	2.18.2 Electrical safe working practices

**H – Electronic units**

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEH001A Carry out basic repairs to computer equipment by replacement of modules/sub-assemblies	2.1.8 Electronic cable and conductor terminations
	2.4.11 Personal computers, hardware structure
	2.18.1 Occupational health and safety principles
	2.18.9 Electronic safe working practices
UEENEEH002A Carry out basic repairs to electronic equipment by replacement of components	2.1.4 Basic cable and conductor terminations
	2.1.8 Electronic cable and conductor terminations
	2.9.1.1 Electronic component basics
	2.11.11.1 Electronic soldering equipment and techniques
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH003A Carry out basic repairs to business equipment	2.1.8 Electronic cable and conductor terminations
	2.2.1 Enterprise communication methods
	2.4.18 Business equipment software basics
	2.9.73 Operational concepts of business machines
	2.9.74.1 Electro-mechanics of business machines
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH004A Set up and test residential audio/video equipment	2.1.8 Electronic cable and conductor terminations
	2.9.15 Audio and video component functional controls
	2.9.42 Audio and video system set up
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH005A Verify compliance and functionality of custom electronic installations	2.9.72 Custom electronic installations, testing and verification methods
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH006A Assemble and set up fixed audio/video components and systems in buildings and premises	2.5.5 Technical standards, regulations and codes for extra-low voltage work
	2.9.16.1 Sound reproduction fundamentals
	2.9.17.1 Audio reproduction, electronic components
	2.9.18 Audio reproduction, speaker fundamentals

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.9.19 Audio/video recording and replay components repair basics
	2.9.43 Video systems installation
	2.9.81 Audio/video control equipment
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH007A Carry out repairs of predictable faults in general electronic apparatus	2.5.10 Technical manuals and catalogues
	2.9.83 General electronic apparatus repair basics
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH008A Assemble and erect reception antennae and signal distribution equipment	2.1.7.2 Coaxial cable installation and terminations
	2.10.14 TV antenna systems
	2.10.15 Antenna installation and servicing
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH009A Set up and test gaming/games equipment	2.2.1 Enterprise communication methods
	2.2.5 Enterprise customer relations protocols
	2.5.18 Regulatory requirements and codes of practice for the gaming equipment
	2.9.22 Gaming machine systems and equipment overview
	2.9.23.1 Gaming machine equipment adjustment and maintenance
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH010A Install commercial audio/video system components	2.1.7.4 Specialist audio/video cabling installation and termination
	2.5.5 Technical standards, regulations and codes for extra-low voltage work
	2.9.16.1 Sound reproduction fundamentals
	2.9.17.1 Audio reproduction, electronic components
	2.9.18 Audio reproduction, speaker fundamentals
	2.9.19 Audio/video recording and replay components repair basics
	2.9.46 Professional audio electronics
	2.9.47 Loud speakers and microphones

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.9.80 Video and display set up 2.9.81 Audio/video control equipment 2.18.1 Occupational Health and Safety principles 2.18.9 Electronic safe working practices
UEENEEH011A Solve problems in d.c. power supplies with single phase input	2.9.12 Electronic fault finding 2.9.63 Direct current power supplies 2.18.1 Occupational Health and Safety principles 2.18.9 Electronic safe working practices 2.11.7.2 Advanced electronic testing and measuring devices and techniques
UEENEEH012A Solve problems in digital components of electronic apparatus	2. 9.4.1 Digital electronics fundamentals 2.9.12 Electronic fault finding 2.11.7.1 Electronic testing and measuring devices and techniques 2.18.1 Occupational Health and Safety principles 2.18.9 Electronic safe working practices
UEENEEH013A Solve problems in amplifier sections of electronic apparatus	2.9.9.1 Advanced amplifiers 2.9.9.2 Amplifier applications 2.18.1 Occupational Health and Safety principles 2.18.9 Electronic safe working practices 2.11.7.2 Advanced electronic testing and measuring devices and techniques
UEENEEH014A Solve problems in frequency dependant circuits	2.9.1.4 Frequency dependent circuit principles 2.11.7.1 Electronic testing and measuring devices and techniques 2.18.1 Occupational Health and Safety principles 2.18.9 Electronic safe working practices
UEENEEH015A Solve problems in microprocessor based hardware and firmware	2.9.5.1 Microprocessor fundamentals 2.9.12 Electronic fault finding 2.11.7.1 Electronic testing and measuring devices and techniques 2.18.1 Occupational Health and Safety principles 2.18.9 Electronic safe working practices 2.11.7.2 Advanced electronic testing and measuring devices and techniques

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEH016A Find and repair faults in the microwave amplifier sections of electronic apparatus	2.9.9.3 Microwave amplifiers
	2.9.12 Electronic fault finding
	2.11.7.1 Electronic testing and measuring devices and techniques
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH017A Carry out repairs of predictable faults in audio and video replay/recording apparatus	2.5.10 Technical manuals and catalogues
	2.9.19 Audio/video recording and replay components repair basics
	2.9.27 Digital versatile disc (DVD) and compact disc (CD)
	2.9.48 Digital audio
	2.9.52 Digital versatile disk processors
	2.9.53 Compact disk players
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH018A Find and repair faults in electronic apparatus	2.9.70 Automatic data capture
	2.9.71 Biometric devices
	2.9.77 Electronic components and system, industrial applications
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH019A Carry out repairs of predictable faults in television receivers	2.5.10 Technical manuals and catalogues
	2.9.29 Television scanning and deflection
	2.9.30 Television chrominance and luminance
	2.9.57.1 Introduction to television
	2.9.57.2 Television receiver repair basics
	2.18.1 Occupational Health and Safety principles
UEENEEH020A Find and repair faults in gaming and games equipment	2.4.19 Gaming equipment communications
	2.9.23.2 Gaming machine fault finding
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH021A Find and repair faults in high volume office equipment	2.4.45 Copier/printer software functions and configuration
	2.9.74.2 Business machine transducers

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.9.75.1 High volume business machine functions and faults
	2.9.75.2 Colour photocopiers operating principles
	2.9.75.3 Facsimile machine operating principles
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH022A Find and repair faults in remote control apparatus	2.9.28 Hand held remote control units
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH023A Find and repair faults in microwave heating apparatus	2.9.76 Microwave heating
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH024A Carry out repairs to predicable faults in audio components	2.5.10 Technical manuals and catalogues
	2.9.15 Audio and video component functional controls
	2.9.17.1 Audio reproduction, electronic components
	2.9.17.2 Audio component repair basics
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH025A Provide solution to single phase electronic power control problems	2.9.7.1 Single phase power control
	2.18.1 Occupational Health and Safety principles
UEENEEH026A Provide solutions to polyphase electronic power control problems	2.9.7.2 Polyphase power control
	2.18.1 Occupational Health and Safety principles
UEENEEH027A Commission commercial radio frequency (RF) transmission and reception systems	2.10.9 Electronic communications, antennas and wave propagation
	2.10.11 Electronic communications, satellite
	2.10.19 Electronic communications, commissioning process
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH028A Install microwave and antennae and waveguides	2.10.18 Electronic communications, microwave antennas and wave guide fundamentals
	2.18.1 Occupational Health and Safety principles

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.18.9 Electronic safe working practices
UEENEEH029A Diagnose and rectify faults in navigation systems	2.10.26 Electronic communications, navigation systems
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
	2.18.9 Electronic safe working practices
UEENEEH030A Diagnose and rectify faults in satellite-based surveillance and observation systems	2.10.11 Electronic communications, satellite
	2.10.27 Electronic communications, surveillance and observation
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
	2.18.9 Electronic safe working practices
UEENEEH031A Diagnose and rectify faults in radar apparatus and systems	2.10.23 Electronic communications, secondary radar and related systems
	2.10.24 Electronic communications, radar and sonar displays devices
	2.10.25 Electronic communications, radar fundamentals
	2.11.7.2 Advanced electronic testing and measuring devices and techniques
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
	2.18.9 Electronic safe working practices
UEENEEH032A Diagnose and rectify faults in global positioning systems	2.10.28 Electronic communications, global positioning systems
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
	2.18.9 Electronic safe working practices
UEENEEH033A Diagnose and rectify faults in telecommunication apparatus and systems	2.4.1.2 Telephone system fundamentals
	2.4.1.3 Telephone network facilities
	2.4.2.1 Telecommunication earthing and protection
	2.4.6 PABX fundamentals
	2.4.7 PABX programming

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.4.8 Switches, hubs and routers 2.4.9 Decoders 2.18.1 Occupational Health and Safety principles 2.18.8.2 Occupational Health and Safety, enterprise responsibilities 2.18.9 Electronic safe working practices
UEENEEH034A Diagnose and rectify faults in medical equipment	2.12.22.1 Medical equipment principles 2.12.22.2 Medical equipment, anatomy and physiology and infection control 2.18.1 Occupational Health and Safety principles 2.18.9 Electronic safe working practices 2.18.10 Medical equipment safe working practices
UEENEEH035A Design custom electronic installations	2.5.5 Technical standards, regulations and codes for extra-low voltage work 2.5.11 Environmental and heritage awareness 2.9.16.2 Acoustics, spatial treatment and sound reproduction 2.9.40 Integrated audio systems 2.9.80 Video and display set up 2.9.81 Audio/video control equipment 2.18.1 Occupational Health and Safety principles
UEENEEH036A Design commercial audio/video installations	2.5.5 Technical standards, regulations and codes for extra-low voltage work 2.5.11 Environmental and heritage awareness 2.6.9.3 Venue lighting for audio/video/live presentations 2.9.16.2 Acoustics, spatial treatment and sound reproduction 2.18.1 Occupational Health and Safety principles
UEENEEH037A Program and commission commercial audio/video systems	2.9.50 Commercial audio/video systems commissioning process 2.18.1 Occupational Health and Safety principles 2.18.9 Electronic safe working practices
UEENEEH038A Find and repair faults in complex power supplies	2.9.11 Linear and switch mode power supplies 2.9.65 Regulated power supplies 2.9.66 Switching power supplies

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.11.7.1 Electronic testing and measuring devices and techniques
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH039A Solve problems in basic amplifier circuits	2.9.8 Amplifier Fundamentals
	2.9.12 Electronic fault finding
	2.11.7.1 Electronic testing and measuring devices and techniques
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH040A Diagnose and rectify faults in sonar apparatus and systems	2.10.20 Electronic communications, sonar Transducers and arrays
	2.10.21 Electronic communications, sonar system operating principles
	2.10.22 Electronic communications, sonar measurement and set up
	2.10.24 Electronic communications, radar and sonar displays devices
	2.11.7.2 Advanced electronic testing and measuring devices and techniques
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
	2.18.9 Electronic safe working practices
UEENEEH041A Manage and implement electronic projects	2.2.17 Project management
	2.2.29 Electronic systems industry sector customs and practices
	2.2.19 Customer/Client relations
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEH042A Solve problems in oscillator sections of electronic apparatus	2.9.67 Feedback filters and oscillators
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH043A Diagnose and rectify faults in digital subsystems of electronic controls	2.9.4.1 Digital electronics fundamentals
	2.9.12 Electronic fault finding
	2.11.7.1 Electronic testing and measuring devices and techniques

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH044A Diagnose and rectify faults in analogue circuits and components in electronic control systems	2.9.8 Amplifier fundamentals
	2.9.9.1 Advanced amplifiers
	2.9.9.2 Amplifier applications
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
	2.18.9 Electronic safe working practices
UEENEEH045A Develop solutions to analogue electronic problems	2.9.84 Advanced analogue electronics
	2.9.85 Advanced power amplifiers
	2.18.1 Occupational Health and Safety principles
UEENEEH046A Solve fundamental problems in electronic communications systems	2.10.1.1 Electronic communications, principles
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH047A Assess compliance of electronic apparatus	2.2.24 Technical examination and testing methods
	2.5.8 Technical standards, regulations and codes for electronic apparatus
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH048A Design and develop advance digital systems	2.9.4.4 Digital applications
	2.11.7.2 Advanced electronic testing and measuring devices and techniques
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH049A Develop solutions to audio electronics problems	2.11.7.2 Advanced electronic testing and measuring devices and techniques
	2.9.16.2 Acoustics, spatial treatment and sound reproduction
	2.9.17.1 Audio reproduction, electronic components
	2.9.86 Audio system advance diagnostic techniques
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH050A Assemble and set up	2.5.11 Environmental and heritage awareness

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
basic wired and wireless security systems	2.5.20 Technical standards, regulations and codes for security systems
	2.9.41.1 Security systems installation basics
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEH051A Install large wired and wireless security systems	2.9.59 Closed circuit televisions
	2.9.61 Advanced electronic security systems
	2.9.71.1 Biometric devices
	2.18.1 Occupational Health and Safety principles

	2.17.1.1 Refrigeration fundamentals
	2.17.1.2 Basic refrigeration system operating conditions
	2.17.2.2 Split air conditioning refrigerants
	2.18.1 Occupational Health and Safety principles
	2.18.3.1 Refrigeration and air conditioning safe working practices
UEENEEJ073A Service microwave ovens	2.6.27.2 Microwave ovens
	2.18.1 Occupational health and safety principles
	2.18.13 Appliance servicing safe working practices

## K – Renewable sustainable units

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEK001A Maintain safety and tidiness of remote area power supply (RAPS) systems	2.13.1 RAPS plant area cleaning
	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote area power supply safe working practices
UEENEEK002A Work safely in remote area power supply (RAPS) systems	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote area power supply safe working practices
UEENEEK003A Conduct periodic maintenance of remote area power supply (RAPS) battery banks	2.13.2 RAPS systems battery bank maintenance techniques
	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote area power supply safe working practices
UEENEEK004A Conduct periodic maintenance of remote area power supply (RAPS) generator sets	2.13.3 RAPS systems generator sets maintenance techniques
	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote area power supply safe working practices
UEENEEK005A Conduct periodic maintenance of remote area power supply (RAPS) photo voltaic arrays	2.13.4 RAPS systems photo voltaic array maintenance techniques
	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote Area Power Supply safe working practices
UEENEEK006A Conduct periodic maintenance of remote area power supply (RAPS) wind generators	2.13.5 RAPS systems wind generator maintenance techniques
	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote Area Power Supply safe working practices
UEENEEK007A Conduct checks in the demand side use of remote area power supplies	2.13.7 RAPS systems maintenance scheduling
	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote Area Power Supply safe working practices
UEENEEK008A Plan periodic maintenance schedules of remote area power supplies	2.13.1 RAPS plant area cleaning
	2.13.2 RAPS system battery bank maintenance techniques
	2.13.4 RAPS systems photo voltaic array maintenance techniques

	2.13.7 RAPS system maintenance scheduling
	2.13.8 Scheduled maintenance processors
	2.18.1 Occupational Health and Safety principles
	2.20.3 Introduction to renewable energy technologies
	2.20.5 Remote area essential services facilities
UEENEEK009A Attend to breakdowns in remote area power supplies	2.13.1 RAPS plant area cleaning
	2.13.2 RAPS system battery bank maintenance techniques
	2.13.4 RAPS systems photo voltaic array maintenance techniques
	2.18.1 Occupational Health and Safety principles
	2.20.3 Introduction to renewable energy technologies
	2.20.5 Remote area essential services facilities
UEENEEK010A Coordinate maintenance of renewable energy apparatus and systems	2.13.1 RAPS plant area cleaning
	2.13.2 RAPS system battery bank maintenance techniques
	2.13.4 RAPS systems photo voltaic array maintenance techniques
	2.18.1 Occupational Health and Safety principles
	2.20.3 Introduction to renewable energy technologies
	2.20.5 Remote area essential services facilities
UEENEEK011A Assemble and connect remote area power supplies (RAPS)	2.13.2 RAPS Systems battery bank maintenance techniques
	2.18.1 Occupational Health and Safety principles
	2.20.3 Introduction to renewable energy technologies
	2.20.5 Remote area essential services facilities
	2.20.6 Remote area essential services power plant
UEENEEK012A Provide basic sustainable energy solutions for energy reduction in domestic premises	2.8.1.2 Fundamental electrical principles
	2.8.2.1 Direct current circuit principles
	2.18.1 Occupational Health and Safety principles
	2.20.3 Introduction to renewable energy technologies
UEENEEK013A Apply sustainable energy practice in daily activities	2.18.1 Occupational Health and Safety principles
	2.20.3 Introduction to renewable energy technologies

	2.20.4 Greenhouse reduction strategies
UEENEEK014A Promote sustainable energy practice in the community	2.18.1 Occupational Health and Safety principles
	2.20.3 Introduction to renewable energy technologies
	2.20.4 Greenhouse reduction strategies
UEENEEK017A Maintain and repair facilities associated with remote area essential service operations	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote area power supply safe working practices
	2.20.5 Remote area essential services facilities
UEENEEK018A Maintain operation of remote area water facilities	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote area power supply safe working practices
	2.20.8 Remote area essential services water facilities
UEENEEK019A Maintain operation of remote area waste water facilities	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote area power supply safe working practices
	2.20.7 Remote area essential services waste water facilities
UEENEEK020A Maintain operation of remote area power plant	2.18.1 Occupational Health and Safety principles
	2.18.4 Remote area power supply safe working practices
	2.20.6 Remote area essential services power plant
UEENEEK021A Manage renewable energy projects	2.2.17 Project management
	2.2.19 Customer/Client relations
	2.2.32 Renewable energy industry sector customs and practices
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEK022A Plan renewable energy projects	2.2.16.1 Project planning
	2.2.18.2 Critical path and project analysis
	2.2.32 Renewable energy industry sector customs and practices
	2.18.8.8 Occupational Health and Safety, enterprise responsibilities
UEENEEK023A Carry out basic repairs to renewable energy apparatus by replacement of components	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.20.3 Introduction to renewable energy technologies
UEENEEK024A Assemble and set up	2.5.5 Technical standards, regulations and codes for

photovoltaic apparatus in domestic dwellings	extra-low voltage work
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEEK025A Solve basic problems in photovoltaic energy apparatus	2.20.13 Photovoltaic installations
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
UEENEEK026A Install and set up grid connected photovoltaic power systems	2.20.14 Photovoltaic power systems
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
UEENEEK027A Diagnose faults in renewable energy control systems	2.20.19 Grid connected inverters
	2.2.3 Fault finding techniques
	2.18.1 Occupational Health and Safety principles
UEENEEK028A Solve problems in stand-alone renewable energy systems	2.18.2 Electrical safe working practices
	2.20.15 Renewable energy system electronics
	2.20.9.1 Stand alone renewable energy system components
UEENEEK029A Design renewable energy heating systems	2.17.18.2 Thermodynamics
	2.18.1 Occupational Health and Safety principles
	2.20.18 Solar water heating systems
	2.20.20 Renewable energy heating
UEENEEK030A Solve problems in wind energy conversion systems	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.20.16.1 Fundamentals of wind energy conversion
UEENEEK031A Design wind energy conversion systems rated to 10 kW.	2.18.1 Occupational Health and Safety principles
	2.20.16.2 Wind energy conversion systems
UEENEEK032A Develop strategies to address sustainability issues	2.18.1 Occupational Health and Safety principles
	2.20.11 Sustainability and greenhouse reduction strategies
UEENEEK033A Design set up hybrid power systems	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.20.10 Hybrid Energy Systems
UEENEEK034A Reserved	Reserved
UEENEEK035A Design grid connected power supply systems	2.5.2.1 Technical standards, regulations and codes for general electrical installations
	2.5.12 Electricity distributors, supply requirements

	2.6.2.2 Electrical metering arrangements
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.20.19 Grid connected inverters
UEENEEK036A Reserved	Reserved
UEENEEK037A Install and set up micro-hydro systems	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.20.17.1 Micro-hydro systems installation and maintenance processes
UEENEEK038A Design micro-hydro systems	2.18.1 Occupational Health and Safety principles
	2.20.17.1 Micro-hydro systems installation and maintenance processes
	2.20.17.2 Micro-hydro systems
UEENEEK039A Design stand-alone renewable energy systems	2.18.1 Occupational Health and Safety principles
	2.20.9.2 Stand-alone renewable energy system design consideration
UEENEEK040A Develop engineering solution to renewable energy problems	2.17.18.1 Thermodynamics fundamentals
	2.18.1 Occupational Health and Safety principles
	2.20.21 Distributed generation
UEENEEK041A Develop strategies for effective energy reduction in buildings	2.16.13 Building management systems
	2.18.1 Occupational Health and Safety principles
	2.20.12 Energy efficient building design

**M – Hazardous areas units**

<b>Competency Standard Units (CSUs)</b>	<b>Essential Knowledge and Associated Skills Clause</b>
UEENEEM001A Report on the integrity of explosion-protected equipment in hazardous areas	2.18.6 Hazardous area safe working practices
	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion protected equipment
	2.19.23 Explosion-protection visual checks
UEENEEM002A Attend to breakdowns in hazardous areas	2.18.6 Hazardous area safe working practices
	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex 'd') explosion-protection technique
	2.19.4 Increased safety (Ex 'e') explosion-protection technique
	2.19.5 Non-sparking (Ex 'n') explosion-protection technique
	2.19.6 Intrinsic safety (Ex 'i') explosion-protection technique
	2.19.7 Pressurization (Ex 'p') explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
2.19.9 Common characteristics of explosion-protection techniques	
UEENEEM003A Use and maintain the integrity of portable gas detection devices	2.18.6 Hazardous area safe working practices
	2.19.1 Hazardous areas and explosion-protection principles
	2.19.24 Gas detection-portable devices
UEENEEM004A Install explosion-protected equipment and wiring systems	2.18.6 Hazardous area safe working practices
	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex 'd') explosion-protection technique
	2.19.4 Increased safety (Ex 'e') explosion-protection technique
	2.19.5 Non-sparking (Ex 'n') explosion-protection technique

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex‘p’) explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
	2.19.9 Common characteristics of explosion-protection techniques
	2.19.10 Hazardous areas installation and maintenance requirements
	2.19.11 Hazardous areas cable termination techniques
UEENEEM005A Install and maintain integrity of fixed gas detection equipment	2.18.6 Hazardous area safe working practices
	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex‘d’) explosion-protection technique
	2.19.4 Increased safety (Ex‘e’) explosion-protection technique
	2.19.5 Non-sparking (Ex‘n’) explosion-protection technique
	2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex‘p’) explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
	2.19.9 Common characteristics of explosion-protection techniques
	2.19.10 Hazardous areas installation and maintenance requirements
	2.19.11 Hazardous areas cable termination techniques
	2.19.25 Gas detection-fixed equipment
UEENEEM006A Maintain equipment in hazardous areas	2.18.6 Hazardous area safe working practices
	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex‘d’) explosion-protection technique

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.19.4 Increased safety (Ex 'e') explosion-protection technique 2.19.5 Non-sparking (Ex 'n') explosion-protection technique 2.19.6 Intrinsic safety (Ex 'i') explosion-protection technique 2.19.7 Pressurization (Ex 'p') explosion-protection technique 2.19.8 Explosion-protection techniques for dusts 2.19.9 Common characteristics of explosion-protection techniques 2.19.10 Hazardous areas installation and maintenance requirements 2.19.11 Hazardous areas cable termination techniques
UEENEEM007A Overhaul and repair explosion-protected equipment	2.19.1 Hazardous areas and explosion-protection principles 2.19.2 Explosion-protected equipment 2.19.3 Flameproof (Ex 'd') explosion-protection technique 2.19.4 Increased safety (Ex 'e') explosion-protection technique 2.19.5 Non-sparking (Ex 'n') explosion-protection technique 2.19.6 Intrinsic safety (Ex 'i') explosion-protection technique 2.19.7 Pressurization (Ex 'p') explosion-protection technique 2.19.8 Explosion-protection techniques for dusts 2.19.9 Common characteristics of explosion-protection techniques 2.19.13.1 Explosion-protected equipment overhaul and repair, general requirements 2.19.13.2 Overhaul and repair requirements specific to each explosion-protection technique
UEENEEM008A Assess explosion-protected equipment for compliance with Standards	2.19.1 Hazardous areas and explosion-protection principles 2.19.2 Explosion-protected equipment

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.19.3 Flameproof (Ex‘d’) explosion-protection technique
	2.19.4 Increased safety (Ex‘e’) explosion-protection technique
	2.19.5 Non-sparking (Ex‘n’) explosion-protection technique
	2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex‘p’) explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
	2.19.9 Common characteristics of explosion-protection techniques
	2.19.21 Explosion-protected equipment conformity assessment
	UEENEEM009A Test installations in hazardous areas
2.19.1 Hazardous areas and explosion-protection principles	
2.19.2 Explosion-protected equipment	
2.19.3 Flameproof (Ex‘d’) explosion-protection technique	
2.19.4 Increased safety (Ex‘e’) explosion-protection technique	
2.19.5 Non-sparking (Ex‘n’) explosion-protection technique	
2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique	
2.19.7 Pressurization (Ex‘p’) explosion-protection technique	
2.19.8 Explosion-protection techniques for dusts	
2.19.9 Common characteristics of explosion-protection techniques	
2.19.10 Hazardous areas installation and maintenance requirements	
2.19.11 Hazardous areas cable termination techniques	
2.19.22 Hazardous areas installation testing	
UEENEEM010A Conduct close	2.18.6 Hazardous areas safe working practices

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
inspection of existing hazardous areas installations	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex ‘d’) explosion-protection technique
	2.19.4 Increased safety (Ex ‘e’) explosion-protection technique
	2.19.5 Non-sparking (Ex ‘n’) explosion-protection technique
	2.19.6 Intrinsic safety (Ex ‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex ‘p’) explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
	2.19.9 Common characteristics of explosion-protection techniques
	2.19.10 Hazardous areas installation and maintenance requirements
	2.19.18 Hazardous areas close inspection requirements
UEENEEM011A Conduct detailed inspection of hazardous areas installations	2.18.6 Hazardous areas safe working practices
	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex ‘d’) explosion-protection technique
	2.19.4 Increased safety (Ex ‘e’) explosion-protection technique
	2.19.5 Non-sparking (Ex ‘n’) explosion-protection technique
	2.19.6 Intrinsic safety (Ex ‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex ‘p’) explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
	2.19.9 Common characteristics of explosion-protection techniques
	2.19.10 Hazardous areas installation and maintenance requirements

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.19.12 Hazardous areas detailed inspection techniques
	2.19.18 Hazardous areas close inspection requirements
UEENEEM012A Develop and manage maintenance programs for hazardous areas electrical equipment	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex‘d’) explosion-protection technique
	2.19.4 Increased safety (Ex‘e’) explosion-protection technique
	2.19.5 Non-sparking (Ex‘n’) explosion-protection technique
	2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex‘p’) explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
	2.19.9 Common characteristics of explosion-protection techniques
	2.19.10 Hazardous areas installation and maintenance requirements
	2.19.19 Hazardous areas management
UEENEEM013A Ensure the safety of hazardous areas	2.19.1 Hazardous areas and explosion-protection principles
	2.19.19 Hazardous areas management
UEENEEM014A Design and develop modifications to explosion-protected equipment	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex‘d’) explosion-protection technique
	2.19.4 Increased safety (Ex‘e’) explosion-protection technique
	2.19.5 Non-sparking (Ex‘n’) explosion-protection technique
	2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex‘p’) explosion-protection technique

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.19.8 Explosion-protection techniques for dusts 2.19.9 Common characteristics of explosion-protection techniques 2.19.13.1 Explosion-protected equipment overhaul and repair, general requirements 2.19.13.2 Overhaul and repair requirements specific to each explosion-protection technique 2.19.14.1 Explosion-protected equipment modification, general requirements 2.19.14.2 Modification requirements specific to each explosion-protection technique
UEENEEM015A Classify hazardous areas	2.19.1 Hazardous areas and explosion-protection principles 2.19.17 Hazardous areas classification techniques
UEENEEM016A Design electrical installations in hazardous areas	2.19.1 Hazardous areas and explosion-protection principles 2.19.2 Explosion-protected equipment 2.19.3 Flameproof (Ex ‘d’) explosion-protection technique 2.19.4 Increased safety (Ex ‘e’) explosion-protection technique 2.19.5 Non-sparking (Ex ‘n’) explosion-protection technique 2.19.6 Intrinsic safety (Ex ‘i’) explosion-protection technique 2.19.7 Pressurization (Ex ‘p’) explosion-protection technique 2.19.8 Explosion-protection techniques for dusts 2.19.9 Common characteristics of explosion-protection techniques 2.19.10 Hazardous areas installation and maintenance requirements 2.19.15 Hazardous areas installation planning 2.19.16 Common classified hazardous areas
UEENEEM017A Design explosion-protected electrical systems	2.19.1 Hazardous areas and explosion-protection principles 2.19.2 Explosion-protected equipment 2.19.3 Flameproof (Ex ‘d’) explosion-protection technique

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.19.4 Increased safety (Ex‘e’) explosion-protection technique
	2.19.5 Non-sparking (Ex‘n’) explosion-protection technique
	2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex‘p’) explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
	2.19.9 Common characteristics of explosion-protection techniques
	2.19.10 Hazardous areas installation and maintenance requirements
	2.19.15 Hazardous areas installation planning
	2.19.16 Common classified hazardous areas
	2.19.20 Explosion-protected electrical systems design
	2.19.25 Gas detection-fixed equipment
UEENEEM018A Design gas detection systems	2.19.1 Hazardous areas and explosion-protection principles
	2.19.2 Explosion-protected equipment
	2.19.3 Flameproof (Ex‘d’) explosion-protection technique
	2.19.4 Increased safety (Ex‘e’) explosion-protection technique
	2.19.5 Non-sparking (Ex‘n’) explosion-protection technique
	2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
	2.19.7 Pressurization (Ex‘p’) explosion-protection technique
	2.19.8 Explosion-protection techniques for dusts
	2.19.9 Common characteristics of explosion-protection techniques
	2.19.10 Hazardous areas installation and maintenance requirements
	2.19.15 Hazardous areas installation planning
2.19.16 Common classified hazardous areas	

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.19.20 Explosion-protected electrical systems design
	2.19.26 Evaluation and selection of gas detection equipment (portable and fixed)

## N – Rail signalling units

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEN001A Service mechanical signalling equipment and infrastructure	2.5.4 Technical standards, regulations and codes rail networks
	2.5.10 Technical manuals and catalogues
	2.5.11 Environmental and heritage awareness
	2.14.1 Basic rail operations
	2.14.2.2 Rail signalling principles, mechanical
	2.14.3 Rail signalling, mechanical equipment
	2.14.5 Rail signalling, point actuators devices
	2.14.11.2 Rail signalling, interlocking systems, Mechanical
	2.14.13 Rail signalling, electro-pneumatic equipment
	2.14.14 Rail signalling, drawings and diagrams
	2.14.15 Rail signalling, regulations and codes
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.18.5 Rail safe working practices
UEENEEN002A Assemble and wire internal electrical signalling equipment	2.5.4 Technical standards, regulations and codes rail networks
	2.5.10 Technical manuals and catalogues
	2.9.3.2 Inverters
	2.14.6 Rail signalling, electronic equipment
	2.14.7 Rail signalling, computer-based equipment
	2.14.9 Rail signalling, train detection
	2.14.10 Rail signalling, remote control systems
	2.14.11.1 Rail signalling, interlocking systems, Electrical
	2.14.12 Rail signalling, power supplies
	2.14.13 Rail signalling, electro-pneumatic equipment
	2.14.14 Rail signalling, drawings and diagrams
	2.14.15 Rail signalling, regulations and codes
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEN003A Install and maintain track circuit leads and bonds	2.18.5 Rail safe working practices
	2.5.4 Technical standards, regulations and codes rail networks
	2.5.10 Technical manuals and catalogues
	2.5.11 Environmental and heritage awareness
	2.14.1 Basic rail operations
	2.14.9 Rail signalling, train detection
	2.14.14 Rail signalling, drawings and diagrams
	2.14.15 Rail signalling, regulations and codes
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
UEENEEN004A Perform cable system tests	2.18.5 Rail safe working practices
	2.2.2 Enterprise work activities records
	2.4.16 Personal computers, engineering applications software basic
	2.5.4 Technical standards, regulations and codes rail networks
	2.5.10 Technical manuals and catalogues
	2.5.11 Environmental and heritage awareness
	2.11.8 Data and voice cabling testing devices
	2.14.1 Basic rail operations
	2.14.9 Rail signalling, train detection
	2.14.12 Rail signalling, power supplies
	2.14.14 Rail signalling, drawings and diagrams
	2.14.15 Rail signalling, regulations and codes
	2.18.1 Occupational Health and Safety principles
UEENEEN005A Install and maintain signalling power supplies	2.18.2 Electrical safe working practices
	2.18.5 Rail safe working practices
	2.2.2 Enterprise work activities records
	2.4.16 Personal computers, engineering applications software basic
	2.5.4 Technical standards, regulations and codes rail networks
	2.5.10 Technical manuals and catalogues
	2.9.3.3 Electronic switching

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.9.3.2 Inverters
	2.9.11 Linear and switch mode power supplies
	2.14.12 Rail signalling, power supplies
	2.14.14 Rail signalling, drawings and diagrams
	2.14.15 Rail signalling, regulations and codes
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.18.5 Rail safe working practices
UEENEEN006A Maintain remote control and non-vital interlocking control systems	2.2.2 Enterprise work activities records
	2.3.13 Using supervisory control and data acquisition systems
	2.4.11 Personal computers, hardware structure
	2.4.13 Computer peripherals
	2.4.16 Personal computers, engineering applications software basic
	2.5.4 Technical standards, regulations and codes rail networks
	2.5.10 Technical manuals and catalogues
	2.9.3.2 Inverters
	2.9.3.3 Electronic switching
	2.9.11 Linear and switch mode power supplies
	2.10.1.1 Electronic communications, principles
	2.14.6 Rail signalling, electronic equipment
	2.14.8 Rail signalling, computer applications
	2.14.10 Rail signalling, remote control systems
	2.14.12 Rail signalling, power supplies
	2.14.14 Rail signalling, drawings and diagrams
	2.14.15 Rail signalling, regulations and codes
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.18.5 Rail safe working practices
UEENEEN007A Maintain power signalling and protected level crossing equipment	2.2.2 Enterprise work activities records
	2.5.4 Technical standards, regulations and codes rail networks
	2.5.10 Technical manuals and catalogues

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.5.11 Environmental and heritage awareness 2.10.1.1 Electronic communications, principles 2.14.1 Basic rail operations 2.14.3 Rail signalling, mechanical equipment 2.14.4 Rail signalling, electrical equipment 2.14.5 Rail signalling, point actuators devices 2.14.9 Rail signalling, train detection 2.14.14 Rail signalling, drawings and diagrams 2.14.15 Rail signalling, regulations and codes 2.18.1 Occupational Health and Safety principles 2.18.2 Electrical safe working practices 2.18.5 Rail safe working practices

**P – Restricted and specialist electrical work units**

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEP001A Disconnect and reconnect fixed wired electrical equipment connected to a Low Voltage supply	2.1.5.1 Power cable and conductor terminations
	2.2.2 Enterprise work activities records
	2.5.1.2 Drawings and diagrams
	2.8.1.1 Basic electrical principles
	2.8.8 Electrotechnology science and materials
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.19.29 Disconnect/Reconnect
	2.19.39 Produce Status Reports using established procedures
UEENEEP002A Attach cords and plugs to electrical equipment for connection to a single phase 250 Volt supply	2.8.1.1 Basic electrical principles
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.19.30 Flexible cords and plugs to 250V
	2.19.36 Fault find to 250 V – General Appliances
	2.19.39 Produce Status Reports using established procedures
UEENEEP003A Attach cords and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.19.31 Flexible cords/cables to 1000 V
	2.19.39 Produce Status Reports using established procedures
UEENEEP004A Disconnect and reconnect explosion-protected electrical equipment connected to Low Voltage supply	2.18.1 Occupational Health and Safety principles
	2.18.6 Hazardous area safe working practices
	2.19.1 Hazardous area and explosion protection principles

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.19.2 Explosion-Protected equipment 2.19.11 Hazardous areas cable termination techniques 2.19.39 Produce Status Reports using established procedures
UEENEPP005A Disconnect and reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles	2.18.1 Occupational Health and Safety principles 2.18.2 Electrical safe working practices 2.19.32 Disconnect and reconnect HV electric propulsion components 2.19.39 Produce Status Reports using established procedures
UEENEPP006A Attach flexible cables and plugs to electrical equipment connected to a high voltage supply	2.18.1 Occupational Health and Safety principles 2.18.2 Electrical safe working practices 2.19.33 High voltage flexible cables and plugs exceeding 1000 V 2.19.39 Produce Status Reports using established procedures
UEENEPP007A Locate and rectify faults in electrical low voltage equipment following prescribed procedures – <i>General single phase motors, composite equipment, and/or control devices</i>	2.18.1 Occupational Health and Safety principles 2.18.13 Appliance servicing working practices 2.19.36 Fault find to 250 V – General Appliances 2.19.39 Produce Status Reports using established procedures
UEENEPP007A Locate and rectify faults in electrical low voltage equipment following prescribed procedures – <i>Multi phase motor endorsements, composite equipment, and/or control devices</i>	2.18.1 Occupational Health and Safety principles 2.18.2 Electrical safe working practices 2.19.34 Fault find to 250 V - Motors 2.19.37 Fault find to 1000 V - Motors 2.19.39 Produce Status Reports using established procedures
UEENEPP007A Locate and rectify	2.18.1 Occupational Health and Safety principles

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
faults in electrical low voltage equipment following prescribed procedures – <i>Water heater endorsements</i>	2.18.2 Electrical safe working practices
	2.19.35 Fault find to 250 V – Water heaters
	2.19.38 Fault find to 1000 V – Water heaters
	2.19.39 Produce Status Reports using established procedures
UEENEEP008A Conduct in-service safety testing of electrical cord assemblies and cord connected equipment	2.5.2.3 Technical standards, regulations and codes for testing and tagging portable and cord connected electrical apparatus
	2.6.1 Protection devices and applications
	2.8.1.1 Basic electrical principles
	2.11.5 Basic electrical testing and measuring devices and techniques
	2.11.15 Portable apparatus testing (PAT) devices
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
	2.19.39 Produce Status Reports using established procedures

## R – Research units

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEER001A Contribute to the planning of a research project	2.2.16.1 Project planning
	2.2.17 Project management
	2.2.25 Research concepts
	2.2.33 Working in a team
	2.2.34 Scientific writing and communication
	2.2.35 Data collection techniques
	2.2.36 Data analysis and presentation
	2.2.37 Product development and trials
	2.2.38 Intellectual property concepts
	2.2.39 Commercialisation concepts
	2.18.1 Occupational Health and Safety principles
UEENEER002A Contribute to the conduct of a research project	2.2.17 Project management
	2.2.25 Research concepts
	2.2.33 Working in a team
	2.2.34 Scientific writing and communication
	2.2.35 Data collection techniques
	2.2.36 Data analysis and presentation
	2.2.37 Product development and trials
	2.2.38 Intellectual property concepts
	2.18.1 Occupational Health and Safety principles
UEENEER003A Contribute to the development of a Product/Application/Service	2.2.17 Project management
	2.2.25 Research concepts
	2.2.33 Working in a team
	2.2.34 Scientific writing and communication

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.2.35 Data collection techniques
	2.2.36 Data analysis and presentation
	2.2.37 Product development and trials
	2.2.38 Intellectual property concepts
	2.18.1 Occupational Health and Safety principles
UEENEER004A Contribute to the trial of a Product/Application/Service	2.2.17 Project management
	2.2.25 Research concepts
	2.2.33 Working in a team
	2.2.34 Scientific writing and communication
	2.2.35 Data collection techniques
	2.2.36 Data analysis and presentation
	2.2.37 Product development and trials
	2.2.38 Intellectual property concepts
	2.18.1 Occupational Health and Safety principles
UEENEER005A Contribute to Intellectual Property Management	2.2.17 Project management
	2.2.33 Working in a team
	2.2.38 Intellectual property concepts
	2.18.1 Occupational Health and Safety principles
UEENEER006A Contribute to the commercialisation of products/applications/ services	2.2.33 Working in a team
	2.2.38 Intellectual property concepts
	2.2.39 Commercialisation concepts
	2.18.1 Occupational Health and Safety principles

## Map 2 – Essential Knowledge and Associated Skills to Unit Relationship

### 2.1 – Cables, conductors and terminations

Essential Knowledge and Associated Skills Clause	Competency Standard Units (CSUs)
2.1.1 Cable protection and support	E008A; E022A; F002A; F003A; G007A;
2.1.2 Cable types and applications	E008A; F002A; G007A;
2.1.3 Cables in buildings, structures and premises	E008A; F002A; G003A; G004A; G007A; I007;
2.1.4 Basic cable and conductor terminations	E008A; G011A; H002A; H070A; I001A; I007; I019A;
2.1.5.1 Power cable and conductor terminations	A013A; G003A; G004A; P001A;
2.1.5.2 Bus bar techniques	A012A;
2.1.6.1 Telecommunication cable and conductor terminations	F002A;
2.1.6.2 Telecommunication aerial cabling	F012A;
2.1.6.3 Telecommunication below ground cabling	F013A;
2.1.7.1 Performance (copper) data cable installation and terminations	D017A; F004A; F010A;
2.1.7.2 Coaxial cable installation and terminations	D017A; F010A; H008A;
2.1.7.3 Optical fibre cabling installation and terminations	D017A; F005A; F010A;
2.1.7.4 Specialist audio/video cabling installation and termination	H010A;
2.1.8 Electronic cable and conductor terminations	H001A; H002A; H003A; H004A; H070A; I007; I008;
2.1.9 Winding wire types and connections	G051A;
2.1.10 High voltage motor winding, conductors, connections methods and insulation	G055A; G056A;
2.1.11 Integrated cabling arrangements	E021A;

**2.2 – Common, commercial, processes and enterprise specific knowledge and skills**

<b>Essential Knowledge and Associated Skills Clause</b>	<b>Competency Standard Units (CSUs)</b>
2.2.1 Enterprise communication methods	C001A; C002A; C003A; C008A; C009A; C010A; C012A; E020A; E024A; E032A; E033A; E034A; E035A; E036A; E037A; E051A; G007A; G008A; G009A; G032A; H003A; H009A; J010A; J070A;
2.2.2 Enterprise work activities records	C001A;C002A; C003A; C008A; C009A; C010A; C012A; E020A; E024A; E032A; E033A; E034A; E035A; E036A; E037A; E051A; F008A; F010A; G007A; G008A; G009A; G022A; G032A; G062A; N004A; N005A; N006A; N007A; N008A; N009A; N010A; N011A; N012A; N013A; N014A; N015A; N016A; N017A; N018A; N019A; N020A; N027A; N028A; P001A;
2.2.3 Fault finding techniques	G008A; G009A; G015A; H065A; I014A; J012A; J070A; K027A;
2.2.4 Problem solving techniques	C010A; E014A; E051A; G062A; H065A;
2.2.5 Enterprise customer relations protocols	C003A; C009A; C010A; C012A; E015A; E020A; E051A; G022A; G062A; H009A;
2.2.6 Enterprise quality management system, basics	A004A; A006A; C010A; C012A; E014A; E016A;
2.2.7 Enterprise purchasing system	C002A; E016A;
2.2.8 Enterprise costing methods	C003A; C009A;
2.2.9 Enterprise stock control methods	C008A; E051A;
2.2.10 Job costing techniques	C003A; C009A; E016A;
2.2.11.1 Estimating techniques	C005A; C007A;
2.2.11.2 Specification development	C004A; E016A; E070A; E071A; E072A; E073A; E074A; E075A; E077A; J039A;
2.2.12 Tendering requirements	C006A;

<b>Essential Knowledge and Associated Skills Clause</b>	<b>Competency Standard Units (CSUs)</b>
2.2.13 User instruction techniques	C010A; E020A;
2.2.14 Contracts, format, responsibilities and obligations	C007A;
2.2.15 Risk management, application and techniques	E011A; E016A;
2.2.16.1 Project Planning	D048A; E013A; G070A; H060A; 1035A; 1037A; J069A; R001A;
2.2.16.2 Project development	None
2.2.17 Project management	D047A; E012A; G069A; H041; 1034A; 1036A; J040A; K021A; R001A; R002A; R003A; R004A; R005A;
2.2.18 Critical path and project analysis	D048A; E013A; E015A; E016A; G070A; H060A; 1035A; 1037A; J069A;
2.2.19 Customer/Client relations	D047A; E012A; E014A; E016A; E070A; E071A; E072A; E073A; E074A; E075A; E077A; G069A; H041A; 1034A; 1036A; J040A; K021A;
2.2.20 Computer use basics	C001A; C002A; C008A; D001A; E016A; E024A; E044A; E070A; E071A; E072A; E073A; E074A; E075A; E077A;
2.2.21 Engineering analysis, decision making and reporting	E024A;
2.2.22 Enterprise work/business coverage	C012A;
2.2.23 Enterprise regulatory requirements and non regulatory standards	G014A;
2.2.24 Technical examination and testing methods	H047;
2.2.25 Research Concepts	E016A; E024A; E070A; E071A; E072A; E073A; E074A; E075A; E077A; R001A; R002A; R003A; R004A;
2.2.26 Automated systems industry sector customs and practices	1036A; 1037A;
2.2.27 Computer industry sector customs and practices	D047A; D048A;
2.2.28 Electrical industry sector customs and practices	G069A; G070A;
2.2.29 Electronic systems industry sector customs and practices	H041; H060A;

<b>Essential Knowledge and Associated Skills Clause</b>	<b>Competency Standard Units (CSUs)</b>
2.2.30 Control systems industry sector customs and practices	1034A; 1035A;
2.2.31 Refrigeration and air conditioning industry sector customs and practices	J040A; J069A;
2.2.32 Renewable energy industry sector customs and practices	K021A; K022A;
2.2.33 Working in a Team	E024A; R001A; R002A; R003A; R004A; R005A; R006A;
2.2.34 Scientific Writing and Communication	R001A; R002A; R003A;R004A;
2.2.35 Data Collection Techniques	E024A; R001A; R002A; R003A; R004A;
2.2.36 Data Analysis and Presentation	E024A; R001A; R002A; R003A; R004A;
2.2.37 Product Development and Trials	R001A; R002A; R003A; R004A;
2.2.38 Intellectual Property Concepts	R001A; R002A; R003A; R004A; R005A; R006A;
2.2.39 Commercialisation Concepts	R001A; R006A;
2.2.40 Electrotechnology Industry organisations and practices	E040A; E041A; E042A; E043A; E044A; E045A; E047A; E048A; E049A;
2.2.41 Supervision fundamentals	E014A;
2.2.42 Business Concepts	None
2.2.43 Commissioning processes and procedures	G062A;
2.2.44 Requirements and methods for maintaining currency in industry developments	E006A;
2.2.45 Responsibilities under a competency development plan	C013A;C014A; C015A; C016A; C017A; C018A; C019A; C020A; C021A; C022A; C023A; C024A; C025A; C026A; C027AA; C028A; C029A; E038A;
2.2.46 Methods of monitoring and reporting competency development activities	C013A;C014A; C015A; C016A; C017A; C018A; C019A; C020A; C021A; C022A; C023A; C024A; C025A; C026A; C027AA; C028A; C029A; E038A;
2.2.49 Procedure and protocols for giving evidence in a court of law	G072A;

## 2.3 – Control technologies

Essential Knowledge and Associated Skills	Competency Standard Units
2.3.1 Electrical control devices	A013A; G007A; G008A; G009A; G028A;
2.3.2 Control circuit fundamentals	A013A; G008A; G009A; G052A;
2.3.3 Process control principles	D052A; I006A; I014A;
2.3.4 Pneumatic/hydraulic control tubing/piping	I001A; I007; I008; I019A;
2.3.5 Refrigeration system controls	J012A; J070A;
2.3.6 Air conditioning system controls	J012A; J070A;
2.3.7 Smart device basics	D005A;
2.3.8 Programmable controller basics	D007A;
2.3.9 PLC programming basics	D007A;
2.3.10.1 PLC programming	D007A;
2.3.10.2 PLC high level programming	D009A;
2.3.10.3 PLC system applications	D026A;
2.3.11 Control system network basics	D025A; D034A;
2.3.12 Control network infrastructure	D026A; D034A;
2.3.13 Using supervisory control and data acquisition systems	N006A; N008A; N009A; N010A; N011A; N012A; N014A; N016A; N017A;
2.3.14 Supervisory control and data acquisition systems programming	D008A;
2.3.15 Appliances, electronic controls and communications basics	J054A;
2.3.16 Integrated systems basics	D031A;
2.3.17 Integrated systems, subsystem interworking	D032A;
2.3.18 Complex integrated system programming	D033A;
2.3.19 Control programming fundamentals	D026A; D027A;
2.3.20 Microcontroller programming basics	D028A; D050A;
2.3.21 Complex control systems	I023A;

## 2.4 – Communications and computer technologies

Essential Knowledge and Associated Skills	Competency Standard Units
2.4.1.1 Telecommunications CPR regulations and installations	F001A;
2.4.1.2 Telephone system fundamentals	F002A; F008A; F010A; H033A;
2.4.1.3 Telephone network facilities	H033A;
2.4.1.4 Lift telecommunications cabling regulations and installation	F003A;
2.4.2.1 Telecommunication earthing and protection	F002A; F010A; H033A;
2.4.3.1 Data communication fundamentals	F014A;
2.4.3.2 Networking fundamentals	D012A; D017A; F008A; F009A; F010A; F011A; H083A;
2.4.4 Wireless networks infrastructure	H083A;
2.4.5 Wide area networks infrastructure	None
2.4.6 PABX fundamentals	F010A; H033A;
2.4.7 PABX programming	H033A;
2.4.8 Switches, hubs and routers	F010A; H033A;
2.4.9 Decoders	F010A; H033A;
2.4.10 (Reserved)	Reserved
2.4.11 Personal computers, hardware structure	D002A; E044A; H001A; N006A; N010A; N014A; N016A; N017A; N019A; N027A; N028A;
2.4.12.1 Computer hardware sub-assemblies	D002A;
2.4.12.2 Multimedia computer components	D030A;
2.4.13 Computer peripherals	D012A; N006A; N010A; N013A; N014A; N016A; N017A; N018A; N019A; N027A; N028A;
2.4.14 Personal computer operating systems, basics	D002A; D043A;
2.4.15 Computer operating systems	D012A; D013A; D043A;
2.4.16 Personal computers, engineering applications software basic	D004A; N004A; N005A; N006A; N009A; N010A; N012A; N015A; N016A; N017A; N018A; N019A; N020A; N027A; N028A;

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.4.17 Servers	None
2.4.18 Business equipment software basics	H003A;
2.4.19 Gaming equipment communications	H020A;
2.4.20 Programming elements	D010A;
2.4.21 Client Side programming	D010A; D029A;
2.4.22 Server scripting	D010A; D029A;
2.4.23 Database access	D010A;
2.4.24 Web applications and services	D010A;
2.4.25.1 Local area network fundamentals	D046A;
2.4.25.2 Network services design processes	D014A;
2.4.26 Network services management processes	D014A;
2.4.27.1 Unix fundamentals	D013A; D015A;
2.4.27.2 Linux fundamentals	D013A;
2.4.27.3 Mac OSX fundamentals	D013A;
2.4.28 Network operating systems essentials	D015A;
2.4.29 Network operating systems implementation	D015A;
2.4.30 Network infrastructure	D016A; D025A;
2.4.31 Directory Services	D016A;
2.4.32 Operating systems and networks fundamentals	D024A;
2.4.33 Operating systems and networks	D024A;
2.4.34 Routing methods and protocols	D019A;
2.4.35 Networks, remote access	D020A;
2.4.36 Multi-layer switched networks	D021A;
2.4.37 Fundamentals of network security	D022A;
2.4.38 Fundamentals of wireless security	D023A; H083A;
2.4.39 Internet, network basics	D017A;
2.4.40 Internet, network routing	D017A;
2.4.41 Internet, local area networking	D018A;
2.4.42 Internet, wide area networking	D018A;
2.4.43.1 Object orientated programming basics	D003A;
2.4.43.2 Object orientated programming	D011A;
2.4.44.1 Microprocessor/microcontroller assembler language programming	D050A;

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.4.44.2 High level programming	D050A; D051A;
2.4.44.3 Advanced high-level programming	D051A;
2.4.45 Copier/printer software functions and configuration	H021A;
2.4.46 Security systems basic software functions and configuration	H052A;
2.4.47 Security systems programming methods	H053A;
2.4.48 Security systems alarms programming	H054A;
2.4.49.1 Security systems access control programming	H055A;
2.4.49.2 Security systems closed circuit television programming	H056A;
2.4.50.1 Integrated security systems	H058A;
2.4.50.2 Internetworking security systems	H059A;
2.4.51 Fire protection systems programming methods	H063A;

## 2.5 – Drawings, diagrams, schedules, manuals, standards and regulations

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.5.1.1 Drawings interpretation and sketching	E042A; E043A;E044A; E047A; E049A;
2.5.1.2 Drawings and diagrams	E007A; G007A; P001A;
2.5.2.1 Technical standards, regulations and codes for general electrical installations	E021A; G003A; G004A; G007A; G008A; G014A; G071A; K035A;
2.5.2.2 Technical standards, regulations and codes for special electrical installations	G007A; G014A; G020A; G021A; G024A;
2.5.2.3 Technical standards, regulations and codes for testing and tagging portable and cord connected electrical apparatus	P008A;
2.5.3 Technical standards, regulations and codes for lifts and escalators	G016A;
2.5.4 Technical standards, regulations and codes rail networks	N001A; N002A; N003A; N004A; N005A; N006A; N007A; N008A; N009A; N010A; N011A; N012A; N013A; N014A; N015A; N016A; N017A; N018A; N019A; N020A; N025A; N026A; N027A; N028A;
2.5.5 Technical standards, regulations and codes for extra-low voltage work	E008A; H006A; H010A; H035A; H036A; K024A;
2.5.6 Technical standards, regulations and codes for refrigeration and air conditioning	J006A; J007A; J008A; J010A; J032A; J033A; J034A; J035A; J038A
2.5.7 Technical standards, regulations and codes for telecommunications cabling	D017A; E021A; F002A;
2.5.8 Technical standards, regulations and codes for electronic apparatus	H047;
2.5.9 Building codes for applicable to general electrotechnology installations	E021A;
2.5.10 Technical manuals and catalogues	G007A; G008A; H007A; H017A; H019A; H024A; I006A; I013A; N001A; N002A; N003A; N004A; N005A; N006A; N007A; N008A; N009A; N010A; N011A; N012A; N013A; N014A; N015A; N016A; N017A; N018A; N019A; N020A; N026A;

	N027A; N028A;
2.5.11 Environmental and heritage awareness	E008A; F002A; F003A; G003A; G004A; G007A; H035A; H036A; H050A; N001A; N003A; N004A; N007A; N008A; N011A; N013A; N015A; N018A; N019A; N025A; N026A;
2.5.12 Electricity distributors, supply requirements	G014A; G022A; G027A; G071A; K035A;
2.5.13 Electricity regulatory safety requirements	G014A; G022A;
2.5.14 Technical standards, regulations and codes applicable to instrumentation and control	I001A; I006A; I007; I008; I013A; I019A;
2.5.15 Measurement standards applicable to process instrumentation	I013A;
2.5.16 Measurement standards applicable to scientific instruments	I017A;
2.5.17 Regulatory requirements for the generation, transmission and distribution of electricity	None
2.5.18 Regulatory requirements and codes of practice for the gaming equipment	H009A;
2.5.19 Technical standards, regulations and codes for mining	G018A;
2.5.20 Technical standards, regulations and codes for security systems	H050A;
2.5.21 Technical standards, regulations and codes for fire protection and warning systems	H061A; H062A;
2.5.22 Performance standards and regulatory requirements for the electrical rotating machine	G060A;
2.5.23 Performance standards and regulatory requirements for electrical equipment	G031A;

## 2.6 – Electrical applications and apparatus

Essential Knowledge and Associated Skills	Competency Standard Units
2.6.1 Protection devices and applications	G007A; G028A; J053A; P008A;
2.6.2.1 Switchboards/distribution boards	G007A; G028A;
2.6.2.2 Electrical metering arrangements	G025A; G028A; G071A; K035A;
2.6.2.3 Interval metering concepts and applications	G071A;
2.6.3 Single phase alternators	G026A;
2.6.4 Three phase alternators	G026A;
2.6.5 Single phase motors	None
2.6.6.1 Three phase motors	None
2.6.6.2 Alternating Current Rotating Machines	A010A; G003A; G008A; G052A;
2.6.7 Single phase transformers	None
2.6.8.1 Three phase transformers	None
2.6.8.2 Single and Three-Phase Transformers	A013A; G003A; G008A; G053A;
2.6.8.3 Power transformers diagnostics	G040A;
2.6.9.1 Lighting fundamentals	G008A;
2.6.9.2 Luminaires and lighting systems	G003A; G008A;
2.6.9.3 Venue lighting for audio/video/live presentations	H036A;
2.6.10 Electric Heating	G008A;
2.6.11 Direct current motor fundamentals	None
2.6.12 Direct current machines	G010A;
2.6.13 Motor starters and overload protection basics	None
2.6.14 Direct-on-line (DOL) motor starters	None
2.6.15 Reduced voltage a.c. motor starters	None
2.6.16 Direct current motor control	G010A;
2.6.17 Cells and batteries	G013A; G019A;
2.6.18 RAPS systems basics	Covered by 2.13 and 2.20 Clauses
2.6.19 RAPS systems demand side management	
2.6.20 Electrical mining systems overview	G018A;
2.6.21 Electricity supply and reticulation	G015A;
2.6.22.1 Electrical power system protection	G015A;

2.6.22.2 Electrical power system operations	G037A;
2.6.22.3 Electrical power system transmission faults	G042A;
2.6.22.4 Distributive generation systems	G039A;
2.6.22.5 Electrical power system protection diagnostic	G046A;
2.6.22.6 Electrical power distribution systems diagnostic	G038A;
2.6.23 Marine Electrical Systems overview	G019A;
2.6.24.1 Switchgear/controlgear	A010A; G028A; G029A;
2.6.24.2 Control panel wiring	A013A; G028A;
2.6.25 Hand power tools repairs	J051A;
2.6.26 Appliance motors and circuits	J053A;
2.6.27.1 Electric heating appliances	J057A;
2.6.27.2 Microwave ovens	J073A;
2.6.28 Motor windings	G053A; G054A; G061A;
2.6.29 Coil winding basics	G050A;
2.6.30 Coil testing	G050A;
2.6.31.1 Electrical machine winding basic	G051A; G052A;
2.6.31.2 Low voltage three phase motor winding techniques	G053A;
2.6.31.3 Direct current motor winding techniques	G054A;
2.6.31.4 High voltage three phase motor winding techniques	G055A; G056A;
2.6.31.5 Electrical machines, mechanical components	G059A; G064A;
2.6.31.6 Electrical machines, performance monitoring	G060A;
2.6.32 Field power and distribution systems	G026A;
2.6.33 Variable speed drives for a.c. motors	G035A;
2.6.34 Variable speed drives for d.c. motors	G036A;
2.6.35 Servomechanism systems	G041A;
2.6.36 Synchronous machine diagnostics	G043A;
2.6.37 Induction motors diagnostics	G045A;
2.6.38 Direct current machines diagnostics	G044A;
2.6.39 Lubrication of lift components	G065A; G066A;
2.6.40 Lift systems, roping	G065A;
2.6.41 Lift systems, rope inspection	G065A;
2.6.42 Escalators, moving walk and tread way mechanics	G066A;
2.6.43 Lift systems, plumbing and setting out	G067A;
2.6.44 Lift equipment alignment techniques	G067A;
2.6.45 Lift components – electrical/electronics.	G068A;

2.6.46 Lift systems – basic operations	G016A;
2.6.47 Lift components – electro-mechanical	G016A;
2.6.48 Electric lifts – mechanics	G016A;
2.6.49 Electro - hydraulic lifts	G016A;
2.6.50 Electro-hydraulic lifts – mechanical operation	G016A;
2.6.51 Emergency release procedures – trapped passengers	G016A;

## 2.7 – Electrical installations and systems

Essential Knowledge and Associated Skills	Competency Standard Units
2.7.1.1 Electrotechnology, building systems and materials	E047A;
2.7.1.2 Electrical installations, wiring and accessories	G003A; G004A; G007A; G008A;
2.7.1.3 Electrical Wiring Systems	G003A; G004A; G007A;
2.7.2 Electrical installations, equipment requirements	G003A; G004A; G007A; G017A;
2.7.3 Electrical installations, safety principles and requirements	G007A; G025A;
2.7.4.1 Electrical Installations, Protection Methods and Devices	A013A; G007A; G008A; G029A; G057A;
2.7.4.2 Electrical installations, circuit arrangements and cable selection	E021A; G007A; G008A; G025A;
2.7.4.3 Electrical installations, advanced methods of cable and protection selection	G027A;
2.7.5.1 Electrical installations, testing and verification	G005A; G027A;
2.7.5.2 Electrical installations, testing and verification of special installations	G021A; G027A;
2.7.5.3 Fire protection installations, testing and verification methods	H062A;
2.7.6 Electrical installations, emergency systems	G013A;
2.7.7 Electrical installations, special installation requirements	None
2.7.8 Electrical installations, hazardous areas	Covered by 2.19 Clauses
2.7.9.1 Electrical installations, single phase inspections	G022A;
2.7.9.2 Electrical installations, inspections and safety compliance audits	G023A;
2.7.10 Electrical installations, determination of demand	G027A;
2.7.11 Electrical installations, overcurrent protection	G027A;
2.7.12 Electrical installations, overvoltage and undervoltage protection	G027A;
2.7.13 Electrical installations, programmable logic controller requirements	D007A;
2.7.14 Procedures and processes for responding to reported electrical incidents	G072A;
2.7.15 Causes and consequence of unsafe and misuse of electrical installations and equipment	G072A;

