## Electrotechnology Training Package UEE06 – Version Number 1. Review Date 31 Dec 2008

© Commonwealth of Australia 2006

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

Training Copyright

or email [copyright@training.com.au](mailto:copyright@training.com.au)

This work is the result of wide consultations with Australian industry participants. It is a collaborative view and does not necessarily represent the view of DEST or any specific body. For the sake of brevity it may omit factors which could be pertinent in particular cases. While care has been taken in the preparation of this Training Package, DEST and the original developer do not warrant that any licensing or registration requirements specified here are either complete or up-to-date for your State or Territory. DEST and the original developer do not accept any liability for any damage or loss (including indirect and consequential loss) incurred by any person as a result of relying on the information contained in this Training Package.

The Commonwealth, through the Department of Education, Science and Training, does not accept any liability to any person for the information or advice (or the use of such information or advice) which is provided in this material or incorporated into it by reference. The information is provided on the basis that all persons accessing this material undertake responsibility for assessing the relevance and accuracy of its content. No liability is accepted for any information or services which may appear in any other format. No responsibility is taken for any information or services which may appear on any linked websites.

# Volume 2 Part 1

## Preliminary Information

This Volume (Vol 2 Part 1) contains the Definitions/Glossary of Electrotechnology Terms.. In addition, the National Occupational Health and Safety Commission Glossary of Terms has been included. Users will find definitions here that clarify any Occupational Health and Safety specific terms. Where a term in the glossary is followed by a number, eg *Tools and equipment (2)*, the number indicates the AQF level.

Volume 2, Part 2 contains competency standard units and the Essential Knowledge and Associated Skills (EKAS). Each competency standard unit has a reference to the relevant Knowledge and Associated Skills, which are detailed separately from the competency standard units. This is designed to make the package easier to interpret and apply. In the Essential Knowledge and Associated Skills section of each unit there is reference to the relevant EKAS, identified by a unique clause number and title. This separate Essential Knowledge and Associated Skills forms an integral part of each competency standard unit, and all assessment evidence activities and reporting processes are to incorporate this specification.

## Training Package Layout

This revised Electrotechnology Industry Training Package has been developed, reviewed and validated through extensive industry consultation. It reflects the views of a wide cross-section of the industry and its key stakeholders/practitioners throughout Australia.

The Training Package has been constructed as a two volume set. Volume 1 covers the overall Package framework and completion requirements for qualifications. Volume 2 includes the content details of parts and sub-sections of Volume 1. The two volumes form an integrated whole and are not to be used independently of each other.

## Volume 1

Preliminary Information

Current Membership of the National Steering Group  
The Electrotechnology Industry

Part 1 Qualifications Framework

Part 2 Competency Standards Overview and Index

Part 3 Assessment Guidelines

Appendix A — New Apprenticeships

Appendix B — Sample Assessment Instruments

Enclosures

- Enclosure A: List of Sample Assessment Instruments
- Enclosure B: Administrative Forms
- Enclosure C: Glossary of Terms

## Volume 2

Preliminary Information

Part 1 Definitions/Glossary

Part 2 Competency Standards

2.1 Competency Standard Units

A – Assembly

B – Broadcast

C – Commercial

D – Computer systems

E – Cross discipline

F – Data and voice communications

G – Electrical

H – Electronic

I – Instrument and control

J – Refrigeration and air conditioning

K – Renewable and sustainable energy

L – Imported

M – Hazardous areas

N – Rail systems

P – Restricted and specialist

R – Research

## 2.2 Essential Knowledge and Associated Skills (EKAS)

Part 3 Literacy and Numeracy Skills

Part 4 Key Competencies

Part 5 Skills Enabling Employment

### **Volume 1: Structure and Overview**

#### **Part 1 – Qualification Framework**

Information in Part 1 outlines how the qualifications are structured, along with their scope/descriptions, composition and content. Completion and issuance requirements are provided as well as advice on flexibility arrangements, with entry and exit pathways and articulation arrangements. Titles and codes of the list of qualifications to be issued are also included.

#### **Part 2 – Competency standards**

Information in Part 2 outlines how the competency standards were developed (in broad terms). The industry coverage they apply to, as well as the format and construction of the individual competency standard units is provided. The index of Competency Standard Units and their scope/description is included in this part. Matters related to language, literacy and numeracy, access, equity and cultural diversity, and any regulatory arrangements, for which the competency standard units may apply is also included. Importantly, each competency standard unit is interrelated and linked with the Definitions/Glossary and Essential Knowledge and Associated Skills sections of the Volume. Each competency standard unit must not be used in isolation or exported without these interrelated components.

There are nearly 500 competency standard units included in Volume 2, each listed according to their respective industry discipline area.

#### **Part 3 – Assessment guidelines**

Information in Part 3 outlines how the assessment guidelines inform RTOs about the infrastructure requirements they will need, to enable them to carry out training delivery assessment activities related to the Training Package. This includes assessment systems, the role of the RTO, assessment pathways, recognition arrangements, assessor qualifications and sources of information.

Included in the Part 3 are Appendix A: New Apprenticeships Application and Appendix B: Sample Assessment Instruments. Appendix B also contains Enclosures A, B and C: A – a List of Sample Assessment Instruments, B – Administrative Forms and C – Glossary of Terms.

### **Volume 2: Competency Standard Units – Content and Scope**

Volume 2 Part 1 contains the Competency Standards Units in their respective disciplines: Assembly; Broadcast; Commercial; Computer systems; Cross discipline; Data and voice communications; Electrical; Electronic; Instrument and Control; Refrigeration and air conditioning; Renewable and sustainable energy; Imported; Hazardous areas; Rail systems; Restricted and specialist; Research

Volume 2 Part 2.2 contains the Essential Knowledge and Associated Skills and an Essential Knowledge Matrix mapping the essential knowledge and associated skills to each Unit.

Volume 2 Parts 3-5 contain information and definitions relating to literacy and numeracy skills, Key Competencies and skills enabling employment. Users should refer to these sections when developing learning and assessment resources..

### **Important Note to Users**

Training Packages are dynamic documents. They are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

#### ***Check the version number before commencing training or assessment***

This Training Package is Version 1 – check whether this is the latest version by going to the National Training Information Service ([www.ntis.gov.au](http://www.ntis.gov.au)) and locating information about the Training Package. Alternatively, contact the Training Package – developer and technical content custodian ElectroComms and EnergyUtilities Industry Skills Council Ltd trading as EE-Oz Training Standards <http://www.eeoz.com.au/> to obtain relevant content advice and confirm the latest version number.

#### **Explanation of version number conventions**

The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed, it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Package’s national code (which remains the same during its period of endorsement).

#### ***Note the change of National Code from UTE99 to UEE06 for this Training Package.***

In Volume 2, Part 2 the competency standard units and the Essential Knowledge and Associated Skills are found. The competency standard units refer to the Knowledge and Associated Skills in the respective section of each competency standard unit. As with the Definitions/Glossary, users should apply the requirements found in the Essential Knowledge and Associated Skills section of the Training Package for an outline of what is defined. The competency standard units themselves only refer to the clause number and reference title of the Essential Knowledge and Associated Skill, and further specific information that is to be covered is elaborated in Volume 2, Part 2.2.1. The separation of the essential knowledge and associated skills from the competency standard units has occurred to facilitate user friendliness for interpretation, applicability and future maintenance. Each competency standard unit has listed within its essential knowledge and associated skills section a unique essential knowledge and associated skills clause number and title. Further elaboration of the specification that applies to the essential knowledge and associated skills clauses is included in the separate essential knowledge and associated skills section of this Volume (2) of this Training Package. This separate essential knowledge and associated skills forms an integral part of each competency standard unit, and all assessment evidence activities and reporting processes are to incorporate this specification.

## Definitions

### Scope

The Definitions/Glossary provided here should not be considered a definitive and exhaustive list. The terms provide added meaning to a term and the range in which it may be used and generally understood by Industry, including regulators and practitioners.

### Application

The information contained in each competency standard unit includes the intended use of the unit for assessment and a training program(s).

### References

#### Regulations

The work functions described by competency standard units in this Training Package may be subject to statutory regulations. Where this is the case the particular regulations will depend on local jurisdictions and knowledge and application of such regulations within the scope of the unit shall be an aspect of evidence in deeming a person competent. Refer to in 1.4 Definitions

#### Reference documents

Each part of the Training Package will include a list of reference documents. These are a component of competency which assist in developing training programs and assessing competency, which include relevant legislation, regulation, industrial instruments, codes of practice, guidelines and advisory standards and policies. Examples may include industry preferred training and assessment models, anti-discrimination and equal employment opportunity statutes encompassing application of access, equity and cultural diversity principles associated with under-represented groups. They should be used wherever required and currency is to be assured in their application.

## Electrotechnology Definitions

The definition of terms used in this Part 2 of the Training Package form an integral part of the Training Package.

### 1.4.1 Access permits

A form type document giving formal permission to enter a specified work area when it is safe to do so and is part of the risk control measures for the area.

### 1.4.2 Accessories

Devices forming part of an electrotechnology system or installation but not including those defined as apparatus

### 1.4.3 Apparatus

Any device used to convert energy from one form to another and any device used for control or protection of a persons, environment or a system.

**1.4.4 Appliance**

An energy using device, other than a lamp, in which electricity and/or gas is converted to any other form of energy.

**1.4.5 Appropriate person**

Individuals with responsibilities for design, installation, maintenance, production or servicing activities or a customer or a person of higher authority.

Note:

Examples of an appropriate person is a site manager, a project manager, a line managers, a supervisors a team leader and a customer's representative.

**1.4.6 Approved**

Acceptable to an authority having jurisdiction.

**1.4.7 Assessment of competence**

The process of checking and confirming the ability to carry out specific work activities and/or functions based on evidence that shows a person can carry out such work safely and to requirements.

**1.4.8 Australian Qualifications Framework (AQF)**

Australian Qualifications Framework Qualifications described in terms of levels characterised by the outcomes of vocational education and training. The Australian Qualifications Framework is intended to provide a comprehensive, nationally consistent, flexible framework for all qualifications in post-compulsory education and training.

**1.4.9 Australian Quality Training Framework (AQTF)**

A set of nationally agreed Standards to ensure the quality of vocational education and training services throughout Australia. The AQTF includes two sets of Standards:

1. Standards for Registered Training Organisation
2. Standards for State and Territory Registering/Course Accrediting Bodies

**1.4.10 Authorised**

Permission granted by a relevant higher authority to use particular equipment or to carry out specified work.

**1.4.11 Authority**

Agency representing the interest of another party and with the responsibility to make decisions on their behalf.

Note.

Examples are a customers representative and agencies responsible for implementation of legislation

**1.4.12 Cardiopulmonary Resuscitation (CPR)**

An emergency life-support procedure using a combination of expired air resuscitation and external cardiac compression.

#### 1.4.13 Checks, functional

The process of verifying that items of equipment operate as intended. Functional checking is used confined to basic systems.

#### 1.4.14 Checks, visual

The process of identifying defects that are apparent to the eye. Visual checking is used confined to basic systems.

#### 1.4.15 Competency

Competency comprises the specification of knowledge and skills and the application of that knowledge and skill to the Standards of performance required in the workplace.

Competency includes all aspects of work performance and not only narrow skills. The four components of competency are: task skills; task management skills; contingency management skills and job/role environment skills.

#### 1.4.16 Competency Standard Unit(s) *See also units of competency*

A competency standard unit is the group of skills and knowledge required by an individual to carry out a useful work function.

A single Competency Standard Unit is not to be confused with a job description that will invariably comprise of a number of competency standard units.

Competency standards are made up of a number of Competency Standard Units. These units describe a key function or role in a particular job function or occupation. Each unit identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency, as well as language, literacy and numeracy and Occupational Health and Safety requirements. A competency standard unit is usually linked to one or more AQF qualifications.

The fields in each competency standard unit and the types of information they contain are given in the Table below.

Field Title	Type of information
Unit code	Unit title
Unit Descriptor	<p><b>1) Scope</b></p> <p>General description of the scope of the work function to which the competency applies and the general abilities needed.</p>
Prerequisite Units	<p><b>2) Prerequisites</b></p>
Competencies	<p><b>2.1) Competency Standard units</b></p> <p>Specific and general competencies expected to have been achieved prior to undertaking training in the unit.</p>
Literacy and numeracy skills	<p><b>2.2) Literacy and numeracy skills</b></p> <p>Informs the reading, writing and maths skill level needed to achieve competence in the unit.</p>

Field Title	Type of information
<p><b>Application of the unit</b></p>	<p><b>3) Application</b> The way in which the Unit is intended to be used in a learning program or qualification</p>
<p><b>License to practise</b></p>	<p><b>3.1) Licensing</b> Indicates how technical standards, codes of practice and regulatory requirements apply to the Unit and whether a licence to practise is required.</p>
<p><b>Competency field</b></p>	<p><b>4) Discipline</b> The sector of the Electrotechnology industry to which the unit mainly applies.</p>
<p><b>Elements and Performance Criteria</b></p>	<p><b>5) Elements</b> Outcomes that contribute to a unit.</p> <p><b>5) Performance Criteria</b> Specify the required levels of performance for each Element.</p>
<p><b>Required skills and knowledge</b></p>	<p><b>6) Essential knowledge and associated skills</b> Knowledge that is either explicit or implicit to effective performance.</p>
<p><b>Range Statement</b></p>	<p><b>7) Range</b> Range of context and conditions to which performance criteria apply.</p>
<p><b>Evidence Guide</b></p> <p><b>Overview of assessment</b></p> <p><b>Critical aspects of evidence required to demonstrate competency in this unit</b></p> <p><b>Context and specific resources for assessment</b></p> <p><b>Methods of assessment</b></p>	<p><b>8) Evidence guide</b> Assists with the interpretation and assessment of the unit</p> <p><b>8.1) Overview</b> Provides a summary of appropriate assessment methods and what they encompass.</p> <p><b>8.2) Critical Aspects of Evidence</b> Particular knowledge and skills essential to effective performance.</p> <p><b>8.3) Context</b> Environment and resources acceptable for assessing achievement of competency. Informs of the resources needed when simulating real the work place is considered and indicates when simulation of the workplace may be a viable or necessary.</p> <p><b>8.4) Assessment Methods</b> Indicates the acceptable methods of assessment which are specified in Section 3 of this document.</p>

Field Title	Type of information
<b>Concurrent assessment and relationship with other units</b>	<b>8.5) Concurrency</b> Identifies where benefits may be derived by assessing two or more units concurrently or sequentially.
<b>Key Competencies</b>	<b>8.6) Key Competencies</b> Generic competencies enabling effective participation in work and their incorporation in the competency standard units (see Volume 2 Part 4).
<b>Skills enabling employment</b>	<b>8.7) Skills enabling employment</b> Generic competencies related to enabling skills for workplace employment activities (see Volume 2 Part 5).

#### 1.4.17 Competency Standards

Competency Standards are the collection of competency standard units for a particular industry sector and are an integral part of a Training Package.

The competency standard units described in this document are part of the draft Electrotechnology Industry Training Package UEE06.

#### 1.4.18 Complex

Made up of many interrelated parts the behaviour or performance of which effect the behaviour or performance of the whole.

Note.

Example in the context of electrotechnology are systems with many interworking subsystems, complex work activities such as some testing procedures and aspects of some essential knowledge.

#### 1.4.19 Compliance

An installation or equipment that conforms to relevant regulations which may include technical standards, codes or practice and the like.

#### 1.4.20 Computer system

Computer hardware, software and connectivity components that make up a system to operate, control or analysis a process.

#### 1.4.21 Defects

Physical or performance aspects of an installation or equipment that do not comply with the relevant regulations, standards or job specifications.

#### 1.4.22 Documentation

Written information, either hard or soft copy, related to a work function.

Note.

Examples of documentation are forms, work instructions, specifications, drawings, reports

#### **1.4.23 Electrical installation, general**

All parts of an electrical installation in a building, structure and premises that are not designated as special electrical installations or those related to hazardous areas.

#### **1.4.24 Electrical installation, special**

Electrical installation related to moveable premises and caravan parks, shows and carnivals, boating marinas, medical treatment areas. cranes and hoists, lifts, electric fences and construction and demolition sites.

#### **1.4.25 Electronic sub assemblies**

An assembly of connected electronic components designed for a particular function that forms part of electronic apparatus or system.

#### **1.4.26 Enterprise standards**

Standards of management, performance, service or product established by an enterprise.

#### **1.4.27 Endorsement**

The variations in equipment or function in which an individual demonstrates competence relevant to a competency standard unit. An endorsement applies to competency standard unit in the disciplines of 'Hazardous areas' and 'Restricted and special electrical work' and is shown by a suffix to the unit title. Details of endorsements are given in the competency standard units where they apply

#### **1.4.28 Equipment**

Any component part or apparatus accessory of an electrotechnology system or installation

#### **1.4.29 Established procedures**

Formal arrangements of an organization, enterprise or statutory authority of how work is to be done and by whom.

Note.

Examples of established procedures are documented in quality management systems, safety management systems, work clearance systems, work instructions, reporting systems and arrangements for dealing with emergencies.

#### **1.4.30 Essential knowledge and associated skills (EKAS) learning specification (LS)**

Provide specific advice in facilitating consistency and reliability in resource development and delivery. The learning specifications are premised on the separate content of the essential knowledge and associated skills section of the expanded Volume 2 – Essential Knowledge and Associated Skills clauses, which are referred to in each competency standard unit.

The specifications are designed to:

- provide the depth and breadth of essential knowledge and associated skills to be learned
- ensure they support the needs of the workplace

- contain assessment strategies, including a table of specifications, to increase validity, reliability and fairness
- detail the resources required for satisfactory delivery in the learning environment
- provide clarification regarding the type and quantity of evidence needed for assessment purposes
- support a variety of delivery modes, eg face-to-face, distance or computer-assisted learning
- provide content and structure that maximises learning retention
- provide a clear purpose statement about their relationship to the overall educational program.

#### **1.4.31 Established routines**

Strict procedures for carrying out a work activity or task often formalised in the form of work instructions.

#### **1.4.32 Explosion protection**

Techniques applied to the design of electrical equipment, components and systems to prevent the electrical energy from becoming an ignition source in the presence of flammable vapours and gases or combustible dusts in hazardous areas.

#### **1.4.33 Fall prevention**

Safe working practices intended to prevent persons or objects from falling from a height regarded as hazardous.

#### **1.4.34 Hazard**

Something with the potential to cause injury or disease to persons, damage property or disrupt productivity.

#### **1.4.35 Hazardous area**

Area in which an explosive atmosphere is present or may be expected to be present in quantities such as to require special precautions for the construction, installation and use of electrical equipment. Hazardous areas may include a variety of adverse environmental conditions such as those encountered in coal mines, shipping, oil/gas platforms and the like, which commonly require further specifications stated in legislation or regulatory requirements.

#### **1.4.36 Hazardous area records**

Records that show a hazardous area has been appropriately classified and the electrical equipment comply with the appropriate certification and other relevant requirements specific to the site. Generally referred to as a 'Verification Dossier'

#### **1.4.37 Industry standards**

Standards of management, performance, service or product established by a representative Industry Body. This Training Package is an example of an industry standard.

#### **1.4.38 Inspection, actions taken**

Actions taken by an inspector in relation to defects in an installation.

Note:

Examples of such actions are disconnection or non-connection of supply until a defect is rectified, notice of period in which it has to be rectified, other actions within the scope of inspection authority.

#### **1.4.39 Inspection, audit**

An inspection that reviews the regulatory obligations of enterprise. Audit inspections may involve reviewing records of work, inspection of safety equipment and inspection of recently completed work.

#### **1.4.40 Inspection, close**

An inspection which encompasses those aspects covered by a visual inspection and, in addition, identifies those defects, eg loose fasteners, which will become apparent when access equipment, eg steps, and tools are used. Close inspections do not normally require an enclosure to be opened or equipment de-energised.

#### **1.4.41 Inspection, detailed**

An inspection that encompasses those aspects covered by a close inspection and, in addition, identifies those defects that only become apparent when an enclosure is opened up, or by use of tools and test equipment.

#### **1.4.42 Inspection, visual**

An inspection that identifies, without the use of access equipment or tools, those defects that are apparent to the eye.

#### **1.4.43 Install**

1. The act of placing and permanently fixing equipment in place in a building or premises.
2. Placing and setting up an operating system and application software on a computer or network.

#### **1.4.44 Installation**

Installation includes all equipment and component parts or a system as they are fixed in place and connected as necessary, to operate as intended.

Note.

Examples of installations are antenna installations, electrical installation, home entertainment installations and refrigeration installation.

#### **1.4.45 Key competencies**

Generic competencies enabling effective participation in work and their incorporation in the Units of Competency (see Appendix A).

#### **1.4.46 Learning Specification (LS)**

See Essential Knowledge and Associated Skills (EKAS).

#### **1.4.47 Maintain**

Ensuring systems, equipment or apparatus continue to work properly by checking, repairing faults, rectifying malfunction and making adjustments as required.

#### **1.4.48 Maintenance, scheduled**

A formal process of periodically checking, overhauling and replacing equipment and/or components based on the assessment of risk associated with their failure during operation.

#### **1.4.49 Non-compliance**

Aspects of an installation or equipment that do not satisfy the applicable regulations, standards or requirements.

#### **1.4.50 OHS policies and procedures**

Arrangements of an organization or enterprise to meet its legal and ethical obligations of ensuring the workplace is safe and without risk to health. ( See also Glossary of OHS terms)

Note:

Ensuring a workplace is safe will include hazards identification and risk assessment mechanisms, implementation of safety regulations, safety training, safety systems incorporating work clearance procedures, isolation procedures, use of protective equipment and clothing and use of codes of practice.

#### **1.4.51 Permit, clearance to work**

A system that authorises, in writing, specified work activities to be carried out in specified work location at a specified time as part of the risk control measures. The system includes safety procedures that shall be followed before authorisation is given.

Note.

Example. Work permit systems operate in the electricity supply sector, in petrochemical plants, in refineries, in heavy manufacturing and in rail networks

#### **1.4.52 Process control**

Control of actions used in the manufacture, analysis and modification of materials.

#### **1.4.53 Process control system**

System used to control processes

#### **1.4.54 Regulated environment**

Are those requirements that are to be met for regulated purposes including but not limited to licensing regimes; registration regimes; industrial instruments and/or arrangements; standards; codes of practice; industry wide preferred approaches encompassing industry polices and guidelines advised for respective Training Package non-endorsed implementation.

#### **1.4.55 Reporting**

Formally written or computer entered and stored document detailing the outcomes of a work activity. (See 1.4.15 Documentation)

**1.4.56 Requirements**

That to which equipment and procedures and their outcomes shall conform and includes statutory obligations and regulations and Standards called-up by legislation or regulations.

Requirements may include codes of practice, job specifications, Standards called up in specifications, procedures and work instructions and quality management systems.

**1.4.57 Risk assessment**

Process of evaluating the likelihood and consequences of occurrences that would have an adverse affect on safety, health and the environment of a work area and the operation and viability of an enterprise.

**1.4.58 Risk control measures**

Methods and equipment for preventing risk of injury or damage from a hazard. Many risk control measures have been established and formalised in standards and codes of practice.

**1.4.59 Safe design principles**

Principle applied in the design of a product that take into account means to reduce harmful effects to both persons and the environment during its manufacture, its use and its disposal at the end of the life of the product.

**1.4.60 Safe working**

System of procedures used to ensure safety in work and operation related to rail systems.

**1.4.61 Servicing**

Maintaining, fault finding and repair of equipment, plant machinery and installations.

**1.4.62 Set-up**

Place in operation equipment that requires certain procedures to be followed before it can be used. Typical items of equipment that require setting up are appliance, computers and home entertainment equipment.

**1.4.63 Skill enabling employment**

A range of genetic employment based skills that are expected of individuals in a workplace. (See Volume 2 Part 5)

**1.4.64 Specifications**

All those attributes that define accurately the nature of the involved hazards, materials/products, processes, equipment and installation design.

Note:

Examples of specifications are design and manufacturer specifications defining all the necessary parameters and tolerances, process flow diagrams, explosive characteristics and technical data sheets for hazardous materials and products.

#### **1.4.65 Standard, deemed to comply**

A guide setting out methods and materials that if applied in the prescribed way will satisfy the requirements of a performance-based technical standard.

#### **1.4.66 Standards, technical**

Technical documents which set out specifications and other criteria for equipment, materials and methods, to ensure they consistently perform as intended. The Standards referred to in this Standard are those published by Standards Australia or an industry association.

#### **1.4.67 Sustainable energy, practices**

Working in a way that eliminates unnecessary energy use and material waste and disposes of the necessary waste with minimal effect on the environment and in compliance with regulation.

#### **1.4.68 Training Package**

A Training Package is a set of nationally endorsed Standards and qualification for recognising and assessing peoples skills. A training package specifies the outcome of training and is not a prescription of how an individual should be trained.

#### **1.4.69 Unit of competency**

See competency standard unit.

#### **1.4.70 Voltage, extra-low**

Not exceeding 50 V a.c. or 120 V d.c.

#### **1.4.71 Voltage, high**

Exceeding low voltage

#### **1.4.72 Voltage, low**

Exceeding extra-low voltage, but not exceeding 1000 V a.c. or 1500 V d.c.

#### **1.4.73 Work instructions**

Strict and formal instruction on how a work activity or task is to be carried out.

#### **1.4.74 Work platform**

Equipment specifically designed to access a work area out of normal reach above the ground or floor level.

Note.

Examples are step ladders, extension ladders, scaffolding, pole platforms, 'cherry pickers' and the like.

#### **1.4.75 Workplace procedures**

See 1.4.29 Established procedures

#### **1.4.76 Work site protection**

Processes and procedure to manage or prevent the passage of trains over a section of (rail) track for which possession has be acquired so that maintenance or repair work to be carried out.

## **Additional Glossary of terms for Occupational Health and Safety**

### **Introduction**

This Glossary of Occupational Health and Safety (OHS) Terms has been developed to assist competency developers and writers, reviewers of training packages and those developing any training specification or learning materials for the Vocational Education and Training environment.

In Australia we consider that the rate of workplace fatality, injury and ill-health is far too high. To reduce this toll we need to make some changes in the work place and this requires training to enable business and workers to effectively manage safety.

We must get OHS right in the competency so that the resultant learning contributes to improving the capacity of those in the workplace to manage safety. This applies not only to the ‘designated’ OHS units but to the integration of OHS, as appropriate, into all competencies, learning programs and learning resources.

The competency, TAADES505A *Research and develop competency standards*, specifies the outcomes and the knowledge and skills required to research and develop documents which outline competency requirements for a particular job function, work process, work role or specific vocational outcome. This competency cites four phases in developing a competency:

1. Research the competency area
2. Formulate competency specifications
3. Validate competency specifications
4. Finalise competency specifications.

OHS is a critical aspect of research into the competency area, and also an important aspect of work performance to be integrated within a competency.

As in many technical areas, OHS has, to some extent, its own language. OHS is ‘owned’ by many people as it impacts on all of us, however key words and terms are not always used in a consistent manner and this can lead to confusion. To maximise the effectiveness of our training and education we need to ensure that our use of the OHS language is as consistent and clear as possible.

This glossary is not intended as a definitive dictionary of OHS terms but is designed to be used in the second phase of competency development, formulate the competency specifications. It is also an invaluable tool for those involved in the design and development of learning resources.

Further information on OHS hazards, practical guidance material, standards and codes of practice is available at the National Occupational Health and Safety Commission website at [www.nohsc.gov.au](http://www.nohsc.gov.au)

The glossary is intended to be an evolving and dynamic document and those wishing to comment on the terms or suggest additions or modifications should email the Team Leader of the OHS Skills Development Team at NOHSC.

## GLOSSARY OF OHS TERMS

NOHSC Glossary	Explanation
<b>Accident</b>	A term that is now considered out of date. Preferred term is 'incident'.
<b>Accountability</b>	The process by which a person with OHS responsibilities is answerable to a higher authority.
<b>Action level</b>	The level at which a risk is considered to be unacceptable and action is required to reduce the level of risk. May be specific such as a noise level at which hearing protection must be worn, a concentration of chemical or more generic.
<b>(OHS) Action plans</b>	Documented plans developed within the workplace to implement OHS management, which include allocated responsibilities and time frames.
<b>Administrative controls</b>	Management practices that aim to control employees' exposure to specific hazards, and generally improve health and safety – examples include the use of job rotation, job enlargement
<b>ALARA (As Low As Reasonably Achievable)</b>	A basic concept where risks are kept as low as is reasonably achievable. ALARA is determined by reference to established codes and standards and consultation with groups impacted by the decision outcomes including those exposed to the risk.
<b>Anthropometry</b>	The science dealing with the comparative measurement of the size and proportions of the human body, the range of movement of limbs, as used in ergonomics.
<b>(OHS) Audit</b>	A systematic examination against an agreed benchmark of the approach to managing safety to evaluate an organisation's arrangements for identifying hazards, assessing and controlling risks, and monitoring and improving the effectiveness of the management of OHS and compliance. <i>(Note: a workplace inspection is NOT an audit.)</i>
<b>Audit tools</b>	The instruments for collecting evidence and conducting the analysis and evaluation (they are not the same as the audit criteria or benchmark), they may be: <ul style="list-style-type: none"> <li>• developed specifically for the purpose</li> <li>• adapted from existing tools</li> <li>• purchased or accessed from existing tools</li> </ul> and include: <ul style="list-style-type: none"> <li>• performance checklists</li> <li>• sets of questions to be asked</li> <li>• descriptions of required characteristics to be checked</li> <li>• limitations for and instructions for use</li> </ul>
<b>Authorisation of permit</b>	Signing of permit by competent person.
<b>Biomechanics</b>	The application of mechanics (forces and motion) to analyse body movement and the stresses involved in body posture during movement.

NOHSC Glossary	Explanation
<b>Causative event</b>	Key event that resulted in the particular outcome(s) of injury or damage.
<b>Circumstance</b>	Short-term situation that is relatively unusual, such as a storm or when a key person is absent.
<b>Certification</b>	Refer 'operator certification.
<b>Common law</b>	Law that is derived from the English legal system and has evolved through judicial decision and practice (case law) that establishes and follows precedent. Note difference to 'statute law'.
<b>Condition</b>	Permanent situation such as type of equipment, work practice, design of work environment (often different to detect or identify) that may contribute to risk.
<b>Consequence</b>	The injury or damage outcome of an event, which may be expressed quantitatively or qualitatively; there may be a range of possible outcomes for a specific event or scenario.
<b>Confined space</b>	<p>An enclosed or partially enclosed space which-</p> <ul style="list-style-type: none"> <li>• is at atmospheric pressure during occupancy</li> <li>• is not intended or designed primarily as a place of work, and is liable at any time to - <ul style="list-style-type: none"> <li>- have an atmosphere which contains potentially harmful levels of contaminant</li> <li>- not have a safe oxygen level or</li> <li>- cause engulfment, and</li> </ul> </li> <li>• may have restricted means for entry and exit.</li> </ul> <p>A confined space is determined in part by the hazards associated with a defined set of circumstances (restricted entry or hazardous atmosphere, risk of engulfment) and not just with work performed in a restricted space. Examples include but may not be limited to:</p> <ul style="list-style-type: none"> <li>• storage tanks, tank cars, process vessels, boilers, pressure vessels, silos and other tank-like compartments</li> <li>• open-topped spaces such as pits or degreasers</li> <li>• pipes, sewers, shafts, ducts and similar structures</li> <li>• shipboard spaces entered through a small hatchway or access point, cargo tanks, cellular double bottom tanks, duct keels, ballast and oil tanks and void spaces (but not including dry cargo holds).</li> </ul> <p>A person is deemed to have entered a confined space when their head (ie. the breathing zone) or upper part of the body is within the boundary of the confined space. (Note that inserting an arm for atmospheric testing is not considered an entry to a confined space).</p> <p>References:</p> <ul style="list-style-type: none"> <li>• AS/NZS 2865:2001 Safe working in a confined space</li> <li>• Handbook - HB 213:2003 Guidelines for safe working in a confined space</li> </ul>

<p><b>Consultative arrangements</b></p>	<p>State and Territory OHS legislation specifies obligations for workplace consultation. The workplace arrangements to meet these obligations may include:</p> <ul style="list-style-type: none"> <li>• OHS and other consultative and planning committees</li> <li>• health and safety and other employee representatives</li> <li>• employee and supervisor involvement in OHS activities such as inspections and audits</li> <li>• procedures for reporting hazards, and raising and addressing OHS issues</li> <li>• employee and workgroup meetings.</li> </ul> <p>Factors that should be considered when developing consultative arrangements include:</p> <ul style="list-style-type: none"> <li>• language</li> <li>• shift work and rostering arrangements</li> <li>• timing of information and data provision</li> <li>• literacy and numeracy levels</li> <li>• workers with special needs</li> <li>• workplace organisational structures (for example, size of organisation, geographic, hierarchical)</li> <li>• cultural diversity</li> <li>• management approach</li> <li>• workplace culture and approach to OHS by managers, supervisors and employees.</li> </ul>
<p><b>Controls</b></p>	<p>The devices and methods of controlling the effect of the hazard so that the risk of injury is minimised. The ‘quality’ of the control is the level and reliability of the control compared with the level of risk. The quality of the controls is determined by:</p> <ul style="list-style-type: none"> <li>• the best available technology or approach should be applied when the most probable outcome is death or serious injury</li> <li>• the best practical technology or approach may be applied where the most probable outcome is less serious</li> </ul> <p>Refer also ‘Hierarchy of control’.</p> <p>Workplace factors that impact on the controls selected and the implementation include:</p> <ul style="list-style-type: none"> <li>• language</li> <li>• shift work and rostering arrangements</li> <li>• literacy and numeracy</li> <li>• workplace organisational structures (e.g. geographic, hierarchical)</li> <li>• cultural diversity</li> <li>• training required</li> <li>• workplace culture related to OHS, including commitment by managers and supervisors and compliance with procedures and training.</li> </ul>
<p><b>Control measures</b></p>	<p>Devices, systems (including work methods) or approaches that reduce</p>

	exposure to workplace hazards
<p><b>Crisis management plan</b></p>	<p>A flexible document that can cope with a broad range of crisis types and:</p> <ul style="list-style-type: none"> <li>• is approved at the highest levels of the organisation</li> <li>• focuses on management control</li> <li>• identifies responsibilities for decision making</li> <li>• details communication processes and psychological support</li> <li>• addresses arrangements with any contractors or shared tenancy</li> <li>• integrates the emergency response plans as well as recovery</li> <li>• incorporates dealing with external agencies and support</li> <li>• addresses planning for recovery before crisis occurs.</li> </ul> <p>Documentation for crisis management plan may include</p> <ul style="list-style-type: none"> <li>• policy, emergency response structure, initial response instructions for various roles/areas, responsibility and authority of individual roles, warning systems, training requirements, resource inventory for response and recovery, program review and monitoring processes; and</li> <li>• crisis risk management documentation, such as risk management team lists, communications strategies, identification of issues, risk assessments/evaluations, vulnerability profiles, risk registers and treatment strategies.</li> </ul> <p>The term ‘emergency management’ may also apply but ‘crisis management’ infers a more holistic approach encompassing the full range of business affairs.</p>
<p><b>Dangerous Goods (DG)</b></p>	<p>Those gases, liquids and solids identified and classified under the internationally agreed system which is followed in Australia and that are subject of so called ‘dangerous goods’ standards and legislation.</p> <p>The objective of the Dangerous Goods legislation is to control the storage, handling and transport of DGs to protect the safety of workers, the public, property and the environment. While dangerous goods may also be hazardous the terms should not be confused.</p>
<p><b>Dangerous parts of plant</b></p>	<p>Potential contact or entrapment points to which the operator may be exposed during:</p> <ul style="list-style-type: none"> <li>• operation</li> <li>• examination</li> <li>• lubrication</li> <li>• adjustment</li> <li>• maintenance.</li> </ul>
<p><b>Design</b></p>	<p>The process of bringing together innovation, aesthetics, and functionality to plan and create a product, process or system to meet the artistic, industrial or performance requirement of an individual or group. The Design Process involves a series of activities where an idea is conceived, shaped, developed, produced and then acted upon to produce a designed-product. It also includes any subsequent alteration of a designed-product (redesign or retrofit).</p>
<p><b>Design process</b></p>	<p>The stages of the design process include:</p> <p>The concept design phase considers preliminary design options, which</p>

are assessed against product specifications to determine the best preliminary design to be developed. This phase includes concept design, research and development, feasibility and risk management (including OHS risks).

The detailed design phase develops the selected design to its final state. It includes research and development, feasibility studies, concept and detail design, technical and functional specifications, plans and drawings, operational systems, construct/manufacture options and detailed quantities, cost and risk analysis (including analysis of OHS risks).

**Designed-product**

The item to be designed, including a built environment, structure, an item of plant or equipment, chemical, work system or process; or any other physical attribute or system associated with either the work or its interface with people.

**Duty of care**

Arises from common law but is enshrined in OHS statute law and / that places into a legal form a moral duty to anticipate possible causes of injury and illness and to do everything reasonably practicable to remove or minimise these possible causes of harm.

The key factors relating to duty of care are that:

- duty of care applies wherever there is special relationship (employer – employee, employer-contractor, supervisor – work team member, tradesperson-apprentice)
- duty of care applies to all circumstances of the relationship
- individual duty of care cannot be delegated (but roles and functions may be delegated)
- applies personally to individuals
- applies to all risks that are foreseeable and preventable
- includes the concept of ‘reasonable’.

**Elements of systematic approaches to managing OHS including OHSMs**

A list of key requirements or major principles that are combined in a methodical and ordered manner to minimise the risk of injury or ill health in the workplace; and may include processes of OHS planning, allocation of resources, communication and consultation, hazard management, record keeping and reporting, training and competency, and review and evaluation for ongoing improvement of OHS.

**Emergency**

Events such as:

- serious injury events
- emergencies requiring evacuation
- fires and explosions
- hazardous substance and chemical spills
- explosion and bomb alerts
- security emergencies, such as armed robberies, intruders and disturbed persons
- internal emergencies, such as loss of power or water supply and structural collapse
- external emergencies and natural disasters, such as flood, storm and traffic accident impacting on the organisation.

May also be referred to ‘hazardous event’.

**Emergency agency**

Includes fire, police, ambulance, relevant government departments,

hazardous materials response teams (HAZMAT) and OHS authorities

<b>Emergency control organisation (ECO) is:</b>	Structured group within the organisation that includes roles such as emergency controller, communications recorder, media liaison and employee support.
<b>Emergency equipment</b>	Includes: <ul style="list-style-type: none"><li>• First Aid equipment</li><li>• eye wash shower or portable eye washes</li><li>• fire extinguishers and equipment</li><li>• communication equipment</li><li>• evacuation alarms</li><li>• evacuation equipment, especially that for disabled persons</li><li>• torches</li><li>• clothing items such as coloured hats and vests.</li></ul>
<b>Emergency stops and warning devices</b>	Are fitted to plant and equipment that have a risk of entrapment or other hazard and must be: <ul style="list-style-type: none"><li>• prominently, clearly and durably marked</li><li>• coloured red (push buttons, bars or handles)</li><li>• unable to be affected by electrical or electronic circuit malfunction</li><li>• fitted where risk assessment identifies a need.</li></ul>
<b>Enforcement</b>	Processes and instruments available to the OHS regulator under legislation may include: <ul style="list-style-type: none"><li>• prosecution</li><li>• prohibition notices</li><li>• improvement notices</li><li>• on-the-spot fines</li><li>• provisional improvement notices.</li></ul>
<b>Epidemiology</b>	The study of the distribution and determinants of disease within human populations. Patterns of injury or illness in groups of people are studied to determine causes, identify groups at risk and to identify and evaluate methods of treatment and prevention.
<b>Ergonomics</b>	The study of the relationship between people, the equipment they use and their physical and social work environment.
<b>Ergonomic interventions</b>	Includes: <ul style="list-style-type: none"><li>• design of tools</li><li>• design of workplaces</li><li>• design of products</li><li>• design of equipment</li><li>• design of work systems, processes or organisation including work flow, planning and control</li><li>• job design</li><li>• development of new decision making processes</li><li>• new forms and organisations of work</li></ul>

<b>Ergonomic tools and databases</b>	<p>May include:</p> <ul style="list-style-type: none"><li>• engineering models</li><li>• Australian and International Standards</li><li>• Australian and International anthropometric databases</li></ul>
<b>Explosive substance</b>	<p>Substance that explodes if it comes into contact with heat, flame, an ignition source or incompatible substance.</p>
<b>Fail-to-safe</b>	<p>Design feature of equipment that ensures if there is a failure or defect in the product, or another factor such as loss of power, then the product is left in a safe condition.</p>
<b>Functional areas and management systems</b>	<p>Other than OHS but that impact on the management of OHS may include:</p> <ul style="list-style-type: none"><li>• strategic planning</li><li>• purchasing, procurement and contracting</li><li>• logistics</li><li>• HR, IR and personnel management, including payroll</li><li>• engineering and maintenance</li><li>• information, data and records management</li><li>• finance and auditing</li><li>• environmental management</li><li>• quality management.</li></ul>
<b>Guarding</b>	<p>Devices fitted to machinery to separate the operator from dangerous parts of the machine. Devices may include:</p> <ul style="list-style-type: none"><li>• permanently fixed physical barriers where no access of any part of a person is required</li><li>• interlocking physical barriers where access to dangerous areas is required during operation</li><li>• physical barriers securely fixed by means of fasteners or devices</li><li>• presence-sensing safeguarding systems.</li></ul>
<b>Hazard</b>	<p>A source or a situation with a potential for harm in terms of human injury or ill-health, damage to property, damage to the environment, or a combination of these.</p>
<b>Hazards of long latency</b>	<p>Conditions, illnesses and other health risks that result from longer term exposure to specific triggers such as chemicals, noise, radiation and psychosocial factors.</p>
<b>Hazards of low frequency/high consequence</b>	<p>High impact events that occur rarely such as explosions, fires and building collapses but may result in very serious injury, death or multiple death situations.</p>
<b>Hazard identification</b>	<p>The process of identifying sources of harm. Hazard identification may be required:</p> <ul style="list-style-type: none"><li>• at design or pre purchase of buildings, equipment and materials</li><li>• at commissioning or pre-implementation of new processes or practices</li></ul>

- before new forms of work and organisation of work are implemented
- before changes are made to workplace, equipment, work processes or work arrangements
- as part of planning major tasks or activities, such as equipment shutdowns
- following an incident report
- when new knowledge becomes available
- at regular intervals during normal operations
- prior to disposal of equipment, buildings or materials.

Different methods may be used to identify hazards including observation; consultation with workers, clients or other users; trial of models or prototypes; review of technical standards and other information sources; monitoring and measurement.

**Hazard identification tools and processes**

Include:

- analysis of incident investigations
- analysis of incident, injury and claims statistics
- workplace inspections
- job safety analysis (JSA)
- audits
- cause and effect diagrams
- surveys
- review of research and industry literature

**Hazardous event**

Includes incidents with the potential to seriously harm life, health, property, the environment or a combination. May also be referred to as 'emergencies'.

**Hazardous substance**

A substance that is listed on the National Commission's *List of Designated Hazardous Substances* (NOHSC:10005) or has been classified as a hazardous substance by the manufacturer or importer in accordance with the National Commission's *Approved Criteria for Classifying Hazardous Substances* (NOHSC:1008).

**Hazardous substance register**

Listing of all the hazardous substances that are used or produced in a workplace together with a current Material Safety Data Sheet for each substance. May also contain risk assessments for individual hazardous substances.

**HAZCHEM**

An initial response emergency action code that provides information vital to emergency services to enable them to stabilise the incident scene during the early stages of a HAZMAT incident. The Code is displayed on emergency information panels on transport vehicles and on signs on buildings. HAZCHEM codes are assigned to chemicals on the basis of their flammability, toxicity, reactivity and other relevant chemical and physical properties.

**HAZMAT**

A contraction of the words 'hazardous materials' and may be used in a range of circumstances including HAZMAT emergency response units, HAMAT emergency response equipment and HAZMAT registers of hazardous substances.

**HAZOP (Hazard and**

An advanced risk analysis technique that involves a systematic review of

<b>Operability Study)</b>	a process to determine risks and risk minimisation strategies.
<b>Health and safety representative</b>	An employee, elected by the workgroup, who represents the OHS interests of the people with whom they work. The function is carried out in addition to the normal work role. Processes for election of health and safety representatives, their role and rights are specified in State and Territory legislation.
<b>Health promotion</b>	The promotion of health, especially as a workplace program, designed to improve and enhance employee health undertaken as a complementary activity to the prevention of work-related injury and disease.  Also called wellness.
<b>Health surveillance</b>	Monitoring or checking individuals for the purpose of identifying changes due to exposure to hazards in the workplace. May include biological monitoring.
<b>Hierarchy of control</b>	The priority order in which hazard and risk controls should be considered with the eventual outcome often being a combination of measures. The prime emphasis is on: <ul style="list-style-type: none"><li>• elimination, and where this is not practicable, minimisation of risk by:<ul style="list-style-type: none"><li>○ substitution</li><li>○ isolating the hazard from personnel</li><li>○ engineering controls</li><li>○ administrative controls (e.g. procedures, training)</li><li>○ personal protective equipment (PPE).</li></ul></li></ul>
<b>Hot work</b>	Involves using equipment that generates heat, sparks, flames or any other sources of ignition in an atmosphere that may be flammable. Includes work with welders, cutters including oxygen cutters, power tools, grinding, mobile phones.  Hot work can also include breaking into 'live' equipment or performing work on live equipment that has the potential to release its contents (eg hot tap in chemical plants).
<b>Housekeeping</b>	Describes workplace and personal routines designed to improve hygiene and safety, eg cleaning up spills and keeping walkways, exits and traffic areas clear.
<b>Incident</b>	An event that has caused or has the potential for injury, ill-health or damage. ('Incident' is the preferred term rather than 'accident')
<b>(Sources of OHS) Information:</b>	May be internal and include: <ul style="list-style-type: none"><li>• hazard, incident and investigation reports</li><li>• workplace inspections</li><li>• incident investigations</li><li>• minutes of meetings</li><li>• Job Safety Analyses (JSAs) and risk assessments</li><li>• organisational data such as insurance records, enforcement notices and actions, workers compensation data, OHS performance data</li><li>• reports and audits</li><li>• material safety data sheets (MSDSs) and registers</li></ul>

- employees handbooks
- employees including questionnaire results
- OHS advisors
- manufacturer manuals and specifications.

Or external, including:

- regulatory bodies and OHS Acts regulations, codes and guidance material
- other relevant legislation
- National Occupational Health and Safety Commission (NOHSC) and Australian Bureau of Statistics
- databases such as national and State injury data and NICNAS (National Industrial Chemicals Notification and Assessment Scheme)
- OHS specialists and consultants
- newspapers and journals, trade/industry publications
- internet sites
- industry networks and associations including unions and employer groups
- OHS professional bodies
- research information .

**Isolation**

*Also called 'lock-out' and 'tag-out'.*

A safety device system that includes devices such as isolating switches, locks, safety bars, shields, full pressure blanks, spectacle blanks to lock controls, especially moving parts, equipment, systems or devices with stored energy, to an 'off' position while a worker is in a vulnerable position such as carrying out maintenance on rotating equipment, and electrical and hydraulic systems.