## 2.8 – Electrical principles

Essential Knowledge and Associated Skills	Competency Standard Units
2.8.1.1 Basic electrical principles	P001A; P002A; P008A;
2.8.1.2 Fundamental electrical principles	E003A; E040A; E041A; E042A; E043A; E044A; E045A; E047A; E048A; E049A; K012A;
2.8.1.3 Electrotechnical principles	E029A;
2.8.2.1 Direct current circuit principles	E004A; E040A; E042A; E043A; E044A; E045A; E047A; E048A; E049A; K012A;
2.8.2.2 Alternating current principles - power	E019A; G002A; G012A; G030A;
2.8.3 Power factor	None
2.8.4 Three phase circuits	None
2.8.5 Magnetism	None
2.8.6 Electromagnetic principles	E019A; G001A; G008A; G012A;
2.8.7 Harmonic fundamentals	None
2.8.8 Electrotechnology science and materials	E047A; E049A; G012A; G030A; P001A;
2.8.9.1 Circuit analysis	E025A;
2.8.9.2 Electrical power circuit analysis	G048A;
2.8.9.3 Polyphase power circuit analysis	G049A;
2.8.10.1 Engineering maths fundamentals	E026A;
2.8.10.2 Engineering maths	E026A; G061A;
2.8.10.3 Advanced engineering maths	E027A;
2.8.10.4 Engineering Mathematics with Calculus	H084A;
2.8.11 Power engineering computations	G047A;
2.8.12 Electrical concepts and applications	None
2.8.13 Parts and component selection	E040A; E041A; E042A; E043A; E044A; E045A; E047A; E049A;
2.8.14.1 Electrotechnology calculations	None
2.8.14.2 Electrotechnology science	None
2.8.14.3 Electrotechnology Numeracy Diagnostic Assessment Methods	E030A;
2.8.14.4 Electrotechnology Literacy Diagnostic Assessment Methods	E030A;
2.8.15.1 Applied mathematical concepts	E045A; E050A;

2.8.15.2 Applied physics concepts	E046A;
2.8.15.3 Fault current calculations	G030A;

## 2.9 – Electronic principles and applications

Essential Knowledge and Associated Skills	Competency Standard Units
2.9.1.1 Electronic component basics	A002A; H002A; H070A;
2.9.1.2 Electronic component parameters and selection methods	H081A;
2.9.1.3 Single phase rectifiers	None
2.9.1.4 Frequency dependant circuit principles	H014A;
2.9.1.5 Basic electronic principles	E023A;
2.9.1.6 Basic digital principles	E023A;
2.9.2 Multiphase rectifiers	None
2.9.3.1 Voltage regulators	None
2.9.3.2 Inverters	N002A; N005A; N006A; N010A; N013A; N014A; N016A; N018A; N019A; N020A; N027A; N028A;
2.9.3.3 Electronic switching	N005A; N006A; N010A; N013A; N014A; N016A; N018A; N019A; N020A; N027A; N028A;
2.9.4.1 Digital electronic fundamentals	None
2.9.4.2 Digital signal processing	D052A; H084A;
2.9.4.3 Digital signal processing development	D052A; H084A;
2.9.4.4 Digital applications	H048;
2.9.5.1 Microprocessor fundamentals	D028A; H015A;
2.9.5.2 Microcontroller fundamentals	D028A; H066A;
2.9.6 Operational amplifiers	None
2.9.7.1 Single phase power control	H025A;
2.9.7.2 Polyphase power control	H026A;
2.9.8 Amplifier Fundamentals	H039A; H044A;
2.9.9.1 Advanced amplifiers	H013A; H044A;
2.9.9.2 Amplifier applications	H013A; H044; H072A;
2.9.9.3 Microwave amplifiers	H016A;
2.9.10 Reserved	Reserved
2.9.11 Linear and switch mode power supplies	H038; N005A; N006A; N010A; N013A; N014A; N016A; N018A; N019A; N020A; N027A; N028A;

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.9.12 Electronic fault finding	H011A; H012A; H015A; H016A; H039; H043; H066A;
2.9.13 Measurement circuits and applications	I021A;
2.9.14 Fundamentals of calibration	I017A;
2.9.15 Audio and video component functional controls	H004A; H024A;
2.9.16.1 Sound reproduction fundamentals	H006A; H010A; H073A;
2.9.16.2 Acoustics, spatial treatment and sound reproduction	H035A; H036A; H049A;
2.9.17.1 Audio reproduction, electronic components	H006A; H010A; H024A; H049A; H073A;
2.9.17.2 Audio component repair basics	H024A;
2.9.18 Audio reproduction, speaker fundamentals	H006A; H010A;
2.9.19 Audio/video recording and replay components repair basics	H006A; H010A; H017A;
2.9.20 Business equipment operational functions	Covered by 2.9.72/73
2.9.21 Business equipment components	
2.9.22 Gaming machine systems and equipment overview	H009A;
2.9.23.1 Gaming machine equipment adjustment and maintenance	H009A;
2.9.23.2 Gaming machine fault finding	H020A;
2.9.24 Cathode ray tube displays	H076A;
2.9.25 Plasma displays	H076A;
2.9.26.1 Liquid crystal displays	H076A;
2.9.26.2 Display circuit diagnostics	H076A;
2.9.27 Digital versatile disc (DVD) and compact disc (CD)	H017A;
2.9.28 Hand held remote control units	H022A;
2.9.29 Television scanning and deflection	H019A; H071A;
2.9.30 Television chrominance and luminance	H019A; H071A;
2.9.31.1 Television and video reception	None
2.9.31.2 Power supplies for TVs and VCRs	H071A;
2.9.31.3 Television RF Stages	H071A;
2.9.32.1 Camcorders and digital cameras	H078A;
2.9.32.2 Camera circuits diagnostics	H078A;
2.9.33 Video cassette recorder	None
2.9.34.1 Digital Television Receivers	H079A;

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.9.34.2 Digital television principles	H079A;
2.9.34.3 Advanced digital television principles	H080A;
2.9.35 Micro computer systems	None
2.9.36 Fire detection and warning system and apparatus fundamentals	H061A; H062A;
2.9.37 Fire alarm routine testing	H062A;
2.9.38 Tape recorders	None
2.9.39 AM and FM tuners	H072A;
2.9.40 Integrated audio systems	H035A;
2.9.41.1 Security systems installation basics	H050A;
2.9.41.2 Security systems installation faults	H075A;
2.9.42 Audio and video system set up	H004A;
2.9.43 Video systems installation	H006A;
2.9.44 Consumer video equipment	None
2.9.45.1 Audio electronics	H073A;
2.9.45.2 Recording and replay apparatus diagnostics	H077A;
2.9.46 Professional audio electronics	H010A;
2.9.47 Loud speakers and microphones	H010A;
2.9.48 Digital audio	H017A;
2.9.49 Computer monitors	None
2.9.50 Commercial audio/video systems commissioning process	H037A;
2.9.51 Camcorders	H074A;
2.9.52 Digital versatile disk processors	H017A; H074A;
2.9.53 Compact disk players	H017A; H074A;
2.9.54 VCR basic principles	H074A;
2.9.55 VCR fault finding	H074A;
2.9.56 VCR advanced principles	H074A;
2.9.57.1 Introduction to television	H019A;
2.9.57.2 Television receiver repair basics	H019A;
2.9.58 TV RF signal stages	None
2.9.59 Closed circuit televisions	H051A;
2.9.60 Electronic security systems fundamentals	Covered in 2.9.41.1
2.9.61 Advanced electronic security systems	H051A;

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.9.62 Security video monitoring and recording	None
2.9.63 Direct current power supplies	H011A;
2.9.64 Application of electronic devices	None
2.9.65 Regulated power supplies	None
2.9.66 Switching power supplies	None
2.9.67 Feedback filters and oscillators	H042A;
2.9.68 Filters and resonance	None
2.9.69 Digital subsystems	None
2.9.70 Automatic data capture	H018A;
2.9.71.1 Biometric devices	D053A; H051A;
2.9.71.2 Biometrics Equipment Techniques and Applications	D054A; D055A;
2.9.71.3 Biometric Systems Techniques and Applications	D054A; D055A;
2.9.71.4 Biometrics and Security	D055A;
2.9.72 Custom electronic installations, testing and verification methods	H005A;
2.9.73 Operational concepts of business machines	H003A;
2.9.74.1 Electro-mechanics of business machines	H003A;
2.9.74.2 Business machine transducers	H021A;
2.9.74.3 Photocopiers operating principles	None
2.9.75.1 High volume business machine functions and faults	H021A;
2.9.75.2 Colour photocopiers operating principles	H021A;
2.9.75.3 Facsimile machine operating principles	H021A;
2.9.76 Microwave heating	H023A;
2.9.77 Electronic components and system, industrial applications	G008A; H018A;
2.9.78 Common security scenarios and solutions	H057A;
2.9.79.1 Fire protection technologies	H061A; H062A;
2.9.79.2 Fire protection systems, commissioning process	H064A;
2.9.79.3 Fire protection systems faults	H065A;
2.9.80 Video and display set up	H010A; H035A;
2.9.81 Audio/video control equipment	H006A; H010A; H035A;
2.9.82 Introduction to optics	None
2.9.83 General electronic apparatus repair basics	H007A;
2.9.84 Advanced analogue electronics	H045A;

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.9.85 Advanced power amplifiers	H045A;
2.9.86 Audio system advance diagnostic techniques	H049A;
2.9.87 Photonic principles and applications	E028A;
2.9.88 Principles of Signal Conditioning	H085A;
2.9.89 Analogue Integrated Circuits	H085A;
2.9.90 RF Amplifiers	H082A;
2.9.91 Printed circuit board design techniques	H081A;

**2.10 – Electronic communications technology**

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.10.1.1 Electronic communications, principles	H046A; N006A; N007A; N010A; N014A; N016A; N017A; N018A; N019A; N027A; N028A;
2.10.1.2 Electronic signals and systems	D051A;
2.10.1.3 Electronic communications, technologies	None
2.10.2 Electronic communications, transmission principles	None
2.10.3 Electronic communications, modulation	None
2.10.4 Electronic communications, modulation circuits	H072A;
2.10.5 Electronic communications, receivers	H072A;
2.10.6 Electronic communications, transmitters	H072A;
2.10.7 Electronic communications, digital techniques	H083A;
2.10.8 Electronic communications, transmission lines	None
2.10.9 Electronic communications, antennas and wave propagation	H027A;
2.10.10 Electronic communications, microwave	None
2.10.11 Electronic communications, satellite	H027A; H030A;
2.10.12 Electronic communications, optical methods	None
2.10.13 Television and video reception	None
2.10.14 TV antenna systems	H008A;
2.10.15 Antenna installation and servicing	H008A;
2.10.16 Transmission lines and antennae	None
2.10.17 Electronic communications, multiplexing and de multiplexing	None
2.10.18 Electronic communications, microwave antennas and wave guide fundamentals	H028A;
2.10.19 Electronic communications, commissioning process	H027A;
2.10.20 Electronic communications, sonar Transducers and arrays	H040A;
2.10.21 Electronic communications, sonar system operating principles	H040A;
2.10.22 Electronic communications, sonar measurement and set up	H040A;
2.10.23 Electronic communications, secondary radar and related systems	H031A;

2.10.24 Electronic communications, radar and sonar displays devices	H031A; H040A;
2.10.25 Electronic communications, radar fundamentals	H031A;
2.10.26 Electronic communications, navigation systems	H029A;
2.10.27 Electronic communications, surveillance and observation	H030A;
2.10.28 Electronic communications, global positioning systems	H032A;
2.10.29 Digital television transmission towers and equipment	H080A;
2.10.30 Wireless devices	F007A;
2.10.31 Electrotechnology communications principles	F006A;
2.10.32 Amateur radio communication principles, practices, and technical overview	B001A;

## 2.11 – Equipment and tools

Essential Knowledge and Associated Skills	Competency Standard Units
2.11.1 Hand tools	E002A; E005A; E019A; E022A; E042A; E043A; E044A; E047A; E049A; G001A;
2.11.2.1 Power tools	E002A;E005A; E022A; E042A; E043A; E044A; E047A; E049A;
2.11.2.2 Electrical workshop machines	G011A; G064A;
2.11.3.1 Fixing and support devices and techniques	E005A; E022A; G007A;
2.11.3.2 Mobile plant, tools and equipment	None
2.11.4 Dismantling and assembling techniques	E002A; E042A; E043A; E044A; E047A; E049A;
2.11.5 Basic electrical testing and measuring devices and techniques	F011A; H070A; J053A; P008A;
2.11.6.1 Advance electrical testing and measuring devices	G032A; G072A;
2.11.6.2 Electrical field testing and measurement techniques	G032A; G072A;
2.11.6.3 Power cable fault detection techniques	G032A;
2.11.7.1 Electronic testing and measuring devices and techniques	H012A; H014A; H015A; H016A; H038A; H039; H043; H072A;
2.11.7.2 Advanced electronic testing and measuring devices and techniques	H011A; H013A; H015A; H031A; H040; H048; H049; H076A; H077A;
2.11.8 Data and voice cabling testing and testing devices	F004A; F005A; F011A; N004A; N015A; N018A;
2.11.9.1 Basic refrigeration testing and measuring field devices	J003A; J072A;
2.11.9.2 Fitting and removing refrigeration service gauges	J003A; J072A;
2.11.9.3 Replacement of basic components on a refrigeration system	J008A;
2.11.9.4 Appliance diagnostic tools	J054A;
2.11.10.1 Basic air conditioning measurement devices	J004A;
2.11.10.2 Air conditioning testing devices	J013A;
2.11.11.1 Electronic soldering equipment and techniques	H002A; H070A;
2.11.11.2 Surface mount soldering techniques	A001A;
2.11.11.3 Printed circuit board repair techniques	A004A;
2.11.11.4 Lead-free soldering technology	A006A;
2.11.12 Instrumentation testing and measuring field devices	I002A; I003A; I004A; I005A;

	I006A;
2.11.13.1 Brazing and soldering equipment and techniques	J002A;
2.11.13.2 Introduction to welding	E042A; E043A;
2.11.14 Piping and tubing techniques	J002A;
2.11.15 Portable apparatus testing (PAT) devices	P008A;
2.11.16 Electronic component place equipment	A003A;
2.11.17 Electronic assembly correction and rework techniques	None
2.11.18 Electronic assembly functional and quality testing	A005A;
2.11.19 Electrotechnology engineering practice	E042A; E043A;
2.11.20.1 Low voltage motor testing devices and techniques	G057A;
2.11.20.2 High voltage motor testing devices and techniques	G058A;
2.11.20.3 Electric motor mechanical measuring and testing devices and techniques	G059A;

## 2.12 – Instrumentation

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.12.1 Instrumentation principles	I001A;
2.12.2 Pressure	I002A;
2.12.3 Density and level	I003A;
2.12.4 Fluid flow	I004A;
2.12.5 Temperature	I005A;
2.12.6 Process control systems	I006A; I014A; I020A;
2.12.7 Control valve principles	I011A;
2.12.8 Control valve selection	I011A;
2.12.9 Actuators and positioners	I011A;
2.12.10 Transmitters and converters	I006A;
2.12.11.1 Industrial processes	I009A; I010A;
2.12.11.2 Process control, commissioning	I022A;
2.12.12 Distributive control principles (DCS)	I013A;
2.12.13 Instrumentation and control communications	I013A;
2.12.14 Indicators and methods of recording process data	I009A; I013A;
2.12.15 Gas analysis	I009A; I021A;
2.12.16 Water analysis	I009A; I021A;
2.12.17 Scientific analysis	I009A; I021A;
2.12.18 Weight measurement principles	I009A; I021A;
2.12.19 Instrument calibration methods	I009A;
2.12.20.1 Process equipment installation requirements and techniques	I013A;
2.12.20.2 Process control arrangements and equipment selection	I013A;
2.12.21 Control system installation, testing and verification methods	I012A;
2.12.22.1 Medical equipment principles	H034A; I015A;
2.12.22.2 Medical equipment, anatomy and physiology and infection control	H034A; I015A;
2.12.23 Transducers and sensing devices	I001A; I019A;
2.12.24 Calibration techniques	I017A;

**2.13 – Maintenance and repair**

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.13.1 RAPS plant area cleaning	K001A; K008A; K009A; K010A;
2.13.2 RAPS systems battery bank maintenance techniques	K003A; K008A; K009A; K010A; K011A;
2.13.3 RAPS systems generator sets maintenance techniques	K004A;
2.13.4 RAPS systems photo voltaic array maintenance techniques	K005A; K008A; K009A; K010A;
2.13.5 RAPS systems wind generator maintenance techniques	K006A;
2.13.6 RAPS system use auditing techniques	None
2.13.7 RAPS systems maintenance scheduling	K007A; K008A;
2.13.8 Scheduled maintenance processors	E009A; E010A; F004A; F005A; J068A; K008A;
2.13.9 Business equipment fundamentals	None
2.13.10 Cooling plant maintenance procedures	None

**2.14 – Rail signalling**

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.14.1 Basic rail operations	G017A; N001A; N003A; N004A; N007A; N008A; N009A; N010A; N011A; N012A; N013A; N014A; N019A; N025A; N026A;
2.14.2.1 Rail signalling principles, electrical	N011A; N012A;
2.14.2.2 Rail signalling principles, mechanical	N001A; N019A; N026A;
2.14.3 Rail signalling, mechanical equipment	N001A; N007A; N008A; N011A; N019A; N026A;
2.14.4 Rail signalling, electrical equipment	N007A; N008A; N010A; N011A; N012A; N015A;
2.14.5 Rail signalling, point actuating devices	N001A; N007A; N008A; N011A; N015A; N019A; N026A;
2.14.6 Rail signalling, electronic equipment	N002A; N006A; N010A; N013A; N014A; N015A; N016A; N017A; N018A; N019A; N027A; N028A;
2.14.7 Rail signalling, computer-based equipment	N002A; N010A; N011A; N013A; N014A; N015A; N017A; N018A; N019A; N027A; N028A;
2.14.8 Rail signalling, computer applications	N006A; N010A; N013A; N014A; N015A; N016A; N017A; N018A; N019A; N027A; N028A;
2.14.9 Rail signalling, train detection	N002A; N003A; N004A; N007A; N009A; N010A; N015A;
2.14.10 Rail signalling, remote control systems	N002A; N006A; N010A; N013A; N014A; N015A; N016A; N017A; N018A; N027A; N028A;
2.14.11.1 Rail signalling interlocking systems, Electrical	N002A; N010A; N013A; N018A; N027A; N028A;
2.14.11.2 Rail signalling interlocking systems, Mechanical	N001A; N010A; N013A; N018A; N019A; N026A; N027A; N028A;

Essential Knowledge and Associated Skills	Competency Standard Units
2.14.12 Rail signalling, power supplies	N002A; N004A; N005A; N006A; N009A; N010A; N013A; N014A; N015A; N018A; N020A; N027A; N028A;
2.14.13 Rail signalling, electro-pneumatic equipment	N001A; N002A; N008A; N011A; N015A; N019A; N020A; N026A;
2.14.14 Rail signalling, drawings and diagrams	N001A; N002A; N003A; N004A; N005A; N006A; N007A; N008A; N009A; N010A; N011A; N012A; N013A; N014A; N015A; N016A; N017A; N018A; N019A; N020A; N025A; N026A; N027A; N028A;
2.14.15 Rail signalling, regulations and codes	G017A; N001A; N002A; N003A; N004A; N005A; N006A; N007A; N008A; N009A; N010A; N011A; N012A; N013A; N014A; N015A; N016A; N017A; N018A; N019A; N020A; N025A; N026A; N027A; N028A;

## 2.15 – Refrigeration and air conditioning apparatus

Essential Knowledge and Associated Skills	Competency Standard Units
2.15.1 Refrigeration compressors	J003A; J072A;
2.15.2 Condensers	J003A; J072A;
2.15.3 Evaporators	J003A; J072A;
2.15.4 Refrigerant flow controls	None
2.15.5 Pumps	None
2.15.6 Fans and air distribution	J007A;
2.15.7 Small appliance repair	J051A;
2.15.8 Domestic appliance principles	J052A; J055A; J056A;
2.15.9.1 Appliance refrigeration systems.	J011A; J055A;
2.15.9.2 Capillary systems	J055A;
2.15.9.3 Retrofitting domestic refrigeration systems	J055A;
2.15.9.4 Split air conditioning system	J072A;
2.15.10 Clothes washers and dryers	J056A;
2.15.11 Dish washing machines	J058A;
2.15.12 Gas cooking appliances	J059A;
2.15.13 Room air conditioners	J060A;
2.15.14 Appliance, testing and compliance verification methods	J061A;
2.15.15 HVAC control systems fundamentals	J030A;
2.15.16 Energy management systems for commercial refrigeration	J021A;
2.15.17 Refrigeration/HVAC direct digital controls	J022A; J035A; J046A;
2.15.18 Refrigeration/HVAC pneumatic controls	J022A; J035A; J046A;
2.15.19 HVAC air systems	J023A; J064A;
2.15.20 HVAC hydronic systems	J024A; J045A; J064A;
2.15.21 Refrigeration/HVAC electronic controls	J026A;
2.15.22 HVAC control systems	J048A;
2.15.23 Microbial control fundamentals	J068A;
2.15.24 Cool rooms/freezer rooms	J007A;
2.15.25 Package air conditioning systems	J007A;
2.15.26 Merchandising and display cabinets	J007A;
2.15.27 Cooling towers, cooling towers, evaporative condensers, evaporative coolers and associated equipment	J007A;

2.15.28 Residential air conditioning	J007A;
--------------------------------------	--------

**2.16 – Refrigeration and air conditioning installations**

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.16.1 Refrigeration pipework and accessories	J006A; J010A;
2.16.2 Refrigeration pipework layout	J006A; J010A;
2.16.3 Refrigeration installations, equipment requirements	J006A; J010A;
2.16.4 Refrigeration pipe selection and sizing	J010A;
2.16.5 Refrigeration and air conditioning installations, testing and verification methods	J009A; J048A;
2.16.6 Split air conditioning system installation	J005A;
2.16.7 High pressure refrigerant installation	J062A;
2.16.8 Fault-finding and diagnostic techniques	Covered by 2.2.3
2.16.9 Commissioning – HVAC systems	J023A; J024A; J025A; J026A;
2.16.10 Commissioning Commercial/Industrial Refrigeration Systems	J025A;
2.16.11 Air conditioning drawing	J028A;
2.16.12.1 Energy management fundamentals	None
2.16.12.2 Energy management	J047A;
2.16.13 Building management systems	J036A; J048A; K041A;
2.16.14 Management of indoor air quality	J037A;
2.16.15 Computer aided drafting	J039A;
2.16.16 Refrigeration System Components and Piping	J032A; J033A; J034A; J064A;
2.16.17 Retro-fitting refrigeration systems	J013A;

**2.17 – Refrigeration and air conditioning principles and applications**

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.17.1.1 Refrigeration fundamentals	J003A; J072A;
2.17.1.2 Basic refrigeration system operating conditions	J003A; J072A;
2.17.2.1 Refrigerants	J008A;
2.17.2.2 Split air conditioning refrigerants	J072A;
2.17.2.3 Appliance refrigerants	J062A;
2.17.2.4 High pressure refrigerants	J008A;
2.17.3 Refrigeration systems and compressor operation	J013A; J062A;
2.17.4 Air conditioning fundamentals	J004A; J060A;
2.17.5 Central plant air conditioning systems	J067A;
2.17.6 Hydronic systems	J014A;
2.17.7 Beverage dispensers	J015A;
2.17.8 Transport refrigeration systems	J016A;
2.17.9 Ultra-low temperature refrigeration systems	J017A;
2.17.10.1 Post mix refrigeration systems	J018A;
2.17.10.2 Dairy refrigeration systems	J066A;
2.17.11 Ice making systems	J019A;
2.17.12 Industrial refrigeration systems	J020A;
2.17.13 Refrigeration system analysis	J012A;
2.17.14.1 Refrigeration engineering mathematics fundamentals	J027A;
2.17.14.2 Refrigeration engineering advanced mathematics	J065A;
2.17.15 Refrigeration science	J027A;
2.17.16 Heat load estimating of commercial refrigeration	J029A;
2.17.17.1 HVAC load estimating fundamentals	J029A;
2.17.17.2 HVAC load estimating	J043A;
2.17.18.1 Thermodynamics fundamentals	J065A; K040A;
2.17.18.2 Thermodynamics	J038A; J049A; K029A;
2.17.18.3 Heater exchanger design	J049A;
2.17.19 Fluid mechanics fundamentals	J065A;
2.17.20 Materials strength fundamentals	J031A;

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.17.21.1 Noise and vibration control fundamentals	J031A;
2.17.21.2 Advanced noise and vibration control	J038A;
2.17.22 Refrigeration and food storage technology	J032A; J033A;
2.17.23.1 Industrial refrigeration systems design fundamentals	J033A;
2.17.23.2 Industrial refrigeration system design	None
2.17.24 Commercial air conditioning systems design	J034A;
2.17.25 Statics	J038A;
2.17.26 Commercial refrigeration system design	J041A;
2.17.27 Air conditioning system design	J043A;
2.17.28 Psychrometrics - advanced	J043A;
2.17.29 Exhaust systems design	J044A;
2.17.30 Heating systems design	J045A;
2.17.31 Hydronic system design	J045A;
2.17.32 Sources of technical development and processes for their adoption	J050A;
2.17.33 Refrigeration systems	J063A;
2.17.34 Air conditioning systems	J063A;
2.17.35 Applied psychrometrics	J063A;
2.17.36 Ventilation systems	J064A;
2.17.37 Beverage vending cabinets	J071A;

## 2.18 – Safety

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.18.1 Occupational Health and Safety principles	A001A; A002A; A003A; A004A; A005A; A006A; A010A; A012A; A013A;
2.18.1 Occupational Health and Safety principles	B001A
2.18.1 Occupational Health and Safety principles	C001A; C002A; C003A; C004A; C005A; C006A; C007A; C008A; C009A; C010A; C012A;
2.18.1 Occupational Health and Safety principles	D001A; D002A; D003A; D004A; D005A; D007A; D008A; D009A; D010A; D011A; D012A; D013A; D014A; D015A; D016A; D017A; D018A; D019A; D020A; D021A; D022A; D023A; D024A; D025A; D026A; D027A; D028A; D029A; D030A; D031A; D032A; D033A; D034A; D043A; D046A; D050A; D051A; D052A; D053A; D054A; D055A;
2.18.1 Occupational Health and Safety principles	E001A; E002A; E003A; E004A; E005A; E006A; E007A; E008A; E009A; E010A; E019A; E020A; E021A; E022A; E023A; E025A; E026A; E027A; E028A; E029A; E030A; E032A; E033A; E034A; E035A; E036A; E037A; E040A; E041A; E042A; E043A; E044A; E045A; E046A; E047A; E048A; E050A; E051A; E060A; E061A; E062A; E063A; E064A;
2.18.1 Occupational Health and Safety principles	F001A; F002A; F003A; F004A; F005A; F006A; F007A; F008A; F009A; F010A; F011A; F012A; F013A; F014A; F015A;
2.18.1 Occupational Health and Safety principles	G001A; G002A; G003A; G004A; G005A; G007A; G008A; G009A; G010A; G011A; G012A; G013A; G015A; G016A; G017A; G018A; G019A; G020A; G021A; G022A; G023A; G024A; G025A; G026A; G027A; G028A; G029A; G030A; G031A; G032A; G034A; G035A; G036A; G037A; G038A; G039A; G040A; G041A; G042A; G043A; G044A; G045A; G046A; G047A;

	G048A; G049A; G050A; G051A; G052A; G053A; G054A; G055A; G056A; G057A; G058A; G059A; G060A; G061A; G062A; G064A; G065A; G066A; G067A; G068A; G071A; G072A;
2.18.1 Occupational Health and Safety principles	H001A; H002A; H003A; H004A; H005A; H006A; H007A; H008A; H009A; H010A; H011A; H012A; H013A; H014A; H015A; H016A; H017A; H018A; H019A; H020A; H021A; H022A; H023A; H024A; H025A; H026A; H027A; H028A; H029A; H030A; H031A; H032A H033A; H034A; H035A; H036A; H037A; H038A; H039A; H040A; H042A; H043A; H044A; H045A; H046A; H047A; H048A; H049A; H050A; H051A; H052A; H053A; H054A; H055A; H056A; H057A; H058A; H059A; H061A; H062A; H063A; H064A; H065A; H066A; H070A; H071A; H072A; H073A; H074A; H075A; H076A; H077A; H078A; H079A; H080A; H081A; H082A; H083A; H084A; H085A;
2.18.1 Occupational Health and Safety principles	I001A; I002A; I003A; I004A; I005A; I006A; I007; I008A; I009A; I010A; I011A; I012A; I013A; I014A; I015A; I017A; I019A; I020A; I021A; I022A; I023A; I025A; I026A; I027A; I028A; I029A; I030A; I034A; I035A; I036A;

2.18.9 Electronic safe working practices	K024A;
2.18.10 Medical equipment safe working practices	H034A; I015A;
2.18.11 Fire protection equipment safe working practices	H061A; H062A; H063A; H064A; H065A;
2.18.12 Business equipment servicing safe working practices	None
2.18.13 Appliance servicing safe working practices	J051A; J052A; J054A; J055A; J056A; J057A; J058A; J059A; J060A; J061A; J073A; P007A;
2.18.14 Aerial safety practice	F012A;
2.18.15 Trenching safety practices	F013A;
2.18.16 Documenting hazards and identifying risks	E032A; E033A; E034A; E035A; E036A; E037A;

**2.19 – Special requirements, hazardous areas and restricted**

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.19.1 Hazardous areas and explosion-protection principles	M001A; M002A; M003A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M013A; M014A; M015A; M016A; M017A; M018A; P004A;
2.19.2 Explosion-protected equipment	M001A; M002A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M014A; M016A; M017A; M018A; P004A;
2.19.3 Flameproof (Ex‘d’) explosion-protection technique	M002A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M014A; M016A; M017A; M018A;
2.19.4 Increased safety (Ex‘e’) explosion-protection technique	M002A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M014A; M016A; M017A; M018A;
2.19.5 Non-sparking (Ex‘n’) explosion-protection technique	M002A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M014A; M016A; M017A; M018A;
2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique	M002A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M014A; M016A; M017A; M018A;
2.19.7 Pressurization (Ex‘p’) explosion-protection technique	M002A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M014A; M016A; M017A; M018A;
2.19.8 Explosion-protection techniques for dusts	M002A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M014A; M016A; M017A; M018A;
2.19.9 Common characteristics of explosion-protection techniques	M002A; M004A; M005A; M006A; M007A; M008A; M009A; M010A; M011A; M012A; M014A; M016A; M017A; M018A;
2.19.10 Hazardous areas installation and maintenance requirements	M004A; M005A; M006A; M009A; M010A; M011A; M012A; M016A; M017A; M018A;
2.19.11 Hazardous areas cable termination techniques	M004A; M005A; M006A; M009A; P004A;

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.19.12 Hazardous areas detailed inspection techniques	M011A;
2.19.13.1 Explosion-protected equipment overhaul and repair, general requirements	M007A; M014A;
2.19.13.2 Overhaul and repair requirements specific to each explosion-protection technique	M007A; M014A;
2.19.14.1 Explosion-protected equipment modification, general requirements	M014A;
2.19.14.2 Modification requirements specific to each explosion-protection technique	M014A;
2.19.15 Hazardous areas installation planning	M016A; M017A; M018A;
2.19.16 Common classified hazardous areas	M016A; M017A; M018A;
2.19.17 Hazardous areas classification techniques	M015A;
2.19.18 Hazardous areas close inspection requirements	M010A; M011A;
2.19.19 Hazardous areas management	M012A; M013A;
2.19.20 Explosion-protected electrical systems design	M017A; M018A;
2.19.21 Explosion-protected equipment conformity assessment	M008A;
2.19.22 Hazardous areas installation testing	M009A;
2.19.23 Explosion-protection visual checks	M001A;
2.19.24 Gas detection – portable devices	M003A;
2.19.25 Gas detection – fixed equipment	M005A; M017A;
2.19.26 Evaluation and selection of gas detection equipment (portable and fixed)	M018A;
2.19.29 Disconnect/Reconnect	P001A;
2.19.30 Flexible cords and plugs to 250 V	P002A;
2.19.31 Flexible Cords/Cables and Plugs to 1000 V	P003A;
2.19.32 Disconnect and reconnect HV electric propulsion components	P005A;
2.19.33 High Voltage Flexible Cables and Plugs Exceeding 1000 V	P006A;
2.19.34 Fault Find to 250 V – Motors	P007A; Multi phase motor endorsements, composite equipment, and/or control devices endorsement
2.19.35 Fault Find to 250 V – Water Heaters	P007A; Water heater endorsements
2.19.36 Fault Find to 250 V – General Appliances	P002A; P007A; General single phase motors, composite equipment, and/or control devices endorsement
2.19.37 Fault Find to 1000 V - Motors	P007A; Multi phase motor

Essential Knowledge and Associated Skills	Competency Standard Units
	endorsements, composite equipment, and/or control devices endorsement
2.19.38 Fault Find to 1000 V – Water Heaters	P007A; Water heater endorsements
2.19.39 Produce Status Reports Using Established Procedures	P001A; P002A; P003A; P004A; P005A; P006A; P007A; P008A;

## 2.20 – Sustainable energy and environment

Essential Knowledge and Associated Skills	Competency Standard Units
2.20.1 Sustainable energy principles	J006A;
2.20.2 Environmental and heritage awareness	J006A;
2.20.3 Introduction to renewable energy technologies	K008A; K009A; K010A; K011A; K012A; K013A; K014A; K023A;
2.20.4 Greenhouse reduction strategies	K013A; K014A;
2.20.5 Remote area essential services facilities	K008A; K009A; K010A;K011A; K017A;
2.20.6 Remote area essential services power plant	K011A; K020A;
2.20.7 Remote area essential services waste water facilities	K019A;
2.20.8 Remote area essential services water facilities	K018A;
2.20.9.1 Stand-alone renewable energy system components	K028A;
2.20.9.2 Stand-alone renewable energy system design consideration	K039A;
2.20.10 Hybrid Energy Systems	K033A;
2.20.11 Sustainability and greenhouse reduction strategies	K032A;
2.20.12 Energy efficient building design	K041A;
2.20.13 Photovoltaic installations	K024A;
2.20.14 Photovoltaic power systems	K025A;
2.20.15 Renewable energy system electronics	K027A;
2.20.16.1 Fundamentals of wind energy conversion	K030A;
2.20.16.2 Wind energy conversion systems	K031A;
2.20.17.1 Micro-hydro systems installation and maintenance processes	K037A; K038A;
2.20.17.2 Micro-hydro systems	K038A;
2.20.18 Solar water heating systems	K029A;
2.20.19 Grid connected inverters	K026A; K035A;
2.20.20 Renewable energy heating	K029A;
2.20.21 Distributed generation	K040A;

## 2.21 – System – control and automated

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
2.21.1 Machine design and positioning	E064A;
2.21.2 Mechanical drives and engineering	E062A;
2.21.3 Materials and strength of materials	E063A;
2.21.4 Statics and dynamics	E061A;
2.21.5 Advanced fluid mechanics	I028A;
2.21.6 Electronic interfacing to mechanical processes	I029A;
2.21.7 Electronic control of fluid processes	I027A;
2.21.8 Electronic interfacing to robotic processes	I030A;
2.21.9 Material science	E060A;
2.21.10 Thermodynamics	E060A;
2.21.11 Pneumatics	I026A;
2.21.12 Hydraulics	I026A;
2.21.13 Fluid power control	I025A;

**T 2.4 – HV Switching**

<b>Essential Knowledge and Associated Skills</b>	<b>Competency Standard Units</b>
T2.4.3 High voltage switching principles	G034A;
T2.4.4 High voltage fault switching principles	G034A;
T2.4.5 High voltage distribution transformer principles	G034A;
T2.4.6 High voltage SWER system	G034A;
T2.4.7 Feeder automation system	G034A;

# **ELECTROTECHNOLOGY TRAINING PACKAGE**

**Volume 2 – Part 2.2  
Essential Knowledge and Associated Skills**

**Volume 2 of 2**

## Electrotechnology Training Package UEE06 – Version Number 1. Review Date 31 Dec 2008

© Commonwealth of Australia 2006

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AEShareNet Free for Education instant licence (AEShareNet-FfE Licence). The onus rests with you to ensure compliance with the AEShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AEShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AEShareNet-FfE Licence conditions should be directed to the AEShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AEShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## Essential Knowledge and Associated Skills (EKAS)

Reference to the Essential Knowledge and Associated Skills is found in each Electrotechnology Industry Competency Standard Unit (Section 6). These references are detailed in the section of that follows. To insure that the content of theory and associated skills training aspect of the respective competency standard unit is met, users of the Training Package must include all the Essential Knowledge and Associated Skills clauses when developing learning specifications and support materials.

### EKAS Clause List

2.1 Cables, conductors and terminations.....	2
2.2 Common, commercial, processes and enterprise specific knowledge and skills .....	2
2.3 Control technologies .....	2
2.4 Communications and computer technologies .....	2
2.5 Drawings, diagrams, schedules, manuals, standards and regulations .....	2

T2.4 HV Switching .....	2

## **Essential Knowledge and Associated Skills – Contextualisation**

In the competency standard units, ‘notes’ have been placed against respective aspects that include scope, performance criteria, range statement and essential knowledge and associated skills and other related sections. The insertion of these “notes” is primarily to provide users and support material developers with examples of the form and type related to technical content principles, technology, equipment, or processes that may be used to cover the outcomes. The examples should be treated as information that adds clarity for the purposes of assisting in guidance of the depth and breadth that is to be covered.

As the type, form, process, or technique of technology and equipment may change it is therefore expected and encumbered on RTOs to continue to be current in the content of their delivery arrangements.

It is therefore appropriate for RTOs to use the notes in relation to technology and equipment references as advisory information. In these instances RTOs should aim to accommodate the adoption of improved and new technologies in the scope/range and essential knowledge and associated skills of the competency standard units by varying the context examples given in the referenced ‘Notes:’ to the Performance Criteria, Range Statement and Essential Knowledge and Associated Skills. However, the contextualisation must not be such that the outcome of the competency standard units is altered in any way.

Where contextualisation of the notes varies the outcome of the competency standard units and its related content, RTOs should consult with EE-Oz Training Standards to explore options for incorporating and/or covering the new arrangements, so that currency of the Training package is maintained.

It should be noted that any need to alter the competency standard units from its intended outcome requires a new or varied competency standard unit. Such changes are to be undertaken through the continuous improvement processes required of Training Packages, which for this Training Package is managed by EE-Oz Training Standards.

## 2.1 Cables, conductors and terminations

### 2.1.1 Cable protection and support

Evidence shall show an understanding of cable protection and support method and accessories to an extent indicated by the following aspects:

a) Requirements to protect and support cables adequately

Note:

Examples of protection are protection against mechanical damage, protection from adverse temperatures and corrosion and protection from magnetic field that may affect the performance of the cable.

b) Cable support and protection devices, accessories and typical applications

Note:

Examples include metallic and non-metallic conduits, duct and trunking, cable ladder and tray, cable clips and ties and related accessories.

c) Installation techniques encompassing:

- Cable installation equipment
- Cable drawing and hauling techniques

### 2.1.2 Cable types and applications

Evidence shall show an understanding of the types of cables used in the electrotechnology industry and their application to an extent indicated by the following aspects:

a) Structural components of cables and their purpose

Note:

Components include conductors and conductor material; insulation; sheathings and servings.

b) Application of various cables types

c) Cable varieties

Note:

Cable varieties include single cables, flexible cables, flexible cords, shielded cables, armoured cables, ribbon cables, other similar and like cables

d) Typical characteristics and use of power circuit cables and control circuit cables

### 2.1.3 Cables in buildings, structures and premises

Evidence shall show an understanding of installing cables in buildings, structures and premises to an extent indicated by the following aspects:

a) Building construction method and construction sequence.

b) Typical cable routes through buildings, structures and premises.

c) Building codes affecting the installation of cables in buildings, structures and premises

Note:

Building codes include limitation on penetration structural elements and maintenance of fire protection interiority

d) Cable segregation requirements

### 2.1.4 Basic cable and conductor terminations

Evidence shall show an understanding of basic cable and conductor terminations to an extent indicated by the following aspects:

a) Insulation removal and replacement

- b) Conductor handling and cable terminations encompassing:
- General aspects and soldering involving pins on electronic components and stranded conductors carrying current up to 25 amperes.
  - Application of connecting devices for conductors and terminals
  - Continuity through connections and insulation resistance testing
  - Stress release on cables/conductors.

#### **2.1.5.1 Power cable and conductor terminations**

Evidence shall show an understanding of power cable and conductor terminations to an extent indicated by the following aspects:

- a) Types of cable glands and their application

Note:

Types include glands for circular sheathed cables; steel wire armoured (SWA) cables and mineral-insulated metal-sheathed (MIMS) cables.

- Cable termination techniques

- b) Terminal types and applications

- c) Conductor termination techniques encompassing:

- Need for sound termination
- Consequences of poor conductor termination
- Conductor and terminal preparation

Note:

Conductors include copper and aluminium

#### **2.1.5.2 Bus bar techniques**

Evidence shall show an understanding of bus bar techniques to an extent indicated by the following aspects:

- a) Materials and applications  
 b) Shaping techniques  
 c) Terminations and connections

#### **2.1.6.1 Telecommunication cable and conductor terminations**

Evidence shall show an understanding of telecommunication cable and conductor terminations to an extent indicated by the following aspects:

- a) Approved termination devices and sockets.  
 b) Special termination tools and their use.  
 c) Cable colour coding up to 100 pair indoor and outdoor cable  
 d) End to end testing  
 e) Methods of terminating cables encompassing:
- Cables less than twenty pair
  - Twenty pair cable and greater
- f) Cable labelling devices  
 g) Colour coding of cables, sockets and termination modules and standard connectors used with twisted pair, optical fibre and coaxial cables

### **2.1.6.2 Telecommunication aerial cabling**

Evidence shall show an understanding of telecommunication aerial cabling to an extent indicated by the following aspects:

- a) Hazard and control measures in aerial cabling working environment
- b) Soundness of pole for aerial cabling
- c) Aerial safety equipment
- d) Procedure to applying pole top rescue
- e) Aerial construction methods and regulations
- f) Joining of an aerial cables

### **2.1.6.3 Telecommunication below ground cabling**

Evidence shall show an understanding of telecommunication below ground to an extent indicated by the following aspects:

- a) Hazard and control measures in underground cabling working environment
- b) Types and purposes of mechanical and manual aids.
- c) Purpose, location, and capacity of man holes and pits.
- d) Types of underground cable
- e) Procedure for the excavation of a site for the installation of a man hole, pit, pipe and conduit

### **2.1.6.4 Voice and data cabinet cabling terminations**

Evidence shall show an understanding of voice and data cabinet cabling terminations, to an extent indicated by the following aspects.

- a) Communication cable and conductor terminations encompassing:
  - approved termination devices and sockets
  - special termination tools and their use
  - cable colour coding up to 100 pair indoor and outdoor cable
- b) Methods of terminating cables encompassing:
  - cables less than twenty pair
  - twenty pair cable and greater
  - structured cables
  - coaxial cables
  - optical fibre cables
  - termination safety practices
- c) Cable labelling devices

### **2.1.7.1 Performance (copper) data cable installation and terminations**

Evidence shall show an understanding of performance data cabling and conductor installation and terminations to an extent indicated by the following aspects:

- a) High performance cable types encompassing:
  - High performance transmission parameters

- Electrical characteristics
  - Structure of UTP, FTP, and STP higher performance cables
- b) High performance cabling installation and termination encompassing:
- Separation and segregation requirements and techniques
  - Requirements for connecting hardware as defined in current Standards
  - Installation requirements and techniques applicable to high performance cable

### **2.1.7.2 Coaxial cable installation and terminations**

Evidence shall show an understanding of coaxial cabling installation and terminations to an extent indicated by the following aspects:

- a) Coaxial cable types encompassing:
- Structure of qualshield and trishield coaxial cables armour plated coaxial cable
  - Typical applications
- b) Coaxial cabling installation and termination encompassing:
- Separation and segregation requirements and techniques.
  - Coaxial cable connectors compatible with the cable type and the environment
  - Installation requirements and techniques applicable to coaxial cables
  - Coaxial cable connectors and termination techniques

### **2.1.7.3 Optical fibre cabling installation and terminations**

Evidence shall show an understanding of optical fibre cabling installation and terminations to an extent indicated by the following aspects:

- a) Operating principles of optical fibre transmission encompassing:
- Types of optical fibre types available for telecommunications voice and data transmission.
  - Difference between multimode and single mode transmission.
  - Advantages of optical fibre cable compared to other cables.
  - Applications of optical fibre cables.
  - Requirements of optical fibre cables as specified in current Standards
  - Hazards associated with working with optical fibre.
- b) Installation techniques encompassing:
- Purpose and procedures for pre-testing optical fibre cable prior to installation.
  - Regulations, standards and codes applicable to optical fibre installation
  - Bending radii and hauling requirements.
  - Cable support and securing mechanisms
  - Safety precautions
- c) Termination and splicing techniques
- Risk control measures applied in the preparation of fibre for termination.
  - Termination devices and method
  - Preparation and splicing techniques.
  - Devices used to protect terminations and splices against mechanical damage and prevent contamination.

#### **2.1.7.4 Specialist audio/video cabling installation and termination**

Evidence shall show an understanding of specialist audio/video cabling installation and terminations to an extent indicated by the following aspects:

- a) Features of high performance audio and video cables and interconnects
- b) High performance audio and video cables and interconnects encompassing:
  - Installation methods and limitations
  - Terminations techniques as specified by cable manufacturers

#### **2.1.8 Electronic cable and conductor terminations**

Evidence shall show an understanding of terminating cable and conductor used in electronic equipment to an extent indicated by the following aspects:

- a) Cable and conductor types and characteristics encompassing:
  - Insulated wire
  - Harness wiring,
  - High performance cables

Note.

  - 1. Examples of characteristics are transmission performance parameters and electrical characteristics
  - 2. Types include UTP, FTP, and STP
- b) Coaxial cables types and characteristics

Note.

Types include qualshield, trishield coaxial and armour plated coaxial cables
- c) Cable anchoring and support methods
- d) Termination methods

#### **2.1.9 Winding wire types and connections**

Evidence shall show knowledge and skills of winding wires and connections to an extent indicated by the following aspects:

- a) Winding wires and their applications.
- b) Winding wire connection methods encompassing:
  - Conductor preparation
  - Connection mediums
  - Insulation methods

#### **2.1.10 High voltage motor winding, conductors, connections methods and insulation**

Evidence shall show knowledge and skills of high voltage winding conductors, connections and insulation to an extent indicated by the following aspects:

- a) HV winding conductors and their applications.
- b) HV winding wire connection methods encompassing:
  - Conductor handling
  - Conductor preparation
  - Connection mediums

c) Insulation types and methods

### **2.1.11 Integrated cabling arrangements**

Evidence shall show knowledge and skills of integrated cabling arrangements to an extent indicated by the following aspects:

- a) Types of service that use integrated cabling arrangements, e.g. “Smart wiring” concept.
- b) ELV communication and control cabling selection methods encompassing:
  - Limitations imposed by equipment
  - Limitations imposed by route length
  - Communication rates
- c) Cable schedules and planning
- d) Cable identification methods

## 2.2 Common, commercial, processes and enterprise specific knowledge and skills

### 2.2.1 Enterprise communication methods

Evidence shall show an understanding of enterprise communication methods to an extent indicated by the following aspects:

- a) Communicating with personnel encompassing:
  - Oral communications
  - Written procedures and work instructions
- b) Communicating with suppliers
- c) Communicating with customers

### 2.2.2 Enterprise work activities records

Evidence shall show an understanding of work activities records to an extent indicated by the following aspects:

- a) Purpose and extent of maintaining work activities records in an enterprise
- b) Types of records for maintaining work activities in an enterprise
- c) Methods for recording and maintaining work records
- d) Work records required by regulation requirements

### 2.2.3 Fault finding techniques

Evidence shall show an understanding of technical fault finding to an extent indicated by the following aspects:

- a) Factors to consider in clarifying the nature of a fault encompassing:
  - Initial fault report
  - Confirmation of symptoms of the fault
  - Comparison of symptoms with normal operation
- b) Effect to cause reasoning — assumptions of possible causes
- c) Methods for testing assumptions encompassing:
  - Visual inspection
  - Sectional testing
  - Split-half tests
  - Component isolation
- d) Dealing with intermittent faults

Note:

Typical causes of intermittent faults are vibration, shock, changes in temperature and electromagnetic interference.

### 2.2.4 Problem solving techniques

Evidence shall show an understanding of problem solving concepts and techniques as they apply in the workplace, to an extent indicated by the following aspects:

- a) Identify problems

Note: Examples may include: Process and quality problems; Equipment selection, availability and failure; Teamwork and work allocation problems; Safety and emergency situations and incident; Performance gaps; Profit improvement and the like.

b) Mathematical Tools

Note.

Examples may include: Average, Standard deviation and the like.

c) Use of analytical techniques in problem solving

Note.

Examples may include: Brainstorming; Fishbone diagrams/cause and effect diagrams; Logic trees; Process logic/process requirements; Similarity/difference analysis; Pareto analysis; Force field/SWOT analysis.

d) Using tools to assistance in problem solving

Note.

Examples may include: Procedures and work instructions; Safety data sheets; Job cards; Maintenance logs; Plant drawing.

e) Determine corrective action encompassing:

- Tools
- Mode of communication procedure used within each enterprise
- Established work procedures and policies
- Size and structure of the teams/enterprise
- Group goals - team, section, enterprise
- Enterprise specific conflict resolution procedures
- Action plans
- Priority requirements
- Measurable objectives
- Resource requirements
- Methods for reaching objectives
- Timelines
- Safety requirements
- Risk assessment
- Environmental requirements

f) Communicate recommendations

Note.

Examples may include: Feedback requirements; Corrective action and analysis; Following up recommendations and the like.

g) Implement Monitoring encompassing:

- Identifying components to be measured
- Measurement and monitoring techniques
- Measurement and monitoring tools

### 2.2.5 Enterprise customer relations protocols

Evidence shall show an understanding of enterprise customer relations protocols to an extent indicated by the following aspects:

a) Purpose of customer relations

- b) Procedures for dealing with customers
- c) Dealing with customer issues

### **2.2.6 Enterprise quality management system, basics**

Evidence shall show an understanding of enterprise quality management system to an extent indicated by the following aspects:

- a) Purpose of a quality system
- b) Procedures pertaining to the relevant work function
- c) Work instructions pertaining to the relevant work function

### **2.2.7 Enterprise purchasing system**

Evidence shall show an understanding of the purchasing system within an enterprise to an extent indicated by the following aspects:

- a) Purchasing process
- b) Common suppliers
- c) Authorities to purchase

### **2.2.8 Enterprise costing methods**

Evidence shall show an understanding of costing methods in an enterprise to an extent indicated by the following aspects:

- a) Costing policy
- b) Purchase prices and discounts for materials
- c) Labour charge out rates
- d) Margins

### **2.2.9 Enterprise stock control methods**

Evidence shall show an understanding of stock control methods to an extent indicated by the following aspects:

- a) Enterprise purchasing policy
- b) Stock data base
- c) Purchase and sales entry mechanisms
- d) Reordering methods

### **2.2.10 Job costing techniques**

Evidence shall show an understanding of costing small jobs to an extent indicated by the following aspects:

- a) Resources to be quantified and costed
- b) Costing labour plant and materials
- c) Service costs and margins.

### **2.2.11.1 Estimating techniques**

Evidence shall show an understanding of estimating to an extent indicated by the following aspects:

- a) Documents used in estimating
- b) Resources to be quantified and costed
- c) Material take-off methods
- d) Costing encompassing:
  - resource (labour, plant, equipment and materials)
  - contingency
  - money
  - margins
- e) Labour rates method of costing
- f) Life cycle costing analysis
- g) Documenting estimations and costing.
- h) Evaluating estimates and costs

### **2.2.11.2 Specification development**

Evidence shall show an understanding of specification writing to an extent indicated by the following aspects:

- a) Purpose and nature of specification
- b) Performance based specifications
- c) Prescriptive specifications
- d) Acceptable evidence of compliance
- e) Additional service required with the supply of equipment
- f) Dealing with suppliers and manufacturer's
- g) Documenting specification.

### **2.2.12 Tendering requirements**

Evidence shall show an understanding of tenders to an extent indicated by the following aspects:

- a) Purpose and sources of a tender
- b) Documents supplied with a tender
- c) Typical special conditions included in a tender
- d) Tender submission requirements

### **2.2.13 User instruction techniques**

Evidence shall show an understanding of instructing users in the use of specific items of equipment and systems to an extent indicated by the following aspects:

- a) Methods for evaluating user needs

Note:

User needs should include how equipment is used efficiently and safely and identifying wear and tear and damage to the equipment that requires repairing.

- b) Basic instruction methods

Note:

Methods of instruction should be appropriate to the culture of the users and the equipment for which instruction is given.

c) Methods for evaluating user's ability use equipment correctly

#### **2.2.14 Contracts, format, responsibilities and obligations**

Evidence shall show an understanding of the format, responsibilities and obligations of a contract to an extent indicated by the following aspects:

- a) Contract purpose and formats
- b) Documents legally attached to a contract
- c) Responsibilities and obligations of parties entering a contract
- d) Regulatory requirements

#### **2.2.15 Risk management, application and techniques**

Evidence shall show an understanding of risk management to an extent indicated by the following aspects:

- a) The need for risk management within the broad project management framework
- b) Risk management methodologies, their capabilities, limitations, applicability and outcomes
- c) Uncertainty and the means of measurement
- d) The application of risk management tools and techniques
- e) Risk management in the context of the project life cycle and other project management functions
- f) Implementing risk management

##### **2.2.16.1 Project Planning**

Evidence shall show an understanding of project planning to an extent indicated by the following aspects:

- a) Purpose of project planning
- b) Documents needed to plan a project
- c) Factors influencing sequence and restraints of project activities
- d) Critical path analysis encompassing:
  - Graphical representation methods
  - Methods of representing time/rates

##### **2.2.16.2 Project development**

Evidence shall show an understanding of project development to an extent indicated by the following aspects:

- a) Purpose and source of a design brief
- b) Engineering solution development encompassing:
  - Role of standards
  - Use of proven designs
- c) Design and detail drawings required.

- d) Role of and form of job specification.
- e) Project documentation and legal issues

### **2.2.17 Project management**

Evidence shall show an understanding of project management concepts to an extent indicated by the following aspects:

- a) Defining project parameters

Note:

Examples may include: Project scope; Project stakeholders and clients; Project phases and the relationship between phases; Time requirements and limitations; Resource requirements and limitations; Quality requirements and limitations.

- b) Time management

Note:

Examples may include: time management concepts; standard practices for ensuring a project runs to time and the like.

- c) Financial management

Note.

Examples may include: Financial management concepts; Standard practices for managing project finances; Project budgets; Costs, variations and estimations; Invoicing against project phases/deliverables; Acquittals and the like.

- d) Quality management

Note.

Examples may include: Quality management concepts; Standard practices for managing quality within a project.

- e) Human Resource management

Note.

Examples may include: human resource management concepts; standard practices for managing personnel within a project

- f) Communication management

Note.

Examples may include: Communication management concepts; Standard practices for managing communication within a project and the like.

- g) Risk management and contingencies

Note.

Examples may include: risk management concepts; standard practices for managing risk within a project; Internal risks; External risks; Risk minimisation; Risk removal; Contingencies and the like.

- h) Procurement management

Note.

Examples may include: procurement management concepts; standard practices for managing procurement and the like.

- i) Physical Resource management

Note.

Examples may include: Types of physical resource, including; Equipment, Technology, Information, Facilities; Physical resource management concepts; Standard practices for managing physical resources

- j) Contracts

Note.

Examples may include: Understanding project contracts; Standard practices for working to contract

specifications; Contract format; Contract content; Legal obligations of contract parties; Accompanying documentation including; Contract Schedules and the like.

k) Performance assessment and continuous improvement

Note.

Examples may include: standard performance assessment practices; standard continuous improvement practices and the like

### **2.2.18 Critical path and project analysis**

Evidence shall show an understanding of customer/client relations to an extent indicated by the following aspects:

- a) Purpose of critical path analysis
- b) Essential data
- c) Relational sequence of work activities
- d) Graphical representation methods
- e) Methods of representing time/rates
- f) Monitoring methods

### **2.2.19 Customer/Client relations**

Evidence shall show an understanding of customer/client relations to an extent indicated by the following aspects:

- a) Importance of customer/client relations
- b) Interpersonal skills that enhance customer/client
- c) Dispute resolution
- d) Customer/client relations strategies

### **2.2.20 Computer use basics**

Evidence shall show an understanding of computer use basics to an extent indicated by the following aspects:

- a) Starting up
- b) Selecting application
- c) Entering information
- d) Saving
- e) Printing

### **2.2.21 Engineering analysis, decision making and reporting**

Evidence shall show an understanding of analysis, decision making and reporting as they apply to engineering work functions to an extent indicated by the following aspects:

- a) Techniques of analysis encompassing:
  - use of appropriate sampling techniques to collect data.
  - types of data and classification.
  - effective questionnaire design
  - data collection errors.
  - frequency tables.
  - statistical diagrams – drawing and interpretation.

- the general shape of a frequency distribution.
  - different types of diagrams.
  - mean time between failures calculations
- b) Summary of statistics encompassing:
- measures of central tendency
  - measures of dispersion
  - a 5-point summary for a given data set, box and whisker plot distribution
  - data sets comparison using measures of centre and spread
  - the effect of outliers on measures of centre and spread
  - use computer programs or calculators to simplify calculations
- c) Correlation and regression encompassing:
- bivariate data and scatter diagrams.
  - product-moment correlation coefficient calculation and interpretation.
  - difference between causation and correlation.
  - equations of regression lines from bivariate data with a calculator and line plotting on a scatter diagram.
  - using the equation of regression to make predictions in practical situations.
  - investigation of practical problems using correlation and regression.
- d) Investigation and reporting encompassing:
- presentation of a well formatted report with a clearly stated aim.
  - using the internet to obtain relevant data.
  - description of the statistical method and design chosen to meet the aim of the investigation.
  - statistical analysis and results reporting.
  - evaluation and interpretation of the results of the investigation.
  - discussion of the investigation with reference to real world applications.
  - chronology of the investigation.

#### **2.2.22 Enterprise work/business coverage**

Evidence shall show an understanding of the work covered by the employing enterprise to an extent indicated by the following aspects:

- a) Systems and equipment of the electrotechnology disciplines covered by the enterprise
- b) Where and how the electrotechnology disciplines are used
- c) The work activities involved
- d) Role of various sectors of personnel in the enterprise

#### **2.2.23 Enterprise regulatory requirements and non regulatory standards**

Evidence shall show an understanding of regulatory requirements to an extent indicated by the following aspects:

- a) Compliance regulations for businesses
- b) Methods of meeting compliance
- c) Non-regulatory standards and their effects on business

#### **2.2.24 Technical examination and testing methods**

Evidence shall show an understanding of technical examination and testing methods to an extent indicated by the following aspects:

- a) Compliance certification encompassing:
  - the purposes of certification of equipment;
  - the parties involved in the assessment/testing and certification of equipment, and
  - the scheme for recognition of assessment/testing and certification
- b) Preparation required to assess equipment for compliance with Standards encompassing:
  - documentation required prior to conducting conformity assessment;
  - tests necessary to establish that an item of equipment conforms with relevant Standards;
- c) Assessing and testing equipment encompassing:
  - types of assessment tests
  - test set ups and procedures.
  - recording and reporting requirements of conformity assessment.

### **2.2.25 Research Concepts**

Evidence shall show an understanding of research concepts and techniques, as they apply in the workplace, to an extent indicated by the following aspects:

#### a) Terminology

Note.

Examples may include: Terminology used in a research workplace; Terminology used in research-specific literature and the like.

#### b) Theory – why conduct research?

Note. Examples may include: The history of research; Past research successes; Past research failures; Research Protocols; Research practices and the like.

#### c) The research environment

Note.

Examples may include: The research work environment; Standard research practices; Industrial, legal, ethical, political and market environment considerations; Legislation and regulation; Contractual obligations of all parties and the like.

#### d) Planning to conduct research

Note.

Examples may include: Concept development and/or research brief analysis; Research objectives; Research deliverables; Research project plan; Literature reviews; Methodology development, including; Experimental design, Technology selection, Information Management system selection and the like

#### e) Clients

Note.

Examples may include: Identifying client viewpoints and stake in project; Identifying client requirements and parameters; Determining research budgets, timelines, milestones and quality attributes with clients.

#### f) Research, Development and Commercialisation

Note.

Examples may include: Research and Development goals versus Commercialisation goals and realities; Research and Development to inspire a commercialisation process.

### **2.2.26 Automated systems industry sector customs and practices**

Evidence shall show an understanding of automated systems industry sector customs and

practices to an extent indicated by the following aspects:

- a) Technical aspects of project planning and management encompassing:
  - Method of ensuring equipment meets specified performance requirements
  - Performance/cost benefit analysis
  - Equipment procurement
- b) Typical approaches to planning and management
- c) Successful planning techniques
- d) Best practice management methods and styles

### **2.2.27 Computer industry sector customs and practices**

Evidence shall show an understanding of computer industry sector customs and practices to an extent indicated by the following aspects:

- a) Technical aspects of project planning and management encompassing:
  - Method of ensuring equipment meets specified performance requirements
  - Equipment performance/cost benefit analysis
  - Equipment procurement
- b) Typical approaches to planning and management
- c) Successful planning techniques
- d) Best practice management methods and styles

### **2.2.28 Electrical industry sector customs and practices**

Evidence shall show an understanding of electrical industry sector customs and practices to an extent indicated by the following aspects:

- a) Technical aspects of project planning and management encompassing:
  - Method of ensuring equipment meets specified performance requirements
  - Performance/cost benefit analysis
  - Equipment procurement
- b) Typical approaches to planning and management
- c) Successful planning techniques
- d) Best practice management methods and styles

### **2.2.29 Electronic systems industry sector customs and practices**

Evidence shall show an understanding of electronic industry sector customs and practices to an extent indicated by the following aspects:

- a) Technical aspects of project planning and management encompassing:
  - Method of ensuring equipment meets specified performance requirements
  - Performance/cost benefit analysis
  - Equipment procurement
- b) Typical approaches to planning and management
- c) Successful planning techniques

d) Best practice management methods and styles

### **2.2.30 Control systems industry sector customs and practices**

Evidence shall show an understanding of control system industry sector customs and practices to an extent indicated by the following aspects:

- a) Technical aspects of project planning and management encompassing:
  - Method of ensuring equipment meets specified performance requirements
  - Performance/cost benefit analysis
  - Equipment procurement
- b) Typical approaches to planning and management
- c) Successful planning techniques
- d) Best practice management methods and styles

### **2.2.31 Refrigeration and air conditioning industry sector customs and practices**

Evidence shall show an understanding of refrigeration and air conditioning industry sector customs and practices to an extent indicated by the following aspects:

- a) Technical aspects of project planning and management encompassing:
  - Method of ensuring equipment meets specified performance requirements
  - Performance/cost benefit analysis
  - Equipment procurement
- b) Typical approaches to planning and management
- c) Successful planning techniques
- d) Best practice management methods and styles

### **2.2.32 Renewable energy industry sector customs and practices**

Evidence shall show an understanding of renewable energy industry sector customs and practices to an extent indicated by the following aspects:

- a) Technical aspects of project planning and management encompassing:
  - Method of ensuring equipment meets specified performance requirements
  - Performance/cost benefit analysis
  - Equipment procurement
- b) Typical approaches to planning and management
- c) Successful planning techniques
- d) Best practice management methods and styles

### **2.2.33 Working in a Team**

Evidence shall show an understanding of the teams that may exist in the workplace, to an extent indicated by the following aspects:

a) Types of teams

Note.

Examples may include; Managerial, Administrative, Project-based, Commercial and Social

b) Roles, responsibilities and accountabilities of team members

Note

Examples may include; the role, responsibility and accountability of individuals, teams, organisational management, clients and the like.

c) Working in a team

Note.

Examples may include; Identification and utilisation of team member skills and knowledge; Maximising benefits of team diversity; Team planning; Team commitment and cooperation; Improving/Maximising team performance to achieve goals; Team monitoring and adjustment; Plain English literacy and communication; Leading, facilitating, participating, coaching, mentoring.

d) Working with clients

Note

Examples may include; client relations, client liaison, the practice of working with clients and the like.

e) Conflict resolution

Note.

Examples may include: Personality analysis tools, Strategies for dealing with difficult people and the like.

## 2.2.34 Scientific Writing and Communication

Evidence shall show an understanding of scientific writing and communication concepts and techniques and they apply in the workplace, to an extent indicated by the following aspects:

a) Types of scientific writing and communication

Note.

Examples may include: The distinguishing characteristics of the different types of scientific writing.

b) Purpose of the different types of scientific writing

Note.

Examples may include: Product development justification and specifications; Management advice; Scientific papers/publications; Conference/meeting presentations; Policy documents; Planning documents; Reports and the like.

c) Types of audience

Note.

Examples may include: The features and characteristics of an audience, including; an audience's professional, social, cultural, ethnic background and physical and academic capabilities; the importance of 'Plain English' written and oral communication.

d) Scientific writing techniques

Note.

Examples may include: The component parts of scientific documents, including: Aim, Materials, Method, Results, Discussion, Conclusion, References; The required content of each component part; Scientific referencing techniques, including: Bibliographies, Reference Lists, Citations, Footnotes, Quotes, and Acknowledgements; Scientific labelling techniques, including: Graphs, Tables, Diagrams, and Figures; Techniques for documenting results, including: Text, Graphs, Tables, Diagrams, and Figures; Organisational standards for document and presentation production, including: Standard organisational document templates, letterheads, headers, footers, and logos.

e) Oral communication techniques

Note.

Examples may include: Techniques for communicating to large groups, including; Conference presentations, Speeches; Techniques for communicating to small groups, including: Meeting presentations, Team discussions, planning forums and the like.

f) Electronic communication formats

Note.

Examples may include: World-wide Web – protocols and practices; Email – protocols and practices; Transfer of information via CD Rom/Floppy Disk; Use of PDF and other secure files.

g) Confidentiality considerations

Note.

Examples may include: Confidentiality practices to protect the organisation; Confidentiality practices

to protect the client; Confidentiality practices to protect providers of information/research cohorts.

### 2.2.35 Data Collection Techniques

Evidence shall show an understanding of data collection concepts and techniques as they apply in the workplace, to an extent indicated by the following aspects:

a) Data types

Note. Examples may include: Quantitative data, including; empirical, non-parametric, parametric; Qualitative data; Raw; Graphic; Diagrams; Original; Textual; Multimedia; Electronic and the like.

b) Data Collection

Note.

Examples may include: Data sources; Consultation protocols and practices; Survey methodologies, including; interviews, surveys, chat rooms, focus groups; Literature reviews, including; traditional and web-based; Group facilitation and presentation; Questioning, active listening and clarification; Obstacles to data collection, including; unavailable data, inconsistent data, confidentiality, security; Data limitations.

c) Evaluating data quality

Note.

Examples may include: Reliability; Accuracy; Clarity; Validity; Contribution to research; Relevance to research objectives.

### 2.2.36 Data Analysis and Presentation

Evidence shall show an understanding of data analysis and presentation concepts and techniques as they apply in the workplace, to an extent indicated by the following aspects:

a) Data analysis techniques

Note.

Examples may include: Univariate analysis; Multivariate analysis; Decision trees; Genetic Algorithms; Neural Networks; Gap Analysis; Urgency and impact, and the like.

b) Data analysis technique selection

Note.

Examples may include: Determining the correct analysis technique(s); Determining the correct sequence of analysis techniques; Accommodating influencing factors including research objectives, budget, timeline and quality requirements, data limitations, confidentiality, security and the like.

c) Data interpretation

Note.

Examples may include: Determining results; Determining conclusions; Benchmarking; Quality Assurance, including consideration of accuracy, validity, clarity and the like.

d) Data presentation encompassing:

- Determining the correct form of presentation for the audience, including; colleagues, scientific community, marketing and commercialisation specialists, general community, industry, mixed (i.e. conference audience).

Note.

Examples may include: Forms of documentary presentation, including reports, journal articles, scientific papers, graphs, tables, diagrams, electronic formats; Forms of verbal presentation, including meetings, client briefings, conferences, support of a new concept, need for further research, commercialisation opportunity; Quality Assurance, including accuracy, validity, clarity of information presented.

### 2.2.37 Product Development and Trials

Evidence shall show an understanding of product development and trial concepts and techniques as they apply in the workplace, to an extent indicated by the following aspects:

- a) Identifying client and managerial requirements for production and trials
  - Note. Examples may include: Required outcome(s); Key performance indicators; Timelines; Financing; Resources; Quality Assurance and the like.
- b) Influencing factors
  - Note. Examples may include: Internal business goals and strategies; Technical specifications (chemical, mechanical, environmental); Industrial considerations; Regulatory considerations; Legislative considerations; Intellectual Property; Australian & International Standards; Codes of Practice; Market requirements; Resource requirements, including personnel tools and equipment (principles and practices), materials, finances and the like.
- c) Product development arrangements
  - Note.
  - Examples may include: Licensing agreements; Joint Ventures; Sole Ventures and the like.
- d) Relevant Documentation
  - Note.
  - Examples may include: Codes of Practice; Standard Operating Procedures; Product formulation documentation; Material safety data sheets (MSDSs); Equipment and Quality manuals; Calibration and maintenance schedules; Enterprise recording and reporting procedures; Material, equipment and product specifications and the like.
- e) Development & trial processes
  - Note.
  - Examples may include: Proof of concept; Trialing concepts; Definitions/Specifications; Types of development and trial processes, including Phase A product and trial, Phase B product and trial, User trials, Ergonomics and Usability testing; Pre-defined acceptance criteria, confidence limits; Data collection & analysis; Production; Evaluation and recommendation formulation.

### 2.2.38 Intellectual Property Concepts

Evidence shall show an understanding of intellectual property concepts as they apply in the workplace, to an extent indicated by the following aspects:

- a) Intellectual Property and Australian Law
  - Note.
  - Examples may include: The place of Intellectual Property in Australian Law; Past cases and outcomes; Necessary considerations and the like.
- b) The nature of Intellectual Property
  - Note.
  - Examples may include: What is Intellectual Property?; What isn't Intellectual Property?; Why is Intellectual Property relevant?; What can Intellectual Property rights do?; What can't Intellectual Property rights do?
- c) Intellectual Property Rights
  - Note.
  - Examples may include: Patents; Copyright; Designs; Confidential Information; Other specialty rights and the like.
- d) Managing Intellectual Property
  - Note.
  - Examples may include: Identifying Intellectual Property; Deciding what to protect; Strategies for managing Intellectual Property; How can Intellectual Property rights work together?; Intellectual Property versus time, effort, finances; Sources of Assistance, including Publications, Intellectual Property professionals, Lawyers, Business Advisors, Marketing consultants and the like.
- e) Enforcement of Intellectual Property
  - Note.
  - Examples may include: The enforcement process; The role of lawyers; Resolution.
- f) The changing face of Intellectual Property
  - Note.
  - Examples may include: Development of Intellectual Property Right Laws; Changes to Intellectual Property Right laws; Extensions of Intellectual Property Rights into non-traditional areas, including

cultural, property arenas; The global marketplace and the like.

### 2.2.39 Commercialisation Concepts

Evidence shall show an understanding of commercialisation concepts and techniques as they apply in the workplace, to an extent indicated by the following aspects:

a) Commercialisation

Note.

Examples may include: Definition of commercialisation; Triggers for commercialisation; Past commercialisation successes; Past commercialisation failures; Triggers for commercialisation; Methods for identifying a good product/idea/service/application; Sources of assistance in regard to commercialisation, including documents; lawyers, business advisors, marketing consultants.

b) The commercialisation process

Note.

Examples may include: The concept; Does the concept fit with the organisation's goals? Is there a market, what is the market? Will the product meet the market requirements? Can the product be sold? How can the product be sold? Can the product be produced? How can the product be produced? Can the production be repeated?

c) Commercialisation arrangements

Note.

Examples may include: Sole venture; Joint venture; Licensing; Legal aspects of commercialisation.

d) Commercialisation planning

Note.

Examples may include: Costing; Marketing; Production/development; Distribution; Sales.

e) Competition

Note.

Examples may include: Who are the competitors? What are they doing and how quickly? Internal development relevant to competition.

f) Critical analysis of the commercialisation process for continuous improvement

Note.

Examples may include: Successes; Opportunities for improvement; Controllable influences; Uncontrollable influences; Formulation of recommendations.

### 2.2.40 Electrotechnology Industry organisations and practices

Evidence shall show an understanding of Electrotechnology industry organisations and practices to an extent indicated by the following aspects:

a) Electrotechnology vocations encompassing:

- Electrical
- Electronics
- Computer Systems
- Data Communication
- Refrigeration and Air Conditioning
- Instrumentation and Control
- Lifts

b) Career Paths in Electrotechnology encompassing:

- Australian Qualification Framework (AQF)
- Qualifications/Classifications
- Scope of work-installation, maintenance and servicing

- c) Training in Electrotechnology Vocations encompassing:
  - Traineeships, apprenticeships
  - Licensed Electrician minimum requirements
  - Career advancements
- d) Industry Organisations encompassing:
  - Employers
  - EE-Oz Training Standards and EE-Oz State/Territory Network
  - Employee – Trade union group (CEPU, ETU)
  - Government - ITABs, TAFE, RTO, ERAC
  - Private providers
- e) Qualification Requirements encompassing:
  - Unit of competency
  - Qualification assessments
- f) Policies and Practices in Electrotechnology Industry encompassing:
  - Licensing requirements
  - OH&S requirements
  - Awards
- g) Job Application encompassing:
  - Research
  - Writing
  - Methods of application
- h) Job Interview encompassing:
  - Preparation
  - Presentation
  - Evaluation

#### **2.2.41 Supervision fundamentals**

Evidence shall show an understanding of Electrotechnology industry organisations and practices to an extent indicated by the following aspects:

- a) Responsibilities of workplace supervisors
- b) Effective instruction methods
- c) Methods for seeking the cooperation of others
- d) Dealing with conflict

#### **2.2.42 Business Concepts**

Evidence shall show an understanding of basic business management concepts and techniques as they apply in the workplace, to an extent indicated by the following aspects:

- a) Basic business planning

Note.

Examples may include: Business plans; Performance plans; Strategic plans; Marketing plans and the like.

- b) Basic business administration

Note.

Examples may include: Access and equity principles and practices; Financial concepts; Awards and enterprise agreements; Legislation (OH&S, Environmental, Industrial, Anti-discrimination); Regulations; Australian Standards; Industrial specifications.

c) Basic business management

Note.

Examples may include: Codes of practice; Ethical standards; Quality Assurance; Innovation; Operation control; Customer service principles.

**2.2.43 Commissioning processes and procedures**

Evidence shall show an understanding of commissioning process processes and procedures to an extent indicated by the following aspects:

- a) Purpose of commissioning
- b) Commissioning planning and documentation
- c) Procedures for commissioning systems encompassing:
  - configuring
  - calibrating
  - tuning
  - validating system performance to specification
  - procedures followed to commission instrument systems
- d) Purpose and importance of documentation

**2.2 44 Requirements and methods for maintaining currency in industry developments**

Evidence shall show an understanding of requirements and methods for maintaining currency in industry developments to an extent indicated by the following aspects:

- a) Requirements to maintain currency in industry practices and products encompassing: any:
  - Regulatory
  - Industry
  - Professional/Association
  - Other
- b) Sources of information in industry changes and new developments encompassing:
  - Legislation and regulation
  - Technical Standards
  - Codes and industry/work practices and processes
  - Manufacture's product catalogues and instruction manuals
  - Industry Journals
  - Safety and environmental issues
- c) Currency of technology, machinery, equipment and tools applications and uses
- e) Acceptable methods of formally maintaining currency

Note.

1. Examples are formal industry refresher programs, industry seminars, product promotion programs and the like.

2. Acceptable methods may vary in different jurisdictions

**2.2 45 Responsibilities under a competency development plan**

Evidence shall show an understanding of responsibilities under a competency development plan to an extent indicated by the following aspects:

- a) Competency Development (Training) Plans encompassing:

- state/territories requirements (acts/regulations)
  - competency development (training) contracts
  - competency development (training) period
  - purpose of competency development (training) plans
  - process in developing competency development (training) plans
  - parties involved in the competency development (training) plan
- b) Qualification Structure encompassing:
- scope of work
  - training Packages - electrotechnology
  - competency standard units (CSUs)
  - structure of Qualification
  - off-Job Requirements
  - on-Job Requirements
- c) Responsibilities of Parties to the contract encompassing:
- employer responsibilities
  - learner responsibilities
  - RTO responsibilities
  - State Training Authorities (STA)
- d) Electrotechnology Industry Career Opportunities encompassing:
- industry Areas
  - qualification levels
  - career paths
- e) Industry customs and practices encompassing:
- industry bodies – employer and employee representatives
  - regulatory bodies – including licensing/registration, OHS, IR, training authorities – apprentice/trainee regulation
  - vocational and technical education system – Australian Qualification Framework (AQF), credentials, Australian Qualification Training Framework (AQTF)
- f) Monitoring of Workplace Evidence encompassing:
- workplace exposure and practices and relationship with competency standard units
  - methods of collecting workplace evidence
  - monitoring period cycle
  - requirements of workplace evidence
  - actions taken for unsatisfactory progression
  - role of state training authority (STA)
  - apprentice/learner responsibilities
  - employer responsibilities
- g) RTO Policies encompassing:
- apprentice/Learner Responsibilities
  - teachers/Trainers Responsibilities
  - absenteeism
  - off-Job component assessment specifications
  - on-Job component assessment specifications
  - qualification completion requirements and award
  - advanced standing and/or RPL
  - result review procedures
- h) Apprentice/Learner Discipline Policy encompassing:

- apprentices/Learners rights
  - apprentice/Learner responsibilities
  - breaches of discipline
  - types of penalties Apprentice/Learner Responsibilities
- i) Attendance at the Vocational and Technical Education Centre encompassing:
- importance of attendance
  - record management of attendance
  - attendance cards
  - advice to employer of absences
- j) Fire and Emergencies at the Vocational and Technical Education Centre encompassing:
- designated fire and emergency exists
  - procedures in the event of a fire
  - evacuation procedures
  - assembly points importance of attendance
- k) Occupational Health and Safety at the Vocational and Technical Education Centre encompassing:
- eye protection
  - foot protection
  - protective clothing
  - personal injuries
  - mobile phones and personal belonging
  - dress regulations
  - rotating machinery, designated fire and emergency exists
- l) Entry Requirements encompassing:
- numeracy requirements
  - literacy requirements
  - vocational and technical education centre support mechanisms
  - testing and appropriate action by learner Eye protection
- j) Vocational and Technical Education Centre Tour encompassing:
- vocational and technical education centre layout
  - building layout
  - tour of building and vocational and technical education centre

## **2.2 46 Methods of monitoring and reporting competency development activities**

Evidence shall show an understanding of methods of monitoring and reporting workplace activities indicated by the following aspects:

- a) RTOs responsibility to receive and monitor workplace activities of the apprentice/learner
- b) Industry requirements for monitoring workplace evidence
- c) Acceptable methods for monitoring and reporting workplace activities
- d) Apprentice's/Learner's responsibility to participate in the reporting of workplace activities
- e) RTOs requirements in periodically evaluating development of apprentices/learners from the workplace activities information gathered, and providing feedback and advice on areas requiring improvement
- f) Employers responsibilities to participate in monitoring, reporting and confirming workplace activities, and assisting in overcoming areas requiring development by the apprentice/learner

g) Options for appeal or assistance from RTO or State Training Authority (STA)

## 2.2 47 Electrotechnology engineering structures and occupations

Evidence shall show an understanding of electrotechnology engineering structures and occupations methods to an extent indicated by the following aspects:

- a) Structure and historical background of a specific engineering industry encompassing:
- Historical background of significant technological developments and changes in the student's particular engineering discipline and industry.
  - Types of organisations in the student's engineering industry:
  - Private industry and government enterprises
  - Size of organisations
  - Location and market.
  - Types of activities performed in student's industry:
  - Research and development
  - Design and consultancy
  - Manufacturing installation and commissioning
  - Servicing and maintenance.
  - Industry groupings and organisations; trade and industry support and professional bodies.
  - Engineering industrial practices of organizational controls/monitoring such as:
  - Budgeting and cost estimating processes
  - Setting production/service targets in terms of time, output and costs
  - Planning, coordination and control processes fundamentals, including such tools as PERT and project management charts.
  - Inventory controls of tools, stock and components
  - The tendering process, development of specifications and contracts
  - Application of industry standards
  - Quality control processes
- b) Engineering occupations and employment, education, training & retraining encompassing:
- Types of engineering occupations in student's particular engineering industry; job titles and descriptions, with reference to both private industry award re-structuring and government organizations where appropriate.
  - Qualification and training requirements for the occupations of the student's engineering industry.
  - Areas of employment opportunities and growth; careers; changes in engineering work practices and requirements.
  - Applying for employment in engineering occupations; interpreting job vacancy advertisements; appropriate forms of application; presentation of personal qualifications and experience; addressing the specified criteria of the vacant position.
  - Education and industry training structures and opportunities; school, TAFE, CAE, university; on-the-job experience; structure and accreditation of formal qualifications and recognition of prior learning.
  - Re-training requirements of technological, organisational and social change; industry restructuring and work practice change; career change and recurrent education.
  - Assessing future directions of change and the resulting impact on the student's particular industry and career path.

- c) Operating environment of Australian engineering industry encompassing:
- General and background operating environment of the student’s particular engineering disciplines and industry appropriate to the student’s workplace:
  - Technological environment including:
  - Legal environment
  - Education and training
  - Industrial relations
  - Political and public pressure groups
  - Economics/economic climate
  - Markets
  - Cultural/social
  - Ecological
  - Government factors
  - Customers/clients/end users of output
  - Product
  - Competitors
- d) Industrial Awards and Trade Unions encompassing:
- The nature, typical content and application of Australian industrial awards in the engineering workplace.
  - Trade union structures and membership in the engineering industries.

#### **2.2 48 Enterprise work activities policies and procedures**

Evidence shall show an understanding of enterprise work activities policies and procedures to an extent indicated by the following aspects:

- a) Need for policies and procedures
- b) Scope for an industry/enterprise to establish work activity policies and procedures
- Note.  
Example are policies and procedure related to safety, effective work outcomes, customer relations, conflict resolution and competency development.
- c) Following work activities procedures

#### **2.2.49 Procedure and protocols for giving evidence in a court of law**

Evidence shall show an understanding of procedure and protocols for giving evidence in a court of law to an extent indicated by the following aspects:

- a) Process for responding to a witness summons
- b) Requirements for preparing to appear in court to give evidence
- c) Court procedures and protocols for giving evidence

## 2.3 Control technologies

### 2.3.1 Electrical control devices

Evidence shall show an understanding of control devices to an extent indicated by the following aspects:

- a) Contactors, relays and timers encompassing:
  - o Operating principles
  - o Basic contact configurations and identification
  - o Common applications
- b) Switches and push buttons encompassing:
  - o Switching configurations
  - o Common applications
- c) Solid state devices encompassing:
  - o Types of devices and their function
    - Note:  
Examples include soft starters, dimmers; smoke alarms, inverters, line conditioners and uninterruptible power supplies.
  - o Input and output parameters
  - o Risk control measure for isolating circuits when needed
  - o Risk control measure for preventing damage to devices during circuit testing.

### 2.3.2 Control circuit fundamentals

Evidence shall show an understanding of control circuit fundamentals to an extent indicated by the following aspects:

- a) Conversion of circuit diagrams from one form to another.
- b) Design and connection of basic control circuits
  - Note:  
Examples include multiple (light) switching circuits, master control circuit, stop-start circuit, remote stop-start circuit, time controlled circuit, interlocked circuit, jogging circuit (non-latching) and machine safety circuit.
- c) Sequence of operation of basic control circuits.

### 2.3.3 Process control principles

Evidence shall show an understanding of process control principles to an extent indicated by the following aspects:

- a) Control systems and components encompassing:
  - o open and closed loop systems,
  - o final element, process measuring, transmitters, converters, controllers,
- b) Control terminology encompassing:
  - o set point, offset, deviation, gain, proportional band, integral (reset), derivative (rate preact), process variable, feedback, conversion of gain to PB and vice versa and direct and reverse action.
  - o Integral - repeats/min and min/repeat
- c) Types of control encompassing:
  - o on/off control, proportional amplitude control, proportional time control, proportional plus integral control, proportional plus integral plus derivative control

and reset wind-up.

Note:

These include control action generation using R/C networks.

- d) Process characteristics encompassing:
  - o process lag, resistive lag, capacitive, dead time
- e) Response of systems to controller parameter (PI and D) changes and load change.

### **2.3.4 Pneumatic/hydraulic control tubing/piping**

Evidence shall show an understanding of pneumatic/hydraulic control tubing/piping to an extent indicated by the following aspects:

- a) Fittings and their use
- b) Control tubing/piping materials and sizes
- c) Working techniques encompassing:
  - o Cutting pipe tubing/piping
  - o Bending, shaping/setting pipe and tubing
  - o Joining connecting/terminating tubing/piping
  - o Cleaning
- d) Air cleaners and lubricants

### **2.3.5.1 Refrigerant pressure sensing controls**

Evidence shall show an understanding of refrigerant pressure sensing controls an extent indicated by the following aspects:

- a) Control systems and components encompassing:
  - o Refrigeration pressure sensing controls, including low and high
  - o Oil pressure controls and
  - o Defrost pressure controls
- b) Control terminology, symbols and diagrams/drawings
- c) Types of refrigerant pressure sensing controls, their operations, installation/replacement, setting adjustment and testing
- d) Refrigeration process characteristics and control parameters
- e) System responses to parameter changes

### **2.3.5.2 Refrigeration system controls**

Evidence shall show an understanding of refrigeration system controls to an extent indicated by the following aspects:

- a) Control systems and electrical/electronic components encompassing:
  - o Refrigeration controls, including thermostats, pressure controls, defrost controls
  - o Electrical controls, including timers, relays (starting and control), contactors, three phase motor starters
- b) Control terminology, symbols and diagrams/drawings
- c) Types of controls, their operations, installation/replacement, setting adjustment and testing
- d) Refrigeration process characteristics and control parameters
- e) System responses to parameter changes

### 2.3.6 Air conditioning system controls

Evidence shall show a basic understanding of simple air conditioning system control principles, concepts, terms and applications to an extent indicated by the following aspects:

- a) Control systems and components encompassing:
  - o Electrical controls,
  - o Electronics controls,
  - o Pneumatic controls,
  - o Direct digital controls
- b) Control terminology, symbols, drawings/diagrams
- c) Types of control, their basics operation, installation/replacement, commissioning, setting/adjustment and testing
- d) Air conditioning process characteristics and control parameters
- e) System responses to parameter changes.

### 2.3.7 Smart device basics

Evidence shall show an understanding of smart devices with embedded controls to an extent indicated by the following aspects:

- a) Types of devices and their function.
- b) Connection into a circuit.
- c) Entering and verifying instructions.

### 2.3.8 Programmable controller basics

Evidence shall show an understanding of programmable controller basics to an extent indicated by the following aspects:

- a) Regulatory requirement/limitations
- b) Basics of control system concepts encompassing:
  - o Input, process and output
  - o Relay control, static logic control and programmable control.
- c) Typical applications of PLCs
- d) PLC system components and arrangement
- e) Definitions and terminology encompassing:
  - o PLC, in/out (I/O), memory (RAM, ROM, E<sub>2</sub>PROM), CPU and power supply.
- f) Basic PLC operation encompassing:
  - o scan cycle, basic programming rules, addressing for I/O, and halt/run
- g) Connection of input and output devices.

### 2.3.9 PLC programming basics

Evidence shall show an understanding of the programming basics functions in PLCs to an extent indicated by the following aspects:

- a) Basic control system design methods
- b) Programming basics encompassing:

- Clearing memory
  - Using ladder format
  - Working with Boolean/mnemonic/statement
- c) Programming monitoring and editing basic control functions
- Note.  
Examples of basic control functions are Switching Latching, Timing, Counting, and Master control,

### 2.3.10.1 PLC programming

Evidence shall show an understanding of programming basics PLCs to an extent indicated by the following aspects:

- a) Extended control system design methods using ladder logic
- b) Advance discrete programming functions and controls encompassing:
- derived timers (off delay,
  - self resetting,
  - constant duty cycle),
  - reversible counters,
  - cascading timers,
  - cascading counters,
  - combining timers and counters,
  - internal relays/flags/markers,
  - latching relays (set/reset),
  - jump instructions,
  - master control instructions,
  - bit shift registers,
  - scan time considerations,
  - one shot,
  - retentive (power fail) functions,
  - simple step sequence instructions

### 2.3.10.2 PLC high level programming

Evidence shall show an understanding of high level programming of PLCs to an extent indicated by the following aspects:

- a) Medium to high level PLC encompassing:
- Hardware configuration
  - Software components
- Note.  
Examples of software components are, addressing (discrete, work and analogue), memory map, basic programming instruction syntax, file manipulation, documentation and saving/restoring programs.
- b) Number systems and codes encompassing:
- binary, octal, integer and hexadecimal
  - conversions between formats
  - common codes such as BCD, Grey, ASCII and the like
- c) Programming diagnostics encompassing:
- flags/status words (file)

- fault locations
  - scan considerations
  - fixed and variable parameters
  - immediate update
  - special internal relays (overflow bits)
- d) Data Manipulation encompassing:
- binary word structure
  - single and double words
  - word devices
  - arithmetic instructions, add, subtract, multiply, divide & square root
  - compare instructions
  - word logical instructions, AND, OR, EXOR)
  - conversions of BCD to binary, binary to BCD
  - indirect addressing
- Note.  
Examples are image register to word, word to IR, word to word, word to table and table to table
- word shift registers (LIFO FIFO)
  - masking
  - bit manipulation (bit set, bit clear, bit test)
  - entering data constants
  - multiplexing
- e) Analogue input/output encompassing:
- common signal types
  - module resolution
  - scaling
  - un-scaling
  - signal offset

### 2.3.10.3 PLC system applications

Evidence shall show an understanding of PLC system applications to an extent indicated by the following aspects:

- a) Alternative/enhancing programming methods
- b) System diagnostics techniques.
- c) Control loops encompassing:
  - Regulated loop control
  - Proportional / integral /derivative (PID) control
  - Applications of PID control
  - Methods used to achieve PID control using a PLC
- d) Specialist instructions
  - Note.  
Examples are interrupt driven applications, high speed counters, positional encoders
- e) Communications methods and requirements encompassing:
  - Common protocols and interface standards
  - Requirements when networking/interfacing PLC's
  - Communication mediums
  - Network types and topologies

- Hierarchical networks
- Peer to peer networks
- Handshaking
- Open architecture communications
- Remote I/O

f) Intelligent terminals/graphic interfaces installation and communication requirements

### **2.3.11 Control system network basics**

Evidence shall show an understanding of control systems networks to an extent indicated by the following aspects:

- a) Purpose and application of control system networks systems
- b) Open and common proprietary control system networks models (layers) and protocols

Note.

Examples of systems are CANopen, ControlNet, Devicenet, Ethernet, Foundation Fieldbus, Interbus, Modbus, Profibus.

- c) Control system networks interface.

### **2.3.12 Control network infrastructure**

Evidence shall show an understanding of control network infrastructure to an extent indicated by the following aspects:

- a) Data link layer encompassing:
  - Device types
  - Bus arbitration
  - Device initialisation
  - Synchronous / Asynchronous messaging.
  - Time management
  - Link active scheduler specific functions
- b) Bus monitor encompassing:
  - capturing
  - filtering
- c) Fieldbus message specification encompassing:
  - Virtual field device
  - Object dictionary
  - Communicate objectives
  - Communicate services
- d) High speed Ethernet encompassing:
  - Protocols
  - FDA agents
  - Messaging
  - Sessions
  - Time synchronisation
  - Redundancy

### **2.3.13 Using supervisory control and data acquisition systems**

Evidence shall show an understanding of supervisory control and data acquisition systems to an extent indicated by the following aspects:

- a) SCADA system features and applications encompassing:
  - Industries in which SCADA systems are used and
  - Associate benefits of the package.
  - Features and facilities of different SCADA packages.
  - Hardware requirements
- b) Reading mimics and animated graphics
- c) Trending encompassing:
  - Analysis of process to select data,
  - Viewing data and graphical representation of selected information
  - Trend graphs and data matching
- d) Alarm logging encompassing:
  - Analysing select data,
  - Corrective action of alarm status

### **2.3.14 Supervisory control and data acquisition systems programming**

Evidence shall show an understanding of supervisory control and data acquisition systems to an extent indicated by the following aspects:

- a) SCADA system networking encompassing:
  - PLC interface requirements
  - Networking requirements of the system
  - SCADA system differences from DCS
  - Costs of different software packages.
- b) Mimics and animated graphics encompassing:
  - Graphic designs balance of layout
  - Assessment of data required to be entered in software package
- c) Trending encompassing:
  - Analysis of process to select data, i.e., sampling of the process in terms of temperatures, time, weight, etc.
  - Viewing data and graphical representation of selected information
  - Trend graphs and data matching
- d) Alarm logging encompassing:
  - Analysing select data, applying limits and specification applied to processes
  - Corrective action of alarm status
- e) Recipes and scheduling encompassing:
  - Methods of producing libraries for different process conditions, required for varied production runs
  - Analysis of different production runs i.e., amounts of materials required, raw materials, pressure, temperature, weights, colour required in the process.
  - Alarm limits/material specifications
  - Scheduling, setting limits and evoking program changes.
- f) Data Collection and data basing encompassing:
  - Producing a data base of variables, and limit specifications involved in the process, i.e., individual items manufactures, or global manufactured products
  - Conversion of raw data into appropriate data basing software package Paradox,

Lotus, Excel

Note.

Examples of software packages are Paradox, Lotus, Excel and the like.

Reports encompassing:

- Types and layout of reports
- Aims of the reports, i.e., customer, manager/s, or accountant reports. The report may include information on statistical process control for quality assurance etc.
- Analysis of data in report i.e., graphs, design, layout, balance of layout etc.
- Assessment of data required for the report.

g) Programming language encompassing:

- Automate tasks within the software package.
- Provide complex processing, where field equipment does not have the facilities.

h) Implementation and applications encompassing:

- Overview of implementation of SCADA systems i.e. summary of points required for implementation.
- Typical application in manufacturing and data control i.e., food processing, packaging, automotive industry, energy management, steel production etc.

i) Networking encompassing:

- Types of networks available
- Coordinate and access of networking by linking to factory network.

### **2.3.15 Appliances, electronic controls and communications basics**

Evidence shall show an understanding of electronic controls and communications used in domestic appliances to an extent indicated by the following aspects:

a) Control systems and components encompassing:

- Appliance controls,
- Electrical/Electronic controls,

b) Control terminology

c) Types of control

d) Appliance characteristics and control parameters

e) System responses to parameter changes

f) Appliance integrated communications components and their function.

### **2.3.16 Integrated systems basics**

Evidence shall show an understanding of the basics of integrated systems to an extent indicated by the following aspects:

a) Systems purpose and principle of operation

b) Scope of control and inter working in integrated systems

c) System topology

d) Basic functions and programming methods using on screen 'icons and function and operating instruction lists.

### **2.3.17 Integrated systems, subsystem interworking**

Evidence shall show an understanding of subsystem interworking to an extent indicated by

the following aspects:

- a) Types of subsystems an integrated system
- b) Typical subsystem interworking scenarios
- c) Higher level functions and scripting (programming) methods.

### **2.3.18 Complex integrated system programming**

Evidence shall show an understanding of complex integrated system programming to an extent indicated by the following aspects:

- a) System complexities encompassing:
  - o Networked systems
  - o Extent of interworking subsystems
  - o System monitoring
- b) Advance integrated system programming methods

Note.

Examples of programming methods are those used in systems by AMX, Creston, C Bus, I Control and the like.

### **2.3.19 Control programming fundamentals**

Evidence shall show an understanding of control programming fundamentals to an extent indicated by the following aspects:

- a) Control applications of software
- b) Software terminology
- c) Programming languages currently used by industry
- d) Control system development encompassing:
  - o flowcharts
  - o pseudocode
  - o Nassi-Schneidemann charts
  - o algorithms
- e) Programming styles encompassing:
  - o programming structure
  - o documentation
  - o installing a language compiler
  - o using a text editor
  - o compiling source code
  - o generating executable files
  - o scalar and structured data types
  - o constants and variables
  - o reading from keyboard and writing to screen
  - o arithmetic, relational and logical operations
  - o making decisions using if/then, if/then/else, nested if/then and case
  - o looping operations using while/do, repeat/until and for/do
  - o programming to access external devices via I/O boards
  - o functions

Note.

Examples are macros; global and local variables, auto and static variables; Intrinsic functions used in control; Writing functions; Linking in external functions to control

- hardware
- numerical and character arrays

### **2.3.20 Microcontroller programming basics**

Evidence shall show an understanding of microcontroller control system programming methods to an extent indicated by the following aspects:

- a) Programming terms encompassing:
  - instruction
  - instruction mnemonic
  - operation code (op code)
  - address, operand, label, mnemonic and comment fields
- b) Language levels and their features encompassing:
  - machine code
  - assembly language
  - high level language types (in current use by industry) and their application
- c) Language simulators and emulators
- d) Assembler Language programming basics encompassing:
  - Programming input/output functions
  - Timing loops

### **2.3.21 Complex control systems**

Evidence shall show an understanding of complex control systems indicated by the following aspects:

- a) Control systems encompassing:
  - process controller and programmable controllers and personal computer
  - control peripherals suitable control
- b) Purpose built microprocessor controller multiple inputs resulting in different or changed outputs
- c) Different types and applications of system transducers and sensors
- d) Actuators and drive systems.

## 2.4 Communications and computer technologies

### 2.4.1.1 Telecommunications CPR regulations and installations

Evidence shall show an understanding of telecommunications CPR regulations and installations to an extent indicated by the following aspects:

- a) Telecommunication industry overview encompassing:
  - Telecommunications network
  - Act 1997
  - Role of ACA and ACIF
  - Telecommunications terminology
- b) Telecommunication technical standards encompassing:
  - ACA Technical Standards TS008, TS009
  - SAA Communications Cabling Manual (Restricted) (starter kit) as approved by relevant bodies – Standards Australia/ACIF
  - International Standards – ISO, IEC, ITU
  - Building Code of Australia (BCA)
  - AS/NZS 3000 Wiring Rules
  - National Association of Testing Authorities NATA
- c) Cabling Provider Rules (CPR) encompassing:
  - Australian Communications Authority (ACA)
  - Telecommunications Cabling Provider Rules
  - CPR registration
  - Old Telecommunication Licensing structures
  - Inspection of work
  - Documentation – TCA1 form
- d) Cable type and identification encompassing:
  - Cable types – unshielded twisted pair, shielded twisted pair, indoor, underground and aerial.
  - Cable construction
  - Cable identification – codes (colour, banded, numbered, lettered)
- e).Cable installation encompassing:
  - Cable damage
  - Cable packaging
  - Cable dispensing devices
  - Cable insertion and hauling
  - Lead-in conduit requirements (including wall box installation)
  - Wiring diagrams
  - Segregation of cables
  - Aerial cable fittings and additional safety aspects required.
- f) Termination of Telecommunication Cables encompassing:
  - Sheath stripping – methods, precautions
  - Pair identification
  - End to end testing
  - Filled cable termination
  - Termination systems – telephone outlets and sockets, network terminating devices

(NTD)

- Connector jointing eg. external to internal cable where required
- g) Telecommunication earthing and protection encompassing:
  - Customer lightning protection and (CLP) earthing
  - Carrier's policy requirement covering materials (including surge suppression devices) and practices (including earth bonding arrangements)
- h) Basic telephony encompassing:
  - Basic telephone service
  - Telephone
  - Exchange number
  - Connection equipment / lead in cable
  - Dialling signals – pulse dialling, tone dialling, ring equivalence number (REN)

#### **2.4.1.2 Telephone system fundamentals**

Evidence shall show an understanding of telephone system fundamentals to an extent indicated by the following aspects:

- a) The transmission of sound in a telephone system encompassing:
  - Function of telephone transmitters and receivers
  - Components and functions of the telephone
- b) Purpose of earthing and protection in a telephone system
- c) Customer Switching Systems encompassing:
  - Basic function
  - Difference between a key system and a PABX.
  - Advanced features
- d) Basic operations of System Distribution Frames (SDF)/Test Point Frames (TPF), power fail and line interface requirements (eg Indial, Rotary Groups, ISDN, Extension, Tie-line circuits)
- e) Types, purpose, use, and requirements of metering devices.
- f) Metering and installation arrangements of public/pay phones
- g) Installation methods and requirements encompassing:
  - Customer Switching Systems (CSS)
  - Interfacing equipment
  - Termination of CSS equipment
- h) Requirements for programming of CSS
- i) Hazard associated the electronic components of CSS encompassing:
  - Static discharge
  - Chemical damage
  - Mechanical damage
  - Electromagnetic Interference

#### **2.4.1.3 Telephone network facilities**

Evidence shall show an understanding of telephone system fundamentals to an extent indicated by the following aspects:

- a) Network subsystems (i.e. functional blocks) components and operating parameters
- b) Switches within the network

- c) Customer accesses infrastructure
- d) System security

#### 2.4.1.4 Lift telecommunications cabling regulations and installation

Evidence shall show an understanding of lift telecommunications cabling regulations and installation to an extent indicated by the following aspects:

- a) Regulations and Standards
  - registration of Cablers
  - standards
  - record keeping (cable records)
  - lift boundary
- b) Telecommunication lift cables and termination methods
  - cables identification
  - types of cables (round travelling cable, flat travelling cable)
  - cable wire identification (colour codes)
- c) Installation methods of communication cabling
  - requirements
  - cable installation and cable stripping
  - termination (solder, screw, insulation crushing screw, insulation displacement)
  - segregation
  - cable protection methods
- d) Testing of communication cabling
  - types of tests (continuity, correct sequence, revised pair, transposed or split pair and insulation resistance)
  - test equipment

#### 2.4.2.1 Telecommunication earthing and protection

Evidence shall show an understanding of telecommunication earthing and protection to an extent indicated by the following aspects:

- e) Telecommunication overvoltage protection system
  - Operating principles
  - Overvoltage and surge/spike suppression protection techniques
  - Overvoltage protection devices
  - Installation of overvoltage protection systems
- f) Earthing protection system encompassing:
  - Components and arrangement of the MEN system
  - TELEX functional earth system
  - Telecommunication system earthing single and multi-storey
  - Communication earth system
  - Protective earth barriers for segregation, cable tray, duct and metal equipment enclosures
- g) Electrical interference encompassing:
  - Types – RFI, EMI
  - Sources of interference

- Techniques in reducing interference
- Earthing cable shields
- h) Earth testing instruments and procedure
- i) Safety issues to be considered with earthing and bonding

#### **2.4.2.2 Voice and data cabinet assembly and terminations**

Evidence shall show an understanding of voice and data cabinet assembly and fit out, to an extent indicated by the following aspects.

- a) Internal cable routing and management provisions
- b) Ventilation requirements
- c) Cabinet structure encompassing:
  - internal framework
  - cable entry
  - removable panels
  - multiple cabinets
  - doors, locks and hinges
  - mounting rails
  - access to equipment and cabling
  - earthing arrangements and methods
- d) Mounting requirements for components that include
  - rack Units
  - patch panels
  - routers
  - servers

#### **2.4.3.1 Data communication fundamentals**

Evidence shall show an understanding of data communications fundamentals to an extent indicated by the following aspects:

- a) Process of data transmission encompassing:
  - codes used in data communications
  - asynchronous and synchronous transmission
  - bits per second and baud rate
  - DCEs and DTEs.
  - error control, parity and CRC.
- b) Characteristics and limitations of the types of transmission media encompassing:
  - information as a quantity.
  - information content of symbols.
  - redundancy in communications.
  - common types of media used in data communications: twisted pair, coaxial.
  - other communication systems: HF radio, satellite and cellular.
- c) Simple protocols encompassing:
  - reason for protocols.
  - simple protocols: teletype, X modem, half-duplex and full duplex.
- d) Types, characteristics and limitations of modems and interface standards encompassing:

- operation and types of modems
    - Note:
    - Examples include serial, parallel, USB, firewire, broadband, ADSL, cable modems
  - modulation techniques: FSK, PSK and QAM.
  - interface and signalling standards:
    - Note:
    - Examples include RS232, V.24, Current loop, RS422, RS423, RS449, RS485, V35, X21 and G703.
  - Limitations interface standards, speed and distance.
- e) Types, characteristic specifications and limitations of fibre optic systems encompassing:
- fundamentals of light and how it travels in a fibre.
  - typical fibre composition, multimode and single mode propagation
  - laser and other light sources and detectors.
  - fibre cable and splice fibre cable.

#### **2.4.3.2 Networking fundamentals**

Evidence shall show an understanding of networking fundamentals to an extent indicated by the following aspects:

- a) Analogue and digital signals encompassing:
  - How information is carried
  - Signal distortion
    - Note.
    - Examples include attenuation, reflection, noise, dispersion, jitter, latency and collisions
- b) Types of networks, network components and hardware
- c) Local Area Network (LAN) architectures
- d) Networking protocols and the OSI model
- e) Network signal propagation
- f) Transmission Control Protocol / Internet Protocol (TCP/IP)
- g) Basics of Encoding Networking Signals
- h) Internet services

#### **2.4.4 Wireless networks infrastructure**

Evidence shall show an understanding of wireless networks infrastructure to an extent indicated by the following aspects:

- a) Wireless components
- b) Network configurations
- c) Wireless network security

#### **2.4.5 Wide area networks infrastructure**

Evidence shall show an understanding of wide area networks infrastructure to an extent indicated by the following aspects:

- a) Network communication media
- b) Network servers
- c) Network configurations
- d) Network security

#### **2.4.6 PABX fundamentals**

Evidence shall show an understanding of PABX fundamentals to an extent indicated by the following aspects:

- a) Programming methods
- b) Configuration options
- c) Programming options

#### **2.4.8 Switches, hubs and routers**

Evidence shall show an understanding of switches, hubs and routers to an extent indicated by the following aspects:

- a) Purpose and function
- b) Circuit configurations
- c) Connection arrangements
- d) System protocols

#### **2.4.9 Decoders**

Evidence shall show an understanding of decoders to an extent indicated by the following aspects:

- a) Purpose and function
- b) Circuit configurations
- c) Connection arrangements
- d) System protocols

#### **2.4.10 Reserved**

#### **2.4.11 Personal computers, hardware structure**

Evidence shall show an understanding of personal computers, hardware structure to an extent indicated by the following aspects:

- a) Structure and components and their function

Note:

Examples include motherboards, memory modules, video modules, connecting buses, storage devices and the like.

- b) Assembling and dismantling techniques
- c) Hardware faults and troubleshooting techniques

Note:

Confined to subsystem level

- d) Basic network hardware and components
- e) Connection of network media
- f) Set up of standard network configuration

#### 2.4.12.1 Computer hardware sub-assemblies

Evidence shall show an understanding of computers, hardware components to an extent indicated by the following aspects:

- a) Sub-assemblies architecture and their function
- b) Sub-assemblies faults and troubleshooting techniques
- c) Repair techniques

#### 2.4.12.2 Multimedia computer components

Evidence shall show an understanding of computer multimedia subsystem components to an extent indicated by the following aspects:

- a) Multimedia subsystems

Note:

Examples include new multimedia standards, pixel resolution, scanning, resolution, output resolution, printer resolution, microprocessor speeds, INTEL INCOMP Index rating, cache memory speeds, system bus transfer speeds, configure a mother board, trouble shoot a mother board

- b) Multimedia storage devices

Note:

Examples include USB/flash, hard disk drive, multimedia storage devices, removable storage hard disk drive, CD-ROM/DVD drive, digital tape (DAT) drive

- c) Video cards, types and specifications

Note:

Examples include video processor, graphic processing, video RAM, bus interferences, resolution, full motion video, still image, driver software and updates

- d) Sound cards and sound card standards

Note:

Examples include MIDI interface, sound card applications, sound card connectors, FM synthesis, wave table, sound card file formats

- e) CD-ROM's, CD-ROM/DVD standards

Note:

Examples include CD-ROM/DVD cache memory, CD-compatible, CD/DVD drive transfer speeds, CD-ROM/DVD interfaces, photo CD/DVD compatible, CD/DVD recordable, multi-session compatible.

- f) Colour printers

Note:

Examples include types of colour printers, construction and operation, dot matrix, ink-jet, laser, dye sublimation.

- g) Colour scanners

Note:

Examples include types of scanners, construction and operation, drivers and scanning software

#### 2.4.13 Computer peripherals

Evidence shall show an understanding of computer peripherals to an extent indicated by the following aspects:

- a) Types and applications
- b) Operating principles
- c) Software (drivers) installation
- d) Network management of peripheral devices.

#### **2.4.14 Personal computer operating systems, basics**

Evidence shall show an understanding of personal computer operating systems to an extent indicated by the following aspects:

- a) Basic function, components and concepts.
- b) Operating systems in use.
- c) System installation and configuration

#### **2.4.15 Computer operating systems**

Evidence shall show an understanding of computer operating systems to an extent indicated by the following aspects:

- a) Operating system components and structure
  - Note:  
Examples include relevant versions of DOS, Windows and UNIX variants.
- b) System installation and configuration
  - Note:  
System installation includes drivers and internet access and simple networking
- c) File structure and management
- d) System tools
  - Note:  
Examples include control panels, wizards and the like
- e) Operating systems malfunctions and solutions
- f) Troubleshooting techniques.

#### **2.4.16 Personal computers, engineering applications software basic**

Evidence shall show an understanding of computers applications to an extent indicated by the following aspects:

- a) Application software types
  - Note:  
Examples include Apparatus set up and calibration, Electronic Design Automation system, Aided Design, Engineering data analysis software, Engineering modelling, Project management and the like.
- b) Configurations and preferences
- c) Use of particular software packages
  - Note:  
Examples include word processor, spreadsheet, database, presentation software, web/document publisher, CAD/drawing packages, email client, business management

#### **2.4.17 Servers**

Evidence shall show an understanding of Servers to an extent indicated by the following aspects:

- a) Types and applications
  - Note:  
Examples include redundant array of independent disks (RAID),
- b) Software installation and configuration
- c) Access and security
- d) Adding hardware and upgrading

#### **2.4.18 Business equipment software basics**

Evidence shall show an understanding of business equipment software to an extent indicated by the following aspects:

- a) Programming methods
- b) Configuration options
- c) Administration and maintenance functions

#### **2.4.19 Gaming equipment communications**

Evidence shall show an understanding of gaming equipment communications to an extent indicated by the following aspects:

- a) Online and stand alone systems
- b) Common gaming networks
- c) Linked jackpot networks
- d) Player tracking systems

#### **2.4.20 Programming elements**

Evidence shall show an understanding of the programming elements to an extent indicated by the following aspects:

- a) Algorithm Design encompassing:
  - o Problem Definition
  - o Steps in Problem-Solving
  - o Modular Design
  - o Top-Down Design
  - o Flow-Charts and Structured Programming
  - o Pseudo-Code
  - o Filtering allowable Data Input
  - o Using standard Input & Output methods
  - o Object-Oriented Design (brief intro.)
  - o Documentation Rationale
  - o Acceptable Documentation Method
- b) Machine-Code, Assemblers and Compilers
- c) Brief History of Languages & Limitations
- d) Parameters of different programming languages encompassing:
  - o Constants and variables
  - o Data types and declarations
  - o Logical flow control
  - o Detecting breaches of structure
  - o Documentation instruction examples
  - o Procedures and function calls
  - o Parameter-passing
  - o Local and global variables
  - o Object-oriented methods

- o Classes and objects,
  - o encapsulation and inheritance.
  - o Visual programming methods
  - o General-purpose program libraries
- e) Data structures encompassing:
- o Records
  - o Arrays
  - o File Input/Output
- f) Testing and validation encompassing:
- o Sequencing the process
  - o Inconsistencies detection
- Note,  
An examples is comparing code to documentation, commonly called “Desk-Checking’.
- o Test data selection
  - o Modular testing & debug
  - o Problems with using non-standard methods for data input and output.
  - o Common bugs

#### **2.4.21 Client side programming**

Evidence shall show an understanding of client side programming the to an extent indicated by the following aspects:

- a) Client server architecture
- b) Hyper Text Markup Language (HTML) encompassing:
- o Forms
  - o Table
  - o Cascading style sheets
- c) Hyper Text Markup Language (HTML) scripting encompassing:
- o Exposed object model
  - o Events and event handling
  - o Objects methods, properties, events
  - o Window, document, form, and form elements
  - o String object, methods, properties
  - o Form field validation
- Note:  
Examples of scripting language are JavaScript and Visual Basic (VB) Script
- d) Extendable Markup Language (XML) encompassing:
- o Syntax
  - o Structure (well formed XML)
  - o Schemas
  - o Transformations
  - o Parsing Document Object Model (DOM) and Simple API (SAX)
  - o Scripting to Document Object Model (DOM)
- e) Extendible Stylesheet Language (XSL) generating HTML from XML
- f) Wireless thin client programming
- Note.  
Examples include Java2 Micro Edition (JEME), Mobile Information Device Profile (MIDP), Windows CE and Palm OS

- g) Consideration for system architecture
- h) Configurations and profile overview

#### **2.4.22 Server scripting**

Evidence shall show an understanding of server scripting the to an extent indicated by the following aspects:

- a) Client server architecture
- b) Web and Application Servers
- c) Server scripting languages eg. JSP, ASP, PHP, Perl
- d) Server script Tags
- e) Integrating script with HTML
- f) Server script object model
- g) Request, Response, Session, Application
- h) Using server objects
- i) Server components
- j) Using components in server scripts
- k) Scope of server components eg. session, page, application
- l) Component get / set methods
- m) Deploying server components
- n) Advanced server scripting concepts

#### **2.4.23 Database access**

Evidence shall show an understanding of database access to an extent indicated by the following aspects:

- a) Relational Databases encompassing:
  - o Tables, keys, design rules and normalisation
  - o Database management utilities
    - Note.
    - Example include MSSQL, MYSQL and Access
- b) Structural query language (SQL) queries encompassing:
  - o Select, insert, update and delete processes
  - o Application of conditionals ‘where’, ‘distinct’ and ‘like’
  - o Create and dropping tables
- c) Data Base connectivity components encompassing:
  - o Drivers, data sources
  - o Database connectivity component loading
  - o Query connection and execution
  - o ResultSets / RecordSets
  - o Rows, columns, cursors, concurrency, pooling
  - o Iterating through ResultSets / RecordSets
    - Note.
    - Example include ODBC, JDBC, ADO

#### **2.4.24 Web applications and services**

Evidence shall show an understanding of web servers to an extent indicated by the following aspects:

- a) Comparison of HTTP servers and platforms  
Note.  
Examples include IIS and Apache
- b) Comparison of Application servers and platforms  
Note.  
Examples include J2EE / tomcat, .NET
- c) HTTP Servers encompassing:
  - o Installation requirements and methods
  - o Security configuration
  - o Content publishing and security
- d) WEB application technologies encompassing:
  - o Server installation and deployment
  - o Security
- e) Server scripting technologies encompassing:
  - o WEB application installation and deployment
  - o Application server administration
- f) Web services overview encompassing:
  - o WEB services XML, API, RPC
  - o XML API processing
  - o XML DOM
  - o SOAP (simple object access protocol)
  - o WEB Services Security

#### **2.4.25.1 Local area network fundamentals**

Evidence shall show an understanding of local area network fundamentals to an extent indicated by the following aspects:

- a) The OSI model for computer system interconnect
- b) General principle of Local Area Network (LAN) encompassing:
  - o benefits of a LAN.
  - o the elements of a LAN.
  - o the different types of network topology and their applications.
- c) Cabling and termination arrangements for a LAN system and define all the hardware requirements encompassing:
  - o Network standards:  
Note.  
Examples are 10/100 BASE T and 10/100 BASE F.
  - o Applications of different types of coaxial cable, twisted pair, optical fibre cable and microwave as the transmission medium for a LAN.
- d) Multiple access units and their function  
Note.  
Examples are hubs, switches, routers and the like
- e) LAN Standards  
Note.  
Examples are Ethernet (IEEE 802.3) Token Ring (IEEE 802.5).
- f) Basic principle of medium access methods such as polling, token passing and CSMA/CD.

- g) Current network operating systems available for establishing a LAN encompassing:
  - Network protocols
  - Concepts of TCP/IP addressing
  - Peer-to-peer and server based
  - Establishing workgroups.
  - File and device sharing
- h) Network hardware installation methods encompassing:
  - Installing network card
  - Installing hubs switches and routers
- i) Concepts and the hardware required for internet and worldwide web working LANs
- j) Network software installation and configuration methods encompassing:
  - Loading and configuring operating software
  - Installing and configuring the network card
  - Setting up user accounts and permissions
  - Establishing security
- k) Network testing and diagnostic tools and methods

#### 2.4.25.2 Network services design processes

Evidence shall show an understanding of network services processes to an extent indicated by the following aspects:

- a) Analysis of business requirements encompassing:
  - Existing and planned business model and organisational structure.
  - Factors impacting on the design
    - Note.
    - Examples include priorities, growth, growth strategy, regulatory framework, risk, and cost.
  - IT management structure
- b) Analysis of technical requirements encompassing:
  - Evaluation of the company's existing and planned technical and environment goals
    - Note.
    - Examples include company size, user and resource distribution, various site connectivity, bandwidth, service performance, availability and scalability, data and system access patterns, network roles and responsibilities and security considerations
  - Evaluation of the company's existing and planned technical and environment goals
    - Note.
    - Examples include current resources, services, network infrastructure, protocols and hosts, Transmission Control Protocol / Internet Protocol (TCP/IP), hardware, planned upgrades, support and network and systems management
  - Client access, end-user work needs and usage patterns
  - Disaster recovery requirements
- c) Design of a network infrastructure encompassing:
  - Network topology
  - TCP/IP networking strategy
    - Note.
    - Examples include Internet Protocol (IP) subnet requirements, addressing and implementation plan, measurement and optimisation of a TCP/IP design, software routing integration and TCP/IP Wide Area Network (WAN) integration.
  - Dynamic Host Configuration Protocol (DHCP) strategy
    - Note.
    - Examples include DHCP in a routed environment, an operating system remote locations

- service and measurement and optimisation of a DHCP infrastructure design
- o Name resolution services
  - Note.  
Examples include integrated Directory Name Service (DNS) and secure DNS, highly available DNS, DNS deployment strategy, other systems providing naming services such as Windows Internet Naming Services WINS and their secure naming services, deployment strategy and the measurement and optimisation of DNS and other naming services
- o Multi-protocol strategy
  - Note.  
Examples include Internetwork Packet Exchange / Sequenced Package Exchange (IPX/SPX) and Systems Network Architecture (SNA)
- o Distributed File Strategy
  - Note.  
Examples include placement of Dfs root and Dfs root replica strategy
- d) Design of internet connectivity encompassing:
  - o Internet and extranet access
  - o proxy server, firewall, routing and remote access, Network Address Translation, connection sharing, web sharing and web or mail server
  - o Load balancing strategy
- e) Wide Area Network (WAN) infrastructure encompassing:
  - o Dial-up remote access design
    - Note.  
Examples include routing and remote access and integration of Remote Authentication Dial-in User Service (RADIUS)
  - o Virtual Private Network (VPN) design
  - o Routing and Remote Access design incorporating demand dial strategy
- f) Design of a management and implementation strategy encompassing:
  - o Management strategy
    - Note.  
Examples include strategy for monitoring and managing network services such as global catalogue, lightweight Directory Access Protocol, Services, Certificate Services, DNS, DHCP, WINS, Routing and Remote Access, Proxy Server and Dfs
  - o Network services that support application architecture
  - o Interaction between network services and DNS, DHCP and WINS
  - o Resource strategy

#### 2.4.26 Network services management processes

Evidence shall show an understanding of network services management processes to an extent indicated by the following aspects:

- a) Management of print, file and web resources encompassing:
  - o Directory services
    - Note.  
Examples include publishing resources, performing searches and configuring a printer object
  - o Data storage
    - Note.  
Examples include NTFS and FAT file systems eg New Technology File Systems (NTFS) and File Allocation Table (FAT), quotas, Encrypting File Systems, configuring volumes and basic and dynamic disks, file and folder permissions and compression and domain-based distributed file systems
  - o Shared resources
    - Note.

Examples include folders, web sharing, folder permissions, printers and printer permissions

- Internet Information Services

Note.

Examples include configuring virtual directories and servers, internet and intranet browsing, authentication and Secure Sockets Layer (SSL), File Transfer Protocol (FTP) services and access permissions for intranet server

- Network security

Note.

Examples include user account lockout settings, password management, Group Policy to run logon scripts and link objects, auditing and security log file

b) Troubleshooting the network infrastructure

- Routing

Note.

Examples include using the tracert, route, arp, ping, pathping and ipconfig utilities

- Transmission Control Protocol / Internet Protocol (TCP/IP)

Note.

Examples include configuring TCP/IP properties, using the winipcfg, ipconfig and arp commands and connectivity using ping

- DHCP

Note.