Isolation systems generally use locking switches that need keys to open the lock and are used in conjunction with a danger tag system that promotes greater safety consciousness amongst the workforce for all situations in which danger to persons could arise from:

- the operation of machinery, plant or equipment
- the flow of steam, electricity, gases or liquids
- the use of faulty or unsafe plant and equipment
- include multiple locking systems and involve written authorisation by a competent person

**Job Safety Analysis (JSA)**

Process of examining all aspects of a task to identify hazards and conditions with a potential for injury or ill health with the objective of developing risk controls including written job instructions.

**Legislation relevant to OHS**

Includes Commonwealth and relevant State / Territory OHS specific acts and regulations as well as:

- workers compensation
- privacy legislation
- contract law
- trade practices
- criminal law
- common law

- industrial relations law
- equal employment opportunity and anti- discrimination law

<b>Life-cycle</b>	All phases in the life of a product. Specific phases depend on the type of product but may include design, development, manufacture, construction, assembly, import, supply, distribution, sale, hire, lease, storage, transport, installation, erection, commissioning, use or operation, consumption, maintenance, servicing, cleaning, adjustment, inspection, repair, modification, refurbishment, renovation, recycling, resale, decommissioning, dismantling, demolition, discontinuance, disposal.
<b>Likelihood</b>	The likelihood of the occurrence of the consequence, not the likelihood of the hazard or the particular scenario.
<b>Locked out</b> <i>See 'Isolation'</i>	<p>Equipment, which is not to be operated for any reason, may be pad-locked, or otherwise prevented from operation using a keyed lock. A lockout may be accompanied by a tag out, or a lock out system may incorporate a tag.</p> <p>Lockout means the isolation by a mechanical device, generally a lock, which, when applied at the source, physically prevents the control to any electrical or mechanical equipment being turned on.</p>
<b>Manual handling</b>	The use of force applied by a person to lift, move, carry, push, pull or otherwise move or restrain an animate inanimate object.
<b>Material Safety Data Sheet (MSDS)</b>	Document describing the properties and hazards of a material or substance including statements about its chemical and physical properties, health hazards, precautions for use and safe handling instructions. All manufacturers and suppliers of chemicals are obliged to produce an MSDS for each hazardous chemical.
<b>Monitoring</b>	Involves the use of valid and suitable techniques to estimate the exposure of employees to a hazard.
<b>Musculoskeletal disorder (MSD)</b>	An injury, illness or disease that arises in whole or part from manual handling in the workplace, whether occurring suddenly or over a prolonged period of time. (Does not include injuries caused by crushing, entrapment or cut resulting primarily from the mechanical operation of plant.
<b>Occupational Overuse Syndrome (OOS)</b>	Previously called RSI and refers to arrange of conditions characterised by persistent discomfort and pain in and around joints and associated with repeated movement of the joint. Recent State and Territory legislation tends to group these conditions with those arising from manual handling as Musculoskeletal Disorders.
<b>OHS inspection</b>	<p>The process of physically examining and evaluating the extent to which hazards and risks exists, and /or particular OHS requirements, procedures or standards are being met.</p> <p>Refer also to 'workplace inspection'.</p>
<b>OHS specialists</b>	<p>Include:</p> <ul style="list-style-type: none"><li>• safety professionals</li><li>• ergonomists</li><li>• occupational hygienists</li></ul>

	<ul style="list-style-type: none"> <li>• safety engineers</li> <li>• injury management advisors</li> <li>• health professionals.</li> </ul>
<b>Operator certification</b>	The process by which a certificate to use or operate industrial equipment is issued by a certifying authority.
<b>OHS management system (OHSMS)</b>	<p>That part of the organisation’s overall management system that covers developing, implementing, reviewing and maintaining the activities for managing OHS. It is NOT a standard, a commercial package or folders on the shelf; however it may involve use of OHS management systems developed in the workplace to meet the OHS situation in that particular workplace.</p> <p>Also referred to in broader context as systematic approaches to managing OHS.</p>
<b>Operational controls for plant and equipment</b>	<p>Should:</p> <ul style="list-style-type: none"> <li>• be suitability identified</li> <li>• have nature and function clearly indicated</li> <li>• be readily and conveniently located</li> <li>• be guarded to prevent unintentional activation</li> <li>• be capable of locking in ‘off’ position to enable disconnection of all motive power and forces</li> <li>• be of ‘fail safe’ type.</li> </ul>
<b>Participative arrangements</b>	Arrangements that inform employees and other stakeholders of OHS matters, seek their input and offer opportunity to participate in decisions that may impact on their OHS. May also be referred to as ‘consultative arrangements’, but ‘participation’ implies a higher level of involvement.
<b>Permit to work</b>	<p>A written authority document such as hot work and confined space entry that:</p> <ul style="list-style-type: none"> <li>• includes approval to undertake work and activities including tests, measurements and monitoring</li> <li>• is authorised by a responsible or designated person directly in control of the work</li> <li>• certifies appropriate precautions and controls to be followed</li> <li>• incorporates checklists, conditions and actions such as the frequency and duration of the work and atmospheric tests</li> <li>• follows recognised industry standard recording practices.</li> </ul>
<b>Plant</b>	<p>As defined in National Standard for Plant includes:</p> <ul style="list-style-type: none"> <li>• machinery, equipment (including scaffolding), appliance, implement or tool and any other component, fitting or accessory</li> <li>• fixed and or specified plant as cited in commonwealth, State and Territory OHS legislation</li> <li>• mobile plant and load shifting equipment</li> <li>• pressure equipment such as boilers, pressure vessels and pressure piping</li> <li>• electrical installation and plant such as wiring, accessories, fittings, consuming devices, control and protective gear, converters and</li> </ul>

generators.

<b>Plant Registration</b>	The administrative process by which a certifying authority or State OHS regulator requires an organisation or industry to register plant, machinery and equipment.
<b>Personal protective equipment (PPE)</b>	<p>Equipment designed to be worn by a person to provide protection from hazards, and may include:</p> <ul style="list-style-type: none"><li>• head protection</li><li>• face and eye protection</li><li>• respiratory protection</li><li>• hearing protection</li><li>• hand protection</li><li>• clothing and footwear.</li></ul> <p>Personal protective equipment is considered the least satisfactory control measure.</p>
<b>Policies and procedures</b>	<p>Relevant to OHS include:</p> <ul style="list-style-type: none"><li>• policies and procedures underpinning OHS including those for hazard and incident reporting, OHS communication, consultation, issue resolution and risk management</li><li>• quality system documentation</li><li>• purchasing and contracting procedures</li><li>• documents describing how tasks, projects, inspections, jobs and processes are to be undertaken</li><li>• standard operating procedures, work instructions</li><li>• job or batch sheets, recipes</li><li>• operators manuals</li><li>• employee and contractor handbooks</li><li>• job/task statements.</li></ul>
<b>Positive performance indicators</b>	Focus on assessing how successfully a workplace is performing through measuring OHS processes.
<b>(OHS) Records</b>	<p>Requirements for OHS record keeping may be defined in:</p> <ul style="list-style-type: none"><li>• OHS legislation and regulations governing reporting of incidents and maintenance of records related to specific hazards, including chemical registers and material safety data sheets (MSDSs)</li><li>• privacy legislation</li><li>• organisational procedures.</li></ul> <p>OHS records may include:</p> <ul style="list-style-type: none"><li>• hazard and incident reports, first aid records</li><li>• risk assessments</li><li>• hazardous substances and dangerous good registers, MSDSs</li><li>• risk registers</li><li>• OHS audit and inspection reports</li><li>• maintenance and testing records</li><li>• OHS training records</li></ul>

- outcomes of health surveillance and environmental monitoring
- workers compensation claims and return to work records.

OHS records must be stored taking account of:

- privacy
- confidentiality
- enabling access to personal records, within legislative requirements
- commercial in confidence issues as appropriate.

**(OHS) Reporting requirements**

Under legislation include serious injury and serious incident reporting to OHS authorities.

**(OHS) Responsibilities**

Those with legislated OHS responsibilities include:

- company director
- manager
- supervisors
- OHS representatives
- employees and contractors
- designers, manufacturers, installers, suppliers.

**Residual risk**

That risk that is unable to be designed out of a product or process.

**Risk**

The chance of something occurring that will result in injury or damage. It is measured in terms of consequences (injury or damage) and likelihood of the consequence.

See 'Consequence' and 'Likelihood'.

**Risk analysis**

Analysing the risk to:

- identify factors influencing the risk and the range of potential consequences
- effectiveness of existing controls
- likelihood of each consequence considering exposure and hazard level
- combining these in some way to obtain a level of risk.

Factors influencing the risk may be associated with

- equipment
- work environment
- work organisation
- task
- the individual/operator
- frequency and duration of exposure
- number of people exposed/ involved.

**Risk assessment**

Risk assessment is a two-step process that involves risk analysis and risk evaluation.

Risk assessment as required under various OHS legislation does not necessarily require this second step of evaluation.

See 'Risk Analysis' and 'Risk evaluation'.

<b>Risk evaluation</b>	Comparison of risk with pre-established criteria for tolerance (or as low as reasonably achievable) and the subsequent ranking of risks requiring control. This activity will usually be carried out by or in conjunction with others with advanced OHS skills and knowledge.
<b>Risk management</b>	The whole systematic process directed towards identifying hazards, assessing the risk and developing controls to minimise the risk and monitoring the effectiveness of the controls (and taking further action as required).
<b>Risk ranking</b>	A process of rating risks according to their severity and likelihood. Common systems are based on matrices or nomograms but are usually highly subjective.
<b>Risk register</b> <i>Also referred to as Hazard Register</i>	Includes: <ul style="list-style-type: none"><li>• a list of hazards, their location and people exposed</li><li>• a range of possible scenarios or circumstances under which these hazards may cause injury or damage</li><li>• the results of the risk assessment, and may also include;</li><li>• possible control measures and dates for implementation.</li></ul>
<b>Safe Design</b>	A design process that generates options to eliminate hazards, or minimise potential risk to health and safety of those who make the product and those that use it by involving decision makers and considering OHS risks throughout the life cycle of the designed product.
<b>Stakeholders</b>	In workplace OHS include: <ul style="list-style-type: none"><li>• managers</li><li>• supervisors</li><li>• health and safety and other employee representatives</li><li>• OHS committees</li><li>• employees and contractors</li><li>• the community.</li></ul>
<b>Standards</b>	Relevant to OHS include: <ul style="list-style-type: none"><li>• OHS regulations and standards developed by OHS regulators</li><li>• national standards (NOHSC)</li><li>• Australian standards</li><li>• International national standards</li><li>• industry standards</li><li>• codes of practice</li><li>• exposure standards</li><li>• guidance notes.</li></ul>
<b>Statute Law</b>	Law created by legislation passed by government (acts and regulations) as distinct from common law.

<b>(OHS) plan:</b>	<p>A document that:</p> <ul style="list-style-type: none"><li>• is usually developed annually but may be developed for a shorter or longer period</li><li>• reviewed regularly</li><li>• has OHS performance indicators (ie objectives and targets that are achievable and practical) reflecting systematic approaches to managing OHS.</li></ul>
<b>System of work</b>	<p>The overall process of work including:</p> <ul style="list-style-type: none"><li>• method by which the work is carried out</li><li>• organisation of the work</li><li>• selection and maintenance of tools and equipment</li><li>• supervision and training</li><li>• selection of workers</li><li>• allocation of tasks and responsibilities.</li></ul>
<b>Systemic approach to managing OHS</b>	<p>Requires:</p> <ul style="list-style-type: none"><li>• comprehensive processes that are combined in a methodical and ordered manner to minimise the risk of injury or ill health in the workplace</li><li>• processes of planning, allocation of resources, communication and consultation, hazard management, record keeping and reporting, training and competency, and review and evaluation for ongoing improvement.</li></ul> <p>Factors that may impact on the implementation of a systematic approach to managing OHS may include:</p> <ul style="list-style-type: none"><li>• barriers to communication, such as language/literacy</li><li>• workplace culture issues, such as management commitment, supervisors' approach to compliance and general acceptance of the priority of safety</li><li>• diversity of workers</li><li>• structural factors, such as multiple locations, shift work and supervisory arrangements.</li></ul>
<b>Tag out</b>	<p>See 'Isolation'.</p>
<b>Technical advisors</b>	<p>To the OHS function may include:</p> <ul style="list-style-type: none"><li>• legal practitioners</li><li>• engineers (such as design, acoustic, mechanical, civil)</li><li>• security and emergency response personnel</li><li>• workplace trainers and assessors</li><li>• maintenance and trade persons.</li></ul>
<b>Wellness</b>	<p>See 'Health promotion'.</p>
<b>Workplace policies</b>	<p>Comprise written statements of employer's intentions and how the employers will action those intentions in the workplace. For example: OHS, access and equity, discrimination and manual handling.</p>

**Workplace inspection**

Process of examining the workplace, usually with the aid of a checklist, to identify hazards and level of compliance with workplace procedures.

*Some terms in the glossary have been taken from, or modified from the CCH Occupational Health and Safety Glossary, 1992 and National Guidelines for Integrating OHS Competencies into National Industry Competency Standards [NOHSC: 7025 (1998)] 2<sup>nd</sup> edition.*

This work is copyright and licensed under the AEShareNet Free for Education instant licence (AEShareNet-FfE Licence). The onus rests with you to ensure compliance with the AEShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AEShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AEShareNet-FfE Licence conditions should be directed to the AEShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AEShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

### Index of Competency Standard Units

In this Electrotechnology Training Package (UEE06) there are approximately 500 competency standard units, arranged into sixteen (16) disciplines for ease of presentation and to facilitate quick access and referencing for finding relevant competency standard units for users.

#### Disciplines

A – Assembly	I – Instrument and control
B – Broadcast	J – Refrigeration and air conditioning
C – Commercial	K – Renewable and sustainable energy
D – Computer systems	L – Imported
E – Cross discipline	M – Hazardous areas
F – Data and voice communications	N – Rail systems
G – Electrical	P – Restricted and specialist
H – Electronic	R – Research

All of the competency standard units have been developed in accordance with DEST requirements with minor enhancements. All Parts in Volume 2 of this Training Package form an integrated component of each competency standard unit and must be included when developing learning strategies and assessment processes. Importantly, each competency standard unit is interrelated and linked with the Definitions/Glossary and an Essential Knowledge and Associated Skills (EKAS) sections of the Volume. Each competency standard unit has listed within its essential knowledge and associated skills section a unique essential knowledge and associated skills clause number and title

EKAS have been separated from the competency standard units to facilitate user friendliness for interpretation, applicability and future maintenance, however the EKAS section forms an integral part of each competency standard unit, and all assessment evidence activities and reporting processes shall include and confirm achievement of the relevant EKAS specifications.

No competency standard unit is to be used in isolation or exported without these interrelated components.

For detailed information on competency standard units, including their structure, refer to *Volume 1, Part 1 Qualifications* and *Volume 1, Part 2 Competency Standards*.

#### Coding Structure

The competency standard units have been coded with a Discipline code. Units in any one Discipline may range across a number of AQF levels. Refer to the section covering the Qualification Structure of Volume 1 Part 1 Qualification Framework to determine the relevant unit(s) pertaining to the qualification(s) required.

Unit Number										
U	E	E	N	E	E	H	0	2	4	A
<b>Industry - EE-Oz Training Standards identifier</b>			<b>Training Package identifier</b>			<b>Discipline ← letters →</b>	<b>Unit Numbers 001 to 999</b>			<b>Version</b>

U = Utilities – DEST Identifier

EE = EE-Oz Training Standards – ElectroComms and EnergyUtilities Industry Skills Council Identifier

N = National – Training Package identifier

EE = Electrical and Electronics

H = Discipline (eg H = Electronic)

*Number* = unit number identifier

A = Version

### Possible Skill Clusters CSUs

Some competency standard units (CSUs) may appear within this section and/or within a qualification within this Training Package but they can be delivered and assessed independently of any qualification.

Typically, these CSUs relate to work functions associated with regulatory or specialised functions. They may augment or be incidental to existing competencies held by individuals or be required for workplace entry associated with OHS issues.

All of any prerequisite requirements must be met for each competency standard unit.

The independent competency standard units are listed in Volume1 Part 1 – Qualifications Framework. For the complete competency standard unit refer to the respective Discipline sections.

## Essential Knowledge and Associated Skills

### Introduction

The Essential Knowledge and Associated Skills (EKAS) play an integral part in each unit of competence and must be taken into account when developing learning strategies and assessment tools. This separate essential knowledge and associated skills forms an integral part of each competency standard unit, and all assessment evidence activities and reporting processes are to incorporate this specification. In determining strategies for delivery regard is to be had in the preferred use of industry EKAS learning specifications to assure consistency and reliability of outcomes. The information supplied below has been recommended by industry in providing the underpinning support towards deeming a person competent in a unit or units of competence.

### Outline of Essential Knowledge and Associated Skills construction

Since Essential Knowledge and Associated Skills can be common across some units, the Electrotechnology Industry has adopted a layout of incorporating Clause Numbers and Clause Titles in each unit of competency under Section 6.1. The numbers and titles have been group into Topics that best suit the industry and training providers. A Clause Number has been allocated for this Training Package. The number 2 aligns to this section of Volume 2 of the Training Package and the number following the dot point refers to the category as shown in the table below. The topic areas are as follows:

Clause number	Topic areas
2.1	Cables, conductors and terminations
2.2	Common, commercial, processes and enterprise specific knowledge and skills
2.3	Control technologies
2.4	Communications and computer technologies
2.5	Drawings, diagrams, schedules, manuals, standards and regulations
2.6	Electrical applications and apparatus
2.7	Electrical installations and systems
2.8	Electrical principles
2.9	Electronic principles and applications
2.10	Electronic communications technology
2.11	Equipment and tools

- 2.12 Instrumentation
- 2.13 Maintenance and repair
- 2.14 Rail signalling
- 2.15 Refrigeration and air conditioning apparatus
- 2.16 Refrigeration and air conditioning installations
- 2.17 Refrigeration and air conditioning principles and applications
- 2.18 Safety
- 2.19 Special requirements
- 2.20 Sustainable energy and environment
- 2.21 System, control and automated

### **ESI — Transmission Distribution and Rail Training Package**

- T2.4 HV Switching

### **Essential Knowledge and Associated Skills (EKAS) are detailed in Volume 2 — Part 2.2**

It includes two appendices mapping the relationship between Essential Knowledge and Associated Skills and Competency Standard Units and :

- **Appendix 1** — Competency Standard Units to Essential Knowledge and Associated Skills Relationship
- **Appendix 2** — Essential Knowledge and Associated Skills to Competency Standard Units Relationship

This information is provided to assist users in developing holistic training support materials for respective qualifications and/or competency standard units.

## UEENEEA001A Assemble electronic apparatus

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers fitting and inter connecting of electronic sub assemblies. It encompasses the safe use of hand tools, powered tools, identifying components, high reliability soldering, following set procedures and work instructions and keeping work records.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  There are no prerequisite competencies for this unit.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      3      Writing      3      Numeracy      3
<b>Application of the Unit</b>	<b>3)</b>  This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.
<b>License to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Assembly

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to assemble electronic components.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures for work preparation are followed</p> <p>1.3 Work instructions are obtained and understood</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others</p> <p>1.5 Materials required for work are obtained in accordance with established routines and procedures</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety</p>
2 Assemble electronic components.	<p>2.1 Established OHS risk control work measures are followed</p> <p>2.2 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Interconnections are made to comply with industry/enterprise standards.</p> <p>2.5 Work is completed in acceptable timeframe given environment and workplace conditions</p>
3 Check quality of assembled components.	<p>3.1 Established OHS risk control measures for work completion are followed</p> <p>3.2 Quality of assembled component is checked against enterprise/industry standards</p> <p>3.3 Prescribed solutions are used where corrective actions to assembled components are necessary</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and assembling electronic apparatus.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.11.2 Surface mount soldering techniques

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by assembling at least two different electronic apparatus consisting of a chassis, printed circuit board, adjustment components and interconnections in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble electronic apparatus as described in 7) and including:
    - A Following assembly instructions.
    - B Correctly selecting and placing components.
    - C Making connection without damaging components.
    - D Adhering to quality procedures.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEA002A Select electronic components

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
		<b>Developing and using skills within a real workplace</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 3.2

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEA002A Select electronic components

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers the identifying and selecting electronic components for assembly from job specifications. It encompasses working safely, interpreting job specifications, identifying components by colour code and markings and following quality procedures and work instructions.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  There are no prerequisite competencies for this unit.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      3      Writing      3      Numeracy      3
<b>Application of the Unit</b>	<b>3)</b>  This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.
<b>License to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Assembly

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to select electronic components.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> <p>1.3 Work instructions are obtained and understood.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.</p> <p>1.5 Materials required for the work are obtained in accordance with established routines and procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Select electronic components.	<p>2.1 Established OHS risk control work measures are followed.</p> <p>2.2 Electronic components are selected, sorted and placed in accordance with work instructions and established routines.</p> <p>2.3 Prescribed solutions are used to resolve issues with supply of component.</p> <p>2.4 Routine quality checks are conducted to ensure components comply with enterprise / industry standards.</p> <p>2.5 Work is completed in acceptable timeframe given environment and workplace conditions.</p>
3 Complete work report.	<p>3.1 Established OHS risk control measures for work completion are followed.</p> <p>3.2 Work report forms/data sheets on components are completed accurately.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and the selection of electronic components.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.1.1 Electronic component basics

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by selecting components for at least two different electronic apparatus consisting of a chassis, printed circuit board, adjustment components and interconnections in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Select electronic components as described in 7) and including:
  - A Following job specifications
  - B Identifying and selecting components
  - C Handling components without damaging them
  - D Adhering to quality procedures
  - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**  
This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in the selection of electronic components.

**Method of assessment**

**8.4)**  
This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEA001A Assemble electronic apparatus

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 3.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  1.5; 2.2	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2 3.3	2
-----------------------------------	---	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## UEENEEA003A Set up and check electronic component placement machines

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the setting up of electronic circuit board assembly machines. <b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.	
1	Prepare to set-up machine.	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures for work preparation are followed.
		1.3	Work instructions are obtained and understood
		1.4	Advice is sought from the work supervisor to ensure that work is co-ordinated effectively with others
		1.5	Materials required for the work are obtained in accordance with established routines and procedures
		1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2	Set-up machine.	2.1	Established OHS risk control work measures are followed
		2.2	Machines are checked as being isolated where necessary in strict accordance OHS requirements and procedures
		2.3	Electronic components are selected, sorted and placed in accordance with work instructions and established routines
		2.4	Machine is set up in accordance with routine instructions ensuring specified components are loaded correctly
		2.5	Prescribed solutions are used to resolve issues with supply of component
		2.6	Routine quality checks are conducted to ensure components comply with enterprise/industry standards
		2.7	Work is completed in acceptable timeframe given environment and workplace conditions
3	Complete work report.	3.1	Established OHS risk control measures for work completion are followed.
		3.2	Operational checks of machine are carried out in accordance with established routines to ensure quality outcome are met
		3.3	Work report forms/data sheets on components are completed accurately

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and setting up and checking electronic and component placement machines.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.16 Electronic component place equipment

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by setting up and checking electronic component machines in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Set-up and check electronic component placement machines as described in 7) and including:
  - A Following assembly job specifications.
  - B Identifying components.
  - C Handling components without damaging them.
  - D Conducting machine operation checks.
  - E Adhering to quality procedures.
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up and working pick and place machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEA001A Assemble electronic apparatus

UEENEEA002A Select electronic components

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  3.2	1
-----------------------------------	---	---

### **Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEA004A Rework electronic sub assemblies

### Unit Descriptor

1)

This unit covers correcting and or modifying electronic sub assemblies. It encompasses working safely, high reliability de-soldering/soldering, checking components against job specifications, testing and following quality procedures.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEA001A Assemble electronic apparatus

UEENEEA002A Select electronic components

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEE003A Solve problems in extra-low voltage single path circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Assembly

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare for rework.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 OHS risk control measures for work preparation are followed</p> <p>1.3 The nature of the rework is determined from documentation or from work supervisor to establish the scope of work to be undertaken</p> <p>1.4 Rework of subassemblies is coordinated with others involved in the work to ensure work schedules are met and safety measures are followed</p> <p>1.5 Sources of materials that may be required for the work are established in accordance with established procedures</p> <p>1.6 Tools and equipment required for rework are selected for their effectiveness and checked for correct operation and safety</p>
2 Carry out rework of sub assemblies.	<p>2.1 OHS risk control work measures and procedures are followed</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Components are de-connected and re-connected in accordance with principles and technology of connection methods used</p> <p>2.5 Work is carried out in compliance with quality procedures and enterprise/industry standards</p> <p>2.6 Rework of subassemblies is completed in acceptable timeframe and given environment and workplace conditions</p>
3 Check quality of reworked sub assemblies.	<p>3.1 OHS risk control measures for work completion are followed</p> <p>3.2 Quality of rework is checked against enterprise/industry standards</p>

- 3.3 Functional tests on reworked subassemblies are carried out in accordance with established routines
- 3.4 Actions are taken to rectify defects within the scope of established routines
- 3.5 Report forms/data sheets on rework of subassemblies are completed accurately

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and reworking electronic sub assemblies.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.6 Enterprise quality management system, basics
- 2.11.11.3 Printed circuit board repair techniques
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by reworking any electronic sub assembly in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in

a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Rework electronic sub assemblies as described in 7) and including:
    - A Following job specifications
    - B Using high reliability de-soldering/soldering techniques
    - C Removing and placing components without damage
    - D Adhering to quality procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in reworking electronic sub assemblies.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

Assembly

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.	
1	Prepare to conduct testing and inspection.	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	OHS risk control measures for work preparation are followed
		1.3	Documented apparatus functions and quality requirements are identified, obtained and understood
		1.4	Testing processes and procedures are reviewed and testing equipment is checked for correct operation and safety
		1.5	Apparatus testing and inspection is coordinated with others involved in the work to ensure work schedules are met and safety measures are followed
2	Conduct apparatus tests.	2.1	OHS risk control work measures and procedures are followed
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
		2.3	Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
		2.4	Testing is conducted in accordance with principles and technology of electrical measurement
		2.5	Test results are interpreted within the scope of required functionality and quality
3	Conduct apparatus inspection.	3.1	OHS risk control work measures and procedures are followed
		3.2	Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
		3.3	Apparatus is inspected for compliance with quality/industry standards
		3.4	Work is completed in acceptable timeframe and given environment and workplace conditions
4	Report on apparatus testing and inspection.	4.1	Recommendations on repairs to defects are reported within the scope of established procedures
		4.2	Report forms/data sheets on testing and inspection are completed accurately

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices, conducting functional and quality tests on assembled electronic apparatus.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.18 Electronic assembly functional and quality testing

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to conducting functional and quality tests on assembled electronic apparatus in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Conduct functional and quality tests on assembled electronic apparatus as described in 7) and including:
  - A Following job specifications.
  - B Selecting and using testing and measuring device correctly.
  - C Interpreting test results.
  - D Identifying visual defects.
  - E Reporting test results.
  - F Recommending appropriate actions for dealing with defect apparatus.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting functional and quality tests on assembled electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2; 3.3	2

**Skills Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEA006A Apply lead-free soldering techniques

**Unit Descriptor** 1)  
 This unit covers connecting/de-connecting electronic components using lead-free soldering. It encompasses working safely, high reliability soldering/de-soldering, checking components against job specifications, testing and following quality procedures.

**Prerequisite Unit(s)** 2)

**Competencies** 2.1)  
 There are no prerequisite competencies for this unit.

**Literacy and numeracy skills** 2.2)  
 Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

**Application of the Unit** 3)  
 This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training.

**License to practise** 3.1)  
 The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field** 4)  
 Assembly

### ELEMENT

### PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

- |   |  |     |  |
|---|--|-----|--|
| 1 | Prepare to carryout lead-free soldering.   | 1.1 | OHS procedures for a given work area are identified, obtained and understood   |
|   |  | 1.2 | OHS risk control measures for work preparation are followed  |
|   |  | 1.3 | The nature of the work is determined from documentation or from work supervisor to establish the scope of work to be undertaken                          |
|   |  | 1.4 | Work is coordinated with others involved in the work to ensure work schedules are met and safety measures are followed.                                  |
|   |  | 1.5 | Materials required for the work are sourced and check for compliance with lead-free soldering requirements and in accordance with established procedures |
|   |  | 1.6 | Tools and equipment required for the work are selected for their effectiveness and checked for correct operation and safety                              |
| 2 | Carry out lead-free soldering              | 2.1 | OHS risk control work measures and procedures are followed   |
|   |  | 2.2 | Knowledge of lead-free soldering characteristic and requirements are applied to soldering/de-soldering operations  |
|   |  | 2.3 | Components are connected and de-connected in accordance with lead-free soldering principles and technology   |
|   |  | 2.4 | Work is carried out in compliance with quality procedures and enterprise/industry standards  |
|   |  | 2.5 | Lead-free soldering is completed in acceptable timeframe and given environment and workplace conditions  |
| 3 | Check quality of lead-free soldering work. | 3.1 | OHS risk control measures for work completion are followed   |
|   |  | 3.2 | Quality of lead-free is checked against enterprise/ industry standards.  |
|   |  | 3.3 | Functional tests on lead-free soldered connections are carried out in accordance with established routines   |
|   |  | 3.4 | Actions are taken to rectify defects within the scope of established routines.   |
|   |  | 3.5 | Report forms/data sheets on lead-free soldering work are completed accurately  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and reworking electronic sub assemblies.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.6 Enterprise quality management system, basics

2.11.11.4 Lead-free soldering technology

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by applying lead-free soldering technology to any of the following in an environment designed specifically for the purpose.

- printed circuit board assembly,
- electronic sub-assembly rework,
- discrete component connections, and
- electronic equipment repair.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
- Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance

with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

Apply lead-free soldering technology as described in 7) and including:

- A Following job specifications
- B Using high reliability lead-free soldering/de-soldering techniques
- C Handling components without damage
- D Adhering to quality procedures
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in reworking electronic sub assemblies.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEA001A Assemble electronic apparatus

UEENEEA004A Rework electronic sub assemblies

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 3.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 3.3; 3.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 3.3; 3.4
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEA010A Assemble, mount and connect switchgear and controlgear

### Unit Descriptor

1)

This unit covers the assembling and mounting of switchgear and controlgear including the interconnections within a switchboard enclosure intended to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely, following standards, specifications and component manufacturers requirements, matching equipment with that specified, terminating cables and connecting wiring and completing necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the following competencies have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, schedules and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in a workplace specifically for the purpose of assembling control panels. In another workplaces a licence to practise may be required subject to regulation to undertake electrical work. However, practice in this unit is

subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Assembly

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to assemble, mount and connect switchgear and controlgear.	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures for work preparation are followed
		1.3	Work instructions, including layout and wiring diagrams, are obtained and understood.
		1.4	Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others
		1.5	Materials required for the work are obtained in accordance with established routines and procedures
		1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2	Assemble, mount and connect switchgear and controlgear.	2.1	Established OHS risk control work measures are followed
		2.2	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
		2.3	Switchgear/controlgear is fitted in accordance with work instructions, standards and established routines
		2.4	Interconnections are made in accordance with work instructions, standards and established routines
		2.5	Routine quality checks are carried out in accordance with work instructions
		2.6	Completed switchboard is tested against work instructions and industry standards and in strict accordance with OHS risk control measures
		2.7	Procedures for referring non-routine events to immediate supervisor for directions are followed

	2.8	Work is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy practices.
3	Check quality of assembled switchgear/controlgear.	<p>3.1 Established OHS risk control measures for work completion are followed</p> <p>3.2 Quality of assembled switchboard panel is checked against work instructions and industry standards and in accordance with established routines</p> <p>3.3 Prescribed solutions are used where corrective actions to assembled components are necessary</p> <p>3.4 Work report forms are completed accurately and appropriate person(s) notified in accordance with established routine</p>

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices, assembling, mounting and connecting switchgear and control gear.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.6.2	Alternating current rotating machines
2.6.24.1	Switchgear/controlgear
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by assembling at least two different control panels comprising more than essential services and general supply main switches, metering and sub main controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble, mount and connect switchgear and controlgear as described in 7) and including:
    - A Following assembly instructions.
    - B Correctly selecting and placing, switchgear and control gear.
    - C Making connection without damaging switchgear/control.
    - D Adhering to quality procedures.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling, mounting and connecting switchgear and controlgear.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEA012A Make up and assemble bus bars

### Unit Descriptor

1)

This unit covers fabricating and assembling copper and aluminium bus bar for interconnections in switchboards and for specific plant and that has high current demand. It encompasses working safely and to standards and specifications, measuring, cutting, shaping and fixing bus bar and completing necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the following competencies have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, schedules and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

**License to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in a workplace specifically for the purpose of making up and assembling bus bars. In other workplaces, a licence to practise may be required subject to regulation to undertake electrical work. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Assembly

**ELEMENT****PERFORMANCE CRITERIA**

**5)** Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to make up and assemble bus bars.	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures for work preparation are followed
		1.3	Work instructions including layout and wiring diagrams are obtained and understood
		1.4	Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others
		1.5	Materials required for the work are obtained in accordance with established routines and procedures
		1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2	Make up and assemble bus bars.	2.1	Established OHS risk control work measures are followed
		2.2	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
		2.3	Bus bars are formed/made up in accordance with work instructions, standards and established routines
		2.4	Bus bars are connected in accordance with work instructions, standards and established routines

- |   |                                      |   |   |
|---|--------------------------------------|---|---|
|   | 2.5                                  | Routine quality checks are carried out in accordance with work instructions   |   |
|   | 2.6                                  | Completed bus bar assembly is tested against work instructions and industry standards and in strict accordance with OHS risk control measures                     |   |
|   | 2.7                                  | Procedures for referring non-routine events to immediate supervisor for directions are followed   |   |
|   | 2.8                                  | Work is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy practices |   |
| 3 | Check quality of assembled bus bars. | 3.1   | Established OHS risk control measures for work completion are followed  |
|   |                                      | 3.2   | Quality of bus bar assembly is checked against work instructions and industry standards and in accordance with established routines |
|   |                                      | 3.3   | Prescribed solutions are used where corrective actions to assembled components are necessary  |
|   |                                      | 3.4   | Work report forms are completed accurately and appropriate person(s) notified in accordance with established routine                |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and making and assembling bus bars.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.1.5.2 | Bus bar techniques                        |
| 2.18.1  | Occupational Health and Safety principles |
| 2.18.2  | Electrical Safe Working practices         |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to making up at least two different bus bars assemblies one of which shall be custom made.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Making and assembling bus bars as described in 7) and including:
    - A Following assembly instructions.
    - B Forming and making up correctly.
    - C Terminating bus bars correctly.
    - D Adhering to quality procedures.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above in context of and specific resources for assessment, evidence should show demonstrated competency in the make up and assembly of bus bars.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEA013A Assemble and wire control panels

### Unit Descriptor

1)

This unit covers mounting control devices, wiring support in control panel enclosures and installing the interconnecting wiring. It encompasses working safely, following layout and circuit diagrams, mounting equipment, installing and terminating wiring, functional testing and completing necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the following competencies have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, schedules and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and Numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in a workplace specifically for the purpose of assembling control panels. In a other workplaces a licence to practise may be required subject to regulation to undertake electrical work. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Assembly

**ELEMENT****PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.	
1 Prepare to assemble and wire control panels.	1.1	OHS procedures for a given work area are identified, obtained and understood
	1.2	Established OHS risk control measures for work preparation are followed
	1.3	Work instructions, including layout and wiring diagrams, are obtained and understood.
	1.4	Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others
	1.5	Materials required for the work are obtained in accordance with established routines and procedures
	1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety
2 Assemble and wire control panels.	2.1	Established OHS risk control work measures are followed
	2.2	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3	Control panels components are fitted in accordance with work instructions, standards and established routines
	2.4	Interconnections are made in accordance with work instructions, standards and established routines
	2.5	Routine quality checks are carried out in accordance with work instructions
	2.6	Completed control panel is tested against work instructions and industry standards and in strict accordance with OHS risk control measures
	2.7	Procedures for referring non-routine events to immediate supervisor for directions are followed

	2.8	Work is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy practices
3	Check quality of assembled control panels.	3.1 Established OHS risk control measures for work completion are followed
	3.2	Quality of assembled control panel is tested against work instructions and industry standards and in accordance with established routines
	3.3	Prescribed solutions are used where corrective actions to assembled components are necessary
	3.4	Work report forms are completed accurately and appropriate person(s) notified in accordance with established routine

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices, assembling and wiring control panels.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.1.5.1	Power cable and conductor terminations
2.3.1	Electrical control devices
2.3.2	Control circuit fundamentals
2.6.8.2	Single & three-phase transformers
2.6.24.2	Control panel wiring
2.7.4.1	Electrical installations, protection methods and devices
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by assembling at least two different control panels comprising controls for more than two electrical machines, electro-mechanical and/or electronic control and devices such as relays, timers, logic controllers, indicators,

switches/push buttons and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

|---|-------------------------------------|--|
|   | 2.5                                 | Amateur radio communication station is operated in accordance with Standard Licence Operator’s level as prescribed by the Australian Communication Media Authority                                   |
|   | 2.6                                 | Methods for dealing with unexpected situations are selected on the basis of safety, discussions with appropriate persons and specified work outcomes   |
|   | 2.7                                 | Set-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles                                 |
| 3 | Maintain an Amateur Radio Station   |  |
|   | 3.1                                 | OHS work completion risk control measures and procedures are followed.   |
|   | 3.2                                 | Modules/sub-assemblies are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.  |
|   | 3.3                                 | Apparatus is dismantled and assembled in accordance with manufacturer guidelines.  |
|   | 3.4                                 | Repairs are affected efficiently without damage to other components, apparatus or circuits and in accordance with established procedures   |
|   | 3.5                                 | Repairs are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices                 |
|   | 3.6                                 | Apparatus is assembled in an appropriate sequence with all modules/sub-assemblies and parts correctly placed, secured and connected in accordance with manufacturer guidelines and industry practice |
|   | 3.7                                 | Repaired radio equipment, where appropriate, is tested and returned to service to ensure operating parameters are not exceeded   |
|   | 3.8                                 | Procedures for referring non-routine events to appropriate authorities are followed  |
|   | 3.9                                 | Work and operating area is cleaned and made safe in accordance with established procedures   |
| 4 | Identify and assemble amateur radio |  |
|   | 4.1                                 | Established OHS risk control measures and procedures for carrying out the work are followed  |

communication equipment and associated apparatus	4.2	Requirements for the item to be assembled are identified
	4.3	Item is assembled in accordance with established procedures and relevant engineering standards
	4.4	Assembled unit is tested to ensure that the operating parameters of the station will not be compromised
	4.5	Adjustments are made to the equipment where required to optimise reception
	4.6	Commission the equipment as constructed for on air performance.
	5 Complete work and maintain reports	5.1
5.2		Work site is cleaned and made safe in accordance with established procedures
5.3		Adjustment settings are documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out radio station operation, basic maintenance and assembly of radio communication equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.10.32 Amateur radio communication principles, practices, and technical overview

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to carrying out the operation and maintenance of an amateur radio communication station.

The operation and maintenance shall be limited to:

- the requirements as prescribed by the Australian Communications and Media Authority, Amateur Operator Certificate of Proficiency (Standard) Syllabus Documentation and Licence Conditions Determination, and

- Assembly of an antenna and power supply or equivalent item of apparatus to industry standards, that may include minor soldering

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

The Australian Communications and Media Authority and the Wireless of Australia have established agreed minimal assessment requirements for licensing of amateur radio stations, including the minimal requirements for assessors.

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required, regulatory requirements and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to

consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Operate and maintain an amateur radio station, dismantling and assembling apparatus and disconnecting and reconnecting components including:
    - A Following manufacturer service instructions and licence conditions determination for radio station assembly and dismantling, including transmitter, power, measurement and adjustment.
    - B Demonstrating on HF and VHF correct operating procedure as prescribed by the Australian Communications and Media Authority.

- C Connecting and disconnecting components to radio equipment manufacturer requirements and appropriate engineering requirements, including minor soldering
- D Identifying common types of transmission lines, coaxial connectors, antennas and symbols.
- E Assembling a radio frequency choke used for the elimination of potential interference.
- F Testing a coaxial cable for continuity and standing wave ratio, including explaining how to correct a high standing wave ratio, and demonstrating the use of a signal strength metre.
- G Demonstrating the correct use of voice repeaters with and without continuous tone coded squelch system (CTCSS) and/or dual tone multi frequency signalling.
- H Correctly using an amateur radio according to ACMA licence and standard operating procedures
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Relevant Australian and International standards for the assembly and operation of an amateur radio station.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling, dismantling and operating

an amateur radio station, including the assembly of an antenna, power supply unit or an equivalent circuit.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: NA	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.8

## Electrotechnology Training Package UEE06 – Version Number 1. Review Date 31 Dec 2008

© Commonwealth of Australia 2006

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Commercial</p>						

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Prepare to maintain documentation	1.1	Documentation requirements and methods for the organisation/enterprise are identified, obtained and understood
		1.2	Advice is sought from the work supervisor, when necessary, to ensure the work is correctly documented and coordinated effectively with others
		1.3	Forms required to document work are obtained in accordance with established routines and procedures
		1.4	OHS risk assessment and control measures are documented before work is commenced in accordance with established routine/procedures.
2	Maintain documentation.	2.1	Activities are documented promptly and at the appropriate time in accordance with established routine/procedures
		2.2	Documentation is checked for accuracy and clarity and any anomalies corrected
		2.3	Where applicable, signature is obtained from an appropriate person and the person's identification documented
		2.4	Where applicable, a copy of any required documentation is forwarded to an appropriate person in accordance with established routine/procedures
		2.5	Procedures for referring non-routine events to immediate supervisor for directions are followed

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining documentation.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records

2.2.20 Computer use basics

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by maintaining documentation in any electrotechnology enterprise information system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will

contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain documentation in any electrotechnology enterprise information system, including:
    - A Following enterprise documentation requirements.
    - B Enabling documentation to communicate clearly to others.
    - C Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining documentation.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with any unit or units that require formal documentation.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.1; 2.5

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.1; 1.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5

## **UEENEEC002A Source and purchase material/parts for installation or service jobs**

### **Unit Descriptor**

**1)**

This unit covers sourcing and purchasing/ordering materials/parts for installation or service jobs. It encompasses following job specification, using manufacturer’s catalogues, making telephone, internet or email enquiries, selecting compliance materials and completing the necessary purchasing documentation.

Note: In the unit the value of materials for installation jobs is limited to \$20k.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 3 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Commercial

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Establish the extent of the materials to be purchased.	1.1 OHS procedures for a given work area are identified, obtained and understood
	1.2 Established OHS risk control measures and procedures are followed
	1.3 The extent of installation or service work is determined from job specifications, drawings or results of service calls
	1.4 Materials required for the work are determined from job specifications or requirements resulting from service calls
	1.5 Materials or parts required are documented in accordance with established routine procedures
2 Source and purchase materials.	2.1 Sources of materials are obtained based on availability and price using catalogues, computers and/or telephone in accordance with established routine procedures
	2.2 Approval to purchase alternative materials/parts is sought from an appropriately qualified and authorised person
	2.3 Price for the supply of materials/parts, particularly non-standard high cost items, is sought in accordance with routine established procedures
	2.4 Approval to purchase materials or parts is obtained in writing from the customer or other authorised person in accordance with established routine procedures
	2.5 Purchases are initiated based on price and availability of materials/parts within the required timeframe and in accordance with established routine procedures
3 Document material purchases.	3.1 Material or part purchases are allocated against the appropriate jobs

- 3.2 Material or part purchases are documented in accordance with established routine procedures.

Note:

Prices to include discounts, GST and delivery costs

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and the sourcing and purchasing of material/parts for installation or service jobs.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.2.7 Enterprise purchasing systems
- 2.2.20 Computer use basics
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to sourcing and purchasing materials/parts for at least two installation job, two service job or one installation and one service job and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Source and purchase material/parts for installation or service jobs as described in 7) including:
    - A Establishing the extent of work on which purchases are to be based.
    - B Determining the material or parts required accurately.
    - C Using at least two methods to source materials.
    - D Obtaining quotations for supply of materials/parts.
    - E Obtaining approval to purchase.
    - F Establishing availability and arranging supply within the required timeframe.
    - G Documenting material/part purchases accurately.

- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in sourcing and purchasing of material/parts for installation or service jobs.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEED001A Use basic computer applications

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 2.3; 3.1; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.2; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.2

## **UEENEEC003A Provide quotations for installation or service jobs**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers providing quotations for installation and service work not exceeding \$20k. It encompasses following job specification, using manufacturer catalogues, making telephone, internet or email enquiries, selecting compliance materials, pricing materials and labour costs, completing the necessary quotation documentation and applying the necessary customer relations protocols.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 25%;">Reading</td> <td style="width: 5%;">4</td> <td style="width: 25%;">Writing</td> <td style="width: 5%;">4</td> <td style="width: 25%;">Numeracy</td> <td style="width: 5%;">4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4
Reading	4	Writing	4	Numeracy	4		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Commercial</p>						

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Establish the extent of the work.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed</p> <p>1.3 The extent of installation or service work is determined from job specifications and discussions with customer and/or other appropriate person(s)</p> <p>1.4 The extent of installation or service work on which a quotation is to be given is documented as a job specification and agreement sought with customer or other appropriate person(s)</p> <p>1.5 OHS and other regulatory requirements are incorporated in the work on which the quotation is based</p> <p>1.6 Requests for alterations to the job specification are negotiated with customer or other appropriate person(s) and within the constraints imposed by regulatory requirements</p> <p>1.7 A date by which the quotation is to be submitted is agreed with the customer and/or other appropriate person(s)</p>
2 Develop quotations.	<p>2.1 Material take-offs are performed accurately and checked against job specification(s)</p> <p>2.2 Materials, labour and other costs are determined from industry standard labour rates, enterprise costing arrangements and/or material suppliers</p> <p>2.3 Quotations are checked for accuracy in costing and against job specification</p>
3 Document and submit quotation.	<p>3.1 Quotation is documented in accordance with established policies and procedures</p> <p>3.2 Quotation is submitted to customer within by an agreed date</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and providing quotations for installation and service jobs

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

2.2.1	Enterprise communication methods
2.2.2	Enterprise work activities records
2.2.5	Enterprise customer relations protocols
2.2.8	Enterprise costing methods
2.2.10	Job costing techniques
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to providing at least one quotation for an installation job and one for a service job. The value of the jobs shall not exceed \$20k and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide quotations for installation and service jobs on at least two occasions as described in 7) including:
    - A Establishing the extent of work on which the quotation is to be based.
    - B Taking of material accurately.
    - C Costing the job appropriately.
    - D Checking the quotation.
    - E Documenting the quotation clearly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing quotations for installation or service jobs.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEED001A Use basic computer applications relevant to a workplace

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.6; 2.2; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.6; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.6; 2.1 to 2.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.6

## **UEENEEC004A Prepare specifications for the supply of materials and equipment for electrotechnology projects**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers writing technical specifications for the supply of materials and equipment for electrotechnology projects. It encompasses establishing the performance requirements, comparing requirements with available materials and equipment, specifying material and equipment performance requirements and documenting the specifications.						
<b>Prerequisite Unit(s)</b>	<b>2)</b>						
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.						
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">5</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">5</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">5</td> </tr> </table>	Reading	5	Writing	5	Numeracy	5
Reading	5	Writing	5	Numeracy	5		
<b>Application of the Unit</b>	<b>3)</b>  This unit is suitable for competency development employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.						
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.						
<b>Competency Field</b>	<b>4)</b>  Commercial						

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Establish performance and prescribed parameters of materials and equipment.	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	The extent of the work is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
		1.3	The performance and prescribed parameters of materials and equipment is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
		1.4	A date by which the materials and equipment is required is determined from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
		1.5	Activities are planned to meet scheduled timeframe in consultation with others involved in the work.
2	Prepare specifications for supply of materials and equipment.	2.1	Manufacturer specifications and limitations of materials and equipment are sought.
		2.2	Manufacturer specifications and limitations are compared with the established performance and prescribed parameters for materials and equipment.
		2.3	Sources and availability of materials and equipment are established in accordance with organisation policies and procedures.
		2.4	Specifications for the supply of materials and equipment, including required evidence of compliance are developed in accordance with enterprise policy.
		2.5	Additional services such as equipment set up/commissioning and training are incorporate in the specifications where relevant.
		2.6	Solutions to unplanned events are implemented consistent with enterprise policy.
3	Document and submit quotation.	3.1	Material and equipment supply documentation is forwarded to appropriate person for processing in accordance with enterprise policies.