Examples include unauthorised DHCP servers detection, DHCP authorisation, dynamic IP addressing, configuring DHCP properties and creating configuring a DHCP scope

- Domain Name Service (DNS)

Note.

Examples include configuring DNS server properties, managing DNS database records such as CNAME, A and PTR and creating and configuring DNS zones

- Name resolution using nbtstat, ipconfig, nslookup and netdiag commands, Host file and Lmhost files creation and configuration.

c) Troubleshooting Servers encompassing:

- Installation and configuring of server and client computer hardware

Note.

Examples include hardware compatibility using qualifies tools, driver signing options, digital signatures on driver files and systems support for legacy hardware devices

- Starting servers and client computers including, Safe Mode, Recovery Console, parallel installations, startup log file, repairing operating systems using startup options, recovery console, recovering data from hard disk and restoring from back up

- Use of System Monitor, Event Viewer and Task Manager

- Updates

Note.

Examples include service packs, hot fixes and security hot fixes

d) Directory service infrastructure encompassing:

Note.

Examples of directory service infrastructure are Active Directory, Organisational Units and Group Policy

- Creation, management and troubleshooting of User and Group objects

Note.

Examples include computer accounts, groups configuring accounts via a directory service, searching for objects, use of templates for creating user accounts and resetting accounts

- Managing objects and container permissions

Note.

Examples include Delegation of Control Wizard and active control lists.

- Diagnosis of directory service replication problems

Note.

Examples include those related to Wide Area Network (WAN) link connectivity,

- replication, latency, duplicate objects and LostandFound container
  - Group Policy
    - Note.
    - Examples include deploying software, Windows Installer, updates and assigning and publishing applications
  - Troubleshooting End-User Group Policy
    - Note.
    - Examples include problems involving precedence, inheritance, filtering and NO Override option and manual refreshing of Group Policy
  - Implementation and management of security through Group Policy
    - Note.
    - Examples include security templates, seccedit commands, Security Configuration and Analysis and modification of domain security policy to comply with corporate standards
- e) Remote Access encompassing:
- Configuration, management and troubleshooting remote access and VPN connections
    - Note.
    - Examples include protocols such as client to client Point to Point Tunnelling Protocol (PPTP) and Layer Two Tunnelling Protocol (L2TP) connections, verification of security of VPN connections, configuration of client computer remote access properties, name resolution and IP address allocation.
  - Troubleshooting remote access policy
    - Note.
    - Examples include diagnosis of problems with remote access policy priority, user account, group membership and nested groups, creation and configuration of remote access policies and profiles and selection of encryption and authentication protocols
  - Implementation and troubleshooting of Terminal Services for remote access
    - Note.
    - Examples include configuring Terminal Services for remote administration or application server mode and local resource mapping and user properties
  - Configuring and troubleshooting Network Address Translation (NAT)
    - Note.
    - Examples include configuration of routing and remote access to perform NAT and troubleshooting Internet Connection Sharing problems by using the ipconfig and ping commands.

#### 2.4.27.1 Unix fundamentals

Evidence shall show an understanding of Unix fundamentals to an extent indicated by the following aspects:

- a) UNIX operating systems encompassing:
- Overview of basic function, components and concepts of computer systems and operating systems
  - History of UNIX and flavours of UNIX
  - UNIX administrators role
- b) Accessing UNIX and common desktop environment encompassing:
- User Accounts
  - Desktop environment
  - Customising using Style Manager
  - Sub-panels
- c) Graphical User Interface (GUI) Applications encompassing:
- Using Mail Tool, Calendar Manager and other applications
  - Using GUI help and other help systems
  - Troubleshooting

- d) Accessing files and directories encompassing:
  - File system structure and navigation
  - Pathnames
  - Listing directory contents
  - Identifying and using meta-characters
- e) Directory and file management encompassing:
  - Using Command Line
  - Using File Manager
- f) File and user information utilities encompassing:
  - File systems
  - File processing commands
  - Users
  - Scripting
- g) File security encompassing:
  - Overview of security concepts and functions
  - Permissions
  - Changing permissions with Command Line and File Manager
- h) Printing encompassing:
  - Command line printing
  - Print manager, print status and queue
  - Printing from File Manager
- i) Backup and restoring data encompassing:
  - Overview of back up and restoring strategies
  - Using tar utility to perform file storage
  - Compression tools
  - Using jar command
  - GUI backup tools
- j) System processes and memory management encompassing:
  - Processes and PIDs
  - Terminating a process
  - Memory management
- k) Korn and C Shells encompassing:
  - Overview of shell
  - Korn Shell features
  - C Shell Features
  - Shell Feature Comparison
- l) Customisation encompassing:
  - Overview of customisation
  - Initialisation files
  - Shell customisation
  - GUI customisation
- m) Network Basics encompassing:
  - Client – Server
  - Network commands
  - NIS+ and NFS+

### 2.4.27.2 Linux fundamentals

Evidence shall show an understanding of Linux fundamentals to an extent indicated by the following aspects:

- a) Linux operating systems encompassing:
  - o System Installation
  - o Examining and recording hardware details
  - o Disk partitioning
  - o Standalone installation from a CDROM
  - o Multi-boot installation and boot managers
  - o Network installation
- b) Work on the command line
  - o Using a shell
  - o Navigating and managing the filesystem
  - o Streams, pipes and redirects
  - o Manipulating text and basic regexes
  - o Text editors
  - o Managing and monitoring processes
- c) Networking
  - o Setup a host to connect to a LAN
  - o Use command line network tools
  - o Use networking protocols to connect to other hosts on the LAN—ssh, ftp, telnet, talk, finger etc.
  - o Share files over the network using nfs.
  - o Running X over a network
- d) X window system
  - o X configuration
  - o Window manager configuration
  - o Configuring and using a display manager
  - o Using X over a network
- e) Using Applications
  - o Installing applications using a package manager installing software from source tarballs
  - o Using command line applications
  - o Using GUI applications
- f) Installing and managing server software
  - o Setting up servers for a variety of protocols
  - o Managing access to servers

### 2.4.27.3 Mac OSX fundamentals

Evidence shall show an understanding of Mac OSX fundamentals to an extent indicated by the following aspects:

- a) Mac OSX operating systems encompassing:
  - o System structure and component functions
  - o System Installation
  - o Setting user preferences

- b) Security encompassing:
  - o Setting up multiple user accounts
  - o Role and function of Keychain
- c) Networking/internet set up procedures
- d) Installing applications software
- e) Installing and managing server software encompassing:
  - o Setting up servers for a variety of protocols
  - o Managing access
- f) Using 'Terminal'

#### 2.4.28 Network operating systems essentials

Evidence shall show an understanding of network operating systems to an extent indicated by the following aspects:

- a) Installation of a personal computer operating system encompassing:
  - o Attended and unattended installation
  - o Server Remote Installation Services
  - o System preparation tool
  - o Use of attended answer files created using Set-up Manager
  - o Upgrading from previous versions of operating systems
  - o Applying update packs and deploying service packs
  - o Failed installations troubleshooting techniques
- b) Personal computer operating system administration encompassing:
  - o File compression
  - o Permissions
  - o File and folder optimisation
  - o Shared folders and web server resources
  - o Printers and print jobs
  - o File system configuration and management
- c) Installation, configuration, management and troubleshooting of hardware devices encompassing:
  - o Disk devices
  - o Removable media devices
  - o Display devices
  - o Mobile computing hardware
  - o Multiple processing units
  - o Network adaptors
- d) Installation, configuration, management and troubleshooting of input / output devices encompassing:
  - o Printers, scanners keyboard, smart card and the like
  - o Multimedia hardware
  - o Modems
  - o Devices connected by differing media
    - Note.
    - Examples are wireless, USB and Firewire.
- e) Managing and troubleshooting system performance and reliability encompassing:
  - o Driver signing

- Task scheduler
  - Offline file synchronisation
  - Optimising memory, processor utilisation, disk, network and application performance
  - Hardware profiles
  - Backing up and restoring data
  - Safe mode and recovery console
- f) Configuring and troubleshooting the desktop environment encompassing:
- Multiple users
  - Multiple languages and locations
  - Configuring local settings
  - Managing applications using installer packages
  - Desktop settings
  - Fax support and accessibility services
- g) Network Protocols and Services encompassing:
- Transmission Control Protocol / Internet Protocol (TCP/IP)
  - Connecting computers by a virtual private network (VPN) connection
  - Dial up connection to remote access server
  - Connecting to the internet
  - Managing internet connection sharing
  - Connecting shared resources on a network
- h) Implementing, monitoring, managing and troubleshooting security encompassing:
- Data encryption using Encrypting File System
  - Local security policy
  - Local user accounts
- Note.  
Examples are audits, creating accounts, account settings, user rights and policy
- User authentication
  - Security configuration

## 2.4.29 Network operating systems implementation

Evidence shall show an understanding of implementing network operating systems to an extent indicated by the following aspects:

- a) Installation of server software encompassing:
- Attended and unattended installation
  - Server Remote Installation Services
  - System Preparation Tool
  - Use of attended answer files created using Set-up Manager
  - Upgrading servers from previous versions of the operating system
  - Applying update packs and deploying service packs
  - Failed installations troubleshooting techniques
- b) Installing, configuring and troubleshooting access to resources encompassing:
- Network services
  - Printers
  - Files and folders
  - Standalone and domain based Distributed File System

- File and folder security
- Web access to files and folders
- Access to internet
- c) Configuration and troubleshooting of hardware devices and drivers encompassing:
  - Hardware devices
  - Driver signing options
  - Updating drivers
- d) Managing and troubleshooting system performance, availability and reliability encompassing:
  - Monitoring and optimising systems resources
  - Managing process
  - Optimising disk performance, systems state data and user data
  - Backing up and restoring data
  - Safe mode and Recovery Console
- e) Managing, configuring and troubleshooting the storage encompassing:
  - Disks and volumes
  - Data compression
  - Monitoring and configuring disk quotas
  - Disk failure and recovery
- f) Installation, configuration and troubleshooting network connections encompassing:
  - Shared access
  - Connecting computers by a virtual private network (VPN) connection
  - Network protocols and services
  - Remote access connection, policy and access profile
  - Terminal services
    - Note.
    - Examples include remote administration and application configuration and sharing
  - Network adaptors and drivers
- g) Implementing, monitoring, managing and troubleshooting security encompassing:
  - Data encryption using Encrypting File System
  - Local and systems security policy
  - Accounts
    - Note.
    - Examples include audits, creating accounts and account policy
  - Security Configuration Tool Set

#### 2.4.30 Network infrastructure

Evidence shall show an understanding of network infrastructure to an extent indicated by the following aspects:

- a) Domain Name Service (DNS) encompassing:
  - DNS Server Service
  - Root name server
  - Configuring zones
    - Note.
    - Examples include configuring for dynamic updates and delegating zone for DNS
  - Caching – only server
  - DNS client

- Testing DNS Server service
- Manually creating DNS source
- Managing and monitoring DNS
- b) Dynamic Host Configuration Protocol (DHCP)
  - Installation of DHCP Server Service
  - DHCP scopes, superscopes and multicast scopes
  - DHCP – DNS integration
  - Active Directory™
  - Managing and monitoring DHCP
- c) Network Infrastructure encompassing:
  - Configuring and troubleshooting remote access
    - Note.
    - Examples include remote access policy, configuration of remote access profile, Virtual Private Network (VPN), multi link connection, routing and remote access for DHCP
  - Managing and monitoring remote access
  - Remote access security
    - Note.
    - Examples include authentication protocols, encryption protocols and access policy
- d) Network Protocols encompassing:
  - Installation, configuration and troubleshooting of network protocols
    - Note.
    - Examples include Transmission Control Protocol / Internet Protocol (TCP/IP), NWLink and network bindings
  - Configure TCP/IP packets
  - Configuring and troubleshooting network protocol security and IP Security (IPSec)
  - Managing and monitoring network traffic
- e) Internet Naming Services in a network encompassing:
  - Installation, configuring and troubleshooting
  - Configuring Internet Naming Services replication
  - Configuring an application networking interface
  - Managing and monitoring Internet Naming Services
- f) IP Routing encompassing:
  - Installation, configuring and troubleshooting of IP routing protocols
    - Note.
    - This includes updating routing tables, and implementing demand-dial routing
  - Managing and monitoring IP routing
    - Note.
    - This includes border routing, internal routing and IP routing protocols
- g) Network Address Translation (NAT) encompassing:
  - Installing Internet connection sharing
  - Installing NAT
  - Configure NAT properties and interfaces
- h) Certificate Services encompassing:
  - Installing and configuring Certificate Authority
  - Issuing and revoking certificates
  - Removing the Encrypted File System recovery keys

### 2.4.31 Directory services

Evidence shall show an understanding of directory services to an extent indicated by the following aspects:

- a) Installing and configuring directory services encompassing:
  - Installing forests, trees and domains including automatic domain controller
  - Creating sites, subnets, site links and connection objects
  - Configuring server objects including site membership and global catalogue designation
  - Transferring of operations master roles
  - Verification and troubleshooting of directory services installation
  - Implementation of and organisational unit structure
- b) Domain Name Service (DNS) for directory services encompassing:
  - Installation and configuration of DNS for directory services
    - Note.
    - Examples are integration with existing DNS infrastructure, configuration of zones for dynamic and secure dynamic updates and creation and configuration of DNS records
  - Management, monitoring and troubleshooting of DNS
- c) Change and Configuration Management encompassing:
  - Implementing and troubleshooting Group Policy
    - Note.
    - Examples are Group Policy Object (GPO), linking to an existing GPO, delegation of administrative control of Group Policy, filtering of Group Policy settings by using security groups and modification of Group Policy prioritisation
  - Managing and troubleshooting user environments using Group Policy
  - Configuring directory services to support Remote Installation Services (RIS) including configuration of RIS options and security.
- d) Components of a directory service infrastructure encompassing:
  - Management of directory objects
    - Note.
    - Examples are moving objects, publishing resources in the directory service infrastructure, location of objects in the directory service infrastructure, creation and management of objects manually and by scripting, access control of objects and delegation of administrative control
  - Monitoring, optimisation and troubleshooting of the directory services infrastructure performance and replication
  - Backup and restoring directory services infrastructure
    - Note.
    - Examples are authoritative and non authoritative restoration of directory services, restoration from systems failure and the seizing of operations master roles
- e) Security encompassing:
  - Applying security policies using Group Policy
  - Creating, analysing and security modification by using Security Configuration and Analysis snap-in and the Security Templates snap-in
  - Implementation of an audit policy
- f) Monitoring and analysing security events

### 2.4.32 Operating systems and networks fundamentals

Evidence shall show an understanding of fundamentals of operating systems and networks to an extent indicated by the following aspects:

- a) Operating system fundamentals encompassing:
  - Operating systems basics

- Operating systems in current use
- Network operating systems
- b) Networking fundamentals encompassing:
  - Benefits of networking
  - Types of networks
  - Networking standards and protocols
  - Local Area Network (LAN) architecture
- c) Physical components of a network encompassing:
  - Network Interface Cards
  - Topologies
  - Physical media types
  - Network devices
  - Wide Area Networks (WANs)
- d) Transmission Control Protocol / Internet Protocol (TCP / IP) encompassing:
  - TCP/IP fundamentals
  - IP Addressing
  - Name resolution
  - TCP/IP Protocols
- e) Network Services encompassing:
  - Network services fundamentals
  - Remote administration and access services
  - Directory services
  - Other network services
- f) Network Operating Systems encompassing:
  - Systems fundamentals
  - Types of network operating systems in current use
  - Software requirements
- g) Installation and boot processes encompassing:
  - Preparation for installation
  - Installing operating system
  - Booting operating system
  - Troubleshooting installation

### 2.4.33 Operating systems and networks

Evidence shall show an understanding of operating systems and networks to an extent indicated by the following aspects:

- a) Operating systems encompassing:
  - Operating systems installation and configuration
  - Administration and user interface
  - User accounts and group accounts
  - Managing the file system
  - Services and services management
  - Servers
  - Post – installation configuration and tasks
  - Daemons

- Network operating systems
  - Note.
  - Examples of operating systems are current iteration of Windows, OS/2, Unix variants such as Linux and Mac OS X and the like.
- b) Networking Operating Systems Administration encompassing:
  - Backups
  - Drive mapping
  - Partition and process management
  - Server Resources
  - Network performance monitoring and optimisation
- c) Installing and maintaining hardware encompassing:
  - Hardware terms, concepts and components
  - Hardware installation, configuration, and maintenance
  - Checking hardware configuration
  - Diagnosing and troubleshooting devices
  - Laptop and mobile devices
- d) Troubleshooting operating systems encompassing:
  - Identifying and locating symptoms and problems
  - Boot errors
  - Error recognition
  - Troubleshooting network problems
  - Disaster recovery
- e) Network Security encompassing:
  - Developing a network security policy
  - Threats to network security
  - Implementing security measures
  - Network operating system patches
  - Firewalls

#### 2.4.34 Routing methods and protocols

Evidence shall show an understanding of routing methods and protocols to an extent indicated by the following aspects:

- a) The Routing Process
  - Routing table establishment
  - Routing advertisement methods
- b) Scalable Internet Protocol (IP) addresses encompassing:
  - Scaling with IPv4
  - Variable Length subnet Mask (VLSM) and supernetting
  - IPv6
  - Network Address Translation (NAT) and Port Address Translation (PAT)
- c) Routing protocols in current use.
  - Note.
  - 1. Examples include Routing Information Protocol (RIPv2), Enhanced Interior Gateway Protocol (EIGRP), Open Shortest Path First (OSPF) covering single, multi and NBMA areas and Virtual links, OD Rights Language (ODRL), Border Gateway Protocols (BGP) covering applications, communities, peer groups and route reflectors.
  - 2. Other relevant routing protocols may be included.
- d) Multi-protocol routing encompassing:

- o Static and floating static routes
- o Route optimisation
- o Route redistribution
- o Route filtering

e) Default route

#### **2.4.35 Networks, remote access**

Evidence shall show an understanding of remote access to networks to an extent indicated by the following aspects:

- a) Network devices and feature sets used for remote access networks encompassing:
  - o Typical Wide Area Networks (WAN) service.
  - o Devices for interfacing to WAN services
  - o Features of WAN services
  - o Required network device feature sets for effective WAN connectivity
- b) Asynchronous On-Demand WAN services encompassing:
  - o Asynchronous vs synchronous services.
  - o Configuring asynchronous Connections with modems
  - o Interfacing hosts and modems
  - o Configuring Point-to-point Protocols (PPP) and related network access with Password Authentication Protocols (PAP) and Challenge Hand Shake Authentication Protocols (CHAP)
- c) Synchronous and leased WAN connectivity encompassing:
  - o Current industry-standard WAN services
    - Note.
    - Examples include X.25, ISDN and Frame Relay
  - o Configuring remote connections
  - o Configuring dial-on-demand routing.
  - o Traffic Flow
  - o Configuring backup links
  - o Managing network performance with queuing and compression
- d) Scaling remote access networks with Network Address Translation (NAT) and Port Address Translation (PAT)
- e) Controlling corporate network access
  - o Router-based access control (like access-control lists, reflexive access control, context-bases access control)
  - o Configuring access, authentication and accounting control systems using current current industry standard tools.
    - Note.
    - Example of current industry standard tools is Remote Authentication Dial-In User Service (RADIUS)
- f) Troubleshooting the remote access network.

#### **2.4.36 Multi-layer switched networks**

Evidence shall show an understanding of multi-layer switched networks to an extent indicated by the following aspects:

- a) Campus network design encompassing:

- core layer
  - distribution layer
  - access layer
  - selection of appropriate devices
  - defining workgroups
- b) Managing Redundant Links encompassing:
- Spanning Tree Protocol (STP)
  - Controlling STP in redundant environments
  - STP in Virtual Local Area Network (VLAN) environments
  - Configuring redundant routing protocols for a fault-tolerant routing
- Note.  
An example is Hot Standby routing protocol (HSRP)
- c) Fast layer 2 services encompassing:
- Fast Ethernet
  - Trunking
  - Fast Ether channels
  - Gigabit services
- d) Inter VLAN Routing encompassing:
- Hardware vs Software switching
  - Overview of fast switching technologies
  - Elements of a multi-layer switch
  - Configuring multi-layer switches
- e) Multicast encompassing:
- Multi-cast group management
  - Configuring multi-cast control at layer 2
  - Configuring multi-cast control at layer 3
- f) Controlling Access to the Campus Network
- g) Managing Network Traffic

### **2.4.37 Fundamentals of network security**

Evidence shall show an understanding of fundamentals of network security to an extent indicated by the following aspects:

- a) Network Security fundamentals
- b) Securing the Perimeter Router
- c) Access Control Lists (ACLs)
- d) Router Authentication, Authorisation and Accounting (AAA) Security
- e) Intrusion Detection
- f) Internet Protocol (IP) Security
- g) Easy Virtual Private Network (VPN)
- h) Private Internet Exchange (PIX) Firewall
- i) Translations and Connections
- j) Access Control Lists for the PIX Firewall
- k) AAA on PIX Firewalls
- l) PIX Intrusion
- m) Intrusion Detection System (IDS)
- n) PIX Failover and System Maintenance

- o) PIX VPN
- p) PIX Device Manager

#### **2.4.38 Fundamentals of wireless security**

Evidence shall show an understanding of fundamentals of wireless security to an extent indicated by the following aspects:

- a) Standards and Network Interface Cards (NICs)
- b) Wireless radio technology
- c) Wireless topologies
- d) Access points
- e) Bridges
- f) Antennas
- g) Security
- h) Application design and site survey preparation
- i) Troubleshooting, management, monitoring and diagnostics
- j) Emerging technologies

#### **2.4.39 Internet, network basics**

Evidence shall show an understanding of network basics to an extent indicated by the following aspects:

- a) Workstation Configuration
- b) The function and interaction of workstation sub systems encompassing:
  - o Outline of network-aware operating systems
  - o Workstation network hardware
  - o Basic networking terminology
  - o IP configuration
  - o Browser configuration
  - o Digital bandwidth and data throughput
- c) The OSI Model encompassing:
  - o The OSI Reference Model
  - o Encapsulation
  - o The TCP/IP reference model
  - o TCP/IP protocols
  - o Comparison of the Open Systems Interconnection (OSI) model and the TCP/IP model
- d) Network Devices encompassing:
  - o Basic Local Area Network (LAN) Devices
    - Note.
    - Examples include repeaters, hubs, bridges, switches, routers, clouds, network segments
  - o Basics of data flow through LANs
  - o Operating system network configuration and diagnosis tools
- e) The Physical Layer encompassing:
  - o Most Common LAN Media (STP, UTP, Coax, Optical fibre)
  - o Wireless communication
  - o Cable Specification and Termination

- TIA/EIA standards
- Testing Cables
- Features of an advanced cable tester
- Advanced cable tester
- Jacks and Patch panels
- OSI Layer 1 components and devices:
  - Transceivers
  - Repeaters
  - Multi-port repeaters (hubs)
- Collisions and Collision Domains in Shared Layer Environments
- Basic Topologies Used in Networking
  - Note.
  - Examples include Linear bus, Ring, Dual ring, Star, Extended star, Tree, Irregular, Complete (mesh) and Cellular network topologies
- f) The Data Link Layer encompassing:
  - Comparing OSI Layer 1 and 2 with various LAN standards
  - Comparing the IEEE model with the OSI model
  - Logical Link Control (LLC)
  - Media Access Control (MAC) sub-layers
  - Converting between decimal and hexadecimal numbers
  - MAC Addressing
  - Framing
  - Media Access Control (MAC) and various implementations
- g) Layer 2 Trouble Shooting encompassing:
  - Basics of Token Ring
  - Basics of Fibre Distributed Data Interface (FDDI)
  - Ethernet and IEEE 802.3
  - Layer 2 Devices (NICs, Bridges, Switches)
  - Effects of Layer 2 Devices on Data Flow
  - Basic Ethernet Troubleshooting
  - Network discovery tools and their use
- h) IP Design encompassing:
  - Autonomous systems
  - Path Determination
  - Comparing flat and hierarchical addressing
  - IP Address Classes
  - Reserved Address Space
  - Basics of Sub-netting and Creating Subnets:
    - Determining subnet mask size
    - Computing hosts per sub-network
  - IP configuration on a network diagram
  - Host/subnet schemes
  - Private addresses
- i) The Network Layer encompassing:
  - Router interfaces/ports
  - DHCP initialisation sequence
  - Function of the address resolution protocol (ARP) within a subnet

- Indirect Routing
  - Proxy ARP
  - Viewing and interpreting ARP tables
  - Routable and non-Routable Protocols
  - Overview of Routing Protocols (e.g. RIP, IGRP, EIGRP, OSPF)
  - Routing encapsulation sequence
  - Multi-protocol routing
  - Connectionless and Connection-oriented network services
  - IP and transport layer
  - Static routing and dynamic routing
  - Protocol Analyser Software
- j) The Transport Layer encompassing:
- Purpose of the transport layer
  - Comparing TCP and IP
  - TCP and UDP
  - TCP segment format
  - UDP segment format
  - TCP Connection Methods
  - Examining and interpreting layer 4 traffic using an analyser
- k) The Session Layer encompassing:
- Session layer overview
  - Dialogue control
  - Dialogue separation
  - Layer 5 protocols
- l) The Presentation Layer encompassing:
- Presentation layer functions and standards
  - File formats
  - Data encryption and compression
- m) The Application Layer encompassing:
- Application processes
  - Direct and indirect network applications
  - Making and breaking a connection
  - Domain Name System
  - Network Applications Services

#### **2.4.40 Internet, network routing**

Evidence shall show an understanding of network routing to an extent indicated by the following aspects:

- a) Subnetting encompassing:
- The purpose of IP address
  - The role of host address on a routed network
  - The role of broadcast addresses on a routed network
  - Calculating sub-net addresses
  - Calculating host addresses on a sub-netted network
  - Calculating the sub-net mask

- Reserved addresses and reserved sub-nets
- b) Layer 3 and 4 Protocols encompassing:
  - Compare the Internet TCP/IP protocols and the OSI model
  - TCP and UDP operation and segment format
  - TCP and UDP port numbers
  - The Internet Layer and IP datagrams
- c) Routing encompassing:
  - Path determination
  - Routed versus routing protocol
  - Network-layer protocol operations
  - Multi-protocol routing
  - Static and dynamic routes
  - Applications of static routing
  - Default routes
  - Dynamic routing operations
  - Network metrics
  - Time to convergence
  - Distance-Vector Routing
  - Routing loops, their cause and control
  - Link-State Routing
  - Unsynchronised link-state advertisements (LSAs) problems
  - Hybrid routing protocols
  - LAN-to-LAN routing
  - LAN-to-WAN routing
  - Path selection and switching of multiple protocols and media
- d) Basic Router Configuration encompassing:
  - WAN standards, devices and technologies
  - Router functions
  - Router user interface
  - Router access modes
  - Help functions
  - Editing functions
  - Router programming modes
  - Basic router interface configuration
  - Basic routing configuration
  - Basic router diagnostic commands
- e) Neighbour Discovery Techniques encompassing:
  - Examining router status using diagnostic commands (e.g. show and debug commands)
  - Using and interpreting a router's neighbour discovery features (e.g. CDP neighbour commands)
  - Basic networking testing using ping and trace route commands
  - Checking real-time traffic with debug
  - Operating telnet sessions to explore other routers
  - Setting router names to enable the identification of routers when telneting
  - Setting passwords and names to provide access for telnet sessions
- f) Router Security encompassing:

- Router entry points
- Basic line and user security features of a router
- Setting up the router web interface
- Browsing to a router
- g) Router Boot Sequence encompassing:
  - Functional components of a router
  - Internal router's configuration components
  - External router configuration sources
  - Router booting modes
  - Configuration and systems files
  - Router boot sequence
  - Varying boot sequence through the configuration register
  - Varying the boot sequence through software commands (e.g. boot system commands)
  - Basic features of a deployment tool like ConfigMaker
  - Configuration practice
  - Web server set up
- h) IOS Management encompassing:
  - Locating the Cisco IOS software
  - Configuration register values
  - Commands for revealing system file status and requirements
  - Bootstrap Options in Software
  - TFTP server set up and operation
  - Procedures for TFTP transfer of router IOS
  - Back up and recover router IOS
  - Sources and versions of router IOS from vendor
  - Up date a router IOS
  - Vendor IOS installation tools
- i) Password Recovery encompassing:
  - Modifying the boot sequence to gain entry to a protected router (egg 1600 series and 2500 series)
  - Re-configuring the router after entry with and without loss of previous configuration
- j) DNS Configuration encompassing:
  - The Role of DNS in Router Configurations
  - Setting up DNS on a router
  - Verifying DNS operation
- k) Troubleshooting encompassing:
  - Typical layer 1 errors
  - Typical layer 2 errors
  - Typical layer 3 errors
  - Network troubleshooting strategies

#### **2.4.41 Internet, local area networking**

Evidence shall show an understanding of local area networking to an extent indicated by the following aspects:

- a) Basic Switch Configuration encompassing:
  - Factors that impact on network performance
  - Network segmentation using repeaters
  - Full-Duplex, Fast Ethernet Standard and LAN Segmentation
  - LAN segmentation with bridges
  - Pros and cons of LAN segmentation with switches
  - Microsegmentation
  - How a switch learns addresses
  - Benefits of LAN switching
  - Symmetric and asymmetric switching
  - Cut-through, fast-forward and store-and-forward switching
  - An overview of the Spanning-Tree Protocol
- b) Basic VLAN Configuration encompassing:
  - Differences between traditional switched LAN and VLANs
  - Benefits of VLANs
  - The transport of VLANs across backbones
  - The role of routers in VLANs
  - Port-centric VLANs
  - Static VLANs
  - Dynamic VLANs
  - Configuring VLANs
  - Telnetting and browsing to switches
  - Updating IOS on a switch
  - Configuring VLAN trunking
- c) VLAN Design encompassing:
  - VLAN Design Goals and Components
  - Critical components of LAN Design
  - Network Design Methodology
  - Layer 1 Design
  - Layer 2 Design
  - Layer 3 Design
  - Network documentation
  - Network documentation tools
- d) IGRP Configuration encompassing:
  - The operation of routing tables
  - The role of metrics
  - Multi-protocol routing
  - Static and dynamic routing
  - Classifications of routing protocols
  - Interior, system, and exterior routes
  - Routing configuration commands
  - Metric adjustment
  - Route prediction
  - Routing table display and interpretation
- e) Access Lists encompassing:
  - Reasons to create ACLs

- Flowchart of the ACL test matching process
  - Standard ACLs
  - Extended ACLs
  - Named ACLs
  - Using ACLs with protocols
  - Adding and removing ACLs
  - Modifying ACLs
  - Applying ACLs
  - Verifying ACLs
- f) Internet Packet eXchange protocol (IPX) encompassing:
- Protocols suite features and addresses
  - Novell Encapsulation
  - The IOS encapsulation names for Ethernet, FDDI, and Token Ring
  - Novell Routing
  - Service advertising protocol
  - Get nearest server protocol
  - Novell IPX Configuration
  - Monitoring and Managing an IPX Network
  - Using the IPX ping command
- g) Network Documentation encompassing:
- Elements of Network Documentation
  - Cut sheet diagrams
  - MDF and IDF layouts
  - Server and workstation configuration details
  - Software listings
  - Maintenance records
  - Security measures
  - User policies
  - Software tools for documentation
- h) Network Security encompassing:
- Network security issues
  - Network access
  - Data recovery
  - Back up operations
  - Redundancy techniques
- i) Network Risk Management encompassing:
- Environmental hazards (Static, Dust and Dirt, Heat )
  - Power conditioning
  - EMI and RFI
  - Software Viruses
- Note.  
Types include Worms Viruses and Trojan Horses
- j) Network Performance Assessment encompassing:
- Network baseline, updates and change verification
- k) Network Structures encompassing:
- Peer-to-Peer
  - Client-Server

- Network control
- 1) Design Report Presentation encompassing:
  - LAN design examples
  - Examining specifications (a WAN and a set of LANs; one LAN per group)
  - Designing a LAN IP scheme
  - Designing a WAN IP scheme

#### 2.4.42 Internet, wide area networking

Evidence shall show an understanding of wide area networking to an extent indicated by the following aspects:

- a) Wide Area Networks (WANs) encompassing:
  - WAN services
  - WAN terminology
  - Virtual circuits
  - WAN Devices  
(Routers, WAN switches, CSU/DSU, TAs, TNs, etc)
  - WAN and the OSI Model
  - WAN Encapsulation Formats
  - WAN Link Options
- b) WAN Design encompassing:
  - WAN design requirements
  - LAN/WAN integration issues
  - The First Steps in WAN Design
  - The three hierarchical WAN design layers
  - One-layer network designs
  - Two-layer network designs
  - The benefits of hierarchical WAN designs
  - Server placement in WANs
  - Alternatives to dedicated WAN links
- c) Serial Line protocols encompassing:
  - Point-to-Point Protocols (PPP) components, layer functions and session establishment
  - PPP Authentication
    - Note.
    - Authentication includes Password Authentication Protocols (PAP) and Challenge Hand Shake Authentication Protocols (CHAP) (PAP and CHAP)
  - Steps to configure PPP authentication
  - Steps to configure CHAP authentication
- d) Integrated Services Digital Network (ISDN) encompassing:
  - Basic ISDN components
  - ISDN reference points
  - ISDN switches and SPIDs
  - E, I, and Q ISDN protocols
  - ISDN and the OSI Reference Model
  - ISDN encapsulation
  - ISDN Uses

- BRI and PRI
  - ISDN Configuration Tasks
  - Confirming BRI operations
  - Dial-on-Demand Routing
  - DDR considerations
  - Configuring DDR
  - Verifying DDR operation
  - Troubleshooting DDR operation
- e) Frame Relay encompassing:
- Frame Relay Technology
    - Note.  
This includes Local access rate, DLCI, LMI, CIR, committed burst, excess burst, FECN, BECN, and DE)
  - Frame relay operation
  - Frame relay frame format
  - LMI Features
  - Frame relay mapping
  - Frame relay switching tables
  - Frame Relay Sub interfaces
  - Split horizon routing environments
  - Resolution of point-to-point and multipoint reachability issues
  - Configuration of Basic Frame Relay
  - Verifying frame relay operation
  - Configuring frame relay sub interfaces
- f) Network Management encompassing:
- The Administrative Side of Network Management:
    - What does a network look like?
    - Understanding and establishing the boundaries of the network
    - Costs of a network
    - Error report documentation
  - Monitoring the Network:
    - Reasons monitor a network
    - Connection monitoring
    - Traffic monitoring
  - Simple network management protocol
  - Remote monitoring (RMON)
  - Networks troubleshooting software tools

#### **2.4.43.1 Object orientated programming basics**

Evidence shall show an understanding of object orientated programming basics to an extent indicated by the following aspects:

- a) Object-Oriented programming language elements encompassing:
- Overview of (OO) programming concepts
  - Documentation
  - OO programming language elements
  - Data storage and data types

- Syntax
- b) Object-Oriented programming language operators and control structure

#### 2.4.43.2 Object orientated programming

Evidence shall show an understanding of object orientated programming to an extent indicated by the following aspects:

- a) OO programming language elements encompassing:
  - Overview of (OO) programming concepts
  - Documentation
  - OO programming language elements
  - Data storage and data types
  - Syntax
  - Object creation – mutability and destruction
- b) OO programming language operators and control structures encompassing:
  - Object operations
  - Numeric data and operations
  - Concepts of Casting and conversion
  - Character and String data
  - Control structures
  - Dissecting sample code
- c) Defining and using classes encompassing:
  - Class definitions
  - Creating objects
  - Encapsulation
  - Attributes
  - Constructors
  - Method types and syntax
  - The variable this
  - Data available in a method
  - Implementing encapsulation using methods
  - Overloading
  - Type lifespan – creation, mutability and destruction
- d) System, Strings, String Buffer, Math and Wrapper classes encompassing:
  - System and String class
  - String Buffer class
  - Input selection and repetition
  - Wrapper classes
  - Math class
  - Math package
  - Working with dates
- e) Classes and Inheritance encompassing:
  - Inheritance and object orientated programming
  - Support for inheritance
  - Access modifiers and inheritance
  - Overriding

- Use of this and super
  - Inheritance and constructors
  - Extending classes
  - Interfaces
  - Polymorphism and dynamic binding
- f) Arrays encompassing:
- Declaring and initialising Array objects
  - Using Arrays
  - Multidimensional arrays
- g) Packages encompassing:
- Application Programming Interface (API) packages eg Abstract Window Toolkit (AWT)
  - Packages and names in programs
  - Accessing packages
  - Packaging classes
- h) Creating Graphical User Interfaces (GUI) applications using AWT encompassing:
- Methodology for creating a GUI
  - GUI functionality
- i) Creating applets and graphics encompassing:
- Creating and applet
  - Applet and AWT class hierarchies
  - Applet methods and Components
  - Applets and Event-driven programming
  - Creating graphic objects
  - Graphics methods
  - Animation
- j) Exceptions encompassing:
- Exceptions concepts and handling of exceptions
  - Types of exceptions
  - Exception objects
  - Dealing with exceptions
  - Defining and using exceptions
  - Structuring a method and the execution sequence
  - Overriding exceptions
- k) Streams, files and Stream output encompassing:
- Understanding files
  - Input and output classes and operations
  - Storing objects in a file
- l) Utility Classes encompassing:
- Collections and collection framework
  - Generating Random Numbers
- m) Threads encompassing:
- Threads and Multithreading
  - The Thread class and Runnable interface
  - Thread lifecycle
  - Creating and running and managing threads

#### 2.4.44.1 Microprocessor/microcontroller assembler language programming

Evidence shall show an understanding of microprocessor assembly language to an extent indicated by the following aspects:

- a) CPU Architecture
  - registers.
  - instruction set considerations, common and advanced instructions.
  - addressing modes supported: direct, indirect, indexed etc.
  - software interrupts and system calls.
- b) Processor And System Support
  - instruction pre-fetch pipeline.
  - system timer chip, function and programming.
  - hardware interrupt programming considerations.
  - DMA devices and support.
  - co-processors and bus interface.
- c) Modular Programming
  - separately compiled and linked assembly language modules.
  - library modules.
  - macros.
- d) Documentation And Debugging
  - system specification and documentation
  - debugging and tracing program execution

#### 2.4.44.2 High level programming

Evidence shall show an understanding of high-level language programming as it is applied to engineering applications to an extent indicated by the following aspects:

- a) Program structure and compilation encompassing:
  - Top-down modular design methodology
  - Integrated development environments
- b) Data types and operators encompassing:
  - variables, constants, simple data types
  - cast operator
  - good operating practices related to variable and constant identifiers
- c) Loop control encompassing:
  - relational, equality and logical operators
  - compound operators
  - if-else, switch
  - while, do-while, for, break and continue
  - good operating practices related to structured programming
- d) Complex data types and structures encompassing:
  - Pointers/references
  - arrays and strings
  - user-defined data types
- e) Interfacing high-level languages to assembler encompassing:

- in-line assembly.
- bit manipulation
- IO port addressing

#### **2.4.44.3 Advanced high-level programming**

Evidence shall show an understanding of advanced high-level language programming as it is applied to engineering applications to an extent indicated by the following aspects:

- a) Object Orientated Programming concepts
  - Encapsulation
  - Inheritance
  - Polymorphism
- b) Creating applications with a Graphical Interface
- c) Using external libraries

#### **2.4.45 Copier/printer software functions and configuration**

Evidence shall show an understanding of copier/printer software to an extent indicated by the following aspects:

- a) Copier/printer software functions and configuration options
- b) Device driver software installation and configuration
- c) Available user function
- d) Diagnostic software functions and their use:

#### **2.4.46 Security systems basic software functions and configuration**

Evidence shall show an understanding of security systems basic software to an extent indicated by the following aspects:

- a) Security system software functions and configuration options
- b) Access and detection functions
- c) Diagnostic functions and their use

#### **2.4.47 Security systems programming methods**

Evidence shall show an understanding of security systems programming methods to an extent indicated by the following aspects:

- a) Vender programming codes and functions encompassing:
  - Input/output instruction
  - Variable
  - Timers
  - Limitations of vender software
- b) Program loading methods using a personal computer
- c) Program testing methods

#### **2.4.48 Security systems alarms programming**

Evidence shall show an understanding of security systems alarms programming to an extent indicated by the following aspects:

- a) Vender programming codes and functions encompassing:
  - Input/output instruction
  - Variable
  - Timers
  - Limitations of vender software
- b) Program loading methods using a personal computer
- c) Program testing methods

#### **2.4.49.1 Security systems access control programming**

Evidence shall show an understanding of security systems access control programming to an extent indicated by the following aspects:

- a) Vender programming codes and functions encompassing:
  - Input/output instruction
  - Variable
  - Timers
  - Limitations of vender software
- b) Program loading methods using a personal computer
- c) Program testing methods

#### **2.4.49.2 Security systems closed circuit television programming**

Evidence shall show an understanding of security systems closed circuit television programming to an extent indicated by the following aspects:

- a) Vender programming codes and functions encompassing:
  - Input/output instruction
  - Variable
  - Timers
  - Limitations of vender software
- b) Program loading methods using a personal computer
- c) Program testing methods

#### **2.4.50.1 Integrated security systems**

Evidence shall show an understanding of integrated security systems to an extent indicated by the following aspects:

- a) security scenarios
- b) security network standards and protocols
- c) network topology
- d) physical media
- e) disaster planning

#### **2.4.50.2 Internetworking security systems**

Evidence shall show an understanding of internetworking security systems to an extent indicated by the following aspects:

- a) Security scenarios
- b) security network standards and protocols
- c) network topology
- d) physical media
- e) disaster planning

#### **2.4.51 Fire protection systems programming methods**

Evidence shall show an understanding of fire protection systems programming methods to an extent indicated by the following aspects:

- a) Vender programming codes and functions encompassing:
  - Input/output instruction
  - Variable
  - Timers
  - Limitations of vender software
- b) Program loading methods using a personal computer
- c) Program testing methods
- d) Program back up, version control and documentation requirements

## 2.5 Drawings, diagrams, schedules, manuals, standards and regulations

### 2.5.1.1 Drawings interpretation and sketching

Evidence shall show an understanding of drawings interpretation and sketching to an extent indicated by the following aspects:

- a) Basic technical drawing conventions and symbols
- b) Freehand technical sketching techniques

### 2.5.1.2 Drawings and diagrams

Evidence shall show an understanding of drawings, diagrams and schedules used in electrotechnology work to an extent indicated by the following aspects:

- a) Drawing types and applications encompassing:
  - Drawing layouts and conventions
 

Note:  
Examples include mechanical drawings, electrical/electronic schematics, wiring diagrams, PC boards, location diagrams (architectural drawings), cable routes and switching arrangements and building details.
  - Drawing symbols
 

Note:  
Examples include symbols representing electrotechnology circuit components, equipment location and cable routes and control arrangements.
- b) Cable/wiring/connection and equipment/component/schedules.

### 2.5.2.1 Technical standards, regulations and codes for general electrical installations

Evidence shall show an understanding of technical standards and regulations that apply to electrical installations to an extent indicated by the following aspects:

- a) Regulation for undertaking electrical work
- b) Standards philosophy and format
  - How to read and apply a standard.
  - Standards and Codes that apply to all types of electrical installations

Note:

  1. Standards include Standards mandated under regulation or by an authority, deemed-to-comply standard and local service requirements.
  2. Codes include those applicable to electrical safe working practices.
- c) Applying standards, regulations and codes to general electrical installation encompassing:
  - Protection for safety
  - Installation design
  - Selection of electrical equipment
  - Installation of electrical equipment
- d) Testing and verification

### 2.5.2.2 Technical standards, regulations and codes for special electrical installations

Evidence shall show an understanding of technical standards and regulations that apply to

special electrical installations to an extent indicated by the following aspects:

- a) Additional requirements for special installations
- b) Applying standards, regulations and codes to special electrical installation

Note:

Special installations are those in caravan parks, construction and demolition sites, marinas, medical treatment areas and moveable premises and HV installation in consumer's premises

### **2.5.2.3 Technical standards, regulations and codes for testing and tagging portable and cord connected electrical apparatus**

Evidence shall show an understanding of technical standards and regulations that apply to testing and tagging portable and cord connected electrical apparatus to an extent indicated by the following aspects:

- a) Regulation for undertaking testing and tagging work
- b) Standards and Codes that apply to testing and tagging
  - How to read and apply a standard
  - Standards and Codes that apply to testing and tagging

Note:

1. Standards include Standards mandated under regulation or by an authority, deemed-to-comply standard and local service requirement
2. Codes include those applicable to electrical safe working practices

- c) Applying standards, regulations and codes to testing and tagging encompassing:
  - Apparatus and cord inspection and testing
  - Tests and testing methods
  - Test results and compliance requirements
- d) Tagging system methods and requirements.

### **2.5.3 Technical standards, regulations and codes for lifts and escalators**

Evidence shall show an understanding of technical standards and regulations that apply to lifts and escalators to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard
- c) Standards and Codes that apply to lifts and escalators
- d) Applying standards, regulations and codes

### **2.5.4 Technical standards, regulations and codes rail networks**

Evidence shall show an understanding of technical standards and regulations that apply to rail networks and escalators to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard
- c) Standards and Codes that apply to rail networks
- d) Regulations

### **2.5.5 Technical standards, regulations and codes for extra low voltage work**

Evidence shall show an understanding of technical standards, regulations and codes related

to extra-low voltage work to an extent indicated by the following aspects:

- a) Limitation imposed by regulations
- b) How to read and apply a standard
- c) Aspects of technical Standards that apply to extra-low voltage work

### **2.5.6 Technical standards, regulations and codes for refrigeration and air conditioning**

Evidence shall show an understanding of technical standards and regulations that apply to refrigeration and air conditioning to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard
- c) Standards and Codes that apply to refrigeration and air conditioning
- d) Regulations
- e) Equipment manufactures specifications

### **2.5.7 Technical standards, regulations and codes for telecommunications cabling**

Evidence shall show an understanding of technical standards and regulations that apply to telecommunications cabling to an extent indicated by the following aspects:

- a) Role of Australian Communications Authority (ACA) under the Telecommunication Act 1997
- b) Penalties for non compliance
- c) Standards and Codes that apply to telecommunications cabling encompassing:
  - Current technical standards applicable to cabling
  - Aspects of other technical standards or codes of practice called up by regulation
  - Cabling Provider Rules' requirements
  - Certified components
- d) Application of Standards, Codes and regulations encompassing:
  - Cabling installation, protection and segregation
  - Earthing and protection
  - Cable connections
  - Certification
  - Labelling and documentation of cabling and active communication equipment
- e) Cabler Registration requirements and processes

### **2.5.8 Technical standards, regulations and codes for electronic apparatus**

Evidence shall show an understanding of electronic apparatus to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard
- c) Standards and Codes that apply to electronic apparatus
- d) Applying standards, regulations and codes

### **2.5.9 Building codes applicable to general electrotechnology installations**

Evidence shall show an understanding of building codes to an extent indicated by the following aspects:

- a) Building code philosophy and format
- b) How to read and apply a code
- c) Codes that apply to general electrotechnology installations
- d) Applying codes

### **2.5.10 Technical manuals and catalogues**

Evidence shall show an understanding of the use of technical manuals and catalogues for electrotechnology work to an extent indicated by the following aspects:

- a) Typical format
- b) How to read and apply information

### **2.5.11 Environmental and heritage awareness**

Evidence shall show an understanding of environmental and heritage regulation effecting electrotechnology work to an extent indicated by the following aspects:

- a) Purpose of environmental and heritage regulation
- b) Typical issues affecting electrotechnology services and systems
- c) Meeting requirements

### **2.5.12 Electricity distributors, supply requirements**

Evidence shall show an understanding of supply arrangements of electricity distributors to an extent indicated by the following aspects:

- a) General requirements for the supply of electricity.
- b) Supply and metering requirements.
- c) Acceptable arrangement of switchgear and controlgear.
- d) Acceptable earthing methods and arrangements

### **2.5.13 Electricity regulatory safety requirements**

Evidence shall show an understanding of safety requirement of electricity regulator to an extent indicated by the following aspects:

- a) Regulatory requirements for ensuring the safety and integrity of electrical installations.

Note:

Regulatory requirements are relative to the jurisdiction for which competency is sought

- b) Types and scope of electrical inspections and safety audits
- c) Authority of electrical inspectors

### **2.5.14 Technical standards, regulations and codes applicable to instrumentation and control**

Evidence shall show an understanding of technical standards and regulations that apply to telecommunications cabling to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard.
- c) Standards and Codes that apply to instrumentation and control

Note:

1. Examples of standards and code are those covering hazardous materials, potentially explosive atmospheres, certification of apparatus, environment protection, safety and the like

- d) Regulations

#### **2.5.15 Measurement standards applicable to process instrumentation**

Evidence shall show an understanding of technical standards and regulations that apply to telecommunications cabling to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard.
- c) Certification standards that apply to process instrumentation
- d) Process instrumentation that apply to certification

#### **2.5.16 Measurement standards applicable to scientific instruments**

Evidence shall show an understanding of technical standards and regulations that apply to telecommunications cabling to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard.
- c) Certificate standards that apply to scientific instrumentation
- d) Scientific instrumentation certification process

#### **2.5.17 Regulatory requirements for the generation, transmission and distribution of electricity**

Evidence shall show an understanding of regulations that apply to the generation, transmission and distribution of electricity to an extent indicated by the following aspects:

- a) Generation, transmission and distribution technical standards
- b) Scope of regulatory requirements

#### **2.5.18 Regulatory requirements and codes of practice for the gaming equipment**

Evidence shall show an understanding of regulations that apply to gaming equipment to an extent indicated by the following aspects:

- a) Types of equipment permitted —
  - Location restrictions and requirements
  - Operational restrictions and requirements
- b) Security encompassing:
  - Access to customers premises
  - Access to machines

### **2.5.19 Technical standards, regulations and codes for mining**

Evidence shall show an understanding of technical standards and regulations that apply to mines to an extent indicated by the following aspects:

- a) Regulation governing mining and related activities
- b) Standards and Codes that apply to mining electrical systems

Note:

- 1. Standards include Standards mandated under regulation or by an authority, deemed-to-comply standard and local service requirements.
- 2. Codes include those applicable to electrical safe working practices

- c) Applying standards, regulations and codes to mining electrical systems encompassing:

- Protection for safety
- Installation arrangement
- Certified/approved electrical equipment
- Installation of electrical equipment
- Testing and verification

### **2.5.20 Technical standards, regulations and codes for security systems**

Evidence shall show an understanding of technical standards and regulations that apply to security systems to an extent indicated by the following aspects:

- a) Regulation governing security system installations
- b) Standards and Codes that apply to security systems and equipment

Note:

- 1. Standards include Standards mandated under regulation or by an authority, deemed-to-comply standard and local service requirements.
- 2. Codes include those applicable to electrical safe working practices

- c) Applying standards, regulations and codes to security systems encompassing:

- Installation arrangement
- Certified/approved security equipment
- Installation of security equipment
- Testing and verification

### **2.5.21 Technical standards, regulations and codes for fire protection and warning systems**

Evidence shall show an understanding of technical standards and regulations that apply to fire protection and warning systems to an extent indicated by the following aspects:

- a) Regulation governing fire protection and warning system installations
- b) Standards and Codes that apply to fire protection systems and equipment

Note:

- 1. Standards include Standards mandated under regulation or by an authority, deemed-to-comply standard and local service requirements.
- 2. Codes include those applicable to electrical safe working practices

- c) Applying standards, regulations and codes to fire protection systems encompassing:

- Installation arrangement
- Certified/approved fire equipment
- Installation of fire equipment
- Testing and verification
- Final commissioning verifications

**2.5.22 Performance standards and regulatory requirements for the electrical rotating machine**

Evidence shall show an understanding of performance standards and regulations that apply to electric motors and generators to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard
- c) Performance standards encompassing:
  - Safety requirements
  - Machine efficiency
- d) Regulations

**2.5.23 Performance standards and regulatory requirements for electrical equipment**

Evidence shall show an understanding of performance standards and regulations that apply to electrical equipment to an extent indicated by the following aspects:

- a) Standards philosophy and format
- b) How to read and apply a standard
- c) Performance standards encompassing:
  - Safety requirements
  - Machine efficiency
- d) Regulations

## 2.6 Electrical applications and apparatus

### 2.6.1 Protection devices and applications

Evidence shall show an understanding of protection devices and their application to an extent indicated by the following aspects:

- a) Purpose, types and applications.

Note:

Types include rewirable fuses, HRC fuses, circuit breakers, residual current devices and overvoltage and undervoltage protection.

- b) Operating principles and characteristics

Note.

Principles include the purpose of earthing and the MEN system.

- c) Requirements for coordination and discrimination of circuit protection devices.

### 2.6.2.1 Switchboards / distribution boards

Evidence shall show an understanding of switchboards / distribution board to an extent indicated by the following aspects:

- a) Purpose, types and applications.
- b) Equipment installed on switchboards.
- c) Arrangements of equipment.

### 2.6.2.2 Electrical metering arrangements

Evidence shall show an understanding of electrical metering arrangements to an extent indicated by the following aspects:

- a) Purpose, types and applications.
- b) Metering equipment.
- c) Arrangements for metering.

### 2.6.2.3 Interval metering concepts and applications

Evidence shall show an understanding of interval metering to an extent indicated by the following aspects:

- a) Purpose, types and applications.
- b) Installation and power connection arrangements.
- c) Communication methods and arrangements.
- d) Connections for gas metering.
- e) Procedures for setting meter parameters.

### 2.6.3 Single phase alternators

Evidence shall show an understanding of single phase alternators to an extent indicated by the following aspects:

- a) Purpose, types and applications
- b) Operating principles and characteristics

- c) Installation and starting/running requirements and limitations
- d) Connection arrangements
- e) Typical fault symptoms and related conditions

#### **2.6.4 Three phase alternators**

Evidence shall show an understanding of three phase alternators to an extent indicated by the following aspects:

- a) Purpose, types and applications
- b) Operating principles and characteristics
- c) Installation and starting/running requirements and limitations
- d) Connection arrangements
- e) Typical fault symptoms and related conditions

#### **2.6.5 Single phase motors**

Evidence shall show an understanding of single phase motors to an extent indicated by the following aspects:

- a) Purpose, types and applications
- b) Operating principles and characteristics
- c) Installation and starting/running requirements and limitations
- d) Connection arrangements
- e) Typical fault symptoms and related conditions

##### **2.6.6.1 Three phase motors**

Evidence shall show an understanding of three phase motors to an extent indicated by the following aspects:

- a) Purpose, types and applications
- b) Operating principles and characteristics
- c) Installation and starting/running requirements and limitations
- d) Connection arrangements
- e) Typical fault symptoms and related conditions

##### **2.6.6.2 Alternating current rotating machines**

Evidence shall show an understanding of alternating current rotating machines to an extent indicated by the following aspects:

- a) Three phase motors encompassing:
  - principles of operation.
  - construction features of various induction motor types.
  - relationship between torque, speed, and power in an induction motor.
  - conditions necessary for an induction motor to produce maximum torque.
  - operating characteristics of an induction motor from name plate information and by measurement.
  - full load efficiency and power factor of induction motors.
  - minimum energy performance standards (MEPS)

b) Motor protection encompassing:

- conditions that cause motors to overheat.
- protection of motors against overcurrent and undervoltage.
- operating principles of microtherm devices, thermal and magnetic overloads and current control relays.
- HRC fuses/circuit breakers selection to protect a motor circuit.
- overload devices for a given motor and load condition.

c) Purpose of limiting starting current of machines encompassing:

- operating characteristics and applications of DOL, star-delta, auto transformer, soft start, primary resistance and secondary resistance starters.
- relative starting torque produced by a motor using each type of starter.
- components and operating sequence of each type of starter.
- conditions necessary for a motor to accelerate when coupled to a load.
- effects on motor performance when a load variation occurs.

d) Connection methods of three phase starters encompassing:

- interpretation of motor starter wiring diagrams.
- connection of motor starters with local or remote stop-start stations.

e) Wiring Rules and service rule requirements encompassing:

- Wiring Rules' requirements relating to motors, their protection and control.
- state local Supply Authorities' requirements for the limitation of starting current, connection and controls of electric motors.

f) Three phase induction motor controls encompassing:

- reversing motor direction of rotation.
- braking methods.

Note:

Braking methods to include: dynamic, plugging, regenerative, eddy current and mechanical.

- speed control methods

Note:

Speed control methods to include: voltage control, pole changing, variable voltage/variable frequency and slip control.

g) Single phase motor principles and characteristics encompassing:

- production of 'rotating' magnetic field in split-phase and shaded-pole motors.
- relative difference in torque produced by various types of 'phase-splitting' motors using a phasor diagram.
- torque/speed characteristics of single phase motors.
- circuit diagrams of split-phase, capacitor start, capacitor start-run motors, shaded-pole motor and universal motor.
- methods of reversing the direction of rotation of single-phase motors.

h) Single phase motor construction encompassing:

- identification of the run winding and the start/auxiliary winding in a split-phase motor by resistance measurement at the motor terminals.
- identification of the starting circuits switching devices and explain how they operate.
- identification of the components in single-phase motors and explain their purpose.
- identification of the devices used with single-phase motors to provide overload protection, over-temperature protection, automatic or remote starting and speed

control.

- i) Single phase motor applications encompassing:
  - power, torque and speed characteristics of various types of motors.
  - power, torque, speed and efficiency of single-phase motors.
  - typical applications for various types of single-phase motors.
- j) Fault testing encompassing:
  - common causes of motor malfunction.
  - load test on a motor to determine whether the terminal voltage is correct, line current is balanced and the motor operates within rated speed.
  - faults in various motor windings for various winding conditions.
  - tests on motors and circuits to locate faults.
- k) Three-phase synchronous machines encompassing:
  - constructional details of three-phase alternators, induction generators and synchronous motors.
  - operation of three-phase alternators, induction generators and synchronous motors.
  - applications of induction generators and three-phase synchronous motors.
  - nameplate data.
  - full load current ratings of synchronous machines.
- l) Three-phase synchronous machines encompassing:
  - effect of a given load on the output characteristics of a three-phase alternator.
  - effect of excitation variation on a given operating condition of a three-phase alternator.
  - effect of load on a three-phase synchronous motor.
  - effect of excitation variation in relation to a three-phase synchronous motor.
- m) Single phase synchronous machines encompassing:
  - constructional details of common single-phase portable alternator.
  - operating characteristics of common single-phase alternators.
  - type of common single-phase synchronous motor given constructional details.
  - appropriate application of each type of motor identified.

### **2.6.7 Single phase transformers**

Evidence shall show an understanding of single phase transformers to an extent indicated by the following aspects:

- a) Purpose, types and applications
- b) Operating principles and characteristics
- c) Installation and operating requirements and limitations
- d) Connection arrangements
- e) Typical fault symptoms and related conditions

#### **2.6.8.1 Three phase transformers**

Evidence shall show an understanding of three phase transformers to an extent indicated by the following aspects:

- a) Purpose, types and applications

- b) Operating principles and characteristics
- c) Installation and operating requirements and limitations
- d) Connection arrangements
- e) Typical fault symptoms and related conditions

### 2.6.8.2 Single & three-phase transformers

Evidence shall show an understanding of single and three phase transformers to an extent indicated by the following aspects:

- a) Transformer construction and operating principles encompassing:
  - types of lamination style and core construction used in single-phase, three-phase, double wound and auto transformers.
  - different winding styles/types used in transformers.
  - no load and load operating parameters.
  - transformation ratio.
  - nameplate data.
  - operation of a transformer under load/no load conditions.
  - application of transformers.
  - safety features specified in AS/NZS 3000:2000 with respect to transformers.
  - safety features specified in AS/NZS 3000:2000 with respect to isolating transformers.
  - basic insulation resistance, continuity and winding identification tests.
- b) Transformer parameters encompassing:
  - percentage impedance of a transformer.
  - equivalent circuit of a transformer.
  - voltage regulation.
  - losses that occur in a transformer.
  - tests to determine losses.
  - efficiency and all day efficiency of a transformer.
- c) Cooling methods encompassing:
  - methods of natural and forced cooling.
  - properties of transformer oil.
  - tests performed on transformer oil.
  - auxiliary equipment
  - purpose and operation of auxiliary equipment used on transformers

Note:  
Examples are: bushings, explosion vents, surge diverters, tap changers, conservator, breathers and desiccants, gas relays, temperature indicators.
- d) Instrument transformers encompassing:
  - construction of current transformers.
  - uses and ratings of current transformers.
  - construction of voltage transformers.
  - uses and ratings of voltage transformers.
  - safety techniques when using instrument transformers.
- e) Transformer connections encompassing:

- vector group of a transformer from a connection diagram.
  - connections of a three-phase transformer to create a particular vector group.
  - using the different vector groups.
  - tertiary windings.
  - consequences/effect of an incorrect connection.
- f) Parallel operation encompassing:
- polarity markings for the windings of a transformer.
  - conditions/restrictions for parallel operation of transformers.
  - loading on transformers operating in parallel.
  - connection of transformers in parallel to supply a common load.
  - the consequences/effect of an incorrect connection.
- g) Harmonics in transformers encompassing:
- harmonics generated in transformers.
  - problems caused by harmonics in transformers.
  - observation and measurement of the harmonics in a transformer.
  - methods/equipment used to overcome harmonics in transformers.
- h) High voltage isolation encompassing:
- the term high voltage.
  - procedures for isolating high voltage apparatus.
  - regulations with respect to *access permits*.
  - clearances to be observed with respect to high voltages up to 33kV.
  - the term ‘step’ and ‘touch’ potential.