3.2 Material and equipment supply documentation is filed in accordance with enterprise policies

---

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and preparing specifications for the supply of materials and equipment for electrotechnology projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

2.2.11.2 Specification development

2.18.1 Occupational Health and Safety principles

2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to preparing specifications for the supply of materials and equipment for at least two different electrotechnology projects exceeding \$20k and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. ### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Prepare specifications for the supply of materials and equipment for electrotechnology projects as described in 7) including:
    - A Ascertain the extent of the project accurately
    - B Establishing performance and prescribed parameters of materials and equipment
    - C Comparing material/equipment manufacturer specifications and limitations with the established performance and prescribed parameters accurately
    - D Including in the specifications required evidence of compliance
    - E Identifying the need for additional services and incorporating this in the specification
    - F Documenting the specifications clearly
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in preparing specifications for the supply of materials and equipment for electrotechnology projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEED001A Use basic computer applications relevant to a workplace

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.1	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 3.1	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEC005A Estimate electrotechnology projects**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers estimate material and labour costs for competitive quotation/tenders for work exceeding \$20k. It encompasses reading and understanding job specifications, material take-offs, determining labour and site requirements, costing and documenting.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      5      Writing      5      Numeracy      5
<b>Application of the Unit</b>	<b>3)</b>  This unit is suitable for competency development employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Commercial

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Ascertain the extent of the project.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p> <p>1.4 A date by which the estimate is to be completed is determined from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p> <p>1.5 Activities are planned to meet scheduled timeframe in consultation with others involved in the work.</p>
2 Estimate project.	<p>2.1 Material take-offs are performed accurately and checked against job specifications.</p> <p>2.2 Materials, labour and other costs are determined from industry standard labour rates, enterprise costing arrangements and /or material suppliers.</p> <p>2.3 Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.</p> <p>2.4 Estimates are checked and revised where necessary, for accuracy in costing and against job specification, in consultation with appropriate person(s).</p> <p>2.5 Solutions to unplanned events are implemented consistent with enterprise policy.</p>
3 Document and submit quotation.	<p>3.1 Project estimates are documented in accordance with established policies and procedures.</p> <p>3.2 Quotation is forwarded to appropriate person(s) for inclusion in a submission within the specified timeframe.</p> <p>3.3 Quotation documentation is filed in accordance with established policies and procedures.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and estimating electrotechnology projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.11.1 Estimating techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to estimating at least two electrotechnology projects for a competitive quotation/tender. The value of the jobs shall exceed \$20k and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Estimate electrotechnology projects as described in 7) including:
    - A Ascertaining the extent of the project accurately.
    - B Planning estimation work effectively.
    - C Estimating the job competitively.
    - D Checking the estimates accurately.
    - E Documenting the estimates clearly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in estimating electrotechnology projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEED001A Use basic computer applications relevant to a workplace

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.1	3

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5

## UEENEEC006A Prepare tender submissions for electrotechnology projects

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the preparation of tender documents. It encompasses reading and understanding tender requirements and project specifications, verifying estimates and capacity to meet timelines, complying with legal requirements and documenting submissions.</p>

### ELEMENT

### PERFORMANCE CRITERIA

<b>5) Elements describe the essential outcomes of a unit of competency</b>	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Ascertain tender requirements.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed.</p> <p>1.3 The extent of the work under the tender is determined from tender documents.</p> <p>1.4 Special conditions and requirements for lodging the tender are ascertained from tender documents.</p> <p>1.5 Appropriately competent person(s) is engaged to estimate material, labour and other costs.</p> <p>1.6 Activities are planned to meet specified tender closing date/time.</p>
2 Assemble tender submission.	<p>2.1 All inputs to the tender are obtained and checked with person(s) responsible for their development.</p> <p>2.2 Materials and human resources needed to complete the work under the conditions of the tender are confirmed with person(s) responsible.</p> <p>2.3 Legal advice is sought on contingent aspects of the tender.</p> <p>2.4 Contingency allowances are included in the tender in accordance with established policies and procedures.</p>
3 Document tender submission.	<p>3.1 Tender submission is documented in tender lodgement requirements and in accordance with established policies and procedures.</p> <p>3.2 Tender submission is checked for accuracy against tender documents and all other inputs and made ready for lodgement before the closing date/time.</p>

---

## REQUIRED SKILLS AND KNOWLEDGE

**6)** This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and preparing tender submissions. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

2.2.12 Tendering requirements

2.18.1 Occupational Health and Safety principles

2.18.8.2 Occupational Health and Safety, enterprise responsibilities

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to preparing tender submissions for at least two electrotechnology projects. The tenders apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where

- required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Prepare tender submissions for electrotechnology projects as described in 7) including:
    - A Ascertaining the extent of the work under the tender accurately
    - B Ascertaining special conditions and requirements for lodging the tender
    - C Planning tender submission work effectively
    - D Checking all input to the tender submission accurately
    - E Applying legal advise to contingent issues
    - F Documenting the tender submission ready for lodgement before the closing date/time
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in preparing tender submission for electrotechnology projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENED001A Use basic computer applications relevant to a workplace

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.1 to 2.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 2.1; 2.2	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: All	3

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5 to 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEC007A Manage contract variations

### Unit Descriptor

1)

This unit covers estimating and negotiating variations to contracted work. It encompasses understanding the specification on which the contracted price is based, identifying contract variations, negotiating and using methods for submitting variations, documenting and applying customer relations protocols.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Commercial

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Ascertain the terms of the contract.	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures are followed.
		1.3	The extent of the work under the original contract price is ascertained from tender submission/acceptance documents and associated work specifications, plans and diagrams.
		1.4	Arrangements under the contract for costing and claiming variations are ascertained from tender submission/acceptance and contract documents.
2	Manage contract variations.	2.1	The extent of a variation is determined and formal variation issued by the customer representative or other appropriate person.
		2.2	Variation is priced in accordance with the contract and established policies and procedures.
		2.3	Variation approvals are negotiated with reference to contract obligations of both parties and in accordance with established policies and procedures.
		2.4	Variation resolution proceeding is initiated for variations not agreed to by the client representative.
		2.5	Approved variations are submitted for payment promptly and in accordance with established policies and procedures.
		2.6	Variations documents are forwarded to appropriate person(s) within the organisation in accordance with established policies and procedures.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and managing contract variations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.11.1 Estimating techniques
- 2.2.14 Contracts, format, responsibilities and obligations

- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing at least five variations to electrotechnology contracts. The contracts may apply to any of the following electrotechnology disciplines

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire Protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that

can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s

- performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
- Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Manage contract variations as described in 7) including:
      - A Ascertaining the terms of the contract accurately.
      - B Ascertaining the contract arrangements for claiming variations.
      - C Pricing variation in accordance with the contract.
      - D Initiating variation resolution proceeding, where applicable.
      - E Negotiating contract variation approvals.
      - F Forwarding variation documentation appropriately.
      - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in managing contract variations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEED001A Use basic computer applications relevant to a workplace

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.1	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	3
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	2.4	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.5; 2.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4

## **UEENEEC008A      Receive and store materials and equipment for electrotechnology work**

### **Unit Descriptor**

**1)**

This unit covers the receiving and storing of materials and equipment for a construction site or workshop store. It encompasses receiving materials and equipment, checking consignment notes, storing materials and equipment and completing the necessary documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Note:**

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Receive materials and equipment.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control work measures and procedures are followed.
- 1.3 Documentation on pending material and equipment deliveries is read, and content and time of the delivery is understood.
- 1.4 Deliveries are checked against consignment documentation before they are received.
- 1.5 Discrepancies in deliveries are notified to work supervisor and supplier in accordance with established routines.
- 1.6 Materials and equipment are handled in strict accordance with OHS risk control work preparation measures and procedures.

2 Store materials and equipment.

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 Material and equipment are stored to prevent damage or loss in accordance with established routines.
- 2.3 Security of the stored materials and equipment is maintained in accordance with established routines.
- 2.4 Material and equipment documentation is forwarded to an appropriate person in accordance with established routine/procedures.

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and of receiving and storing materials and equipment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.2.9 Enterprise stock control methods
- 2.2.20 Computer use basics
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to receiving and storing materials and equipment for a construction site or workshop store.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Receive and store materials and equipment for electrotechnology work as described in 7) including:
    - A Determining content and time of pending deliveries from relevant documentation.
    - B Dealing with discrepancies in deliveries.

- C Storing and securing materials and equipment to prevent damage or loss.
- D Forwarding documentation appropriately.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in receiving and storing materials and equipment for electrotechnology work.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with any unit or units that require formal documentation.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.5

## **UEENEEC009A Provide quotations for inspection and compliance audit services**

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers providing quotations for compliance inspections and technical safety audits. It encompasses reading and understanding job specification, pricing labour and site costs, completing the necessary quotation documentation and applying the necessary customer relations protocols.</p>						
<b>Prerequisite Unit(s)</b>	<p>2)</p>						
<b>Competencies</b>	<p>2.1)</p> <p>Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">5</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">5</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">5</td> </tr> </table>	Reading	5	Writing	5	Numeracy	5
Reading	5	Writing	5	Numeracy	5		
<b>Application of the Unit</b>	<p>3)</p> <p>This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p>4)</p> <p>Commercial</p>						

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Establish the extent of the work.	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures are followed.
		1.3	The extent of inspection or audit service work is determined from job specifications and drawings and from discussions with customer and/or other appropriate person(s).
		1.4	The extent of inspection or audit service work on which a quotation is to be given is documented as a job specification and agreement sought with customer or other appropriate person(s).
		1.5	OHS and other regulatory requirements are incorporated in the work on which the quotation is based.
		1.6	A date by which the quotation is to be submitted is agreed with the customer and/or other appropriate person(s).
2	Develop quotations	2.1	Labour and other costs are determined from industry standard labour rates and/or enterprise costing arrangements.
		2.2	Costing is performed accurately and checked against job specifications.
		2.3	Quotations are checked for accuracy in costing and against job specifications.
3	Document and submit quotation.	3.1	Quotation is documented in accordance with established policies and procedures.
		3.2	Quotation is submitted to customer within by an agreed date.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and providing quotations for inspection and compliance audit services. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

2.2.1 Enterprise communication methods

- 2.2.2 Enterprise work activities records
- 2.2.5 Enterprise customer relations protocols
- 2.2.8 Enterprise costing methods
- 2.2.10 Job costing techniques
- 2.18.1 Occupational Health and Safety principles

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to providing at least one quotation for an inspection job and one for compliance audit. The value of the jobs shall not exceeding \$20k and may apply to any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

## **Critical aspects of evidence required to**

---

### **8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide quotations for inspection and compliance audit services as described in 7) including:
    - A Establishing the extent of work on which the quotation is to be based.
    - B Determining the extent of labour and other costs.
    - C Costing the job appropriately.
    - D Checking the quotation.
    - E Documenting the quotation clearly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and  
specific  
resources for  
assessment**
**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing quotations for inspection and compliance audit services.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENED001A Use basic computer applications relevant to a workplace

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1	3
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.3; 1.6; 2.2; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  All	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	1.3; 1.6; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.6; 2.1 to 2.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEC010A Deliver a service to customers

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the interacting with customers to identify and meet their service needs. It encompasses following community and enterprise policies and standards, identifying customer needs, identifying and resolving problems/issues and maintaining product/service quality.</p>

<b>Competency Field</b>	<p>4)</p> <p>Commercial</p>						

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Interact with customers.	<p>1.1 Communication with customers is conducted in a professional and courteous manner according to established procedures.</p> <p>1.2 Customer enquiries are responded to promptly and politely and in accordance with established procedures.</p> <p>1.3 Personal dress and presentation is maintained in line with established procedures.</p> <p>1.4 Appropriate interpersonal skills are used to facilitate accurate and relevant exchange of information.</p>
2 Identify customer needs.	<p>2.1 Customer needs are assessed so that priorities for service delivery can be identified in accordance with established procedures.</p> <p>2.2 Appropriate questioning and active listening are used to determine customer needs.</p> <p>2.3 Customers are provided with information about available options for meeting their needs and assisted to identify their preferred option.</p> <p>2.4 Personal limitations in addressing customer needs are identified and where appropriate assistance is sought from appropriate personnel.</p>
3 Deliver a service to customers.	<p>3.1 Prompt customer service is provided to meet identified needs in accordance with established procedures.</p> <p>3.2 Service provided follows OHS policies and procedures and work is appropriately sequenced in accordance with requirements.</p> <p>3.3 Service provided is coordinated effectively with others involved on the work site.</p> <p>3.4 Customer complaints are handled sensitively and courteously in accordance with established procedures.</p> <p>3.5 Opportunities to enhance the quality of service and products are identified and taken whenever possible.</p>

4	Evaluate and complete service.	4.1	Own work is monitored and adjusted according to requirements for job quality, customer service and efficient resource use.
		4.2	Customer service records are inspected and verified after service is completed to ensure requirements are met.
		4.3	Appropriate personnel are notified of the completion of the repair work and details are documented in accordance with established procedures and requirements.
		4.4	Variations in the quality of service and/or products from required standards are detected and reported in accordance with established procedures.
		4.5	Additional information or follow-up action is completed in line with customer needs.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and delivering a service to customers. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

2.2.1	Enterprise communication methods
2.2.2	Enterprise work activities records
2.2.4	Problem solving techniques
2.2.5	Enterprise customer relations protocols
2.2.6	Enterprise quality management system, basics
2.2.13	User instruction techniques
2.18.1	Occupational Health and Safety principles

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by delivering a service to customers in any of the electrotechnology disciplines.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

## **Critical aspects of evidence required to**

### **8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Deliver a service to customers as described in 7) including:
    - A Interacting with customers appropriately.
    - B Identifying customer needs accurately.
    - C Identifying and resolving customer issues promptly and amicably.
    - D Delivering a service.
    - E Reflecting on the completed service positively.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and  
specific  
resources for  
assessment****8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in delivering a service to customers.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with any unit or units that require formal documentation.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	1

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.2

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4

## UEENEEC012A Direct technical and non-technical enquiries to appropriate personnel

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers clarifying the nature of technical and non-technical enquiries of customers and co-workers and directing such enquiries to appropriate personnel. It encompasses working safely, applying appropriate knowledge to questioning enquirers, clarifying the point of an enquiry, directing enquiries appropriately and documenting actions.</p>						
<b>Prerequisite Unit(s)</b>	2)						
<b>Competencies</b>	<p>2.1)</p> <p>There are no prerequisite competencies for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 25%;">Reading</td> <td style="width: 5%;">3</td> <td style="width: 25%;">Writing</td> <td style="width: 5%;">3</td> <td style="width: 25%;">Numeracy</td> <td style="width: 5%;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p>3)</p> <p>This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p>4)</p> <p>Commercial</p>						

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Interact with customers and co-workers	1.1	Communication with customers is conducted in a professional and courteous manner according to established procedures.
		1.2	Customer/co worker enquiries are responded to promptly and politely and in accordance with established procedures.
		1.3	Appropriate interpersonal skills are used to facilitate accurate and relevant exchange of information.
2	Direct enquirers to appropriate personnel	2.1	Customer/co-worker enquiries are assessed to determine whether the enquiry is technical or non-technical.
		2.2	Appropriate questioning and active listening are used, drawing on general knowledge of the specific electrotechnology discipline, to determine the nature of the enquiry.
		2.3	Customers are directed to appropriate personnel to respond to the enquiry.
		2.4	Appropriate personnel to whom the enquiry is directed are informed of the nature of the enquiry and identity of the enquirer.
		2.5	All enquiries and how they were responded to are documented in accordance with routine procedures.

## **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and directing technical and non-technical enquiries to appropriate personnel.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.2.5 Enterprise customer relations protocols
- 2.2.6 Enterprise quality management system, basics

2.2.22 Enterprise work/business coverage

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to directing technical and non-technical enquiries to appropriate personnel in any of the electrotechnology disciplines.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will

contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Direct technical and non-technical enquiries to appropriate personnel as described in 7) including:
    - A Interacting with customers appropriately.
    - B Identifying nature of the enquiry accurately.
    - C Directing the enquirer to the appropriate personnel.
    - D Informing appropriate personnel of the enquiry.
    - E Documenting all enquiries in accordance with routine

procedures.

- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in directing technical and non-technical enquiries to appropriate personnel.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with any unit or units that require formal documentation.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.2; 2.2	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEC013A Participate in business equipment work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant,

machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT PERFORMANCE CRITERIA**

<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Comply with business equipment industry/enterprise work policies and procedures</p>	<p>1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.</p> <p>1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.</p> <p>1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.</p>
<p>2 Monitor and respond to a personal competency development plan.</p>	<p>2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.</p> <p>2.2 All components of the competency development plan are followed diligently.</p> <p>2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.</p> <p>2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.</p> <p>2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.</p> <p>2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.</p>

- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. This unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant state/territory training act seeking to complete the qualification. Incorporate therein is the requirement for deployment of an approved competency development (training) plan.

The Plan specifies the competency standard units, which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans

- Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance
    - Evaluation of progress against requisite stages of development towards competent performance
    - Implementation of remedial measures
    - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in business equipment work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved
    - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
    - F Reporting periodically the competency development

activities in accordance with requirements

- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- J Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC014A Participate in computer equipment work and competency development activities**

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the application of industry/enterprise policies in actively participating in work activities and in one’s own competency development. ### **ELEMENT**

### **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Comply with computer equipment industry/enterprise work policies and procedures	<p>1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.</p> <p>1.2 Clarification on how work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.</p> <p>1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.</p>
2 Monitor and respond to a personal competency development plan.	<p>2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.</p> <p>2.2 All components of the competency development plan are followed diligently.</p> <p>2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.</p> <p>2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.</p> <p>2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.</p> <p>2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.</p> <p>2.7 Obligations are met for periodic and timely reporting of competency development activities.</p> <p>2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

2.2.45	Responsibilities under a competency development plan
2.2.46	Methods of monitoring and reporting competency development activities
2.2.48	Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities

- Employee/Learner responsibilities
- Context of responsible parties:
  - Industry customs, work practices
  - Industry bodies – employer and employee representatives
  - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
  - Vocational and technical education system – AQF, credentials, AQTF
  - RTO training practices, requirements, administration, costs, and support services
- 2. Workplace practice and exposure:
  - Timely reporting of workplace exposures and practice
  - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- 3. Workplace evidence reporting:
  - Unit of work
  - Elements and performance of work
  - Range of items exposed to and practised on
  - Level of supervision received
  - Period of exposure
- 4. Workplace evidence validation:
  - Currency of evidence
  - Authenticity of evidence
  - Sufficiency of evidence
- 5. Workplace evidence reporting review:
  - Contribution towards progressive development for the qualification
  - Competency standard unit progressive reporting
  - Regular review of progress report
  - Timing of periodic monitoring/evaluation
  - Procedures for monitoring and analysing progress
  - Procedures for responding to anomalies in competency development
  - Procedures for liaison with the workplace supervisor
- 6. Periodic evaluation of competency development (training) progress:
  - Stages of progress that are to be met in developing competent performance
  - Evaluation of progress against requisite stages of development towards competent performance
  - Implementation of remedial measures
  - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in computer equipment work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved
    - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
    - F Reporting periodically the competency development

activities in accordance with requirements

- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- J Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC015A Participate in custom electronic installations work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Where the components of the custom electronic system are connected to the public telephone system facility, practice in the workplace is also subject to ACA regulations to undertake cabling work.

Note:

Units 'UEE NEEF001A and UEE NEEF002A provide the required skill and knowledge for registration in accordance with ACA

regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to OHS and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with custom electronic installations industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.

- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:

- Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training)

progress:

- Stages of progress that are to be met in developing competent performance
- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included

in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in custom electronic installations work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities

- D Seeking clarification of how particular work is to be carried out and the procedures involved
- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## REQUIRED SKILLS AND KNOWLEDGE

**6)** This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF

- RTO training practices, requirements, administration, costs, and support services
- 2. Workplace practice and exposure:
  - Timely reporting of workplace exposures and practice
  - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- 3. Workplace evidence reporting:
  - Unit of work
  - Elements and performance of work
  - Range of items exposed to and practised on
  - Level of supervision received
  - Period of exposure
- 4. Workplace evidence validation:
  - Currency of evidence
  - Authenticity of evidence
  - Sufficiency of evidence
- 5. Workplace evidence reporting review:
  - Contribution towards progressive development for the qualification
  - Competency standard unit progressive reporting
  - Regular review of progress report
  - Timing of periodic monitoring/evaluation
  - Procedures for monitoring and analysing progress
  - Procedures for responding to anomalies in competency development
  - Procedures for liaison with the workplace supervisor
- 6. Periodic evaluation of competency development (training) progress:
  - Stages of progress that are to be met in developing competent performance
  - Evaluation of progress against requisite stages of development towards competent performance
  - Implementation of remedial measures
  - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and

associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in voice and data communications work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved
    - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
    - F Reporting periodically the competency development activities in accordance with requirements
    - G Periodically reviewing progress of the competency development activities in accordance with requirements
    - H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
    - I Progressing successfully against periodic or staged evaluative performance events according to requirements
    - G Seeking assistance to overcome difficulties in developing competency

- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC017A Participate in appliance servicing work and competency development activities**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the application of industry/enterprise policies in actively participating in work activities and in one’s own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>

ELEMENT	PERFORMANCE CRITERIA	
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1 Comply with appliance servicing industry/enterprise work policies and procedures	1.1	Industry/enterprise policies and procedures for all work activities are identified and obtained.
	1.2	Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
	1.3	Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.
2 Monitor and respond to a personal competency development plan.	2.1	All aspects of the competency development plan are confirmed in consultation with appropriate persons.
	2.2	All components of the competency development plan are followed diligently
	2.3	Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
	2.4	Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
	2.5	Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
	2.6	Modifications to the personal competency development plan are made in consultation with appropriate persons.
	2.7	Obligations are met for periodic and timely reporting of competency development activities.
	2.8	Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

2.2.45	Responsibilities under a competency development plan
2.2.46	Methods of monitoring and reporting competency development activities
2.2.48	Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities

- Employee/Learner responsibilities
- Context of responsible parties:
  - Industry customs, work practices
  - Industry bodies – employer and employee representatives
  - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
  - Vocational and technical education system – AQF, credentials, AQTF
  - RTO training practices, requirements, administration, costs, and support services
- 2. Workplace practice and exposure:
  - Timely reporting of workplace exposures and practice
  - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- 3. Workplace evidence reporting:
  - Unit of work
  - Elements and performance of work
  - Range of items exposed to and practised on
  - Level of supervision received
  - Period of exposure
- 4. Workplace evidence validation:
  - Currency of evidence
  - Authenticity of evidence
  - Sufficiency of evidence
- 5. Workplace evidence reporting review:
  - Contribution towards progressive development for the qualification
  - Competency standard unit progressive reporting
  - Regular review of progress report
  - Timing of periodic monitoring/evaluation
  - Procedures for monitoring and analysing progress
  - Procedures for responding to anomalies in competency development
  - Procedures for liaison with the workplace supervisor
- 6. Periodic evaluation of competency development (training) progress:
  - Stages of progress that are to be met in developing competent performance
  - Evaluation of progress against requisite stages of development towards competent performance
  - Implementation of remedial measures
  - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in appliance servicing work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved
    - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
    - F Reporting periodically the competency development

activities in accordance with requirements

- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

This unit shall be assessed concurrently with other units in a qualification.

UEENEEJ061A      Verify compliance and functionality of appliances

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

**Skills Enabling  
Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC018A Participate in electrical machine repair work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in

various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with electrical machine repair industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.

- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance

- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in electrical machine repair work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved

- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC019A Participate in switchgear and controlgear work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in

various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Comply with switchgear and controlgear industry/enterprise work policies and procedures</p>	<p>1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.</p> <p>1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.</p> <p>1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.</p>
<p>2 Monitor and respond to a personal competency development plan.</p>	<p>2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.</p> <p>2.2 All components of the competency development plan are followed diligently.</p> <p>2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.</p> <p>2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.</p> <p>2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.</p>

- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance

- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in switchgear and controlgear work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved

- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## UEENEEC020A Participate in electrical work and competency development activities

### Unit Descriptor

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG005A    Verify compliance and functionality of general electrical installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with electrical industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.

- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance

- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in electrical work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved

- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

This unit shall be assessed concurrently with other units in a qualification.

UEENEEG005A Verify compliance and functionality of general electrical installations

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC021A Participate in electronics and communications work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States and Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with electronics and communications industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.

- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
  - Timely reporting of workplace exposures and practice
  - Supervisor confirmation of workplace exposures and practices in a structured workplace report
3. Workplace evidence reporting:
  - Unit of work
  - Elements and performance of work
  - Range of items exposed to and practised on
  - Level of supervision received
  - Period of exposure
4. Workplace evidence validation:
  - Currency of evidence
  - Authenticity of evidence
  - Sufficiency of evidence
5. Workplace evidence reporting review:
  - Contribution towards progressive development for the qualification
  - Competency standard unit progressive reporting
  - Regular review of progress report
  - Timing of periodic monitoring/evaluation
  - Procedures for monitoring and analysing progress
  - Procedures for responding to anomalies in competency development
  - Procedures for liaison with the workplace supervisor

6. Periodic evaluation of competency development (training) progress:
  - Stages of progress that are to be met in developing competent performance
  - Evaluation of progress against requisite stages of development towards competent performance
  - Implementation of remedial measures
  - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in electronics and communications work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities

- D Seeking clarification of how particular work is to be carried out and the procedures involved
- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of**

**8.4)**

**assessment**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC022A Participate in fire protection control work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. **ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with fire protection control industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.

- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance

- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in fire protection control work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved

- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC023A      Participate in gaming electronic work and competency development activities**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the application of industry/enterprise policies in actively participating in work activities and in one’s own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.</p>						
<b>Prerequisite Unit(s)</b>	<b>2)</b>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed with core and nominated elective units in a qualification.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 25%;">Reading</td> <td style="width: 5%;">4</td> <td style="width: 25%;">Writing</td> <td style="width: 5%;">4</td> <td style="width: 25%;">Numeracy</td> <td style="width: 5%;">4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4
Reading	4	Writing	4	Numeracy	4		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.</p> <p>Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p> <p style="text-align: center;">Note:</p> <p style="text-align: center;">1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as</p>						

elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>	
<p>1 Comply with gaming electronic industry/enterprise work policies and procedures</p>	<p>1.1</p>	<p>Industry/enterprise policies and procedures for all work activities are identified and obtained.</p>
	<p>1.2</p>	<p>Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.</p>
	<p>1.3</p>	<p>Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.</p>
<p>2 Monitor and respond to a personal competency development plan.</p>	<p>2.1</p>	<p>All aspects of the competency development plan are confirmed in consultation with appropriate persons.</p>
	<p>2.2</p>	<p>All components of the competency development plan are followed diligently.</p>
	<p>2.3</p>	<p>Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.</p>
	<p>2.4</p>	<p>Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.</p>
	<p>2.5</p>	<p>Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.</p>
	<p>2.6</p>	<p>Modifications to the personal competency development plan are made in consultation with appropriate persons.</p>

- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development

- (training) plans
- Parties involved in the competency development (training) plan
- Responsibilities of Parties:
  - RTO responsibilities
  - Role of State Training Authority (STA)
  - Employer responsibilities
  - Employee/Learner responsibilities
- Context of responsible parties:
  - Industry customs, work practices
  - Industry bodies – employer and employee representatives
  - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
  - Vocational and technical education system – AQF, credentials, AQTF
  - RTO training practices, requirements, administration, costs, and support services
- 2. Workplace practice and exposure:
  - Timely reporting of workplace exposures and practice
  - Supervisor confirmation of workplace exposures and practices in a structured workplace report
- 3. Workplace evidence reporting:
  - Unit of work
  - Elements and performance of work
  - Range of items exposed to and practised on
  - Level of supervision received
  - Period of exposure
- 4. Workplace evidence validation:
  - Currency of evidence
  - Authenticity of evidence
  - Sufficiency of evidence
- 5. Workplace evidence reporting review:
  - Contribution towards progressive development for the qualification
  - Competency standard unit progressive reporting
  - Regular review of progress report
  - Timing of periodic monitoring/evaluation
  - Procedures for monitoring and analysing progress
  - Procedures for responding to anomalies in competency development
  - Procedures for liaison with the workplace supervisor
- 6. Periodic evaluation of competency development (training) progress:
  - Stages of progress that are to be met in developing competent performance
  - Evaluation of progress against requisite stages of development towards competent performance
  - Implementation of remedial measures
  - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in gaming electronic work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved
    - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
    - F Reporting periodically the competency development

activities in accordance with requirements

- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies****8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC024A Participate in instrumentation and control work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification

UEENEEI012A      Verify compliance and functionality of process control installations

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as

elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with instrumentation and control industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.

- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development

- (training) plans
- Parties involved in the competency development (training) plan
- Responsibilities of Parties:
  - RTO responsibilities
  - Role of State Training Authority (STA)
  - Employer responsibilities
  - Employee/Learner responsibilities

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in instrumentation and control work and competency development activities as detailed in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved
    - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person

- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop

and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

This unit shall be assessed concurrently with other units in a qualification.

UEENEEI012A      Verify compliance and functionality of process control installations

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC025A Participate in refrigeration and air conditioning work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification

UEENEEJ009A      Verify compliance and functionality of refrigeration and air conditioning installations

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the

operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with refrigeration and air conditioning industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.

- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance

- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in refrigeration and air conditioning work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved

- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

This unit shall be assessed concurrently with other units in a qualification.

UEENEEJ009A      Verify compliance and functionality of refrigeration and air conditioning installations

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## UEENEEC026A Participate in security equipment work and competency development activities

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.</p>

<b>Application of the Unit</b>	<p>3)</p> <p>This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.</p> <p>Practice of this unit in the workplace is subject to State and Territory Security Industry regulations. Where the security system has a call-back-to-base facility practice in the workplace is also subject to ACA regulations to undertake cabling work.</p> <p style="margin-left: 40px;">Note: Units 'UEENEEF001A and UEENEEF002A provide the required skill and knowledge for registration in</p>						

accordance with ACA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with security equipment industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are obtained
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued

- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan.
- 2.2.46 Methods of monitoring and reporting competency development activities.
- 2.2.48 Enterprise work activities policies and procedures.

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes

required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
  - Timely reporting of workplace exposures and practice
  - Supervisor confirmation of workplace exposures and practices in a structured workplace report
3. Workplace evidence reporting:
  - Unit of work
  - Elements and performance of work
  - Range of items exposed to and practised on
  - Level of supervision received
  - Period of exposure
4. Workplace evidence validation:
  - Currency of evidence
  - Authenticity of evidence
  - Sufficiency of evidence
5. Workplace evidence reporting review:
  - Contribution towards progressive development for the qualification
  - Competency standard unit progressive reporting
  - Regular review of progress report

- Timing of periodic monitoring/evaluation
  - Procedures for monitoring and analysing progress
  - Procedures for responding to anomalies in competency development
  - Procedures for liaison with the workplace supervisor
6. Periodic evaluation of competency development (training) progress:
- Stages of progress that are to be met in developing competent performance
  - Evaluation of progress against requisite stages of development towards competent performance
  - Implementation of remedial measures
  - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on

the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in security equipment work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and

support service policies and procedures provided by the RTO to all vocational and technical education activities

- D Seeking clarification of how particular work is to be carried out and the procedures involved
- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and

following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 1.3;

## **UEENEEC027A Participate in rail communications and networks work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as

confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with rail communications and networks industry/enterprise work policies and procedures

1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.

1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.

1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.

2.2 All components of the competency development plan are followed diligently.

2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.

2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.

2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.

2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.

2.7 Obligations are met for periodic and timely reporting of competency development activities.

- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan

- Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance
    - Evaluation of progress against requisite stages of development towards competent performance
    - Implementation of remedial measures
    - Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in rail communications and networks work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved
    - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person

- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop

and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**  
Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## UEENEEC028A Participate in hazardous areas work and competency development activities

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.</p>						
<b>Prerequisite Unit(s)</b>	2)						
<b>Competencies</b>	<p>2.1)</p> <p>Competency in this unit shall be assessed with core and nominated elective units in a qualification.</p>

<b>Application of the Unit</b>	<p>3)</p> <p>This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.</p> <p>Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p> <p style="margin-left: 40px;">Note:</p> <p style="margin-left: 40px;">1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as</p>						

elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with hazardous areas industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.
- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.

- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)
  - Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development

- (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in hazardous areas work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved
    - E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
    - F Reporting periodically the competency development

activities in accordance with requirements

- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

## **UEENEEC029A Participate in explosion-protected equipment overhaul work and competency development activities**

### **Unit Descriptor**

1)

This unit covers the application of industry/enterprise policies in actively participating in work activities and in one's own competency development. It complies with established industry/enterprise procedures regarding how work is conducted, understanding responsibilities and obligations under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed with core and nominated elective units in a qualification.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to a recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulation for undertaking electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various

jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Commercial

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Comply with explosion-protected equipment overhaul industry/enterprise work policies and procedures

- 1.1 Industry/enterprise policies and procedures for all work activities are identified and obtained.
- 1.2 Clarification on how particular work is to be carried out and the procedures involved is sought from the immediate supervisor/appropriate person.
- 1.3 Unexpected situations are dealt with safely and in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person.

2 Monitor and respond to a personal competency development plan.

- 2.1 All aspects of the competency development plan are confirmed in consultation with appropriate persons.
- 2.2 All components of the competency development plan are followed diligently.
- 2.3 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued.
- 2.4 Assistance is sought from appropriate persons to overcome difficulties in developing skills and applying knowledge relevant to a particular competency.
- 2.5 Progress in competency development is self-monitored against the competency development plan and industry/enterprise policies and procedures.

- 2.6 Modifications to the personal competency development plan are made in consultation with appropriate persons.
- 2.7 Obligations are met for periodic and timely reporting of competency development activities.
- 2.8 Periodic competency development activities report is validated by an appropriate person in accordance with industry/enterprise policies and procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of the unit.

- 2.2.45 Responsibilities under a competency development plan
- 2.2.46 Methods of monitoring and reporting competency development activities
- 2.2.48 Enterprise work activities policies and procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated following the completion of a range of performance process activities that contribute to assisting in the evaluation of progress towards the development of competency. The unit applies to those engaged in employment-based programs covered by an approved contract of training under a relevant State/Territory training Act seeking to complete the qualification. Incorporated therein is the requirement for deploying an approved competency development (training) plan.

The Plan specifies the units which are to be attained to complete the qualification. This unit is a core requirement for the completion of the qualification. It encompasses the processes required to participate in the development of competence by an apprentice/learner in the industry and in particular the activities associated with performance in the workplace and in vocational and technical education. It includes but is not limited to recognising and participating in:

1. The competency development plan:
  - Context of the plan
  - State/Territory regulatory requirements (Acts/Regulations)

- Competency development (training) contracts
  - Competency development (nominal training) period
  - Purpose of competency development (training) plans
  - Process in developing competency development (training) plans
  - Parties involved in the competency development (training) plan
  - Responsibilities of Parties:
    - RTO responsibilities
    - Role of State Training Authority (STA)
    - Employer responsibilities
    - Employee/Learner responsibilities
  - Context of responsible parties:
    - Industry customs, work practices
    - Industry bodies – employer and employee representatives
    - Regulatory bodies, including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
    - Vocational and technical education system – AQF, credentials, AQTF
    - RTO training practices, requirements, administration, costs, and support services
2. Workplace practice and exposure:
    - Timely reporting of workplace exposures and practice
    - Supervisor confirmation of workplace exposures and practices in a structured workplace report
  3. Workplace evidence reporting:
    - Unit of work
    - Elements and performance of work
    - Range of items exposed to and practised on
    - Level of supervision received
    - Period of exposure
  4. Workplace evidence validation:
    - Currency of evidence
    - Authenticity of evidence
    - Sufficiency of evidence
  5. Workplace evidence reporting review:
    - Contribution towards progressive development for the qualification
    - Competency standard unit progressive reporting
    - Regular review of progress report
    - Timing of periodic monitoring/evaluation
    - Procedures for monitoring and analysing progress
    - Procedures for responding to anomalies in competency development
    - Procedures for liaison with the workplace supervisor
  6. Periodic evaluation of competency development (training) progress:
    - Stages of progress that are to be met in developing competent performance

- Evaluation of progress against requisite stages of development towards competent performance
- Implementation of remedial measures
- Periodic progress report formally confirmed to parties

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of the unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Participate in explosion-protected equipment overhaul work and competency development activities as described in 7) including:
    - A Identifying and confirming the context, requirements and responsibilities of the competency development (training) plan to be met
    - B Identifying and confirming the critical industry, enterprise and regulatory policies, procedures and context applicable to all work activities
    - C Identifying and confirming the applicable training practices, requirements, administration, costs and support service policies and procedures provided by the RTO to all vocational and technical education activities
    - D Seeking clarification of how particular work is to be carried out and the procedures involved

- E Dealing with unexpected situations in accordance with industry/enterprise policies and procedures, and with the approval of an authorised person
- F Reporting periodically the competency development activities in accordance with requirements
- G Periodically reviewing progress of the competency development activities in accordance with requirements
- H Pursuing strategies to develop opportunities for gaining the range of workplace experiences and exposure
- I Progressing successfully against periodic or staged evaluative performance events according to requirements
- G Seeking assistance to overcome difficulties in developing competency
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment it must ensure that the conditions for assessment are authentic and as far as possible reproduce and replicate the workplace and is consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

Competency in this unit shall be assessed concurrently with the all core and nominated elective units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular Key Competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 2.3; 2.4; 2.7;	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.7;	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2;	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3;

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

Training Copyright

## **UEENEED001A Use basic computer applications relevant to a workplace**

### **Unit Descriptor**

1)

This unit covers the basic use of personal computers application relevant to a work function. It encompasses switching the computer on, applying user preferences, selecting basic applications, entering and retrieving information and printing files.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to use computer applications.</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.</p> <p>1.2 Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.</p> <p>1.3 Information required for the use of the application is obtained from appropriate sources.</p> <p>1.4 Computer is started up and desktop icons are manipulated to access desired application, directories and files.</p> <p>1.5 On-screen instructions in relation to any anomaly such as a virus warning are followed.</p> <p>1.6 Help directory is used to resolve any straightforward start up or access issues or anomalies.</p>
<p>2 Use computer basic application.</p>	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Information is added, altered or deleted as needed in accordance with application user instructions.</p> <p>2.3 Routine checks are made to ensure accuracy of information in accordance with quality requirements.</p>
<p>3 Output information from an application.</p>	<p>3.1 Completed files are stored appropriately in accordance with enterprise requirements.</p> <p>3.2 Files are printed for a formal record and/or to forwarded to others.</p> <p>3.3 Files are sent via email in a readable format.</p>
<p>4 Shut down computer.</p>	<p>4.1 Files are named, arranged, saved and backed up in accordance with enterprise requirements.</p> <p>4.2 Computer shutdown procedures are followed and computer switched off.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices using basic computer applications relevant to a workplace.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.20 Computer use basics

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall/may be demonstrated in relation to at least three of the following using computer applications to produce, store and forward engineering related reports and/or results at a basic level.

- Word processing
- Spread sheet
- Drawings
- Business management
- Apparatus set-up
- Note:  
Apparatus set-up applications are invariably vendor specific and include icon-based integration and control applications.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range

statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Use basic computer applications relevant to workplace as described in 7) and including:
    - A Correctly starting-up a computer.
    - B Dealing with anomalies appropriately.
    - C Following application instructions to input and output information.
    - D Storing information appropriately.
    - E Outputting information to a printer.
    - F Forwarding information via email and/or web mail in a readable format.
    - G Producing, storing and forwarding engineering related reports and/or results using at least three computer applications according to requirements
    - H Shutting down a computer correctly
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency to produce, store and forward engineering related reports and/or results using a range of computer applications.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2; 3.3	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEED002A Assemble, set up and test personal computers

### Unit Descriptor

1)

This unit covers assembly, setting up and testing personal computers as directed in computer service manuals. It encompasses safe working practices, checking computer components, assembling components to form a basic personal computer, installing and testing basic operating system, drivers and application software, following written and oral instruction and applying customer relations procedures.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE007A Use drawings, diagrams, schedules and manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment formally-acquired competencies.

**Licence to practise**

**3.1)**

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking electrical work. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field**

**4)**

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Assemble personal computer.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.
- 1.3 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.4 Computer, components, operating system and application software are obtained in accordance with established routines and checked as meeting requirements.
- 1.5 Computer components are assembled and connected in accordance with manufacturer instructions.
- 1.6 Routine quality checks are carried out in accordance with work instructions.
- 1.7 Procedures are followed for referring non-routine events to immediate supervisor for directions.

2 Install operating system and application software.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Computer is started up and on-screen instructions for the installation of the operating system to default configuration are followed, including drivers.
- 2.3 Application software is installed to default configuration following on-screen installation instruction.

- |   |     |   |
|---|-----|---|
|   | 2.4 | Computer shutdown procedures are followed and computer switched off.  |
|   | 2.5 | Routine quality checks are carried out in accordance with work instructions.  |
|   | 2.6 | Procedures for referring non-routine events to immediate supervisor for directions are followed.  |
| 3 | 3.1 | Test computer operation.<br>Established OHS risk control measures and procedures for carrying out the work are followed.  |
|   | 3.2 | Computer is switched on and start-up procedures are followed and checked.   |
|   | 3.3 | Operating system and application programs are checked to be opening and operating correctly.  |
|   | 3.4 | Faults are identified as being the result of faulty hardware or software.   |
|   | 3.5 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.                  |
|   | 3.6 | Faults are rectified in accordance with computer hardware, operating system and application instructions.   |
|   | 3.7 | Procedures for referring non-routine events to immediate supervisor for directions are followed.  |
|   | 3.8 | Computer shutdown procedures are followed and computer switched off.  |
|   | 3.9 | Work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. |
| 4 | 4.1 | Complete work and report.<br>OHS risk control work completion measures and procedures are followed.   |
|   | 4.2 | Work area is cleaned and made safe in accordance with established procedures.   |
|   | 4.3 | Work supervisor is notified of the completion of the work in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices, assembling, setting-up and testing personal computers.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.11 Personal computers, hardware structure
- 2.4.12.1 Computer hardware sub-assemblies
- 2.4.14 Personal computer operating systems, basics
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembling, setting-up, test and rectifying faults in a personal computer for single user operation and not intended to be connected to a network. Hardware faults rectification is confined to replacement of subassemblies and interconnections. Software faults rectification is confined to resetting default configuration.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble, set up and test personal computers as described in 7) and including:
    - A Correctly connecting computer, components and peripherals.
    - B Installing a basic operating system for single user operation.
    - C Installing application software to default configuration.
    - D Testing computer operation.
    - E Identifying and rectifying interconnection faults.
    - F Shutting down a computer correctly.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling, setting up and testing personal computers.

### **Method of assessment**

#### **8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

### Concurrent assessment and relationship with other units

#### 8.5)

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE007A	Use drawings, diagrams, schedules and manuals

### Key competencies

#### 8.6)

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.2; 3.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	3.4 to 3.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.2 to 3.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5; 2.2 to 2.4; 3.2 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6; 3.7

## UEENEED003A Evaluate and modify programs written in object oriented code

### Unit Descriptor

1)

This unit covers evaluating and modifying programs based on object-oriented code. It encompasses safe working practices, following written and oral instruction and procedures, applying knowledge of object-oriented code scripting and testing and documenting outcomes.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED001A Use basic computer applications relevant to a workplace

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to evaluate and modify programs written in object oriented code.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of program modification work is determined from job performance specifications and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Appropriate development kit and software are selected based on specified requirements and performance standard.</p> <p>1.6 Strategies are implemented to ensure programming is carried out efficiently.</p>
<p>2 Evaluate and modify programs written in object oriented code.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of computer function features are applied to object oriented programming.</p> <p>2.3 Correct syntax is applied to evaluating and modifying.</p> <p>2.4 Key features of the an object orientated programming language are applied to evaluation and modification. (See Note)</p> <p>2.5 Approaches to issues/problems are analysed to provide most effective solutions.</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.</p>
<p>3 Test and document modified programs written in object oriented code.</p>	<p>3.1 Procedures are developed to test modified programming.</p> <p>3.2 Problems and bugs in code are rectified to ensure specification in the creation of the code is met.</p> <p>3.3 Intermediate and final work reports are written in accordance with professional standards, and presented to appropriate person(s).</p>

Note.

Key features include object; class; instance; member data/fields; member attributes/methods and local variables.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating and modifying programs written in object oriented code.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.43.1 Object oriented programming basics

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any object oriented programming language including the following features.

- Graphical User Interfaces
- Applets and graphics
- Exceptions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Evaluate and modify programs written in object oriented code as described in 7) and including:
    - A Using key features of object oriented programming to evaluate and modify program.
    - B Modifying three programs' features.
    - C Developing testing procedures.
    - D Identifying problem and bugs in code.
    - E Rectifying problem and bugs in code.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in evaluating and modifying programs written in object oriented code.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

The critical aspects of Occupational Health and Safety covered in UEENEEE001A and other discipline specific Occupational Health and Safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	2.1 to 3.2	3
--	------------	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.6; 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.1; 3.2

## UEENEED004A Use engineering applications software

### Unit Descriptor

1)

This unit covers the use of computers application relevant to engineering support work functions. It encompasses installing software, applying user preferences, using application menus and tools, entering and retrieve information, working with groups and transferring and printing files.

Note:

Examples of engineering application software are Visio, Electronic Work Bench, LabView

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

### ELEMENT

5) Elements describe the essential outcomes of a unit of competency

### PERFORMANCE CRITERIA

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

- |   |   |     |   |
|---|---|-----|---|
| 1 | Prepare to use computer applications.   | 1.1 | OHS procedures for a given work area are identified, obtained and understood through established routines and procedures. |
|   |   | 1.2 | Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.               |
|   |   | 1.3 | Application software and information required for its installation and use is obtained from appropriate sources.          |
|   |   | 1.4 | Application software is installed to default configuration following on-screen installation instruction.                  |
|   |   | 1.5 | On-screen instructions in relation to any anomaly such as a virus warning are followed.                                   |
|   |   | 1.6 | Help directory is used to resolve any straightforward start up or access issues or anomalies.                             |
| 2 | Use engineering application software.   | 2.1 | Established OHS risk control measures and procedures for carrying out the work are followed.                              |
|   |   | 2.2 | Techniques that apply to a particular software package are used to produce appropriate files.                             |
|   |   | 2.3 | Routine checks are made to ensure accuracy of information in accordance with quality requirements.                        |
| 3 | Output information from an application. | 3.1 | Completed files are stored appropriately in accordance with enterprise requirements.                                      |
|   |   | 3.2 | Files are printed for formal records and/or to forwarded to others.   |
|   |   | 3.3 | Files are sent via email in a readable format.  |
| 4 | Shut down computer.                     | 4.1 | Files are named, arranged, saved and backed up in accordance with enterprise requirements.                                |
|   |   | 4.2 | Computer shutdown procedures are followed and computer switched off.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices using engineering application software.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.16 Personal computers, engineering applications software basic

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to using at least two of the following types of engineering applications at a basic level.

- Apparatus set up and calibration
- Computer Aided Design
- Engineering data analysis software
- Engineering modelling
- Project management
- Note:
- Apparatus set-up applications are invariably vendor specific and include icon-based integration and control applications.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range

statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Use engineering applications software as described in 7) and including:
      - A Correctly installing software.
      - B Dealing with anomalies appropriately.
      - C Following application instructions to input and output information.
      - D Storing information appropriately.
      - E Outputting information to a printer.
      - F Forwarding information via email in a readable format.
      - G Saving, storing and backing up files for effective retrieval by others.
      - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment

environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in using engineering application software.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3; 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.5 to 1.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1 to 1.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.5 to 1.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.5
---	--	---

## **UEENEED005A Enter and verify operating instructions in microprocessor equipped devices**

### **Unit Descriptor**

1)

This unit covers entering instructions in microprocessor-equipped devices (embedded system) with simple built-in programming function and verifying that the device operates as intended. It encompasses safe working practices, checking device installation, following written and oral instruction and procedures and completing necessary documentation.

Note:

Examples of devices are simple programmable relays, timers, temperature controllers, switches and basic detection devices for security and fire the like.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field****4)**

Computer Systems

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to enter operating instructions.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.</p> <p>1.4 Work supervisor or customers are consulted to determine which functions of the device are to be used and the parameter of each</p> <p>1.5 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p> <p>1.6 Device installation is checked for compliance with job specification and regulations where they apply.</p>
2 Enter operating instructions.	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 The required status of each function of the device is entered and their parameters set in accordance with manufacturer programming instructions.</p> <p>2.4 Entered data are checked as meeting those specified by the work supervisor or customer.</p> <p>2.5 Procedures for referring non-routine events to immediate supervisor for directions are followed.</p> <p>2.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
3 Test device operation and report.	3.1 Device operation is tested in strict accordance OHS requirements and procedures.

- 3.2 Operating anomalies are identified and corrected in accordance with established routines.
- 3.3 OHS work completion risk control measures and procedures are followed.
- 3.4 Work site is cleaned and made safe in accordance with established procedures.
- 3.5 Work completion is reported and appropriate person(s) notified in accordance with established routines.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and entering and verifying operating instruction in basic microprocessor equipped devices.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.3.7 Smart device basics
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to entering and verifying operating instruction in at least two types of microprocessor equipped devices with built-in icon-based programmable functions such as programmable relays, timers, temperature controllers, detection devices for security and fire .

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Enter and verify operating instructions in microprocessor equipped devices as described in 7) and including:
    - A Understanding required operating functions and parameters.
    - B Identifying non-compliance conditions of device installation.
    - C Entering functions and parameters correctly.
    - D Correcting programming anomalies.
    - E Testing and verify device operation.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of

outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in enter and verifying operating instructions in microprocessor equipped devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 3.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.2	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.5; 3.2; 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEED007A    Develop, enter and verify programs for programmable logic controllers using ladder instruction set**

### **Unit Descriptor**

1)

This unit covers development, installation and testing of programs for programmable logic controllers (PLC) for a system requiring extended control functions. It encompasses working safely, applying knowledge of control systems, control system development methods, ladder logic control functions, using ladder instruction set, following written instructions and documenting program development and testing activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be only after all relevant competency standard units at AQF level 3 have been achieved.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to augment formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field**

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to develop enter and verify program.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 Control system scenario is determined from job specifications of the process/plant/machine to be controlled, and through consultation with appropriate person(s).
- 1.5 Equipment, software and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 1.6 Installation of programmable controller is checked for compliance with regulations and job specification.

2 Develop control system and enter and test program.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 Control solutions are developed and documented based on the specified control mode and using acceptable methods for designing control systems.
- 2.4 Developed control system is converted to an appropriate form, such as flow, state and ladder diagrams, using a personal computer and software applicable to the programmable controller into which the program is to be entered. (See Note 1)
- 2.5 Program is entered into the programmable control using a personal computer and appropriate software.

- |   |   |  |
|---|---|--|
|   | 2.6   | Entered instructions and settings are tested as meeting those specified in by the control system scenario.                                   |
|   | 2.7   | Appropriate methods and tools are used to test control systems and operating faults and anomalies are identified and rectified. (See Note 2) |
|   | 2.8   | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.                              |
| 3 | Verify, document and report programming activities. | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 Program is transferred from a programmable controller to an external medium for storage. (See Note 3)                                    |
|   |   | 3.3 Control system specification and program are documented in accordance with established procedures.                                       |
|   |   | 3.4 Work completion is reported and appropriate personnel notified in accordance with established procedures.                                |

Note.

1. Example of control functions are derived timers (off delay, self resetting, constant duty cycle), reversible counters, cascading timers, cascading counters, combining timers and counters, internal relays/flags/markers, latching relays (set/reset), jump instructions, master control instructions, bit shift registers, scan time considerations, one shot, retentive (power fail) functions, simple step sequence instructions

2. Examples of control system testing methods and tools are monitor mode as an aid to fault finding, inbuilt hardware/software diagnostics and use of error codes.

3. Examples of storage mediums are IC storage, hard disks, servers .

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing, entering and verifying programs for programmable logic controllers using ladder instruction set. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.3.8    | Programmable controller basics                                       |
| 2.3.9    | PLC programming basics   |
| 2.3.10.1 | PLC programming  |
| 2.7.13   | Electrical installations, programmable logic controller requirements |
| 2.18.1   | Occupational Health and Safety principles                            |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing, entering and verifying programs for programmable logic controllers. The program shall include at least five of the following functions/controls:

- Derived timers (off delay)
- Self resetting
- Constant duty cycle)
- Reversible counters
- Cascading timers
- Cascading counters
- Combining timers and counters
- Internal relays/flags/markers
- Latching relays (set/reset)
- Jump instructions
- Master control instructions
- Bit shift registers
- Scan time considerations
- One shot
- Retentive (power fail) functions
- Simple step sequence instructions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop, enter and verify programs for programmable logic controllers using ladder instruction set as described in 7) and including:
    - A Developing a control system solution to the required operating functions and parameters.
    - B Identifying non-compliance conditions of device installation.
    - C Converting control system to a PLC program.
    - D Entering programming functions and parameters correctly.
    - E Transferring programs to a PLC.
    - F Correcting programming anomalies.
    - G Testing and verify control system operation.
    - H Transferring program to external storage.
    - I Documenting control system and programming clearly.
    - J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing, entering and verifying programs for programmable logic controllers using ladder instrument set.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this	Refer to the following Performance Criteria for examples of application:	

competency?	1.4; 3.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2; 3.3	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2; 3.3
5	Planning and organising the	Refer to the following Performance Criteria for examples of application:

	meaningful work task	1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4

## **UEENEED008A    Develop, enter and verify programs in Supervisory Control and Data Acquisition systems**

### **Unit Descriptor**

1)

This unit covers development, installation and testing of programs for supervisory control and data acquisition. It encompasses working safely, process analysis, developing process condition database, developing Human-Machine Interface (HMI), using dedicated SCADA software package and documenting programming activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED009A    Develop, enter and verify programs for industrial control systems using high level instructions.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to augment formally recognised competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to

currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field**

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to develop programs for supervisory control and data acquisition systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the SCADA system is determined from design brief and process specifications.
- 1.4 Process data are analysed for development of graphical design/mimic diagrams.
- 1.5 PLC analogue and digitised addresses are related to tag database.
- 1.6 Tag data types are configured in the database.
- 1.7 Graphic objects are created and added to a graphic library. (See Note 1)
- 1.8 Equipment, software and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Develop and enter programs using dedicated supervisory control and data acquisition software.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 SCADA software is used to develop human-machine interface (HMI) of processes.
- 2.3 Control functions, data acquisition components and automated tasks are programmed using SCADA software.
- 2.4 Complex data is manipulated within the SCADA software.
- 2.5 Alarms and limits for process variables are identified and programmed accordingly.
- 2.6 Trends for process variables and limits are programmed accordingly.

		2.7	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3	Monitor, verify and document programming activities.	3.1	Device operation is tested in strict accordance OHS requirements and procedures.
		3.2	Entered objects and settings are tested as meeting those specified in the design brief.
		3.3	SCADA software tools are used to test and monitor programs and operating faults, anomalies are identified and rectified.
		3.4	OHS work completion risk control measures and procedures are followed.
		3.5	SCADA system specification and program are documented in accordance with established procedures.
		3.6	Work completion is reported and appropriate personnel notified in accordance with established procedures.

Note.

1. Graphic libraries are typically part of vender software for SCADA systems.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing, entering and verifying programs in Supervisory Control and Data Acquisition systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.3.14 Supervisory control and data acquisition systems programming

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing entering and verifying programs in Supervisory Control and Data Acquisition systems. The program shall include the following programming activities:

- Configuring tag type data
- Creating at least five graphic objects
- Adding graphic objects to the graphic library

- Developing a HMI for a given system
- Incorporating alarms and limits for process variables
- Incorporating trends for process variables and limits.
- Entering objects and testing
- Rectifying operating faults and anomalies

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Developing, entering and verifying programs in Supervisory Control and Data Acquisition systems as described in 7) and including:
    - A Collecting and analysing data accurately.
    - B Converting data to an appropriate database.
    - C Creating appropriate graphic object and adding them to a graphic object library.
    - D Developing effective HMI.
    - E Programming SCADA functions and data acquisition components correctly.
    - F Manipulating complex data effectively.

- G Correcting programming faults and anomalies.
- H Documenting SCADA system and programming clearly.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in develop, enter and verify programs in Supervisory Control and Data Acquisition systems.

### **Method of assessment**

#### **8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

### **Concurrent assessment and relationship with other units**

#### **8.5)**

There are no concurrent assessment recommendations for this unit.

### **Key competencies**

#### **8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2; 3.3	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEED009A    Develop, enter and verify programs for industrial control systems using high level instructions**

### **Unit Descriptor**

1)

This unit covers development, installation and testing of programs for an industrial system requiring advance control functions. It encompasses working safely, using structure logic, acceptable design techniques, applying knowledge of high level instructions, and documenting development and programming activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED007A    Develop, enter and verify programs for programmable logic controllers using ladder instruction set.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to augment formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to

currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field**

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to develop industrial control systems programs.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Mode of operation of the control system is determined from job specifications of the process/plant/machine to be controlled, and through consultation with appropriate person(s).
- 1.4 Equipment, software and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 1.5 Installation of programmable controller is checked for compliance with regulations and job specification.

2 Develop and enter and programs for industrial control systems.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Control solutions are developed and documented based on the operational mode and using acceptable methods for designing control system that contain numeric variables and values.
- 2.3 Developed control system is converted to an appropriate form, such as flow, state and ladder diagrams, using a personal computer and software applicable to the programmable controller into which the program is to be entered.
- 2.4 Programming elements are written and used to manipulate word data. (See Note 1)
- 2.5 Program control values are assigned using an applicable numbering system and code. (See Note 2)
- 2.6 Programs are written to read and write analog signals offset using applicable software tools.

	2.7	Arithmetic functions are used to scale analog inputs to a specified span.	
	2.8	Program is entered into the programmable control using a personal computer and appropriate software.	
	2.9	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.	
3	Monitor, verify and document programming activities.	3.1	Device operation is tested in strict accordance OHS requirements and procedures.
		3.2	Entered instructions and settings are tested as meeting those specified for the control mode requirements.
		3.3	Appropriate methods and tools are used to test and monitor control programs and operating faults, anomalies are identified and rectified. (See Note 3)
		3.4	OHS work completion risk control measures and procedures are followed.
		3.5	Control system specification and program are documented in accordance with established procedures.

Notes.

1. Example of programming elements are loading data from discrete input switches to an internal register; manipulating internal registers using arithmetic, logical and other functions; driving outputs from internal registers; utilizing thumbwheel switches and displays; manipulating double registers with mathematical operations; loading constants, variables and presets in and out of memory; using masking of registers to obtain desired data; using tables for the storage of data.
2. Examples are binary and signed binary, numbering systems and codes such as BCD or ASCII codes
3. Examples of control program testing and monitoring methods and tools are locating status bits (flags); examining and modifying watchdog timer; investigating the implications of rung positioning in relation to scan.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing, entering and verifying programs for industrial control systems using high level instructions.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.3.10.2 PLC high level programming

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing, entering and verifying programs for industrial control systems using high level instructions. The program shall include at least five of the following functions/controls:

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Developing, entering and verifying programs for industrial control systems using high level instructions as described in 7) and including:
    - A Developing a control system to the required operating functions and parameters.
    - B Identifying non-compliance conditions of device installation.
    - C Converting control system to a PLC program.
    - D Entering programming functions and parameters correctly.
    - E Correcting programming anomalies.
    - F Testing and verify device operation..
    - G Documenting control system and programming clearly.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing, entering and verifying programs for industrial control systems using high level instructions.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2; 3.3	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

## **UEENEED010A Set up and create content for a web server**

### **Unit Descriptor**

1)

This unit covers installation, set up, implementation and provision of on-going support of web services. It encompasses working safely, installing and administering server software and databases, server side scripting, configuring access and security and documenting work activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

### **ELEMENT**

### **PERFORMANCE CRITERIA**

<p><b>5) Elements describe the essential outcomes of a unit of competency</b></p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to develop and implement web based server.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of development work is determined from server performance specifications and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Appropriate development tools and software are selected based on specified requirements and performance standards.</p> <p>1.6 Strategies are implemented to ensure development work is carried out efficiently.</p>
<p>2 Develop web services.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Server software is installed and configured to ensure effective functionality and security. (See Note 1)</p> <p>2.3 Knowledge of syntax functions and features of mark-up languages scripts in current use are applied to developing client-side programming. (See Notes 2 and 3)</p> <p>2.4 Pages are created and rendered with relative and absolute links, images and table formatting using cascaded styles sheets.</p> <p>2.5 Forms are created with a variety of appropriate elements and element groupings to make forms easy to follow.</p> <p>2.6 Knowledge of server scripting languages in current use is applied to scripting to developing client-side programming and validations. (See Note 4)</p> <p>2.7 Scripts are written to provide web functionality and management of relation databases. (See Notes 5 and 6)</p> <p>2.8 Scripts are written to provide web functionality and management of browser windows, security, web application deployment and administration consoles.</p> <p>2.9 A number of individual solutions are integrated to meet the specifications of a web application project.</p>

- |   |      |  |
|---|------|--|
|   | 2.10 | Approaches to issues/problems are analysed to provide most effective solutions.  |
|   | 2.11 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.           |
| 3 | 3.1  | Testing and procedures are developed to evaluate client-side programming and web applications and services.                                |
|   | 3.2  | Problems and bugs in client-side programming, and web services functionality are identified and rectified to ensure specification are met. |
|   | 3.3  | Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s).          |

Notes.

1. Examples of web software are Apache, IIS .
- 2.Examples of mark-up languages are HTML, XML and XSL.
- 3.Example of scripts are Javascript and VB script.
4. Examples of server scripting languages are JSP, ASP, PHP and Perl
5. Examples of relational databases are SQL variants and Access
6. Examples of database connectivity components are ODBC, JDBC and ADO

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and creating content for a web server.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|

| 2.4.24 | Web application server and services       |
| 2.18.1 | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to web and application servers and web services technology within a multi-tier client-server environment. This shall include:

- Development, implementation and testing HTML pages with at least four of the following features:
  - Relative and absolute links, images and table formatting
  - Cascaded styles sheets
  - Forms
  - New browser windows
  - Validation of form data
- Development, implementation and testing of server scripting for database access with at least four of the following features:
  - Form data input response
  - Form data processing
  - Database access
  - Output of database table contents
  - Insertion of table data to database
- Installation and administration of key features of Web and Web application servers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up and create content for a web server as described in 7) and including:

- A Interpreting server performance requirements.
- B Identifying the appropriate development tools and software.
- C Installing and configure web server software.
- D Creating and rendering effective web pages.
- E Providing web functionality and management of relation databases.
- F Providing web functionality and management of browser windows, security, web application deployment and administration consoles.
- G Developing testing procedures.
- H Identifying problem and bugs in client-side programming and web services functionality.
- I Rectifying problem and bugs.
- J Writing intermediate and final work reports to the required standard.
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in set up and create content in a web server.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the

Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1; 3.2	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.10	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.9; 3.1; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	2.1 to 3.2	3
--	------------	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.11; 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10; 3.2

## **UEENEED011A      Create object oriented code**

### **Unit Descriptor**

**1)**

This unit covers developing, implementing and testing object oriented programming solutions using object orientated programming language. It encompasses following development brief, using appropriate development software, writing code that features classes, inheritance, arrays and packages, creating applets and documenting development activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED003A    Evaluate and modify programs written in object oriented code

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field**

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to create object oriented code.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of code creation work is determined from job performance specifications and in consultation with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Appropriate development kit and software are selected based on specified requirements and performance standard.
- 1.6 Strategies are implemented to ensure programming is carried out efficiently.

2 Create code.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of computer function features are applied to object oriented programming.
- 2.3 Correct syntax is applied to creating code.
- 2.4 Key features of the an object orientated programming language are applied to develop and test solutions.  
 Note:  
 Key features include object; class; instance; member data/fields; member attributes/methods and local variables.
- 2.5 Code is written that features data encapsulation, composition, inheritance and packages.  
 Note:  
 Examples of packages are java.lang, java.awt and java.io
- 2.6 Code is written that invokes overridden or overloaded methods and parental or overloaded constructors.
- 2.7 Approaches to issues/problems are analysed to provide most effective solutions.

	2.8	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.	
3	Test and document the creation of object oriented code.	3.1	Testing procedures are developed to analyse code developed in Objected Oriented Programming. Language.
		3.2	Problems and bugs in code are rectified to ensure specification in the creation of the code is met.
		3.3	Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and creating object oriented code.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.43.2 Object orientated programming

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any object oriented programming language including the following features.

- Graphical User Interfaces
- Applets and graphics
- Exceptions
- Streams, files and Stream output
- Utility Classes
- Threads

Note:

Example of programming referred to here is Java

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## **Critical aspects of evidence required to demonstrate competency in this**

### **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Create object oriented code as described in 7) and including:
    - A Using all key features of object oriented programming.
    - B Developing testing procedures.
    - C Identifying problem and bugs in code.
    - D Rectifying problem and bugs in code.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**
**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in creating object oriented code..

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this	Refer to the following Performance Criteria for examples of application:	

competency?	1.4; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 2.2 to 2.7; 3.1
5	Planning and organising the	Refer to the following Performance Criteria for examples of application:

	meaningful work task	1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 3.2

# UEENEED012A Support computers hardware and software

## Unit Descriptor

1)

This unit covers upgrading and maintaining computers, computer devices and peripherals and installing, maintaining and configuring software. It encompasses safe working practices, installing and testing the upgrading components, locating faults in hardware components, replacing faulty components, installing and testing the operating system and application software, testing functionality, rectifying malfunctions, following written and oral instruction and procedures and applying appropriate customer relations.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED002A Assemble, set-up and test personal computers

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

## Competency Field

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to upgrade and maintain computer hardware and software.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Appropriate person(s) are consulted to determine the nature of computer or peripheral hardware/software upgrading or maintenance.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others affected by the work.
- 1.5 Hardware components needed to upgrade or maintain computers and peripherals are obtained in accordance with established procedures and checked against job requirements. (See Note 1)
- 1.6 Software version updates needed upgrade or maintain computers are obtained in accordance with established procedures and checked against job requirements. (See Note 2)

2 Upgrade computer hardware and software.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Computers are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 Computers and peripherals are dismantled as needed for upgrading in accordance with service manual instructions or industry practices, and parts stored to prevent loss or damage.
- 2.4 Upgrading components are fitted and computer/peripheral apparatus is reassembled in accordance with service manual instructions or industry practices.
- 2.5 Upgrading software components are installed and accordance with service manual instructions or industry practices.
- 2.6 Operating system, including device drivers and application software are tested in preparation for return to service/customer. (See Note 3)

- |   |   |  |
|---|---|--|
|   | 2.7   | Computer/peripheral apparatus is tested and prepared for return to customer.   |
| 3 | Maintain operation of computer hardware and software. | 3.1 OHS risk control measures and procedures for carrying out the work are followed.   |
|   | 3.2   | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.                                     |
|   | 3.3   | Computers are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   | 3.4   | Computers and peripherals are dismantled as needed to find and rectify faults in accordance with service manual instructions and industry practices, and parts stored to prevent loss or damage. |
|   | 3.5   | Faults are identified using logical techniques drawing on knowledge of computer/peripheral hardware components and measured values of operating parameters.                                      |
|   | 3.6   | Faulty components are rechecked and their fault status confirmed.  |
|   | 3.7   | Operating system malfunctions are identified using logical techniques drawing on knowledge of operating system configuration requirements.   |
|   | 3.8   | Device driver malfunctions are identified using logical techniques drawing on knowledge of device driver software configuration requirements.  |
|   | 3.9   | Application software malfunctions are identified using logical techniques drawing on knowledge of software configuration requirements.   |
|   | 3.10  | Malfunctions are rectified using latest software versions, incremental updates and bug and security patches.   |
|   | 3.11  | Computer hardware/peripheral device, operating system, including device drivers, and application software are tested in preparation for return to service/customer.                              |
|   | 3.12  | Redundant files are removed and disposed of or archived in accordance with established procedures.   |
|   | 3.13  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |

- |   |      |   |
|---|------|---|
|   | 3.14 | Maintenance is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services. |
| 4 Complete and report upgrading and maintenance activities. | 4.1  | OHS work completion risk control measures and procedures are followed.  |
|   | 4.2  | Work area is cleaned and made safe in accordance with established procedures.   |
|   | 4.3  | Written justification is produced for hardware software upgrading and maintenance.  |
|   | 4.4  | Upgrading and maintenance is documented and appropriate person(s) notified in accordance with established procedures.                               |

Note:

1. Example of materials are motherboards, processors and memory modules.
2. Example include complete version update, incremental (download) updates and security and bug patches.
3. Examples include Internet access, word processing, spreadsheet, graphics, publishing and industrial applications.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and supporting computers hardware and software.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.4.3.2 | Networking fundamentals                   |
| 2.4.13  | Computer peripherals                      |
| 2.4.15  | Computer operating systems                |
| 2.18.1  | Occupational Health and Safety principles |
| 2.18.9  | Electronic Safe working practices         |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to maintaining and upgrading the operating system, including device drivers and at least three application software types for a personal computer and server.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Support computers hardware and software as described in 7) and including:
    - Upgrade a computer and two external peripheral devices including:
      - A Obtaining appropriate upgrading components
      - B Dismantling, fitting upgrading components and reassembling correctly
      - C Testing upgrade
      - D Documenting upgrading activities
    - Upgrade computer software on at least two occasions including:
      - E Identifying upgrade needs
      - F Installing upgrade components
      - G Testing upgraded software
      - H Documenting upgrade activities

- Maintain a computer and two external peripheral devices including:
  - I Testing and identifying faulty components
  - J Dismantling, fitting replacement components and reassembling correctly
  - K Testing maintenance repair
  - L Documenting maintenance activities
- Maintain computer software on at least two occasions including:
  - M Identifying operating system malfunctions
  - N Identifying device driver malfunctions
  - O Identifying application malfunctions
  - P Rectifying software malfunctions
  - Q Dealing with redundant files and backups
  - R Documenting maintenance activities
  - S Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in support computers hardware and

software.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3; 4.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 1.6; 2.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.4; 3.5; 3.9; 3.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7; 3.2 to 3.12	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.4; 4.3; 4.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.2 to 2.9; 3.2 to 3.12
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 3.13

## UEENEED013A **Install and administer Unix based computers**

### Unit Descriptor

1)

This unit covers the installation and administration of UNIX based and networked computers. It encompasses safe working practices, performing basic UNIX, Linux or Mac OSX operating system installation, administration functions of logging in and out, setting up GUI applications, manipulating text files, creating and searching files and directories, changing permissions, using text editors, identifying and modifying initialization files, streamlining command, execution using shell features, using basic network commands and documenting all administration activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to install, upgrade and maintain network operations.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The nature of the administration work is established from network specifications and in consultation with appropriate person(s).</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Unix system variants, versions and updates needed to maintain the computers and networks are identified and obtained in accordance with established procedures and checked against job requirements.</p>
2 Install, upgrade and maintain Unix-based computers and network operations	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Unix operating system is installed upgraded and configured on computers and servers in accordance with developer’s instructions and network requirements.</p> <p>2.3 Devices and drivers, desktop environment, network protocols and services and system security are implemented in accordance with requirements.</p> <p>2.4 Access to resources is configured within the limitations specified for each users.</p> <p>2.5 Unix-based network malfunctions are identified and rectified using logical techniques and drawing knowledge of devices and drivers, storage, basic network protocols, connections and services and system security configuration processes.</p> <p>2.6 Network performance and reliability is monitored and optimised in accordance with established procedures.</p> <p>2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p>

- |   |   |   |   |
|---|---|---|---|
|   | 2.8   | Unix-based network administration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services. |   |
| 3 | Document network administration activities. | 3.1   | Written justification is produced for network upgrading and maintenance and appropriate person(s) notified in accordance with established procedures. |
|   |   | 3.2   | Network administration documentation are maintained in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing, configuring and administering Unix based computers.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.15 Computer operating systems

2.4.27.1 Unix fundamentals

2.18.1 Occupational Health and Safety principles

OR

2.4.15 Computer operating systems

2.4.27.2 Linux fundamentals

2.18.1 Occupational Health and Safety principles

OR

2.4.15 Computer operating systems

2.4.27.1 MacOSX fundamentals

2.18.1 Occupational Health and Safety principles

Note.

Essential knowledge and associated skill shall be relevant to the operating system for which competency is sought.

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and configuring the operating system and administering at least two networked computers using at least one of UNIX, Linux or MacOSX operating systems

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to

consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and administer Unix based computers as described in 7) and including:
    - A Identify the Unix-based operating system variants, versions and updates required.
    - B Installing, upgrading and configuring computer operating system correctly.
    - C Configuring access to resources for each user.
    - D Identifying computer/network malfunctions.
    - E Rectifying computer/network malfunctions.
    - F Documenting computer/network administration activities.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and administering Unix based computers.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.1; 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3; 1.5; 2.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.5; 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.4; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.7

## **UEENEED014A Design and manage enterprise networks**

### **Unit Descriptor**

1)

This unit covers designing, managing, monitoring and diagnosing enterprise servers. It encompasses safe working practices, designing and managing Domain Name Server (DNS), Email servers, Dynamic Host Configuration Protocol (DHCP), Remote access servers, Network Address Translation (N/AT), Directory services, Authentication Servers and documenting all designing and managing activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED016A Develop network services

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

### **ELEMENT**

### **PERFORMANCE CRITERIA**

<p><b>5) Elements describe the essential outcomes of a unit of competency</b></p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Develop design for an enterprise network.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 The extent of the network to be designed is determined from design brief and/or in consultation with appropriate persons.</p> <p>1.3 Business requirements of the enterprise are analysed taking into account existing and projected business model, organisational and Information Technology management structures.</p> <p>1.4 Consideration is given to factors that will have an impact on the design such as business priorities, growth, growth strategy, regulatory framework, risk, and cost.</p> <p>1.5 Existing and planned technical and environment goals of the enterprise are evaluated and documented. (See Note 1)</p> <p>1.6 Consideration is given to technical factors that will have an impact on the design. (See Note 2)</p> <p>1.7 Client access and end-user needs and usage patterns and disaster recovery requirements are evaluated and documented.</p> <p>1.8 Design specification is written using information obtained from the analysis and evaluations of enterprise business and technical requirements.</p> <p>1.9 Network specification is presented and discussed with person(s) of higher authority.</p> <p>1.10 Alterations to the network specification resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation’s policy.</p>
<p>2 Design an enterprise network.</p>	<p>2.1 Knowledge and complexities of alternative network infrastructures and currently available technologies are applied to network design. (See Note 3)</p> <p>2.2 Network design is developed to incorporate all required Wide Area Network (WAN) infrastructure, Internet connectivity and implementation and management strategies.</p> <p>2.3 Risk management strategies are sought and obtained for incorporating into the network design.</p>

- 2.4 Network design is reviewed against all inputs and adjusted to rectify any anomalies.
- 2.5 Network design proposal is documented in accordance with organisation policies and procedures.
- 2.6 Network design is presented and discussed with person(s) of higher authority.
- 2.7 Alterations to the network design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
- 2.8 Final design is documented and approval obtained from appropriate person(s).
- 3 Implement and manage an enterprise network.
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Server and client computer hardware are installed and configured in compliance with design specifications and network industry standards. (See Note 4)
  - 3.3 User and Group objects are created and group policy implemented. (Notes 5 and 6)
  - 3.4 Directory services, data storage, shared resources Internet information services, remote access and network security are managed to ensure effective operation of the network. (Notes 7 to 11)
  - 3.5 Approaches to issues/problems are analysed to provide most effective solutions.
  - 3.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
- 4 Diagnose network malfunctions.
  - 4.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 4.2 Network operation is monitored and malfunctions are diagnosed to ascertain their cause using network diagnostic tools. (Note 12)
  - 4.3 Network malfunctions are rectified using effective techniques and drawing knowledge of network topology and complexities of network interactivity.
  - 4.4 Approaches to issues/problems are analysed to provide most effective solutions.

- |   |                                       |  |  |
|---|---------------------------------------|--|--|
|   | 4.5                                   | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards. |  |
| 5 | Report network management activities. | 5.1  | Written justification is produced for enterprise network services solutions and forwarded to appropriate person/s in accordance with established procedures. |
|   |                                       | 5.2  | Network service development records are maintained in accordance with established procedures.  |

## Notes.

1. Examples are company size, user and resource distribution, various site connectivity, bandwidth, service performance, availability and scalability, data and system access patterns, network roles and responsibilities and security considerations
2. Examples are currently available resources, services, network infrastructure, protocols and hosts, Transmission Control Protocol and Internet Protocol hardware, planned upgrades, support and network and systems management.
3. Examples of network infrastructure are topology, TCP/IP networking strategy, DHCP strategy, Design of name resolution services, Multi-protocol strategy and Distributed File Strategy
4. Hardware installation includes using qualified tools, driver signing options, digital signatures on driver files and systems support for legacy hardware devices.
5. Example of user and group objects are computer accounts, groups configuring accounts via a directory service, searching for objects, use of templates for creating user accounts and resetting accounts
6. Examples of group policy implementation are deploying software, updates and assigning and publishing applications.
7. Examples of directory services are publishing resources, performing searches and configuring printer objects
8. Examples of data storage are NTFS and FAT file systems such as New Technology File Systems (NTFS) and File Allocation Table (FAT), quotas, Encrypting File Systems, configuring volumes and basic and dynamic disks, file and folder permissions and compression and domain-based distributed file systems.
9. Examples of shared resources are folders, web sharing, folder permissions, printers and printer permissions.
10. Examples of Internet Information Services are virtual directories and servers, Internet and intranet browsing, authentication and Secure Sockets Layer (SSL), File Transfer Protocol (FTP) services and access permissions for intranet server
11. Examples of Network security are user account lockout settings, password management, Group Policy to run logon scripts and link objects, auditing and security log file.
12. Examples of network operations are routing TCP/IP, DHCP, Domain Name Service, name resolution, starting servers, client computers, User and group objects, directory service replication problems, End-User Group Policy and remote access.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe work practices and designing and managing enterprise networks.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.25.2 Network services design processes

2.4.26 Network services management processes

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation design and management of any enterprise network consisting of multiple sites and users and is to provide users with email and Internet access, shared resources and security.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Design and manage enterprise networks as described in 7) and including:
  - A Analysing business requirements.
  - B Analysing technical requirements.
  - C Obtaining approval for network design specification.
  - D Designing a practical network in compliance with specifications and industry standards.
  - E Implementing network design.
  - F Diagnosing and rectifying the cause of network malfunctions effectively.
  - G Documenting justification for network solutions.
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in design and manage enterprise networks.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.9; 1.10; 2.6; 2.7; 5.1; 5.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.7	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.9; 1.10; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 1.8; 2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5; 4.2; 4.3	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4; 4.2; 4.3	3

**Skills Enabling****8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.9 to 1.10; 2.6; 2.7; 5.1; 5.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3 to 2.7; 3.2 to 3.5; 4.2; 4.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5; 4.4

## UEENEED015A Administer user networks

### Unit Descriptor

1)

This unit covers the administration of network servers. It encompasses safe working practices, establishing and maintaining user and group permissions, network security and shared resource management, monitoring and optimising network systems performance and reliability, maintaining currency of the network and documenting all administration activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED024A Integrate multiple computer operating systems on a client server network

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to install, upgrade and maintain network operations.</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The nature of the network is established from network specifications and in consultation with appropriate person(s).</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Network operating system versions and updates needed to maintain the network are obtained in accordance with established procedures and checked against job requirements. (See Note 1)</p>
<p>2 Install, upgrade and maintain network operations.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Server operating systems in current use are installed and upgraded and configure in accordance with developer’s instructions and network requirements. (See Note 2)</p> <p>2.3 Devices and drivers, desktop environment, network protocols and services and system security are implemented in accordance with requirements.</p> <p>2.4 Access to resources is configured within the limitations specified for each users.</p> <p>2.5 Network malfunctions are identified and rectified using logical techniques and drawing knowledge of devices and drivers, storage, network protocols, connections and services and system security configuration processes.</p> <p>2.6 Network performance and reliability is monitored and optimised in accordance with established procedures.</p> <p>2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p> <p>2.8 Network administration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.</p>

	2.9	Written justification is produced for network maintenance and upgrading and appropriate person(s) notified in accordance with established procedures.
3	3.1	Document network administration activities. Network administration documentation are maintained in accordance with established procedures.
	3.2	OHS procedures for a given work area are identified, obtained and understood.

Notes:

1. Examples include complete version update, incremental (download) updates and security and bug patches.
2. Examples of operating systems are Windows 2000 Server and Unix variants.
3. Examples of optimising network performance include installing incremental OS updates and bug and security patches, removal of redundant components and maintaining storage capacity.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and administering user networks.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.27.1	Unix fundamentals
2.4.28	Network operating systems essentials
2.4.29	Network operating system implementation
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to administering at least two networks each with a different server operating system in current use.

Note.

Examples of server operating systems in current use are Windows 2000 Server, Unix variants

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Administer user networks as described in 7) and including:
    - A Establishing network requirements and operating system versions and updates.
    - B Installing, upgrading and configuring server operating system correctly.
    - C Configuring access to resources for each user.
    - D Identifying network malfunctions.
    - E Rectifying network malfunctions.
    - F Documenting network administration activities.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in administering user networks..

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED019A Design and implement Internetworking systems-advanced routing

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.5; 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.9
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEED016A    Develop network services

### Unit Descriptor

1)

This unit covers develop services for network clients for emails, Internet access, shared resources . It encompasses safe working practices, installing and configuring Domain Name Server (DNS), email servers, Dynamic Host Configuration Protocol (DHCP), remote access servers, Network Address Translation (N/AT), directory services, Authentication Servers and documenting development activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED015A    Administer user networks

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

### ELEMENT

### PERFORMANCE CRITERIA

<p><b>5) Elements describe the essential outcomes of a unit of competency</b></p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>	
<p><b>1 Prepare to develop network services.</b></p>	<p>1.1</p> <p>1.2</p> <p>1.3</p> <p>1.4</p> <p>1.5</p> <p>1.6</p>	<p>OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>The extent of network services to be developed is determined from network performance specifications and in consultation with relevant persons.</p> <p>Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>Appropriate development tools and software are selected based on specified requirements and performance standard.</p> <p>Strategies are implemented to ensure network development is carried out efficiently.</p>
<p><b>2 Install, configure and manage network services.</b></p>	<p>2.1</p> <p>2.2</p> <p>2.3</p> <p>2.4</p> <p>2.5</p> <p>2.6</p> <p>2.7</p>	<p>OHS risk control measures and procedures for carrying out the work are followed.</p> <p>Knowledge and complexities of network infrastructure are applied to developing network services.</p> <p>Network infrastructure components in current use and installed and configured in compliance with industry standards and variants as specified for the network. (See Note 1)</p> <p>Structural components of directory services are installed and configured in compliance with industry standards and variants as specified for the network. (Notes 2 and 3)</p> <p>Management components of network services are configured in compliance with industry standards and requirements specified for the network. (See Note 4)</p> <p>Security components of network services are created using Group Policy in compliance with industry standards and requirements specified for the network.</p> <p>Network malfunctions are identified and rectified using logical techniques and drawing knowledge of complex network infrastructure.</p>

	2.8	Network is monitored and solutions are developed to optimise network performance and reliability in accordance with established procedures.
	2.9	Security events are analysed and actions taken in accordance with established policy.
	2.10	Approaches to issues/problems are analysed to provide most effective solutions.
	2.11	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.
3	Report network administration activities	
	3.1	Written justification is produced for network services development activities and appropriate person/s notified in accordance with established procedures.
	3.2	Network service development records are maintained in accordance with established procedures.

## Notes.

1. Examples of network infrastructure components are DNS, DHCP, Remote Access, Network Protocols, IP Routing and WINS
2. Examples of structural components are domains, automatic domain controller, sites, subnets, site links, connection objects and DNS.
3. Examples of configuring are site memberships global catalogue designation, zones for dynamic and secure dynamic updates and creation and configuration of DNS records.
4. Examples of management components are Group Policy including Group Policy Object (GPO), delegation of administrative control of Group Policy, filtering of Group Policy settings by using security groups and Group Policy prioritisation.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing network services.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.30	Network infrastructure
2.4.31	Directory services
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation developing and managing services for any network that is to provide clients with email and Internet access, shared resources and security.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

---

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop network services as described in 7) and including:
    - A Establishing network services to be developed.
    - B Installing and configuring network infrastructure components.
    - C Installing and configuring structural components of directory services.
    - D Configuring management components of network services.
    - E Creating security components of network services.
    - F Identifying and rectifying network malfunctions.
    - G Developing solutions to optimise network performance.
    - H Documenting network services development activities.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing network services.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.9	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7; 3.8	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.10	3
-----------------------------------	---	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.10
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.10

# UEENEED017A Install and configure Internetworking systems

## Unit Descriptor

1)

This unit covers the interconnection of networks using Open Systems Interconnection model (OSI) layer 2 and 3 devices. It encompasses safe working practice, basic installation and configuration of switches and routers and documenting installation and configuration activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

There are no prerequisite competencies for this unit.

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

## Competency Field

4)

Computer Systems

## ELEMENT

## PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to install and configure Internetworking systems.	1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
	1.3 The extent of Internetworking to be installed and configured is determined from Internetworking performance specifications and in consultation with relevant persons.
	1.4 Media and software required for Internetworking is selected in accordance with organisation’s established procedures.
	1.5 Network cabling test reports are obtained and reviewed to determine whether it complies with the required regulatory and performance standard.
	1.6 Appropriately competent/qualified person(s) are engaged to rectify non-compliance cabling.
	1.7 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
	1.8 Appropriate development tools and software are selected based on specified requirements and performance standard.
	1.9 Strategies are implemented to ensure network development is carried out efficiently.
2 Install and configure Internetworking systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2 Knowledge of Internetworking arrangements and basic protocols are applied to installing and configuring routers and TCP/IP addresses.
	2.3 Access lists affording security of the network are created in compliance with industry standards and requirements specified for Internetworking.
	2.4 Common routing, TCP/IP and access malfunctions are identified and rectified using known solutions drawing knowledge of basic Internetworking arrangements and protocol.

	2.5	Approaches to issues/problems are analysed to provide most effective solutions.	
	2.6	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.	
3	Report install and configuring of Internetworking systems.	3.1	Written justification is produced for Internetworking installation and configuring activities and appropriate person/s notified in accordance with established procedures.
		3.2	Network services records are maintained in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and configuring networking systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

	2.1.7.1	Performance (copper) data cable installation and terminations
	2.1.7.2	Coaxial cable installation and terminations
	2.1.7.3	Optical fibre cabling installation and terminations
	2.4.3.2	Networking fundamentals
	2.4.39	Internet, network basics
	2.2.40	Internet, network routing
	2.5.7	Technical standards, regulations and codes for telecommunications cabling
	2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and configuring Internetworking systems between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other

terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

---

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and configure networking systems as described in 7) and including:
    - A Establishing the extent of Internetworking installation.
    - B Selecting appropriate Internetworking media and software.
    - C Determining whether network cabling is compliant.
    - D Installing and configuring basic routing and TCP/IP protocols.
    - E Creating access list in compliance with industry standards and requirements specified for Internetworking.
    - F Identifying common routing, TCP/IP and access malfunctions.
    - G Applying known solutions to common routing, TCP/IP and access malfunctions.
    - H Documenting Internetworking installation and configuration activities.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and configuring networking systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 1.5; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.6; 1.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 1.9; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.7 to 1.9; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.2 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

# UEENEED018A Design and implement Internetworking systems

## Unit Descriptor

1)

This unit covers the design, implementation and performance monitoring of Internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, using Wide Area Network (WAN) technologies, complying with regulation and standards, and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Competency in this unit may be assessed only after the following competencies have been confirmed.

UEENEED017A Install and configure Internetworking systems

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

## Competency Field

4)

Computer Systems

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to design Internetworking systems.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Design brief for the Internetworking is developed and documented in consultation with person(s) of higher authority.</p> <p>1.4 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation’s established procedures.</p> <p>1.5 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.6 Strategies are implemented to ensure network development is carried out efficiently.</p>
<p>2 Design Internetworking systems.</p>	<p>2.1 Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions.</p> <p>2.2 Switching, routing and WAN technologies are included in the Internetworking system design. (See Notes 1 and 2)</p> <p>2.3 Internetworking system design includes specification of required media that is compliant with industry standards.</p> <p>2.4 Internetworking system design is documented in accordance with organisation policies and procedures.</p> <p>2.5 Internetworking system design is presented and discussed with person(s) of higher authority.</p> <p>2.6 Alterations to the Internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation’s policy.</p> <p>2.7 Final Internetworking system design is documented and approval obtained from person(s) of higher authority.</p>

- |   |                                    |     |  |
|---|------------------------------------|-----|--|
| 3 | Implement Internetworking systems. | 3.1 | Activities are planned to meet scheduled timelines in consultation with others involved in the work.   |
|   |                                    | 3.2 | Appropriate development tools and software are selected based on specified requirements and performance standard.  |
|   |                                    | 3.3 | Knowledge of Internetworking arrangements and protocols is applied to installing, configuring and testing switching, routing and WAN technologies.       |
|   |                                    | 3.4 | System malfunctions are identified during testing and rectified using logical techniques drawing knowledge of Internetworking arrangements and protocol. |
|   |                                    | 3.5 | Approaches to issues/problems are analysed to provide most effective solutions.  |
|   |                                    | 3.6 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.                         |
|   |                                    | 3.7 | Final Internetworking system design and implementation are documented in accordance organisation’s established procedures.                               |

Note.

1. Examples of switching and routing technologies are basics of OSPF, basics of EIGRP, switch configuration, Spanning Tree Protocol (STP) and Virtual Local Area Networks (VLANs)
2. Examples of Wide Area Network (WAN) technologies are ISDN, Frame Relay, Point-to-Point Protocols (PPP)

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.4.41 | Internet, local area networks             |
| 2.4.42 | Internet, wide area networks              |
| 2.18.1 | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and implementing Internetworking systems between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or

a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and implement Internetworking systems as described in 7) and including:
    - A Developing an Internetworking system design brief.
    - B Planning work activities including requirements for work team/group.
    - C Designing Internetworking system based on economic and effective solution that meet with design brief requirements.
    - D Detailing switching, routing and WAN technologies and specification for Internetworking media in the design.
    - E Documenting and presenting design for approval.
    - F Implementing Internetworking system design.
    - G Identifying and rectifying system malfunctions.

- H Documenting Internetworking installation and configuration activities.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and implementing Internetworking systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEED019A Design and implement Internetworking systems – advance routing
- UEENEED020A Design and implement Internetworking systems – remote access
- UEENEED021A Design and implement Internetworking systems – multi-layer switching
- UEENEED022A Design and implement Internetworking systems – security

UEENEED023A Design and implement Internetworking systems  
– wireless LANs/WANs

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 2.6; 2.7; 3.7	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3; to 1.6; 2.1 to 2.3; 2.6; 3.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3; 3.1 to 3.5	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.7; 3.7
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## UEENEED019A Design and implement Internetworking systems – advanced routing

### Unit Descriptor

1)

This unit covers the design, implementation and performance monitoring of Internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, complying with regulation and standards, incorporation and advance configuration of remote access and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEED018A Design and implement Internetworking systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to design Internetworking systems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Design brief for the advanced routing is developed and documented in consultation with person(s) of higher authority.
- 1.4 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation’s established procedures.
- 1.5 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.6 Strategies are implemented to ensure network development is carried out efficiently.

2 Design Internetworking systems.

- 2.1 Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions.
- 2.2 Advanced routing technologies are included in the Internetworking system design. (See Note)
- 2.3 Internetworking system design includes specification of required media that is compliant with industry standards.
- 2.4 Internetworking system design is documented in accordance with organisation policies and procedures.
- 2.5 Internetworking system design is presented and discussed with person(s) of higher authority.
- 2.6 Alterations to the Internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation’s policy.
- 2.7 Final Internetworking system design is documented and approval obtained from person(s) of higher authority.