### 2.6.8.3 Power transformers diagnostics

Evidence shall show an understanding of power transformers to an extent indicated by the following aspects:

- a) Transformer construction and operating principles encompassing:
- various types of lamination style and core construction used in single-phase, three-phase, double wound and auto transformers.
  - different winding styles/types used in transformers.
  - how input current is limited on no load and how power is transferred from primary to secondary when a load is connected.
  - using the transformation ratio to determine an unknown quantity of V, I, VA.
  - significance of nameplate data items.
  - operation of a transformer under load/no load conditions.
  - the reason any particular type of transformer is used in a specific application.
  - safety features specified in regulatory standards with respect to transformers.
  - safety features specified in regulatory standards with respect to isolating transformers.
  - basic insulation resistance, continuity and winding identification tests.
- b) Transformer parameters encompassing:
- the percentage impedance of a transformer by test.
  - percentage impedance of a transformer by calculation.

- the equivalent circuit of a transformer.
  - calculation of voltage regulation.
  - losses that occur in a transformer.
  - tests to determine losses.
  - efficiency and state typical values.
  - the all day efficiency of a transformer.
- c) Cooling methods encompassing:
- methods of natural and forced cooling.
  - properties of transformer oil.
  - tests performed on transformer oil.
  - auxiliary equipment
  - the purpose and operation of the types of auxiliary equipment used on transformers
- Note.  
Examples are bushings, explosion vents, surge diverters, tap changers, conservator, breathers and desiccants, gas relays, temperature indicators.
- d) Instrument transformers encompassing:
- construction of current transformers.
  - uses and ratings of current transformers.
  - construction of voltage transformers.
  - uses and ratings of voltage transformers.
  - safety techniques when using instrument transformers.
- e) Transformer connections encompassing:
- vector group of a transformer from a connection diagram.
  - connections of a three-phase transformer to create a particular vector group.
  - reasons for using the different vector groups.
  - purpose of tertiary windings.
  - consequences/effect of an incorrect connection.
- f) Parallel operation encompassing:
- polarity markings for the windings of a transformer.
  - conditions/restrictions for parallel operation of transformers.
  - calculation of loading on transformers operating in parallel.
  - connection of transformers in parallel to supply a common load.
  - the consequences/effect of an incorrect connection.
- g) Harmonics in transformers encompassing:
- how harmonics are generated in transformers.
  - problems caused by harmonics in transformers.
  - measurement of the harmonics in a transformer.
  - methods/equipment used to overcome harmonics in transformers.
- h) High voltage isolation encompassing:
- the term high voltage.
  - procedures for isolating high voltage apparatus.
  - regulations with respect to *access permits*.
  - clearances to be observed with respect to high voltages up to 33kV.

- the term ‘step’ and ‘touch’ potential.

### 2.6.9.1 Lighting fundamentals

Evidence shall show an understanding of luminaires - lighting fundamentals to an extent indicated by the following aspects:

#### a) Lighting concepts

- Principles of light
- Common lighting terms

Note.

Example are lumens, lux, candela, efficacy, lamp, lamp life, luminance, illuminance, luminaire and lamp colour.

- Measurement of lighting levels using light meters.

#### b) Light producing principles of incandescent, fluorescent and gas discharge lamps.

### 2.6.9.2 Luminaires and lighting systems

Evidence shall show an understanding of luminaires to an extent indicated by the following aspects:

#### a) Types and applications of luminaires

#### b) Operating principles and connection arrangements

Note:

Principles and connections include ancillary equipment and power factor improvement methods

#### c) Installation and operating requirements and limitations

#### d) Typical fault symptoms and related conditions of lighting circuits

- Common faults in fluorescent lights
- Testing techniques – dead and live testing

#### e) Supply authority requirements for lighting circuits

- Requirements for power factor correction
- Requirements to prevent interference of supply authority control signals
- Terms lead/lag, LPF, HPF/BI and stroboscopic effect.

#### f) Evacuation lighting systems

- Requirements of system (Building Codes and Standards)
- Types of systems (central battery system and self contained system)
- Luminaire types (non-maintained, maintained and sustained)
- Maintenance requirements.

### 2.6.9.3 Venue lighting for audio/video/live presentations

Evidence shall show an understanding of venue lighting to an extent indicated by the following aspects:

#### a) Lighting types and colour

#### b) Effects of direction of light

#### c) Use of natural light

#### d) Lighting levels and control

### 2.6.10 Electric heating

Evidence shall show an understanding of electric heating to an extent indicated by the following aspects:

a) Heating and heat energy encompassing:

- heat and temperature.
- methods of heat transfer.
- thermal conductivity and its dependent factors.

b) Control of heating encompassing:

- methods of heat control, manual and automatic
- function of a thermostat with respect to its mechanical operation, sensitivity and differential
- thermostat testing for correct operation within its specification
- applications of thermostats
- operation and application of a simmerstat
- electronic techniques employed for heat control

Note.

Example are zero crossing, phase control, voltage control, half/full wave

c) Heating process encompassing:

- Types of domestic and industrial water heaters and their control.
- Intrinsic safety precautions employed with water heaters.
- Solar heating as a supplement or replacement for electrical heating.
- Tariff mechanisms employed with heating processes.
- Types of space heaters and their control methods

Note.

Examples are strip heaters, storage heaters, under carpet heating, reverse cycle air conditioning and infra-red heating.

- Types of cooking appliances and their control method

Note.

Examples are resistance, induction heating and microwave.

- Industrial process heating and their control

Note.

Examples are resistance heating, infra-red ovens, induction heating, dielectric heating, electric arc.

- Causes of a fault in a malfunctioning electric heating device/circuit

Note.

Faults may include open circuits, short circuits, high resistance, low insulation resistance, thermostat or cut-out failure.

### 2.6.11 Direct current machine fundamentals

Evidence shall show an understanding of d.c. machine to an extent indicated by the following aspects:

a) Types and applications

b) Motor circuit configurations

c) Name plate details

### 2.6.12 Direct current machines

Evidence shall show an understanding of d.c. machines to an extent indicated by the following aspects:

- a) Purpose, types and applications
- b) Operating principles
- c) Installation and starting/running requirements and limitations
- d) Connection arrangements
- e) Typical fault symptoms and related conditions.

### 2.6.13 Motor starters and overload protection basics

Evidence shall show an understanding of motors starter and overload protection to an extent indicated by the following aspects:

- a) Purpose of motor starters and overload protection
- b) Starting current limitations
- c) Types and applications
- d) Basic motor starter control circuits and safety interlocks

### 2.6.14 Direct-on-line (DOL) motor starters

Evidence shall show an understanding of DOL motors starter to an extent indicated by the following aspects:

- a) Operating principles
- b) Power and control connection arrangements encompassing:
  - Built-in stop/start control
  - Remote stop/start control
  - Overload protection
  - Interlocking with other starters
- c) Overload protection characteristics

### 2.6.15 Reduced voltage a.c. motor starters

Evidence shall show an understanding of reduced voltage motors starter to an extent indicated by the following aspects:

- a) Types of starter and their operating principles

Notes:

Types include star/delta; primary resistance; secondary resistance; auto transformer and soft starters.

- b) Power and control connection arrangements encompassing:
  - Built-in stop/start control
  - Remote stop/start control
  - Overload protection
  - Interlocking with other starters and controls

### 2.6.16 Direct current motor controls

Evidence shall show an understanding of direct current motor controls to an extent

indicated by the following aspects:

a) Types of starter and their operating principles

Notes:

Types include back emf; series-lockout, timed starters and electronic controllers

b) Power and control connection arrangements encompassing:

- Built-in stop/start control
- Remote stop/start control
- Overload protection
- Interlocking with other starters and controls

c) Braking methods encompassing:

- Dynamic,
- Plugging,
- Electromechanical, and
- Regenerative.

d) Speed control methods encompassing:

- Field control
- Reostatic control
- Voltage control

e) Protection of d.c. motors

### 2.6.17 Cells and batteries

Evidence shall show an understanding of cells and batteries to an extent indicated by the following aspects:

a) Types and electricity production processes.

Notes:

1. Types include primary and secondary cells in common use.
2. Processes include discharging and recharging

b) Cell parameters.

Note:

Examples include terminal voltages, capacity and discharge and recharge characteristics.

c) Battery configurations and applications.

d) Cell and battery safety practices.

### 2.6.18 RAPS systems basics

Evidence shall show an understanding of RAPS systems. to an extent indicated by the following aspects:

a) System components and their functions.

Note:

1. System components are engine driven generator sets, photo voltaic arrays, wind driven generator sets, battery banks, system inverters and controls.
2. The function of each component includes how they operate within the system.

b) Operating parameters of each component and of the system

Note:

Operating parameters include voltage range and current supplied by each power component to the system and limitations on system components to supply various loads.

### 2.6.19 RAPS systems demand side management

Evidence shall show an understanding of RAPS systems demand side management to an extent indicated by the following aspects:

- a) Need for demand side management
- b) Demand limitations and seasonal variations in capabilities of given RAPS systems

Note:

Factors limiting demand are rating of the system and its components, demand of individual appliances, most suitable source of supply for individual appliances, population of local community and how and when appliances are used

- c) Optimisation of system performance
- d) Methods for evaluating long term changes to community and/or household power requirements

### 2.6.20 Electrical mining systems overview

Evidence shall show an understanding of electrical mining systems to an extent indicated by the following aspects:

- a) Mine reticulation encompassing:
  - Mine reticulation
  - Substations
  - Transmission lines
  - Switchgear
  - Earthing
- b) Electrical control and protection encompassing:
  - Types of protection
  - Operation of protection devices and systems
  - Prospective fault currents
  - Discrimination
- c) Mining cables encompassing:
  - Handling
  - Storage
  - Testing
- d) Ventilation fans
- e) Operation and safety of mining equipment encompassing:
  - Battery charging
  - Battery operated vehicles
  - Conveyors
  - Mine winder and package systems
  - Ore extraction machinery
  - Shuttle cars
  - Ventilation fans
- f) Environmental monitoring and control encompassing:
  - Basic principle

- Types and application of sensors
  - Control methods
- g) Equipment monitoring methods
- h) Fire detection, warning and control systems

### **2.6.21 Electricity supply and reticulation**

Evidence shall show an understanding of electricity supply and reticulation systems to an extent indicated by the following aspects:

- a) Generation
- primary energy sources
  - power stations
  - power station output
  - acts and legislation relating to generation
  - renewable energy sources and techniques
- b) Transmission
- system requirements
  - principal components of a power system
  - voltage levels
  - grid systems
  - acts/legislation relating to transmission
  - future trends
- c) Distribution
- high voltage distribution systems
  - medium/low voltage distribution systems
  - radial feeders
  - parallel feeders
  - ring main feeders
  - acts/legislation relating to distribution
- d) Substations
- purpose
  - location
  - layout
- e) Overhead and underground systems
- relative merits
  - applications
  - planning
  - installation
- f) Power distribution system electrical characteristics
- transmission and distribution systems
  - inductance, capacitance and resistance
- g) Voltage problems in a power distribution system
- low voltage
  - unbalanced voltages

- voltage rises
- h) Voltage regulation
  - autotransformers with OLTC
  - transformers with OLTC
  - static capacitors
  - load control
- i) Control of OLTC
  - regulation relays
  - control circuits
  - line drop compensation
- j) Power distribution system faults
  - type/classification of fault
  - typical causes/effects of faults
  - three-phase symmetrical fault levels
  - fault level limitation
- k) Voltage surges in a power distribution system
  - lightning surges
  - switching surges
  - typical surge levels
  - surge impedance, typical values
  - significance of the system surge impedance.
- l) Metering and metered quantities
  - purpose
  - energy
  - maximum demand
  - accuracy classes for metering systems
- m) Energy and demand meters
  - construction
  - operation
  - adjustments
  - testing
- n) Metering circuits
  - direct metering
  - instrument transformer metering
- o) Electronic metering systems and recording meters
  - types
  - applications
  - connections
- p) Load control
  - purpose
  - methods

#### 2.6.22.1 Electrical power system protection

Evidence shall show an understanding of protection methods and devices for electrical power systems to an extent indicated by the following aspects:

a) Protection fundamentals encompassing:

- purpose of protection
- features of a protection scheme

b) Instrument transformers for protection encompassing:

- Operating principles
- Applications of current transformers
- Applications of voltage transformers

c) Feeder protection encompassing:

- fuse protection
- overcurrent & earth fault
- sensitive earth fault
- unit schemes
- distance protection
- trip/close sequences for feeders
- recloser/sectionaliser systems

d) Transformer protection encompassing:

- overheating protection
- overcurrent protection
- restricted earth fault protection
- differential protection
- oil and gas devices

e) Busbar protection encompassing:

- types of fault
- requirements of busbar protection
- system protection
- frame-earth protection

f) Surge protection encompassing:

- voltage surges (revision)
- surge diverters
- arcing horns

### **2.6.22.2 Electrical power system operations**

Evidence shall show an understanding of electrical power system operations to an extent indicated by the following aspects:

a) Control of voltage encompassing:

- Conditions leading to voltage collapse and system disintegration.
- Effects on the system of high/low volts
- Voltage control devices

Note.

Examples are voltage regulators applied to generators and synchronous phase modifiers, electromagnetic voltage regulators, series and parallel capacitors, OLTC transformers and static Var

compensations (SVCs) such as saturated reactor compensations (SRs), thyristor controlled reactor compensators (TCRs), combined TCR/TSCs and the production of wave-form distorting harmonics and control devices.

- b) The importance of the location in the system of voltage control devices.
- c) The use of graphical methods to calculate the size of VAr regulating plant.
- d) Control of power encompassing:
- Base load and spinning reserve
  - Regulating machines
  - Rapid start plant,
  - Phase shifting transformers and various forms of load shedding.
  - Principles and practices of automated control of individual machines
  - Stations and transmission/tie-line elements.
  - Synchronising power
- e) The relationship between power and frequency encompassing:
- Limiting values
  - Machine stabilising
- Note.  
Examples are steam by-pass, rapid valving, slip stabilisers and over speed limiting.
- Use of single pole generator CB's.
  - Use of machine AVR's as angular stabilisers.
  - Damped and un-damped system oscillations.
  - Relationship between fault clearance times and system stability.
  - Calculation of critical clearance angles based on equal area criteria.
- f) Types of communication systems
- Note.  
Examples are telephone, power line carrier, dedicated cable, microwave links and fibre optics.
- Quantities and signals to be communicated.
  - Advantages and disadvantages of the various systems.
  - Equipment requirements.
- g) Transient over-voltages in power systems encompassing:
- Switching and lightning overvoltages and their effect on different plant items.
  - Transient over-voltage control and reduction using surge diverters, shield wires and CB are control.
  - Insulation systems, insulation coordination, insulation grading in plant items, bushings and capacitor bushings.
- h) Factors leading to the generation of corona encompassing:
- Consequences of corona.
  - Reduction of corona
- Note.  
Examples are conductor bundling, grading rings and conductor surface treatment.
- i) Power System Protection encompassing:
- Location of CT's in major plant items.
  - Earthing principles and devices.
  - Fault current control/limitation using neutral earthing compensators (NEC's), neutral point earth impedances, high conductivity shield wires and parallel feed

interlocking.

- Application of different types of protection.

### 2.6.22.3 Electrical power system transmission faults

Evidence shall show an understanding of electrical power system transmission faults to an extent indicated by the following aspects:

- a) Overview of the transmission system including lines, buses, transformers and cables. Line/bus layouts including single and double switching, breaker and a half systems and HV crossing methods.
- b) The principles involved in high voltage a.c. transmission including tower types and configurations, choice of towers or poles (economic and environmental), insulator types and configuration, types of conductors, their configuration and standard nomenclature. Typical line spacing and ground clearances. Line ratings based on ambient temperature. Conductor terminating and clamping equipment including vibration damping principles and equipment.
- c) The principles involved in d.c. transmission including the economics, harmonic generation, VAR requirements and protection difficulties. Types of connections and transformer requirements. Advantages and disadvantages of d.c. transmission. Typical overseas systems. Likely (future) use in this country.
- d) The principles of operation, voltage and current range, breaking capacity and field of use of the following types of circuit breakers.
  - bulk oil
  - small oil volume
  - air break
  - air blast
  - air puffer
  - vacuum and
  - SF6 (double pressure and puffer types).
- e) The types of isolators in use. Examples include duo-roll, blade and scissor type.
- f) Circuit breaker auxiliary systems including:
  - high pressure air systems and air storage and handling processes
  - d.c. systems including battery types, charging and protection systems and earth fault detection systems
  - SF6 conditioning, storage and handling system
- g) The characteristics of lines and cables including the calculation of R, X and B for different arrangements of conductor. Typical values for actual lines. Transposition. Models based on line length. Voltage and line regulation. The transmission of power (P) and VARs(Q).
- h) Control of voltage. Conditions leading to voltage collapse and system disintegration. Effects on the system of high/low volts. Voltage control devices including:
  - voltage regulators applied to generators and synchronous phase modifiers
  - electromagnetic voltage regulators
  - series and parallel capacitors
  - OLTC transformers and static Var compensations (SVCs)
- i) Range of devices covered by SVCs including:
  - saturated reactor compensations (SRs)
  - thyristor controlled reactor compensators (TCRs)

- combined TCR/TSCs and
  - production of wave-form distorting harmonics and control devices
- j) Importance of the location in the system of voltage control devices
- k) Use of graphical methods to calculate the size of Var regulating plant
- l) Types of communication systems including telephone, power line carrier, dedicated cable, micro-wave links and fibreoptics. Quantities and signals to be communicated. Advantages and disadvantages of the various systems. Equipment requirements
- m) Transient over-voltages in power systems. Switching and lightning overvoltages and their effect on different plant items. Transient over-voltage control and reduction using surge diverters, shield wires and CB are control. Insulation systems, insulation co-ordination, insulation grading in plant items, bushings and capacitor bushings
- n) Factors leading to the generation of corona. Consequences of corona. Reduction of corona including conductor bundling, grading rings and conductor surface treatment

#### 2.6.22.4 Distributive generation systems

Evidence shall show an understanding of distributive generation systems to an extent indicated by the following aspects:

- a) Concept and application
- b) Anti-islanding control and protection
- c) System monitoring and load management.

#### 2.6.22.5 Electrical power system protection diagnostic

Evidence shall show an understanding of diagnosing faults in electrical power system protection to an extent indicated by the following aspects:

- a) Protection scheme requirements
  - Requirements of a protection scheme
 

Note:  
Includes relationship to primary system design, purpose of protection, safety of persons, protection of plant, system instability, system break up, loss of customers, loss of revenue, protection zones, restricted schemes, unrestricted schemes, duplicate protection, local backup protection, remote backup protection, selectivity, discrimination, stability, sensitivity, reliability
  - Components of a protection scheme
 

Note:  
Includes current transformers, potential transformers, summation current transformers, interposing transformers, multitapped transformers, all-or-nothing relays, induction relays, balanced beam relays, directional relays, biased relays, solid state relays, microprocessor based relays, gas relays, thermal sensors, hardwired communication, powerline carriers systems, microwave systems, fibre optic systems, need for isolation, need for interfacing
  - Protection applied to buses
 

Note:  
Includes overload, differential, earth leakage, structure leakage, combined schemes, protection overlap
  - Protection applied to transformers
 

Note:  
Includes biased differential, gas, winding temperature, oil temperature
  - Protection applied to single/radial lines
 

Note:  
Includes overcurrent, earth leakage, slow earth leakage, distance, auto reclose, sectionalising, over voltage

- Protection applied to interconnected lines

Note:

Includes overcurrent, pilot wire, directional, directional overcurrent, current differential, phase comparison, current comparison, distance, impedance, admittance, offset

b) Discrete protection systems

- Earth fault protection

Note:

Includes master earth leakage schemes, sensitive earth fault relays and schemes, residual earth fault scheme, core balance earth fault scheme, frame/structure earth leakage scheme, time graded discrimination, backup protection

- Overcurrent protection

Note:

Includes feeder overcurrent protection, instantaneous overcurrent schemes, inverse timed overcurrent schemes, types and location of components of an overcurrent scheme, CT summation, time graded discrimination, backup protection

- Alarms and controls

Note:

Includes auxiliary relays, voltage regulating relays, line drop compensation, gas relay types, gas relay scheme operation and setting, over temperature schemes

c) Interdependent protection systems

- Overcurrent and earth leakage intertripping, interlocking and blocking

Note:

Includes logic mapping, master control, electromechanical, electronic, shading coils

- Pilot wire, phase comparison

Note:

Includes opposed voltage schemes, circulating current schemes, location of components of a scheme, pilot supervisory techniques,

- Load shedding, voltage control, parallel operation, load rejection
- CB failure protection
- Reclose systems

Note:

Includes applications, single shot, multishot, blocking schemes, synchronisation checking

d) Complex protection systems

- Distance

Note:

Includes characteristics, electromechanical, electronic, impedance, mho, offset mho, switched schemes, non-switched schemes, blocking schemes, bus zone

- Differential, transformer differential, bus overcurrent

Note:

Includes principles, feeder protection, transformer protection, bias systems, harmonic restraint, CT connections, bus protection, low impedance schemes, high impedance schemes, bus overcurrent schemes, generator protection, CT connections, special considerations, digital systems

- Types of revenue metering
- Applications of SCADA
- Complex protection systems for communications
- Harmonic control
- Point on wave switching

### 2.6.22.6 Electrical power distribution systems diagnostic

Evidence shall show an understanding of diagnosing faults in power distribution systems to an extent indicated by the following aspects:

a) Distribution system overview including:

- regulatory conditions of supply and utilisation
- compliance with Australian Standards.
- reticulation system including overhead/underground, urban/rural, HV customers and high-rise building systems. The effects of industrial customers
- methods used to ensure continuity of supply.
- types of substations in current use.
- systems of distribution used, (primary and secondary)
- voltage levels, power factor, wave-form distortion and transient loading
- supply quality
- load curve profiles (residential/industrial/commercial)
- types of feeders
- distribution systems (urban, rural single-phase systems, SWER, spur, parallel and ring systems etc.)

b) Overhead lines and installation

- industry and safety regulations
- overhead conductors
- conductor material
- current rating factors (heating, voltage drops, power losses)
- aerial bundled cables (HV and LV)
- covered conductors

Note:

The characteristics of lines and cables including the calculation of R, X and B for different arrangements of conductor. Typical values for actual lines. Transposition. Models based on line length. Voltage and line regulation

- overhead line poles
- types (wood, concrete and steel)
- installation of poles (tooling, rake, life, labelling, sinking)
- maintenance of poles – above & below ground
- pole strength and loads
- crossarms
- types and standard sizes
- insulators
- insulation types
- types (pin, suspension or disc, shackle)
- creepage, necessary clearances
- arcing horns, insulator mounting
- structure types
- mechanical properties (working strength, maximum tension, limiting size)
- interpretation of stringing charts

- determination of sag (by calculations or measurement and/or tension measurement)
  - sight and wave sagging, sag correction
  - stays
  - components, anchorage
- c) Use of design schedules
- sample design problems
- Note:  
Examples of common design practice line, voltage, structure types used, line deviation, span sag, crossarms, insulators and stays wind loading and line deviation loading basic surveying
- measurement of levels, deviation angle and compass bearings
  - perform survey of short distribution line extension of produce field notes
- d) Underground cables
- cable types, ratings, core material, design considerations, cable dielectrics, insulating materials and abbreviations, electric stress, cable volt drop and volt drop calculations, cable termination, joints and installation.
  - induction and eddy currents
  - cable testing, cable fault location
  - cable drawing
- e) Voltage regulations of feeders and associated equipment
- terminology used: distribution system, service line, customer's terminals, customer voltage, utilisation voltage, base voltage, voltage variation and bandwidth
  - voltage limits and effects of voltage variation
  - causes of variation: inductance, capacitance and reactance of distribution lines, transformers
  - methods of voltage control: off-load, on-load tap changers, voltage regulating relays, line drop compensation, different types of voltage regulators
  - voltage profiles: principles, effect on voltage profiles, limits of voltage, voltage drops due to LV mains transformers, tapsettings feeder and service lines
  - determining volt drops for components within the profile.
- f) Control of voltage. Conditions leading to voltage collapse and system disintegration. Effects on the system of high/low volts. Voltage control devices including:
- voltage regulators applied to generators and synchronous phase modifiers
  - electromagnetic voltage regulators
  - series and parallel capacitors
  - OLTC transformers and static Var compensations (SVCs)
- g) Range of devices covered by SVCs including:
- saturated reactor compensations (SRs)
  - thyristor controlled reactor compensators (TCRs)
  - combined TCR/TSCs and
  - production of wave-form distorting harmonics and control devices
- h) Importance of the location in the system of voltage control devices
- i) Types of communication systems including telephone, power line carrier, dedicated cable, micro-wave links and fibreoptics. Quantities and signals to be communicated. Advantages and disadvantages of the various systems. Equipment requirements
- j) Transient over-voltages in power systems. Switching and lightning overvoltages and their effect on different plant items. Transient over-voltage control and reduction using surge

diverters, shield wires and CB are control. Insulation systems, insulation co-ordination, insulation grading in plant items, bushings and capacitor bushings

- k) The principles of operation, voltage and current range, breaking capacity and field of use of the following types of circuit breakers.
  - bulk oil, small oil volume, air break, vacuum and SF6 (double pressure and puffer types).
- l) The types of isolators in use. Examples include duo-roll, blade and scissor type.
- m) Circuit breaker auxiliary systems including:
  - d.c. systems including battery types, charging and protection systems and earth fault detection systems
  - SF6 conditioning, storage and handling system

### 2.6.23 Marine electrical systems overview

Evidence shall show an understanding of marine electrical systems to an extent indicated by the following aspects:

- a) Marine electrical systems
  - Switchboards
  - Instrumentation
  - Earthing
- b) Alternators
  - Construction
  - Characteristics
  - Synchronised operation
- c) Switchboards and protection
  - Purpose
  - Testing and maintenance
  - Equipment removal
- d) Lighting systems
  - Purpose
  - Types
- e) Power supplies
  - UPS systems
  - Batteries
  - Maintenance
  - Safety procedures - battery banks
- f) Cathodic protection
  - Purpose
  - Operating parameters
  - Corrosion factors
- g) Safety
  - Equipment
  - Codes and Regulations
- h) Electrical system commissioning requirements and surveys

### **2.6.24.1 Switchgear/controlgear**

Evidence shall show an understanding of switchgear/controlgear to an extent indicated by the following aspects:

- a) Types and applications
- b) Operating principles
- c) Interlocking systems
- d) Control and protection
- e) Installation requirements

### **2.6.24.2 Control panel wiring**

Evidence shall show an understanding of control panel wiring to an extent indicated by the following aspects:

- a) Equipment layout methods and accessories
- b) Connection identification methods
- c) Wiring techniques

### **2.6.25 Hand power tools repairs**

Evidence shall show an understanding of hand power tools to an extent indicated by the following aspects:

- a) Types, applications, operating principles and characteristics
- b) Motors and drive mechanisms
- c) Control and over current protection methods and devices
- d) Typical hand power tool faults encompassing:

- Motor faults
- Power supply faults

Note.

Examples include open circuit or tripped circuit in cord connected tools and battery charging and discharging problems in battery operated tools.

- Control faults
- Mechanical faults

### **2.6.26 Appliance motors and circuits**

Evidence shall show an understanding of appliance motors and circuits to an extent indicated by the following aspects:

- a) Fundamental a.c. circuit principles
  - Components of a circuit – source, path, load and control
  - Notions of open circuit, closed circuit, and short circuits
- b) Circuit - basic configurations encompassing:
  - Single source Series, parallel, and series-parallel and circuits configurations
  - Relationship between voltage, current and impedance (Ohms law)
  - Components of impedance in a circuit

Note:

Confined to basics of resistance, inductive reactance and capacitive reactance

- c) Electromagnetic induction basics encompassing:
- Induction principles
  - Motor action and generator action
  - Transformer principles
  - Risks associated with electromagnetic induction
- d) Single phase supply and three phase supplies encompassing:
- safety testing and isolation of single and three phase circuits
  - sine waves showing the nature of EMF and current in single and three phase supplies
  - Star and Delta connections of a three phase a.c. supply
- e) Electrical supply and distribution within a building or premises encompassing:
- purpose and typical arrangement of main switchboards and distribution boards
  - arrangement of circuits
  - methods and devices for protection against direct and indirect contact with conductive parts
  - methods and device for protection against overload current and fault currents
  - the need for earthing and methods of testing for sound earthing.
- f) Operation, construction and applications of three phase induction motors encompassing:
- Methods for determining polarity magnetic flux in relation to current flow in straight conductors and solenoids
  - circuit operating characteristics
  - characteristics of the magnetic field produced by a three phase winding
  - calculated speed of rotation of the rotating magnetic field
  - basic principle of operation, construction and applications of a three phase induction motor
  - three phase induction motor connections
  - reversing the direction of rotation of a three phase induction motor
  - equipment and methods for testing the motor winding resistance and insulation properties
  - effects of incorrect wiring a three phase motor.
- g) Operation, construction and applications of three phase motor starters encompassing:
- regulatory requirements for starting, control and protection of induction motors
  - operating principle, construction and applications of motor starters
  - main advantages and disadvantages of a motor starter
  - motor starting circuit diagrams
  - starter and three phase motor connections
  - Method of testing and fault finding three phase motor starters.
- h) Components and arrangement of three phase motor circuits encompassing:
- purpose of motor protection
  - three phase motor protection devices and their applications
  - construction and operating principle of thermal and magnetic motor protection
  - connection of thermal overloads in a three phase motors, starters circuit
  - Methods of testing and fault find three phase motor thermal overloads
  - electrical features of motor protection fuses

- effects of under and over voltage on motor circuits
  - effects of repetitive starting and /or reversing motors
  - special requirements for motor protection, in high humidity or moist environments, high temperature areas and corrosive atmospheres
- i) Construction, operation and applications of split phase and single phase motors and controls encompassing:
- principle of operation of a split phase motor and starters
  - construction and basic characteristics of a split phase motor and starters
  - typical applications of a split phase motor
  - split phase motor and starter circuit diagrams
  - reversing direction of rotation of split phase motor
  - methods of testing a split phase motor to identify terminal connections.
- j) Operating principles, construction and applications of capacitor and shaded pole, single phase motors and controls encompassing:
- types of single phase induction motors
- Note.  
Examples are capacitor start, capacitor start/induction run, permanently split capacitor, shaded pole
- the principle of operation of each motor type and associated control.
  - operating characteristics and typical application of each motor and control.
  - single phase induction motors motor and starter circuit diagrams
  - reversing direction of rotation of single phase induction motors
  - methods of testing a single phase induction motors to identify terminal connections.
- k) Operating principles, construction and applications of series universal motors encompassing:
- principle of operation of a series universal and synchronous motor
  - function of the basic parts of a series universal and synchronous motor
  - operating characteristics and typical uses for a series universal and synchronous motor
  - reversing direction of rotation of series universal and synchronous motor
  - list the common series universal and synchronous motor faults and possible causes.
- l) Speed control, protection devices and diagnostic testing of single phase induction motors encompassing:
- principle of speed control for single phase induction motors
  - common faults in single phase induction motors and their control equipment
  - protection devices used with single phase motors and their operation.

### 2.6.27.1 Electric heating appliances

Evidence shall show an understanding of electrical heating appliances to an extent indicated by the following aspects:

a) Heating principles and applications

Note.

Principles include resistance, induction and microwave.

b) Types of heating appliances, their operating principles and characteristics

c) Heating circuits and controls

d) Typical faults

### 2.6.27.2 Microwave ovens

Evidence shall show an understanding of microwave ovens to an extent indicated by the following aspects:

- a) Microwave cooking basics encompassing:
  - Properties of microwaves
  - Biological effects of microwaves
  - Fundamental microwave oven operations
- b) Microwave oven performance encompassing:
  - Radiation leakage
  - Power output measurement
  - Oven leakage safety system
  - Magnetron tests and measurements
  - Interlocks
  - Thermal cut outs and thermostats
  - Stirrer cooling and turntable systems
- c) Power control systems encompassing:
  - Hazards of microwaves and associated high voltages
  - High/low power selection
  - Duty cycle control systems
  - Basic circuit diagrams
  - New microwave oven technology such as inverter microwave ovens
- d) Auto-cook facilities encompassing:
  - Temperature control cooking systems
  - Humidity sensor cooking systems
  - Infrared sensor cooking systems
  - Convection microwave oven systems
- e) Service, fault finding and repair encompassing:
  - Manufacturers' data
  - Safety checks
  - Operating sequence
  - Typical fault symptoms
  - Test equipment
  - Fault identification
  - Fault location using test equipment and service manuals
  - Repairs techniques

### 2.6.28 Motor windings

Evidence shall show an understanding of motor windings to an extent indicated by the following aspects:

- a) Principles and construction encompassing:
  - direct-current machine types

- construction of direct current machine
  - types of armature windings
  - parallel circuits in armature windings
  - value of generated e.m.f.
- b) Direct current armature windings encompassing:
- terms used in armature winding
  - effects of chording
  - lap and wave windings
  - progressive and retrogressive windings.
- c) Simplex lap windings encompassing:
- simplex lap armature winding
  - commutator pitch
  - number and position of brushes
  - characteristics of simplex lap windings
  - equalising connections for armature windings
  - applications for lap windings.
- d) Simplex wave windings encompassing:
- simplex wave armature winding
  - commutator pitch
  - number and position of brushes
  - dummy coils
  - characteristics of simplex wave windings
  - applications of wave windings
  - comparison of lap and wave windings
  - armature winding calculations.
- e) Commutation and interpoles encompassing:
- principles of commutation
  - conditions for sparkless commutation
  - methods used to reduce sparking
  - resistance commutation
  - e.m.f. commutation
  - interpoles or commutating poles
  - advantages of interpoles.
- f) Alternator windings encompassing:
- elementary single-phase stator winding
  - elementary three-phase stator winding
  - half-coil and whole-coil windings
  - concentrated and distributed windings
  - chain, lap and wave windings
  - pole-pitch and coil-span
  - half-coil winding for a three-phase alternator
  - whole-coil stator winding for a three-phase alternator
- g) Breadth factor and sinusoidal output encompassing:

- breadth factor
  - e.m.f. equation for an alternator
  - methods of obtaining sinusoidal wave form
  - star and delta connection of alternator windings
- h) Rating, cooling and regulation encompassing:
- rating of alternators
  - cooling of alternators
  - the voltage regulator
- i) Testing techniques encompassing:
- continuity
  - insulation testing
  - use of 'growler'
  - magnetic field testing

#### **2.6.29 Coil winding basics**

Evidence shall show an understanding of basic of coil winding to an extent indicated by the following aspects:

- a) Coil data
- b) Coil former types and construction/set up
- c) Coil winding machines
- d) Coil insulations.

#### **2.6.30 Coil testing**

Evidence shall show an understanding of coil testing to an extent indicated by the following aspects:

- a) Testing devices and their purpose
- b) Types of tests
- c) Testing techniques

#### **2.6.31.1 Electrical machine winding basic**

Evidence shall show an understanding of the basic techniques in insulating and placing coils for electrical static and rotating machines to an extent indicated by the following aspects:

- a) Electrical machine insulation processes
- b) Coil types
- c) Coil placement techniques

#### **2.6.31.2 Low voltage three phase motor winding techniques**

Evidence shall show an understanding of the techniques of winding three phase motors to an extent indicated by the following aspects:

- a) Electrical machine insulation types and applications
- b) Coil placement techniques

- c) Coil connection arrangements and terminations
- d) Winding insulation methods

### 2.6.31.3 Direct current motor winding techniques

Evidence shall show an understanding of the techniques of winding direct current motors to an extent indicated by the following aspects:

- a) Critical details and measurements when stripping a stator encompassing:
  - Winding types
    - Note.
    - Examples are wave winding and a lap winding with equalisers
  - Winding diagram
  - Tests carried out on steel bands removed from an armature
- b) Procedures and precautions required when inspecting and/or re-using a commutator encompassing:
  - Method of removing the armature leads from the risers of a TIG welded commutator.
  - Dimension to be checked on a TIG welded commutator.
  - Features of TIG welded and soft soldered commutators.
  - Relationship between the position of the slot a coil is in and the commutator segments it is connected to.
  - Purpose of commutator wear ring.
- c) Outline the procedures for checking the condition of a stripped core and commutator in preparation for rewind encompassing:
  - Describe the sequence of events between the removal of an old winding and the start of rewinding.
  - Describe the method of carrying out the core loss test, the effect this test has on the core and expected test results.
  - Describe two methods of overcoming hot spots in an armature core.
  - Detail the tests and checks made to a commutator before it can be reused.
- d) Select the appropriate insulation for a particular application with reference to manufacturers' recommendations and standards encompassing:
  - Conductor insulations available for use in d.c. formed coils, their dielectric strength and temperature rating.
  - Various insulations used on the slot portion and overhang of a d.c. armature encompassing:
    - Note
    - Examples may include: B stage insulation, VPI insulation
  - Properties, method of application and specific uses for the above insulations.
- e) Calculations and insulation specifications for preparing coils and equalisers for rewinding with reference to manufacturers' specifications.
  - Special characteristics of copper used in formed armature coils.
  - Half coil length and the amount of copper required for a set of coils, given the dimensions, the voltage and winding pitch of an armature.
  - Preparation of copper prior to insulating the coils and equalisers for armatures
    - Note:
    - Examples may include: commutators, TIG welded, soft soldered

- Insulation specification for each of the following impregnation systems given an armature, voltage rating, temperature rise and conductor size.

Note:

Examples may include; solvent based impregnating system, a VPI impregnating system

f) Procedures and precautions required for fitting the coils and equalisers to the armature, wedging, connecting and banding with reference to manufacturers' specifications.

- Method of insulating the overhang support rings.
- Procedures required between the insulating of the support ring and the stage of fitting the temporary band.
- Method of fitting a temporary band and it's purpose.
- Purpose of stoving a large armature after the fitting of the temporary band.
- Method of making the joints.

Note:

Examples are: a soft soldered commutator, a TIG welded commutator

- Calculation of turns required for both glass and steel bands given the armature dimensions, copper size, mean length of turn and speed.
- Features and use of glass and steel bands

g) Materials, procedures, tests and precautions required during and after the impregnation of completed armature.

- Precautions to be taken when handling and using varnishes and resins.
- Important features of an oven used to cure large impregnated machines.
- Application and features of various impregnating materials

Note.

Examples are water based varnish, Xylol base varnish and 100% solids resin

- Method of carrying out a gel test on a resin and a viscosity test on a varnish
- Typical quality procedures carried out on an impregnating varnish.
- Procedure and precautions for carrying out the a hot dip impregnation and a VPI impregnation

h) Describe methods for preparing and testing a bare commutator.

- Describe the method of diamond turning a commutator.
- Describe the method of undercutting and de-burring a commutator.
- Detail the method of insulating the exposed Vee ring.
- Explain the method and purpose of seasoning a commutator.
- Procedures for Electrical testing procedures of a bare commutator.

i) Procedures and precautions to be followed when performing static electrical testing of a completed rewind according to Australian, British and IEC standards encompassing:

- Types and purpose of tests
- Testing safety precautions
- Testing procedures

Note.

Example of tests are repetitive surge test, polarisation index (PI) test, induction/growler test an electrical test on the steel bands cold resistance test and polarity test.

- Interpretation of test results
- Calculation of winding cold resistance and resistance across adjacent bars of a commutator.

#### 2.6.31.4 High voltage three phase motor winding techniques

Evidence shall show an understanding of the techniques of winding high voltage three phase motors to an extent indicated by the following aspects:

a) Critical details and measurements when stripping a stator encompassing:

- Winding types

Note.

Example are hairpin wound stator and lap wound stator

- Winding diagram
- Wedges of a radially ventilated machine
- Factors to be considered when selecting cables for a stator.

b) Procedures for checking the condition of a stripped in preparation for rewind encompassing:

- Manufacturers' specifications.
- Sequence of events between the removal of the old winding and the start of rewinding.
- Core loss test, the effect this test may have on the core and expected test results
- Methods of overcoming hot spots in a stator core.
- Level of insulation required to insulate the steel bracing rings that support the overhang.
- Difference between the slot liners and packers of a 3.3kV and a 6.6 kV machine.

c) Procedures for the fitting of coils to core, wedging and bracing.

- Significance of the slot portion of coils for machines above 3.3 kV
- Method of inserting the coils of a ribbon winding into slots.
- Effects of undue mechanical stress on B stage insulated coils.
- Importance of coil pitch and why it is important.
- Sequence of events in fitting the first pole pitch group of coils in a lap winding
- Sequence of events in fitting the coils of a concentric winding
- Purpose and location of the excess packing in a slot.
- Difference between the wedges for a lap and hairpin winding.
- Method of fitting a wedge.
- Difference that may be encountered between the wedges for a radial ventilated and the wedges for an axially ventilated machine.
- Methods used to brace and strengthen the overhang of a lap winding and a hairpin winding

d) Procedures for making inter turn and inter coil connections on a hairpin winding and inter coil connections on a lap and bar winding encompassing:

- Sequence of events in making turn to turn connections, and insulating the turns of a lap winding

Note.

Connection methods include silver solder or brazing and soft solder

- Sequence of events, from hand forming the coil to final insulation, in making the turn to turn connections in a hairpin winding, using a welded joint.
- Sequence of events in making the coil to coil connections in a bar winding.

e) Testing according to British and IEC standards.

Note.

Examples of testing are 3.3 kV B stage insulated winding test, 6.6 kV B stage insulated winding and VPI winding test.

f) Materials, procedures, tests and precautions required during and after the impregnation of completed windings according to Australian, British and IEC standards.

- Precautions to be taken when handling and using varnishes and resins.
- Important features of an oven used to cure large impregnated machines.
- Application and features of various impregnating materials

Note.

Examples are water based varnish, Xylol base varnish and 100% solids resin

- Method of carrying out a gel test on a resin and a viscosity test on a varnish
- Typical quality procedures carried out on an impregnating varnish.
- Procedure and precautions for carrying out the a hot dip impregnation, a flood coat impregnation and a VPI impregnation
- Tests to be carried out after impregnation and bake on a 3.3kV B stage insulated winding, a 6.6 kV B stage insulated winding and a VPI winding

g) Winding to terminal connections according to British and IEC standards.

- Criteria for selection of winding to terminal cables

Note.

Examples are voltage rating, full load current and fault capacity.

- Common types of terminal boxes and their structure.

Note.

Example are phase segregated, phase separated and phase insulated

- Method of making the joint between winding and terminal cables and insulating such a joint.

h) Procedures and precautions to be followed when performing static electrical testing of a completed rewind according to Australian, British and IEC standards encompassing:

- Types and purpose of tests
- Testing safety precautions
- Testing procedures

Note.

Example of tests are repetitive surge test, loss tangent test, polarisation index (PI) test, cold resistance test and polarity test.

- Interpretation of test results
- Calculation of winding cold resistance and line and phase resistance

### 2.6.31.5 Electrical machines, mechanical components

Evidence shall show an understanding of the mechanical components of electrical machines to an extent indicated by the following aspects:

a) Types of bearings used in electric motors:

b) Bearing clearances.

c) Techniques for removing and fitting bearings encompassing:

- shafts
- housings

d) Handling and storage of bearings.

e) Lubrication encompassing:

- Safety and environment issues in handling and disposing of lubricants

- Lubrication methods
- f) Calculation of bearing life.
- g) Bearing damage and remedial action
- h) Types of couplings, applications
- i) Fitting and aligning couplings
- j) Types of belts and their applications
- k) Fitting and aligning pulleys
- l) Machine cooling/ventilation methods and components

#### **2.6.31.6 Electrical machines, performance monitoring**

Evidence shall show an understanding of the performance monitoring of electrical machines to an extent indicated by the following aspects:

- a) Methods of testing the condition of bearings.
- b) Methods of testing the condition of windings and terminal boxes.
- c) Methods of testing the condition of the coolers
- d) Problems likely to be created due to lack of maintenance on brush gear.
- e) Method of testing the general condition of a machine by vibration analysis
- f) Methods of checking the condition of couplings, pulleys, belts and the like.
- g) Determining machine operating efficiency

#### **2.6.32 Field power and distribution systems**

Evidence shall show an understanding of field power and distribution systems to an extent indicated by the following aspects:

- a) Types applications and components
- b) Regulator and safety requirements and standard
- c) Equipment installation and commissioning
- d) Testing requirements

#### **2.6.33 Variable speed drives for a.c. motors**

Evidence shall show an understanding of a.c. variable speed drive to an extent indicated by the following aspects:

- a) Methods and operating principles
- b) Installation requirements
- c) Filtering
- d) Performance characteristics
- e) Set up and commissioning
- f) Common faults: their symptoms and causes.

#### **2.6.34 Variable speed drives for d.c. motors**

Evidence shall show an understanding of d.c. variable speed drive to an extent indicated by the following aspects:

- a) Methods and operating principles
- b) Installation requirements

- c) Filtering
- d) Performance characteristics
- e) Set up and commissioning
- f) Common faults their symptoms and causes.

### 2.6.35 Servomechanism systems

Evidence shall show an understanding of servomechanism systems to an extent indicated by the following aspects:

- a) Servomechanism terminology and concepts encompassing:
  - null, error signal, feedback and reference signal
  - damping: under, over, critical
  - hunting
  - overshooting
  - deadband
  - response time
  - time lag
- b) Difference between an open loop and a closed loop system encompassing:
  - the operation of a servomechanism system to block diagram level identifying the components:
  - command transmitter
  - error detector
  - amplifier
  - summing point/network
  - servo
  - position feedback
  - rate feedback
  - acceleration feedback
  - modulator/demodulator
- c) Differences in operation between types of servomechanism systems encompassing:
  - a.c., d.c. and hybrid types
  - advantages and limitations
- d) Causes of hunting.
- e) Inspection, testing, and alignment of a servomechanism system
- f) Common faults their symptoms and causes.
- g) Programming and configuration of a PLC driven servo system

### 2.6.36 Synchronous machine diagnostics

Evidence shall show an understanding of synchronous machine diagnostics to an extent indicated by the following aspects:

- a) a.c. generators – construction, types and cooling encompassing:
  - construction of stator and rotor windings
  - rotor construction (cylindrical and salient pole)
  - advantages of rotating field construction

- excitation methods
  - cooling methods
  - prime movers
- b) a.c. generators – operating principles and characteristics encompassing:
- a.c. generator equivalent circuits (synchronous reactance and resistance components)
  - tests – open circuit, short circuit, stator impedance
  - voltage regulation, island generator's terminal voltage load power factor
  - determination of excitation voltage and load angle
- c) Synchronising a.c. generators encompassing:
- conditions for synchronising (infinite bus)
  - methods for synchronising (lamp methods, synchroscope)
  - alternator load sharing, parallel operation
- d) a.c. generators power, torque and efficiency encompassing:
- power input, input torque, speed
  - power losses
  - output power, load power factor, rotor angle, pu power
  - efficiency
  - performance chart interpretation
- e) Voltage regulation (AVR) encompassing:
- need for AVR's
  - features of AVR's
  - effects of rotor inductance
  - connections of AVRs
  - operation of AVRs
- f) a.c. generator operational stability encompassing:
- power output, VAR effects, rotor angle, excitation
  - control of VAR (OLTC transformers)
  - voltage dependant nature of stability
  - critical clearance angle of a.c. generator
  - stability limits
- g) a.c. generator protection encompassing:
- restricted, unrestricted primary, back up and duplicated protection
  - overcurrent, short circuit, differential, reverse power, load unbalance, rotor overload, loss-of-field, rotor earth fault, station earth fault, under frequency protection
  - external fault protection
- h) Induction generator encompassing:
- types operating principles, characteristics
  - excitation methods
  - losses and efficiency
  - synchronising and paralleling
- i) Three phase synchronous motors encompassing:

- construction – rotor, stator, windings
- excitation methods
- operating principles (equivalent circuits, synchronous impedance)
- hunting and stability limits
- power factor correction
- paralleling and synchronisation techniques
- starting methods
- braking methods

### **2.6.37 Induction motors diagnostics**

Evidence shall show an understanding of induction motors diagnostics to an extent indicated by the following aspects:

a) Construction of polyphase induction motors encompassing:

- squirrel cage motors
- slip-ring motors

b) Operating principles of polyphase induction motors encompassing:

- rotating magnetic field torque slip
- MMF relationships
- Leakage fluxes

c) Speed-torque relationships in induction motors encompassing:

- maximum torque
- torque – slip relationships
- types of motor squirrel cages
- power flow in the motors
- power distribution
- torque units
- slip ring rotors

d) Induction motor performance testing encompassing:

- no-load tests
- locked rotor tests
- development of motor equivalent circuit from test results
- analysis of motor performance using circle diagrams

e) Induction motor starters encompassing:

- starting requirements
- type of starters
- starting torque
- starting dynamics
- static friction
- mechanical loads
- starting duration

f) Reduced voltage starting encompassing:

- starting dynamics

- change over conditions
  - starting duration
  - acceleration curves
- g) Speed control of induction motors encompassing:
- constant torque, constant power concepts
  - torque-flux-voltage relationships
  - rotor resistance control
  - stator impedance control
  - variable frequency control (e.g. PAM, PWM, Flux vector control)
- h) Braking of induction motors encompassing:
- electrical braking systems (plugging, d.c. dynamic, regenerative, capacitor-magnetic)
  - mechanical braking systems (mechanical drum, demag, eddy current)
- i) Motor protection encompassing:
- overload
  - earth fault
  - phase failure
- j) Motor selection encompassing:
- selection criteria
  - RMS rating
- k) Induction motor maintenance/repair encompassing:
- routine maintenance schedules
  - type of repairs (mechanical, electrical)
- l) Single phase induction motors encompassing:
- construction
  - operating principles
  - speed-torque relationships
  - testing

### **2.6.38 Direct current machines diagnostics**

Evidence shall show an understanding of direct current machines diagnostics to an extent indicated by the following aspects:

- a) Basic d.c. machine construction and operation encompassing:
- application of d.c. machine
  - construction of d.c. machines
  - d.c. machine connections
  - insulation
  - ratings
  - cooling paths
  - bearings
  - general maintenance of d.c. machines
- b) Construction and use of lap and wave windings encompassing:
- coils and elements

- generated voltage equation for generator
- generated voltage equation for motors
- application of lap and wave windings

c) Commutation process encompassing:

- use of interpoles
- loading of machines
- brush shifting
- brush selection
- classes of brush grades

Note:

Examples include: natural graphite, hard carbon, electrographite, metal-graphite, metal-carbon, “treated” grades

- carbon brush contact characteristics

Note:

Examples include: specific resistance, thermal conductivity, density and porosity, elastic properties, contact properties

- carbon brush factors

Note:

Examples are: pressure, current, polarity, speed

- brush construction

Note:

Examples are: dimensions, tolerances, preferred sizes, surfaces, edges, bevels, flexible shunts, connection of flexible shunt to brush, insulation of flexible connections

- brush holders

Note:

Examples are: types, brush angles, trailing holders, reaction holders, top bevel angles, reversible rotation, cantilever holders, effective arc of contact, construction of brush holders, pressure mechanism

- mounting of brush holders and brushes

Note:

Examples are: clearances, brush angle, brush arm spacing, alignment, staggering, brush bedding, brush pressure

- brush operation

Note:

Examples are: temperature rise, number and size of brushes, current distribution between brushes, slotting brushes, polarity effects, arc of contact, materials for commutators, mica

- selection of brush grades

Note:

Examples are: machine data, current density, commutator peripheral speed, brush arc, pitch of segments, number of segments covered by brush, cooling surface

d) Armature reaction in d.c. machines

- effect of armature reaction on d.c. machine characteristics
- use of compensating winding

e) d.c. generators

- performance of generators supplying various loads
- voltage regulation as a percentage or per unit value
- operation in parallel

f) d.c. motors

- shape of motor speed/torque curves
- reversal of machines

g) Starting of d.c. motors

- types of d.c. motor starters in use
- d.c. motor protection

h) Speed regulation and speed control of d.c. motors

- methods in use
- effect on motor design and operation caused by the use of SCR
- speed control equipment

i) Braking of d.c. motors

- Plugging
- Dynamic
- Regenerative
- Mechanical

j) Losses and efficiency

k) Acceleration of d.c. motors and loads

- characteristics of typical loads
- matching loads to a suitable motor
- heating of windings
- derating of motors

l) Special d.c. motors construction, operation and applications

- permanent-magnet motors
- brushless motors (e.c. motors)
- coreless and moving coil motors
- linear motors
- printed circuit motor
- stepping motors
- voice-coil motors

m) Maintenance of d.c. machines

- routine maintenance
- breakdown repairs

n) types of faults

- brushes/brush gear problems

Note:

Examples are: sparking, excessive heating, excessive wear of brushes, commutator or slip rings, bad surface conditions, excessive maintenance, flexible burning, flexible corrosion, separation or grooving, blackening, copper picking, copper dragging, brush noise

o) adjustment of machines

- correct brush position
- machining and finishing of commutators.

## 2.6.39 Lubrication of lift components

Evidence shall show an understanding of lubrication of lift components to an extent

indicated by the following aspects:

- a) Purpose of lubrication encompassing:
  - Corrosion protection,
  - Friction reduction,
  - Cooling,
- b) Lubricant loss and loss estimation
- c) Suitability Oils, Greases, Coolants, Rust preventative, Solvents
- d) Selection of lubricant encompassing:
  - Viscosity
  - Types to suit device operation
- e) Application methods and quantities encompassing:
  - Hand, Grease guns,
  - Oil cans,
  - Pressure lubricators,
  - Oil misters,
  - Level indicators,
  - Estimating quantities,
  - Lubrication points
  - Automatic lubricators

#### **2.6.40 Lift systems, roping**

Evidence shall show an understanding of lift systems roping to an extent indicated by the following aspects:

- a) Single wrap encompassing:
  - Hoisting
  - Governor
  - Tappet
  - Compensator
  - Selector
- b) Multiple wrap encompassing:
  - Hoisting
- c) Types of ropes encompassing:
  - Normal lay
  - Langs lay
- d) Rope attachments encompassing:
  - Standards ends
  - Splices
  - Wedges sockets
  - Talurit fitting
  - Babbit sockets
  - Secon fitting

### **2.6.41 Lift systems, rope inspection**

Evidence shall show an understanding of lift systems rope inspection to an extent indicated by the following aspects:

- a) Inspection of ropes encompassing:
  - Requirements of Lift Code/enterprise
  - Purpose
  - Wear
  - Broken strands
  - Diameter
  - Deformation
  - Corrosion
  - Lubrication
  - Tension
- b) Rope stretch encompassing:
  - Requirements of Lift Code/enterprise
  - Counterweight clearance
  - Compensatory equipment
- c) Inspection of rope attachments encompassing:
  - Requirements of Lift Code/enterprise
  - Rope anchor rods
  - Castings, Springs
  - Wedges
  - Swaging
  - Checking for fracturing
  - Deformation
  - Remedial action
- d) Inspection of sheaves encompassing:
  - Groove condition
  - Riffling
  - Ropes down in sheaves
  - Maintenance records

### **2.6.42 Escalators, moving walk and tread way mechanics**

Evidence shall show an understanding of escalators, moving walk and tread way mechanics to an extent indicated by the following aspects:

- a) Escalators encompassing:
  - Statutory and enterprise requirements: Lift Code, OHS, Emergency stop, Danger signage, Barriers and Running clearances
  - Purpose of Controller, Safety devices, Chain/steps and Hand rail
  - Techniques for repair of Steps/belts/pallets, Combs, Guards, Balustrades, Newel rollers, Balustrade lighting and hand rails
  - Adjustments of Chains, Hand rail, Brake, Steps and Safety devices

b) Safe working procedures encompassing:

- Removing steps/pallets,
- Working in motor room/pit,
- Cleaning/lubricating,
- Guards
- Hand rails remove/refit

c) Installation and commissioning encompassing:

- Aligning,
- Testing,
- Handling
- Running clearances

d) Escalator types to suit applications

Note.