- |   |                                    |     |  |
|---|------------------------------------|-----|--|
| 3 | Implement Internetworking systems. | 3.1 | Activities are planned to meet scheduled timelines in consultation with others involved in the work.   |
|   |                                    | 3.2 | Appropriate development tools and software are selected based on specified requirements and performance standard.  |
|   |                                    | 3.3 | Knowledge of Internetworking arrangements and protocols is applied to installing, configuring and testing advance routing technologies.                  |
|   |                                    | 3.4 | System malfunctions are identified during testing and rectified using logical techniques drawing knowledge of Internetworking arrangements and protocol. |
|   |                                    | 3.5 | Approaches to issues/problems are analysed to provide most effective solutions.  |
|   |                                    | 3.6 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.                         |
|   |                                    | 3.7 | Final Internetworking system design and implementation are documented in accordance organisation’s established procedures.                               |

Note.

Examples of advanced routing technologies are scalable IP addresses, technologies to redistribute and support multiple, advanced, IP routing protocols such as OSPF, EIGRP, and BGP, access lists (security) and edge router connectivity into BGP networks

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems advanced routing.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.34 Routing methods and protocols

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and implementing Internetworking systems advanced routing between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the

Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

---

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and implement Internetworking systems – advanced routing as described in 7) and including:
    - A Developing a design brief for advance routing in a Internetworking system.
    - B Planning work activities including requirements for work team/group.
    - C Designing advanced routing based on economic and effective solution that meet with design brief requirements.
    - D Detailing advanced routing technologies and specification for Internetworking media in the design.
    - E Documenting and presenting design for approval.
    - F Implementing Internetworking system design.
    - G Identifying and rectifying system malfunctions.
    - H Documenting Internetworking installation and configuration activities.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

Resources required to assess this unit are listed above in Context of assessment’, which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in designing and implementing Internetworking systems – advanced routing.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEED018A Design and implement Internetworking systems
- UEENEED020A Design and implement Internetworking systems – remote access
- UEENEED021A Design and implement Internetworking systems – multi-layer switching
- UEENEED022A Design and implement Internetworking systems – security
- UEENEED023A Design and implement Internetworking systems – wireless LANs/WANs

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed

in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 2.6; 2.7; 3.7	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3; to 1.6; 2.1 to 2.3; 2.6; 3.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3; 3.1 to 3.5	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.7; 3.7
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

# UEENEED020A Design and implement Internetworking systems – remote access

## Unit Descriptor

1)

This unit covers the design, implementation and performance monitoring of Internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, complying with regulation and standards, incorporation and advance configuration of remote access and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEED018A Design and implement Internetworking systems

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

## Competency Field

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to design Internetworking systems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Design brief for the advanced remote access is developed and documented in consultation with person(s) of higher authority.
- 1.4 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation’s established procedures.
- 1.5 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.6 Strategies are implemented to ensure network development is carried out efficiently.

2 Design Internetworking systems.

- 2.1 Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions.
- 2.2 Advanced remote access technologies are included in the Internetworking system design. (See Note)
- 2.3 Internetworking system design includes specification of required media that is compliant with industry standards.
- 2.4 Internetworking system design is documented in accordance with organisation policies and procedures.
- 2.5 Internetworking system design is presented and discussed with person(s) of higher authority.
- 2.6 Alterations to the Internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation’s policy.

- |   |                                    |     |  |
|---|------------------------------------|-----|--|
| 3 | Implement Internetworking systems. | 2.7 | Final Internetworking system design is documented and approval obtained from person(s) of higher authority.  |
|   |                                    | 3.1 | Activities are planned to meet scheduled timelines in consultation with others involved in the work.   |
|   |                                    | 3.2 | Appropriate development tools and software are selected based on specified requirements and performance standard.  |
|   |                                    | 3.3 | Knowledge of Internetworking arrangements and protocols is applied to installing, configuring and testing advance routing technologies.                  |
|   |                                    | 3.4 | System malfunctions are identified during testing and rectified using logical techniques drawing knowledge of Internetworking arrangements and protocol. |
|   |                                    | 3.5 | Approaches to issues/problems are analysed to provide most effective solutions.  |
|   |                                    | 3.6 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.                         |
|   |                                    | 3.7 | Final Internetworking system design and implementation are documented in accordance organisation’s established procedures.                               |

Note.

Examples of advanced remote access technologies are asynchronous connections, Point-to-Point Protocol (PPP) architecture, protocol, call back, and compression ISDN architecture, protocol layers, BRI and DDR and X.25, Frame Relay, and AAA

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems remote access.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.35 Networks, remote access

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation the designing and implementing advanced remote

access technologies in an Internetworking system between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and implement Internetworking systems – remote access as described in 7) and including:
    - A Developing a design brief for advanced remote access technologies in an Internetworking system.
    - B Planning work activities including requirements for work team/group.
    - C Designing Internetworking system based on economic and effective solution that meet with design brief requirements
    - D Detailing advanced remote access technologies and specification for Internetworking media in the design.
    - E Documenting and presenting design for approval.
    - F Implementing Internetworking system design.
    - G Identifying and rectifying system malfunctions.
    - H Documenting Internetworking installation and configuration activities.

- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and implementing Internetworking systems – remote access.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |             |  |
|-------------|--|
| UEENEED018A | Design and implement Internetworking systems                         |
| UEENEED019A | Design and implement Internetworking systems – advance routing       |
| UEENEED021A | Design and implement Internetworking systems – multi-layer switching |
| UEENEED022A | Design and implement Internetworking systems – security              |
| UEENEED023A | Design and implement Internetworking systems – wireless LANs/WANs    |

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 2.6; 2.7; 3.7	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3; to 1.6; 2.1 to 2.3; 2.6; 3.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3; 3.1 to 3.5	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills

enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.7; 3.7
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## **UEENEED021A Design and implement Internetworking systems – multi-layer switching**

### **Unit Descriptor**

1)

This unit covers the design, implementation and performance monitoring of Internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, complying with regulation and standards, incorporation and advance multi-layer switching technologies access and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEED018A Design and implement Internetworking systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to design Internetworking systems.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Design brief for the advance multi-layer switching technologies is developed and documented in consultation with person(s) of higher authority.</p> <p>1.4 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation’s established procedures.</p> <p>1.5 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.6 Strategies are implemented to ensure network development is carried out efficiently.</p>
<p>2 Design Internetworking systems.</p>	<p>2.1 Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions.</p> <p>2.2 Advance multi-layer switching technologies are included in the Internetworking system design. (See Note)</p> <p>2.3 Internetworking system design includes specification of required media that is compliant with industry standards.</p> <p>2.4 Internetworking system design is documented in accordance with organisation policies and procedures.</p> <p>2.5 Internetworking system design is presented and discussed with person(s) of higher authority.</p> <p>2.6 Alterations to the Internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation’s policy.</p> <p>2.7 Final Internetworking system design is documented and approval obtained from person(s) of higher authority.</p>

- |   |                                    |     |  |
|---|------------------------------------|-----|--|
| 3 | Implement Internetworking systems. | 3.1 | Activities are planned to meet scheduled timelines in consultation with others involved in the work.   |
|   |                                    | 3.2 | Appropriate development tools and software are selected based on specified requirements and performance standard.  |
|   |                                    | 3.3 | Knowledge of Internetworking arrangements and protocols is applied to installing, configuring and testing advance routing technologies.                  |
|   |                                    | 3.4 | System malfunctions are identified during testing and rectified using logical techniques drawing knowledge of Internetworking arrangements and protocol. |
|   |                                    | 3.5 | Approaches to issues/problems are analysed to provide most effective solutions.  |
|   |                                    | 3.6 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.                         |
|   |                                    | 3.7 | Final Internetworking system design and implementation are documented in accordance organisation’s established procedures.                               |

Note.

Examples of multi-layer switching technologies are, Fast Ethernet, Gigabit Ethernet, VLAN basics, types, identification, and trunking protocol, Spanning Tree Protocol, MLS processes, and configuration and multicasting protocols and routing.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems multi-layer switching.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.36 Multi-layer switched networks

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and implementing advance configuration of multi-layer switching in an Internetworking system between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the

Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and implement Internetworking systems – multi-layer switching as described in 7) and including:
    - A Developing a design brief for multi-layer switching technologies in an Internetworking system
    - B Planning work activities including requirements for work team/group
    - C Designing Internetworking system based on economic and effective solution that meet with design brief requirements
    - D Detailing multi-layer switching technologies and specification for Internetworking media in the design
    - E Documenting and presenting design for approval
    - F Implementing Internetworking system design
    - G Identifying and rectifying system malfunctions
    - H Documenting Internetworking installation and configuration activities
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and implementing Internetworking systems – multi-layer switching.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEED018A Design and implement Internetworking systems
- UEENEED019A Design and implement Internetworking systems – advance routing
- UEENEED020A Design and implement Internetworking systems – remote access
- UEENEED022A Design and implement Internetworking systems – security
- UEENEED023A Design and implement Internetworking systems – wireless LANs/WANs

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 2.6; 2.7; 3.7	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3; to 1.6; 2.1 to 2.3; 2.6; 3.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3; 3.1 to 3.5	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.7; 3.7
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## **UEENEED022A Design and implement Internetworking systems – security**

### **Unit Descriptor**

1)

This unit covers the design, implementation and performance monitoring of Internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, complying with regulation and standards, incorporation of advance security technologies and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEED018A Design and implement Internetworking systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

- |   |                                    |     |  |
|---|------------------------------------|-----|--|
| 3 | Implement Internetworking systems. | 3.1 | Activities are planned to meet scheduled timelines in consultation with others involved in the work.   |
|   |                                    | 3.2 | Appropriate development tools and software are selected based on specified requirements and performance standard.  |
|   |                                    | 3.3 | Knowledge of Internetworking arrangements and protocols is applied to installing, configuring and testing advance routing technologies.                  |
|   |                                    | 3.4 | System malfunctions are identified during testing and rectified using logical techniques drawing knowledge of Internetworking arrangements and protocol. |
|   |                                    | 3.5 | Approaches to issues/problems are analysed to provide most effective solutions.  |
|   |                                    | 3.6 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.                         |
|   |                                    | 3.7 | Final Internetworking system design and implementation are documented in accordance with organisation’s established procedures.                          |

Note.

1. Examples of advance security technologies are firewalls intrusion detection feature of CSACS, Cisco IOS routers, PIX for AAA service, site-to-site VPNs between Cisco devices and remote access VPNs between Cisco device and clients.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems security.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.37 Fundamentals of network security

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and implementing Internetworking systems security between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the

Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

---

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and implement Internetworking systems – security as described in 7) and including:
    - A Developing a design brief for advance security technologies in an Internetworking system design brief.
    - B Planning work activities including requirements for work team/group.
    - C Designing Internetworking system based on economic and effective solution that meet with design brief requirements.
    - D Detailing advance security technologies and specification for Internetworking media in the design.
    - E Documenting and presenting design for approval.
    - F Implementing Internetworking system design.
    - G Identifying and rectifying system malfunctions.
    - H Documenting Internetworking installation and configuration activities.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and implementing Internetworking systems – security.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEED019A Design and implement Internetworking systems – advance routing
- UEENEED020A Design and implement Internetworking systems – remote access
- UEENEED021A Design and implement Internetworking systems – multi-layer switching
- UEENEED023A Design and implement Internetworking systems – wireless LANs/WANs

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 2.6; 2.7; 3.7	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3; to 1.6; 2.1 to 2.3; 2.6; 3.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3; 3.1 to 3.5	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.7; 3.7
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## **UEENEED023A Design and implement Internetworking systems – wireless LANs/WANs**

### **Unit Descriptor**

1)

This unit covers the design, implementation and performance monitoring of Internetworking systems. It encompasses safe working practice, evaluating customer requirements, applying sound design principles, complying with regulation and standards, incorporation and advance wireless LANs technologies and documentation of design and performance monitoring.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEED018A Design and implement Internetworking systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

## ELEMENT

## PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1	Prepare to design Internetworking systems.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	Design brief for the advance wireless LANs technologies is developed and documented in consultation with person(s) of higher authority.
		1.4	Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation’s established procedures.
		1.5	Activities are planned to meet scheduled timelines in consultation with others involved in the work.
		1.6	Strategies are implemented to ensure network development is carried out efficiently.
2	Design Internetworking systems.	2.1	Internetworking system is designed to comply with design brief and consideration of economical and appropriately effective design solutions.
		2.2	Advance wireless LANs technologies are included in the Internetworking system design. (See Note 1)
		2.3	Internetworking system design includes specification of required media that is compliant with industry standards.
		2.4	Internetworking system design is documented in accordance with organisation policies and procedures.
		2.5	Internetworking system design is presented and discussed with person(s) of higher authority.
		2.6	Alterations to the Internetworking system design resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation’s policy.
		2.7	Final Internetworking system design is documented and approval obtained from person(s) of higher authority.

- |   |                                    |     |  |
|---|------------------------------------|-----|--|
| 3 | Implement Internetworking systems. | 3.1 | Activities are planned to meet scheduled timelines in consultation with others involved in the work.   |
|   |                                    | 3.2 | Appropriate development tools and software are selected based on specified requirements and performance standard.  |
|   |                                    | 3.3 | Knowledge of Internetworking arrangements and protocols is applied to installing, configuring and testing advance wireless LANs technologies.  |
|   |                                    | 3.4 | System malfunctions and performance issues are identified during testing and rectified using logical techniques drawing knowledge of Internetworking arrangements and protocol. (See Note 2) |
|   |                                    | 3.5 | Approaches to issues/problems are analysed to provide most effective solutions.  |
|   |                                    | 3.6 | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.   |
|   |                                    | 3.7 | Final Internetworking system design and implementation are documented in accordance with organisation’s established procedures.  |

Note.

1. Wireless LAN technologies include compliance with IEEE 802.11 standards, and frequency and channel usage, in-building and building-to-building WLANs and devices and appropriate antennas that meet mobility and throughput specifications, hardware set-up and software configuration of Cisco Aironet wireless products including security using WEP, Cisco LEAP, and 802.1x protocols.
2. Performance issues include using event logging, command-line utilities, and diagnostic tools

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and implementing Internetworking systems wireless LANs/WANs.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.38 Fundamentals of wireless security

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and implementing Internetworking systems security between two Local Area Networks (LANs) to form a Wide Area Network (WAN) or a LAN and the Internet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and implement Internetworking systems – wireless LANs and WANs as described in 7) and including:
    - A Developing a design brief for advance wireless LAN technologies in an Internetworking system design brief.
    - B Planning work activities including requirements for work team/group.
    - C Designing Internetworking system based on economic and effective solution that meet with design brief requirements.
    - D Detailing advance wireless LANs technologies and specification for Internetworking media in the design.
    - E Documenting and presenting design for approval.
    - F Implementing Internetworking system design.
    - G Identifying and rectifying system malfunctions.

- H Documenting Internetworking installation and configuration activities.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and implementing Internetworking systems – wireless LANs/WANs.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEED018A Design and implement Internetworking systems
- UEENEED019A Design and implement Internetworking systems – advance routing
- UEENEED020A Design and implement Internetworking systems – remote access
- UEENEED021A Design and implement Internetworking systems – multi-layer switching

UEENEED022A Design and implement Internetworking systems  
– security

### Key competencies 8.6)

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 2.6; 2.7; 3.7	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3; 3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.3; to 1.6; 2.1 to 2.3; 2.6; 3.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3; 3.1 to 3.5	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.7; 3.7
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## UEENEED024A Integrate multiple computer operating systems on a client server network

### Unit Descriptor

1)

This unit covers interconnecting computers to form a local area network (LAN). It encompasses applying different computer and network operating systems on a single LAN, using network standards and protocols, selecting network topology and physical media, disaster planning recovery, performance management and documentation of work activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED012A Support computers hardware and software

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to install multiple operating systems on computers and a client server network.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Operating systems, devices, software and services required are determined from network performance specifications and in consultation with persons of higher authority.</p> <p>1.4 Network security policy is reviewed in network performance specifications and in consultation with person(s) of higher authority.</p> <p>1.5 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.6 Appropriate persons are consulted to ensure the work is coordinated effectively with others involved or affected by the work.</p>
<p>2 Install and configure computer and network operating systems.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of computer and networks operations and network infrastructure are applied to installing and configuring operating systems and software on computers and client server.</p> <p>2.3 Network protocols are installed and configured to integrate computers using different operating systems in compliance with industry standards and variants as specified for the network.</p> <p>2.4 Security measures of the network are implemented in compliance with security policy, industry standards and requirements specified for the network.</p> <p>2.5 Disaster recovery plan is tested for absolute effectiveness and compliance with enterprise security policy.</p> <p>2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p>

3	Monitor and optimise computer and network performance.	3.1	OHS risk control measures and procedures for carrying out the work are followed.
		3.2	Network is monitored and common methods are implemented to optimise system performance.
		3.3	Common computer and server malfunctions are identified and rectified using logical techniques and known solutions.
		3.4	Computer and server operating system incremental updates and security patches are installed as soon as they are available.
		3.5	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
		3.6	On-going checks of the quality of work outcomes are undertaken in accordance with job specification, technical standards, enterprise policy and/or regulatory requirements.
		3.7	Work is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
4	Report integration and outcome of network monitoring activities.	4.1	Written justification is produced for solutions used to rectify malfunctions and appropriate person/s notified in accordance with established procedures.
		4.2	Computer and network installation and monitoring records are maintained in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and integrating multiple computer operating systems on a client server network.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.32	Operating systems and networks fundamentals
2.4.33	Operating systems and networks
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation at least two different operating systems for a client server and at least two computers connected to the server to form a client server network.

Note.

Examples of operating systems are various iteration of Windows, OS/2, Unix variants such as Linux and Mac OS X.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety

and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Integrate multiple computer operating systems on a client server network as described in 7) and including:
    - A Determining the correct operating system, devices software and services required.
    - B Installing and configuring computer and client server operating system and software.
    - C Implementing system security measure in compliance with enterprise security policy.
    - D Testing effectiveness of disaster recovery plan.
    - E Using common methods to optimise system performance.

- F Identifying and rectifying common malfunctions using known solutions.
- G Providing credible justification for solutions used to rectify malfunctions.
- H Maintaining computer and network monitoring and records accurately.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in integrating multiple computer operating systems on a client server network.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED012A Support computers hardware and software

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

## Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6	4
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.5; 3.2 to 3.4	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 4.1; 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5; 3.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6; 3.5

## UEENEED025A Design and configure Human-Machine Interface networks

### Unit Descriptor

1)

This unit covers monitoring and maintaining the operation of distributive and central control system networks. It encompasses safe working practices, installing and configuring controllers and devices, monitoring system operations, diagnosing malfunctions and faults and documenting development activities.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED008A Develop, enter and verify programs in Supervisory Control and Data Acquisition systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to manage control system networks.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of control system networks is determined from network specifications/design brief and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Appropriate management tools and software are selected based on specified requirements and performance standard.</p> <p>1.6 Strategies are implemented to ensure network development is carried out efficiently.</p>
<p>2 Install, configure and manage control system networks.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge and complexities of control system networks infrastructure are applied to managing network services.</p> <p>2.3 Network infrastructure components are installed and configured in compliance with industry standards and variants as specified for the network.</p> <p>2.4 Structural components of directory services are installed and configured in compliance with industry standards and variants as specified for the network.</p> <p>2.5 Management components of network control system are configured in compliance with industry standards and requirements specified for the network.</p> <p>2.6 Security components of network control system are created in compliance with industry standards and requirements specified for the network.</p> <p>2.7 Network malfunctions are identified and rectified using logical techniques and drawing knowledge of complex network control system infrastructure.</p>

- |   |   |   |  |
|---|---|---|--|
|   | 2.8                                       | Network is monitored and solutions are developed to optimise network performance and reliability in accordance with established procedures. |  |
|   | 2.9                                       | Security events are analysed and actions taken in accordance with established policy.   |  |
|   | 2.10                                      | Approaches to issues/problems are analysed to provide most effective solutions.   |  |
|   | 2.11                                      | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.            |  |
| 3 | Report network administration activities. | 3.1   | Written justification is produced for network services development activities and appropriate person/s notified in accordance with established procedures. |
|   |   | 3.2   | Network service development records are maintained in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and configuring Human-Machine Interface networks.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |        |   |
|--|--------|---|
|  | 2.3.11 | Control system network basics             |
|  | 2.4.30 | Network infrastructure                    |
|  | 2.18.1 | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to safe working practices and designing and configuring Human-Machine Interface networks

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and configure Human-Machine Interface networks as described in 7) and including:
    - A Establishing network services to be developed.
    - B Installing and configuring network infrastructure components.
    - C Installing and configuring structural components of directory services.
    - D Configuring management components of network services.
    - E Creating security components of network services.
    - F Identifying and rectifying network malfunctions.
    - G Developing solutions to optimise network performance.
    - H Documenting network services development

activities.

- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in design and configure Human-Machine Interface networks.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.9	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7; 3.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.10	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.10
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.10

## UEENEED026A Design a computer based control system

### Unit Descriptor

1)

This unit covers the design of computer application for control processes. It encompasses apply knowledge of control devices, control systems, programmable logic controllers, supervisory control and data acquisition systems and control programming methods, developing alternative design schemes based on design brief, customer relations and documenting designs.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED025A Design and configure Human-Machine Interface networks

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to design engineering computer applications.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed control system is determined from the design brief or in consultation with appropriate person(s).</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.</p>
<p>2 Develop engineering computer applications design.</p>	<p>2.1 Knowledge of control devices, control systems and control programming methods are applied to the design.</p> <p>2.2 Alternative concepts for the design are tested based on the requirements outlined in the design brief. (Note)</p> <p>2.3 Safety, functional and budget considerations are incorporated in the design.</p> <p>2.4 System design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.5 System design is documented for submission to appropriate person(s) for approval.</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation’s policy.</p>
<p>3 Obtain approval for engineering computer applications design.</p>	<p>3.1 System design is presented and explained to client representative and/or other relevant person(s).</p> <p>3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation’s policy.</p> <p>3.3 Final design is documented and approval obtained from appropriate person(s).</p> <p>3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.</p>

Note.

Design concepts should be tested by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design meet specified requirements

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing a computer based control system.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.3.10.3	PLC system applications
2.3.12	Control network infrastructure
2.3.19	Control programming fundamentals
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing a computer based control system incorporating at least five interacting subsystems modes.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design a computer based control system as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

### Context of and specific resources for assessment

#### 8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in design a computer based control system.

### Method of assessment

#### 8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE011A    Manage risk in electrotechnology activities

UEENEEE012A    Manage electrotechnology projects

UEENEEE013A    Plans electrotechnology project

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 2.6; 3.2	3

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEED027A    Develop structured programs for control sub systems to access external devices**

### **Unit Descriptor**

1)

This unit covers programming of microprocessor/microcontroller devices to access external devices. It encompasses working safely, applying knowledge of control applications, and analogue and digital input/output signals, programming fundamentals, writing and testing program and documenting programming activities.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to develop structured programs for control sub systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of structure programming to be developed is determined from job performance specifications and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Appropriate development kit and software are selected based on specified requirements and performance standard.</p> <p>1.6 Strategies are implemented to ensure programming is carried out efficiently.</p>
2 Develop structured programs for control sub systems.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of computer functions and features are applied to developing structure program.</p> <p>2.3 Correct structure and syntax is applied to developing structure program.</p> <p>2.4 Key features of the programming language are applied to develop and test solutions. (Note)</p> <p>2.5 Approaches to issues/problems are analysed to provide most effective solutions.</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards</p>
3 Test and document structured program for control subsystems.	<p>3.1 Testing procedures are developed to test developed program.</p> <p>3.2 Problems and bugs in program are rectified to ensure specification in the creation of the code is met.</p>

- 3.3 Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s).

Note:

Although programming in 'C' is preferred any other structured language in current use by industry may be used.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing structured programs for control sub systems to access external devices.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.3.19 Control programming fundamentals

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing structured programs for control sub systems to access external devices including at least three of the following:

- Macros
- Global and local variables,
- Auto and static variables
- Intrinsic functions used in control
- Linking in external functions to control hardware

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in

accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop structured programs for control sub systems to access external devices as described in 7) and including:
    - A Using all key features of an appropriate programming language.
    - B Developing testing procedures.
    - C Identifying problem and bugs in program.
    - D Rectifying problem and bugs in program.
    - E Writing and presenting work reports to an acceptable standard.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in develop structured programs for control sub systems to access external devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no prerequisite competencies for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.1; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.7; 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

	routine or contingent situations	2.5; 3.2
--	----------------------------------	----------

## **UEENEED028A      Develop and test basic specification for microcontroller equipped devices**

### **Unit Descriptor**

**1)**

This unit covers structured programming instructions for micro devices at a fundamental level. It encompasses working safely, applying knowledge device architecture and programming fundamentals, writing and testing specified instructions and documenting development activities.

Note.

In this unit the term ‘micro’ refers to microcontrollers however competency in the unit can be achieved using microprocessors.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

**4)**

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to develop and test basic specifications.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of specifications to be developed is determined from job performance requirements and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Appropriate development kit and software are selected based on specified requirements and performance standard.</p> <p>1.6 Strategies are implemented to ensure programming is carried out efficiently.</p>
2 Develop basic specification.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of micro controller functions and features are applied to developing specifications.</p> <p>2.3 Correct structure and syntax is applied to developing program specification for target micro controller function.</p> <p>2.4 Key features of the assembler programming language are applied to develop and test solutions.</p> <p>2.5 Approaches to issues/problems are analysed to provide most effective solutions.</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.</p>
3 Test and document the basic specification.	<p>3.1 Testing procedures are developed to analyse code developed.</p> <p>3.2 Problems and bugs are rectified to ensure specification in the creation of the code is met.</p>

- 3.3 Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing and test basic specification for microcontroller equipped devices.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.3.20 Microcontroller programming basics
- 2.9.5.1 Microprocessor fundamentals
- 2.9.5.2 Microcontroller fundamentals
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing and testing basic specification for micro equipped devices including at least three of the following:

- Selecting an appropriate micro for a given task
- Setting up and using basic input/output functions
- Using assembler/simulator software packages to debug program
- Finding system faults.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range

statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop and test basic specification for microcontroller equipped devices as described in 7) and including:
    - A Using all key features of an appropriate assembler language.
    - B Developing testing procedures.
    - C Identifying problem and bugs in program.
    - D Rectifying problem and bugs in program.
    - E Writing and presenting work reports to an acceptable standard.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in develop and test basic specification for microcontroller equipped devices.

**Method of**

**8.4)**

**assessment**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no prerequisite competencies for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	2
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	3.1; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 2.2 to 2.6; 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5; 3.2

## **UEENEED029A      Develop basic web pages for engineering applications**

### **Unit Descriptor**

1)

This unit covers the development of web pages for engineering applications. It encompasses working safely, developing web pages using authoring tools, client-side scripting, fundamental server-side scripting and documenting development activities.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

This unit is supported by other competencies relevant to other electrical/electronic/control engineering.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

### **ELEMENT**

### **PERFORMANCE CRITERIA**

<p><b>5) Elements describe the essential outcomes of a unit of competency</b></p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to develop basic web pages for engineering applications.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of development work is determined from page development specifications, including engineering subject matter, and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Appropriate development tools and software are selected based on specified requirements and performance standards.</p> <p>1.6 Strategies are implemented to ensure development work is carried out efficiently.</p>
<p>2 Develop basic web pages for engineering applications.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of syntax functions and features of mark-up languages scripts in current use are applied to developing client-side programming. (Notes 1 and 2)</p> <p>2.3 Pages are created and rendered with relative and absolute links, images and table formatting using cascaded styles sheets.</p> <p>2.4 Forms are created with a variety of appropriate elements and element groupings to make forms easy to follow.</p> <p>2.5 Knowledge of server scripting languages in current use is applied to scripting to developing client-side programming and validations. (See Note 3)</p> <p>2.6 Approaches to issues/problems are analysed to provide most effective solutions.</p> <p>2.7 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.</p>

- |   |   |     |   |
|---|---|-----|---|
| 3 | Test, evaluate, implement and document the developed web pages. | 3.1 | Testing and procedures are developed to evaluate web page programming.  |
|   |   | 3.2 | Problems and bugs in web page programming are identified and rectified to ensure specifications are met.                          |
|   |   | 3.3 | Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s). |

Note

1. Examples of mark-up languages are HTML, XML and XSL.
2. Examples of scripts are Javascript and VB script.
3. Examples of server scripting languages are JSP, ASP, PHP and Perl.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing basic web pages for engineering applications.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.4.21 | Client side programming                   |
| 2.4.22 | Server scripting                          |
| 2.18.1 | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing web pages for any electrotechnology engineering disciplines. This shall include

- Development, implementation and testing HTML pages with at least four of the following features:
  - Relative and absolute links, images and table formatting
  - Cascaded styles sheets
  - Forms
  - New browser windows
  - Validation of form data
- Development, implementation and testing of server scripting for database access with at least four of the following features:

- Form data input response
- Form data processing
- Database access
- Output of database table contents
- Insertion of table data to database

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to

consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop basic web pages for engineering applications as described in 7) and including:
    - A Interpreting page development requirements.
    - B Identifying the appropriate development tools and software.
    - C Creating and rendering effective web pages.
    - D Providing basic web functionality.
    - E Developing testing procedures.
    - F Identifying problem and bugs in web page program.
    - G Rectifying problem and bugs.

- H Writing intermediate and final work reports to the required standard.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in develop basic web pages for engineering applications.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1; 3.2	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 3.1; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.7; 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6; 3.2

**UEENEED030A                      Select, install, configure and test multimedia devices**

**Unit Descriptor**

1)

This unit covers assembly, setting-up and testing multimedia computer systems as directed in computer service manuals and device/driver documentation. It encompasses safe working practices, and selecting, installing, configuring and testing multimedia computer system components, applications, and driver software, following written and oral instruction and applying customer relations' procedures.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

**Prerequisite Unit(s)**

2)

**Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED002A    Assemble, set-up and test personal computers

**Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading        3        Writing        3        Numeracy        3

**Application of the Unit**

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment formally-acquired competencies.

**Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field**

4)

Computer Systems

**ELEMENT****PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Select and prepare to install multimedia components.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures in relation to computer and keyboard use are followed.
- 1.3 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.4 Multimedia components, drivers, and application software are obtained in accordance with established routines and checked as meeting requirements.
- 1.5 Multimedia devices, drivers, and application software are correctly selected given user requirements and manufacturer specifications.

2 Install multimedia components.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Multimedia components are assembled and connected in accordance with manufacturer instructions.
- 2.3 Multimedia devices, drivers, and application software are correctly selected given user requirements and manufacturer specifications.
- 2.4 Multimedia devices are correctly installed and where not hot pluggable, computer is switched on and start-up procedures are followed and checked.
- 2.5 Multimedia devices, operating system, application programs, and multimedia devices are to be checked to be opening and operating correctly.
- 2.6 Multimedia devices and drivers are tested to be working correctly and benchmarked against similar devices for performance comparisons.
- 2.7 Faults are identified as being the result of either faulty hardware or software.

- |   |                           |   |  |
|---|---------------------------|---|--|
|   | 2.8                       | Faults are rectified in accordance with computer hardware, operating system and application instructions in strict accordance with OHS requirements.                          |  |
|   | 2.9                       | Procedures for referring non-routine events to immediate supervisor for directions are followed.  |  |
|   | 2.10                      | Computer shutdown procedures are followed and computer switched off.  |  |
|   | 2.11                      | Work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. |  |
| 3 | Complete work and report. | 3.1   | OHS risk control work completion measures and procedures are followed.                               |
|   |                           | 3.2   | Work area is cleaned and made safe in accordance with established procedures.                        |
|   |                           | 3.3   | Work supervisor is notified of the completion of the work in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting, installing, configuring and testing multimedia devices.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |   |
|--|----------|---|
|  | 2.4.12.2 | Multimedia computer components            |
|  | 2.18.1   | Occupational Health and Safety principles |
|  | 2.18.9   | Electronic Safe working practices         |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembling, setting-up, and testing multimedia computer systems as directed in computer service manuals and device/driver documentation. It is to include demonstrated competence across assembly, setting-up and testing multimedia computer devices on three occasions respectively, using computer service manuals and device/driver documentation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Select, install, configure and test multimedia devices as described in 7) and including:
    - A Connecting computer, components and peripherals in accordance with requirements
    - B Assembling on three separate occasions multimedia computer devices
    - C Setting up on three separate occasions multimedia computer devices
    - D Testing on three separate occasions multimedia computer devices
    - E Documenting and reporting multimedia computer device activities and results.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in selecting, installing, configuring and testing multimedia devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.2; 3.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.4 to 3.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.2 to 3.6	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.5; 2.2 to 2.4; 3.2 to 3.6

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6; 3.7

## **UEENEED031A    Develop and validate basic integrated systems**

### **Unit Descriptor**

**1)**

This unit covers planning installations, developing instructions and validating integrated systems with up to three independent subsystems. It encompasses working safely, understanding operating parameters and capabilities, following instructions and documenting.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 3/4 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### **Competency Field**

**4)**

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to develop and validate basic integrated systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 The extent and nature of the integrated system is determined from design brief.</p> <p>1.3 Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood.</p> <p>1.4 Work supervisor or customers are consulted to determine which functions of the system are to be use and the parameter of each and written confirmation sought.</p> <p>1.5 Software, tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Develop and validate basic integrated systems.	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of integrated systems, electrical and other services, installation performance standards, compliance methods and service equipment is applied to developing the integrated system.</p> <p>2.3 System installation requirements, equipment and instructions for the integrated system are incorporated in the development.</p> <p>2.4 Safety, functional and budgetary considerations are incorporated in the installation design.</p> <p>2.5 Equipment required for the integrated system is selected and obtained in accordance with the developed plan and established requirements.</p> <p>2.6 The required status of each function of system devices is entered and their parameters set in accordance manufactures programming instructions and customer’s requirements.</p> <p>2.7 Location of each device in the installation of the integrated system is documented to ensure correct operation of system functions.</p>

- |   |  |  |   |
|---|--|--|---|
|   | 2.8                                    | Solutions to unplanned situation are provided consistent with organisation's policy. |   |
| 3 | Validate integrated system and report. | 3.1  | System device operations are tested in strict accordance OHS requirements and procedures.                 |
|   |  | 3.2  | Operating anomalies are identified and corrected in accordance with established routines.                 |
|   |  | 3.3  | OHS work completion risk control measures and procedures are followed.                                    |
|   |  | 3.4  | Work site is cleaned and made safe in accordance with established procedures.                             |
|   |  | 3.5  | Work completion is documented and appropriate person(s) notified in accordance with established routines. |

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing and validating basic integrated systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.3.16 Integrated systems basics

2.18.1 Occupational Health and Safety principles

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing and validating basic integrated systems with two independent subsystems one of which is lighting control.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Section 1, Clause 1.4.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop and validate basic integrated systems as described in 7) and including:
    - A Understanding required operating functions and parameters.
    - B Selecting appropriate equipment.
    - C Entering functions and parameters correctly.
    - D Testing and verify device operation.
    - E Correcting system anomalies effectively.
    - F Documenting development work.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in develop and validate basic integrated

systems.

### Method of assessment

#### 8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

### Concurrent assessment and relationship with other units

#### 8.5)

There are no concurrent assessment recommendations for this unit.

### Key competencies

#### 8.6)

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.5	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.8; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note:  
Where dedicated application software is used in demonstrating competency, this unit may be assessed concurrently with UEENEED001A Use basic computer applications

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2; 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

	routine or contingent situations	2.8
--	----------------------------------	-----

## UEENEED032A Design integrated systems

### Unit Descriptor

1)

This unit covers designing systems for the control and management of services such as lighting, air conditioning, water use entertainment facilities, communications and the like for buildings and premises. It encompasses developing control scenarios based on a design brief, negotiating with architect/designer, builder and client, applying knowledge of integrated systems and protocols, developing design drawings and obtaining approval for final design.

Note.

This Unit is limited to systems with up to three inter working subsystems

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED031A Develop and validate basic integrated systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### Competency Field

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to design integrated systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 The extent and nature of the integrated system is determined from design brief.</p> <p>1.3 Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood.</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved in the installation or associated work.</p> <p>1.5 Functions of the integrated system are determined from job specifications and/or and documented through discussions with appropriate person(s).</p>
2 Develop integrated systems design.	<p>2.1 Knowledge of integrated systems, building services installation performance standards, compliance methods and service equipment is applied to designing the integrated system.</p> <p>2.2 Alternative arrangements for the installation design are considered based on the requirements outlined in the design brief.</p> <p>2.3 System installation requirements, equipment and programming for the integrated system are incorporated into the design.</p> <p>2.4 Safety, functional and budgetary considerations are incorporated in the installation design.</p> <p>2.5 System design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.6 System design is documented for submission to appropriate person(s) for acceptance and approval.</p> <p>2.7 Solutions to unplanned situation are provided consistent with organisation’s policy.</p>
3 Obtain approval for design.	3.1 System design is presented and explained to client representative and/or other relevant person(s).

- 3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

## **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing of integrated systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.3.17 Integrated systems, subsystem inter working
- 2.18.1 Occupational Health and Safety principles

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing integrated systems with three inter working subsystems one of which is lighting control.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Section 1, Clause 1.4.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range

statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design integrated systems as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in design of integrated systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE015A    Develop design briefs for electrotechnology projects

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note:  
Where dedicated application software is used in demonstrating competency, this unit may be assessed concurrently with UEENEED001A Use basic computer applications

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.7

## **UEENEED033A      Design complex integrated systems**

### **Unit Descriptor**

**1)**

This unit covers designing large and networked systems for the control services and energy management in buildings and premises. It encompasses developing control scenarios based on a design specifications and/or brief, negotiating with architect/designer, builder and client, applying knowledge of integrated systems, networks and protocols, developing design drawings and obtaining approval for final design.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED032A      Design integrated systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### **Competency Field**

**4)**

Computer Systems

### **ELEMENT**

### **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to design complex integrated systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 The extent and nature of the integrated system is determined from design brief.</p> <p>1.3 Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood.</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved in the installation or associated work.</p>
2 Develop complex integrated systems design.	<p>2.1 Knowledge of complex integrated systems, building services installation performance standards, compliance methods and service equipment is applied to designing the integrated system.</p> <p>2.2 Alternative arrangements for the system design are considered based on the requirements outlined in the design brief.</p> <p>2.3 System installation requirements, equipment and programming for the integrated system are incorporated into the design.</p> <p>2.4 Safety, functional and budgetary considerations are incorporated in the installation design.</p> <p>2.5 System design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.6 System design is documented for submission to appropriate person(s) for acceptance and approval.</p> <p>2.7 Solutions to unplanned situation are provided consistent with organisation’s policy.</p>
3 Obtain approval for design.	<p>3.1 System design is presented and explained to client representative and/or other relevant person(s).</p> <p>3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation’s policy.</p> <p>3.3 Final design is documented and approval obtained from appropriate person(s).</p>

- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing complex integrated systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.3.18 Complex integrated system programming

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing complex integrated systems with at interacting subsystems requiring the application of advance programming.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Design complex integrated systems as described in 7) and including:
  - A Developing outlines of alternative designs.
  - B Developing the design within the safety and functional requirements and budget limitations.
  - C Documenting and presenting design effectively.
  - D Successfully negotiating design alteration requests.
  - E Obtaining approval for final design.
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency designing complex integrated systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE015A Develop design briefs for electrotechnology projects

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2; to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: (See Note)	

Note:

Where dedicated application software is used in demonstrating competency, this unit may be assessed concurrently with UEENEED001A Use basic computer applications

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance.

See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

# UEENEED034A **Configure and maintain industrial control system networks**

## Unit Descriptor

1)

This unit covers installing, configuring and maintaining communication service on a control network. It encompasses safe working practices, applying knowledge of industrial control network topology and protocols, configuring data links, bus monitoring and system management and access, network testing and documenting system settings.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED015A Administer user networks

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

## Competency Field

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to configure and maintain industrial control system networks.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the industrial control system and network is established from control system specifications and in consultation with appropriate person(s).
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Network operating system versions and updates needed to configure and maintain the network are obtained in accordance with established procedures and checked against job requirements.

2 Configure and maintain industrial control system networks.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Control application network components are installed, upgraded and configured in accordance with developer’s instructions and network requirements.
- 2.3 Devices, desktop environment, network protocols and services and system security are implemented in accordance with requirements.
- 2.4 Access to control data and resources is configured within the limitations specified for each user.
- 2.5 Network malfunctions are identified and rectified using logical techniques and drawing knowledge of control devices, storage, network protocols, connections and services and system security configuration processes.
- 2.6 Network performance and reliability is monitored and optimised in accordance with established procedures.
- 2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.

	2.9	Network administration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.
3 Document control system network configuration and maintenance activities.	3.1	Written justification is produced for network maintenance and upgrading and appropriate person(s) notified in accordance with established procedures.
	3.2	Network maintenance documentation is maintained in accordance with established procedures.

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and to configure and maintain industrial control system networks.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.3.11 Control system network basics
- 2.3.12 Control network infrastructure
- 2.18.1 Occupational Health and Safety principles

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to configuring and maintaining an industrial control system networks with at least three distributive control loops, two programmable controllers and one HMI system controller.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

- 8.1) Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and

associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Configure and maintain industrial control system networks as described in 7) and including:
    - A Establishing industrial control system and network requirements and operating system versions and updates.
    - B Installing, upgrading and configuring control application network components correctly.
    - C Configuring access to control data and resources for each user.
    - D Identifying network malfunctions.
    - E Rectifying network malfunctions.
    - F Documenting network configuration and maintenance activities.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in configuring and maintaining industrial control system networks.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED015A Administer user networks

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.5	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.5; 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.6	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.9
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7
---	--	---

## **UEENEED043A      Install and configure a computer operating system and software**

### **Unit Descriptor**

1)

This unit covers installing and configuring an operating system and software on a personal computer. It encompasses safe working practices, installing and testing the operating system and application software, testing functionality, rectifying operating anomalies, following written and oral instruction and procedures and applying appropriate customer relations.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

### **ELEMENT**

### **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to install and configure a computer operating system and software.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The scope of work to be undertaken is determined from documentation or from discussions with work supervisor.</p> <p>1.4 Operating system and application software versions s needed upgrade for the installation are obtained in accordance with established procedures and checked against job requirements.</p>
2 Upgrade computer and peripheral software.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Operating system and application software components are installed in accordance with installation instructions and industry practices.</p> <p>2.3 Operating system, including device drivers, and application software are tested in preparation for return to service/customer.</p> <p>2.4 Operating system and software malfunctions are identified using logical techniques drawing on knowledge of operating system configuration requirements.</p> <p>2.5 Malfunctions are rectified using latest software versions, incremental updates and bug and security patches.</p> <p>2.6 Methods for dealing with unexpected situations are decided on the basis of safety and required work outcomes.</p> <p>2.7 Installation and configuration is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.</p>
3 Complete and report upgrading and	3.1 OHS work completion risk control measures and procedures are followed.

- maintenance activities.
- 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Operating system and software installation is documented and appropriate person(s) notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and configuring a computer operating system and software.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.14 Personal computer operating systems, basics
- 2.4.15 Computer operating systems
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and configuring operating system, including device drivers and at least one-application software types for a personal computer.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and configure a computer operating system and software as described in 7) and including:
    - A Obtaining appropriate operating and software versions.
    - B Installing and configuring operating system correctly.
    - C Installing and configuring software for an application correctly.
    - D Identifying and rectifying operating system and application malfunctions.
    - E Documenting installation activities.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and configuring a computer operating system and software.

### **Method of assessment**

#### **8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

8.5)

There are no concurrent assessment recommendations for this unit.

**Key competencies**

8.6)

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEED046A Set up and configure basic local area network

### Unit Descriptor

1)

This unit covers setting up, configuring and maintaining operation of a basic local area network (LAN) of up to 20 connected devices. It encompasses safe working practices, installing network hardware, installing and configuring network software, establish user accounts, configure shared Internet connection and documenting set up parameters and LAN topology.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED002A Assemble, set-up and test personal computers

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to set up and configure basic local area network.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 The extent of set-up and configuration work is determined from job specifications and in consultation with appropriate person(s).</p> <p>1.3 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.5 Hardware and software needed for the work is obtained in accordance with established procedures and checked against job requirements.</p> <p>1.6 Preparatory work is checked to ensure no damage has occurred and complies with requirements.</p>
2 Set up, configure and maintain basic local area network.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Layout of network hardware, cabling and outlets is determined from job specifications or in consultation with appropriate person(s).</p> <p>2.3 Hardware is installed in accordance with network requirements. (See Note 1)</p> <p>2.4 Network software is installed and configured in accordance with network requirements. (See Note 2)</p> <p>2.5 Network operations are tested and anomalies identified and corrected.</p> <p>2.6 Reported network failures and faults are responded to and appropriate tools and methods are used to</p> <p>2.7 Identified causes of reported problems are rectified and network is tested in accordance with established procedures.</p> <p>2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.</p>

	2.9	Set-up configuration and maintenance are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3	Complete work and document activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Network configuration and maintenance records are maintained in accordance with established procedures.
	3.4	Service report is completed and forwarded to appropriate person(s) in accordance with established procedures.

Notes.

1. Examples of hardware are network card, server, router, hub .
2. Examples of configuration are network protocols, user accounts and permissions, shared devices and security.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and to setting up and configuring a basic local area network.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.25.1 Local area network fundamentals

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to setting up and configuring basic local area network that include at least:

- 3 personal computers/work stations
- 1 server
- 1 hub or switch or router
- 1 input or output device

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up and configure basic local area network as described in 7) and including:
    - A Establishing the extent of work accurately.
    - B Obtaining specified hardware and software.
    - C Laying out network appropriately.
    - D Installing hardware as specified.
    - E Installing and configuring software to requirements.
    - F Identifying and correcting anomalies.
    - G Diagnosing and rectifying the cause of malfunctions effectively.
    - H Documenting network activities.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment****8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in set up and configure basic local area network.

**Method of assessment****8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.2 to 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5; to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2; to 2.7	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	1,3; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## UEENEED047A Manage computer projects

### Unit Descriptor

1)

This unit covers the management of computer projects involving design, modifications, installation, and/or maintenance of systems and equipment. It encompasses management of safety, budget, variation, personnel, resources, and critical path timelines all necessary progress and all completion documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

### Licence to practise

3.1)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

### Competency Field

4)

Computer Systems

### ELEMENT

### PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Establish the scope of the project.

1.1 OHS processes and procedures for a given work area are identified, obtained and understood.

- 1.3 Project deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).
- 1.3 Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation.
- 1.4 Plant, materials and skills needed to meet project outcomes are established from project planning and other relevant documentation.
- 1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.
- 2 Manage project.
  - 2.1 OHS policies, procedures and programs are implemented and monitored.
  - 2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project.
  - 2.3 Risk events are identified and project strategies implemented to ensure that outcomes are achieved to standard of quality specified in the contract and to safety standards required by organisation’s policy.
  - 2.4 Procurement processes and procedures are monitored to ensure on-time supply of plant and materials and in accordance with organisation policy.
  - 2.5 Project progress is monitored against schedule, quality requirements and budget.
  - 2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation’s policy.
  - 2.7 Variations are managed in accordance with agreed processes and in accordance with the contract.
  - 2.8 Project records are maintained and progress reports written and forwarded to all appropriate person(s).
- 3 Complete project.
  - 3.1 Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.