Factors include volume of people, Gradient and Multi floor use

e) Moving walks encompassing:

- Types; Continuous belts and palletised types
- Statutory requirements: OHS, Lift Code
- Comparison with escalator

f) Tread Ways encompassing:

- Belt and palletised types
- Statutory requirements, OHS, Lift Code

### 2.6.43 Lift systems, plumbing and setting out

Evidence shall show an understanding of plumbing and setting out to an extent indicated by the following aspects:

a) Single lift wells encompassing:

- Purpose
- Need for accuracy
- Modification of errors
- Use of template
- Use of plumb lines and weights
- Measuring and marking out lift wells
- Measuring and marking out machine room (where appropriate)
- Plumbing chart
- Identification of clearances
- Adjustment of templates
- Use of laser level

b) Multiple lift wells encompassing:

- Use of centre line/datum
- Use of survey information and layouts
- Setting of well templates
- Plumb charts analysis for three dimensional impact
- Corrective action

- Use of theodolite
- c) Fixing devices and methods encompassing:
- Inserts
  - Expansion anchors
  - Chemically bonded anchors

#### **2.6.44 Lift equipment alignment techniques**

Evidence shall show an understanding of lift components – electrical/electronics to an extent indicated by the following aspects:

- a) Equipment layout encompassing:
- Specifications
  - Clearances
  - 3D impact on layout
  - Lift code
- b) Alignment equipment encompassing:
- Gauges
  - Straight edges
  - Rail gauges
  - Shims/packers
  - Lasers
- c) Machine room alignment encompassing:
- Machine and fixings
  - Diverter sheave
  - Governor and tensioning sheaves
  - Counterweight centre lines
  - Sheave and roping system
- d) Lift car alignment encompassing:
- Superstructure
  - Frames
  - Doors
- e) Lift well alignment encompassing:
- Guides and brackets
  - Trimmer beams
  - Buffers
  - Landing doors and locks
  - Compensators
- f) Running clearances encompassing:
- Safety gear
  - Car sill
  - Door operator
- g) Car operating devices encompassing:
- Slowdown switch

- Limits
  - Inductors
  - Door locks
  - Vanes and Shaft information
- h) Installation and aligning hydraulic equipment procedure encompassing:
- Ram/Cylinder
  - Hydraulic Lines
  - Bleeding Hydraulic system

#### 2.6.45 Lift components – electrical/electronics

Evidence shall show an understanding of lift components – electrical/electronics to an extent indicated by the following aspects:

- a) Traction lifts encompassing:
- Lift control circuits (relay logic only): floor selector circuitry,
  - Machine room control (selector) and well control (transducer) circuitry
- Note:  
Examples are: direction slowing and stopping, re-leveling, door operator, acceleration, button, indicator/lantern, lights and emergency lights, traveling cables, key switch circuits, fans, main supply and power circuits
- b) Safety circuits encompassing:
- Type, operation and actuation
- Note  
Examples are: landing door locks, car door locks, emergency stop, pit switch, car trap-door switch, fire service, car top switch, tappet switch, governor switch, safety gear switch, reverse phase relay, phrase failure relay and limit switches.
- c) Maintenance, replacement and adjustment encompassing:
- Electrical and electronic lift components
- Note:  
Examples are: traveling cables, tachometers, selectors, encoders and transducers.
- Safety devices:
- Note:  
Examples are: overloads, circuit breakers, limit switches, terminal stopping, door protection, governors and safety gear/switches.
- d) Electrical layout/drawings and special requirements encompassing:
- Lift code & AS/NZS 3000 requirements
  - specific lift symbols
  - conduits
  - trailing cable
  - troughing
  - colour coding and labeling
  - segregation LV/ELV
  - telephone and communication cabling
  - regulatory requirements and door lock wiring.
- e) Safety drive adjustment encompassing:
- Emergency stop button

- speed governor
- reverse phase protection
- broken chain/step switch
- broken main drive switch
- drive access switch
- start pressure switch and landing guards/barriers.

f) Lift components – electronic encompassing:

- Encoders
- Transducers
- Electronic boards
- Selectors
- Rectifiers
- Capacitors
- Resistors
- Processor Board
- I/O board

g) Drives - types, construction and operation encompassing:

- Traction
- Gearless types

Note:

Examples are: Speed/load characteristics, Efficiency, Application, Brakes, Electric prime mover (motor types and control)

- Geared types

Note:

Examples are: Speed/load characteristics, Efficiency, Application, Brakes, Electric prime mover (motor types and control)

- Other types of lifts

Note:

Examples are: Drum, Rack and pinion, Chain, Screw

h) Fault finding encompassing:

- Visual inspection
- Performance checks and application of fault finding
- Principles

#### **2.6.46 Lift systems – basic operations**

Evidence shall show an understanding of lift systems – basic operations to an extent indicated by the following aspects:

a) Safety issues encompassing:

- Personal safety equipment
- Hazard identification and reporting
- Single and team manual handling
- Communication on site
- Emergency procedures

b) Access to and safe working practice encompassing:

- Machine room
  - Top of car
  - Lift pit
- c) Statutory requirements encompassing:
- Lift Code
  - Australian Standards
- d) Escalators and moving walks encompassing:
- Components
- Note:  
Examples are: Machine Brakes, Controllers, Safety devices, Balustrade lighting, Steps/pallets/belts, Hand rail, Drive chain, Truss, Track systems, Step/pallet chains, Rollers, Tension carriage, Hand rail earthing
- e) Traction lift components
- f) Types of lifts encompassing:
- Passenger
  - Goods
  - Service
- g) Machine room equipment encompassing:
- Machine
  - Controller
  - Governor
  - Floor selector
- h) Well equipment encompassing:
- Guide rails
  - Landing doors and locks
  - Limit switches/operating devices
  - Ropes
  - Roping systems
  - Counterweights
- i) Pit equipment encompassing:
- Buffers
  - Compensators
  - Safety equipment
- j) Car equipment encompassing:
- Frame
  - Superstructure
  - Door operator
  - Travelling cable
  - Buttons and indicators
  - Communication devices
  - Safety gear

#### **2.6.47 Lift components - electro-mechanical**

Evidence shall show an understanding of electro-mechanical lift components to an extent indicated by the following aspects:

a) Lift control circuits using relay logic encompassing:

- Button circuit
- Indicator/lantern circuit
- Key switch circuits
- Fans
- Mains supply
- Power circuits
- Floor selector circuitry
- Motor room control (selector)
- Well control (transducer)
- Directional circuitry
- Slowing and stopping circuitry
- Re-levelling circuitry
- Door operator circuitry
- Acceleration circuits

b) Safety circuits - type, operation and actuation encompassing:

- Landing door locks
- Car door locks
- Emergency stop
- Pit switch
- Car trap-door limit switch
- Fire service
- Car top switch
- Tappet switch
- Governor/switch
- Safety gear switch
- Reverse phase relay
- Phase failure relay
- Overloads
- Circuit breakers
- Limit switches
- Terminal stopping
- Door protection
- Circuit switches

c) Lift components – electronic encompassing:

- Encoders
- Transducers
- Electronic boards
- Selectors
- Rectifiers

- Capacitors
  - Resistors
  - Processor board
  - I/O board
- d) Lift components – electrical encompassing:
- Relays
  - Tachos
  - Limit switches
  - Brushes
  - Selectors
  - Motor/generator
  - Transformers
  - Fuses
  - Lamps
  - Terminals
- e) Electrical layout and special requirements encompassing:
- Lift Code and AS 3000 requirements
  - Special lift symbols
  - Conduits
  - Travelling cable
  - Troughing
  - Colour coding and labelling
  - Segregation LV/ELV
  - Communication cabling
  - Door lock wiring
- f) Drives encompassing:
- Types
  - Construction
  - Operation
- g) Traction encompassing:
- Speed/load characteristics
  - Efficiency
  - Application
  - Brakes
  - Electric prime mover (motor types and control)
- h) Geared types encompassing:
- Speed/load characteristics
  - Efficiency
  - Application
  - Brakes
  - Electric prime mover (motor types and control)
  - Drum
- Note:

Examples are: Rack and pinion, chain

## 2.6.48 Electric lifts - mechanics

Evidence shall show an understanding of the mechanics of electrical lifts to an extent indicated by the following aspects:

a) Governors encompassing:

- Types

Note:

Examples are: Vertical shaft, Overspeed devices, Horizontal shaft

- Operation

Note:

Examples are: Testing procedures for each type of governor, Governor rope tension test

b) Safety gear encompassing:

- Types

Note:

Examples are: Type A instantaneous, Type B flexible guide clamp, Type C wedge clamp, Type D oil buffer

c) Release procedures for each type of safety gear/governor combination

d) Statutory requirements

e) Maintenance, replacement and adjustment of mechanical lift components encompassing:

- Door locks
- Air cords
- Selectors
- Bearings

Note:

Examples are: Roller, Sleeve, Guide shoes, Roller, Slipper

- Door guides
- Landing doors
- Car doors
- Tapes/chains
- Motor room equipment
- Well equipment
- Pit equipment

f) Brakes encompassing:

- Geared machine brakes
- Gearless machine brakes

g) Brake function and statutory requirements

h) Types of brake operation encompassing:

- Mechanical configurations

Note:

Examples are: External, Internal

- Electrical operations

Note:

Examples are: Stall motor, Solenoid, Hydraulic

i) Brake inspection and adjustment encompassing:

- Mechanical
  - Electrical
- j) Brake circuit operation encompassing:
- Brake circuitry
- k) Manual release of brakes encompassing:
- Safe procedures
  - Release devices
- l) Statutory requirements

#### **2.6.49 Electro-hydraulic lifts**

Evidence shall show an understanding of electro-hydraulic lifts to an extent indicated by the following aspect:

- a) Electrical circuitry
- b) Pump motor, starter
- c) Control components and operation encompassing:
- Governor switch
  - Over travel limits
  - Up, down solenoids
  - Up, down limit switches
  - Levelling switch
  - Stop button
  - Faulty components diagnosis
- d) Hydraulic components
- e) Hydraulic circuitry
- f) Servicing

#### **2.6.50 Electro-hydraulic lifts - mechanical operation**

Evidence shall show an understanding of the mechanical operation of electro-hydraulic lifts to an extent indicated by the following aspect:

- a) Principles of fluid power encompassing:
- Fluids
  - Hydraulics
  - Pascal's Law
  - Safety considerations of fluids under pressure
- b) Components encompassing:
- Pump
  - Control of hydraulic pressure
  - Solenoid valves
  - Directional flow
- Note:  
Examples are: Pressure gauge
- Ram/cylinders
- Note

Examples are: Single stage, Multi stage

- Oil cooler
  - Oil reservoir
  - Filters
  - Seals
  - Bleeding lines
- c) General operation
- d) Lift applications
- e) Types of arrangements encompassing:
- Side acting
  - Direct
  - Suspended
- f) Requirements of Lift Code/Standards encompassing:
- Viewing communication windows
  - Labelling circuit breakers'
  - Head room/top of car
  - Pump installation under car
  - Anti-creep devices
  - Closing of landing doors
- g) Emergency passenger release encompassing:
- Manual lowering
  - OHS considerations
  - communications

### **2.6.51 Emergency release procedures - trapped passengers**

Evidence shall show an understanding of emergency release procedures for trapped passengers to an extent indicated by the following aspect:

- a) OHS considerations encompassing:
- Enterprise requirements and procedures
  - Passenger safety
  - Moving under power
  - Hand winding
- b) Communication with passengers related to status of lift encompassing:
- Determining numbers and condition of passengers
  - Direction of lift travel before stopping
  - Fault indication
  - Status of doors
- c) Communication with passengers related to passenger safety and comfort encompassing:
- Warnings about using controls
  - Warnings about standing near doors
  - Information related to impending movement
  - Information relating to opening of doors
  - Reassurance as to safety of passengers

- Emergency medical support

## 2.7 Electrical installations and systems

### 2.7.1.1 Electrotechnology, building systems and materials

Evidence shall show an understanding of building systems and materials to an extent indicated by the following aspects:

- a) Methods, components and materials
- b) Process and sequence
- c) Cables and equipment in buildings

### 2.7.1.2 Electrical installations, wiring and accessories

Evidence shall show an understanding of the installation of wiring and accessories to an extent indicated by the following aspects:

- a) Standards, codes and requirements applicable to installing wiring and accessories.
- b) Techniques for installing wiring and accessories encompassing:
  - Application of accessories
  - Drawing-in and placing cables
  - Terminating cables and conductors
  - Maintenance of fire rating integrity.

### 2.7.1.3 Electrical wiring systems

Evidence shall show an understanding of electrical low voltage wiring systems to an extent indicated by the following aspects:

- a) TPI and TPS encompassing:
  - regulatory requirements for the installation of flat and circular TPS cables.
  - installation methods used for exposed circular TPS cable of a final subcircuit for lighting or a socket outlet or an appliance.
  - testing of the final subcircuit to ensure it complies with requirements and is safe to connect to the supply.
- b) Enclosures encompassing:
  - regulatory requirement for the installation of cable enclosures such as metallic and non-metallic conduit and trunking.
  - installation methods used for TPI cable enclosed in conduit and trunking, of a final subcircuit for lighting or a socket outlet or an appliance.
  - testing of the final subcircuit to ensure it complies with requirements and is safe to connect to the supply.
- c) Fire related cables encompassing:
  - regulatory requirements for the installation of fire related cable.
  - installation methods used for fire related cable, of a final subcircuit for lighting or a socket outlet or an appliance.
  - testing of the final subcircuit to ensure it complies with requirements and is safe to connect to the supply.
- d) Armoured cable encompassing:
  - regulatory requirements in relation to the installation of armoured cable.

- installation methods used for armoured cable of a final subcircuit for a socket outlet or appliance.
  - testing of the final subcircuit to ensure it complies with requirements and is safe to connect to the supply.
- e) Catenary supported cables and pendants encompassing:
- regulatory requirements for the installation of catenary supported cables and pendant-type socket outlets.
  - installation methods used for catenary support cable system of a final subcircuit for a socket outlet or a tracking cable for an appliance.
  - testing of the final subcircuit to ensure it complies with requirements and is safe to connect to the supply.
- f) Aerial conductors encompassing:
- pole/post/strut selection
  - conductor selection and spacing
  - clearance requirements and safety measures
- g) Underground wiring encompassing:
- categories, cables and enclosures
  - depth laying, protection and other safety measures.

### **2.7.2 Electrical installations, equipment requirements**

Evidence shall show an understanding of the installation of electrical equipment to an extent indicated by the following aspects:

- a) Standards, codes and requirements applicable to installing electrical equipment.

Note:

Equipment includes switchgear and controlgear, motor starters and control devices, measuring and monitoring devices, luminaires and associated controls, heating controls and the like.

- b) Typical locations for various equipment

- c) Terminal configuration for connection of phase, neutral and protective earthing conductors for each type of equipment

### **2.7.3 Electrical installations, safety principles and requirements**

Evidence shall show an understanding of electrical protection for safety to an extent indicated by the following aspects:

- a) Safety principle to which electrical systems in building and premises shall comply

- b) Compliant methods for providing protection.

Note:

Methods include those for providing protection against direct and indirect contact; thermal effects; unwanted voltages; overcurrent; fault currents; overload; overvoltage; injury from mechanical movement

- c) Requirements for installation design and selection of equipment.

Note:

1. Installation design includes compliant protection arrangements; correct functioning; compatibility with supply; estimation of maximum demands; voltage drop considerations; arrangement of circuits and the like

### 2.7.4.1 Electrical installations, protection methods and devices

Evidence shall show an understanding of electrical installations protection methods and devices to an extent indicated by the following aspects:

- a) Electrical installation safety encompassing:
  - effects on the human body of various levels of a.c. and d.c. current and duration of current flow for various current paths.
  - risk of ignition of flammable materials due the thermal effects of current or electric arcs in normal service of an electrical installation.
  - risk of injury from mechanical movement of electrically actuated equipment.
- b) Protection against indirect contact encompassing:
  - indirect contact with live parts of an electrical installation may occur.
  - methods and devices that comply with the Wiring Rules for providing protection against indirect contact.
  - components of the 'automatic disconnection of supply' method of protection against indirect contact.
  - the terms 'touch voltage' and 'touch current'.
  - the current path when a short circuit fault to exposed conductive parts of an appliance occurs.
  - protection against indirect contact is by the use of Class II equipment and by electrical separation.
- c) Earthing encompassing:
  - the terms: earthed, earthed situation, equipotential bonding, multiple earthed neutral (MEN) system, main earthing conductor, protective earthing conductor, functional earthing.
  - minimum size-earthing conductor for a range of active conductor sizes and materials.
  - parts of an earthing system and explain the purpose of each.
  - typical arrangement for a MEN earthing system.
  - arrangements of protective earthing conductors that comply with the Wiring Rules.
  - requirements for earthing in a range of installation situations.
  - requirements for equipotential bonding in a range of installation situations.
- d) Protection against overload and short circuit current encompassing:
  - overload current or fault currents in an electrical installation.
  - equivalent circuit of a fault loop identifying each impedance component and the electrical supply source.
  - level of fault current possible at a given point in an installation from the fault-loop impedance and data from the electricity supplier.
  - methods and devices that comply with the Wiring Rules for providing protection against the damaging effects of overload and fault current
- e) Devices for automatic disconnection of supply encompassing:
  - operating principles of thermal/magnet circuit breakers.
  - operating principles of common types of fuses.
  - operating principles of residual current devices (RCD).
  - time/current curves tripping characteristics of various types of circuit breakers that comply with the requirements of the Wiring Rules.

- time/current curves fusing characteristics of various types of fuses that comply with the requirements of the Wiring Rules.
  - time/current curves tripping characteristics of various types of RCDs that comply with the requirements of the Wiring Rules.
  - factors in a fault loop that will effect the impedance of the circuit.
  - maximum impedance of a fault loop to ensure operating of a protection device in compliance with the performance requirements of the Wiring Rules.
- f) Protection against over voltage and under voltage encompassing:
- causes of over voltage and how this may effect the electrical system.
  - methods for protection against over voltage.
  - causes of under voltage and how this may effect the electrical system.
  - methods for protection against under voltage.

#### 2.7.4.2 Electrical installations, circuit arrangements and cable selection

Evidence shall show an understanding of electrical installations design and equipment selection techniques to an extent indicated by the following aspects:

- a) Performance requirements – design consideration encompassing:
- harmful effect against which the design of an electrical installation must provide protection.
  - acceptable performance standards of a correctly functioning electrical installation.
  - supply characteristics that shall be determined when designing an electrical installation
  - acceptable methods for determining the maximum demand in consumers mains and submains
  - the Wiring Rules’ requirements limiting voltage drop in an installation.
  - reason for dividing electrical installations into circuits and the factors that shall determine their number and type.
  - typical external factors that may damage an electrical installation and that shall be considered in the installations design.
- b) Circuit arrangements encompassing:
- factors that shall be considered in determining the number and type of circuits required for an installation.
  - daily and seasonal demand for lighting power, heating and other loads in a given installation.
  - number and types of circuits required for a particular installation.
  - a layout/schedule of circuits for given installations.
- c) Factors affecting the suitability of wiring systems encompassing:
- wiring systems typically used with various construction methods and particular environment.
  - installation conditions that may affect the current-carrying capacity of cables.
  - external influences that may affect the current-carrying capacity and/or may cause damage to the wiring system.
  - the Wiring Rules’ requirements for selecting wiring systems for a range of circuits, installation conditions and construction methods into which the wiring system is to be installed.

Note:

Wiring systems include cable enclosures, Underground wiring, Aerial wiring, Catenary support, Emergency systems, Busbar Trunking and Earth Sheath Return.

d) Selecting cables encompassing:

- maximum demand for the consumers main and submains for given installations up to 400 A per phase.
- current requirements for given final subcircuits.
- cable selection standards use to select conductor size based on the maximum current requirement while not exceeding voltage drop limitations or maximum fault loop impedance for a given circuit.

### **2.7.4.3 Electrical installations, advanced methods of cable and protection selection**

Evidence shall show an understanding of advanced methods of cable and protection selection to an extent indicated by the following aspects:

a) Faults currents and protection encompassing:

- Methods of determining prospective fault current

Note.

Examples include measurement and calculation

- Protection requirements and methods
- Effects of voltage drop

b) Selection of cables encompassing:

- Short circuit performance limitations
- Effects of voltage drop

### **2.7.5.1 Electrical installations, testing and verification**

Evidence shall show an understanding of electrical installations testing and verification to an extent indicated by the following aspects:

a) Legislated regulations encompassing:

- legislation and regulations that require installations and equipment to be tested to ensure they are safe.
- the person/bodies responsible for the various aspects of ensuring electrical installations are safe.
- results of tests that show an electrical installation is safe for connection to the supply.
- results of periodic inspection and tests that show construction site wiring and equipment is safe to use.
- results of periodic inspection and tests that show electrical equipment is safe to use.

b) Testing installations encompassing:

- tests to ensure: insulation resistance is adequate; earth continuity is such that it will ensure the operation of protection devices under earth fault conditions; polarity of active/s and neutral for mains, submains and final subcircuits is correct; there is no transposition of earthing and neutral conductors; fault-loop impedance is sufficiently low; RCD for correct operation and sensitivity.
- functional tests to ensure active/s and neutral for the same circuit are clearly identified with their circuit protection device.

- tests that show all circuits and devices operate as intended.
  - tests to determine the fault level at a particular point in an installation.
- c) Documentation encompassing:
- results of tests conducted on an installation comply with requirements and ensure the installation is safe.
  - documents of the results of testing an installation as required by the local supply authority.
  - documents of periodic inspection and testing of construction site wiring and equipment in accordance with requirement.
  - documents of periodic testing and inspection of electrical equipment including tagging requirements.

### **2.7.5.2 Electrical installations, testing and verification of special installations**

Evidence shall show an understanding of testing and verification to an extent indicated by the following aspects:

- a) Mandatory and optional testing and verification requirements applicable to special installations.

Note.

Special installations include those for caravan parks, construction and demolition sites, marinas, medical treatment areas and moveable premises and HV installation in consumer's premises

- b) Testing techniques  
 c) Features of special installations that can be visually inspected

### **2.7.5.3 Fire protection installations, testing and verification methods**

Evidence shall show an understanding of methods for testing and verifying compliance and functionality of fire protection installation to an extent indicated by the following aspects:

- a) Mandatory and optional testing and verification requirements applicable to fire protection installations.  
 b) Testing techniques  
 c) Features of fire protection installations that can be visually inspected

### **2.7.6 Electrical installations, emergency systems**

Evidence shall show an understanding of electrical requirements for emergency systems to an extent indicated by the following aspects:

- a) Principles and practices of electrical emergency systems for electrical installations

Note:

Includes the use of relevant Australian Standards, Australian building code, and associated hazards

- b) Arrangement and requirements for fire and smoke control equipment  
 c) Arrangement and requirements for emergency warning and intercommunications systems  
 d) Arrangement and requirements for emergency evacuation lighting  
 e) Arrangement and requirement for emergency power supplies

### **2.7.7 Electrical installations, special installation requirements**

Evidence shall show an understanding of requirements for electrical installations in for

marinas, moveable premises and caravan parks, medical treatment centres and construction and demolition sites to an extent indicated by the following aspects:

- a) Requirements for installation of wiring and equipment
- b) Compliant methods for providing protection
- c) Requirements for installation design and selection of equipment
- d) Mandatory testing and verification requirements

### **2.7.8 Electrical installations, hazardous areas**

Evidence shall show an understanding of requirements for electrical installations in hazardous areas to an extent indicated by the following aspects:

- a) Standards and requirements applicable to hazardous encompassing:

Note:

- 1. Standards may be Australian/ New Zealand or IEC as applicable to a workplace in which competency is demonstrated.
- 2. Requirements include wiring and equipment permitted and not permitted and installation standards applicable to a particular explosion-protection techniques.

- b) Hazardous area verification dossier and its purpose.
- c) Mandatory installation documentation required as a record of the installation process, including certification documentation.

Note:

Documentation includes zone designation drawings, equipment certification and as-installed drawing and installation modification approvals.

### **2.7.9.1 Electrical installations, single phase inspections**

Evidence shall show an understanding of basic electrical inspection processes to an extent indicated by the following aspects:

- a) Scope of inspection of single phase installations.
- b) Processes for inspection of single supply arrangements, main switchboard and earthing
- c) Actions and procedures for dealing with non-compliance defects.

### **2.7.9.2 Electrical installations, inspections and safety compliance audits**

Evidence shall show an understanding of electrical inspection processes to an extent indicated by the following aspects:

- a) Inspection types and their scope.

Note:

Examples include inspection of general electrical installations, special electrical installations, hazardous areas installations, safety audits and investigations.

- b) Inspection procedures
- c) Processes for confirming that performance standards have been met.
- d) Actions and procedures for dealing with non-compliance defects.

### **2.7.10 Electrical installations, determination of demand**

Evidence shall show an understanding of method for determining the demand in mains, submains and final subcircuits to an extent indicated by the following aspects:

- a) Acceptable methods for determining demand in mains and submains

b) Applying calculation and assessment methods of determining demand in mains and submains.

#### **2.7.11 Electrical installations, overcurrent protection**

Evidence shall show an understanding of current protection to an extent indicated by the following aspects:

- a) Application of acceptable methods for determining prospective fault current.
- b) Relationship between prospective fault current and characteristics of protective devices.
- c) Relationship between overcurrent protection at various points in an electrical distribution system.

#### **2.7.12 Electrical installations, overvoltage and undervoltage protection**

Evidence shall show an understanding of overvoltage and undervoltage to an extent indicated by the following aspects:

- a) Application of acceptable methods for determining the need for overvoltage and undervoltage protection
- b) Methods and devices providing overvoltage and undervoltage protection

#### **2.7.13 Electrical installations, programmable logic controller requirements**

Evidence shall show an understanding of requirements for the installation of programmable logic controller to an extent indicated by the following aspects:

- a) Performance for safety requirements and regulations encompassing:
  - Protection against mechanical movement
  - environmental limitations/protection

Note.  
Safety requirements are describe in Australia/New Zealand Standard (e.g. AS/NZS 3000:2000) and adopted IEC Standards.
- b) Regulations and manufacturer's installation requirements encompassing:
  - physical positioning of CPU and I/O racks
  - routing signal/power cables
  - signal/power earthing requirements
- c) Selection of related control equipment and devices

#### **2.7.14 Procedures and processes for responding to reported electrical incidents**

Evidence shall show an understanding of procedures and processes for responding to reported electrical incidents to an extent indicated by the following aspects:

- a) Reporting requirements of the electricity legislation for electrical accidents on customer's premises.
- b) Responsible for investigating electrical accidents on customer's premises.
- c) Reporting procedures of electrical accidents on consumer's premises and distributor's assets.
- d) Actions to be taken when an electrical incident causes loss of life, personal injury or property damage.
- e) Initial task of an investigator of an electrical incident.

f) Extent of evidence needed to be gathered from the site of an electrical incident.

### **2.7.15 Causes and consequence of unsafe and misuse of electrical installations and equipment.**

Evidence shall show an understanding of causes and consequence of unsafe and misuse of electrical installations and equipment to an extent indicated by the following aspects:

a) Conditions and actions that could result in death, injury of property damage from an electrical cause encompassing:

- Non-compliance defects of an electrical installation.

Note.

Compliance cover requirements set by regulations and is typical those specified by the of the Wiring Rules, Service Rules and Building Code.

- Connection or use of unsuitable (not approved) electrical equipment and appliances.
  - Failure to follow safe working procedures.
  - Deliberate misuse.
  - Unacceptable rise in potential of exposed and extraneous conductive parts.
- b) Causes of rise in potential of exposed and extraneous conductive parts encompassing:
- High impedance in the main or service neutral conductor of an MEN system.
  - Earth faults.
  - High impedance in the protective earthing under fault conditions.
  - Ineffective equipotential bonding under fault conditions.
  - Ineffective protective device under fault conditions.
- c) Effects and consequences of current through the human body.
- d) Electrical sources of fire in building and premises.

## 2.8 Electrical principles

### 2.8.1.1 Basic electrical principles

Evidence shall show an understanding of electrical principles to an extent indicated by the following aspects:

- a) Nature of electrical current and charge
- b) Sources of electricity
- c) Effects of current
- d) Single-source single-load circuits encompassing:
  - components that make up the circuit, and
  - relationship between voltage and current
- e) Consequences of a short-circuit and an open-circuit.

### 2.8.1.2 Fundamental electrical principles

Evidence shall show an understanding of electrical principles to an extent indicated by the following aspects:

- a) Fundamental and derived units encompassing:
  - basic units of measurement.
  - SI derived units for force, pressure, energy/work temperature and power.
  - conversion of units to multiple and submultiple units.
  - transposition of a given equation for any variable in the equation.
  - value of electrical and related mechanical quantities given in any combination of units, multiple units or submultiple units.
- b) Power, work and energy encompassing:
  - relationship between power, work and energy.
  - input, output, efficiency or losses of electrical systems and machines in terms of units / multiple units of power.
  - effect of losses in electrical wiring and machines.
- c) Electrical characteristics of materials encompassing:
  - characteristics of solid conductors, electrolytes, insulators and semi-conductors.
  - mechanisms of electrical conduction in solids, liquids and gases.
  - The terms “electric charge”, “electric current” and “electromotive force.”
- d) The simple circuit encompassing:
  - symbols used to represent an electrical energy source, a load, a switch and a circuit protection device in circuit diagram.
  - purpose of each component in the circuit.
  - effects of an open-circuit, a closed-circuit and a short-circuit.
- e) Resistance encompassing:
  - relationship between voltage and current from measured values in a simple circuit.
  - Value of voltage, current and resistance in a circuit given any two of these quantities.
  - power dissipated in a circuit from voltage, current and resistance values.
  - relationship between voltage, current and resistance and the power dissipated in a circuit.

f) Effects of current encompassing:

- physiological effects of current.
- the fundamental principles (listed in AS/NZS 3000) for protection against the physiological effects of current.
- basic principles by which electric current can result in the production of heat; the production of light; the production of magnetic fields; a chemical reaction.
- typical uses of the effects of current.
- mechanisms by which metals corrode.
- The fundamental principles (listed in AS/NZS 3000) for protection against the damaging effects of current.

g) Sources of electrical energy – conversion of other forms to electrical energy encompassing:

- basic principles which electricity is produced from a chemical reaction (primary cells, secondary cells and fuel cells); produced from a magnetic field coupled with motion; produced from light; produced from heat; produced from force.
- single emf source equivalent circuit.

h) Using measuring instruments encompassing:

- safe working procedures when working with instruments.
- handling and storage of instruments to ensure they are protected from damaged.
- selection of an instrument to measure voltage, current or resistance.
- connection of instruments into a circuit to measure voltage, current and resistance
- reading analogue scales and digital readouts in measuring voltage, current and resistance.

### 2.8.1.3 Electrotechnical principles

Evidence shall show an understanding of electrotechnical principles to an extent indicated by the following aspects:

a) Resistance encompassing:

- relationship between voltage, current and resistance and the power dissipated in a circuit
- value of voltage, current and resistance in a circuit given any two of these quantities
- the factors of length, cross-sectional area and material effect the resistance of conductors
- effects of temperature change on the resistance of various conducting materials
- features of fixed and variable resistor types and typical applications
- characteristics of temperature, voltage and light dependent resistors and typical applications of each

b) Series circuits encompassing:

- measurement of resistance, voltage and current values in a single source series circuit
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- relationship between the voltage drops around a circuit and the applied voltage

c) Parallel circuits encompassing:

- measurement of resistance, voltage and current values in a single-source parallel circuit
  - the voltage, current, resistance or power dissipated from measured or given values of any of these quantities
  - relationship between currents entering a junction and currents leaving a junction
- d) Series/parallel circuits encompassing:
- measurement of resistance, voltage and current values in a single-source series / parallel circuit
  - the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- e) Measurement of electrical quantities encompassing:
- operating characteristics of analogue and digital meters
  - selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application
- f) Capacitance/Capacitors encompassing:
- definition of capacitance and explain how a capacitor is charged
  - the units by which capacitance is measured
  - relationship between capacitance, voltage and charge
  - behaviour of a series d.c. circuit containing resistance and capacitance components
  - factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent
- g) Magnetism and electromagnetism encompassing:
- field patterns around given permanent magnets
  - magnetic field patterns around a straight current carrying conductor and a solenoid
  - direction in which the magnetic field around a straight current carrying conductor
- h) Electromagnetic induction encompassing:
- factors required to induce an emf in a conductor
- i) Sinusoidal alternating voltage and current encompassing:
- how a sinusoidal voltage is generated in a single turn coil rotated in a uniform magnetic field
  - definition of the terms ‘period’, ‘maximum value’, ‘peak-to-peak value’, ‘instantaneous value’, ‘average value’ and ‘root-mean-square (r.m.s.) value’ in relation to a sinusoidal waveform
  - instantaneous value of induced voltage of a generated sinusoidal waveform
  - root-mean-square (r.m.s.) value and frequency of a sinusoidal waveform from values of peak voltage and period
- j) Test equipment encompassing:
- operating principles of a CRO including block diagram of functional areas
  - set up, calibration and use of an oscilloscope to measure d.c and a.c. voltages and frequency
  - measurement of the instantaneous, peak, peak-to-peak values and the period of sinusoidal and other common waveforms provided by a signal generator
  - calibration and limitation of CRO probes
  - use of signal generator as a voltage source
- k) Phase relationships in a.c. circuits encompassing:
- phasor representation of graphical waveforms

- ‘in-phase’, ‘out-of-phase’, ‘phase angle’, ‘lead’, and ‘lag’
  - convention for representing voltage, current and the reference quantity in a phasor diagram
  - phasor diagrams to show the relationship between two or more a.c. values of voltage and/or current
- l) Single-source resistive a.c. circuits of various frequencies encompassing:
- single-source a.c. circuit and taking resistance, voltage and current measurements
  - voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
- m) Inductance in a.c. circuits encompassing:
- concept of inductance, self-inductance and mutual inductance. (in terms of storage of magnetic energy)
  - factors affecting inductance and how the unit of inductance is derived
  - value of induced voltage in a given circuit
  - how a series d.c. circuit containing resistance and inductance behaves
  - ‘inductive reactance’
  - inductive reactance of a given inductor and show the relationship between inductive reactance and frequency
  - applying Ohm’s law to determine voltage, current or inductive reactance in a purely inductive a.c. circuit given any two of these quantities
  - examples of inductive components in circuits and systems and describe their effect on the phase relationship between voltage and current
- n) Capacitance in a.c. circuits encompassing:
- capacitive reactance of a given capacitor and the relationship between capacitive reactance and frequency
  - applying Ohm’s law to determine voltage, current or capacitive reactance in a purely capacitive a.c. circuit given any two of these quantities
  - examples of capacitive components in electronic circuits and systems and describe their effect on the phase relationship between voltage and current
- p) Impedance in a.c. circuits encompassing:
- definition of ‘impedance’
  - impedance of series, parallel and series-parallel circuits and draw diagrams showing the relationship between resistive, inductive and capacitive components
  - single-source a.c. circuit with resistance, voltage and current measurements
  - determination of the voltage, current or impedance from measured or given values of any two of these quantities
  - using phasor diagrams to solve problems and show the relationship between voltages and currents in a.c. circuits

### 2.8.2.1 Direct current circuit principles

Evidence shall show an understanding of electrical principles to an extent indicated by the following aspects:

a) Factors affecting resistance encompassing:

- The factors of length, cross-sectional area and material effect the resistance of conductors.

- effects of temperature change on the resistance of various conducting materials.
  - the resistance of a conductor from factors such as conductor length, cross-sectional area, resistivity and changes in temperature.
  - effects of resistance on the current-carrying capacity and voltage drop in cables.
- b) Resistors encompassing:
- features of fixed and variable resistor types and typical applications.
  - characteristics of temperature, voltage and light dependent resistors and typical applications of each.
  - specifying a resistor for a particular application.
  - resistance of a colour coded resistor from colour code table and confirm the value by measurement.
- c) Series circuits encompassing:
- setting up and connecting a single-source series dc circuit.
  - Measurement of resistance, voltage and current values in a single source series circuit.
  - the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities.
  - relationship between the voltage drops around a circuit and the applied voltage.
  - relationship between voltage drops and resistance in a simple voltage divider network.
  - output voltage and current levels of connecting cells in series.
- d) Parallel circuits encompassing:
- setting up and connecting a single-source parallel circuit.
  - Measurement of resistance, voltage and current values in a single-source parallel circuit.
  - the voltage, current, resistance or power dissipated from measured or given values of any of these quantities.
  - relationship between currents entering a junction and currents leaving a junction.
  - relationship between branch currents and resistances in a two branch current divider network.
  - voltage and current levels of connecting cells in parallel.
- e) Series/parallel circuits encompassing:
- setting up and connecting a single-source series / parallel circuit.
  - Measurement of resistance, voltage and current values in a single-source series / parallel circuit.
  - the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities.
  - relationship between voltages, currents and resistances in a bridge network.
  - voltage and current levels of connecting cells in series parallel.
- f) Measurement of electrical quantities encompassing:
- hazards involved in using electrical instruments and the safety control measures that should be taken.
  - operating characteristics of analogue and digital meters.
  - selecting an appropriate meter in terms of units to be measured, range, loading effect and accuracy for a given application.
  - measuring resistance using direct, volt-ammeter and bridge methods.
  - instruments used in the field to measure voltage, current, resistance and insulation

resistance and the typical circumstances in which they are used.

g) Capacitance encompassing:

- definition of capacitance and explain how a capacitor is charged.
- the units by which capacitance is measured.
- relationship between capacitance, voltage and charge.
- Behaviour of a series d.c. circuit containing resistance and capacitance components.

h) Capacitors encompassing:

- hazards involved in working with capacitance effects and the safety control measures that should be taken.
- factors which determine the capacitance of a capacitor and explain how these factors are present in all circuits to some extent.
- effects of capacitors connected in parallel by calculating their equivalent capacitance.
- effects on the total capacitance of capacitors connected in series.
- common faults in capacitors.
- testing of capacitors to determine serviceability.

### 2.8.2.2 Alternating current principles - power

Evidence shall show an understanding of alternating currents principles used in power circuits to an extent indicated by the following aspects:

a) Sinusoidal alternating voltage and current encompassing:

- Generation of a sinusoidal voltage with a single turn coil rotated in a uniform magnetic field.
- the terms ‘period’, ‘maximum value’, ‘peak-to-peak value’, ‘instantaneous value’, ‘average value’, ‘root-mean-square (r.m.s.) value’, ‘crest factor’ and ‘form factor’ in relation to a sinusoidal waveform.
- the instantaneous value of induced voltage of a generated sinusoidal waveform.
- measurement of the instantaneous, peak, peak-to-peak values and the period of a sinusoidal waveform.
- the root-mean-square (r.m.s.) value and frequency of a sinusoidal waveform .
- phase relationship between two or more sinusoidal waveforms.

b) Phasors encompassing:

- the terms ‘in-phase’, ‘out-of-phase’, ‘phase angle’, ‘lead’, and ‘lag’.
- the phase angle between two or more alternating quantities from a given sinusoidal waveform diagram.
- convention for representing voltage, current and the reference quantity in a phasor diagram.
- phasor diagrams two or more a.c. values of voltage and/or current.

c) Resistance in a.c. circuits encompassing:

- connection of a single-source a.c. circuit to take resistance, voltage and current measurements.
- the voltage, current, resistances or power dissipated from measured or given values of any two of these quantities.
- the relationship between voltage drops and current in a resistive a.c. circuit.

d) Inductance in a.c. circuits encompassing:

- definition of ‘inductive reactance’.

- the inductive reactance of a given inductor and show the relationship between inductive reactance and frequency.
  - equivalent inductive reactance in an a.c. circuit or any part of a circuit.
  - application of Ohm's Law to determine voltage, current or inductive reactance in a purely inductive a.c. circuit given any two of these quantities.
  - examples of inductive components in power circuits and systems and describe their effect on the phase relationship between voltage and current.
  - the comparative current limiting characteristics of inductors and resistors.
- e) Capacitance in a.c. circuits encompassing:
- definition of 'capacitive reactance'.
  - the capacitive reactance of a given capacitor and the relationship between capacitive reactance and frequency.
  - equivalent capacitive reactance in an a.c. circuit or any part of a circuit.
  - application of Ohm's Law to determine voltage, current or capacitive reactance in a purely capacitive a.c. circuit given any two of these quantities.
  - examples of capacitive components in power circuits and systems and describe their effect on the phase relationship between voltage and current.
- f) Impedance encompassing:
- definition of 'impedance'.
  - impedance of series, parallel and series-parallel circuits and diagrams showing the relationship between resistive, inductive and capacitive components (impedance triangle).
  - connection of a single-source a.c. circuit and take resistance, voltage and current measurements.
  - voltage, current or impedance values from measured or given values of any two of these quantities.
  - phasor diagram usage to solve problems and show the relationship between voltages and currents in a.c. circuits.
- g) Resonance encompassing:
- conditions in a circuit that produce resonance.
  - the relationship between resonance and frequency.
  - the effect on the current of series resonance and parallel resonance conditions.
  - applications where resonance is applied
- h) Power and power factor encompassing:
- difference between true power, apparent power and reactive power and the units.
  - definition of the term "power factor".
  - the effects of low power factor.
  - local and AS/NZS 3000 requirements regarding the power factor of an installation and power factor improvement equipment.
- i) Multiphase systems encompassing:
- features of a multiphase system.
  - voltages generated by single and multiphase alternators.
  - reasons for the adoption of three-phases for power systems.
- j) Three-phase principles encompassing:
- Generation of three-phases in a single alternator.

- r.m.s. value of voltage generated in each phase.
  - the relationship between the phase voltages generated in a three-phase alternator and the conventions for identifying each.
  - the term “phase sequence” (also, referred to as “phase rotation”).
  - determination of the phase sequence of a three-phase supply.
- k) Three-phase star-connections encompassing:
- connection of three-phase star system.
  - the phase relationship between line and phase voltages and line and phase currents of a star-connected system.
  - the r.m.s. value of line and phase voltage given any one of these quantities.
  - the r.m.s. value of line and phase current given any one of these quantities.
  - the terms “balanced load” and “unbalanced load”.
  - example of balanced and unbalanced loads in typical power systems.
- l) Three-phase four wire systems encompassing:
- purpose of the neutral conductor in a three-phase four wire systems.
  - effects of a high impedance in the neutral conductor of a three-phase four wire system supplying an unbalanced load where MEN earthing is employed.
  - the value and phase relationship of neutral current in an unbalanced three-phase four wire systems given line currents and power factors.
  - the AS/NZS 3000 requirements regarding neutral conductors.
- m) Three-phase delta-connections encompassing:
- connection of three-phase delta system.
  - phase relationship between line and phase voltages and line and phase currents of a delta-connected system.
  - the r.m.s. value of line and phase voltage given any one of these quantities.
  - the r.m.s. value of line and phase current given any one of these quantities.
  - example of delta-connection loads in typical power systems.
- n) Interconnected star and delta systems encompassing:
- relationship between line and phase voltages and line and phase currents in a system with a star-connected supply device and a delta-connected load.
  - relationship between line and phase voltages and line and phase currents in a system with a delta-connected supply device and a star-connected load.
- o) Energy and power requirements of a.c. systems encompassing:
- the purposes for measuring power, energy, power factor and maximum demand of a.c. power systems and loads.
  - methods used to measure power, energy power factor and maximum demand.
  - power factor improvement of a three-phase installation.
- p) Harmonics encompassing:
- the term “harmonic” in relation to the sinusoidal waveform of an a.c. power system.
  - sources in a.c. systems that produce harmonics.
  - problems that may arise in a.c. circuits as a result of harmonics and how these are overcome.

### 2.8.3 Power factor

Evidence shall show an understanding of power factor to an extent indicated by the following aspects:

- a) Effects of low power factor on control-gear, switchgear and circuit cables.
- b) Requirements for maintaining a high power factor.
- c) Fundamentals of methods used to improve power factor.
- d) Actions and conditions that cause lower power factor

#### **2.8.4 Three phase circuits**

Evidence shall show an understanding of three phase circuits to an extent indicated by the following aspects:

- a) Star and delta circuit configurations
- b) Relationship between line and phase voltages and between line and phase currents.
- c) Relationship between line voltage, line current and power.
- d) Balanced and unbalanced four wire systems.
- e) Consequences of high impedance in the neutral conductor where multiple-earthed-neutral (MEN) is used.

#### **2.8.5 Magnetism**

Evidence shall show an understanding of magnetism to an extent indicated by the following aspects:

- a) Concept of magnetism
- b) Magnetic field patterns and magnetic screening
- c) Applications of permanent magnets
- d) Concepts of electromagnetism
- e) Magnetic characteristics of material
- f) Magnetic field around a straight conductor and a solenoid carrying current.
- g) Factors effecting the force between adjacent current-carrying conductors, calculate the force, and state its direction.

#### **2.8.6 Electromagnetic principles**

Evidence shall show an understanding of electromagnetic principles to an extent indicated by the following aspects:

- a) Magnetism encompassing:
  - field patterns around given permanent magnets.
  - magnetic induction and its effects.
  - principles of magnetic shielding and its application.
  - Classification of magnetic materials.
  - typical applications of permanent magnets.
- b) Electromagnetism encompassing:
  - magnetic field patterns around a straight current carrying conductor and a solenoid.
  - direction in which the magnetic field around a straight current carrying conductor.
  - direction of the north pole of a solenoid.
  - factors effecting the force and direction between adjacent current-carrying conductors.

c) Magnetic quantities encompassing:

- magnetic terms and units for magnetomotive force, reluctance, magnetic flux, magnetising force and flux density.
- property of permeability and the meaning of actual and relative permeability.
- values of magnetomotive force, magnetising force, flux density, permeability and reluctance in given magnetic circuits.

d) Magnetisation curve encompassing:

- the terms “saturation”, “hysteresis” and “losses” in relation to magnetic materials and circuits.
- magnetic characteristics of various materials from magnetisation curves, permeability curves and hysteresis loops.
- magnetic losses and the resulting effects on the performance of electrical machines.

e) Electromagnetic induction encompassing:

- factors required to induce an emf in a conductor.
- Faraday’s Law.
- direction of induced voltage in a moving conductor in a magnetic field.
- relationship between the forces acting on a closed conductor when an emf is induced in it. (Lenz’s law).

f) Inductance and inductors encompassing:

- concept of inductance, self-inductance and mutual inductance. (in terms of storage of magnetic energy).
- factors affecting inductance and how the unit of inductance is derived.
- inductance of a solenoid given necessary physical data.
- value of induced voltage in a given circuit.
- growth/decay of current in an inductor and determine the time constant of a series L-R circuit.
- Types of inductors

g) Application of electromagnetic principles encompassing:

- principles of operation and applications of magnetism, electromagnetism and induction.
- hazards associated with induced voltages.
- situations where the effects of inductance and electromagnetism has an adverse effect.

h) Rotating machine construction and operating principles encompassing:

- main components of a rotating machine.
- voltage generated and back emf induced in the “armature” conductors of a machine.
- motor effect produced by an electric current, including the development of torque in a motor and opposing torque in a generator.
- induced voltage in a conductors, force on a conductor and torque of various machines.

i) Generators encompassing:

- circuit arrangement and connection of various types of generators.
- common methods of excitation used for generators.
- methods used to regulate the output voltage of generators.
- effects of load on a generator.
- applications of generators.

j) Machines encompassing:

- circuit arrangements and connections of various common motors.

- performance of motors from measured values.
  - effects of load on a motor.
- k) Specialty machines encompassing:
- tachogenerator – construction, operation and applications.
  - servomotors – construction, operation and applications.
  - stepper motors – construction, operation and applications.
  - EC motors – construction, operation and applications.

### **2.8.7 Harmonic fundamentals**

Evidence shall show an understanding of harmonics in power circuits to an extent indicated by the following aspects:

- a) Nature of harmonics and effect on a sine wave.
- b) Consequences of harmonics on cables and electrical apparatus
- c) Causes of harmonics in modern electrical systems
- d) Method of reducing harmonics

### **2.8.8 Electrotechnology science and materials**

Evidence shall show an understanding of electrotechnology science and materials to an extent indicated by the following aspects:

- a) Trade calculations encompassing:
  - mathematical techniques
  - relevant calculations
  - linear measurement, areas, volumes, ratios
- b) Engineering mechanics encompassing:
  - base physical quantities
  - concepts, principles, S.I. units, their applications in
  - engineering calculations in relation to physical quantities and
  - associated formulae
  - mass, velocity, acceleration, force, weight, density, angles
  - energy/work/power
  - moments/torque
  - centre of gravity
  - mechanical advantage
  - levers
  - pulley blocks
  - efficiency
  - friction
  - vectors
  - resolution of forces
  - forces in strung conductors
  - forces on poles and towers
  - determination of sag

- pressure/stress
- elementary fluid mechanics
- c) Engineering materials encompassing:
  - classification
  - ferrous and non-ferrous metals
  - steels, alloys,
  - properties
  - tensile strength
  - temperature and expansion in metals
  - stress and strain
  - ductility
  - applications
  - corrosion
  - galvanic corrosion
  - hardwoods and soft woods

### **2.8.9.1 Circuit analysis**

Evidence shall show an understanding of circuit analysis to an extent indicated by the following aspects:

- a) Voltage and current Laws
- b) Circuit components
- c) Types of circuits

Note:

Types include RL, RC and RLC circuits; polyphase circuits; magnetically coupled circuits and two port networks

- d) Circuit analysis techniques application and use

Note:

Techniques include Nodal and mesh analysis; superposition; Thevenin and Norton equivalents; maximum power transfer; complex frequency; Laplace transforms; and Fourier transforms;

- e) Use of software tools for analysing circuits.

### **2.8.9.2 Electrical power circuit analysis**

Evidence shall show an understanding of electrical power circuit analysis to an extent indicated by the following aspects:

- a) Superposition theorem
- b) Kirchhoff's laws
- c) Mesh analysis
- d) Thevenin's & Norton's theorems
- e) Maximum power transfer theorem
- f) Complex impedance
- g) Frequency domain
- h) Transients

### 2.8.9.3 Polyphase power circuit analysis

Evidence shall show an understanding of polyphase circuit analysis to an extent indicated by the following aspects:

- a) Complex power 1 $\phi$  and 3 $\phi$
- b) Balanced, unbalanced 3 $\phi$
- c) Impedance of 3 $\phi$  loads
- d) Measurement in 3 $\phi$  circuits
- e) Line voltage drops
- f) Neutral current
- g) Fault currents
  - symmetrical
  - asymmetrical

### 2.8.10.1 Engineering maths fundamentals

Evidence shall show an understanding of engineering maths fundamentals to an extent indicated by the following aspects:

- a) SI Units, scientific and engineering notation, significant figures and accuracy encompassing:
  - Conversion between decimal notation, scientific notation and engineering notation
- b) Evaluation of expressions using a calculator
- c) Substitution in algebraic formulas
- d) Simplification of algebraic formulas encompassing:
  - Addition of like terms
  - Removal of brackets
  - Multiplying and dividing terms
  - Algebraic fractions
- e) Applying the laws of indices
- f) Simplification of expressions involving square roots
- g) Present and interpret data encompassing:
  - building tables of values
  - building graphs
  - reading graphs
- h) Solving right-angled triangles encompassing:
- i) Pythagoras' Theorem
  - trig ratios

### 2.8.10.2 Engineering maths

Evidence shall show an understanding of engineering maths to an extent indicated by the following aspects:

- a) Transposition encompassing:
  - fractional expressions

- exponential and logarithmic expressions
  - trigonometric expressions
- b) Estimations, errors and approximations encompassing:
- Errors in measurement
  - Maximum probable error
  - Significant figures
  - Estimations and approximations
- c) Quadratic functions encompassing:
- Graphs of quadratic functions represented by parabolas and the significance of the leading coefficient.
  - Zeros represented graphically.
  - Solution of quadratic equations by factoring and the quadratic formula.
  - Solution of simultaneous linear and quadratic equations algebraically and geometrically.
- d) Exponential Functions:
- characteristics and
  - applications in engineering
- e) Logarithmic Functions :
- characteristics and
  - applications in engineering
- f) Trigonometric Functions: :
- characteristics and
  - applications in engineering
- g) Methods for solving simultaneous equations encompassing:
- determinants
  - Cramer's rule
- h) Complex numbers encompassing:
- polar to rectangular conversion
  - rectangular to polar conversion
- i) Matrices

### 2.8.10.3 Advanced engineering maths

Evidence shall show an understanding of advanced engineering maths to an extent indicated by the following aspects:

- a) Differentiation Calculus encompassing:
- Integration, integration by parts,
  - Numerical methods,
  - Partial and total differentiation.
- b) Linear Algebra encompassing:
- Matrices and inverse matrices;
  - Linear mapping,
  - Determinants,
  - Solution of linear equations.

- c) Vectors encompassing:
  - Geometrical representation,
  - Addition and scalar multiplication,
  - Dot and cross products,
  - Equations of lines and planes.
- d) Variables encompassing:
  - Graphs, level curves and surfaces
  - Partial derivatives; chain rule; directional derivative;
  - Maxima and minima.
- e) Sequences and Series encompassing:
  - Algebraic and Fourier series, convergence; Taylor's Theorem
  - Power series manipulation.
- f) Differential Equations encompassing:
  - First order and separable linear equations
  - Second order linear equations.
  - Partial differential equations.
  - Numerical Techniques.
- g) Number encompassing:
  - Integer, irrational and complex numbers.
  - Number systems.
  - Arithmetic operations.
  - Accuracy and stability.
- h) Statistics encompassing:
  - Assembly, representation and analysis of data.
  - Fitting distributions to data.
  - Non-parametric statistics.
  - Tests of significance for means, variances and extreme values.
  - Correlation

#### 2.8.10.4 Engineering mathematics with calculus

Evidence shall show an understanding of engineering mathematics with calculus to an extent indicated by the following aspect:

- a) Differential Calculus encompassing:
  - Basic concepts
    - Note.
    - Concepts shall be limited to definition of the derivative of a function as the slope of a tangent line (the gradient of a curve); limits; basic examples from 1st principles; Notation and Results of derivative of  $k.f(ax + b)$  where  $f(x)=x$  to the power of  $n$ ,  $\sin x$ ,  $\cos x$ ,  $\tan x$ ,  $e$  to the power of  $x$ ,  $\ln x$ .
  - Rules
    - Note.
    - Examples are derivative of sum and difference; product rule; quotient rule; chain rule (function of a function), limited to two rules for any given function.
    - The 2nd derivative
  - Applications

Note.

Examples are equations of tangents and normals; stationary points; turning points; and curve sketching; rates of change; rectilinear motion

- Verbally formulated problems involving related rates and maxima: minima

b) Integral Calculus

- Integration as the inverse operation to differentiation

Note.

Examples are results of the integral of  $k.f(ax + b)$  where  $f(x) = x$  to the power of  $n$ ,  $\sin x$ ,  $\cos x$ ,  $\sec^2 x$ ,  $e$  to the power of  $x$

The method of substitution

The definite integral

- Applications

Note.

Examples are areas between curves; rectilinear motion including displacement from acceleration and distance travelled; voltage and current relationship in capacitors and inductors and the like

c) Differential Equations encompassing:

- First order and separable linear equations

### 2.8.11 Power engineering computations

Evidence shall show an understanding of electrical computations to an extent indicated by the following aspects:

a) Graph functions and applications encompassing:

- linear, non linear
- parabolic
- hyperbolic
- logarithmic
- exponential

b) Complex numbers encompassing:

- Polar form
- Rectangular form

c) Simultaneous equations

d) Quadratic equations

e) Phasor diagrams

f) Star-delta transformations

### 2.8.12 Electrical concepts and applications

Evidence shall show an understanding of electrical concepts to an extent indicated by the following aspects:

a) Electrical supply and distribution within a building or premises

b) Arrangement of circuits

c) Protection for safety requirements and their practice

d) Difference between alternating and direct current

e) Measurement and calculation of voltage, current, resistance and power in practical circuits.

- f) Concepts and applications of magnetism and electromagnetic induction
- g) Transformer operating principles and their application
- h) Hazards associated with electrical systems and apparatus.

### 2.8.13 Parts and component selection

Evidence shall show an understanding of electrotechnology, parts and component selection to an extent indicated by the following aspects:

a) Part and component identification encompassing:

- Type, number and ratings of a range of typical components used in the electrotechnology and engineering industries

b) Information about parts and components encompassing:

- Catalogues
- Computer access
- Alternative parts
- Telephone inquiry

Note: Examples of part identification and access may include: part codes, manufacturers and manufacturers supply outlets; availability and delivery times; price, including discounts, tax and delivery costs.

c) Ordering procedures encompassing:

- Customer approval
- Supplier requirements
- In-house requirements

d) Receiving/dispatching procedures

- Supplier requirements
- In-house requirements
- Handling and storage

#### 2.8.14.1 Electrotechnology calculations

Evidence shall show an understanding of Electrotechnology calculations to an extent indicated by the following aspects:

a) Perform basic mathematical operations including fractions, decimals, and scientific notation encompassing:

- Solve problems involving fractions.
- Express numbers as multiples and sub-multiples.
- Without the aid of a calculator estimate the result of a calculation involving mathematical operations verifying answers with a calculator.
- Estimate the result of a problem involving fractions.
- Convert fractions to decimal numbers.
- Convert decimal numbers into scientific notation.

b) Using graphs and tables show the relationship between two variables encompassing:

- Describe the different types of graphs and tables used in Electrotechnology.
- Identify dependent and independent variables.
- Derive equations from graphs and tables.

- Draw graphs involving two variables.
  - Interpret graphical presentations.
- c) Transpose a given equation for any variable in equation encompassing:
- Transpose an equation in order to calculate an unknown value.
  - Transpose an equation involving several variables
- Note:  
Examples are series/parallel resistors.
- Transpose an equation involving parentheses.
- d) Apply trigonometry to problem solving encompassing:
- Use trigonometric ratios to solve practical problems
  - Apply Pythagoras' theorem to practical problems
  - Solve problems using the sine and cosine rules
  - Determine the sine and cosine of angles up to  $720^\circ$
- e) Resolve vectors/phasors given any combination of magnitude and direction encompassing:
- Describe the use of vectors/phasors in electrotechnology situations
  - Define a vector/phasor
  - Draw a vector/phasor diagram.
  - Resolve a vector/phasor into horizontal and vertical components
  - Determine a resultant using a vector/phasor polygon.
- f) Solve electrotechnology calculations systematically encompassing:
- Analyse word problems and identify data
  - Convert relevant data to SI Unit format
  - Insert SI Unit data into relevant equations and obtain solution

#### 2.8.14.2 Electrotechnology science

Evidence shall show an understanding of Electrotechnology science to an extent indicated by the following aspects:

- a) Components
- resistors
  - fixed
- Note:  
Examples are composition and wire wound
- variable
- Note:  
Examples are rheostats, potentiometers and trimmers
- non-linear
- Note:  
Examples are thermistors, VDRs and LDRs
- capacitors
  - fixed
- Note:  
Examples are ceramic, plastic and electrolytic
- variable, trimmers

- magnetic
- transformers

Note:

Examples are AF, RF and power

- chokes
- relays
- contactors

b) Basic physics

- conductors
- definition
- common types
- typical applications
- insulators
- definition
- common types
- typical applications
- semiconductors
- definition
- common types
- typical applications
- current flow
- direction

Note:

Examples are electron/conventional

- unit
- effects of current flow
- voltage
- source

Note:

Examples are electromagnetic, chemical, heat and pressure

- unit
- resistance
- factors effecting

Note:

Examples are material, length, csa and temperature

- effect on circuit
- colour code
- preferred values
- power rating
- Ohms law
- electrical Units

Note:

Examples include sub and multiple

- volt, ampere, Ohm and Watt

- power in electrical circuits
  - $P = IV$  only
  - introductory circuit symbols
- c) Effects of electric current
- heating
  - light
  - magnetic
  - chemical
  - physiological
- d) Circuits
- series and parallel (three resistive elements max.)
  - V,I,R and P relationships
  - use lab experiments to validate theory
- e) Protection
- purpose
  - fuses
  - circuit breaking
  - safety interlocks
  - earthing – personnel safety

#### **2.8.14.3 Electrotechnology Numeracy Diagnostic Assessment Methods**

Evidence shall show an understanding of electrotechnology numeracy diagnostic assessment methods to an extent indicated by the following aspects:

a) Electrotechnology Numeracy Diagnostic Test encompassing:

- Decimals
- Fractions and Indices
- Percentages
- Graphs
- Multiples and Sub Multiples
- Ratios and Proportions
- Transposition
- Areas and Volumes
- Trigonometry and Pythagoras' Theorem
- Construction of Angles and Triangles

b) Recommendation of Remedial Action

- Action plan for remedial action
- Other support agencies
- Failure to follow action plan
- Monitoring of remedial action of learner

#### **2.8.14.4 Electrotechnology Literacy Diagnostic Assessment Methods**

Evidence shall show an understanding of electrotechnology literacy diagnostic assessment methods to an extent indicated by the following aspects:

- a) Electrotechnology Literacy Diagnostic Test encompassing:
  - Reading Comprehension
  - Spelling
  - Sentence Construction (Syntax)
  - Grammar
- b) Recommendation of Remedial Action
  - Action plan for remedial action
  - Other support agencies
  - Failure to follow action plan
- c) Communicating with suppliers and clients

### 2.8.15.1 Applied mathematical concepts

Evidence shall show an understanding of applied mathematical concepts to an extent indicated by the following aspects:

- a) Mathematical linear measurement in engineering situations encompassing:
  - Precision and error in mathematical computations and
  - Displaying mathematical outcomes in the correct format using the appropriate significant figures and in scientific notation
  - Perimeters of plane figures, polygons and the perimeter of shapes involving arcs
  - Pythagoras' theorem to engineering situations
- b) Mathematical spatial measurement in engineering situations encompassing:
  - Areas of combined shapes
  - Volume and surface areas of solids
- c) Right triangle trigonometry in engineering problem solving encompassing:
  - Problems using the six trigonometrical ratios
  - Problems involving compass bearings and angles of elevation/depression
  - Trigonometrical concepts in problems involving inclined planes, vectors and forces and electrical sinusoidal waveforms
- d) Sine and cosine rules in practical applications encompassing:
  - Sine rule to solve unknown dimensions/angles in triangles
  - Cosine rule to solve unknown dimensions/angles in triangles
- e) Mathematical concepts in basic surveying and computation of areas encompassing:
  - Mathematical concepts for radial and triangulation surveys
  - Simpson's Rule in engineering applications
- f) Basic algebra in engineering calculations encompassing:
  - Basic operations involving substitutions, additions, removal of brackets, multiplication and divisions
  - Solving linear equations
  - Transportation in non-linear equations
- g) Linear graphical techniques in engineering problem solving encompassing:
  - Graphing linear functions
  - Deriving equations from graphs and tables
  - Solving simulations equations algebraically and graphically

- The *best line of fit* graphically and determine equation
- h) Mathematical computations involving polynomials encompassing:
  - Adding, subtracting and multiplying polynomials
  - Factorising trinomials
  - Solving quadratic equation
- i) Mathematical computations involving quadratic graphs encompassing:
  - Graphs of quadratic functions
  - Maxima and minima
  - Graphical solutions of quadratic equations
  - Properties of a parabola
  - Applications of parabolas in engineering applications
- j) Trigonometry and graphical techniques in engineering outcomes encompassing:
  - Graphs of trigonometric functions eg:  $V=V_m\sin\theta, I=I_m\cos\theta$
  - Addition of equations such as:  $v\sin\theta + u\sin(\theta + \phi)$  graphically
  - Simpson's Rule to determine the average and root mean square values of a sinusoidal waveform
- k) Statistical data presentation encompassing:
  - Appropriate presentation of frequency tables, histograms, polygons, stem and leaf plots
  - Advantages of different visual presentations
- l) Appropriate sampling techniques for gathering data encompassing:
  - Design of surveys and census
  - Sample data using correct technique
- m) Use of the measures of central tendency encompassing:
  - Estimation of percentiles and deciles from cumulative frequency polygons (ogives)
  - Interpreting data from tables and graphs including interpolation and extrapolation
  - Analysing misleading graphs
- n) Measures of dispersion in statistical presentations encompassing:
  - Box-and-whisker graphs
  - Measures of dispersion using variance and standard deviation
  - Standardised scores including Z-scores
- o) Correlation and regression techniques encompassing:
  - Interpreting scatter plots
  - Correlation coefficients
  - Calculate the regression equation and use for prediction purposes
- p) Elementary probability theory encompassing:
  - Probabilities in everyday situations
  - Counting techniques: factorials; permutations; combinations
- q) Pascal's Triangle and the Normal Curve encompassing:
  - Pascal's triangle
  - Characteristics of the normal curve
  - Standard Deviation and applications to everyday occurrences
  - Probabilities using the normal curve

### 2.8.15.2 Applied physics concepts

Evidence shall show an understanding of applied physics concepts to an extent indicated by the following aspects:

a) Motion in two dimensions encompassing:

- vertical and horizontal components of velocity
- determination of the vertical component of velocity
- resolution of velocity into components
- time of flight, range, effect of air resistance
- centripetal acceleration, force causing the centripetal acceleration
- Newton's law of universal gravitation
- satellites in circular orbits
- Momentum in two dimensions

Note:

Examples are: vector form of Newton's second law of motion, Newton's second law of motion in terms of momentum, law of conservation of momentum

b) Electricity and magnetism encompassing:

- Electric fields

Note:

Examples are: Coulomb's law, principle of superposition, electric field, pictorial representation of electric fields, superposition of electric fields, electric field due to one or two charged plates, electric fields and conductors, electric field inside a hollow conductor, electric fields near sharp points

- The motion of charges particles in electric fields

Note:

Examples are: electric, potential difference, acceleration in a constant electric field, motion of a charged particle in a constant electric field

- Magnetic fields

Note:

Examples are: magnetic fields and their pictorial representation, magnetic force on a current-carrying conductor

- The motion of charges particles in magnetic fields

Note:

Examples are: force on a charged particle in a magnetic field, motion of a charged particle at right angles to a magnetic field

c) Light and matter

- Electromagnetic waves

Note:

Examples are: characteristics of electromagnetic waves, speed, frequency and wavelength

- The interference of light

Note:

Examples are: coherent wave sources, interference, two-source interference, diffraction, two-slit interference, transmission diffraction gratings, speckle

- Photons

Note:

Examples are: photons, the photoelectric effect, x-rays

- Wave behaviour of particles

Note:

Examples are: wave behaviour of particles, experimental evidence for wave behaviour of particles

d) Atoms and nuclei

- The structure of the atom

Note:

Examples are: line emission spectrum, energy levels in atoms, spectrum of atomic hydrogen, ionization energy, continuous spectrum, line absorption spectrum, fluorescence, stimulated emission

- The structure of the nucleus

Note:

Examples are: composition of nuclei, the nucleon force, isotopes, mass defect and binding energy, conservation laws in nuclear reactions

- Radioactivity

Note:

Examples are: stable and unstable nuclei, types of decay of unstable nuclei, alpha decay, beta minus decay, beta plus decay, half-life and activity

- Nuclear fission and fusion

Note:

Examples are: spontaneous and induced nuclear fission, chain reaction

e) Skills

- Experimental skills

Note:

Examples are: purpose and variables, procedure, observation, presentation, interpretation

- Investigation design skills

Note:

Examples are: designing and investigation, evaluating and investigation

- Information skills

Note:

Examples are: planning an information search, searching for information, evaluating information

- Communication skills

Note:

Examples are: oral communication, written communication, evaluation of oral and written communications

### 2.8.15.3 Fault current calculations

Evidence shall show an understanding of calculating fault current to an extent indicated by the following aspects:

- a) The Calculation of Fault Currents
- b) The calculation/determination of positive, negative and zero sequence impedances.
- c) Determination of fault current breaking and let-through energy capacities of protection devices.
- d) The influence of fault/arc impedances.
- e) Impedances operative for phase-to-phase and phase-to-earth faults.
- f) Calculation of fault currents for phase-to-phase and phase-to-earth faults.
- g) Approximation calculations by selecting the components with the major impedance.

## 2.9 Electronic principles and applications

### 2.9.1.1 Electronic component basics

Evidence shall show an understanding of the electronic components to an extent indicated by the following aspects:

a) Types of components

Note.

Examples of types are resistors, inductors, capacitors, diodes, transistor, integrated circuits, printed circuit boards, sub-assemblies, and mounting/enclosing, connection and termination hardware.

b) The physical features and primary characteristic of components.

Note.

1. Features include shape, size and connections
2. Characteristics include parameter and power ratings and polarity.

c) Methods of identifying and marking of component ratings.

d) Identifying and handling static sensitive components.

### 2.9.1.2 Electronic component parameters and selection methods

Evidence shall show an understanding of selecting electronic component to an extent indicated by the following aspects:

a) Circuit/apparatus parameters and specification

b) Component specifications and their implication in a given circuit.

c) Sources of components and technical data.

### 2.9.1.3 Single phase rectifiers

Evidence shall show an understanding of single phase rectifiers to an extent indicated by the following aspects:

a) Features and characteristic of rectifiers under load and no-load characteristics with and without capacitor filter.

Note:

Example include circuit configuration, filters, input and output wave forms, relationship between input and output voltages and ripple frequency and output voltage under load conditions

b) Faults in single phase rectifiers

c) Typical applications of single phase rectifiers

### 2.9.1.4 Frequency dependent circuit principles

Evidence shall show an understanding of frequency dependent circuit principles to an extent indicated by the following aspects:

a) Sinusoidal alternating voltage and current encompassing:

- How a sinusoidal voltage is generated in a single turn coil rotated in a uniform magnetic field
- Definition of the terms 'period', 'maximum value', 'peak-to-peak value', 'instantaneous value', 'average value', and 'root-mean-square value' in relation to a sinusoidal waveform
- Instantaneous value of induced voltage of a generated sinusoidal waveform

- Root-mean-square value and frequency of a sinusoidal waveform from values of peak voltage and period
  - Phase relationship between two or more sinusoidal waveforms from a given diagram of measurements
  - Sketches and names of common waveforms used in electronic circuitry
- b) Test equipment encompassing:
- Operating principles of a CRO including block diagram of functional areas
  - Set up, calibration and use of an oscilloscope to measure d.c. and a.c. voltages and frequency
  - Measurement of the instantaneous, peak, peak-to-peak values and the period of sinusoidal and other common waveforms provided by a single generator
  - Calibration and limitation of CRO probes
  - Use of signal generator as a voltage source
  - Analogue and digital a.c. measuring instruments including true root-mean-square reading instruments
- c) Phase relationships in a.c. circuits encompassing:
- Phasor representation of graphical waveforms
  - ‘in-phase’, ‘out-phase’, ‘phase angle’, ‘lead’ and ‘lag’
  - Convention for representing voltage, current and the reference quantity in a phasor diagram
  - Show the relationship between two or more a.c. values of voltage and/or current
- Note:  
Examples that may be used include phasor diagrams
- d) Single-source resistive a.c. circuits of various frequencies encompassing:
- Single source a.c. circuit and taking resistance, voltage and current measurements
  - Voltage, current, resistances or power dissipated from measured or given values of any two of these quantities
  - Relationship between voltage drops and current in resistance a.c. circuit
- e) Inductance in a.c. circuits encompassing:
- Principles of inductance
  - Units by which inductance is measured
  - How a series d.c. circuit containing resistance and inductance behaves
  - Factors that determine inductance
  - ‘Inductive reactance’
  - Inductive reactance of a given inductor and show the relationship between inductive reactance and frequency
  - Applying Ohm’s Law to determine voltage, current or inductive reactance in a purely inductive a.c. circuit given in any two of these quantities
  - Examples of inductive components in circuits and systems and describe their effect on the phase relationship between voltage and current
  - Comparison of the current limiting characteristics of inductors and resistors
- f) Capacitance in a.c. circuits encompassing:
- ‘capacitive reactance’
  - capacitive reactance of a given capacitor and the relationship between capacitive reactance and frequency
  - series and parallel circuit rules to determine the equivalent capacitive reactance in

an a.c. circuit or any part of a circuit

- applying Ohm's law to determine voltage, current or capacitive reactance in a purely capacitive a.c. circuit given any two of these quantities
- examples of capacitive components in electronic circuits and systems and describe their effect on the phase relationship between voltage and current

g) Impedance in a.c. circuits encompassing:

- Definition of 'impedance'
- Impedance of series, parallel and series-parallel circuits and draw diagrams showing the relationship between resistive, inductive and capacitive components (impedance triangle)
- Single-source a.c. circuit with resistance, voltage and current measurements
- Determination of the voltage, current or impedance from measured or given values of any two of these quantities
- Using phasor diagrams to solve problems and show the relationship between voltages and currents in a.c. circuits
- True, apparent, reactive power and power factor

h) Ideal transformer encompassing:

- Step-up, step-down, turns ratios, voltage and current ratios
- Construction and operating principles
- Double wound and autotransformer types, multi-tap types
- Types of cores, applications
- VA rating

i) Resonance encompassing:

- Conditions in a circuit that produce resonance
- Relationship between resonance and frequency
- Effect on the current of series resonance and parallel resonance conditions
- The 'Q' of a coil and its relevance
- Bandwidth and half power points in a resonant circuit
- 'Selectivity'

j) Passive and active filters encompassing:

- Circuits for operation of the following passive filter circuits: high pass, band pass, band stop, notch
- Operation and frequency response of basic active filters based on the above circuit types
- Bandwidth, attenuation, roll off, order of filter
- Measurements and calculations relating to passive and active filters
- Curves showing the behaviour of various types of filter circuits

### 2.9.1.5 Basic electronic principles

Evidence shall show an understanding of basic electronic principles to an extent indicated by the following aspects:

a) Fundamental concepts

- insulators and conductors
- basic electrical units and engineering prefixes

- voltage, current and resistance
  - Ohm's Law
  - electrical power
  - digital and analogue multimeters
- b) Alternating Currents and Waveforms
- waveforms (sine and square wave)
  - the AC mains supply
  - electrical safety
  - fuses
  - lamps and indicators
- c) Electromagnetic Waves and Signals
- electromagnetic waves
  - the Radio Frequency spectrum
  - wave propagation
  - signals and bandwidth
  - transmission lines and antennas
  - harmonics
- d) Capacitance and inductance
- inductors and capacitors
- e) Electromagnetic Interference
- electrical noise
  - induced currents and voltages
  - cross-talk
  - electromagnetic Interference
- f) Batteries
- types of battery
  - battery capacity
  - care of batteries
- g) Techniques in the use of analogue and digital multimeters

Note:

Example is broad overview of electronics theory applicable to commonplace electronic and computer equipment servicing and support tasks, and includes general appreciation of the topics and concepts rather than rigorous theoretical calculations and designs

### 2.9.1.6 Basic digital principles

Evidence shall show an understanding of basic digital principles to an extent indicated by the following aspects:

- a) Analogue versus digital
- digital waveforms
- b) Number systems
- binary
  - hexadecimal
  - binary addition and subtraction

- number system conversions
- c) Codes
- ASCII
  - ANSI
  - error detecting codes
    - parity
    - check sums
    - CRC
  - error correction
- d) Basic logic
- AND, OR, NOT, XOR
  - truth tables
- e) Data manipulation
- clocks and data rates
  - basic storage cell
  - registers
  - ripple counter (binary counting)
  - shift register (serial to parallel conversion)
  - multiplexer and de-multiplexer
  - bus architecture
    - encoding / decoding
    - addressing methods
- f) Analogue to digital conversion
- g) Digital to analogue conversion

Note:

Example include a broad overview of digital electronics theory applicable to everyday computer servicing and support tasks and encompasses topics and concepts and is not for in depth theoretical calculations and designs. Also there is no specific logic gates or logic levels involved.

## 2.9.2 Multiphase rectifiers

Evidence shall show an understanding of the characteristics and applications of multiphase phase half- wave and full-wave rectifiers to an extent indicated by the following aspects:

- a) Features and characteristic of rectifiers under load and no-load characteristics with and without capacitor filter.

Note:

Example include circuit configuration, filters, input and output wave forms, relationship between input and output voltages and ripple frequency and output voltage under load conditions.

- b) Faults in multiphase rectifiers
- c) Typical applications of multiphase rectifiers

### 2.9.3.1 Voltage regulators

Evidence shall show an understanding of the characteristics and applications of linear and non-linear voltage regulators to an extent indicated by the following aspects:

- a) The purpose of voltage regulation

- b) The features and characteristics of series, shunt and three terminal regulators.

Note

Example of features and characteristics are circuit configuration, regulating action and over-current and voltage limiting methods.

- c) The features and characteristics of switching regulators.

Note:

Example include regulator components, step-up, step-down, voltage-inverting and converting configurations, regulating action and forms of protection.

- d) Faults in linear and non-linear regulators

- e) Typical applications of voltage regulators

### **2.9.3.2 Inverters**

Evidence shall show an understanding of the characteristics and applications of inverters to an extent indicated by the following aspects:

- a) Features and characteristic of inverters under load and no-load characteristics.

Note:

Example include circuit configuration, input and output wave forms, relationship between input and output voltages and output voltage under load conditions.

- b) Faults in inverters

- c) Typical applications of inverters

### **2.9.3.3 Electronic switching**

Evidence shall show an understanding of the characteristics and applications of electronic switching to an extent indicated by the following aspects:

- a) Devices and used for electronic switching and their switching characteristic
- b) Circuit configuration and switch-on, switch-off conditions
- c) Faults in electronic switching devices/circuits
- d) Typical applications of electronic switching

### **2.9.4.1 Digital electronic fundamentals**

Evidence shall show an understanding of the characteristics and applications of the fundamentals of digital electronics to an extent indicated by the following aspects:

- a) Differences between analogue and digital signals
- b) Prediction of output state of logic gates for various input combinations
- c) Hexadecimal, binary and decimal number systems
- d) Precautions when handling electronic devices due to electrostatic discharge
- e) Operation and characteristics of LEDs and LCDs
- f) Digital sub-systems and timing diagrams
- g) Operation of flip-flops and counters
- h) Logic device terminal characteristics
- i) Analysis and operations of encoders, decoders and multiplexes
- j) Operation of flip-flops, latches, registers, shift-registers, counters and multi-vibrators
- k) Operation and characteristics of Analogue to Digital and Digital to Analogue devices

### 2.9.4.2 Digital signal processing

Evidence shall show an understanding of the digital signal processing and applications to an extent indicated by the following aspects:

a) DSP applications encompassing:

- block diagram of a DSP system.
- DSP applications:

Note.

Examples are Audio-response equalization, Echo-cancelling on telephone lines, Tracking filters for radio communications, Loudspeaker testing, Voice compression and the like.

b) Way in which the sampling process changes the signal encompassing:

- Shannon's Sampling Theorem.
- quantisation noise introduced by A/D and D/A signal-conversion in a given DSP system.
- spectrum of a sampled signal.
- response required for the input anti-alias filter.
- response required for the output reconstruction filter, including  $\sin(x)/x$  compensation.

c) Impulse response of a linear-phase filter encompassing:

- frequency-response (amplitude and phase) for low-pass (LP), bandpass (BP) or high-pass (HP) filter.
- impulse-response for LP, BP or HP filters
- approximate number of impulse-response coefficients needed in a Finite Impulse Response (FIR) filter
- unwindowed impulse-response for a linear-phase LP, BP or HP filter.
- von Hann ('Hanning') or Hamming window
- impulse-response coefficients for LP, BP and HP filters.

d) FIR filter encompassing:

- process of convolution.
- standard expression for discrete convolution.
- DSP system and convolution.
- DSP system to implement a FIR filter.

e) Adaptive filter encompassing:

- Least Mean Square (LMS) algorithm.
- practical applications for adaptive filters.
- number of taps needed on an adaptive filter for a given application.
- DSP system and implementation of adaptive filter.

f) Architecture of a specific DSP chip encompassing:

- features of the DSP chip that contribute to a high processing speed.
- function of all registers in the DSP chip.
- circuit diagrams showing how the DSP chip is interfaced to EPROM, RAM, an A/D converter and a D/A converter.
- chip synchronises and signal-sampling.
- execution time for processing for FIR filter.

g) DSP system encompassing:

- assembly code programs using a micro assembler for the selected DSP chip.
  - DSP programs simulator tests
  - emulator or development system
- h) Integer arithmetic encompassing:
- decimal numbers in +1.0 to -1.0 range converted into 16-bit signed integers and/or to signed integers of any other data-length used by the selected DSP chip.
  - signed integers converted to numbers in the range +1.0 to -1.0.
  - effect of arithmetic overflow and under-flow on the digital signal.
  - effect of coefficient rounding error on FIR filters.
- i) Input and output analog filters encompassing:
- input anti-alias filter using standard switched-capacitor filters.
  - output reconstruction filter using standard switched-capacitor filter.
  - circuit diagram showing how the filters interface to the DSP system.

### 2.9.4.3 Digital signal processing development

Evidence shall show an understanding of the digital signal processing development technologies to an extent indicated by the following aspects:

- a) Infinite Impulse Response (IIR) filter encompassing:
- pole-zero placement method to obtain coefficients for a simple first-order and second-order low-pass and band-pass IIR filter.
  - bi-linear Z-transform to obtain the filter coefficients for a simple first-order and second-order low pass IIR filter.
  - direct-form realisation of a simple IIR filter suitable for  $\sin(x)/x$  compensation.
  - DSP system
- b) High-order IIR filter encompassing:
- filter design package to obtain the coefficients for a high-order IIR filter
  - high-order IIR filter would be realised using a cascade or a parallel combination of first-order or second-order IIR filter blocks.
  - effect of coefficient quantisation errors and calculation rounding-off errors on filter performance.
  - IR filters and symmetrical FIR filters
- c) Discrete Fourier Transform (DFT) to a signal encompassing:
- discrete correlation.
  - signal-detection.
  - correlation used to generate DFT.
  - window-function when generating the DFT.
- d) Concept of complex signals encompassing:
- positive-frequency and a negative frequency signal.
  - exponential and polar form of sinusoidal signal and a complex sinusoidal signal.
  - spectra of a general signal having equal real and imaginary components. (An “analytic” or “quadrature” signal).
  - analytic signals simplification filtering operations
- e) Fast Fourier Transform (FFT) encompassing:
- Decimation in Time FFT, and the “twiddle factor”.

- sample-frequency and number of signal samples needed for a FFT.
  - FFT routine.
- f) FIR filtering using FFT encompassing:
- overlap, save method of implementing a long FIR filter using the FFT and the inverse FFT.
  - limitations on the stored frequency-response coefficients and the resulting impulse-response.
- g) Data-rate conversion encompassing:
- data-rate conversion (decimation) simplification of the anti-alias filter requirement
  - data-rate conversion (interpolation) of the DSP system simplification the reconstruction-filter requirement and reduces the need for  $\sin(x)/x$  compensation.
- h) Modulation and de-modulation techniques encompassing:
- Spectra where real signals and analytic (quadrature) signals are modulated by a sinusoidal function.
  - amplitude-modulated signal
  - single-sideband signal
- i) Digital processing steps in practical DSP applications
- j) Currently available DSP support chips

#### 2.9.4.4 Digital applications

Evidence shall show an understanding of the digital applications to an extent indicated by the following aspects:

- a) Two level, four input combination logic circuits encompassing:
- Boolean expression and/or truth table.
  - De Morgan's Law and other simple identities
  - Karnaugh Map or Boolean algebra
  - 'don't cares' to simplify logic implementation.
- b) Propagation delays in a 2 level circuit encompassing:
- total worst case propagation delay in a simple combination circuit.
- c) Types of oscillators encompassing:
- Schmitt trigger input.
  - Schmitt trigger oscillator.
  - simple RC oscillator.
  - crystal oscillator.
- d) Re-triggerable and non-re-triggerable Monostables encompassing:
- R and C values to produce a given output pulse width.
  - monostable to achieve pulse stretching/shortening, pulse delaying and switch debouncing.
  - Modulo N M.S.I asynchronous counters and analyse modulo N M.S.I synchronous counters. Cascading limited to two M.S.I devices.
  - enabling, loading, counting, and cascading counters from manufacturer's data sheets.
  - operation of up to 2 chip M.S.I counter.
- e) Characteristics of Ram and ROM encompassing:

- memory parameters, including access time, array size, memory refresh, low-power mode.
  - pin functions.
  - timing parameter from data sheets (not including DRAM).
  - characteristics of commonly used memory devices, including RAM, DRAM, NVRAM, ROM, EPROM and E<sub>2</sub>ROM.
- f) Circuits applying M.S.I devices encompassing:
- decoded memory system.
  - waveform generator using a multiplexer and a counter (up to 16 states).
  - typical analogue to digital and digital to analogue converters.
  - A to d and D to A converters

### 2.9.5.1 Microprocessor fundamentals

Evidence shall show an understanding of the characteristics and applications of microprocessors to an extent indicated by the following aspects:

- a) Blocks and buses that comprise a microprocessor or microcontroller system
- b) Memory organisation, operation and addressing methods used with semiconductor read/write memories (RAMs) and read-only memories (ROMs)
- c) Differences between a microprocessor and microcontroller and their usages
- d) Microprocessor/microcontroller architecture and operation encompassing:
  - central processing unit (CPU)
  - register array
  - instruction register/decoder
  - arithmetic logic unit (ALU)
  - accumulator and flags
  - instruction cycle timing
  - control lines
  - stack pointer
  - index register
  - general purpose registers
- e) System clock circuits fetch and execute encompassing:
  - timing cycle
  - timing relationship to system clock
  - logic levels of system buses for each clock period of an instruction cycle

### 2.9.5.2 Microcontroller fundamentals

Evidence shall show an understanding of microcontroller fundamentals to an extent indicated by the following aspects:

- a) Microcontroller architecture
- b) Program storage types
- c) Data storage types
- d) I/O Ports: analogue/ digital
- e) Integrated Peripherals: timers, interrupts etc

- f) Control circuitry: system clock, reset etc
- g) Industry standard programming environment

### 2.9.6 Operational amplifiers

Evidence shall show an understanding of the fundamental principles of amplifiers characteristics and the applications of operational amplifiers to an extent indicated by the following aspects:

- a) The purpose and application of amplifiers
- b) The basic characteristics of small signal amplifiers.

Note:

Features and characteristics include input and output impedance, current and voltage gain and bandwidth

- c) Various operational amplifier circuit configurations and where they are used.
- d) Measures and calculated values of gain and output voltage for various operational amplifier configurations

Note:

Circuit configurations include inverting, non-inverting, voltage follower, summing, comparators and Schmitt trigger differential configurations

#### 2.9.7.1 Single phase power control

Evidence shall show an understanding of the characteristics and applications of single phase power control to an extent indicated by the following aspects:

- a) Types of electronic devices, their operating principles and characteristics

Note.

Examples are SCRs, Triacs power transistors and the like.

- b) Applications, circuit configuration and operating parameters

Note.

Examples of applications are applications solid state switches, lighting dimmers, single phase motor speed and efficiency control and the like.

- c) Typical faults, their symptoms and cause.
- d) Testing procedures and test points

#### 2.9.7.2 Polyphase power control

Evidence shall show an understanding of the characteristics and applications of single phase power control to an extent indicated by the following aspects:

- a) Applications, circuit configuration and operating parameters

Note.

Examples of applications are applications polyphase rectifiers, inverters, voltage and frequency control polyphase phase motor speed and efficiency control and the like.

- b) Typical faults, their symptoms and cause.
- c) Testing procedures and test points

### 2.9.8 Amplifier fundamentals

Evidence shall show an understanding of amplifier fundamentals to an extent indicated by the following aspects:

a) Basic op amp configurations encompassing:

- ideal operational amplifier characteristics gain, bandwidth, input and output resistance.
- the inverting amplifier circuit calculating voltage gain and input resistance.
- the non-inverting amplifier circuit calculating voltage gain and input resistance.
- the inverting summer circuit calculating output voltage for given input voltages.
- voltage follower.
- differential amplifier circuits, differential amplifier using op amps need for balancing circuit resistances.

b) Op amp limitations encompassing:

- non-ideal characteristics of an op amp manufacturers' specifications compared to ideal characteristics.
- need for frequency compensation in some types of op amps using manufacturers' data to apply frequency compensation.
- offset nulling methods used manufacturers' data.
- bias compensation need for equal DC resistance between each input and the common line.
- slew rate definition of term specifications of slew rate for typical op amps.
- frequency response how frequency response varies with circuit gain bandwidth product frequency response characteristics for different op amp types definition of bandwidth.

c) Comparators encompassing:

- effect of using an op amp in open loop operation.
- basic configuration of a comparator.
- analysis of comparator operation.
- how positive feedback is applied applications.
- Schmitt trigger basic principle of operation advantages applications.
- comparator circuit applications.
- types of comparator ICs.

d) Op amp applications encompassing:

- clipping circuits and precision rectifiers principle of operation applications.
- RC sine wave oscillators, block diagram, Wien bridge oscillator configuration, basic operation phase shift oscillator, basic operation applications.
- square wave oscillators, converting a sine wave to a square wave using a comparator, applications.
- op amp integrator circuits, circuit configuration, output voltage for a given DC input voltage, why ramp is linear, relationship of time constant of the circuit to output, waveform and applications.
- differentiator circuits, circuit configuration, output waveform for a given input waveform, effect on waveform if the time constant is changed applications.
- function generators, block diagram, output waveforms applications.
- active RC filter circuits (basic types only), principle of operation, low pass and high pass filter circuit configurations, band pass and band stop filter circuit configurations applications.

**2.9.9.1 Advanced amplifiers**

Evidence shall show an understanding of advanced amplifiers to an extent indicated by the following aspects:

- a) Determination of d.c. bias conditions for a single-stage amplifier
- b) Determine the small signal terminal characteristics of single-stage amplifiers
- c) Effects of coupling and by-pass capacitors in single-stage amplifiers

**2.9.9.2 Amplifier applications**

Evidence shall show an understanding of amplifier applications to an extent indicated by the following aspects:

- a) Operation of multistage amplifiers
- b) Effects of component values and frequency response
- c) Identification of components which comprise the negative feedback loop in multistage amplifiers
- d) Effect of negative feedback on amplifier parameters
- e) Predictable effects on the output voltage when amplifiers are subjected to control signal overdrive, bias faults and amplifying device faults

**2.9.9.3 Microwave amplifiers**

Evidence shall show an understanding of microwave amplifiers to an extent indicated by the following aspects:

- a) Applications and operational constraints
- b) Operating principles and parameters
- c) Amplifier components and circuit configuration
- d) Amplifier faults, symptoms and causes

**2.9.10 Reserved****2.9.11 Linear and switch mode power supplies**

Evidence shall show an understanding of linear and switched mode power supplies to an extent indicated by the following aspects:

- a) Operation and characteristics of switched mode power supplies
- b) Isolation requirements and circuitry
- c) Operation of step-down and step-up regulators
- d) DC to DC converters
- e) Operation of variable frequency and pulse width modulated regulation techniques
- f) Radiation suppression circuitry
- g) Diagnostic procedures to isolate faults

**2.9.12 Electronic fault finding**

Evidence shall show an understanding of electronic fault finding techniques to an extent indicated by the following aspects:

- a) Factors to consider in clarifying the nature of a fault encompassing:
  - Initial fault report
  - Confirmation of symptoms of the fault
  - Comparison of symptoms with normal operation
- b) Effect to cause reasoning — assumptions of possible causes
- c) Methods for testing assumptions encompassing:
  - Visual inspection
  - Sectional testing
  - Split-half tests
  - Component isolation
- d) Dealing with intermittent faults

Note:

Typical causes of intermittent faults are vibration, shock, changes in temperature and electromagnetic interference.

### **2.9.13 Measurement circuits and applications**

Evidence shall show an understanding of measurement circuits and applications to an extent indicated by the following aspects:

- a) Principles of measurement
- b) Circuit components and configurations
- c) Applications of measurement circuits

### **2.9.14 Fundamentals of calibration**

Evidence shall show an understanding of fundamentals of calibration to an extent indicated by the following aspects:

- a) Calibration processes
- b) Need for calibration
- c) Metrology standards
- d) Traceability
- e) Electrical measuring instruments and devices
- f) High order frequency references
- g) Counters
- h) Signal and function generators

### **2.9.15 Audio and video component functional controls**

Evidence shall show an understanding of the functional controls of audio and video components to an extent indicated by the following aspects:

- a) Types of components and their functional controls
- b) Function set up procedures
- c) Testing

### 2.9.16.1 Sound reproduction fundamentals

Evidence shall show an understanding of sound reproduction fundamentals to an extent indicated by the following aspects:

- a) Sound wave propagation
- b) Timbre of sound
- c) Effects of other medium of sound waves
- d) Characteristics of the human ear
- e) Difference between mono and stereo
- f) Surround sound principles

### 2.9.16.2 Acoustics, spatial treatment and sound reproduction

Evidence shall show an understanding of acoustics, spatial treatment and sound reproduction to an extent indicated by the following aspects:

- a) Effects of room dimensions, spatial shape and surface textures on acoustics
- b) Ideal acoustic for specific purposes

Note.

Examples of specific purposes are speech, solo or small group music, rock music orchestral music, choral music, cinema and the like.

- c) Measuring room response
- d) Speaker placement and room response
- e) Room treatment methods to improve acoustic response
- f) Active methods to improve acoustic response

### 2.9.17.1 Audio reproduction, electronic components

Evidence shall show an understanding of electronic components for sound reproduction to an extent indicated by the following aspects:

- a) Preamplifiers amplifier encompassing:
  - Function in the reproduction chain
  - Typical circuit arrangements
- b) Power and integrated amplifiers encompassing:
  - Function in the reproduction chain
  - Typical circuit arrangements
- c) Graphic equalizers encompassing:
  - Function in the reproduction chain
  - Typical circuit arrangements
- d) Component interconnections

### 2.9.17.2 Audio component repair basics

Evidence shall show an understanding of the basics of audio component repair to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Common faults, their symptoms and cause.
- c) Fault location procedures and testing points

d) Device adjustments

Note.

Example of audio components are preamplifiers amplifier, power and integrated amplifiers, graphic equalizers and the like.

**2.9.18 Audio reproduction, speaker fundamentals**

Evidence shall show an understanding of speaker fundamentals to an extent indicated by the following aspects:

- a) Types of speaker drives and their operating mechanism
- b) Speaker cabinet characteristics
- c) Purpose and circuit arrangement of typical cross-over networks
- d) Speaker connections

**2.9.19 Audio/video recording and replay components repair basics**

Evidence shall show an understanding of basic repairs to electronic components for audio/video recording and replay to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Common faults, their symptoms and cause.
- c) Fault location procedures and testing points
- d) Device adjustments

Note.

Examples of audio/video recording and replay components are audio cassette player/recorders, compact disk players, video cassette player/recorder, digital versatile disk and super audio compact players.

**2.9.20 Business equipment operational functions**

Evidence shall show an understanding of business equipment electronic components to an extent indicated by the following aspects:

- a) Type of business machines and their application.
- b) Default and user choice functions.
- c) Setting up procedures.

**2.9.21 Business equipment components**

Evidence shall show an understanding of business equipment electronic components to an extent indicated by the following aspects:

- a) Operating principles of components encompassing:

- Stepper and pulse motors
- Relays and Solenoids
- Clutches

Note.

Examples are magnetic, spring, tight and loose slip, friction, one way spring and torque – limited clutch

- Tacho sensors
- Chains and gearing

- Pulleys and belt drives
  - Vacuum feeds
  - Feed rollers
  - Separation pads
- b) Equipment maintenance encompassing:
- Anti static brushes
  - Conductive/non conductive greases
  - Correct use of oil
- c) Transducers types and application encompassing:
- Linear position and velocity
  - Angular position measurement
  - Angular velocity measurement
  - Temperature sensors
  - Humidity sensors
  - Current sensors
  - Piezo sensors
- d) Temperature sensors and applications encompassing:
- Thermocouples
  - Resistance temperature detectors (RTD)
  - Thermistors
  - Bimetal temperature sensors
- e) Optoelectronics devices and applications encompassing:
- Photoresistors
  - Photodiodes
  - Phototransistors
  - LASCR
  - Photovoltaic devices
  - Optocouplers
  - Laser
- f) Operation of input accessories encompassing:
- paper trays
  - high capacity bins
  - document feeders
  - duplex unit
  - manual bypass
  - coin boxes
  - card readers
  - raster image processing unit
  - Toners and cartridges
- g) Operation of output accessories encompassing:
- sorters
  - staplers
  - collators

- folders
- stackers

## **2.9.22 Gaming machine systems and equipment overview**

Evidence shall show an understanding of gaming machine systems and equipment to an extent indicated by the following aspects:

- a) Gaming industry terminology
- b) Functions and specifications of the machine and its components
- c) Types of gaming machines
- d) Operational features of different machines and systems

### **2.9.23.1 Gaming machine equipment adjustment and maintenance**

Evidence shall show an understanding of gaming equipment adjustment and maintenance to an extent indicated by the following aspects:

- a) Machine access and security encompassing:
  - master reset procedures,
  - opening and closing doors,
  - period reset procedures,
  - use of audit and reset key
- b) Adjustments and clearances encompassing:
  - Coin/note jams
  - Hopper to coin chute
  - Screens
  - Touch screen calibration
- c) Removals, installs and checks encompassing:
  - Bank note acceptors,
  - Card readers
  - Coin comparators,
  - Divertor
  - Drop doors
  - Hopper
  - Lighting
  - Machine positioning and mounting
  - Printer paper roll feeding
  - Switches
- d) Attendant screens and functions

### **2.9.23.2 Gaming machine fault finding**

Evidence shall show an understanding of finding faults in gaming machines to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Common faults, their symptoms and cause.

- c) Fault location procedures and testing points
- d) Device adjustments

### **2.9.24 Cathode ray tube displays**

Evidence shall show an understanding of cathode ray tube displays to an extent indicated by the following aspects:

- a) Operation and characteristics of various types of cathode-ray tubes including delta, in-line and precision in-line
- b) Voltages, statics and x-rays around CRTs
- c) Set up and adjustment techniques
- d) Rear and front projection TV systems
- e) Typical faults

### **2.9.25 Plasma displays**

Evidence shall show an understanding of plasma displays and their circuit control operation to an extent indicated by the following aspects:

- a) Advantages of flat panel displays (over conventional CRT's, Raster geometry etc)
- b) Theory of plasma gas discharge and phosphor excitation
- c) Scanning techniques (column/row addressing)
- d) Luminance/colour aspects (the need to re-address pixels to control light output)
- e) Gamma correction considerations. (reversal of the gamma correction that is carried out at the TV studio to compensate for the non-linearity of light output of a conventional CRT)
- f) Plasma flat panel construction (and handling)

#### **2.9.26.1 Liquid crystal displays**

Evidence shall show an understanding of liquid crystal displays and the control circuit operation to an extent indicated by the following aspects:

- a) Principles of transmissive LCD displays (as opposed to reflective types)
- b) Light polarisation. (polarisation twisting characteristics of liquid crystal and the need for polarisation filters in display panel)
- c) Voltage/current requirements and need for electric field
- d) Fluorescent back light (need for high frequency operation and power requirements)
- e) Scanning techniques (colour/row addressing and thin film transistors)
- f) Light attenuation (caused by the many layers/filters the back light has to pass through)
- g) Construction and handling

#### **2.9.26.2 Display circuit diagnostics**

Evidence shall show an understanding of display circuit diagnostics to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Factors effecting system performance
- c) Typical faults, their symptoms and cause.
- d) Fault diagnosis procedures and testing

e) Sub-system adjustments

**2.9.27 Digital versatile disc (DVD) and compact disc (CD)**

Evidence shall show an understanding of DVDs and CDs to an extent indicated by the following aspects:

- a) Operational principles and standards of digital signal processing
- b) Standards and features of DVDs and CDs
- c) Operation and adjustment of DVDs and CDs, as well as
  - Transport mechanisms
  - Laser alignment/tracking
  - Servo system description, operation and adjustment of servo loops
  - System control of player
  - On screen display including service mode set-up on adjustment

**2.9.28 Hand held remote control units**

Evidence shall show an understanding of hand held remote control units to an extent indicated by the following aspects:

- a) Remote control requirements, specifications, multiple systems, code formats, bit sync, system address, commands, timing (clock accuracy), modulation system, infrared system, transmission errors, methods used to reduce battery power, key scanning and displays
- b) Data monitoring points, timing and amplitude specifications, triggering of serial data, data/graticule alignment, identify and decode start bits, system address bits, command bits, stop bits, load and other bits
- c) Remote control measurements, battery voltage range, battery stand-by current, battery transmit current. DC voltage and waveforms on IC pins. Frequencies
- d) System controller requirements including remote, local, main housekeeping.
- e) Methods of inter-chip data communications

**2.9.29 Television scanning and deflection**

Evidence shall show an understanding of television scanning and deflection to an extent indicated by the following aspects:

- a) Operation of a synchronised separator, synchronised horizontal oscillator and drive stages, horizontal transistor output stage
- b) Operation of and repair to vertical deflection circuitry
- c) Operation of Raster correction circuits

**2.9.30 Television chrominance and luminance**

Evidence shall show an understanding of television chrominance and luminance to an extent indicated by the following aspects:

- a) Chrominance and luminance signal processing at the transmitter
- b) Luminance signal process in the receiver including video buffer, traps and filters, video amplifiers, video output stages, brightness and contrast circuits
- c) Chrominance signal processing in the receiver including, chroma decoder, sub-carrier

regeneration, chroma signal processing, final matrix output.

### **2.9.31.1 Television and video reception**

Evidence shall show an understanding of television reception signals and decoding to an extent indicated by the following aspects:

- a) Broadcast systems
- b) Basic operation of a TV cameras
- c) Basic operation of a TV receiver including tubes and displays and operating components
- d) Reception aerials and arrays
- e) Operation of a video cassette recorder including tape recording, helical scanning, mechanical principles and adjustments, electronic principles and adjustments, servo control loops

### **2.9.31.2 Power supplies for TVs and VCRs**

Evidence shall show an understanding of power supplies for TV and VCR to an extent indicated by the following aspects:

- a) components providing RFI suppression protection, rectification and filtering in a typical TV power supply.
- b) safe working procedures to test the power supply circuitry of a typical “hot chassis” television receiver.
- c) The operation of series regulated power supplies as used in typical TV receiver/monitors and VCRs.
- d) Subsystem arrangements and the operating principles of series and shunt type TV/VCR SMPS .
- e) The operation of the SMPS control circuits in a TV/VCR.
- f) The operation of typical self-oscillating TV/VCR SMPS circuits.
- g) Techniques for locating and repairing faults in a defective SMPS in a typical TV/monitor or VCR.

### **2.9.31.3 Television RF stages**

Evidence shall show an understanding of television RF stages to an extent indicated by the following aspects:

- a) The operation of tuners found in typical TV receivers.
- b) Techniques for locating and repairing faulty components in VST and FST tuning systems in typical TV receivers or VCRs.
- c) Techniques for locating and repairing faults in typical vision IF circuits.
- d) The operation of and fault find a typical TV synchronous demodulator circuit.
- e) AGC circuits in typical TV receivers encompassing:
  - Operation
  - Fault finding techniques .

### **2.9.32.1 Camcorders and digital cameras**

Evidence shall show an understanding of camcorders and digital cameras to an extent

indicated by the following aspects:

- a) Operation of camera circuits
- b) Recording media, standards and formats
- c) Pick up tubes and charge coupled devices
- d) Operation of optical transducers, lenses
- e) Colour separation techniques and signal processing
- f) Charge coupled devices
- g) Mechanics and adjustments
- h) Power supplies and batteries
- i) MPEG capability

### **2.9.32.2 Camera circuits diagnostics**

Evidence shall show an understanding of camera circuit diagnosis to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Environment factors effecting system performance
- c) Typical faults, their symptoms and cause.
- d) Fault diagnosis procedures and testing
- e) Sub-system adjustments

### **2.9.33 Video cassette recorder**

Evidence shall show an understanding of video cassette recorders to an extent indicated by the following aspects:

- a) Operation and practical application of chrominance processing principles
- b) System control sections, typical analogue and digital servo systems
- c) Circuit operation involving high fidelity, tracking, picture storage, still pictures
- d) Locate faults in the following sections: mechanical, luminance, chroma, servo control, system control, timer and display control, sound, RF and power supply

### **2.9.34.1 Digital television receivers**

Evidence shall show an understanding of digital television receivers to an extent indicated by the following aspects:

- a) Integrated Receiver Decoder IRD (The Set Top Box) encompassing:
  - sub-system components (i.e. functional blocks) and their operating parameters
  - Basic diagnostic tests
- b) Channel decoders encompassing:
  - Method used to determining the analogue to digital converter (ADC) sampling rate.
  - Function of the Forward Error Correction (FEC) unit and Reed Solomon (RS) and Viterbi plus interleaving.
  - Purpose of the OFDM modulator.
  - Principle of operation of an OFDM demodulator and hierarchical (de) modulation.
  - Principles of operation of a QPSK demodulator.

- Perform measurements and diagnostic test points in a typical IRD channel decoder.
- c) Conditional access encompassing:
- Purpose of a conditional access module (CAM).
  - Access descrambler unit sub-system components (i.e. functional blocks) and their operating parameters
  - Function of the component parts of conditional access descrambler unit.
  - Purpose of a conditional access module 'smart card'.
  - Single chip set top box sub-system components (i.e. functional blocks) and their operating parameters
- d) Repair and maintenance of digital television signal decoding circuitry. encompassing:
- Correct operation of the transport stream processor with reference to typical input and output signal.
  - Testing techniques to determine correct operation of the video decoder, audio decoder and PAL encoder
  - Testing techniques to determine identify faulty data streams.
  - Pin connections of a SCART socket.
  - Operation of a typical UHF modulator.
  - List precautions to be observed when performing tests on functional and non-functional units.
  - Identify and replace faulty components in malfunctioning units.
  - Perform functional testing after repair.

### 2.9.34.2 Digital television principles

Evidence shall show an understanding of digital television principles to an extent indicated by the following aspects:

- a) Describe the basic techniques used to process an analogue signal for integration in a digital broadcasting system encompassing:
- Basic technique of sampling an analogue waveform and assigning quantisation levels to those samples for both video and audio.
  - Calculation of the number of pixel's per line and the sampling rate for a range of typical DTV aspect ratios.
  - Typical sampling rates for Standard Definition Digital Television (SDTV) and High Definition Digital Television (HDTV) broadcasts.
  - Range of different sampling structures used to sample luminance and colour difference signals.
  - Determination of the total bit rate required for a required sampling rate.
  - Factors limiting digital television picture quality.
  - Minimum MPEG video requirements for HDTV and SDTV.
  - Factors that create the need for video data compression.
- b) Describe the process used to prepare video data for integration encompassing:
- Major methods used to compress video data.
  - How a complete picture frame is assembled from samples, blocks, macroblocks and slices.
  - Meaning of the terms DCT coefficients, temporal frequency, spatial frequency, temporal and spatial redundancy.

- Purpose of the Discrete Cosine Transfer (DCT) processor in the processing of video data compression.
  - Relationship between spatial frequencies, DCT coefficients and quantisation levels in the DCT block.
  - Compression techniques used to code quantised DCT coefficients.
  - How Run Length Coding (RLC) is used to group DCT values into a series of values.
  - How Variable Length Coding (VLC or Huffman coding) processes each DCT value according to probability.
- c) Describe the role of the DCT coder encompassing:
- Sub-system components (i.e. functional blocks) and their operating parameters of a DCT coder.
  - Typical construction of a Group of Pictures (GOP).
  - Individual frames in a GOP sequence that uses forward prediction and bi-directional prediction.
  - Purpose of differential coding.
  - Structure of a video Packetised Elementary Stream (PES).
  - Types of information included in the PES.

### 2.9.34.3 Advanced digital television principles

Evidence shall show an understanding of advanced digital television principles to an extent indicated by the following aspects:

- a) Audio component encompassing:
- Audio Encoding
  - Audio Masking
  - Audio sub band encoding
- b) Dolby AC-3
- c) MPEG-2 System Layer encompassing:
- PES Packet Construction
  - Time Stamps
  - Programme Clock Reference (PCR)
  - Transport Packet Header
  - Programme Specific Information (PSI)
- d) Channel Encoding
- Forward Error Correction (FEC)
  - Bit Error Rate (BER)
  - Puncturing
- e) Interleaving.
- f) Modulation
- Phase Shift Keying (PSK)
  - Quadrature Amplitude Modulation (QAM)
  - Orthogonal Frequency Division Multiplexing (OFDM)
  - Coded Orthogonal Frequency Division Multiplexing (COFDM)

- g) Hierarchical Modulation.
  - Terrestrial Channel Encoder
  - Satellite Channel Encoder
  - Carrier to Noise Ratio (C/N)
- h) Single Frequency Networks
  - Guard Interval
  - Megaframes

### **2.9.35 Micro computer systems**

Evidence shall show an understanding of micro computer systems to an extent indicated by the following aspects:

- a) Function of block diagrams related to programmable peripheral interface, programmable interval timer, universal asynchronous receiver transmitter, programmable interrupt controller, programmable memory access controller, bus controllers, floppy disk controller, cathode ray tube controller
- b) Function of pins on common micro processor peripheral ICs
- c) Software for initialisation
- d) Use of the operational mode
- e) Interfacing of IC peripherals

### **2.9.36 Fire detection and warning system and apparatus fundamentals**

Evidence shall show an understanding of fire detection and warning systems to an extent indicated by the following aspects:

- a) Purpose of fire alarm and warning systems.
- b) Purpose and operating principles of fire detection and warning systems.
- c) Operating principles and characteristic of the various types of fire alarm detectors.
- d) Operating principles and characteristic of the various warning system components
- e) Effective and ineffective locations for fire detection devices and common causes of false alarms.
- f) Warning devices and their operating parameters
- g) Common operational requirements and types of control and indicating equipment.
- h) Common operation and types of field data gathering equipment
- i) Common operation and interface connections to other systems.
- j) Purpose and interface requirements to smoke hazard management system

### **2.9.37 Fire alarm routine testing**

Evidence shall show an understanding of fire alarm and warning system routine testing to an extent indicated by the following aspects:

- a) Types and uses of test equipment
- b) Fire alarm and warning system components and their location
- c) Periodic testing requirements to meet manufacturer's and standards requirements

### **2.9.38 Tape recorders**

Evidence shall show an understanding of tape recorders to an extent indicated by the following aspects:

- a) Processors involved with magnetic analogue tape recording
- b) Components and circuitry associated with tape transport, erasure and record bias, recording, play back and noise reduction
- c) Warn or faulty tape transport components and circuits
- d) Inspection of head condition using a microscope and the effects on the output caused by head-wear and oxide build-up

### **2.9.39 AM and FM tuners**

Evidence shall show an understanding of AM and FM tuners to an extent indicated by the following aspects:

- a) Superheterodyne receivers
- b) Operational characteristics and techniques used in AM and FM receivers
- c) Frequency modulation, stereo encoding and de-coding used in commercial FM transmissions
- d) Amplitude modulation and de-modulation used in commercial AM transmissions
- e) RF signal requirements for AM tuners
- f) RF signal requirements for stereo FM tuners

### **2.9.40 Integrated audio systems**

Evidence shall show an understanding of integrated audio systems to an extent indicated by the following aspects:

- a) Types of audio control and switching devices
- b) Types of surround sound systems
- c) Operation of system control circuits, including the remote device

#### **2.9.41.1 Security systems installation basics**

Evidence shall show an understanding of security systems installation to an extent indicated by the following aspects:

- a) Circuit arrangements encompassing:
  - range of typical resistor values used in alarm systems
  - reasons for End Line Resistor (ELR) systems in ELR circuits, balanced bridge circuits and the two resistor ELR
  - wiring of a single EOL resistor to provide a sealed condition
  - wiring of a detector with split EOL resistors to provide a sealed condition
  - how zone doubling can be accomplished through the use of dual EOL resistors
  - effects of open circuits and short circuits on alarm inputs
- b) Construction and operating principles and application of mechanical detectors

Note.

Example are magnets, vibration (hammer type, ball & pin type), switches, pressure mats, trip wires, window tape, and the like

- c) Construction and operating principles and application of electro-mechanical detectors

Note

Example are single twin type, beam fence, missing pulse system, glass break, smoke, ultra sonic, optical fibre, strain system, resistance circuit and the like

d) Operating requirements and application of passive infra-red detectors encompassing:

Note.

Examples are barrier lens, dual corridor lens, long range lens, and wide angle lens.

- Problems associated with PIR sensors
- Area of coverage and fields of a range of sensors

e) Relays encompassing:

- use of NC and NO relays
- show how a transistor “pulls down” current when used as a switch
- wiring diagram for a relay connected to an open collector output on an alarm panel
- typical uses for a relay type output

f) Control panels encompassing:

- features of commonly used panels
- operation of programmable and non-programmable panels
- sound sources used with security alarms
- power sources used with security systems
- panel to base communication systems
- Locks commonly used in the security industry

#### **2.9.41.2 Security systems installation faults**

Evidence shall show an understanding of security systems installation to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Factors effecting system performance
- c) Typical faults, their symptoms and cause.

Note.

Faults include circuit, hardware and software faults

d) Fault diagnosis procedures and testing

Note.

Faults confined to circuit and hardware faults and basic programming faults

e) System adjustments

#### **2.9.42 Audio and video system set up**

Evidence shall show an understanding of setting up audio and video systems to an extent indicated by the following aspects:

- a) Audio components in a system
- b) Video components in a system
- c) Component connection arrangements
- d) Set up options and procedures

#### **2.9.43 Video systems installation**

Evidence shall show an understanding of video systems installation to an extent indicated

by the following aspects:

- a) Installation and set-up of digital TV reception equipment
- b) Installation and set-up of DVD machines
- c) Operating requirements of remote control units

#### **2.9.44 Consumer video equipment**

Evidence shall show an understanding of consumer video equipment to an extent indicated by the following aspects:

- a) Operation principle

Note.

Examples of video equipment are VCRs, DVDs, desktop boxes camcorders and hand held micro controllers

- b) Fault-finding to sub system (functional blocks) level

#### **2.9.45.1 Audio electronics**

Evidence shall show an understanding of audio electronics to an extent indicated by the following aspects:

- a) Interpretation of circuit diagrams of audio amplifiers
- b) Adjustment and testing of the power output stage of an amplifier
- c) Specifications and measurements associated with voltage and power amplifiers
- d) Connections and phasing of equipment
- e) System control circuits

#### **2.9.45.2 Recording and replay apparatus diagnostics**

Evidence shall show an understanding of diagnosing recording and replay apparatus to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Factors effecting system performance
- c) Typical faults, their symptoms and cause.
- d) Fault diagnosis procedures and testing
- e) Sub-system adjustments

#### **2.9.46 Professional audio electronics**

Evidence shall show an understanding of professional audio electronics to an extent indicated by the following aspects:

- a) Complex audio systems used for live sound or theatre application
- b) Connections and phasing of equipment
- c) Optimum signal levels for the acoustic environment
- d) Connection and adjustment of signal processing units
- e) Tuning, adjustment and diagnosis of systems

#### **2.9.47 Loud speakers and microphones**

Evidence shall show an understanding of loud speakers and microphones to an extent

indicated by the following aspects:

- a) Loud speaker construction and applications
- b) Operation of circuits and cross over networks
- c) Optimum layout of speaker systems
- d) Principle and operation of microphones

#### **2.9.48 Digital audio**

Evidence shall show an understanding of digital audio to an extent indicated by the following aspects:

- a) Fundamentals of digital audio systems
- b) Signal processing within the encoding of a system
- c) Error checking techniques in the encoder process
- d) Modulation used in the encoding process
- e) The process for decoding digital audio signals to produce analogue stereo output
- f) Features and operation of compact disk players

#### **2.9.49 Computer monitors**

Evidence shall show an understanding of computer monitors to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Monitor driver software and configuration
- c) Monitor calibration principles
- d) Common faults, their symptoms and cause.
- e) Fault location procedures and testing points
- f) Monitor adjustments

#### **2.9.50 Commercial audio/video systems commissioning process**

Evidence shall show an understanding of commissioning commercial audio/video systems to an extent indicated by the following aspects:

- a) Purpose of commissioning
- b) Commissioning planning and documentation
- c) Initial tests and adjustments
- d) Commissioning procedures

#### **2.9.51 Camcorders**

Evidence shall show an understanding of camcorders to an extent indicated by the following aspects:

- a) Operation, tape standards and formats used in camcorders
- b) Operation of optical transducers and lens systems
- c) Alignment of monochrome camera tubes
- d) Colour separation techniques and single tube colour camera signal processing
- e) Charge coupled device signal processing
- f) Mechanics of camcorders

### **2.9.52 Digital versatile disk processors**

Evidence shall show an understanding of digital versatile disk processors to an extent indicated by the following aspects:

- a) Operating principles, characteristics, features and standards of DVD players
- b) Components and adjustment of DVD players

### **2.9.53 Compact disk players**

Evidence shall show an understanding of compact disk players to an extent indicated by the following aspects:

- a) Characteristics of optical digital recording
- b) Components of CD players
- c) Operation of servo loops
- d) Digital signal processing
- e) System control sections of a CD

### **2.9.54 VCR basic principles**

Evidence shall show an understanding of VCR basic principles to an extent indicated by the following aspects:

- a) Installation and operation of a VCR
- b) Techniques used in magnetic tape recording
- c) Helical scanning process and FM magnetic recording principles
- d) Adjustment and replacement of components within mechanical sections
- e) Luminance signal processing stages
- f) Operation of electronic systems

### **2.9.55 VCR fault finding**

Evidence shall show an understanding of VCR fault finding to an extent indicated by the following aspects:

- a) Faulty component location in the sections of a VCR encompassing:
  - Mechanical components
  - luminance components
  - chroma components
  - servo control sections
  - system control sections
  - timer and display sections
  - power supply sections
  - sound sections
  - RF sections

### **2.9.56 VCR advanced principles**

Evidence shall show an understanding of VCR advanced principles to an extent indicated

by the following aspects:

- a) The operation of the chrominance processing in practical circuits
- b) Control sections operated by microprocessors
- c) The operation of analogue and digital servo systems

#### **2.9.57.1 Introduction to television**

Evidence shall show an understanding of introduction to television to an extent indicated by the following aspects:

- a) Fundamentals of the Australian broadcast television system in block diagram form
- b) Functions of a television camera using block diagrams
- c) Functions of a television receiver using block diagrams
- d) Principles and operations of picture tubes
- e) The principles of the Australian PAL colour television process
- f) Television receiver aerials

#### **2.9.57.2 Television receiver repair basics**

Evidence shall show an understanding of the basics of television receiver repair to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Common faults, their symptoms and cause.
- c) Fault location procedures and testing points
- d) Device adjustments

#### **2.9.58 TV RF signal stages**

Evidence shall show an understanding of TV RF signal stages to an extent indicated by the following aspects:

- a) Block diagrams and specifications for frequency, bandwidth and local or fringe signal levels
- b) VHF, UHF connections, tuner, vision IF, AGC, AFC, inter-carrier sound IF, stereo sound IF, stereo sound decoder
- c) VHF and UHF vision and stereo sound signal frequencies and amplitudes
- d) Specifications of VHF and UHF television, FM radio antennae, polarity of transmitted signals, baluns, diplexers, filters, cable and cable loss, mast head amplifiers, isolation with directional coupling techniques, splitters and combiners, distribution amplifiers, tee off units, signal strength meters and measurements, insertion loss measurements, interface problems and symptoms
- e) VHF/UHF varicap tuner, basic methods of band switching, basic methods of fine frequency tuning by varicaps
- f) Receiver tuner IF specifications
- g) Basics of saw filter, synchronous AM and FM demodulators, AGC response grams, gated displayed amplified AGC with tuner delay, optimum inter-carrier sound IF
- h) Measurement techniques for RF and IF sensitivity, AGC dynamic range, AFC range, stage gain
- i) Specifications of stereo sound system, sub-carrier frequencies modulation levels, amplitudes, bandwidth

### **2.9.59 Closed circuit televisions**

Evidence shall show an understanding of closed circuit televisions to an extent indicated by the following aspects:

- a) Application CCTV systems encompassing:
    - Sub-system components (i.e. functional blocks) and their function
  - b) Television principles encompassing:
    - Sub-system components (i.e. functional blocks) and their function
    - Video signals
  - c) CCTV cameras encompassing:
    - Types of cameras
    - Sub-system components (i.e. functional blocks) and their operating parameters
  - d) Camera lens encompassing:
    - Types of lenses and their characteristics
    - Application of various types
    - Setting up
  - e) Monitors and recording devices
    - Types and application
    - Analogue and digital recording devices and their application
  - f) Installation and mounting encompassing:
    - Consideration in locating and mounting CCTV camera and auxiliary equipment
- Note.
1. Examples are need for sealed and heated housings, IP rating required, methods for overcoming earth (ground) loops, need for lightning protection.
  2. Examples of auxiliary equipment are in-line video amplifiers/ equalizers and video distribution amplifiers

### **2.9.60 Electronic security systems fundamentals**

Evidence shall show an understanding of electronic security systems to an extent indicated by the following aspects:

- a) Type of detectors and their operating principles
- b) Relay connections to an open collector output on an alarm panel
- c) Design principles of a security system
- d) Impact of building structures on system design
- e) Types of security panels and their communication system
- f) Use of CCTV
- g) Locking devices
- h) Security lighting

### **2.9.61 Advanced electronic security systems**

Evidence shall show an understanding of advanced electronic security systems to an extent indicated by the following aspects:

- a) Connection of input and output devices to detectors and control panels
- b) Procedures to perform hardware and software upgrades

- c) Types of code pads and commands required to operate the system

#### **2.9.62 Security video monitoring and recording**

Evidence shall show an understanding of security video monitoring and recording to an extent indicated by the following aspects:

- a) Principles of television systems
- b) Multiplexing techniques
- c) Multiplex display and recording of CCTV
- d) Digital encoding techniques
- e) Video distribution and transmission techniques
- f) Microprocessor based CCTV systems
- g) Factors affecting picture quality

#### **2.9.63 Direct current power supplies**

Evidence shall show an understanding of DC power supplies to an extent indicated by the following aspects:

- a) Operating principles and application of DC power supplies
- b) Output waveforms of various rectification circuits
- c) Ripple an output DC voltage for capacitive power supply filter circuits
- d) Operation of a Zener diode shunt voltage regulator
- e) Selection of 3 terminal regulators from data sheets

#### **2.9.64 Application of electronic devices**

Evidence shall show an understanding of application of electronic devices to an extent indicated by the following aspects:

- a) Characteristics of discrete components
- b) Amplify types and characteristics
- c) Interface devices and their applications
- d) Comparable devices and their applications

#### **2.9.65 Regulated power supplies**

Evidence shall show an understanding of regulated power supplies to an extent indicated by the following aspects:

- a) Purpose and benefits of different types of regulated power supplies
- b) Operation of different types of regulated power supplies
- c) Voltage current waveforms at different points within a power supply
- d) Regulator types operation and characteristics
- e) Linear regulators using integrated circuits

#### **2.9.66 Switching power supplies**

Evidence shall show an understanding of switching power supplies to an extent indicated by the following aspects:

- a) Operation of inverter and inverter circuits
- b) Characteristics of saturable core solid state inverter circuits, transformer inverter/converter circuits and single transistor inverter/converter circuits

### **2.9.67 Feedback filters and oscillators**

Evidence shall show an understanding of feedback filters and oscillators to an extent indicated by the following aspects:

- a) Operation of open and closed looped systems and differences between positive and negative feedback
- b) Characteristics of a voltage amplifier when negative feedback is applied
- c) Estimated measure the gain of an amplifier
- d) Purpose of filters in an electronic system
- e) Common types of filters, their characteristics and application
- f) Operation of oscillators and electronic systems
- g) Purpose of oscillators
- h) Conditions sustained for oscillation
- i) Operation of phase shift oscillators
- j) The operation and characteristics of a Colpitts oscillator
- k) Conditions that causes instability in amplifier circuits

### **2.9.68 Filters and resonance**

Evidence shall show an understanding of filters and resonance to an extent indicated by the following aspects:

- a) Conditions that create resonance in electronic circuits
- b) Circuit conditions and features of a parallel resonant circuit
- c) Circuit conditions for RLC circuits operating above and below resonant frequency
- d) The relationship between Q-bandwidth and resonant frequency
- e) Capacitive/resistive filters principles and characteristics of operation
- f) Characteristics and operation of low pass filters, band stop filters and band pass filters

### **2.9.69 Digital subsystems**

Evidence shall show an understanding of digital subsystems to an extent indicated by the following aspects:

- a) Digital to analogue conversion encompassing:
  - typical applications
  - D/A performance characteristics
  - D/A converter circuitry
  - D/A converter specifications

Note.  
Examples are resolution, accuracy, offset error, setting time, monotonicity.

  - integrated circuit D/A converter
- b) Analogue to digital conversion encompassing:
  - typical applications
  - A/D performance characteristics

- types of A/D converters (ADC)

Note.

Examples are . digital ramp ADC, successive-approximation ADC, simultaneous (flash) ADC, dual slope ADC.

- • integrated circuit A/D converter

c) Interface chips and techniques encompassing:

- logic interface circuits

Note.

Examples are level translations, driving a load (sink and source) from a logic circuit, transistor switches, relays, opto input and output isolation, driver IC's.

- sensor interfacing

d) Programmable logic devices encompassing:

- applications

- types

Note.

Examples are programmable logic array (PLA), programmable array logic (PAL), and erasable PLDs,

- circuit architecture and operation

- programming requirements

### 2.9.70 Automatic data capture

Evidence shall show an understanding of automatic data capture to an extent indicated by the following aspects:

- a) Forms of automatic data capture, advantages and disadvantages
- b) Selection of barcodes from standards
- c) Suitability of automatic data capture equipment including readers, printers, ancillary devices and radio frequency for various applications
- d) Interfacing issues between systems involving different hardware and software
- e) Functional design and construction of a simple system

#### 2.9.71.1 Biometric devices

Evidence shall show an understanding of biometric devices to an extent indicated by the following aspects:

- a) Biometrics techniques and processes including definitions, terminology, advantages, disadvantages and applications

Note.

Includes basic principles of database design, software techniques, classifier combination, feature extraction, feature enhancement, chain code methods, image analysis, biometric transforms, matching techniques, verification and identification, biometric tools, statistical measures of biometrics

- b) Biometric device tools, software and testing techniques
- c) Physical interaction with biometric devices including operation and installation of biometric devices examples are iris scanners, hand scanners voice recognition apparatus, facial recognition devices and like equipment
- d) Legal aspects of biometrics
  - Australian laws impacting on biometrics security and privacy legislation.
  - Australian standards

### 2.9.71.2 Biometrics Equipment Techniques and Applications

Evidence shall show an understanding of biometrics equipment techniques and applications to an extent indicated by the following aspects:

a) Technology applications used in forensics, genetics, civil and commercial environments and government departments for verification of identities, encompassing:

- Fingerprint matching
- Palm Print
- Hand Geometry
- Face Verification
- Iris Recognition
- Retina Scan

Note.