- 3.2 Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation policy.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing computer projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.17 Project management
- 2.2.19 Customer/Client relations
- 2.2.27 Computer industry sector customs and practices
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing a computer system project with not less than the following features:

- Security
- Redundancy
- Scalability
- 100 users
- Catering multiple operating systems

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified

in the Performance Criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Manage computer projects as described in 7) and including:
    - A Establishing the scope of the project accurately.
    - B Ascertaining the input a project.
    - C Developing effective management processes.
    - D Managing resources and variations effectively.
    - E Resolving conflicts.
    - F Adopting risk management strategies.
    - G Maintaining records and submitting progress reports.
    - H Meeting project outcomes.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in manage computer projects.

### Method of assessment

#### 8.4)

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

### Concurrent assessment and relationship with other units

#### 8.5)

There are no concurrent assessment recommendations for this unit

### Key competencies

#### 8.6)

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.4; 2.6 to 2.8	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 2.5; 2.7; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.3; 2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.8; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6
---	--	---

## UEENEED048A Plan computer systems projects

### Unit Descriptor

1)

This unit covers development and documentation of computer systems project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures.</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures.</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies.</p> <p>2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating into the project plan.</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.7 Project plan proposal is documented in accordance with organisation policies and procedures.</p>
3 Obtain approval for project plan.	<p>3.1 Project plan is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.</p>

- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning computer systems projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.16.1 Project Planning
- 2.2.18 Critical path and project analysis
- 2.2.27 Computer industry sector customs and practices
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing a computer system project with not less than the following features:

- Security
- Redundancy
- Scalability
- 100 users
- Catering multiple operating systems

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in

accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan computer systems projects as described in 7) and including:
    - A Determining the project requirements accurately.
    - B Establishing a project budget.
    - C Developing effective work flow strategies.
    - D Documenting project plan proposal.
    - E Negotiating alterations to the proposed project plan successfully.
    - F Obtaining approval of the final plan.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning computer systems projects.

### **Method of**

#### **8.4)**

**assessment**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

**Note:**

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.2; 3.3	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.1; 2.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	2
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	2.3; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3; 2.1; 2.2	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2; 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.2

## UEENEED050A **Develop control programs for microcomputer equipped devices**

### Unit Descriptor

1)

This unit covers development of hardware and programs to control external devices using microcomputers as apply to engineering product development work. It encompasses working safely, following design brief, applying knowledge of microcomputer architecture, constructing prototype devices, programming using assembler or ‘C’ programming language, testing device operation and documenting development work.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEED028A    Develop and test basic specification for microcontroller equipped devices

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p>1 Prepare to develop control programs for microcomputer equipped devices.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of development work is determined from design brief and in consultation with relevant persons.</p> <p>1.4 Development work is planned to meet scheduled timelines in consultation with others involved on the work site.</p> <p>1.5 Appropriate development tools and software are selected based on specified requirements and performance standards.</p> <p>1.6 Materials and devices/components required for the work are selected on compatibility of specifications with control requirements and project budget constraints.</p> <p>1.7 Strategies are implemented to ensure development work is carried out efficiently.</p>
<p>2 Develop control programs.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of computer-equipped devices and systems and compliance standards are applied to the design.</p> <p>2.3 Alternative arrangements for the development are considered based on the requirements outlined in the design brief.</p> <p>2.4 Safety, functional and budget considerations are incorporated in the design.</p> <p>2.5 Prototype devices and circuits are constructed and tested for compliance with the design brief and regulatory requirements.</p> <p>2.6 Knowledge of programming language code, functions and features in current use are applied to developing control programs.</p>

- |   |  |   |
|---|--|---|
|   | 2.7  | Prototype malfunctions are rectified and re-tested to ensure effective operation of design.                                       |
|   | 2.8  | Program development is documented for submission to appropriate person(s) for approval.   |
|   | 2.9  | Approaches to issues/problems are analysed to provide most effective solutions.   |
|   | 2.10   | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.  |
| 3 | Test, evaluate, implement and document control programs. |   |
|   | 3.1  | Testing and procedures are developed to evaluate control program.   |
|   | 3.2  | Problems and bugs in program are identified and rectified to ensure specifications are met.                                       |
|   | 3.3  | Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s). |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing control programs for microcomputer equipped devices.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.3.20   | Microcontroller programming basics                            |
| 2.4.44.1 | Microprocessor/microcontroller assembler language programming |
| 2.4.44.2 | High level programming  |
| 2.18.1   | Occupational Health and Safety principles                     |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing control programs for microcomputer equipped devices with at least five interacting functions and using a programming language currently used in industry.

Note.

Although 'C' and assembler languages are preferred, other relevant language in current industry use may be used.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this

---

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop control programs for microcomputer equipped devices as described in 7) and including:
    - A Determining the extent of development work requirements.
    - B Identifying the appropriate development tools and software.
    - C Selecting devices/components compatibility with control requirements and project budget constraints.
    - D Developing control program within the safety and functional requirements and budget limitations.
    - E Documenting and presenting program development effectively.
    - F Successfully negotiating program alteration requests.
    - G Obtaining approval for final program developed.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing control programs for microcomputer equipped devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	3

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1; 3.2	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 3.1; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.7; 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 3.2

## UEENEED051A Provide programming solution for engineering problems

### Unit Descriptor

1)

This unit covers developing, implementing and testing programming solutions, using a structure programming language. It encompasses following design brief using appropriate development software, writing code that features classes, inheritance, polymorphism, arrays and packages, creating applications (applets) and documenting development activities.

Note 1:

Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising a systems operating parameters and dealing with system malfunctions.

Note 2:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field**

4)

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to develop programming solution.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of engineering problem is determined from performance specifications and situation reports and in consultation with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Appropriate development kit and software tools are selected based on specified requirements and performance standard.
- 1.6 Strategies are implemented to ensure programming is carried out efficiently.

2 Develop programming solutions.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of programming functions and features are applied to providing a programming solution.
- 2.3 Code in existing programs is analysed and alteration or corrections made to modify or rectify program performance.
- 2.4 Key features of the programming language are applied to develop and test solutions. (Note)
- 2.5 Approaches to issues/problems are analysed to provide most effective solutions.
- 2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

3 Test and document the programming

- 3.1 Testing procedures are developed to analyse code developed in relevant programming language.

solutions.

- 3.2 Problems and bugs in program are rectified to ensure compliance with program performance requirements.
- 3.3 Intermediate and final work reports are written in accordance with professional standards and presented to appropriate person(s).

Note:

- 1. Key features include that features classes, inheritance, polymorphism, arrays and packages.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and provide programming solution for engineering problems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.44.2 High level programming
- 2.4.44.3 Advanced high level programming
- 2.10.1.2 Electronic signals and systems
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to providing programming solution for engineering problems in any high level programming language used in engineering applications.

Note:

Example of programming languages are 'C', and object oriented languages such as 'C++', Java and Visual Basic.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified

in the Performance Criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide programming solution for engineering problems as described in 7) and including:
    - A Understanding the engineering programming problem.
    - B Using all key features of programming language.
    - C Developing testing procedures.
    - D Identifying problem and bugs in code.
    - E Rectifying problem and bugs in code.
    - F Writing intermediate and final work reports in accordance with professional standards.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing programming solution for engineering problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6	2
How are mathematical ideas	Refer to the following Performance Criteria for examples of application:	

and techniques used?	2.2 to 2.6	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 2.2 to 2.6; 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

routine or contingent situations	2.5; 3.1; 3.2
--	---------------

## UEENEED052A Design embedded controller systems

### Unit Descriptor

1)

This unit covers designing systems incorporating microcontrollers or embedded signal processors (DSPs). It encompasses working safely, following design briefs and applying knowledge of embedded system devices, interpreting device specifications, constructing prototypes, using appropriate development software, applying programming techniques, testing developed system prototype operation and documenting design and development work.

Note:

This unit applies to all aspects of Electrotechnology – engineering applications only. For general competencies related to Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEE027A Use advanced computational processes to provide solutions to engineering problems

UEENEED027A Develop structured programs for control sub systems to access external devices

UEENEED028A Develop and test basic specification for microcontroller equipped devices

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

**Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field**

**4)**

Computer Systems

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .

1 Prepare to design and develop advance embedded systems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the proposed embedded system development is determined from the design brief or in consultation with appropriate person(s).
- 1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
- 1.5 Materials and devices/components required for the work are selected on compatibility of their specifications with embedded system requirements and project budget constraints.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Design and develop advance embedded systems.

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 Knowledge of embedded devices and systems and compliance standards are applied to the design.
- 2.3 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.
- 2.4 Safety, functional and budget considerations are incorporated in the design.

- |   |  |  |
|---|--|--|
|   | 2.5  | Prototype devices and circuits are constructed and tested for compliance with the design brief and regulatory requirements. (Note) |
|   | 2.6  | Prototype malfunctions are rectified and retested to ensure effective operation of design.   |
|   | 2.7  | Embedded system design is documented for submission to appropriate person(s) for approval.   |
|   | 2.8  | Solutions to unplanned situation are provided consistent with organisation policy.   |
| 3 | Obtain approval for embedded systems design. |  |
|   | 3.1  | Embedded system design is presented and explained to client representative and/or other relevant person(s).                        |
|   | 3.2  | Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.       |
|   | 3.3  | Final design is documented and approval obtained from appropriate person(s).   |
|   | 3.4  | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.   |

Note.

Prototype construction includes programming some devices.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing embedded controller systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.3.3   | Process control principles                |
| 2.9.4.2 | Digital signal processing                 |
| 2.9.4.3 | Digital signal processing development     |
| 2.18.1  | Occupational Health and Safety principles |
| 2.18.9  | Electronic Safe working practices         |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and developing an embedded system with at least five interacting functions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design embedded controller systems as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in design embedded controller systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |             |   |
|-------------|---|
| UEENEEE027A | Use advanced computational processes to provide solutions to engineering problems |
| UEENEED027A | Develop structured programs for control sub systems to access external devices    |
| UEENEED028A | Develop and test basic specification for microcontroller equipped devices         |

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

## Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.3; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 2.5; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>
------------------------------	-------------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 2.3; 3.3; 3.4;
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.7; 3.1 to 3.3;
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## **UEENEED053A Set up and test biometric devices**

### **Unit Descriptor**

1)

This unit covers setting up and testing various biometric devices as implemented in the field of biometric measurements. This is achieved through the installing, setting up, configuring and testing biometric devices in accordance with requirements. It encompasses safe working practices, following written and oral instructions and procedures, applying knowledge of biometric devices then installing and testing their performance while documenting outcomes.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEED046A Set Up and Configure a Basic Local Area Network

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

### **ELEMENT**

### **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to set up and test biometrics devices	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of device set up and configuration work is determined from job specifications and in consultation with appropriate person(s).</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.5 Hardware, software and materials needed for the work are obtained in accordance with established procedures and checked against job requirements.</p> <p>1.6 Tools and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Set up and test biometric devices	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Circuits/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 Layout of biometric system network hardware, cabling and outlets is determined from job specifications or in consultation with appropriate person(s)</p> <p>2.4 Hardware is set up in accordance with network requirements (See Note 1)</p> <p>2.5 Biometric devices are set up and configured in accordance with network requirements.</p> <p>2.6 Biometric devices on a network are tested and anomalies identified and corrected.</p> <p>2.7 Biometric device failures are responded to and rectified in accordance with requirements.</p>

- |   |                                   |   |
|---|-----------------------------------|---|
|   | 2.8                               | Essential knowledge and associated skills required to set up and test biometric devices are applied to ensure work is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
|   | 2.9                               | Identified causes of reported problems are rectified and biometric devices are tested in accordance with established procedures.  |
|   | 2.10                              | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   | 2.11                              | Biometric device installation and set-up are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.  |
| 3 | Complete set up, test and report. | 3.1 OHS risk control work completion measures and procedures are followed.  |
|   |                                   | 3.2 Work area is cleaned and made safe in accordance with established procedures.   |
|   |                                   | 3.3 Biometric device installation and maintenance records are maintained in accordance with established procedures.   |
|   |                                   | 3.4 Service report is completed and forwarded to appropriate person(s) in accordance with established procedures.   |

Note 1:

Connection of equipment may include both plug connected power supply and network

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and testing biometric devices. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.9.71.1 | Biometric devices                         |
| 2.18.1   | Occupational Health and Safety principles |
| 2.18.9   | Electronic Safe working practices         |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to setting up and testing four different types of biometric device.

Note.

Examples of biometric devices are iris recognition scanners, palm print scanners, signature readers, voice recognition devices, data capture devices .

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety

and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up and test biometric devices as described in 7) and including:
    - A Placing equipment in accordance with regulatory and customer requirements.
    - B Applying knowledge of relevant legislation, standards and/or codes of practice pertaining to security and privacy associated with biometric devices
    - C Selecting appropriate equipment.
    - D Entering functions and parameters in accordance with requirements.

- E Testing and verifying functional operation of device(s).
- F Responding to system anomalies to effect functionality of device(s) according to requirements.
- G Completing necessary documentation including handing over equipment maintenance and operating instructions documents to the customer.
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up and testing biometric devices.

### **Method of assessment**

#### **8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

### **Concurrent assessment and relationship with other units**

#### **8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of Occupational Health and Safety covered in Unit UEENEE001A and other discipline specific Occupational Health and Safety unit(s) shall be reassessed in relation to this unit.

**Key competencies 8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3, 2.2, 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2, 2.6, 3.1	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 2.6, 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; to 2.9	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1., 1.4, 2.2, 2.4	

**Skills7 Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.9; 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6 to 2.9

## UEENEED054A Analyse and implement biometric techniques and applications

### Unit Descriptor

1)

This unit covers analysing and implementing the various established biometric techniques and applications as implemented in the field of biometric measurements. This is achieved through evaluation of the major biometric system from enrolment phase, interaction with the operator and subject, to decision making. It encompasses safe working practices, following written and oral instructions and procedures, applying knowledge of biometric systems then implementing, testing and evaluating their performance while documenting outcomes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed only after the following competencies have been confirmed.

UEENEED053A Develop and Validate Biometric Systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

### ELEMENT

### PERFORMANCE CRITERIA

<p><b>5) Elements describe the essential outcomes of a unit of competency</b></p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .</p>
<p><b>1 Prepare to analyse and implement biometric techniques and applications.</b></p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Consideration is given to technical factors that will have an impact on the design and system rollout in criminal, civil and commercial settings.</p> <p>1.4 Technical and physical requirements of a biometric system required for efficient implementation and system rollout are identified</p> <p>1.5 Existing and planned technical and environmental goals of the enterprise are evaluated and documented.</p> <p>1.6 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation’s established procedures.</p> <p>1.7 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.8 Correct operation and safety of software, tools, equipment, and testing devices needed to carry out the work are obtained and checked in accord requirements.</p> <p>1.9 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameters of each and seek written confirmation.</p>
<p><b>2 Analyse and implement biometric techniques and applications</b></p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of technology and the processes of implementation used with biometric systems are applied in analysing and implementing biometric techniques and applications according to requirements.</p>

- 2.3 Performance of landline versus mobile telephony in association with biometric systems is analysed.
- Note:  
Analysis and evaluation to incorporate development process, target enrolment, identification and verification, system installation requirements, software, equipment requirements and instructions for the biometric system.
- 2.4 Safety, functional and budgetary considerations are incorporated in the installation design plan analysis and evaluation.
- 2.5 Hardware and software required for the biometric system are analysed and implemented in accordance with the developed plan and established procedures.
- 2.6 Australian and International standards and/or codes of practice are used to evaluate compliance.
- 2.7 Practical aspects and limitations of biometric system implementation are demonstrated through the use of multi-biometrics.
- 2.8 Location of each device in the installation of the biometric system to ensure correct operation of system functions is documented.
- 2.9 Solutions to unplanned situation are provided that are consistent with legal requirements and established procedures.
- 3 Report on biometric system analysis and implementation
- 3.1 Hardware and software required for the biometric system are analysed for compliance requirements and in accordance with OHS requirements and established procedures
- 3.2 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 3.3 Possible system malfunctions are identified during system analysis and implementation using logical techniques drawing on knowledge of biometric systems.
- 3.4 Approaches to issues/problems are analysed to provide most effective solutions.
- 3.5 Work completion is documented and notified appropriate person(s) or persons in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing and implementing biometric techniques and applications for in field use.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.71.2 Biometrics Equipment Techniques and Applications
- 2.9.71.3 Biometric Systems Techniques and Applications
- 2.18.1 Occupational Health and Safety Principles
- 2.18.9 Electronic Safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to analysing and implementing a biometric system, including at least two of the following features:

- analysis and evaluation development process
- target enrolment
- identification and verification
- system installation requirements
- software
- equipment requirements and instructions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range

statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Evaluation through analysis and implementation of Biometric Systems as described in 7) and including:
    - A Evaluating fingerprint matching, palm print analysis, hand geometry investigation, facial verification, iris recognition, retinal scan, voice recognition, speaker verification, handwriting analysis, signature verification, DNA technology techniques and applications for in field of biometric use
    - B Implementing advice of fingerprint matching, palm print analysis, hand geometry investigation, facial verification, iris recognition, retinal scan, voice recognition, speaker verification, handwriting analysis, signature verification, DNA technology techniques and applications for in field of biometric use
    - C Any two of the following features:
      - analysis and evaluation development process
      - target enrolment
      - identification and verification
      - system installation requirements
      - software requirements
      - equipment requirements and instructions
    - D Applying knowledge of relevant legislation, standards and/or codes of practice pertaining to security and privacy associated with biometric system techniques and applications
    - E Documenting and recording results in accordance with requirements
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and**

**8.3)**

**specific resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in analysing and implementing a biometric system for in field use.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED053A Develop and Validate Biometric Systems

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 2.6; 2.7; 3.7	3

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3; to 1.6; 2.1 to 2.3; 2.6; 3.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3; 3.1 to 3.5	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.7; 3.7
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## **UEENEED055A    Develop and validate biometric systems installation**

### **Unit Descriptor**

1)

This unit covers the development of biometric system installation, instructions and validating requirements of biometric systems. It encompasses working safely, understanding operating parameters and capabilities, following instructions and while documenting outcomes.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be only after all relevant competency standard units at AQF level 5 or higher have been achieved.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide .
1 Prepare to develop and validate biometric systems installation and related instructions and validation	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Consideration is given to technical factors that will have an impact on the system installation in criminal, civil, and commercial settings.</p> <p>1.4 The extent of the biometric database is identified and evaluated, including factors affecting the integration and application of proprietary or open source packages.</p> <p>1.5 Evaluate for documenting the existing and planned technical and environmental requirements, including the enterprise.</p> <p>1.6 Work team/group is arranged of appropriately competent persons in accordance with skills required to meet work outcomes and organisation’s established procedures.</p> <p>1.7 The business requirements of the enterprise taking into account, existing and projected business model, organisational and information technology management structures and legal aspects of biometrics in Australia and overseas environments are analysed.</p> <p>1.8 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.9 Correct operation and safety of software, tools, equipment and testing devices needed to carry out the work are obtained and checked in accord requirements.</p> <p>1.10 Work supervisor or customers are consulted to determine which functions of the system are to be used and the parameters of each, and written confirmation sought.</p>
2 Develop and validate biometric systems installation and related	2.1 OHS risk control measures and procedures for carrying out the work are followed.

instructions and validation	2.2	Knowledge of technology of biometric systems, information technology, network security and other services, installation performance standards, compliance methods and service equipment when developing the biometric system are applied in accordance with requirements.
	2.3	Development process for installation, equipment, instructions, and validation requirements of the biometric system are evaluated.
	2.4	Safety, functional and budgetary considerations are incorporated in the installation plan analysis and evaluation.
	2.5	Equipment required for the biometric system are validated in accordance with the developed plan and established procedures.
	2.6	Australian and International standards and/or codes of practice are used to evaluate compliance.
	2.7	Required status and parameters of each function of system devices are entered and set in accordance established procedures, manufacturer instructions and customer’s requirements.
	2.8	Location of each device in the installation of the biometric system to ensure correct operation of system functions is documented.
	2.9	Solutions to unplanned situation are provided that are consistent with legal requirements and established procedures.
	3 Validate and report on biometric systems installation and related instructions and validation	3.1
3.2		Operating anomalies are identified and reported in accordance with established routines.
3.3		Possible system malfunctions are identified during compliance testing using logical techniques drawing on knowledge of biometric systems.
3.4		Approaches to solving issues/problems are analysed to provide most effective solutions.
3.5		Work completion is documented and notified appropriate person(s) or persons in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing biometric system installation, instructions and validating requirements of biometric systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.71.2	Biometrics Equipment Techniques and Applications
2.9.71.3	Biometric Systems Techniques and Applications
2.9.71.4	Biometrics and Security
2.18.1	Occupational Health and Safety Principles
2.18.9	Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing biometric system installation, instructions and validating requirements of biometric systems., including at least two of the following features:

- securing computer networks
- data base design
- measurement of a biometric system
- equipment requirements and instructions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and range statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range statement
  - Demonstrate an understanding of the essential knowledge and

associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Evaluation through developing biometric system installation, instructions and validating requirements of biometric systems as described in 7) and including:
    - A Evaluating operating functions and parameters
    - B Selecting appropriate equipment.
    - C Any two of the following features:
      - securing computer networks
      - data base design
      - measurement of a biometric system
      - equipment requirements and instructions
    - D Entering functions and parameters correctly.
    - E Testing and verify system operation.
    - F Correcting system anomalies effectively.
    - G Applying knowledge of relevant legislation, standards and/or codes of practice pertaining to security and privacy associated with biometric system techniques and applications
    - H Documenting and recording results in accordance with requirements
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing biometric system installation, instructions and validating requirements of biometric systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 2.6; 2.7; 3.7	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.4	3
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6; 2.7	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3; to 1.6; 2.1 to 2.3; 2.6; 3.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3; 3.1 to 3.5	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 2.7; 3.7
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

	the context of the work task	1.3; 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:

## UEENEEE001A Apply OHS practices in the workplace

### Unit Descriptor 1)

This unit specifies the mandatory requirements of Occupational Health and Safety and how they apply to the various electrotechnology work functions. It encompasses responsibilities for health and safety, risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

Note:

Components of this unit are included in the critical aspects of evidence of each applicable unit to ensure that OHS practices are demonstrated as they apply to specific work functions and situation.

### Prerequisite Unit(s) 2)

### Competencies 2.1)

There are no prerequisite competencies for this unit.

Note:

1. Competency in this unit shall be assessed concurrently with other units in a qualification.
2. Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

### Literacy and numeracy skills 2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit 3)

This unit addresses information, processes and techniques for the application of general Occupational Health and Safety requirements in workplaces and is essential for employees without managerial or supervisory responsibilities. The unit is based on Generic Competency A in the National Guidelines for Integrating OHS Competencies into National Industry Competency Standards [NOHSC: 7025 (1998) 2nd Edition].

Note: All States/Territories and the Commonwealth have enacted legislation that establishes a general duty of care for workplace parties to ensure healthy and safe working conditions. In most workplaces, the final responsibility for providing a healthy and safe working environment, as far as practicable, rests with the employer. Employees also have a duty of care in relation to OHS that ensures their health and safety and that of others in the workplace. The relevant jurisdictional OHS legislation should always be consulted to ascertain the exact duties set down for employers and employees.

**Licence to practise 3.1)**

The competency described in this unit does not directly require a licence to practise but is subject to regulations for Occupational Health and Safety and contracts of training where they apply.

Note

Some workplace equipment requires an operative to hold a current user permit eg scaffolding and elevated platforms above certain heights, excavation equipment. Competencies for receipt of such permits are not included in this unit.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1	Prepare to enter a work area	1.1	Instruction in hazards and risk control measures for specific work functions and work areas are identified and obtained.
		1.2	Work area access permits are obtained from appropriate personnel according to established procedures.
		1.3.	Preparations for electrical and non-electrical isolation are carried out to prevent creation of hazards from loss of machine/system/process control according to established procedures.
		1.4	Tools and equipment needed for the work are checked for safety and correct functionality according to established procedures and regulatory requirements.
2	Apply safe working practices	2.1	Workplace procedures and work instructions for controlling risk are followed accurately.
		2.2	Workplace procedures for dealing with accidents, fires and emergencies are followed according to work procedures and scope of responsibility and competencies.
3.	Follow workplace procedures for hazard identification and risk control	3.1	Hazards are identified and control measures implemented and monitored through active participation in the consultation process with employer and other employees.

- 3.2 Hazards in the work area are recognised and reported to appropriate personnel according to established procedures.
- 3.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures.
- 3.4 Workplace instructions and training are followed accurately within established procedures.

## **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying OHS practices in the workplace.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

### 2.18.1 Occupational Health and Safety principles

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- (a) Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- (b) Accepted industry work procedures and the specific safety procedures and work instructions for particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement encompassing:
  - A Preparing to enter the workplace including, the use of work permits and clearances and isolation permissions.
  - B Applying work procedures and instructions as they apply to risk control measures.
  - C Dealing with accidents and emergencies within the scope of responsibility.
  - D Participation in consultation processes, identifying hazards and implementing and monitoring control measures.
  - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items, and
- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit so that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Applying OHS practices in the workplace as described in 7) and including:

Note:

Ability to implement these Occupation Health and Safety measures shall be demonstrated on all occasions safety issues arise.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in applying OHS practices in the workplace.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 2.1; 3.3	1
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.3; 1.4	
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.1	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 3.4
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1; 3.2
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

	the context of the work task	2.1; 2.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.2

## UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers basic fitting and fabrication techniques as they apply in the various electrotechnology work functions. It encompasses the safe use of hand, fixed and portable power tools; cutting, shaping joining and fixing using metallic and non-metallic materials; dismantling and assembling equipment; basic mechanical measurement and marking-out and reading diagrams.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite units for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. ELEMENT	PERFORMANCE CRITERIA
<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare for dismantling, assembling and fabrication work.</p>	<p>1.1 OHS procedures for a given work area are obtained and understood through established routines and procedures.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazard not previously identified are reported and advice on risk control measures is sought from the work supervisor.</p> <p>1.4 The nature of the work is obtained from documentation and from work supervisor to establish the scope of work to be undertaken.</p> <p>1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.6 Materials required for the work are obtained in accordance with established routines and procedures.</p> <p>1.7 Tools, equipment and measuring devices needed to carry out the work are obtained and checked for correct operation and safety.</p> <p>1.8 Cutting tools such as drills and chisels are sharpened to suit the material on which they are to be used.</p>
<p>2 Dismantle and assemble electrotechnology apparatus.</p>	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 Appropriate tools are selected and used correctly and safely in dismantling and assembling apparatus.</p> <p>2.4 Manufacturer apparatus dismantling and assembling guides are used where applicable.</p> <p>2.5 Components are marked or tagged during the dismantling to help ensure correct and efficient reassembly.</p>

- 2.6 Dismantled components and parts are stored to protect them against loss or damage.
- 2.7 Apparatus is dismantled and assembled efficiently without waste of materials and energy and/or damage to apparatus and the surrounding environment or services.
- 2.8 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.9 Routine quality checks are carried out in accordance with work instructions.
- 3 Fabricate electrotechnology components.
  - 3.1 Established OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 3.3 Appropriate tools are selected and used correctly and safely in fabricating components.
  - 3.4 Drawings and instruction for the fabrication of components are followed.
  - 3.5 Component dimensions are determined directly or by calculation from information given in job drawings and instructions.
  - 3.6 Components are fabricated efficiently without waste of materials and energy and/or damage to the surrounding environment or services.
  - 3.7 Procedures for referring non-routine events to immediate supervisor for directions are followed.
  - 3.8 Routine quality checks are carried out in accordance with work instructions.
- 4 Complete work and report.
  - 4.1 OHS risk control work completion measures and procedures are followed.
  - 4.2 Work site is cleaned and made safe in accordance with established procedures.
  - 4.3 Work supervisor is notified of the completion of the work in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and dismantling, assembling and fabricating electrotechnology components.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.1 Hand tools

2.11.2.1 Power tools

2.11.4 Dismantling and assembling techniques

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installation, fault finding, maintenance or development work functions in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Dismantle, assemble and fabricate electrotechnology components as described in 7) and including:
    - A Dismantle and assemble an apparatus relevant to the discipline in which competency is sought and that requires selection and safe use of a variety dismantling/assembling tools.
    - B Sharpening a drill bit for at least two different types of material.
    - C Fabricating a component that requires the selection and safe use of a variety of fabrication tools.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and  
specific  
resources for  
assessment**
**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in dismantling, assembling and fabricating electrotechnology components.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE005A    Fix and secure equipment

UEENEEE007A    Use drawings, diagrams, schedules and manuals

The critical aspects of Occupational Health and Safety covered in UEENEEE001A and other discipline specific Occupational Health and Safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.3	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4; 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3; 3.3	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.1

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8; 3.7

## UEENEEE003A Solve problems in extra-low voltage single path circuits

### Unit Descriptor

1)

This unit covers providing known solutions to predictable problems in single path circuits operated at extra-low voltage as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However they are subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.

### Competency Field

4)

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to work on extra-low voltage single path electrical circuits.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control work preparation measures and procedures are followed.</p> <p>1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Solve problem in extra-low voltage single path electrical circuits.	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Established routines are used to solve circuit problems using measured and calculated values as they apply to single path, single source circuits.</p> <p>2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>

3	Complete work and document problem solving activities.	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Justification for solutions used to solve circuit problems is documented.
		3.4	Work completion is documented and appropriate person(s) notified in accordance with established routine procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in extra-low voltage single path circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.1.2 Fundamental electrical principles

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Single source single path circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following disciplines:
  - Computers
  - Data Communications
  - Electrical
  - Electronics
  - Fire protection
  - Instrumentation
  - Refrigeration and Air Conditioning,
  - Renewable and sustainable energy systems, and
  - Security technology

- In relation to at least three of the following types of circuit problems and on at least two occasions:
  - Determining the operating parameters of an existing circuit
  - Identifying and locating open-circuits
  - Identifying and locating short-circuits
  - Identifying loss of supply

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in extra-low voltage single path circuits as described in 7) and including:
    - A Determining the operating parameters of an existing circuit.
    - B Altering an existing circuit to comply with specified operating parameters.
    - C Developing circuits to comply with a specified function and operating parameters.
    - D Identifying loss of supply.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solve problems in extra-low voltage single path circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of Occupational Health and Safety covered in UEENEEE001A and other discipline specific Occupational Health and Safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE004A Solve problems in multiple path d.c. circuits

### Unit Descriptor

1)

This unit covers determining correct operation of single source d.c. parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in multiple path circuit.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEEE003A Solve problems in extra-low voltage single path circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit requires a licence to practise in the workplace where plant and equipment is directly connected to installation wiring that operates at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to work on multiple path d.c. electrical circuits.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve multiple path d.c. circuit problems.

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Established methods are used to solve d.c. circuit problems from measure and calculated values as they apply to multiple path electrical circuit.
- 2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.

- |   |  |     |   |
|---|--|-----|---|
| 3 | Complete work and document problem solving activities. | 3.1 | OHS work completion risk control measures and procedures are followed.                                      |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.                               |
|   |  | 3.3 | Justification for solutions used to solve circuit problems is documented.                                   |
|   |  | 3.4 | Work completion is documented and appropriate person(s) notified in accordance with established procedures. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in multiple path d.c. circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.2.1 Direct current circuit principles

2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- - Single source parallel and series-parallel d.c. circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following disciplines:
    - Computers
    - Data Communications
    - Electrical
    - Electronics
    - Fire protection
    - Instrumentation
    - Refrigeration and Air Conditioning, and
- - In relation to at least two of the following types of circuit problems and on at least two occasions:
    - Determining the operating parameters of an existing circuit
    - Alternating an existing circuit to comply with specified operating parameters

- Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solving problems in multiple path d.c. circuits as described in 7) and including:
    - A Determining the operating parameters of an existing circuit.
    - B Alternating an existing circuit to comply with specified operating parameters.
    - C Developing circuits to comply with a specified function and operating parameters.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in multiple path d.c. circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of Occupational Health and Safety covered in UEENEEE001A and other discipline specific Occupational Health and Safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEE005A Fix and secure equipment

### Unit Descriptor

1)

This unit covers fixing, securing and mounting techniques as apply in the various electrotechnology work functions. It encompasses the safe use of hand and portable power tools, safe lifting techniques, safe use of ladders and elevated platforms and the selection and safe application of fixing devices and supporting accessories/equipment.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisites to this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

### Licence to practise

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace where they are applied to electrical work intended for voltage above 50 V a.c. or 120 V d.c. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

#### Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

### Competency Field

4)

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to fix and secure equipment.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control work preparation measures and procedures are followed.</p> <p>1.3 The scope of work to be undertaken is obtained from documentation or from work supervisor.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.</p> <p>1.6 Fixing devices are selected for their suitable ability for the environment, the load they are to support and substratum's into which they are to be installed.</p> <p>1.7 Supporting accessories/equipment is selected for suitability for the environment and ability to support and protect from damage that which they are intended to support.</p> <p>1.8 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Install fixing and support devices.	<p>2.1 Electrical isolation is arranged where work is within arms reach of exposed conductive parts, plant or machinery in strict accordance OHS requirements and procedures.</p> <p>2.2 Other OHS risk control measures relevant to the work site are followed.</p> <p>2.3 Fixing devices are installed in accordance with manufacturer instructions.</p> <p>2.4 Support accessories/equipment is install accurately and to comply with technical standards and job specifications.</p>

	2.5	Work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
3	Complete fixing and support work.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2	Work site is tidied and tools and equipment cleaned and securely stored.
	3.3	Appropriate personnel are notified of the work completion.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fixing and securing equipment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.1	Hand tools
2.11.2.1	Power tools
2.11.3.1	Fixing and support devices and techniques
2.18.1	Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installation, fault finding, maintenance or development work functions in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation

- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Fix and secure equipment as described in 7) and including:
    - A Selecting fixing for loads of < 5 kg, < 20 kg and < 50 kg and suitable for the environment in which they are to be installed.
    - B Fixing to a hollow wall, brick, concrete and steel.
    - C Fixing support accessories/equipment relevant the discipline in which competency is sought.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in fixing and securing equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units covering other installation competencies.

The critical aspects of Occupational Health and Safety covered in UEENEEE001A and other discipline specific Occupational Health and Safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	1.7; 1.8; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEE006A      Apply methods to maintain currency of industry developments**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers methods for keeping up-to-date with developments in electrotechnology-adopted technologies, standards and safety that affect the currency of competencies held. It encompasses accessing relevant information and skills and using formal and informal ways of acquiring this information and skills.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite competencies for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. <b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Electrotechnology</p>						

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Prepare to apply methods to maintain currency of industry developments	1.1	Areas of work activity that may be effected by outdated methods and knowledge are identified.
		1.2	Information and advice is sought on the effects of current legislated requirements on work outcomes.
		1.3	Sources of information related to technical and regulatory developments are investigated.
2	Apply methods to maintain currency of industry developments	2.1	Methods are used to ensure that the application of OHS policies complies with current regulations, codes and practices.
		2.2	Methods are used to ensure technical aspects of work undertaken are aligned to current practices and comply with current regulations.
		2.3	Methods are used to ensure managerial aspects of work undertaken are aligned to current practices and comply with current regulations.
		2.4	Formally recognised methods for maintaining currency of industry developments are identified and applied.
		2.5	Maintenance of current knowledge and practices for the work undertaken is documented in accordance with formally recognised processes.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying methods to maintain currency of industry developments.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.44 Requirements and methods for maintaining currency in industry developments
- 2.18.1 Occupational Health and Safety principles

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to applying methods to maintain currency of industry developments in any electrotechnology discipline in which work is undertaken.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training

Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Apply methods to maintain currency of industry developments in 7) and including:
    - A Identifying areas of work effected by outdated methods and knowledge.
    - B Using methods to ensure current OHS practices are applied.
    - C Using methods to ensure technical aspects of work are aligned to current practices and comply with current regulations.
    - D Using methods to ensure managerial aspects of work undertaken are aligned to current practices and comply with current regulations.
    - E Applying formally recognised methods to maintain currency of industry developments.

- F Documenting maintenance of current knowledge and practices for the work undertaken appropriately.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in applying methods to maintain currency of industry developments.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE018A Establish, maintain and evaluate OHS systems

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.5	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  All
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE007A Use drawings, diagrams, schedules and manuals

### Unit Descriptor

1)

This unit covers the use of drawings, diagrams, equipment and cable schedules and manuals as they apply to the various electrotechnology work functions. It encompasses the rudiments for communicating with schematic, wiring and mechanical diagrams and equipment and cable/connection schedules, manuals, site and architectural drawings and plans showing the location of services, apparatus, plant and machinery.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to use drawings, diagrams, schedules and manuals.	<p>1.1 Established OHS risk control measures and procedures are followed.</p> <p>1.2 The need for drawings, diagrams, schedules or manuals is determined from the nature of the work to be undertaken.</p> <p>1.3 Established routines and procedures are followed to obtain drawings, diagrams, schedules or manuals required for the work to be undertaken.</p>
2 Use drawings, diagrams, schedules and manuals to obtain job information.	<p>2.1 Drawings, diagrams, schedules and/or manuals are selected, appropriate to the work being undertaken.</p> <p>2.2 Drawings, diagrams and schedules are interpreted using knowledge of drawing layouts, conventions and symbols.</p> <p>2.3 Dimensions are extracted from drawings and diagrams for application to work undertaken.</p> <p>2.4 Location of equipment is determined from equipment schedules and location diagrams.</p> <p>2.5 Manuals are reviewed to ascertain their format and where information relevant to the work to be undertaken is located.</p> <p>2.6 Information given in manuals is interpreted in relation to the work to be undertaken.</p>
3 Use drawings, diagrams, schedules and manuals to convey information and ideas.	<p>3.1 Drawing conventions are used in neat freehand drawings to convey information and ideas to others involved in the work to be undertaken.</p> <p>3.2 Drawing conventions are used to neatly correct freehand original job drawing to show final ‘as-installed’ arrangement.</p> <p>3.3 Corrected drawings are forwarded to appropriate person(s) in accordance with established procedures.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and using drawings, diagrams, schedules and manuals.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.1.2 Drawings and diagrams

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembly, installation, fault finding, maintenance or development work functions in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Use drawings, diagrams, schedules and manuals as described in Clause 7) Range and including:
    - A Identifying drawings, diagrams, schedules and manuals relevant to the work to be undertaken.
    - B Interpreting drawings, diagrams, schedules and manuals correctly.
    - C Using correct conventions in freehand drawings.
    - D Giving correct information in freehand drawings.
    - E Dealing with unplanned events and drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and**

**8.3)**

**specific resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in using drawings, diagrams, schedules and manuals.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with units covering the use of drawings, diagrams, schedules or manuals is required.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3	2

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.2	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.1	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.1	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.2; 2.1; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.2; 2.2 to 2.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: N/A

## **UEENEEE008A Lay wiring/cabling and terminate accessories for extra-low voltage circuits**

### **Unit Descriptor**

**1)**

This unit covers the laying of wiring/cabling, connection of accessories and continuity and insulation resistance testing of circuits intended to operate at extra-low voltage. Typically this includes circuits and accessories for ELV powered devices, security, controls, integrated systems, audio/video systems. It encompasses the principles of single source, single load power circuits, control circuits and communications circuits, safe working practices and following work processes that satisfy electrical principles for safety and functionality.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable

contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

**Competency Field 4)**

Electrotechnology

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to lay wiring/cabbling and connect accessories for extra-low voltage circuits.

- 1.1 OHS procedures for a given work area are obtained and understood through established routines.
- 1.2 Established OHS risk control measures in preparation for the work are followed.
- 1.3 Safety hazards not previously identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Lay wiring/cabbling and connect accessories for extra-low voltage circuits.

- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.3 Wiring and accessories are installed to comply standards and job specifications with sufficient excess to affect terminations.
- 2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.
- 2.5 Cables and conductors are terminated at accessories in accordance with manufacture’s specifications and regulatory requirements.
- 2.6 Cables installed for future service and marked in accordance with the cable identification scheme and terminated in compliance with regulatory requirements.
- 2.7 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.8 Cable installation and termination is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
- 3 Complete and report work activities.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Work supervisor is notified of the completion of the installation work in accordance with established routines.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and laying wiring/cabling and terminate accessories for extra-low voltage circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.1 Cable protection and support
- 2.1.2 Cable types and applications
- 2.1.3 Cables in buildings, structures and premises
- 2.1.4 Basic cable and conductor terminations
- 2.5.5 Technical standards, regulations and codes for extra-low voltage work

2.5.11 Environmental and heritage awareness

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to laying wiring/cabling and connecting accessories for extra-low voltage power and control cabling systems circuits using:

- At least one of the following wiring/cabling systems:
  - Unenclosed thermoplastic sheathed (TPS) cable
  - Enclosed thermoplastic insulated (TPI) or sheathed cables, and
- At least three of the following wiring/cabling systems:
  - single cable,
  - flexible cable,
  - flexible cord,
  - shielded cable,
  - armoured cable,
  - ribbon cable,
  - other similar and like cable

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Lay wiring/cabbling and terminate accessories for extra-low voltage in power and control circuits as described in 7) and including:
    - A Understanding the nature of the work.
    - B Selecting appropriate tools, cables and accessories.
    - C Following appropriate cable routes.
    - D Installing cable and accessories to requirements.
    - E Terminating cables and accessories to manufacture’s specifications and requirements.
    - F Cleaning worksite.
    - G Notifying completion of work using established procedures.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in laying wiring/cabbling and terminate accessories for extra-low voltage circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE002A Dismantle, assemble and fabricate electrotechnology components
- UEENEEE005A Fix and secure equipment
- UEENEEE007A Use drawings, diagrams, schedules and manuals

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEE009A Comply with scheduled and preventative maintenance program processes**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the quality assurance and risk management compliance processes for maintenance of the electrotechnology aspects of plant and equipment. It encompasses working safely and to technical, quality and risk management standards, work specifications and maintenance schedules, sample inspections, evaluating components and completing the necessary maintenance documentation.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline qualification in which competency in the unit is sought.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit apply to any qualification in this standard at an AQF 3 level.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Where refrigeration and air conditioning are involved practice in the workplace is subject to Federal/State/Territory regulations covering the use of refrigerants and the relevant codes of practice; in some jurisdictions a licence is required.</p> <p>Practice in the workplace is also subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.</p>						

**Competency Field 4)**

Electrotechnology

**ELEMENT PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to comply with scheduled maintenance program processes.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards which have not previously identified are noted and established risk control measures are implemented.</p> <p>1.4 The maintenance schedule and process compliance requirements are confirmed and work appropriately sequenced in accordance with established procedures.</p> <p>1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.6 Location equipment to be maintained is determined from maintenance schedule procedures and/or system specifications and diagrams.</p> <p>1.7 Resources needed to conduct the maintenance is obtained in accordance with established procedures and checked against job requirements.</p> <p>1.8 Tools, equipment and testing devices needed to conduct the maintenance are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Comply with scheduled maintenance program processes.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Test or measure on a live and operating system in strict accordance with OHS requirements and within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p>

- 2.4 Apparatus to be maintained is inspected and evaluated for compliance with requirements in accordance with maintenance schedule.
  - 2.5 Non-compliant apparatus/components are documented and arrangements made for their rectification in accordance with established procedures.
  - 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 2.7 Ongoing checks of the quality of the maintenance are undertaken in accordance with established procedures.
  - 2.8 Maintenance process compliance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion of maintenance compliance processes.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site and equipment is cleaned and made safe in accordance with established procedures.
  - 3.3 Final checks are made to verify that the maintenance complies with requirements.
  - 3.4 Maintenance completion is documented and appropriate person(s) notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and complying with scheduled and preventative maintenance program processes.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.13.8 Scheduled maintenance processes

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to scheduled and preventative maintenance compliance processes of at least three different items of installed equipment in the any of the following electrotechnology disciplines.

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Lifts
- Mining, electrical
- Marine, electrical
- Refrigeration and Air Conditioning
- Uninterruptible power supplies (UPS)
- Stand alone generator sets
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range

Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Comply with scheduled and preventative maintenance program processes as described in 7) and including:
    - A Interpreting maintenance schedule requirements correctly.
    - B Following quality assurance and risk management compliance processes.
    - C Following maintenance schedule.
    - D Inspecting and evaluating apparatus for quality assurance and risk compliance.
    - E Arranging for corrective action of non compliant apparatus.
    - F Documenting maintenance work.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in complying with scheduled and preventative maintenance program processes.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 2.4; 2.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEE010A      Develop and implement maintenance programs**

### **Unit Descriptor**

1)

This unit covers the development of maintenance programs to ensure safe and continued operation of plant and equipment. It encompasses evaluating risks associated with equipment failure, development of failsafe strategies incorporating maintenance frequency, repair/overhaul/replacement policies, and development of record and reporting system.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher. It may be used in employment-based programs incorporated in approved contracts of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Electrotechnology

## **ELEMENT**

## **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Establish maintenance requirements.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Policies and procedures are developed to include OHS practices, skills required and frequency and level of maintenance work.</p> <p>1.4 The extent of the maintenance program is determined from plant performance specifications and in consultation with relevant person(s).</p> <p>1.5 Appropriately competent persons are engaged to assess the risks associated with individual equipment failure.</p> <p>1.6 Level and frequency of repair/replace to be done under maintenance work is established from risk assessment reports and manufacture’s recommendations and standards reflecting acceptable exposure to risk of equipment failure.</p> <p>1.7 Systems are established to manage and record maintenance work in accordance with organisation and regulatory requirements.</p>
2 Develop and implement maintenance program.	<p>2.1 Schedules are developed detailing maintenance levels and frequency for all equipment items based risk assessment reports and manufacture’s recommendations.</p> <p>2.2 Procedures are developed and implemented to ensure the maintenance program is followed in accordance with the planned schedule and requirements.</p> <p>2.3 Procedures are developed and implemented to ensure records are maintained in accordance with planned schedule and requirements.</p> <p>2.4 Maintenance program is documented in accordance with in accordance with professional standards and organisation procedures.</p>
3 Evaluate maintenance program.	<p>3.1 Periodic and sample inspection reports are used to ascertain maintenance quality and the need for revision of maintenance schedule and frequency.</p>

- 3.2 Maintenance schedule is periodically reviewed and revised to maintain acceptable level of risk associated with equipment failure.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing and implementing maintenance programs.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.13.8 Scheduled maintenance processes
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing and implement a maintenance program for a plant with at least 10 different types of items included in the schedule. Plant may be for production, process or building services.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop and implement maintenance programs as described in 7) and including:
    - A Determining the extent of the maintenance program accurately.
    - B Establishing the level and frequency of maintenance reflecting acceptable exposure to risk of equipment failure.
    - C Developing an effective maintenance schedule implementation procedures.
    - D Developing a maintenance record system.
    - E Developing Ongoing maintenance evaluation scheme.
    - F Documenting the maintenance program clearly.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing and implementing maintenance programs.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1; 3.2	3

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.6 to 3.2	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 1.6; 3.1

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.7 to 3.2

## UEENEEE011A Manage risk in electrotechnology activities

<b>Unit Descriptor</b>	1)  This unit covers managing risk related to OHS, environment, resources and financial viability. It encompasses identifying risk events, the likelihood and consequences of such events, evaluating risk, risk management planning and mitigation of risk.
<b>Prerequisite Unit(s)</b>	2)
<b>Competencies</b>	2.1)  Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.
<b>Literacy and numeracy skills</b>	2.2)  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'  Reading      5      Writing      5      Numeracy      5
<b>Application of the Unit</b>	3)  This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.
<b>Licence to practise</b>	3.1)  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	4)  Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Identify risks and develop management strategies.	<p>1.1 OHS policies, processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 The extent of a program or project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p> <p>1.3 Potential, perceived and actual risk events are identified, documented and analysed, in consultation with risk professionals and appropriate other person(s) in accordance with organisation policies and procedures.</p> <p>1.4 Risk management methods, tools and techniques are used to assist in the analysis and reporting of identified risk events.</p> <p>1.5 Risk management techniques are used to analyse risk events, assess options and recommend risk approaches to appropriate person(s) for approval.</p> <p>1.6 Risk management processes and procedures are developed and agreed to by all stakeholders and communicated to ensure clarity of understanding and ongoing management of risk factors.</p> <p>1.7 OHS risk control measure are incorporated in the in the risk management strategies in compliance with organisation’s OHS policy and regulations.</p>
2 Implement and monitor risk management strategies.	<p>2.1 Risk management processes and procedures are incorporated into work and project plans to ensure common approach achieving outcomes.</p> <p>2.2 Activities are monitored against programs and projects plans to identify and respond to variations in accordance with risk management processes and procedures.</p> <p>2.3 Agreed risk responses are implemented and plans modified to reflect changing project objectives in an environment of uncertainty.</p>

- |   |                                      |     |  |
|---|--------------------------------------|-----|--|
| 3 | Evaluate risk management strategies. | 3.1 | Project outcomes are reviewed with appropriate person(s) to determine effectiveness of risk management processes and procedures.   |
|   |                                      | 3.2 | Risk issues and recommended improvements are identified, documented and passed to appropriate person(s) for approval to incorporate them into ongoing programs and future program and project and plans. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing risk in electrotechnology activities.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.2.15   | Risk management, application and techniques                 |
| 2.18.8.2 | Occupational Health and Safety, enterprise responsibilities |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in managing risk in relation to a program or an individual project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### Overview of Assessment

##### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Manage risk in electrotechnology activities as described in 7) and including:
    - A Contributing to identifying potential, perceived and actual risk events.
    - B Using risk management methods, tools and techniques to assist in the analysis and reporting.
    - C Incorporating risk management processes and procedures into program and project plans.
    - D Monitoring and responding risk events effectively.
    - E Identifying improvements and documenting recommendation for their inclusion in ongoing or future programs and projects.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in managing risk in electrotechnology activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE012A    Manage electrotechnology projects

UEENEEE013A    Plan electrotechnology projects

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.6; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.5	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.2	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.5; 3.1	3
How are mathematical ideas	Refer to the following Performance Criteria for examples of application:	

and techniques used?	1.5; 2.3; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 2.3; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	3

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 3.1; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1; 1.2
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

	routine or contingent situations	2.3
--	--	-----

## UEENEEE012A Manage electrotechnology projects

### Unit Descriptor

1)

This unit covers the management of projects involving design, modifications, installation and or maintenance of systems and equipment. It encompasses management of safety, budget, variations, personnel, resources and critical path timelines and necessary progress and completion documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Identify risks and develop management strategies.	<p>1.1 OHS policies, processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 The extent of a program or project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p> <p>1.3 Potential, perceived and actual risk events are identified, documented and analysed, in consultation with risk professionals and appropriate other person(s) in accordance with organisation policies and procedures.</p> <p>1.4 Risk management methods, tools and techniques are used to assist in the analysis and reporting of identified risk events.</p> <p>1.5 Risk management techniques are used to analyse risk events, assess options and recommend risk approaches to appropriate person(s) for approval.</p> <p>1.6 Risk management processes and procedures are developed and agreed to by all stakeholders and communicated to ensure clarity of understanding and ongoing management of risk factors.</p> <p>1.7 OHS risk control measure are incorporated in the in the risk management strategies in compliance with organisation’s OHS policy and regulations.</p>
2 Implement and monitor risk management strategies.	<p>2.1 Risk management processes and procedures are incorporated into work and project plans to ensure common approach achieving outcomes.</p> <p>2.2 Activities are monitored against programs and projects plans to identify and respond to variations in accordance with risk management processes and procedures.</p> <p>2.3 Agreed risk responses are implemented and plans modified to reflect changing project objectives in an environment of uncertainty.</p>

- |   |                                      |     |  |
|---|--------------------------------------|-----|--|
| 3 | Evaluate risk management strategies. | 3.1 | Project outcomes are reviewed with appropriate person(s) to determine effectiveness of risk management processes and procedures.   |
|   |                                      | 3.2 | Risk issues and recommended improvements are identified, documented and passed to appropriate person(s) for approval to incorporate them into ongoing programs and future program and project and plans. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing electrotechnology projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.2.17   | Project management  |
| 2.2.19   | Customer/Client relations                                   |
| 2.18.8.2 | Occupational Health and Safety, enterprise responsibilities |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in managing risk in relation to a program or an individual project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile

- graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
  - Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Manage electrotechnology projects as described in 7) and including:
      - A Establishing the scope of the project accurately.
      - B Ascertaining the input of a project.
      - C Developing effective management processes.
      - D Managing resources and variations effectively.
      - E Resolving conflicts.
      - F Adopting risk management strategies.
      - G Maintaining records and submitting progress reports.
      - H Meeting project outcomes.
      - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in managing electrotechnology projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.2 to 1.4: 2.6 to 2.8	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5	3

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  All	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  1.3; 2.5; 2.7; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.6	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.3; 2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8; 3.1; 3.2;
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

### ELEMENT

### PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures.</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures.</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies.</p> <p>2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating in the project plan.</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.7 Project plan proposal is documented in accordance with organisation policies and procedures.</p>
3 Obtain approval for project plan.	<p>3.1 Project plan is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p> <p>3.3 Final project plan is documented and approval obtained from appropriate person(s).</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning electrotechnology projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.2.16.1 | Project planning  |
| 2.2.18   | Critical path and project analysis                          |
| 2.18.8.2 | Occupational Health and Safety, enterprise responsibilities |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to planning any project incorporating any of the following electrotechnology disciplines and cost in excess of \$100k.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan electrotechnology projects as described in 7) and including:
    - A Determining the project requirements accurately.
    - B Establishing a project budget.
    - C Developing effective work flow strategies.
    - D Documenting project plan proposal.
    - E Negotiating alterations to the proposed project plan successfully.
    - F Obtaining approval of the final plan.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning electrotechnology projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 1.6; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2;
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.7 to 3.2

## UEENEEE014A Supervise and coordinate work activities

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the supervising and coordinating of work activities in an electrotechnology discipline. It encompasses working safety, implementing safety procedures and processes, sequencing work activities, providing guidance and work instructions to others, ensuring job requirements are met and maintain necessary work documentation.</p>						
<b>Prerequisite Unit(s)</b>	2)						
<b>Competencies</b>	<p>2.1)</p> <p>Competency in this unit shall be assessed only after relevant technical units in a qualification have been achieved.</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td>Reading</td> <td style="text-align: center;">4</td> <td>Writing</td> <td style="text-align: center;">4</td> <td>Numeracy</td> <td style="text-align: center;">4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4
Reading	4	Writing	4	Numeracy	4		
<b>Application of the Unit</b>	<p>3)</p> <p>This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 4 level or higher.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p>4)</p> <p>Electrotechnology</p>						

### ELEMENT

### PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to supervise and coordinate work activities	1.1 OHS processes and procedures for a given work area are identified, obtained and understood. 1.2 Job specification and requirements are obtained and understood. 1.3 Plant, materials and skills needed for the work are established from specifications and other relevant documentation. 1.4 Plant, materials, personnel and others needed for the work are accessed in accordance with established procedures.
2 Supervise and coordinate work activities.	2.1 OHS policies, procedures and programs are implemented and monitored. 2.2 Guidance and work instructions are given to appropriate personnel to ensure the various aspects of the work are sequenced and completed in accordance with job specifications and requirements. 2.3 Cooperation is sought from others involved in the work to ensure the various aspects of the work are coordinated effectively. 2.4 Work progress is monitored against schedules, job specifications and requirements. 2.5 Conflict issues at the work site are dealt with in accordance with established procedures. 2.6 Requested variations to job specification are dealt with in accordance with established procedures and processes. 2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3 Document supervision and coordination activities.	3.1 Job records are maintained in accordance with established procedures. 3.2 Processes are followed to ensure activities are carried out to established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and supervising and coordinating work activities.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.4	Problem solving techniques
2.2.6	Enterprise quality management system, basics
2.2.19	Customer/Client relations
2.2.41	Supervision fundamentals
2.18.8.2	Occupational Health and Safety, enterprise responsibilities

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to supervising and coordinating work activities any of the following electrotechnology disciplines.

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects  
of evidence  
required to  
demonstrate  
competency in  
this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Supervise and coordinate work activities as described in 7) and including:
    - A Understanding job specification and requirements.
    - B Accessing appropriate plant, materials and personnel.
    - C Providing effective guidance and instructions to personnel.
    - D Obtaining the cooperation of others.
    - E Dealing with conflicts in accordance with established procedures.
    - F Dealing with job variations in accordance with established procedures.
    - G Ensuring work completion documentation is accurate and forwarded to appropriate persons.

- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in supervising and coordinating work activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.2; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2;
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.7

## UEENEEE015A      **Develop design briefs for electrotechnology projects**

### **Unit Descriptor**

1)

This unit covers developing requirement to be incorporated in to the design of electrotechnology projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design requirements.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Electrotechnology

## **ELEMENT**

## **PERFORMANCE CRITERIA**

<p><b>5) Elements describe the essential outcomes of a unit of competency</b></p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>	
<p><b>1 Prepare to develop design briefs.</b></p>	<p>1.1</p> <p>1.2</p> <p>1.3</p> <p>1.4</p> <p>1.5</p>	<p>OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>Established techniques for project planning are reviewed are adopted in accordance with organisation policies.</p> <p>The scope of the project is evaluated and project parameters established using a formal evaluation/survey processes.</p> <p>Criteria from other related works impacting on the project are determined from specification of other work, site visits and/or discussion with appropriate person(s).</p> <p>Project budget is established by setting realistic expectations of deliverables and in consideration of tangible quality differences that result in the deliver the best value.</p>
<p><b>2 Develop design briefs.</b></p>	<p>2.1</p> <p>2.2</p> <p>2.3</p> <p>2.4</p> <p>2.5</p>	<p>Design brief is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.</p> <p>Design brief is developed in collaboration with all relevant design professionals and contractors involved in the project.</p> <p>Competent persons required for the project are identified and their roles specified in the design brief.</p> <p>Project design brief is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>Project design brief proposal is documented in accordance with organisation policies and procedures.</p>
<p><b>3 Obtain approval for design briefs.</b></p>	<p>3.1</p> <p>3.2</p>	<p>Project design brief is presented and discussed with person(s) of higher authority.</p> <p>Alterations to the project design brief resulting from the presentation/discussion, are negotiated with person(s) of higher authority within the constraints of organisation policy.</p>

- 3.3 Final project design brief is documented and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing design briefs for electrotechnology projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.5 Enterprise customer relations protocols
- 2.2.18 Critical path and project analysis
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a project design brief incorporating any of the following electrotechnology disciplines:

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop design briefs for electrotechnology projects as described in 7) and including:
    - A Establishing the scope and parameters of the project.
    - B Determining the impact of other related works.
    - C Developing design brief incorporating scenarios and all requirements.
    - D Identifying competencies required for the project.
    - E Documenting project plan proposal.
    - F Negotiating alterations to the proposed design brief successfully.
    - G Obtaining approval of the final brief.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing design briefs for electrotechnology projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6 to 3.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 1.6; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.7; 3.2

## UEENEEE016A Write specifications for electrotechnology projects

### Unit Descriptor

1)

This unit covers developing requirement to be incorporated into the writing of specifications for electrotechnology projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrotechnology

### ELEMENT

### PERFORMANCE CRITERIA

<p><b>5) Elements describe the essential outcomes of a unit of competency</b></p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>	
<p><b>1 Prepare specification requirements.</b></p>	<p>1.1</p>	<p>OHS processes and procedures for a given work area are identified, obtained and understood.</p>
	<p>1.2</p>	<p>Established techniques for specification writing are reviewed are adopted in accordance with organisation policies.</p>
	<p>1.3</p>	<p>The scope of the specification is established using a formal evaluation/survey processes.</p>
	<p>1.4</p>	<p>Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).</p>
<p><b>2 Write specification.</b></p>	<p>2.1</p>	<p>Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.</p>
	<p>2.2</p>	<p>Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.</p>
	<p>2.3</p>	<p>Competent persons required for the project are identified and their roles specified in the specification.</p>
	<p>2.4</p>	<p>Specification is reviewed against all inputs and adjusted to rectify any anomalies.</p>
	<p>2.5</p>	<p>Specification is developed in accordance with organisation policies and procedures.</p>
<p><b>3 Approval of specification is obtained.</b></p>	<p>3.1</p>	<p>Specification is presented and discussed with person(s) of higher authority.</p>
	<p>3.2</p>	<p>Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p>
	<p>3.3</p>	<p>Specification is finalised and approval obtained from appropriate person(s).</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for electrotechnology projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.6	Enterprise quality management systems, basics
2.2.7	Enterprise purchasing system
2.2.10	Job costing techniques
2.2.11.2	Specification development
2.2.15	Risk management, application and techniques
2.2.18	Critical path and project analysis
2.2.19	Customer/client relations
2.2.20	Computer use basics
2.2.25	Research concepts
2.18.8.2	Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a project design brief incorporating any of the following electrotechnology disciplines:

- Automation technologies
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning

- Renewable/sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Write specifications for electrotechnology projects as described in 7) and including:
    - A Establishing the scope and parameters of the specification.
    - B Determining the impact of other related works.
    - C Developing the specification incorporating scenarios and all requirements.
    - D Identifying competencies required for the specifications.
    - E Writing specifications.
    - F Negotiating alterations to the proposed specification successfully.
    - G Obtaining approval of the final specification.

- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in writing specifications for electrotechnology projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.4; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: All	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2

## UEENEEE017A Implement and monitor OHS policies and procedures

### Unit Descriptor

1)

This unit covers the mandatory requirements of persons in a supervisory role to implement and monitor an organisation's Occupational Health and Safety policies, procedures and programs. It encompasses understanding an organisation's OHS obligations, providing safety information to staff, implementing and monitoring participative arrangements, safety procedures and training and maintaining safety records.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

Note:

1. Competency in this unit shall be assessed concurrently with other units in a qualification.
2. Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit addresses information, processes and techniques for the application of general Occupational Health and Safety requirements in workplaces and is essential for employees work supervisory responsibilities. The unit is based on Generic Competency A in the National Guidelines for Integrating OHS Competencies into National Industry Competency Standards [NOHSC: 7025 (1998) 2nd Edition].

Note:

All States/Territories and the Commonwealth have enacted legislation that establishes a general duty of care for workplace parties to ensure healthy and safe working conditions. In most workplaces, the final responsibility for providing a healthy and safe working environment, as far as practicable, rests with the employer. Employees also have a duty of care in relation to OHS that ensures their health and safety and that of others in the workplace. The relevant jurisdictional OHS legislation should always be consulted to ascertain the exact duties set down for employers and employees.

**Licence to practise 3.1)**

The competency described in this unit does not directly require a licence to practise but is subject to regulations for Occupational Health and Safety and contracts of training where they apply.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Provide OHS information to the work group.

1.1 Relevant provisions of Occupational Health and Safety legislation and codes of practice are accurately and clearly explained to the work group.

1.2 Information on the organisation’s Occupational Health and Safety policies, procedures and programs is provided in a readily accessible manner and is accurately and clearly explained to the work group.

1.3. Information about identified hazards and the outcomes of risk assessment and risk control procedures is regularly provided and is accurately and clearly explained to the work group.

2 Implement and monitor participative arrangements for the management of OHS.

2.1 Organisational procedures for consultation over Occupational Health and Safety issues are implemented and monitored to ensure that all members of the work group have the opportunity to contribute.

2.2 Issues raised through consultation are dealt with and resolved promptly or referred to the appropriate personnel for resolution in accordance with workplace procedures for issue resolution.

2.3 The outcomes of consultation over Occupational Health and Safety issues are made known to the work group promptly.

- |  |     |  |
|--|-----|--|
| 3. Implement and monitor the procedures for identifying hazards, assessing risk and controlling risks. | 3.1 | Existing and potential hazards in the work area are identified and reported so that risk assessment and risk control procedures can be applied.  |
|  | 3.2 | Work procedures to control risks are implemented and adherence to them by the work group is monitored in accordance with workplace procedures.   |
|  | 3.3 | Existing procedures to control risks are implemented and adherence to them by the work group is monitored in accordance with workplace procedures.   |
|  | 3.4 | Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control and reported to designated personnel.  |
|  | 3.5 | Inadequacies in resource allocation for implementation of risk control measures identified and reported to designated personnel.   |
| 4. Implement the procedures for dealing with hazardous events.   | 4.1 | Workplace procedures for dealing with hazardous events are implemented whenever necessary to ensure that prompt control action is taken.   |
|  | 4.2 | Hazardous events are investigated to identify their cause in accordance with investigation procedures.   |
|  | 4.3 | Control measures to prevent recurrence and minimise risks of hazardous events are implemented based on the hierarchy of control if within scope of responsibilities and competencies or alternatively referred to designated personnel for implementation.               |
| 5. Implement and monitor the procedures for OHS training.  | 5.1 | Occupational health and safety training needs are identified accurately, specifying gaps between Occupational Health and Safety competencies required and those held by work group members.  |
|  | 5.2 | Arrangements are made for fulfilling identified Occupational Health and Safety training needs in both on and off-the-job training programs in consultation with relevant parties.  |
| 6. Implement and monitor the procedures for maintaining OHS records.                                   | 6.1 | Occupational health and safety records for work area are accurately and legibly completed in accordance with workplace requirements for Occupational Health and Safety records and legal requirements for the maintenance of records of occupational injury and disease. |

- 6.2 Aggregate information from the area’s Occupational Health and Safety records is used to identify hazards and monitor risk control procedures within work according to organisational procedures and within scope of responsibilities and competencies.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and implementing and monitoring OHS policies and procedures The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.8.1 Occupational Health and Safety, supervisory responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Implementation of OHS and the specific safety procedures and work instructions for particular workplace

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Implement and monitor OHS policies and procedures as described in 7) and including:
    - A Providing OHS information to the work group.
    - B Implementing and monitoring participative arrangements for the management of OHS.
    - C Implementing and monitoring the procedures for identifying hazards, assessing risks and controlling risks.
    - D Implementing the procedures for dealing with hazardous events.
    - E Implementing and monitoring the procedures for OHS.
    - F Implementing and monitoring the procedures for maintaining OHS records.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in implementing and monitoring OHS policies and procedures.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3; 2.1	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  2.1	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.4 to 4.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  4.1 to 4.3

## UEENEEE018A Establish, maintain and evaluate OHS systems

### Unit Descriptor

1)

This unit covers the mandatory responsibility of an organisation's executive officers to establish, maintain and evaluate an OHS system. It encompasses understanding an organisation's OHS obligations, establishing and maintaining, participative arrangements, procedures for hazard identification, risk assessment and control measures, procedures for dealing with hazardous incidents, safety training, safety records, and evaluating the safety system.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

Note:

1. Competency in this unit shall be assessed concurrently with other units in a qualification.
2. Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit addresses information, processes and techniques for the application of general Occupational Health and Safety requirements in workplaces and is essential for employees without managerial responsibilities. The unit is based on Generic Competency A in the National Guidelines for Integrating OHS Competencies into National Industry Competency Standards [NOHSC: 7025 (1998) 2nd Edition].

Note:

All States/Territories and the Commonwealth have enacted legislation that establishes a general duty of care for workplace parties to ensure healthy and safe working conditions. In most workplaces, the final responsibility for providing a healthy and safe working environment, as far as practicable, rests with the employer. Employees also have a duty of care in relation to OHS that ensures their health and safety and that of others in the workplace. The relevant jurisdictional OHS legislation should always be consulted to ascertain the exact duties set down for employers and employees.

**Licence to practise 3.1)**

The competency described in this unit does not directly require a licence to practise but is subject to regulations for Occupational Health and Safety and contracts of training where they apply.

**Competency Field 4)**

Electrotechnology

**ELEMENT PERFORMANCE CRITERIA**

<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Establish and maintain the framework for the OHS system.</p>	<p>1.1 Occupational health and safety policies are developed which clearly express the organisation’s commitment with respect to Occupational Health and Safety within the area of managerial responsibility and how relevant Occupational Health and Safety legislation will be implemented, consistent with overall organisational policies.</p> <p>1.2 Occupational health and safety responsibilities and duties which will allow implementation and integration of the Occupational Health and Safety system are clearly defined, allocated and included in job descriptions and duty statements for all relevant positions.</p> <p>1.3. Financial and human resources for the operation of the Occupational Health and Safety system are identified, sought and/or provided in a timely and consistent manner.</p> <p>1.4 Information on the Occupational Health and Safety system and procedures for the area of managerial responsibility is provided and explained in a form which is readily accessible to employees.</p>
<p>2 Establish and maintain participative arrangements for management of OHS.</p>	<p>2.1 Appropriate consultative processes are established and maintained in consultation with employees and their representatives in accordance with relevant Occupational Health and Safety legislation and consistent with the organisation’s overall process for consultation.</p> <p>2.2 Issues raised through participation and consultation are dealt with and resolved promptly and effectively in accordance with procedures for issue resolution.</p>

- 2.3 Information about the outcomes of participation and consultation is provided in a manner accessible to employees.
- 3 Establish and maintain procedures for identifying hazards, assessing risk and controlling risk.
- 3.1 Existing and potential hazards within the area of managerial responsibility are correctly identified and identification confirmed in accordance with Occupational Health and Safety legislation, codes of practice and trends identified from the Occupational Health and Safety records system.
- 3.2 A procedure for ongoing identification of hazards is developed and integrated within systems of work and procedures.
- 3.3 Activities are appropriately monitored to ensure that this procedure is adopted effectively throughout the area of managerial responsibility.
- 3.4 Hazards identification is addressed at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created.
- 3.5 Risks presented by identified hazards are correctly assessed in accordance with Occupational Health and Safety legislation and coded of practice.
- 3.6 A procedure for ongoing assessment of risk is developed and integrated within systems of work and procedures.
- 3.7 Activities are monitored to ensure that this procedure is adopted effectively throughout the area of managerial responsibility.
- 3.8 Risk assessment is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that the risk from hazards is not increased.
- 3.9 Measures to control assessed risks are developed and implemented in accordance with the hierarchy of control, relevant Occupational Health and Safety legislation, codes of practices and trends identified from the Occupational Health and Safety records system.
- 3.10 When measures which control a risk at its source are not immediately practicable, interim solutions are implemented until a control measure is developed.

- |   |  |  |   |
|---|--|--|---|
|   | 3.11   | A procedure for ongoing control of risks, based on the hierarchy of control, is developed and integrated with general systems of work and procedures.  |   |
|   | 3.12   | Activities are monitored to ensure that the risk control procedure is adopted effectively throughout the area of managerial responsibility.  |   |
|   | 3.13   | Risk control is addressed at the planning, design and evaluation stages of any change within the area of managerial responsibility to ensure that adequate risk control measures are included.                                   |   |
|   | 3.14   | Inadequacies in existing risk control measures are identified in accordance with the hierarchy of control, and resources enabling implementation of new measures are sought and/or provided according to appropriate procedures. |   |
| 4 | Establish and maintain procedures for dealing with hazardous events.   | 4.1  | Potential hazardous events are correctly identified.  |
|   |  | 4.2  | Procedures which would control the risks associated with hazardous events and meet any legislative requirements as a minimum are developed in consultation with appropriate emergency services.                         |
|   |  | 4.3  | Appropriate information and training is provided to all employees to enable implementation of the correct procedures in all relevant circumstances.   |
| 5 | Establish and maintain OHS training program.                           | 5.1  | An Occupational Health and Safety training program is developed and implemented to identify and fulfil employees' Occupational Health and Safety training needs as part of the organisation's general training program. |
| 6 | Establish and maintain a system for OHS records.                       | 6.1  | A system for keeping Occupational Health and Safety records is established and monitored to allow identification of patterns of occupational injury and disease within the area of managerial responsibility.           |
| 7 | Evaluate the OHS system and related policies, procedures and programs. | 7.1  | The effectiveness of the Occupational Health and Safety system and related policies, procedures and programs is assessed according to the organisation's aims with respect to occupational health and safety.           |
|   |  | 7.2  | Improvements to the Occupational Health and Safety system are developed and implemented to ensure more effective achievements of the organisation's aims with respect to occupational health and safety.                |

- 7.3 Compliance with Occupational Health and Safety legislation and codes of practice is assessed to ensure that legal Occupational Health and Safety standards are maintained as a minimum.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and establishing, maintaining and evaluating OHS systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace
- Establishing, maintaining and evaluating OHS system for the particular enterprise/organisation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in

a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Establish, maintain and evaluate OHS systems as described in 7) and including:
    - A Establishing and maintaining the framework for the OHS system.
    - B Establishing and maintaining participative arrangements for management of OHS.
    - C Establishing and maintaining procedures for identifying hazards, assessing risk and controlling risk.
    - D Establishing and maintaining procedures for dealing with hazardous events.
    - E Establishing and maintaining OHS training programs.
    - F Establish and maintain a system for OHS records.
    - G Evaluating the OHS system and related policies, procedures and programs.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Ability to implement these Occupational Health and Safety measures shall be demonstrated on all occasions safety issues arise.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in establishing, maintaining and

evaluating OHS systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3; 3.5; 4.1 to 4.3	2

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4; 3.3 to 3.4; 3.12	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.10; 3.12; 4.1	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.2; 3.1 to 3.14
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.14
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.4; 3.8; 3.13

## UEENEEE019A Solve problems in multiple path a.c. circuits

### Unit Descriptor

1)

This unit covers determining correct operation of single source a.c. parallel and series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in multiple path circuits.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEEE004A Solve problems in multiple path d.c. circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

## Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to work on multiple path a.c. electrical circuits.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control work preparation measures and procedures are followed.</p> <p>1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Solve multiple path a.c. circuit problems.	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Established methods are used to solve a.c. circuit problems from measure and calculated values as they apply to multiple path electrical circuit.</p> <p>2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>

- |   |  |     |   |
|---|--|-----|---|
| 3 | Complete work and document problem solving activities. | 3.1 | OHS work completion risk control measures and procedures are followed.                                      |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.                               |
|   |  | 3.3 | Justification for solutions used to solve circuit problems is documented.                                   |
|   |  | 3.4 | Work completion is documented and appropriate person(s) notified in accordance with established procedures. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in multiple path a.c. circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.8.2.2 | Alternating current principles-power      |
| 2.8.6   | Electromagnetic principles                |
| 2.11.1  | Hand tools                                |
| 2.18.1  | Occupational Health and Safety principles |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Single source parallel and series-parallel a.c. circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following disciplines:
  - Computers
  - Data Communications
  - Electrical
  - Electronics
  - Fire protection
  - Instrumentation
  - Refrigeration and Air Conditioning
- In relation to at least two of the following types of circuit problems and on at least two occasions

- determining the operating parameters of an existing circuit
- alternating an existing circuit to comply with specified operating parameters
- developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training

Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in multiple path a.c. circuits as described in 7) and including:
    - A Determining the operating parameters of an existing circuit.
    - B Alternating an existing circuit to comply with specified operating parameters.
    - C Developing circuits to comply with a specified function and operating parameters.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in multiple path a.c. circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4;	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEEE020A Provide basic instruction in the use of electrotechnology apparatus**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers instructing customers/users in the use of electrotechnology apparatus. It encompasses appropriate customer relations, the use of apparatus manufacturer’s instruction material, basic instruction methods and evaluation and completing documentation.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite competencies for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 25%;">Reading</td> <td style="width: 5%;">3</td> <td style="width: 25%;">Writing</td> <td style="width: 5%;">3</td> <td style="width: 25%;">Numeracy</td> <td style="width: 5%;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3

<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Electrotechnology</p>						

ELEMENT	PERFORMANCE CRITERIA
<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to instruct users.</p>	<p>1.1 OHS procedures for a given work area are obtained and understood through established routines and procedures.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Apparatus on which users are to be instructed is confirmed with work supervisor and/or other appropriate person(s).</p> <p>1.4 Safety features and safe use of the apparatus are reviewed by and understood.</p> <p>1.5 Familiarity with the apparatus is gained by reference to manufacturer’s user material and a preliminary run through to ensure the process is understood.</p> <p>1.6 Materials required to instruct are obtained in accordance with established routines and procedures.</p>
<p>2 Instruct users.</p>	<p>2.1 Users are informed of all the safety features and safe use of the apparatus in accordance with manufacturer’s instruction and regulatory requirements.</p> <p>2.2 Users are instructed in the set up and use of the apparatus in accordance with manufacturer’s instruction.</p> <p>2.3 Users are given the opportunity to show that they understand the safety aspects, set up features and operation of the apparatus.</p> <p>2.4 A copy of the apparatus manufacturer’s user instruction and other related documentation is given the appropriate person(s).</p> <p>2.5 Procedures for referring non-routine events to immediate supervisor for directions are followed.</p> <p>2.6 Instructions are given efficiently without damage to apparatus, the surrounding environment or services and using sustainable energy practices.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing basic instruction in the use of electrotechnology apparatus

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.2.5 Enterprise customer relations protocols
- 2.2.13 User instruction techniques
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any single item of electrotechnology apparatus and its control.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide basic instruction in the use of electrotechnology apparatus as described in 7) and including:
    - A Following manufacturer’s user instructions.
    - B Giving clear instructions in the use of the apparatus.
    - C Giving users the opportunity to show that they understand the safe use of the apparatus.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:  
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:  
Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing basic instruction in the use of electrotechnology apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:  
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters covering a unit or units that require formal documentation.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.2

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEE021A Plan an integrated cabling system

### Unit Descriptor

1)

This unit covers the planning of cable routes for power, lighting, communications, entertainment, distributed video and audio and energy management and control. This unit encompasses determining immediate and future cabling needs of an installation and their origins and termination points, planning cable routes, specifying cable types, sizes, fixing/support methods and cable identification systems and documenting cabling plans based on calculated and/or deemed-to-comply solutions as well as the planning of the wiring hub if required.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE008A Lay wiring and terminate accessories for extra-low voltage circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 3 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Determine immediate and future cabling needs.</p>	<p>1.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>1.2 Work supervisor or customers are consulted to determine immediate and future services required.</p> <p>1.3 Immediate and future location of service items and accessories is determined and written confirmation sought from appropriate persons.</p> <p>1.4 Safety and other regulatory requirements to which the installation shall comply are obtained and understood.</p>
<p>2 Plan an integrate cabling system for immediate and future services</p>	<p>2.1 Types and sizes of cables required for the various services are chosen to comply with technical standards, coded and regulations.</p> <p>2.2 Cables are arranged into circuits to ensure safe and functional operation of the services for which they are intended and to comply with technical standards, coded, regulations and budgetary restraints.</p> <p>2.3 Cabling for protective and functional earthing arrangements is determined to comply with technical standards, coded and regulations.</p> <p>2.4 Cabling routes are planned and cable support and methods for protection against damage specified to ensure compliance with technical standards, coded and regulations.</p> <p>2.5 Cable identification scheme is development to aid installation of services.</p> <p>2.6 Methods of terminating cables intended for future services are specified to ensure compliance with technical standards, coded and regulations.</p>
<p>3 Document the integrated cabling plan</p>	<p>3.1 Types and sizes of cables chosen, together with supporting justification, are documented in accordance with established procedures.</p>

- 3.2 Cable routes and cable support and methods for protection against damage are documented in accordance with established procedures.
- 3.3 Cable identification scheme and methods of terminating cables intended for future services are documented in accordance with established procedures.
- 3.4 Acceptance of the integrated cabling plan is sought from appropriate persons.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning integrated cabling installations.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.11 Integrated cabling arrangements
- 2.5.2.1 Technical standards, regulations and codes for general electrical installations
- 2.5.7 Technical standards, regulations and codes for telecommunications cabling.
- 2.5.9 Building codes, applicable to general electrotechnology installations
- 2.7.4.2 Electrical installations, circuit arrangements and cable selection
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to planning two integrated cabling installations for at least four of the following services.

- Electrical power and lighting
- Fixed home entertainment systems
- Integrated energy management system
- Security system

- Climate control system
- Renewable energy systems
- Water management system

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan integrated cabling installations as described in 7) and including:
    - A Determining immediate and future cabling needs accurately.
    - B Choosing appropriate type and size of cables for the immediate and future services.
    - C Planning cable routes and specifying effective support and protection method.
    - D Developing effective cable identification scheme.
    - E Specifying compliant termination methods for cables intended for future use.
    - F Documenting cabling plan including supporting justification.
    - G Dealing with unplanned events by drawing on

essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning integrated cabling installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED001A Use basic computer applications’

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.1 to 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note:  
Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2; 1.3, 2.2 to 2.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE022A Carry out preparatory electrotechnology work activities

### Unit Descriptor

1)

This unit covers the carrying out of preparatory work related to any electrotechnology discipline. It encompasses working safely, following basic instructions under direct supervision. It will include electrotechnology support activities including the use of basic hand tools, the safe use of ladders and elevated work platforms and the fixing and securing of equipment under direction following routine work practices.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power

operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Plan to carry out basic electrotechnology support activities.

- 1.1 OHS procedures for a given work area are obtained and understood through established routines.
- 1.2 Established OHS risk control measures in preparation for the work are followed.
- 1.3 Safety hazards not previously identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 Basic work instructions are obtained. The nature and location of the work is obtained from the supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Basic work instructions are sought from the supervisor. Advice is sought from the supervisor or other appropriate person to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Undertake electrotechnology support activities.

- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Plant and equipment is checked in strict accordance OHS requirements and procedures.
- 2.3 Mechanical equipment is installed straight and square in the required locations and within acceptable tolerances.

- |   |                            |   |   |
|---|----------------------------|---|---|
|   | 2.4                        | Use of basic hand and power tools in accordance with safe working practices and OHS requirements. |   |
|   | 2.5                        | Basic work instructions are carried out under supervision.  |   |
|   | 2.6                        | Procedures for referring non-routine events to immediate supervisor for directions are followed.  |   |
| 3 | Complete work and tidy up. | 3.1   | OHS work completion risk control measures and procedures are followed.                        |
|   |                            | 3.2   | Work site is cleaned and made safe in accordance with established procedures.                 |
|   |                            | 3.3   | Supervisor is notified of the completion of the work in accordance with established routines. |

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out preparatory electrotechnology work activities.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |   |
|--|----------|---|
|  | 2.1.1    | Cable protection and support              |
|  | 2.11.1   | Hand tools                                |
|  | 2.11.2.1 | Power tools                               |
|  | 2.11.3.1 | Fixing and support devices and techniques |
|  | 2.18.1   | Occupational Health and Safety principles |

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out preparatory electrotechnology work activities.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out preparatory electrotechnology work activities as described in 7) and including:
    - A Routing, placing and securing cables to comply with requirements.
    - B Placing and securing accessories accurately.
    - C Maintaining fire integrity.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out preparatory electrotechnology work activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |             |  |
|-------------|--|
| UEENEEE002A | Dismantle, assemble and fabricate electrotechnology components |
| UEENEEE005A | Fix and secure equipment                                       |

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEE023A Solve basic problems electronic and digital equipment**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers determining correct operation of basic electronic and digital equipment and providing solutions as they apply to various electronic and computer work functions. It encompasses working safely, problem solving procedures, including the use of basic measuring devices, providing solutions derived from equipment behaviour and measurements to predictable problems.</p>						
<b>Prerequisite Unit(s)</b>	<b>2)</b>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite competencies to this unit</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 25%;">Reading</td> <td style="width: 5%;">3</td> <td style="width: 25%;">Writing</td> <td style="width: 5%;">3</td> <td style="width: 25%;">Numeracy</td> <td style="width: 5%;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3

### **ELEMENT**

### **PERFORMANCE CRITERIA**

<p><b>5) Elements describe the essential outcomes of a unit of competency</b></p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to work electronic and digital equipment</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control work preparation measures and procedures are followed.</p> <p>1.3 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
<p>2 Solve electronic and digital equipment problems.</p>	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Established methods are used to solve electronic and digital equipment problems from observation or equipment behaviour and measured values.</p> <p>2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>

- |   |  |     |   |
|---|--|-----|---|
| 3 | Complete work and document problem solving activities. | 3.1 | OHS work completion risk control measures and procedures are followed.                                      |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.                               |
|   |  | 3.3 | Justification for solutions used to solve circuit problems is documented.                                   |
|   |  | 3.4 | Work completion is documented and appropriate person(s) notified in accordance with established procedures. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in electronic and digital equipment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.9.1.5 | Basic electronic principles               |
| 2.9.1.6 | Basic digital principles                  |
| 2.18.1  | Occupational Health and Safety principles |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- - Electronic and digital equipment problems as they apply to setting-up, fault finding, maintenance or development work functions in any of the following disciplines:
    - Computers
    - Data Communications
    - Electronics, and
  - In relation to the following types of electronic and digital equipment problems
    - Determining the operating parameters of existing operating equipment
    - Alternating existing equipment to comply with specified operating parameters.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solving problems in electronic and digital equipment as described in 7) and including:
    - A Using methodical problem solving methods.
    - B Taking and recording measurements correctly and accurately using relevant measuring equipment.
    - C Deducing equipment behaviour correctly and accurately.
    - E Providing written justification for the solutions to problems.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.

- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in multiple path d.c. circuits.

### **Method of assessment**

#### **8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

### **Concurrent assessment and relationship with other units**

#### **8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of Occupational Health and Safety covered in UEENEEE001A and other discipline specific Occupational Health and Safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEE024A **Compile and produce an electrotechnology report**

### Unit Descriptor

1)

This unit covers complying and producing an electrotechnology report. It encompasses determining the safety requirements are met and all regulatory responsibilities are adhered to. The person competent in this unit must demonstrate an ability to identify information sources and collect and analyse and format information applicable to the electrotechnology industry and produce a report as required.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after all core units have been achieved in the electrotechnology discipline in which competency in the unit is sought.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrotechnology

### ELEMENT

### PERFORMANCE CRITERIA

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to develop a report.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for report writing are reviewed are adopted in accordance with organisation policies.</p> <p>1.3 The scope of the report is evaluated and report parameters established using a formal evaluation/survey processes.</p> <p>1.4 Criteria from other related works impacting on the report are determined from other sources.</p> <p>1.5 Identify source and availability of information.</p>
<p>2 Develop report.</p>	<p>2.1 Report is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.</p> <p>2.2 Report is developed in collaboration with all relevant personnel.</p> <p>2.3 Competent persons are identified to assist in the compilation of the report.</p> <p>2.4 Report is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.5 Compile report in accordance with organisation policies and procedures.</p> <p>2.6 Compile and analyse research report information</p>
<p>3 Obtain approval for final report.</p>	<p>3.1 Report is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the report resulting from the presentation/discussion, are negotiated with person(s) of higher authority within the constraints of organisation policy.</p> <p>3.3 Final report is presented and approval obtained from appropriate person(s).</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and compiling and producing an electrotechnology report.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.1	Enterprise communication methods
2.2.2	Enterprise work activities records
2.2.20	Computer use basics
2.2.21	Engineering analysis, decision making and reporting
2.2.25	Research concepts
2.2.33	Working in a team
2.2.35	Data collection techniques
2.2.36	Data analysis and presentation
2.18.8.2	Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit of competency describes work conducted by technical personnel who contribute to the conduct of report writing.

This unit of competency is typically performed by high-level technicians, working as part of a product/application/service research and/or design, development and implementation team. This generally involves working closely with a range of management and production/operations personnel and requires balancing the business and technical sides of the research process.

At this level, personnel should be able to interpret and explain sections/types of legislation, codes, regulations, Australian Standards and Intellectual Property rights that apply to the subject matter being reported upon. This unit of competency should be demonstrated in accordance with the organisations

- Occupational Health and Safety and Workplace Safety policies and procedures
- Goals, values, objectives, plans, systems and processes

- Business and performance plans
- Ethical standards
- Client service standards
- Quality and continuous improvement processes and standards
- Standard Operating Procedures
- Resources
- Technical standards
- Regulatory requirements

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will

contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Compile and produce an electrotechnology report as described in 7) and including:
    - A Typical organisation policies and procedures.
    - B Access to a report brief to established report parameters.
    - C Access to appropriate person(s) to establish report requirements.
    - D Establishing the scope and parameters of the report.

- E Determining the impact of other related works.
- F Developing design brief incorporating scenarios and all requirements.
- G Appropriate computer application.
- H Identifying competencies required for the report.
- I Documenting report proposal.
- J Negotiating alterations to the proposed report successfully.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in compiling and producing an electrotechnology report.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.5; 2.3; 2.4; 3.1	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.4; 3.1

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2

## UEENEEE025A **Solve problems in complex multiple path circuits**

### Unit Descriptor

1)

This unit covers determining correct operation of complex series-parallel circuits and providing solutions as they apply to various electrotechnology work functions. It encompasses working safely, problem solving procedures, including using electrical measuring devices, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE026A Provide computational solutions to basic engineering problems

AND

UEENEEH014A Solve problems in frequency dependent circuits

OR

UEENEEE050A Undertake computations in an electrotechnology environment

AND

UEENEEE029A Solve electrotechnical problems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs

under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to solve problems in complex multiple path circuits.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve problems in complex multiple path circuits.

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- |   |  |  |   |
|---|--|--|---|
|   | 2.3  | Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.                               |   |
|   | 2.4  | Established methods are used to solve circuit problems from measure and calculated values as they apply to complex multiple path circuit.  |   |
|   | 2.5  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |   |
|   | 2.6  | Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |   |
| 3 | Complete work and document problem solving activities. | 3.1  | OHS work completion risk control measures and procedures are followed.                                      |
|   |  | 3.2  | Work site is cleaned and made safe in accordance with established procedures.                               |
|   |  | 3.3  | Justification for solutions used to solve circuit problems is documented.                                   |
|   |  | 3.4  | Work completion is documented and appropriate person(s) notified in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in complex multiple path circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.9.1 Circuit analysis

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- 
- Complex series-parallel circuits as they apply to problems related to engineering diagnosis and development work functions in any of the following disciplines:
  - Computers

- Data Communications
- Electrical
- Electronics
- Instrumentation
- Refrigeration and Air Conditioning
- In relation to the following types of circuit problems and on at least two occasions:
  - Determining the operating parameters of an existing circuit
  - Alternating an existing circuit to comply with specified operating parameters
  - Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be

‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in complex multiple path circuits as described in 7) and including:
    - A Determining the operating parameters of existing circuit.
    - B Using established problem solving methods.
    - C Taking relevant measurements accurately.

- D Interpreting measured values appropriately.
- E Providing effective solutions to circuit problems from measurements and calculations.
- F Giving written justification of solutions provided.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in complex multiple path circuits.

**Method of assessment****8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5
---	--	---

## UEENEEE026A Provide computational solutions to basic engineering problems

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the application of computational processes to solve engineering problems. It encompasses working safely, applying problem solving techniques, using a range of mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.</p> <p>Note. <b>Competency Field</b>	<p><b>4)</b></p> <p>Electrotechnology</p>						

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Provide computational solutions to engineering problems.	1.1	OHS procedures for a given work area are obtained and understood
		1.2	The nature of the problems are obtained from documentation or from work supervisor to establish the scope of work to be undertaken
		1.3	Problems are clearly stated in writing and/or diagrammatic form to ensure they are understood and appropriate methods used to resolve them.
		1.4	Known constants and variable related to the problem are obtained from measured values or problem documentation.
		1.5	Alternative methods for resolving the problem are considered and where necessary discussed with appropriate person(s).
		1.6	Problems are solved using appropriate mathematical processes and within the realistic accuracy.
2	Complete work and document problem solving activities	2.1	Justification for solutions used to solve engineering problems is documented for inclusion in work/project development records in accordance with professional standards.
		2.2	Work completion is documented and appropriate person(s) notified.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing computational solutions to basic engineering problems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.8.10.1 Engineering Maths fundamentals
- 2.8.10.2 Engineering Maths
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to problems that apply to engineering diagnosis and development work functions in any of the following disciplines:

- Computers
- Data Communications
- Electrical
- Electronics
- Instrumentation
- Refrigeration and Air Conditioning

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide computational solutions to basic engineering problems as described in 7) and including:
    - A Clearly stating problems in written and diagrammatic form.
    - B Obtaining known constants and variable from an

appropriate source.

- C Solving problems using appropriate mathematical processes.
- D Documenting justification of solutions provided in accordance with professional standards.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing computational solutions to basic engineering problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.1; 2.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.2; 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEE027A Use advanced computational processes to provide solutions to engineering problems**

### **Unit Descriptor**

1)

This unit covers the application of advanced computational processes to solve engineering problems. It encompasses working safely, applying problem solving techniques, using a range of advanced mathematical processes, providing solutions to electrical/electronics engineering problems and justifying such solutions.

Note.

Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising systems operating parameters and dealing with system malfunctions.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE025A Solve problems in complex multiple path circuits

UEENEEE026A Provide computational solutions to basic engineering problems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 6.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable

contracts of training such as apprenticeships.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Provide computational solutions to engineering problems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 The nature of the problems are obtained from documentation or work supervisor to establish the scope of work to be undertaken.
- 1.3 Problems are clearly stated in writing and/or diagrammatic form to ensure they are understood and appropriate methods used to resolve them.
- 1.4 Known constants and variable related to the problem are obtained from measured values or problem documentation.
- 1.5 Alternative methods for resolving the problem are considered and where necessary discussed with appropriate person(s).
- 1.6 Problems are solved using advanced mathematical processes and within the realistic accuracy.

2 Complete work and document problem solving activities.

- 2.1 Justification for solutions used to solve engineering problems is documented for inclusion in work/project development records in accordance with professional standards.
- 2.2 Work completion is documented and appropriate person(s) notified.

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and using advanced computational processes to provide solutions to engineering problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.10.3 Advanced Engineering Maths

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to problems that apply to engineering diagnosis and development work functions in any of the following disciplines:

- Computers
- Data Communications
- Electrical
- Electronics
- Instrumentation
- Refrigeration and Air Conditioning

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Use advanced computational processes to provide solutions to engineering problems as described in 7) and including:
    - A Clearly stating problems in written and diagrammatic form.
    - B Obtaining known constants and variable from an appropriate source.

- C Solving problems using appropriate advanced mathematical processes.
- D Documenting justification of solutions provided in accordance with professional standards.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in using advanced computational processes to provide solutions to engineering problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE025A Solve problems in complex multiple path circuits
- UEENEEE026A Provide computational solutions to basic engineering problems

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills

enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.1; 2.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.2; 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE028A      **Develop engineering solutions to photonic problems**

### **Unit Descriptor**

1)

This unit covers developing engineering solutions to resolve problems with photonic systems. It encompasses working safely, apply extensive knowledge of photonic technologies and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE0025A      Solve problems in complex multiple path circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrotechnology

**ELEMENT****PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to develop engineering solution for photonic systems problems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 The extent of the photonic systems problem is determined from performance specifications and situation reports and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Strategies are identified to ensure efficient development and implementation of solution(s).</p>
2 Develop engineering solutions for photonic system problems.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of photonic technology, operation, device characteristics and applications are applied to developing solutions to photonic system problems.</p> <p>2.3 Parameters, specifications and performance requirements in relation to each photonic system problem are obtained in accordance with established procedures.</p> <p>2.4 Approaches to resolving photonic system problems are analysed to provide most effective solutions.</p> <p>2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.</p>

- |   |  |     |   |
|---|--|-----|---|
| 3 | Test, document and implement engineering solution for photonic problems. | 3.1 | Solutions to photonic problems are tested to determine their effectiveness and modified where necessary.  |
|   |  | 3.2 | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.  |
|   |  | 3.3 | Appropriately competent and qualified person(s) required to implement solutions to photonic system problems are coordinated in accordance with regulatory requirements and enterprise policy.<br><br>(See Note) |
|   |  | 3.4 | Justification for solutions used to solve photonic systems is documented for inclusion in work/project development records in accordance with professional standards.   |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solutions to photonic problems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.87 Photonic principles and applications

2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four photonic system problems.

Note.

Typical photonic system problems are those encountered in meeting performance requirements and compliance standards, revising photonic operating parameters and dealing with photonic system malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Section 1, Clause 1.4.

### EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop engineering solutions to photonic problems as described in 7) and including:
    - A Understanding the extent of the photonic system problems.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining photonic system parameters, specifications and performance requirements appropriate to each problem.
    - D Testing and solutions to photonic system problems.
    - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
    - F Documenting justification of solutions implemented in

accordance with professional standards.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing engineering solutions to photonic problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEE029A Solve electrotechnical problems

### Unit Descriptor

1)

This unit covers the application of calculations required to solve electrotechnical problems. It encompasses working safely, applying problem solving techniques, using a range of mathematical processes and techniques to providing solutions to electrotechnical problems, and justifying such solutions.

Note.

Typical electrotechnical problems are those encountered in meeting requirements in meeting performance requirements and compliance standards, revising systems operating parameters and dealing with system malfunctions

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrotechnology

## ELEMENT

## PERFORMANCE CRITERIA

<b>5) Elements describe the essential outcomes of a unit of competency</b>	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1 Provide calculated solutions to electrotechnical problems.	1.1	OHS procedures for a given work area are obtained and understood
	1.2	The nature of the problems are obtained from documentation or from work supervisor to establish the scope of work to be undertaken
	1.3	Problems are clearly stated in writing and/or diagrammatic form to ensure they are understood and appropriate methods used to resolve them.
	1.4	Known constants and variable related to the problem are obtained from measured values or problem documentation.
	1.5	Alternative methods for resolving the problem are considered and where necessary discussed with appropriate person(s).
	1.6	Problems are solved using appropriate mathematical processes and techniques and within the realistic accuracy.
2 Complete work and document calculated solutions to electrotechnical activities	2.1	Justification for solutions used to solve electrotechnical problems is documented for inclusion in work/project development records in accordance with professional standards.
	2.2	Work completion is documented and appropriate person(s) notified.

## REQUIRED SKILLS AND KNOWLEDGE

**6)** This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solve electrotechnical problems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.1.3 Electrotechnical principles

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solve electrotechnical problems that apply to electrotechnical diagnostic and systems processes in the development of work functions in any of the following disciplines:

- Computer systems
- Electrical/Electronics
- Refrigeration and Air Conditioning
- Renewable Energy

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be

‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Apply calculations required to solve electrotechnical problems as described in 7) and including:
    - A Clearly stating problems in written and diagrammatic form.
    - B Obtaining known constants and variable from an appropriate source.

- C Solving problems using appropriate calculations
- D Documenting justification of solutions provided in accordance with professional standards.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in applying calculations required to solve electrotechnical problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.1; 2.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.2; 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE030A Provide solutions to and report on routine electrotechnology problems

### Unit Descriptor

1)

This unit covers the application of fundamental numerical calculations required to solve routine electrotechnology problems and reporting the outcomes to requirements. It encompasses working safely, applying routine problem solving techniques, using a range of fundamental mathematical processes and techniques to identifying solutions to electrotechnology problems, and reporting the solutions.

Note.

Typical electrotechnology problems are those encountered in meeting routine performance requirements and compliance standards, interpreting the operating parameters of equipment and dealing with equipment malfunctions. Typical reports are those based on routine structures and formats, and require the application of routine communication fundamentals.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	2	Writing	2	Numeracy	2
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 2 or higher

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Perform fundamental numerical calculations to solve routine electrotechnology problems.	<p>1.1 OHS procedures for a given work area are obtained and understood</p> <p>1.2 The nature of the problems are obtained from documentation or from work supervisor to establish the scope of work to be undertaken</p> <p>1.3 Problems are clearly stated in writing and/or diagrammatic form to ensure they are understood and appropriate methods used to resolve them.</p> <p>1.4 Known constants and variable related to the problem are obtained from measured values or problem documentation.</p> <p>1.5 Methods for resolving non-routine problems are considered and discussed with appropriate person(s).</p> <p>1.6 Routine problems are solved using fundamental numerical calculations with resultant outcome aligned to realistic accuracy.</p> <p>1.7 Solutions to routine problems are documented in accordance with established procedures.</p>
2 Complete work and report on calculated solutions	<p>2.1 Solutions used to solve routine electrotechnology problems are recorded for inclusion in work/project records/technical reports in accordance with requirements.</p> <p>2.2 Known reporting requirements and structures are identified and used to prepare for the production of technical reports, which communicate the outcomes solved to appropriate person(s).</p> <p>2.3 Reports are produced to communicate the solved outcomes in accordance with requirements.</p> <p>2.4 Work completion is documented and appropriate person(s) notified.</p>

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices, providing solutions to and reporting on routine electrotechnology problems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.8.14.3 Electrotechnology Numeracy Diagnostic Assessment Methods
- 2.8.14.4 Electrotechnology Literacy Diagnostic Assessment Methods
- 2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solve routine electrotechnology problems using fundamental numerical calculations in equipment processes in the deployment of work functions and reporting their outcomes in accordance with requirements in any of the following disciplines:

- Computers
- Data Communications
- Electrical
- Electronics
- Instrumentation
- Refrigeration and Air Conditioning

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### Overview of Assessment

##### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile

- graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Apply fundamental calculations and standard reporting structures required to solve and report on routine electrotechnology problems as described in 7) and including:
      - A Identifying problems in written and diagrammatic form.
      - B Obtaining known constants and variables from an appropriate source to solve routine problems.
      - C Solving problems using appropriate fundamental calculations to achieve realistic and accurate outcomes.
      - D Using standard reporting structures and forms to prepare and produce routine documents/technical reports
      - E Interpreting and communicating solutions in routine documents/technical reports to appropriate person(s) in accordance with established procedures.
      - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in applying fundamental calculations required to solve routine electrotechnology problems with realistic

accuracy and formally reporting such outcomes to appropriate persons(s) and to requirements.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2; 2.3; 2.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; to 1.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.3 to 1.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3 to 2.4	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.6; 2.1; to 2.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.2; 1.3; 2.1; 2.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE032A Document occupational hazards and risks in computer systems

### Unit Descriptor

1)

This unit covers i) occupational work hazard identification, ii) identifying health and safety risks to workers, iii) classification of risks, iv) documenting control measures intended to eliminate or reduce the risk that could potentially arise during the conduct of work activities and v) consultation processes with those involved with computer systems work. This unit primarily deals with the process involved in completing documentation and/or making appropriate modifications to pre-prepared documents.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after units in a qualification have been achieved for the electrotechnology discipline in which competency in this unit is sought.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit cannot be used in the workplace without the achievement of competence in other relevant technical units that are associated with other vocational disciplines at the same AQF level or in the same vocational discipline at another AQF level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

#### Notes:

1. In addition to OHS compliance there may be additional requirements to be licensed or obtain permits to work. Additionally, this may vary between jurisdictions but typically will relate to the operation of plant, machinery and equipment such as elevating work platforms, power

operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. They may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Competency in applying safety practices for working in close proximity to electrical power systems and equipment is covered by other specific safety-related units.

The skills and knowledge described in this unit should not be practised in the workplace until units relevant to a work function have been achieved.

**Competency Field 4)**

Electrotechnology

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Identify and document hazards and risks.

1.1 Hazards are identified using appropriate processes with involvement of others, where appropriate.

Note: Typically this will relate to such things as:

- The type of job
- Electrical conditions
- Energy levels
- Radiation levels
- Toxic substances
- Airborne particles
- Pressure discharge
- Explosive atmosphere
- Work-site location
- General work-site conditions
- Specific work location
- Moving parts
- Tools and equipment
- Workers competence and/or capacity and/or personal effects

1.2 Risks associated with identified hazards are determined in consultation with others, where appropriate, and documented in accordance with regulations and following established procedures.

- |   |   |  |
|---|---|--|
|   | 1.3   | Provision is made to accommodate changes to documentation should unforeseen hazards be identified.   |
| 2 | Determine risk class and document control measures. | 2.1 Risk class is determined for the risks involved in accordance with the regulations and following established procedures.   |
|   | 2.2   | Control measures are developed on the basis of the determined risk(s) and risk class to eliminate and/or mitigate the risk to health and safety in accordance with regulations and following established procedures. |
|   | 2.3   | Risk class and control measures are agreed to and documented in consultation with all involved, where appropriate, in accordance with regulations and established procedures.  |
| 3 | Monitor and review the control measures.            | 3.1 Documented control measures are made available for reference by all involved with the work.  |
|   | 3.2   | Control measures are modified where required in consultation with all involved with the work in accordance with established procedures.  |
|   | 3.3   | Documentation associated with the risk assessment process are filed in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and documenting occupational hazards and risks in computer systems.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.2.1   | Enterprise communication methods          |
| 2.2.2   | Enterprise work activities records        |
| 2.18.1  | Occupational Health and Safety principles |
| 2.18.16 | Documenting hazards and identifying risks |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to computer systems devices and hazards present in domestic, commercial and industrial buildings
- Accepted industry work procedures and the specific safety procedures and work instructions for a particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Documenting occupational hazards and risks in computer systems as described in 7) and including:
    - A Identifying and noting hazards.
    - B Assessing the risks and developing and documenting control measures.
    - C Reviewing and documenting variations to prior arranged documents.
    - D Recording activities.
    - E Dealing with unplanned activities by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in documenting occupational hazards and risks in computer systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are also included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 2.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2, 1.2, 2.3, 3.1, 3.2, 3.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1, 1.2, 2.1, 2.2, 2.3, 3.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE033A Document occupational hazards and risks in electrical work

### Unit Descriptor

1)

This unit covers i) occupational work hazard identification, ii) identifying health and safety risks to workers, iii) classification of risks, iv) documenting control measures intended to eliminate or reduce the risk that could potentially arise during the conduct of work activities and v) consultation processes with those involved with electrical work. This unit primarily deals with the process involved in completing documentation and/or making appropriate modifications to pre-prepared documents.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after units in a qualification have been achieved for the electrotechnology discipline in which competency in this unit is sought.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit cannot be used in the workplace without the achievement of competence in other relevant technical units that are associated with other vocational disciplines at the same AQF level or in the same vocational discipline at another AQF level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

#### Notes:

1. In addition to OHS compliance there may be additional requirements to be licensed or obtain permits to work. Additionally, this may vary between jurisdictions but typically will relate to the operation of plant, machinery and equipment such as elevating work platforms, power

operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. They may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Competency in applying safety practices for working in close proximity to electrical power systems and equipment is covered by other specific safety-related units.

The skills and knowledge described in this unit should not be practised in the workplace until units relevant to a work function have been achieved.

**Competency Field 4)**

Electrotechnology

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Identify and document hazards and risks.

1.1 Hazards are identified using appropriate processes with involvement of others, where appropriate.

Note: Typically this will relate to such things as

- The type of job
- Electrical conditions
- Energy levels
- Radiation levels
- Toxic substances
- Airborne particles
- Pressure discharge
- Explosive atmosphere
- Work-site location
- General work-site conditions
- Specific work location
- Moving parts
- Tools and equipment
- Workers competence and/or capacity and/or personal effects

1.2 Risks associated with identified hazards are determined in consultation with others, where appropriate, and documented in accordance with regulations and following established procedures.

- |   |   |  |
|---|---|--|
|   | 1.3   | Provision is made to accommodate changes to documentation should unforeseen hazards be identified.   |
| 2 | Determine risk class and document control measures. | <p>2.1 Risk class is determined for the risks involved in accordance with the regulations and following established procedures.</p> <p>2.2 Control measures are developed on the basis of the determined risk(s) and risk class to eliminate and/or mitigate the risk to health and safety in accordance with regulations and following established procedures.</p> <p>2.3 Risk class and control measures are agreed to and documented in consultation with all involved, where appropriate, in accordance with regulations and established procedures.</p> |
| 3 | Monitor and review the control measures.            | <p>3.1 Documented control measures are made available for reference by all involved with the work.</p> <p>3.2 Control measures are modified where required in consultation with all involved with the work in accordance with established procedures.</p> <p>3.3 Documentation associated with the risk assessment process are filed in accordance with established procedures</p>   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and documenting occupational hazards and risks in electrical.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.2.1   | Enterprise communication methods          |
| 2.2.2   | Enterprise work activities records        |
| 2.18.1  | Occupational Health and Safety principles |
| 2.18.16 | Documenting hazards and identifying risks |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to electrical devices and systems and hazards present in domestic, commercial and industrial buildings
- Accepted industry work procedures and the specific safety procedures and work instructions for a particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be

‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Document occupational hazards and risks in electrical as described in 7) and including:
    - A Identifying and noting hazards.
    - B Assessing the risks and developing and documenting control measures.
    - C Reviewing and documenting variations to prior

arranged documents.

- D Recording activities.
- E Dealing with unplanned activities by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in documenting occupational hazards and risks in electrical.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are also included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2,

Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 2.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2, 2.3, 3.1, 3.2, 3.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1, 1.2, 2.1, 2.2, 2.3, 3.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE034A Document occupational hazards and risks in electronics

### Unit Descriptor

1)

This unit deals primarily with the process involved in completing documentation and/or making appropriate modifications to pre-prepared documents. It covers:

- i) occupational work hazard identification
- ii) identifying health and safety risks to workers
- iii) classifying risks
- iv) documenting control measures intended to eliminate or reduce the risk that could potentially arise during the conduct of work activities, and
- v) consultation processes with those involved with computer systems work.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after units in a qualification have been achieved for the electrotechnology discipline in which competency in this unit is sought.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit cannot be used in the workplace without the achievement of competence in other relevant technical units that are associated with other vocational disciplines at the same AQF level or in the same vocational discipline at another AQF level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Notes:

1. In addition to OHS compliance there may be additional requirements to be licensed or obtain permits to work. Additionally, this may vary between jurisdictions but typically will relate to the operation of plant, machinery and equipment such as elevating work platforms, power operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. They may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Competency in applying safety practices for working in close proximity to electrical power systems and equipment is covered by other specific safety-related units.

The skills and knowledge described in this unit should not be practised in the workplace until units relevant to a work function have been achieved.

**Competency Field 4)**

Electrotechnology

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
----------------	-----------------------------

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Identify and document hazards and risks.

1.1 Hazards are identified using appropriate processes with involvement of others, where appropriate.

Note: Typically this will relate to such things as

- The type of job
- Electrical conditions
- Energy levels
- Radiation levels
- Toxic substances
- Airborne particles
- Pressure discharge
- Explosive atmosphere
- Work-site location
- General work-site conditions
- Specific work location
- Moving parts
- Tools and equipment
- Workers competence and/or capacity and/or personal effects

- |   |   |   |  |
|---|---|---|--|
|   | 1.2   | Risks associated with identified hazards are determined in consultation with others, where appropriate, and documented in accordance with regulations and following established procedures. |  |
|   | 1.3   | Provision is made to accommodate changes to documentation should unforeseen hazards be identified.  |  |
| 2 | Determine risk class and document control measures. | 2.1   | Risk class is determined for the risks involved in accordance with the regulations and following established procedures.   |
|   |   | 2.2   | Control measures are developed on the basis of the determined risk(s) and risk class to eliminate and/or mitigate the risk to health and safety in accordance with regulations and following established procedures. |
|   |   | 2.3   | Risk class and control measures are agreed to and documented in consultation with all involved, where appropriate, in accordance with regulations and established procedures.  |
| 3 | Monitor and review the control measures.            | 3.1   | Documented control measures are made available for reference by all involved with the work.  |
|   |   | 3.2   | Control measures are modified where required in consultation with all involved with the work in accordance with established procedures.  |
|   |   | 3.3   | Documentation associated with the risk assessment process are filed in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and documenting occupational hazards and risks in electrical.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.18.1 Occupational Health and Safety principles
- 2.18.16 Documenting hazards and identifying risks

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to electrical devices and systems and hazards present in domestic, commercial and industrial buildings
- Accepted industry work procedures and the specific safety procedures and work instructions for a particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Document occupational hazards and risks in electrical as described in 7) and including:
    - A Identifying and noting hazards.
    - B Assessing the risks and developing and documenting control measures.
    - C Reviewing and documenting variations to prior arranged documents.

- D Recording activities.
- E Dealing with unplanned activities by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in documenting occupational hazards and risks in electrical.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are also included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2,

Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 2.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2, 2.3, 3.1, 3.2, 3.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1, 1.2, 2.1, 2.2, 2.3, 3.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEE035A Document occupational hazards and risks in instrumentation

### Unit Descriptor

1)

This unit primarily deals with the process involved in completing documentation and/or making appropriate modifications to pre-prepared documents. It covers

- i) occupational work hazard identification
- ii) identifying health and safety risks to workers
- iii) classification of risks
- iv) documenting control measures intended to eliminate or reduce the risk that could potentially arise during the conduct of work activities and
- v) consultation processes with those involved with computer systems work.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after units in a qualification have been achieved for the electrotechnology discipline in which competency in this unit is sought.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit cannot be used in the workplace without the achievement of competence in other relevant technical units that are associated with other vocational disciplines at the same AQF level or in the same vocational discipline at another AQF level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Notes:

1. In addition to OHS compliance there may be additional requirements to be licensed or obtain permits to work. Additionally, this may vary between jurisdictions but typically will relate to the operation of plant, machinery and equipment such as elevating work platforms, power operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. They may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Competency in applying safety practices for working in close proximity to electrical power systems and equipment is covered by other specific safety-related units.

The skills and knowledge described in this unit should not be practised in the workplace until units relevant to a work function have been achieved.

**Competency Field 4)**

Electrotechnology

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
----------------	-----------------------------

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Identify and document hazards and risks.

1.1 Hazards are identified using appropriate processes with involvement of others, where appropriate.

Note: Typically this will relate to such things as

- The type of job
- Electrical conditions
- Energy levels
- Radiation levels
- Toxic substances
- Airborne particles
- Pressure discharge
- Explosive atmosphere
- Work-site location
- General work-site conditions
- Specific work location
- Moving parts
- Tools and equipment
- Workers competence and/or capacity and/or personal effects

- |   |   |   |  |
|---|---|---|--|
|   | 1.2   | Risks associated with identified hazards are determined in consultation with others, where appropriate, and documented in accordance with regulations and following established procedures. |  |
|   | 1.3   | Provision is made to accommodate changes to documentation should unforeseen hazards be identified.  |  |
| 2 | Determine risk class and document control measures. | 2.1   | Risk class is determined for the risks involved in accordance with the regulations and following established procedures.   |
|   |   | 2.2   | Control measures are developed on the basis of the determined risk(s) and risk class to eliminate and/or mitigate the risk to health and safety in accordance with regulations and following established procedures. |
|   |   | 2.3   | Risk class and control measures are agreed to and documented in consultation with all involved, where appropriate, in accordance with regulations and established procedures.  |
| 3 | Monitor and review the control measures.            | 3.1   | Documented control measures are made available for reference by all involved with the work.  |
|   |   | 3.2   | Control measures are modified where required in consultation with all involved with the work in accordance with established procedures.  |
|   |   | 3.3   | Documentation associated with the risk assessment process are filed in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and documenting occupational hazards and risks in instrumentation.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.18.1 Occupational Health and Safety principles
- 2.18.16 Documenting hazards and identifying risks

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to electrical devices and systems and hazards present in domestic, commercial and industrial buildings
- Accepted industry work procedures and the specific safety procedures and work instructions for a particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be

‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Document occupational hazards and risks in instrumentation as described in 7) and including:
    - A Identifying and noting hazards.
    - B Assessing the risks and developing and documenting control measures.
    - C Reviewing and documenting variations to prior

arranged documents.

- D Recording activities.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in documenting occupational hazards and risks in instrumentation.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are also included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed

in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 2.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2, 1.2, 2.3, 3.1, 3.2, 3.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1, 1.2, 2.1, 2.2, 2.3, 3.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEE036A Document occupational hazards and risks in refrigeration and air-conditioning**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit primarily deals with the process involved in completing documentation and/or making appropriate modifications to pre-prepared documents. It covers</p> <ul style="list-style-type: none"> <li>i) occupational work hazard identification</li> <li>ii) identifying health and safety risks to workers</li> <li>iii) classification of risks</li> <li>iv) documenting control measures intended to eliminate or reduce the risk that could potentially arise during the conduct of work activities and</li> <li>v) consultation processes with those involved with refrigeration and air-conditioning work.</li> </ul>						
<b>Prerequisite Unit(s)</b>	<b>2)</b>						
<b>Competencies</b>	<b>2.1)</b>						
	Competency in this unit shall be assessed only after units in a qualification have been achieved for the electrotechnology discipline in which competency in this unit is sought.						
<b>Literacy and numeracy skills</b>	<b>2.2)</b>						
	Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’						
	<table border="0"> <tr> <td>Reading</td> <td>3</td> <td>Writing</td> <td>3</td> <td>Numeracy</td> <td>3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<b>3)</b>						
	This unit cannot be used in the workplace without the achievement of competence in other relevant technical units that are associated with other vocational disciplines at the same AQF level or in the same vocational discipline at another AQF level.						
<b>Licence to practise</b>	<b>3.1)</b>						
	The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.						

Notes:

1. In addition to OHS compliance there may be additional requirements to be licensed or obtain permits to work. Additionally, this may vary between jurisdictions but typically will relate to the operation of plant, machinery and equipment such as elevating work platforms, power operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. They may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Competency in applying safety practices for working in close proximity to electrical power systems and equipment is covered by other specific safety-related units.

The skills and knowledge described in this unit should not be practised in the workplace until units relevant to a work function have been achieved.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Identify and document hazards and risks.

1.1 Hazards are identified using appropriate processes with involvement of others, where appropriate.

Note: Typically this will relate to such things as

- The type of job
- Electrical conditions
- Energy levels
- Radiation levels
- Toxic substances
- Airborne particles
- Pressure discharge
- Explosive atmosphere
- Work-site location
- General work-site conditions
- Specific work location
- Moving parts
- Tools and equipment
- Workers competence and/or capacity and/or personal effects

- |   |   |  |
|---|---|--|
|   | 1.2   | Risks associated with identified hazards are determined in consultation with others, where appropriate, and documented in accordance with regulations and following established procedures.  |
|   | 1.3   | Provision is made to accommodate changes to documentation should unforeseen hazards be identified.   |
| 2 | Determine risk class and document control measures. | <p>2.1 Risk class is determined for the risks involved in accordance with the regulations and following established procedures.</p> <p>2.2 Control measures are developed on the basis of the determined risk(s) and risk class to eliminate and/or mitigate the risk to health and safety in accordance with regulations and following established procedures.</p> <p>2.3 Risk class and control measures are agreed to and documented in consultation with all involved, where appropriate, in accordance with regulations and established procedures.</p> |
| 3 | Monitor and review the control measures.            | <p>3.1 Documented control measures are made available for reference by all involved with the work.</p> <p>3.2 Control measures are modified where required in consultation with all involved with the work in accordance with established procedures.</p> <p>3.3 Documentation associated with the risk assessment process are filed in accordance with established procedures</p>   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and documenting occupational hazards and risks in refrigeration and air-conditioning.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.18.1 Occupational Health and Safety principles
- 2.18.16 Documenting hazards and identifying risks

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to electrical devices and systems and hazards present in domestic, commercial and industrial buildings
- Accepted industry work procedures and the specific safety procedures and work instructions for a particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Document occupational hazards and risks in refrigeration and air-conditioning as described in 7) and including:
    - A Identifying and noting hazards.
    - B Assessing the risks and developing and documenting control measures.
    - C Reviewing and documenting variations to prior arranged documents.

- D Recording activities.
- E Dealing with unplanned activities by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in documenting occupational hazards and risks in refrigeration and air-conditioning.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are also included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 2.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2, 1.2, 2.3, 3.1, 3.2, 3.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1, 1.2, 2.1, 2.2, 2.3, 3.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEE037A Document occupational hazards and risks in electrotechnology**

### **Unit Descriptor**

**1)**

This unit primarily deals with the process involved in completing documentation and/or making appropriate modifications to pre-prepared documents. It covers

- i) occupational work hazard identification
- ii) identifying health and safety risks to workers
- iii) classification of risks
- iv) documenting control measures intended to eliminate or reduce the risk that could potentially arise during the conduct of work activities and
- v) consultation processes with those involved with electrotechnology work.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after units in a qualification have been achieved for the electrotechnology discipline in which competency in this unit is sought.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit cannot be used in the workplace without the achievement of competence in other relevant technical units that are associated with other vocational disciplines at the same AQF level or in the same vocational discipline at another AQF level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Notes:

1. In addition to OHS compliance there may be additional requirements to be licensed or obtain permits to work. Additionally, this may vary between jurisdictions but typically will relate to the operation of plant, machinery and equipment such as elevating work platforms, power operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. They may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Competency in applying safety practices for working in close proximity to electrical power systems and equipment is covered by other specific safety-related units.

The skills and knowledge described in this unit should not be practised in the workplace until units relevant to a work function have been achieved.

**Competency Field 4)**

Electrotechnology

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Identify and document hazards and risks.

1.1 Hazards are identified using appropriate processes with involvement of others, where appropriate.

Note: Typically this will relate to such things as

- The type of job
- Electrical conditions
- Energy levels
- Radiation levels
- Toxic substances
- Airborne particles
- Pressure discharge
- Explosive atmosphere
- Work-site location
- General work-site conditions
- Specific work location
- Moving parts
- Tools and equipment
- Workers competence and/or capacity and/or personal effects

- |   |   |   |  |
|---|---|---|--|
|   | 1.2   | Risks associated with identified hazards are determined in consultation with others, where appropriate, and documented in accordance with regulations and following established procedures. |  |
|   | 1.3   | Provision is made to accommodate changes to documentation should unforeseen hazards be identified.  |  |
| 2 | Determine risk class and document control measures. | 2.1   | Risk class is determined for the risks involved in accordance with the regulations and following established procedures.   |
|   |   | 2.2   | Control measures are developed on the basis of the determined risk(s) and risk class to eliminate and/or mitigate the risk to health and safety in accordance with regulations and following established procedures. |
|   |   | 2.3   | Risk class and control measures are agreed to and documented in consultation with all involved, where appropriate, in accordance with regulations and established procedures.  |
| 3 | Monitor and review the control measures.            | 3.1   | Documented control measures are made available for reference by all involved with the work.  |
|   |   | 3.2   | Control measures are modified where required in consultation with all involved with the work in accordance with established procedures.  |
|   |   | 3.3   | Documentation associated with the risk assessment process are filed in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and documenting occupational hazards and risks in electrotechnology.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.18.1 Occupational Health and Safety principles
- 2.18.16 Documenting hazards and identifying risks

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to electrical devices and systems and hazards present in domestic, commercial and industrial buildings
- Accepted industry work procedures and the specific safety procedures and work instructions for a particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Document occupational hazards and risks in electrotechnology as described in 7) and including:
    - A Identifying and noting hazards.
    - B Assessing the risks and developing and documenting control measures.
    - C Reviewing and documenting variations to prior arranged documents.

- D Recording activities.
- E Dealing with unplanned activities by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in documenting occupational hazards and risks in electrotechnology.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with other related units making up a qualification or possible skill clusters.

Components of this unit are also included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2,

Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 2.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2, 1.2, 2.3, 3.1, 3.2, 3.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.3	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1, 1.2, 2.1, 2.2, 2.3, 3.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEE038A Participate in development and follow a personal competency development plan**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the application of skills and knowledge in taking responsibility for ones own competency development. It encompasses understanding the structure of a competency development plan, participating the development of a personal competency development plan, understanding responsibilities and obligation under competency development plan, following activities for developing competency, self-monitoring competency development and meeting trainee obligations for periodic reporting of competency development activities.</p>						
<b>Prerequisite Unit(s)</b>	<b>2)</b>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite competencies for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended to support competency development entry-level employment based programs incorporated in approved contracts of training.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Electrotechnology</p>						

### **ELEMENT**

### **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Participate in the development of a personal competency development plan.	<p>1.1 The nature of competency-based training is sought from discussions with appropriate persons and understood.</p> <p>1.2 The responsibilities/obligations of trainees/learners, their employers, trainers and assessors in a competency-based development program are sought from discussions with appropriate persons and understood.</p> <p>1.3 Competencies to be achieved in a personal competency development plan are established in discussions with appropriate persons.</p> <p>1.4 Details on how to achieve the individual competencies in the plan are sought from discussions with appropriate persons and understood.</p>
2 Follow a personal competency development plan.	<p>2.1 All aspects of the competency development plan are put into practice and followed diligently.</p> <p>2.2 Opportunities to practise skills and apply knowledge relative to a particular competency are pursued</p> <p>2.3 Assistance is sought from appropriate persons to overcome difficulties in develop skills and apply knowledge relevant to a particular competency.</p> <p>2.4 Progress in competency development is self monitored against the competency development plan.</p> <p>2.5 Modifications to the personal competency development plan are made in consultation with appropriate persons.</p> <p>2.6 Trainee/learners responsibility for periodic and timely reporting of competency development activities is followed.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and participating in development and following a personal competency development plan.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.45	Responsibilities under a competency development plan
2.2.46	Methods of monitoring and reporting competency development activities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to an individual's competency development in an electrotechnology discipline and qualification. It includes a competency development plan and instructions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Participate in development and follow a personal competency development plan as described in 7) and including:
  - A Seeking and understanding the responsibilities under a competency development plan.
  - B Seeking and understanding how to achieve the individual competencies in the plan.
  - C Following all aspects of the plan diligently.
  - D Pursuing opportunities to develop competency.
  - E Seeking assistance to overcome difficulties in developing competency.
  - F Self-monitoring competency development.
  - G Periodically reporting competency development activities.
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in participating in development and following a personal competency development plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which

is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence development in this unit may be assessed concurrently with other units in a qualification.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 2.2	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	
-----------------------------------	---	--

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEE040A Identify and select components/accessories/materials for electrotechnology work activities**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers undertaking a schedule of work for selecting appropriately identified components, accessories or materials in an agreed time, to a quality standard and with a minimum of waste, using appropriate technology mediums where required.</p>

Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.</li> <li>2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures</li> </ol>						

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to identify components, accessories and materials.

- 1.1 Instructions for preparing components, accessories or materials identification is communicated and confirmed to ensure clear understanding.
- 1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply in the carrying out of the work.
- 1.3 Necessary tools, equipment and personnel protective equipment are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved.
- 1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures.
- 1.6 Schedule(s) for identifying components, accessories or materials including practices for working safely are confirmed in accordance with instructions and requirements.

2 Select components, accessories and materials.

- 2.1 OHS policies and procedures and safe work practices are followed.
- 2.2 Schedule for selecting components, accessories or materials is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste, using appropriate technology.
- 2.3 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.
- 2.4 Ongoing checks of work quality are undertaken in accordance with instructions and requirements.

- |   |   |     |  |
|---|---|-----|--|
| 3 | Confirm selection of components, accessories and materials. | 3.1 | Final checks are made to ensure selection of components, accessories or materials conforms with instructions.  |
|   |   | 3.2 | Appropriate personnel are notified of completion of the selection process.   |
|   |   | 3.3 | Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures. |
|   |   | 3.4 | Work area is cleaned up and made safe and sustainable energy practices are followed.   |
|   |   | 3.5 | Appropriate records are updated in accordance with instructions and established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and identifying and selecting components/accessories/materials for electrotechnology work activities.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |  |
|---------|--|
| 2.2.40  | Electrotechnology Industry organisations and practises |
| 2.8.1.2 | Fundamental electrical principles                      |
| 2.8.2.1 | Direct current circuit principles                      |
| 2.8.13  | Parts and components selection                         |
| 2.18.1  | Occupational Health and Safety principles              |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to identifying and selecting components/accessories/materials for electrotechnology work activities in any of the following disciplines:

- Appliances
- Business equipment
- Computers

- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.2

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on

the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Identify and select components/accessories/materials for electrotechnology work activities as described in 7) and including:
    - A Understanding work instruction.
    - B Obtaining and checking tools and equipment.
    - C Following work schedules.
    - D Returning tools and surplus resources as required.

- E Updating work records.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in identifying and selecting components/accessories/materials for Electrotechnology work activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6; 2.1 to 2.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6; 2.3; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

<b>Competency Field</b>	<p><b>4)</b></p>						

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to use routine equipment, plant and technologies	<p>1.1 Instructions in the use of routine equipment, plant or technologies are communicated and confirmed to ensure clear understanding.</p> <p>1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply in the carrying out of the work.</p> <p>1.3 Tools, equipment and personnel protective equipment necessary for the work are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved.</p> <p>1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures.</p> <p>1.6 Schedule of work including practices for working safely are confirmed in accordance with instructions and requirements.</p>
2 Use routine equipment, plant and technologies	<p>2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents.</p> <p>2.2 Routine equipment, plant or technologies are used in accordance with schedule of work to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.</p> <p>2.3 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.</p> <p>2.4 Ongoing checks of work quality are undertaken in accordance with instructions and requirements.</p>
3 Complete use of routine equipment, plant and technologies	<p>3.1 Final checks are made to ensure the use of routine equipment, plant or technologies conforms with instructions and to requirements.</p>

- 3.2 Appropriate personnel are notified of completion of the work using routine equipment, plant or technologies.
- 3.3 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
- 3.4 Work area is cleaned up and made safe and sustainable energy practices are followed.
- 3.5 Appropriate records are updated in accordance with instructions and established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and using routine equipment/plant/technologies in an electrotechnology environment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.40 Electrotechnology Industry organisations and practises
- 2.8.1.2 Fundamental electrical principles
- 2.8.13 Parts and components selection
- 2.18.1 Occupational health and safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to the use of routine equipment/plant/technologies in an electrotechnology environment in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection

- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training

Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Use of routine equipment/plant/technologies in an electrotechnology environment as described in 7) and including:
    - A Understanding work instruction.
    - B Obtaining and checking tools and equipment.
    - C Following work schedules.
    - D Using routine equipment/plant/technologies in accordance with work schedules.
    - E Returning tools and surplus resources as required.
    - F Updating work records.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in using routine equipment/plant/technologies in an Electrotechnology environment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## UEENEEE042A Produce routine products for carrying out electrotechnology work activities

### Unit Descriptor

1)

This unit covers routine products required to do work in the Electrotechnology environment are produced in accordance with the schedule of work ensuring work is completed in an agreed time, to a quality standard and with a minimum waste.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite units for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

### Competency Field

4)

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to produce routine products.</p>	<p>1.1 Instructions for preparing the work activity are communicated and confirmed to ensure clear understanding routine products.</p> <p>1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.</p> <p>1.3 Necessary tools, equipment and personnel protective equipment are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved.</p> <p>1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures.</p> <p>1.6 Schedule of work including practices for working safely are confirmed in accordance with instructions and requirements.</p>
<p>2 Produce routine products.</p>	<p>2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents products.</p> <p>2.2 Schedule of work is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.</p> <p>2.3 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.</p> <p>2.4 Ongoing checks of work quality are undertaken in accordance with instructions and requirements.</p>
<p>3 Check results of products produced.</p>	<p>3.1 Final checks are made to ensure the completed work conforms with instructions and to requirements products produced.</p> <p>3.2 Appropriate personnel are notified of completion of the work.</p>

- 3.3 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
- 3.4 Work area is cleaned up and made safe and sustainable energy practices are followed.
- 3.5 Appropriate records are updated in accordance with instructions and established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and producing routine products for carrying out electrotechnology work activities.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.40 Electrotechnology Industry organisations and practises
- 2.5.1.1 Drawing interpretation and sketching
- 2.8.1.2 Fundamental electrical principles
- 2.8.2.1 Direct current circuits principles
- 2.8.13 Parts and components selection
- 2.11.1 Hand tools
- 2.11.2.1 Power tools
- 2.11.4 Dismantling and assembly techniques
- 2.11.13.2 Introduction to welding
- 2.11.19 Electrotechnology engineering practices
- 2.18.1 Occupational health and safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to producing routine products for carrying out electrotechnology work activities in any of the following disciplines:

- Appliances
- Business equipment

- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Produce routine products for carrying out electrotechnology work activities as described in 7) and including:
    - A Understanding work instructions.
    - B Obtaining and checking tools and equipment.
    - C Following work schedules.
    - D Producing products in accordance with work schedule.

- E Returning tools and surplus resources as required.
- F Updating work records.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in producing routine products for carrying out Electrotechnology work activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2,

Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## **UEENEEE043A Produce routine tools/devices for carrying out electrotechnology work activities**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers routine tools/devices required to do work in the Electrotechnology environment are produced in accordance with the schedule of work ensuring work is completed in an agreed time, to a quality standard and with a minimum waste.</p>						
<b>Prerequisite Unit(s)</b>	<b>2)</b>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite units for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.</p> <p>Note:</p> <ol style="list-style-type: none"> <li>1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.</li> <li>2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.</li> </ol>						
<b>Competency Field</b>	<b>4)</b>						

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to produce routine products.	<p>1.1 Instructions for preparing the work activity are communicated and confirmed to ensure clear understanding routine products.</p> <p>1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.</p> <p>1.3 Tools, equipment and personnel protective equipment necessary for the work are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved.</p> <p>1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures</p> <p>1.6 Schedule of work including practices for working safely are confirmed in accordance with instructions and requirements</p>
2 Produce routine products.	<p>2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents products.</p> <p>2.2 Schedule of work is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.</p> <p>2.3 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.</p> <p>2.4 Ongoing checks of work quality are undertaken in accordance with instructions and requirements</p>
3 Check results routine tools and devices produced.	3.1 Final checks are made to ensure the completed work conforms with instructions and to requirements routine tools and devises produced.

- 3.2 Appropriate personnel are notified of completion of the work.
- 3.3 Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
- 3.4 Work area is cleaned up and made safe and sustainable energy practices are followed.
- 3.5 Appropriate records are updated in accordance with instructions and established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and producing routine tools/devices for carrying out electrotechnology work activities. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.40 Electrotechnology Industry organisations and practises
- 2.5.1.1 Drawing interpretation and sketching
- 2.8.1.2 Fundamental electrical principles
- 2.8.2.1 Direct current circuits principles
- 2.8.13 Parts and components selection
- 2.11.1 Hand tools
- 2.11.2.1 Power tools
- 2.11.4 Dismantling and assembly techniques
- 2.11.13.2 Introduction to welding
- 2.11.19 Electrotechnology engineering practices
- 2.18.1 Occupational health and safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to producing routine tools/devices for carrying out electrotechnology work activities in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Produce routine tools/devices for carrying out electrotechnology work activities as described in 7) and including:
    - A Understanding work instructions.
    - B Obtaining and checking tools and equipment.
    - C Following work schedules.
    - D Producing products in accordance with work schedule.
    - E Returning tools and surplus resources as required.
    - F Updating work records.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in producing routine tools/devices for carrying out electrotechnology work activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential

knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	N/A	
--	-----	--

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## UEENEEE044A Apply technologies and concepts to electrotechnology work activities

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers undertake Electrotechnology work activities using a range of technologies such as computers, and apply analytical concepts to achieve the desired outcome ensuring work is completed in an agreed time, to a quality standard and with a minimum of waste.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite units for this unit.</p>

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to apply technologies and concepts.	<p>1.1 Instructions for the preparation to apply technologies and concepts are communicated and confirmed to ensure clear understanding.</p> <p>1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.</p> <p>1.3 Tools, equipment and personnel protective equipment necessary for the work are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved.</p> <p>1.5 Resources and materials needed to apply technologies and concepts are confirmed, scheduled and obtained in accordance with established procedures.</p> <p>1.6 Schedule to apply technologies and concepts, including practices for working safely, are confirmed in accordance with instructions and requirements.</p>
2 Use technologies and apply concepts to the carrying out of work.	<p>2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents.</p> <p>2.2 Schedule of using technologies and applying concepts to the achieving the desired outcome is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.</p> <p>2.3 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.</p> <p>2.4 Ongoing checks of work quality are undertaken in accordance with instructions and requirements.</p>

- |   |  |     |  |
|---|--|-----|--|
| 3 | Check results in the use of technologies and applications of concepts. | 3.1 | Final checks are made to ensure the use of technologies and applications of concepts conforms with instructions and to requirements.                                 |
|   |  | 3.2 | Appropriate personnel are notified of completion in the use of technologies and applications of concepts.  |
|   |  | 3.3 | Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures. |
|   |  | 3.4 | Work area is cleaned up and made safe and sustainable energy practices are followed.   |
|   |  | 3.5 | Appropriate records are updated in accordance with instructions and established procedures   |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying technologies and concepts to electrotechnology work activities.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.2.20   | Computer use basics                                    |
| 2.2.40   | Electrotechnology Industry organisations and practises |
| 2.4.11   | Personal computers hardware structure                  |
| 2.5.1.1  | Drawing Interpretation and Sketching                   |
| 2.8.1.2  | Fundamental electrical principles                      |
| 2.8.2.1  | Direct current circuit principles                      |
| 2.8.13   | Parts and components selection                         |
| 2.11.1   | Hand tools   |
| 2.11.2.1 | Power tools  |
| 2.11.4   | Dismantling and assembly techniques                    |
| 2.18.1   | Occupational Health and Safety principles              |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to producing routine products for carrying out electrotechnology work activities in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy, and
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Apply technologies and concepts to electrotechnology work activities as described in 7) and including:
  - A Understanding work instruction.
  - B Obtaining and checking tools and equipment.
  - C Following work schedules.
  - D Using technologies and applying concepts appropriately.
  - E Returning tools and surplus resources as required.
  - F Updating work records.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in applying technologies and concepts to Electrotechnology work activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEE045A      Apply computation when using equipment/materials/concepts in an electrotechnology environment**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers undertaking computations to produce appropriate results using a range of equipment, materials and concepts in carrying out Electrotechnology work activities, whilst ensuring work is completed in an agreed time, to a quality standard and with a minimum of waste.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite units for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.</p> <p style="margin-left: 20px;">Note:</p> <ol style="list-style-type: none"> <li>1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.</li> <li>2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.</li> </ol>						
<b>Competency Field</b>	<p><b>4)</b></p>						

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to apply computations when using equipment, materials and concepts.	<p>1.1 Instructions for the preparation to apply computations when using equipment, materials or concepts are communicated and confirmed to ensure clear understanding.</p> <p>1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.</p> <p>1.3 Tools, equipment and personnel protective equipment necessary for the work are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.</p> <p>1.4 Appropriate personnel are consulted to ensure computations when using equipment, materials or concepts is coordinated effectively with others involved.</p> <p>1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures.</p> <p>1.6 Schedule of computations to be applied when using equipment, materials or concepts, including practices for working safely, are confirmed in accordance with instructions and requirements.</p>
2 Carry out computations when using equipment, materials and concepts.	<p>2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents.</p> <p>2.2 Schedule of computations is followed to ensure the use equipment, materials or concepts is completed in an agreed time, to a quality standard and with a minimum of waste.</p> <p>2.3 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.</p> <p>2.4 Ongoing checks of quality of the computations are undertaken in accordance with instructions and requirements.</p>

3	Confirm results of computations when using equipment, materials and concepts.	3.1	Confirm results of computations when using equipment, materials and concepts.
		3.2	Appropriate personnel are notified of completion of the computations.
		3.3	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures.
		3.4	Work area is cleaned up and made safe and sustainable energy practices are followed.
		3.5	Appropriate records are updated in accordance with instructions and established procedures.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying computation when using equipment/materials/concepts in an electrotechnology environment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.40 Electrotechnology Industry organisations and practises
- 2.8.1.2 Fundamental electrical principles
- 2.8.2.1 Direct current circuit principles
- 2.8.13 Parts and components selection
- 2.8.15.1 Applied mathematic concepts
- 2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to producing routine products for carrying out electrotechnology work activities in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications

- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will

contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Apply computation when using equipment/materials/concepts in an electrotechnology environment as described in 7) and including:
    - A Understanding work instruction.
    - B Obtaining and checking tools and equipment.
    - C Following work schedules.
    - D Applying computations accurately.
    - E Returning tools and surplus resources as required.

- F Updating work records.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in applying computation when using equipment/materials/concepts in an Electrotechnology environment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.3; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.3; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## **UEENEEE046A Identify effects of energy on machinery and materials in an electrotechnology environment**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers effects of energy on machinery and/or materials used in an Electrotechnology environment are identified and completed in an agreed time, to a quality standard and using appropriate technology mediums, where required. It encompasses working safely, applying knowledge of identifying the effects of energy on machinery and materials in an electrotechnology environment..</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to identify effects of energy on machinery and materials.

- 1.1 Instructions for identifying effects of energy on machinery or materials are communicated and confirmed to ensure clear understanding.
- 1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.
- 1.3 Tools, equipment and personnel protective equipment necessary for the work are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.
- 1.4 Appropriate personnel are consulted to ensure effects of energy on machinery or materials are identified and coordinated effectively with others involved.
- 1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures.
- 1.6 Schedule for identifying effects of energy on machinery or materials including practices for working safely are confirmed in accordance with instructions and requirements.

2 Identify effects of energy on machinery and materials.

- 2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents.
- 2.2 Schedule for identifying effects of energy on machinery or materials work is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.
- 2.3 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.
- 2.4 Ongoing checks of work quality are undertaken in accordance with instructions and requirements.

- |   |  |     |  |
|---|--|-----|--|
| 3 | Check results of the effects of energy on machinery and materials. | 3.1 | Final checks are made to ensure the effects of energy on machinery or materials as identified conforms with instructions and to requirements.                        |
|   |  | 3.2 | Appropriate personnel are notified of completion of the computations.  |
|   |  | 3.3 | Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures. |
|   |  | 3.4 | Work area is cleaned up and made safe and sustainable energy practices are followed.   |