Examples of biometrics equipment technology used including scanning and digitizing of samples, enhancement of captured data, feature extraction, classification, matching, searching and manual verification

b) Technical principles, parameters, and processes underpinning each of the above technologies in identity recognition

c) Typical selection, evaluation and testing criterion and methods of biometrics equipment, encompassing:

- comparative features of selection, evaluation and testing methods of various classes of equipment
- vendor claims, product suitability and product specifications

### 2.9.71.3 Biometric Systems Techniques and Applications

Evidence shall show an understanding of biometric systems techniques and applications to an extent indicated by the following aspects:

a) Complex biometric systems technology applications used in forensics, genetics, civil and commercial environments, government departments and defence for verification of identities, encompassing:

- Voice Recognition
- Speech Recognition
- Handwriting Analysis
- Signature Verification
- DNA Technology
- Multi-biometrics

Note.

Examples of biometrics system technologies used including voice recognition interfacing components and hardware, speech extraction and evaluate speech recognition system performance, handwriting digitizers tablets, hardware and software used in signature verification, DNA technology in biometric systems,

b) Technical principles, parameters, and processes underpinning each biometric system technology in identity and verification recognition

c) Typical selection, evaluation and testing criterion and methods of biometrics systems, encompassing:

- comparative features of selection, evaluation and testing methods of various biometrics systems

- vendor claims, product suitability and product specifications

#### **2.9.71.4 Biometrics and Security**

Evidence shall show an understanding of biometric and security to an extent indicated by the following aspects:

- a) Compliance requirements for implementing security on personal computers and computer networks
- b) Compliance requirements for securing voice over the internet
- c) Compliance requirements for assuring IT network security and capital planning measures encompassing:
  - security risks versus investment risks,
  - investment management life cycle
  - capital management and investment control
  - alternatives and budget analyses of IT security
- d) Security implementation encompassing:
  - biometrics in law and relationship with legislation
  - trusted networks, cryptography and data security characteristics
  - advanced authentication, digital certificates and digital signatures
  - cost comparison and evaluative analysis
- e) Laws, standards and compliance guidelines encompassing:
  - international
  - national
  - local
  - codes
  - institutional
- f) Preparing and selecting a vendor encompassing:
  - client needs analysis
  - project parameters according to business needs analysis
  - project goals and criteria
  - tender process management
  - project monitoring and evaluation
- g) Deployment principles for rollout of Biometrics system(s) encompassing:
  - scalability and manageability
  - trailing and testing
  - commissioning
  - compliance documentation

#### **2.9.72 Custom electronic installations, testing and verification methods**

Evidence shall show an understanding of testing and verifying compliance of custom electronic installations to an extent indicated by the following aspects:

- a) Compliance and quality control testing and verification requirements.
- b) Testing techniques.
- c) Features of custom electronics installations that can be visually inspected

### **2.9.73 Operational concepts of business machines**

Evidence shall show an understanding of operational concepts of business machines to an extent indicated by the following aspects:

- a) Purpose and function of common business machines
- b) Operation, adjustment and maintenance of photocopiers, facsimile machines, printers and PCs
- c) The electronic communications and connections between business machines
- d) Hazardous materials used in the office and handling procedures

### **2.9.74.1 Electro-mechanics of business machines**

Evidence shall show an understanding of electro-mechanics of business machines to an extent indicated by the following aspects:

- a) The operating features of electric motors, relays and solenoids, clutches and tachometers
- b) Function and operation of feed mechanisms, drive-trains and cleaning processors

### **2.9.74.2 Business machine transducers**

Evidence shall show an understanding of business machine transducers to an extent indicated by the following aspects:

a) Function of transducers encompassing:

- Linear position & velocity
- Angular position measurement
- Angular velocity measurement
- Temperature sensors
- Humidity sensors
- Current sensors
- Piezo sensors

b) Temperature sensors types, operating principles and applications

Note.

Examples are thermocouples, resistance temperature detectors (RTD), thermistors, bimetal temperature sensors and the like.

c) Optoelectronics device types, operating principles and applications

Note.

Examples are. photo resistors, photodiodes, phototransistors, LASCR, photovoltaic devices, optocouplers, lasers and the like.

### **2.9.74.3 Photocopier operating principles**

Evidence shall show an understanding of photocopier operating principles to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) operating parameters
- b) Analogue copying processes encompassing:
  - image scanning process
  - development process

- transfer process
  - cleaning process
  - fusing process
  - process control/compensation techniques
- c) Digital copying processes encompassing:
- image scanning process
  - image capture process
  - image storage techniques
  - image manipulation process
- d) Paper feed and transportation encompassing:
- Paper types
  - Paper handling
  - Methods of paper feed
  - Paper transportation
- e) Maintenance procedures encompassing:
- adjustment for correct operation
  - Replacement of consumable items
  - Cleaning procedures

#### **2.9.75.1 High volume business machine functions and faults**

Evidence shall show an understanding of high volume business machine functions and faults to an extent indicated by the following aspects:

- a) The operating features of electric motors, relays and solenoids, clutches and tachometers
- b) Function and operation of feed mechanisms, drive-trains and cleaning processors
- c) Input accessories, their function and operating principle encompassing:
- paper trays
  - high capacity bins
  - document feeders
  - duplex unit
  - manual bypass
  - coin boxes
  - card readers
  - raster image processing unit
- d) Output accessories, their function and operating principle encompassing:
- sorters
  - staplers
  - collators
  - folders
  - stackers

#### **2.9.75.2 Colour photocopiers operating principles**

Evidence shall show an understanding of colour photocopier operating principles to an

extent indicated by the following aspects:

- a) Principles of colour and colour separation encompassing:
  - Effects of light on the eye
  - Colour principles
  - Colour separation
  - Colour mixing processes
  - Colour Wheel
- b) Colour separation in colour photocopying encompassing:
  - Three scan process
  - Four scan process
  - Under colour removal
- c) Principles of colour photocopying
  - Reflected light paths
  - Block diagrams of photocopiers
  - Principles of operation
- d) Scanning processes of colour photocopiers encompassing:
  - CCD
  - Pre amps
  - Auto gain
  - Image Processing Unit
  - Laser unit
  - Exposure processes
- e) Printing processes of colour photocopiers encompassing:
  - Laser diode unit
  - Polygon mirrors
  - Laser synchronising and detector encompassing:
    - Cylindrical lens
- f) Routine maintenance and servicing encompassing:
  - Optics
  - Paper feeds
  - Developer unit
  - Drum unit
  - Belts and rollers
  - Fusing unit

### **2.9.75.3 Facsimile machine operating principles**

Evidence shall show an understanding of facsimile machine operating principles to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) operating parameters encompassing:
  - CCITT standards
  - analog and digital transmissions
  - transmission process

- phases of facsimile calls
- b) Scanning operations encompassing:
  - single photosensor
  - CCD Operations
  - area image sensors
  - lighting systems
  - optical systems
- c) Signal processing encompassing:
  - picture reduction
  - modems
- d) Printing processes encompassing:
  - thermal
  - plain paper
  - carbon transfer
  - ink jet
- e) Dialling parameters encompassing:
  - pulse (decadic) dialling
  - DTMF
  - manual dial
  - blind dial, line and dial detect
  - redial and listen to dial
- f) Coding systems encompassing:
  - data compression
  - Modified Hauffman (MH) systems
  - Modified Read (MR) systems
  - Modified Modified Read (MMR) systems
  - “K” factor
  - Error Correction Modes (ECM)
- g) Operational principles encompassing:
  - transmission
  - reception
  - copying
- h) Installation, operation, maintenance and servicing procedures encompassing:
  - disassembly and assembly
  - consumable replacement
  - cleaning
  - fault identification
  - machine faults
  - line faults
- i) Facsimile services encompassing:
  - faxstream
  - duet

### 2.9.76 Microwave heating

Evidence shall show an understanding of microwave heating to an extent indicated by the following aspects:

- a) Propagation of electromagnetic waves through the atmosphere, microwave frequency bands
- b) Microwave heating devices encompassing:
  - Components
  - Operating parameters and constraints
  - Measurements, test equipment and testing techniques
- c) EMI/EMC, generation, suppression and reduction.

### 2.9.77 Electronic components and system, industrial applications

Evidence shall show an understanding of industrial applications of electronic components and systems to an extent indicated by the following aspects:

- a) Semiconductor devices encompassing:
  - Australian Standard symbols for each device.  
Note: The devices should include P-N junction diodes, schottky rectifier diodes, zener diodes, LED, BJT and MOSFET. transistors (switching), SCRs, triacs, diacs, 3-terminal regulators.
  - basic operating principle for each device.
  - typical applications for each device.
- b) Single and three-phase rectifiers, filters and voltage regulators encompassing:
  - Australian Standard circuit symbol for each rectifier/filter/three terminal voltage regulator type.
  - operating principles of each rectifier/filter/regulator circuit.
  - input and output voltage values and waveforms for each circuit.
- c) Electronic Inverters encompassing:
  - block diagram representation of an inverter.
  - operating principles of an inverter.
  - common types of inverters.
  - safety precautions for low voltage inverter systems.
- d) Power control devices and circuits encompassing:
  - Australian Standard symbols for each device.
  - *Note:* The devices should include SCRs, triacs, GTOs, diacs and UJTs.
  - basic operating principle for each device.
  - typical applications for each device.
  - *Note:* The applications should include solid state relays, leading and trailing edge dimmers, heating controls.
- e) Programmable Relays encompassing:
  - advantages of programmable relays over electromagnetic relay circuit control.
  - applications for programmable relays.
  - block diagram representation of a programmable relays and basic operating principles.
  - input and output connections to a programmable relays and output types.

- basic programming consisting of inputs, outputs and timers.
- f) Typical applications of devices  
g) Common faults and their symptom

### **2.9.78 Common security scenarios and solutions**

Evidence shall show an understanding of common security scenarios and solutions to an extent indicated by the following aspects:

- a) Alternative access arrangement
- b) Intrusion protection and monitoring options
- c) Available technologies
- d) Integration with other systems

#### **2.9.79.1 Fire protection technologies**

Evidence shall show an understanding of fire protection technologies to an extent indicated by the following aspects:

- a) Life and safety concerns for fire protection.
- b) Basic principles of combustion
- c) Bi-products of combustion that can be detected
- d) Basic principles of fire behaviour within and enclosure
- e) Types of fire protection systems and the difference between automatic and passive systems and wet and dry systems.

#### **2.9.79.2 Fire protection systems, commissioning process**

Evidence shall show an understanding of the commissioning process of fire protection systems to an extent indicated by the following aspects:

- a) Purpose of commissioning
- b) Commissioning planning and documentation
- c) Initial tests and adjustments
- d) Commissioning procedures

#### **2.9.79.3 Fire protection systems faults**

Evidence shall show an understanding of locating faults in fire protection systems to an extent indicated by the following aspects:

- a) Sub-system components (ie functional blocks) and their operating parameters
- b) Factors effecting system performance
- c) Typical faults, their symptoms and cause.
- d) Fault diagnosis procedures and testing
- e) Sub-system adjustments

### **2.9.80 Video and display set up**

Evidence shall show an understanding of video and display set up to an extent indicated by the following aspects:

a) Projectors encompassing:

- Aspect ratio
- Screen size
- Orientation
- Throw distance, vertical elevation and horizontal orientation

b) Direct view monitors adjustments

### **2.9.81 Audio/video control equipment**

Evidence shall show an understanding of audio/video control equipment to an extent indicated by the following aspects:

- a) Types of control devices and their operating principles
- b) Control equipment arrangement in an audio/video system

### **2.9.82 Introduction to optics**

Evidence shall show an understanding of optics to an extent indicated by the following aspects:

- a) Optical concepts and parameters
- b) Applications of optical technology
- c) Optical communications encompassing:
  - Optical fibre cable structures and applications
  - Single and multi mode
  - Transmitter and receiver components
- d) Optical fibre cable termination practices
- e) Predicted applications

### **2.9.83 General electronic apparatus repair basics**

Evidence shall show an understanding of general electronic apparatus repair basics to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Common faults, their symptoms and cause.
- c) Fault location procedures and testing points
- d) Device adjustments

Note.

Examples of general electronic apparatus are data capture devices, security panels, fire protection panels, industrial control apparatus, instrumentation electronics and any apparatus not specifically covered under other clauses but for which there is a service manual and circuit diagrams.

### **2.9.84 Advanced analogue electronics**

Evidence shall show an understanding of advanced analogue electronics to an extent indicated by the following aspects:

- a) Differential amplifiers of suitable characteristics to meet system objective encompassing:
  - differential gain, common mode rejection ratio and the required CMRR
  - variable gain input stage

- connections for an instrumentation amplifier to meet given objectives.
- b) Audio frequency integrator working to given specifications encompassing:
- ideal integrator
  - practical difficulty with the ideal circuit
  - common applications of the integrator.
- c) Operational amplifier circuits encompassing:
- use of d.c. offset and capacitive blocking and Norton amplifiers powered by a single supply
  - operation of single-supply inverting and noninverting amplifiers employing DC offset bias at the input and blocking capacitors
  - operation of a high input resistance unity gain
  - circuit symbol of the Norton (input current difference) amplifier
  - areas of use for single-supply amplifiers.
- d) Comparator circuits (open loop, limited swing and hysteresis) using operational amplifiers encompassing:
- ideal op-amp comparator
  - typical uses of the comparator.
  - comparators with limited (i) negative swing and (ii) both positive negative swing
  - hysteresis comparator with positive resistor divider feedback and calculate the input switching voltages.
  - desirable properties of an operational amplifier for use as comparator and the characteristics of comparator op amps.
- e) Amplifiers with given piecewise linear transfer characteristics
- f) Operation and building precision of half-wave and fullwave rectifiers encompassing:
- precision two-diode half-wave rectifier
  - typical applications of precision rectifiers.
- g) Operation of and build a sine - triangle – square function generator encompassing:
- block diagram of a sine-triangle-square signal generator using an integrator, comparator and sine-wave shaper.
  - waveforms at various points in the circuit.
  - frequency range and setting of frequency changes.
  - function generators and oscillators.
- h) Audio-frequency low-pass, high-pass and band-pass filters to meet given objectives encompassing:
- frequency response of low-pass, high-pass, low-Q band-pass, high-Q bandpass, notch and all-pass filters and define pass-band, stop-band and rate of roll-off.
  - main features in the amplitude and phase plots of Butterworth, Chebyshev, Causer-Elliptic and Bessel filter responses.
  - pros and cons of active and passive filters.
  - non-unity gain Sallen-Key low-pass filter.
  - Types of active filters available in IC form:
- Note.  
Examples are Variable filter, Switched Capacitor Filters and digital (sampled data) filters.
- Low-Q (ie cascade of lowpass and high-pass) and/or narrow bandpass filters.

### 2.9.85 Advanced power amplifiers

Evidence shall show an understanding of advanced power amplifiers to an extent indicated by the following aspects:

- a) Analysing the performance of power amplifiers encompassing:
  - Power amps.
  - minimum power, voltage and current rating of an output transistor.
  - aspects of heat transfer related to heat sinking.
  - Common forms of distortion encountered in power amplifiers.
  - techniques for overcoming common forms of distortion.
- b) Classes of power amplifiers and indicate typical maximum efficiencies for each class encompassing:
  - conduction, angle, output power and efficiency of a power amp.
  - typical and/or maximum efficiencies of each class of power Amp.
  - d.c and/or a.c load line,
  - output power and efficiency of a large signal amplifier
- c) Operation of each class and type of power amplifier circuit encompassing:
  - load line operation.
  - Class A – direct, RC, transformer coupled. Class B – Complementary symmetry, drivers, single supply/duel supply. Class C and Class D.
  - measure the characteristics of a fully integrated operational power Amplifiers.

### 2.9.86 Audio system advanced diagnostic techniques

Evidence shall show an understanding of advanced audio system diagnostic techniques to an extent indicated by the following aspects:

- a) Perception and measurement of sound
- b) Acoustics and equalisation
- c) Sound recording and reproduction technologies
- d) Audio component testing, measurements and adjustments

Note.

Examples of tests are frequency response for given loads, small signal test, distortion measurement, noise measurement, frequency versus distortion, intermodulation spectrum, spectral-decay plots, acoustic cross-over, anechoic response, lateral and vertical response and the like.

### 2.9.87 Photonic principles and applications

Evidence shall show an understanding of photonic principles and applications to an extent indicated by the following aspects:

- a) Photonic principles
  - Measurements on the optical devices that are used in a basic fibre optic link
  - Optical devices making up an optical fibre link
  - The interconnection of optical devices that make up a one way optical fibre link
  - The construction of an LED optical light source
  - The electrical and optical parameters of LASERS
  - LED and LASER light sources

- PN photodiodes and phototransistors
  - The electrical and optical parameter
  - The basic capability of optical technology involving energy transfer, communications, sensing, miniaturisation and signal processing
- b) The environmental advantages and impacts of optical technology
- The nature and importance of innovation
  - The triple bottom line of business: economic, social and environmental as it relates to optical technology
  - Scenario development using a variety of expressive methods to explore alternatives.
  - Information networking
  - Medical applications.
  - Teleworking applications.
  - Education applications
  - Opportunities in the optical industry in Australia
  - Innovations in business using optical technology
  - Innovations in the provision of infrastructure in Australia
- c) Basic geometric optics
- d) Introduction to photonic components
- e) The basic concepts of optical transmission encompassing:
- 'Atmospheric' and 'guided' optical transmission systems
  - Fibre 'guided' systems compared to 'atmospheric' systems
- f) Photonic components and component technologies encompassing:
- Differentiate between 'passive' and 'active' photonic components
  - Identify and describe optical component technologies
- g) Photonic components and their roles in photonic devices encompassing:
- Operational concepts of components and devices,
  - Active verses passive devices
  - Available photonic devices and their constituent components
  - Photonic device operation
- h) Operating principles of optical couplers and their characteristics encompassing:
- Optical couplers.
  - Loss
  - Number of ports
  - Directionality
  - Wavelength selectivity
  - 'T' and 'Y' couplers
  - '1-to-N' or 'Tree' couplers
  - Star couplers
  - Wavelength selective couplers
  - Bulk and micro-optic technologies
  - Fused fibre technology
  - Planar waveguides technology

- Fibre-grating technology
- i) Components for WDM systems encompassing:
- Passive and active components for WDM systems
  - Filters (Interference and Absorption)
  - Bulk optical gratings
  - Arrayed waveguides
  - Attenuators
  - Line and Band filters
  - Equalising filters
  - Fixed and Tunable filters
  - Optical Isolators (including Faraday Effect)
  - Dispersion compensators
  - Multiplexers or combiners
  - Demultiplexers or splitters
  - Routers
  - Add/Drop multiplexers
  - Interconnection techniques used between optical components used in each optical
  - Devices
- j) Operational principles of key photonic devices encompassing:
- The difference between multimode and single mode fibre,
  - Attenuation,
  - Dispersion
  - Spontaneous and stimulated emission of light

### **2.9.88 Principles of signal conditioning**

Evidence shall show an understanding of principles of signal conditioning to an extent indicated by the following aspects:

- a) Sensors and transducers: static and dynamic characteristics
- b) Sensor types encompassing:
- strain and force
  - thermocouples
  - displacement, location, proximity
  - motion
  - light and radiation
- c) Signal amplification techniques encompassing:
- Isolation and filtering

### **2.9.89 Analogue integrated circuits**

Evidence shall show an understanding of analogue integrated circuits to an extent indicated by the following aspects:

- a) Power ICs
- b) PLL circuits

- c) Timer circuits
- d) Function and waveform generators
- e) Op amp pulse oscillators

### **2.9.90 RF amplifiers**

Evidence shall show an understanding of RF amplifiers to an extent indicated by the following aspects:

- a) HF response of amplifiers
- b) Gain levelling techniques
- c) Tuned amplifiers
- d) Double-tuned circuits
- e) Z-matching
- f) RF Power amplifiers
- g) Stripline circuit techniques

### **2.9.91 Printed circuit board design techniques**

Evidence shall show an understanding of printed circuit board design techniques to an extent indicated by the following aspects:

- a) Printed circuit board materials and processes
- b) Factors influencing design
- c) Design tools and software
- d) Design standards

## 2.10 Electronic communications technology

### 2.10.1.1 Electronic communications, principles

Evidence shall show an understanding of principles of an electronic communications system to an extent indicated by the following aspects:

- a) Requirements of a basic communications system
- b) Antennae and electromagnetic wave propagation
- c) Reason for modulation
- d) Amplitude and frequency modulation, difference, advantages and disadvantages
- e) Single conversion super hydrodynamic receivers
- f) Specialist receiver circuits

### 2.10.1.2 Electronic signals and systems

Evidence shall show an understanding of electronic signals and system to an extent indicated by the following aspects:

- a) Signal types and their application
- b) Functional blocks in electronic communication systems
- c) Basic methods of signal generation, conditioning and transmission

### 2.10.1.3 Electronic communications, technologies

Evidence shall show an understanding of technologies in electronic communications to an extent indicated by the following aspects:

- a) Concepts of a communication system encompassing:
  - function of a block.
  - radio wave.
  - frequency bands of a radio wave in free space.
  - signal transmission media

Note.  
Examples are metal line, radio terrestrial to terrestrial, radio terrestrial to satellite to terrestrial, wave guide, optical fibre and the like

  - effects of noise on communication system output.
  - internal and external sources of noise.
- b) Characteristics of signals in both the time and frequency domains encompassing:
  - signals forms in time and frequency domain:
  - periodic complex waveforms
  - Fourier analysis
- c) Modulated signals in the time and frequency domain encompassing:
  - process of amplitude modulation (AM).
  - bandwidth of an AM
  - modulation index.
  - total power in an AM wave for one or more modulating tones
  - power rate of AM transmitters

- modulation index using a CRO.
  - Amplitude modulator circuits.
- d) Demodulation of signals and baseband signal encompassing:
- diode detector.
  - operation of an AM demodulator
  - non-linear mixing and filtering or frequency down conversion
  - single sideband (SSB).
  - baseband output frequency
  - Frequency Modulation (FM)
  - limiting of FM signals and noise suppression.
- e) Time and frequency division multiplexing encompassing:
- frequency division multiplexing (FDM).
  - hierarchy of FDM as applied to telephony and broadcast stereo.
  - time division multiplexing (TDM).
  - hierarchy of TDM.
- f) Concepts and characteristics of a superheterodyne receiver system encompassing:
- crystal set circuit operation.
  - TRF receiver circuit.
  - disadvantages of a TRF receiver.
  - block diagram of a single conversion superheterodyne receiver.
  - shortcomings of the TRF
- g) Operation of transmitters encompassing:
- Amplitude Modulation (AM).
  - modulation technique (high or low level) and function of each block
  - single sideband (SSB) and function of each block.
  - frequency modulation (FM) and function of each block
- h) Concepts of digital encoding of baseband signals encompassing:
- analog signals quantised and digital form.
  - sampling analogue signals.
  - pulse-code modulation (PCM).
  - quantisation as applied to PCM.
  - quantisation noise as applied to PCM.
  - companding of PCM signals.
  - PCM encoding.
  - advantages that digital signals such as PCM
- i) Sources and effects of noise in a communication system encompassing:
- S/N ratio in communication systems.
  - noise figure, noise factor and noise equivalent temperature

### 2.10.2 Electronic communications, transmission principles

Evidence shall show an understanding of transmission principles to an extent indicated by the following aspects:

- a) Principles and operation of transmitters
- b) Types of transmitters, their features and characteristics
- c) Tuning, adjusting and testing.

### **2.10.3 Electronic communications, modulation**

Evidence shall show an understanding of modulation in electronic communications to an extent indicated by the following aspects:

- a) Amplitude modulation including concepts, phasor representation, envelope, depth, power in sidebands, over modulation and splatter
- b) Sideband modulation and de-modulation techniques including single, double and vestigial types and frequency representation
- c) Frequency and phase modulation

### **2.10.4 Electronic communications, modulation circuits**

Evidence shall show an understanding of modulation to an extent indicated by the following aspects:

- a) Amplitude modulation concepts

Note.

Examples include basic amplitude modulation fundamentals, phasor representation of carrier and sidebands, phase on modulation envelope, index and percentage modulation depth, power in carrier and sidebands, over modulation and "splatter"

- b) Sideband modulation terminology and techniques.

Note.

Examples include double-sideband (DSB), single-sideband (SSB), vestigial-sideband (VSB), frequency domain representation, double-sideband signal (DSB), single-sideband signal (SSB), demodulation requirements for DSB and SSB

- c) Frequency and phase modulation

Note.

Examples include, time and frequency domain representation, amplitude and frequency distribution of sidebands, frequency modulation (FM) production, phase modulation (PM) production, equivalent FM and PM – audio processing

- d) NBPM Armstrong method of producing (phasor description)

### **2.10.5 Electronic communications, receivers**

Evidence shall show an understanding of receivers to an extent indicated by the following aspects:

- a) Receiver principles, types, construction and applications
- b) Polarisation
- c) Mixers
- d) Intermediate frequency amplification
- e) Demodulation
- f) Receiver systems, types and characteristics

### **2.10.6 Electronic communications, transmitters**

Evidence shall show an understanding of transmitters to an extent indicated by the following aspects:

- a) Transmitter fundamentals
- b) Transmitter configuration
- c) Oscillators and oscillator circuits
- d) Frequency synthesisers
- e) Amplifier types and circuits
- f) Impedance matching networks
- g) Typical transmitter circuits

### **2.10.7 Electronic communications, digital techniques**

Evidence shall show an understanding of digital communication techniques to an extent indicated by the following aspects:

- a) Data rates
- b) Current data communications standards
- c) Modulation schemes used in digital transmission
- d) Power levels and interference
- e) Error handling
- f) Applications like for example: USB, Ethernet, ADSL and BDSL, or any other current applications

### **2.10.8 Electronic communications, transmission lines**

Evidence shall show an understanding of transmission lines to an extent indicated by the following aspects:

- a) Time domain reflectometry measurements
- b) Radio frequency characteristics of transmission lines
- c) Losses in transmission lines
- d) Radiation characteristics of antennae
- e) Directional antennae
- f) Antennae matching
- g) UHF and microwave antennae

### **2.10.9 Electronic communications, antennas and wave propagation**

Evidence shall show an understanding of basic antenna and antennae systems and wave propagation to an extent indicated by the following aspects:

- a) Antenna fundamentals

Note.

Examples include and the characteristics of radio waves, antenna operation, antenna reciprocity and the basic antenna.

- b) Antenna types, feature and characteristics encompassing:

- Dipole antennas and characteristics

Note.

Examples include radiation resistance, dipole length, antenna resistance, antenna Q and bandwidth, conical antennas, dipole polarisation, radiation patterns and directivity, antenna gain and folded dipoles

- Marconi ground-plane vertical antenna features and characteristics

Note.

Examples include radiation pattern, ground plane radials and counterpoise, radiation resistance, antenna length and directivity,

- UHF and microwave antennas
- Relationship between directivity and gain
- Antenna arrays

Note.

Examples include parasitic arrays and driven arrays

- Impedance matching

c) Radio wave propagation characteristics

Note.

Examples include optical characteristic, propagation through space

d) Calculation of received power

e) Antenna selection and location

f) Transmission lines

### 2.10.10 Electronic communications, microwave

Evidence shall show an understanding of microwave communications to an extent indicated by the following aspects:

- a) Propagation of electromagnetic waves through the atmosphere, transmission lines and waveguides including characteristic impedance, impedance matching, standing waves, microwave frequency bands
- b) Microwave device parameters involving wavelength, phase, VSWR, impedance matching, circuit parameters, amplifiers, transmission, reception, oscillation, noise figure, noise temperature
- c) Microwave devices and components
- d) Microwave operational constraints and operating parameters such as power, bandwidth, gain, efficiency, operational life, electrical parameters, stability, cooling, size, testing and device selection
- e) Microwave measurements, test equipment and testing techniques
- f) EMI/EMC, generation, suppression and reduction

### 2.10.11 Electronic communications, satellite

Evidence shall show an understanding of satellite communications systems to an extent indicated by the following aspects:

- a) Types of satellite systems and sub-systems
- b) Earth station locality and antenna parameters
- c) Specifications for an down link communications
- d) Base band signalling processes
- e) Modulation and system access

### **2.10.12 Electronic communications, optical methods**

Evidence shall show an understanding of optic methods of communication to an extent indicated by the following aspects:

- a) Optical principles
- b) Optical fibre cable principles, types construction and applications
- c) Optical transmitters, detectors and receivers
- d) Calculation of transmission losses in fibre optical cables and connectors

### **2.10.13 Television and video reception**

Evidence shall show an understanding of reception signals and decoding to an extent indicated by the following aspects:

- a) Broadcast systems
- b) Basic operation of a TV cameras
- c) Basic operation of a TV receiver including tubes and displays and operating components
- d) Reception aerials and arrays
- e) Operation of a video cassette recorder including tape recording, helical scanning, mechanical principles and adjustments, electronic principles and adjustments, servo control loops

### **2.10.14 TV antenna systems**

Evidence shall show an understanding of TV antenna systems to an extent indicated by the following aspects:

- a) The common difficulties associated with TV receptions
- b) Operating characteristics of common types of TV receiving antennas
- c) Selection of coaxial cable
- d) Multiple outlet TV aerial systems
- e) Operation of satellite receiving systems
- f) Performance testing and fault-finding on multiple outlet antenna systems

### **2.10.15 Antenna installation and servicing**

Evidence shall show an understanding of antenna installation and servicing to an extent indicated by the following aspects:

- a) Propagation of radio waves from a transmitter to a receiver
- b) Characteristics of antenna systems
- c) Selection of antennae systems for various applications
- d) Installation techniques for antennae to receiver and antennae to transmitter transmission and distribution systems

### **2.10.16 Transmission lines and antennae**

Evidence shall show an understanding of transmission lines and antennae to an extent indicated by the following aspects:

- a) Reflectometry minimum and maximum voltage and current values on a transmission line

carrying an RF signal

- b) Transmission line loss measured in decibels
- c) EH field directions in relation to antenna elements
- d) Differences between hertz and Marconi antennas
- e) Principles for microwave antennas used for terrestrial and satellite transmissions

#### **2.10.17 Electronic communications, multiplexing and de multiplexing**

Evidence shall show an understanding of multiplexing and de multiplexing to an extent indicated by the following aspects:

- a) Coding schemes (line coding, error coding, bit rate reduction)
- b) Multiplexing schemes (MPEG1&2)
- c) Spread spectrum (CDMA, COFDM)

#### **2.10.18 Electronic communications, microwave antennas and wave guide fundamentals**

Evidence shall show an understanding of microwave antennas and wave guides to an extent indicated by the following aspects:

- a) Antenna and wave guide principles and components
- b) Installation techniques
- c) Setting up techniques

#### **2.10.19 Electronic communications, commissioning process**

Evidence shall show an understanding of commissioning electronic communication systems to an extent indicated by the following aspects:

- a) Purpose of commissioning
- b) Commissioning planning and documentation
- c) Initial tests and adjustments
- d) Commissioning procedures

#### **2.10.20 Electronic communications, sonar transducers and arrays**

Evidence shall show an understanding of sonar transducers and arrays to an extent indicated by the following aspects:

- a) Hazards and risk control measures
- b) Transducer types, their operating principles and parameters
- c) Transducer array encompassing:
  - Types and their construction
  - Applications
- d) Transducer hull outfits
- e) Beam forming principles and requirements
- f) Transducer installation and operational maintenance

### 2.10.21 Electronic communications, sonar system operating principles

Evidence shall show an understanding of sonar system operating principles to an extent indicated by the following aspects:

- a) The purpose and application of sonar systems
- b) Sonar equipment encompassing:
  - Types and their applications
- c) Sub-system components (i.e. functional blocks) and their function encompassing:
  - Transducer
  - Input amplifier
  - Sonar interface unit
  - Beamforming network (transmit / receive)
  - Signal processing
  - Own Doppler nullification
  - Display system
  - Headset
  - Interfaces
  - Transmitter
  - T/R Switch
  - Timer/Timing
- e) Sonar operating parameters
- f) Sonar transmission characteristics

### 2.10.22 Electronic communications, sonar measurement and set up

Evidence shall show an understanding of sonar measurement and set up to an extent indicated by the following aspects:

- a) Sonar parameters and measurements
- b) Sonar physical parameters
- c) Constraints and Consequences

### 2.10.23 Electronic communications, secondary radar and related systems

Evidence shall show an understanding of secondary radar and related systems to an extent indicated by the following aspects:

- a) Secondary radar principles encompassing:
  - Role of secondary radar
  - Transponder operation
  - Operating principles
  - Signal processing
  - Pulse generation, transmission and detection
  - Mode generation, detection and response
  - Display symbol generation
  - Synchronisation with primary radar
  - Advantages over primary radar with respect to: clutter;

- signal/noise ratio; transmit power required for operation
- b) Interfaces to other systems providing information for transmission of mode data encompassing:

- Slaving/synchronisation to primary radar
- Clutter reduction/elimination
- Defruiting
- Degarbling
- Interfaces to other systems
- Range/ducting effects
- Advantages over primary radar
- Power supplies and UPS
- International standards
- National Curriculum
- Hot standby, cold standby

- c) Application of secondary radar systems

Note.

Examples are Traffic Collision Avoidance System (TCAS), Selective Identification System (SIF), Air Traffic Control Radar Beacon System (ATCRBS), Instrument Landing System (ILS), Tactical Air Navigation (TACAN), Navigation Systems (VOR, GPS, DME), Radar Altimeter, Jamming, Electronic warfare, Second Time Round Returns (STRR), and Identification –friend or foe radar (IFF).

#### **2.10.24 Electronic communications, radar and sonar displays devices**

Evidence shall show an understanding of radar and sonar displays devices to an extent indicated by the following aspects:

- a) Types and their applications

Note.

Examples are CRT, Plasma, LCD, Monochrome, Colour, and Touch screen.

- b) Sub-system components (i.e. functional blocks) and their operating parameters encompassing:

- EHT transformers
- detectors
- video distribution
- time base generators
- phase locked loops
- microprocessors
- memory devices
- demodulators
- focusing/deflection devices
- delay lines
- bleed resistors
- HV generation

- c) Calibration testing and maintenance procedures

- d) Typical fault finding, their symptoms and cause

**2.10.25 Electronic communications, radar fundamentals**

Evidence shall show an understanding of radar fundamentals to an extent indicated by the following aspects:

- a) Hazards and risk control measures
- b) Purpose and uses of radar
- c) Environmental conditions affecting radar
- d) Design factors which affect performance
- e) Propagation of electromagnetic waves
- f) Pulse forming circuits
- g) Typical radar transmitter encompassing:
  - limitations and applications of each type
- h) Typical radar receivers encompassing:
  - Sub-system components (i.e. functional blocks) and their operating parameters
  - limitations and applications
- i) Radar antennae encompassing:
  - Types, application and radiation patterns

Note.  
Examples are parabolic, phased array, log periodic, and cos q

  - antenna gain
  - efficiency
  - length and height factors
- j) Microwave techniques, devices and applications encompassing:
  - oscillators
  - amplifiers
  - modulators and demodulators
  - mixers and detectors
- k) Types and characteristics of various radar systems

**2.10.26 Electronic communications, navigation systems**

Evidence shall show an understanding of navigation systems to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Environment factors effecting system performance
- c) Typical faults, their symptoms and cause.
- d) Fault diagnosis procedures and testing
- e) Sub-system adjustments

**2.10.27 Electronic communications, surveillance and observation**

Evidence shall show an understanding of surveillance and observation to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Environment factors effecting system performance
- c) Typical faults, their symptoms and cause.

- d) Fault diagnosis procedures and testing
- e) Sub-system adjustments

### **2.10.28 Electronic communications, global positioning systems**

Evidence shall show an understanding of global positioning systems to an extent indicated by the following aspects:

- a) Sub-system components (i.e. functional blocks) and their operating parameters
- b) Environment factors effecting system performance
- c) Typical faults, their symptoms and cause.
- d) Fault diagnosis procedures and testing
- e) Sub-system adjustments

### **2.10.29 Digital television transmission towers and equipment**

Evidence shall show an understanding of digital television transmission towers and equipment to an extent indicated by the following aspects:

- a) The requirements of DTTB program input and monitoring equipment encompassing:
  - basic system arrangement  
Note.  
Example is a central router connected to a number of control rooms.
  - Terminologies  
Note.  
Examples are Vertical, Multi-level; Tie-line Routing and cross point
  - typical signal types processed by a router.
  - the purpose of "redundant CPU's and power supply units".
  - common control protocols used in routers.
  - typical analogue audio and video output voltage levels present at the router.
  - typical specifications for digital data signals present at the router.
  - function of various test equipment used in DTTB measurements.
- b) The operating characteristics of a digital television terrestrial broadcast (DTTB) transmitter encompassing:
  - typical DTTB digital transmission system.
  - safety precautions required when working with high power RF transmitters.
  - operating characteristics of a typical MPEG encoder.
  - operation of a coded orthogonal frequency division multiplex (COFDM) modulator.
  - arrangement of subsystem components in a DTTB transmitter
  - purpose of an up converter in a DTTB transmitter.
  - typical characteristics of a DTTB power amplifier.
  - advantages and disadvantages of air and liquid cooling systems used in transmitters.
  - typical DTTB transmitter measurements techniques.
- c) The performance requirements of the DTTB combiner and antenna systems encompassing:
  - minimum channel separation required between digital and analogue TV channels

- typical specifications of an antenna combiner system.
  - the need for combiner systems in DTTB systems.
  - typical system faults in combiners and antenna system.
- d) The requirements of remote monitoring and measurement equipment encompassing:
- purpose of control panel indicators and controls.
  - Process by which the system manages a critical failure.
- Note.  
Example of component failure deemed as critical are power supplies and CPUs
- different system alarm signals.
  - periodic equipment self tests and diagnostic routines on DTTB systems.
  - DTTB systems fault diagnostic and rectification techniques.
  - function of the basic components of a DTTB system.
  - typical units of a DTTB Telemetry system

### 2.10.30 Wireless devices

Evidence shall show an understanding of wireless devices to an extent indicated by the following aspects:

- a) Types and applications
- b) Operating principles at sub-system level
- c) Programming functions
- d) Networking set up

### 2.10.31 Electrotechnology Communications Principles

Evidence shall show an understanding of Electrotechnology communications principles to an extent indicated by the following aspects:

- a) The basic electrical circuit
  - basic circuit components
  - function of basic circuit components
  - connection of components
  - measurement of circuit parameters
  - open-circuit, closed-circuit and short-circuits.
- b) Circuit parameter relationships
  - Ohms Law
  - calculation of voltage, current and resistance
  - power dissipated
  - calculation of power.
- c) Measurement instruments (voltage, current & resistance)
  - safe working procedures
  - handling and storing instruments
  - selecting and set up of instruments
  - connecting instruments
  - read analogue scales and digital readouts.

d) Effects of electrical current

- physiological effect
- heating effect
- magnetic effect
- chemical effect
- typical uses

e) EMF sources

- basic generator
- basic thermocouple
- photovoltaic cells
- piezo electric
- primary and secondary cells.

f) d.c. resistive circuits

- series circuits (set-up, measurement and calculations)
- parallel circuits (set-up, measurement and calculations)
- series-parallel circuits (set-up, measurement and calculations).

g) Capacitance

- construction of capacitors
- operation of capacitors
- units
- charge of a capacitor
- RC series circuit.

h) Magnetism and electromagnetic induction

- permanent magnets
- electromagnetism
- induced emf
- inductors
- principles of inductance
- unit of inductance
- electromagnetic radiation (EMR)
- cross talk.

i) a.c. principles

- generation of sinusoidal voltage
- a.c. circuit parameters – frequency, period, amplitude, instantaneous value, maximum value, peak value, peak to peak value and rms value
- calculation of frequency and rms values
- effects of frequency on inductors  $(X_L = 2\pi f L)$
- effects of frequency on capacitors  $(X_C = \frac{1}{2\pi f c})$
- transformers construction and operating principles.

### 2.10.32 Amateur radio communication principles, practices, and technical overview

Evidence shall show an understanding of amateur radio communication principles, practices, and technical overview to an extent indicated by the following aspects:

a) Nature of Amateur Radio encompassing:

- Nature of Amateur radio
- Types of licences
- Allocation of frequency bands

b) Licence Conditions encompassing:

- Conditions of licences
- Purpose of the Amateur Service
- Communications by Amateur stations
- Distress and Urgency signals
- Station identification
- Amateur call signs
- Secret messages
- Entertainment not permitted
- Amateur frequency bands and emissions
- Permitted power output
- Notification of change of address
- Harmful interference
- Authorised use of Amateur stations
- Inspection of Amateur licences
- Restriction of operation to avoid interference
- Use of the Licence Condition Determinations

c) Mathematics used for Amateur radio operation encompassing:

- addition, subtraction, multiplication and division
- fractions, percentage, and decimal notation
- units and sub-units; (mega, kilo, UNIT, micro, and pico)
- calculations using simple formulae

d) Amateur radio technical basics encompassing:

- Mains power overview
- Mains power supplies overview
- Voltage and current overview
- Resistance overview
- Ohm's Law overview and the relationship between voltage, current and resistance
- Power in DC circuits overview including calculations related to power in a DC circuit using current and voltage, current and resistance or voltage and resistance.
- Capacitance overview
- Inductance overview
- AC circuits overview
- Impedance and reactance overview
- Tuned circuits overview

- Transformers overview
  - Solid state devices overview
- e) Transmitters and Receivers – basic overview encompassing:
- Block diagrams of simple transmitters
  - Mixers
  - Modulation
  - Amplifiers
  - Transmission quality
  - Receiver parameters and terminology
  - Simple block diagrams of a Receiver
  - Frequency converters
  - IF amplifier
  - Automatic Gain Control
  - Transceivers
- f) Transmission lines and Antennas overview encompassing:
- Transmission line basics
  - Baluns
  - Standing waves
  - Antenna Matching Units (ATU)
  - Antennas
  - Identification of common antennas
  - Radiated Power
- g) Propagation overview encompassing:
- Electromagnetic radiation
  - Ionosphere
- h) Interference and Electromagnetic Compatibility (EMC) overview encompassing:
- Interference - Points of entry into electronic equipment
  - Filters
  - EMC
- i) Operating Practices and Procedures overview encompassing:
- Equipment practices
  - Authorised frequencies and emissions
  - Requirement not to transmit on frequencies in use
  - Operating practices
  - Operating through a repeater
  - Make an all-stations call and change frequency
  - Transmitter measurements
  - Correcting simple equipment maladjustments
  - Recognised abbreviations
  - Phonetic alphabet
- j) Safety overview encompassing:
- Dangerous voltages
  - Electrical safety - equipment to be approved

- Awareness of State Electricity Authority requirements
- Electrical earthing
- Fuses
- Correct fuses to be used
- Replacing fuses
- Station layout for safety
- Power lead safety
- Know location and desirability of a mains OFF switch
- Actions to be taken in the event of an accident involving electricity
- Electric shocks
- Call for help – use of resuscitation techniques
- Battery safety
- Antennas and safety
- Radio waves can be dangerous
- Safe distance from an antenna
- Antenna erection
- Securing and siting antennas
- Lightning protection
- Safe use of headphones
- Station security

k) Measurements

- Frequency measurements
- RF Power measurements
- SWR measurements
- Multimeter measurements

## 2.11 Equipment and tools

### 2.11.1 Hand tools

Evidence shall show an understanding of hand tools and their use to an extent indicated by the following aspects:

a) Hand tools for cutting, shaping, drilling, threading, tapping, and finishing metallic and non-metallic components encompassing:

- types of tools and their purpose
- techniques for the correct and safe use of these tools
- hazards associated with their use
- care and maintenance of hand tools

b) Tools for measuring and marking out.

- types of tools and their purpose
- techniques for the correct and safe use of these tools
- hazards associated with their use
- care and maintenance of hand tools

c) Tools for dismantling and assembling electrical and electronic components encompassing:

- types of tools and their purpose
- techniques for the correct and safe use of these tools
- hazards associated with their use
- care and maintenance of hand tools

### 2.11.2.1 Power tools

Evidence shall show an understanding of fixed and portable tools and their use to an extent indicated by the following aspects:

a) Fixed power tools for cutting, shaping, drilling, and finishing metallic and non-metallic components encompassing:

- types of tools and their purpose
- techniques for the correct and safe use of these tools
- hazards associated with their use
- care and maintenance of fixed power tools

b) Portable power tools for cutting, shaping, drilling, and structural components encompassing:

- types of tools and their purpose
- techniques for the correct and safe use of these tools
- hazards associated with their use
- care and maintenance of fixed power tools
- requirements for use on construction sites.

### 2.11.2.2 Electrical workshop machines

Evidence shall show an understanding of electrical workshop machines to an extent

indicated by the following aspects:

- a) Fixed position power tools
- b) Tooling used on drilling machines
- c) Twist drills features, sharpening and faults
- d) Drilling operations
- e) Off hand grinding safety and machine set up
- f) Principles of metal cutting encompassing:
  - Factors influencing the action of cutting tools
  - Principles of chip formation
  - Effects of cutting tool geometry
  - Effects of coolants and cutting fluids
- g) Selection of cutting tools
  - Factors influencing tool selection
  - Cutting tool materials
  - Turning cutting tool design
  - Milling cutting tool design
  - Principles of chip control
  - Identification and selection of carbides
- h) Metal cutting conditions
  - Conditions under which tools cut best
  - Determining cutting data
- i) Cutting tool defects
  - Identification of types of tool failures
  - Causes of tool failure
  - Overcoming causes of tool failure

### **2.11.3.1 Fixing and support devices and techniques**

Evidence shall show an understanding of accessories and support and fixing device and methods and their use to an extent indicated by the following aspects:

- a) Electrical/electronic/instrumentation/refrigeration/airconditioning/telecommunications accessories for supporting, fixing and protecting wiring/cabling/piping and functional accessories.
- b) Device for securing and mounting electrical/electronic accessories encompassing:
  - types and safe application of screws, bolts, rivets and similar devices
  - types and safe application of devices for fixing to timber, metal, hollow structures and masonry and concrete
  - types and safe application of fixing adhesives and tapes
  - hazards and safety measures when working with adhesives and chemical fixing devices
  - regulatory requirements for use of powder fixing tools.

### **2.11.3.2 Mobile plant, tools and equipment**

Evidence shall show an understanding of tools and equipment for use with mobile plant to an extent indicated by the following aspects:

- a) Types of plant and their use
- b) Regulatory requirements for use of specific plant and equipment

#### **2.11.4 Dismantling and assembling techniques**

Evidence shall show an understanding of techniques for assembling and dismantling electrotechnology apparatus to an extent indicated by the following aspects:

- a) Purpose of sequencing dismantling and assembling.
- b) Importance of marking/labelling and storing parts
- c) Techniques for dismantling and assembling close fitting parts.
- d) Use of gasket and seals.

#### **2.11.5 Basic electrical testing and measuring devices and techniques**

Evidence shall show an understanding of the safe use and care of portable voltage testers, voltmeters, ammeters and resistance measuring instruments to an extent indicated by the following aspects:

- a) Types of voltage testers, multimeters, clamp meters, continuity testers and insulation resistance testers and their application.
- b) Features of testing/measuring devices

Note:

Features include safety, user calibration and parameter and range settings.

- c) Connection of test/measuring devices into a circuit encompassing:
  - safety procedures
  - circuit arrangement of test/measuring devices
- d) Taking readings
- e) Storage, maintenance and care of test/measuring devices.
- f) Australian Standard quality assurance requirements for test equipment calibration certification.

##### **2.11.6.1 Advance electrical testing and measuring devices**

Evidence shall show an understanding of the safe use and care of advance measuring instruments to an extent indicated by the following aspects:

- a) Test/measuring devices and their application
- b) Connection of test/measuring devices into a circuit encompassing:
  - safety procedures
  - circuit arrangement of test/measuring devices
- c) Taking readings
- d) Storage, maintenance and care of test/measuring devices

##### **2.11.6.2 Electrical field testing and measurement techniques**

Evidence shall show an understanding of electrical field testing and measurement to an extent indicated by the following aspects:

- a) Measurement concepts encompassing:
  - notion of error, accuracy, resolution

- sources of measurement error and uncertainties
- instrument specifications and calibration certificates
- test and measuring instrument safety certification levels and their application.

b) Types of field measuring instruments and their application encompassing:

- instrument meter movements and readouts

Note

These include moving coil, moving iron and dynamometer meter movements , LCD digital and screen readouts.

- Role of a microprocessor/controller in measuring instrument.

c) Measuring low voltages and direct and alternating currents encompassing:

- low voltage and current measurement techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings.

d) Measuring high voltages and direct and alternating currents encompassing:

- high voltage and current measurement techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings.

Measuring fault levels and (earth) fault loop impedance encompassing:

- fault and fault loop impedance measurement techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings.

e) Measuring power, energy, reactive power, power factor and maximum demand encompassing:

- power measurement techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings.

f) Measuring power quality encompassing:

- power measurement techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings.

Note.

Power quality measurement includes waveform distortion, harmonics, power factor and transients.

### 2.11.6.3 Power cable fault detection techniques

Evidence shall show an understanding of power cable fault detection to an extent indicated by the following aspects:

a) Typical power cable faults

Note.

Faults include poor connection (high resistance), open-circuit, insulation breakdown and arcing.

b) Cable fault detection techniques .

Note.

Techniques include Varley and Murray loop tests, Pulse test, Echo test, Radio based tests.

c) Application and limitations of the various cable fault detection techniques encompassing:

- cable fault detection techniques embodied in microprocessor based instruments.
- causes of inaccuracies and overcoming them.
- test instrument set up and safety procedures
- interpreting test readings.

### 2.11.7.1 Electronic testing and measuring devices and techniques

Evidence shall show an understanding of the safe use and care of electronic measuring instruments to an extent indicated by the following aspects:

a) Test/measuring devices and their application

Note

Examples are analogue and digital multimeters, voltage and digital testers, signal generators and oscilloscopes

b) Connection of test/measuring devices into a circuit encompassing:

- safety procedures
- circuit arrangement of test/measuring devices

c) Taking readings

d) Storage, maintenance and care of test/measuring devices

### 2.11.7.2 Advanced electronic testing and measuring devices and techniques

Evidence shall show an understanding of the safe use and care of advance electronic measuring instruments to an extent indicated by the following aspects:

a) Test/measuring devices and their application

Note

Examples are frequency counters, and synthesisers, spectrum analysers, noise and distortion meters and RF communications service monitor.

b) Connection of test/measuring devices into a circuit encompassing:

- safety procedures
- loading and matching
- storage and delay
- circuit arrangement of test/measuring devices

c) Taking and interpreting readings

d) Notion of decibels including dBm, dBr, dBu, dBo

### 2.11.8 Data and voice cabling testing and testing devices

Evidence shall show an understanding of data and voice cabling testing and the correct and safe use and care of testing devices to an extent indicated by the following aspects:

a) Performance parameters associated with copper cables, coaxial cables and optical cables encompassing:

- Open circuit, short circuit and pair continuity
- Split pair and crossed pair
- Attenuation
- Return loss
- Insulation Resistance (leakage)
- Near end cross talk (NEXT)
- Attenuation to cross talk ratio (ACR)
- Loop resistance
- Noise (Impulse noise and average noise)
- Characteristic impedance

Note:

Structured cabling including, twisted pair cabling, shielded twisted pair (STP), unshielded twisted pair (UTP) and higher performance cabling.

b) Test results for compliance with required regulation, standards, and or codes for structured copper cables, coaxial; and optical fibre cables encompassing:

- Tests required to evaluate a given performance parameter
- Test equipment and leads needed to evaluate a given performance parameter.
- Operation of test equipment for correct evaluation of specific cable performance parameters and to obtain accurate and reliable results.
- Transmission performance requirements.

c) Testing and validation of a customer premises cabling installation encompassing:

- Requirements of current Standard of site certification for high performance copper cables, coaxial cable and optical fibre cables
- Reporting requirements for the completion of work related to conformity of a cabling installation.
- Documentation required in certifying a cabling installation conforms to relevant standards and specifications.

d) Optical Time Domain Reflectometer (OTDR) operating principles, applications and calibration procedures.

e) Typical causes of non compliant test results.

### 2.11.9.1 Basic refrigeration testing and measuring field devices

Evidence shall show an understanding of the safe use and care of refrigeration testing devices to an extent indicated by the following aspects:

a) Test/measuring devices and their application

b) Connection of test/measuring devices component/system undertest encompassing:

- safety procedures
- testing arrangement of test/measuring devices

c) Taking readings

d) Leak detection techniques

e) Storage, maintenance and care of test/measuring devices

Note:

Examples of testing and measuring devices are those used for temperature, pressure measurement and

leak detection.

### **2.11.9.2 Fitting and removing refrigeration service gauges**

Evidence shall show an understanding of techniques for working with refrigeration service gauges to an extent indicated by the following aspects:

- a) Risks of working with refrigerants and rotating equipments
- b) Types, applications and care of service gauges and hoses
- c) Types, applications and care of refrigeration system access fittings
- d) Procedures for use of service gauges with minimal loss of refrigerant, including: fitting, removing air, reading gauges, using pressure temperature scales/charts and removing.

### **2.11.9.3 Replacement of basic components on a refrigeration system**

Evidence shall show an understanding of techniques for replacing basic components on a refrigeration system to an extent indicated by the following aspects:

- a) Risks of working with refrigerants and rotating equipment
- b) Refrigerant isolation/pump down/recovery
- c) Prevention of system contamination
- d) Protection of damage to surrounding equipment/environment
- e) Pressure testing and refrigerant leak detection

### **2.11.9.4 Appliance diagnostic tools**

Evidence shall show an understanding of appliance diagnostic tools to an extent indicated by the following aspects:

- a) Types, construction, operation and application of electrical, electronic and mechanical diagnostic tools

Note.

Examples are appliance manufacturer specific diagnostic tools, binary code via LED display; Test instruments such as multimeters, clamp meters, insulation resistance meters, power analysers and high voltage testers; data loggers, microwave leak detectors, gas (hydrocarbon) detectors and sound meters

- b) Installation requirements, adjustments and safety encompassing:

- Manufacturers' instructions and data
- Installation safety
- Effects and risks of electrical current and mechanical movement
- Protection against indirect contact

- c) Computer and paper based diagnostic tools encompassing:

- Appliance manufacturers programs

Note.

Examples are binary code via LED display, remote fault diagnosis via phone access and remote fault diagnosis via Internet

- Text books and manufacturers data

- d) Service, fault finding and repair encompassing:

- Manufacturers' data
- Safety checks
- Operating sequence

- Typical symptoms
- Fault identification using diagnostic tools
- Confirmation of fault
- Repairs limitations

#### **2.11.10.1 Basic air conditioning measurement devices**

Evidence shall show an understanding of the safe use and care of basic air conditioning measurement devices to an extent indicated by the following aspects:

- a) Measuring devices and their application
- b) Connection of measuring devices to component/system undertest encompassing:
  - safety procedures
  - arrangement of measuring devices
- c) Taking readings
- d) Storage, maintenance and care of measuring devices

Note:

Examples of air conditioning measuring devices are those applicable to air velocity and air flow rates across a grille/register, air temperature, relative humidity. These instruments include anemometers, thermometers, sling psychrometers.

#### **2.11.10.2 Air conditioning testing devices**

Evidence shall show an understanding of the safe use and care of air conditioning testing devices to an extent indicated by the following aspects:

- a) Test/measuring devices and their application
- b) Connection of test/measuring devices component/system undertest encompassing:
  - safety procedures
  - testing arrangement of test/measuring devices
- c) Taking readings
- d) Storage, maintenance and care of test/measuring devices

Note:

Examples of air conditioning testing/measuring devices are those applicable to air volume, air velocity, air pressure, air temperature, air relative humidity and sound levels.

#### **2.11.11.1 Electronic soldering equipment and techniques**

Evidence shall show an understanding of electronic soldering equipment and their use to an extent indicated by the following aspects:

- a) Electronic soldering equipment encompassing:
  - types of equipment and their purpose
  - hazards associated with their use
  - care and maintenance of brazing and soldering equipment
- b) Electronic soldering techniques encompassing:
  - safe use of equipment
  - preparation of surfaces
  - adjusting heat

- application

#### **2.11.11.2 Surface mount soldering techniques**

Evidence shall show an understanding of surface mount soldering technique to an extent indicated by the following aspects:

- a) Identification of surface mount components
- b) Requirements of standard with respect to surface mount soldering
- c) Post solder inspection
- d) Ball grid arrays

#### **2.11.11.3 Printed circuit board repair techniques**

Evidence shall show an understanding of printed circuit board repair techniques to an extent indicated by the following aspects:

- a) Printed wiring board substrate repair encompassing:

- Substrate warpage and cracking damage
- Substrate blistering and delamination

- b) Conductor patterns repair

Note.

Examples are pad repair, pad replacement track repair, track alteration, track replacement and the like.

- c) Conformal coatings types and their removal and replacement.

#### **2.11.11.4 Lead-free soldering technology**

Evidence shall show an understanding of lead-free soldering technology to an extent indicated by the following aspects:

- a) Adoption of lead-free solder encompassing:

- Safety issues
- Environmental issues

- b) Solder types and characteristics encompassing:

- Solder wires and pastes

Note.

Examples are bimetal and trimetal

- Solder characteristics

Note.

Examples include melt and wetting temperatures, soldering temperature and flow behaviour.

- Characteristic differences between lead and lead-free solders.
- Industry standards.

- c) Types of fluxes and their activity level

Note.

Types include water soluble, no-clean and cleanable fluxes

- d) Component requirements for lead-free soldering

- Printed Circuit board (PCB)

Note.

Examples include HAZL, ID marking, conformance certificates and re-working old PCBs

- Component considerations

Note.

Examples include lead/end cap material, temperature capability and the like.

- e) Lead-free soldering cleaning requirements.

Note.

Examples include chemicals and consumable materials, when to clean, white residues and the like.

- f) Equipment requirements.

Note.

Examples include temp stability, recovery capability, tip size, tip shape, tip metal mass, tin erosion and the like.

- g) Soldering techniques.

Note.

These include soldering tip selection, temperature setting, preheating, use of soldering irons and the like.

- h) Completed soldered connections compliance requirements

### **2.11.12 Instrumentation testing and measuring field devices**

Evidence shall show an understanding of the safe use and care of instrumentation testing devices to an extent indicated by the following aspects:

- a) Test/measuring devices and their application
- b) Connection of test/measuring devices component/system under test encompassing:
- Safety procedures
  - Testing arrangement of test/measuring devices
  - Taking readings
  - Storage, maintenance and care of test/measuring devices

#### **2.11.13.1 Brazing and soldering equipment and techniques**

Evidence shall show an understanding of brazing and soldering equipment and their use to an extent indicated by the following aspects:

- a) Silver brazing and soldering equipment encompassing:
- types of equipment and their purpose
  - hazards associated with their use
  - care and maintenance of brazing and soldering equipment
- b) Silver brazing and soldering techniques encompassing:
- safe use of equipment
  - preparation of surfaces
  - adjusting gas flame
  - application
  - use of dry nitrogen to prevent contamination

#### **2.11.13.2 Introduction to welding**

Evidence shall show an understanding of welding to an extent indicated by the following aspects:

- a) Hazards associated with welding activities and equipment
- b) Welding processes and industry applications
- c) Thermal cutting techniques
- d) Manual metal arc welding processes

#### **2.11.14 Piping and tubing techniques**

Evidence shall show an understanding of techniques for working with piping and tubing to an extent indicated by the following aspects:

- a) Risks of working with piping and tubing and their control measures.
- b) Techniques encompassing:
  - Cutting pipe and tubing
  - Bending, shaping/setting pipe and tubing
  - Joining connecting/terminating pipe and tubing, this includes flaring, swaging, silver, brazing and various types of tube and threading fittings

#### **2.11.15 Portable apparatus testing (PAT) devices**

Evidence shall show an understanding of portable apparatus testing devices to an extent indicated by the following aspects:

- a) Purpose and features
- b) Testing procedures
- c) Interpretation of test results

#### **2.11.16 Electronic component place equipment**

Evidence shall show an understanding of electronic component place equipment to an extent indicated by the following aspects:

- a) Process control requirements and procedures
- b) Solder paste composition encompassing:
- c) Storage and shelf life
- d) Preparation
- e) Testing
- f) Manual solder paste deposition equipment setup and application
- g) Automatic solder paste deposition equipment setup and application
- h) Automatic component placement systems set up and operation and adjustments
- i) Reflow ovens and solder reflow
- j) Cleaning agents and techniques
- k) Inspection methods and procedures

#### **2.11.17 Electronic assembly correction and rework techniques**

Evidence shall show an understanding of techniques for correcting and reworking electronic assemblies to an extent indicated by the following aspects:

- a) Typical faults and their causes requiring correction or rework

Note.

Examples for faults are incorrect components, misalignments, poor connections, design modifications

and the like.

b) Aspects of correction and rework of electronic assemblies

Note.

Examples are readjustment of automated screen printing, component placement equipment and soldering equipment, correcting component selection, manual repair and component substitution.

**2.11.18 Electronic assembly functional and quality testing**

Evidence shall show an understanding of electronic assembly functional testing to an extent indicated by the following aspects:

a) Testing encompassing:

- Equipment set up

Note.

Testing equipment may be specific to a workplace and the electronic assembly under test

- Routine testing procedures
- Routine interpreting test results within given parameters

b) Quality inspection encompassing:

- Quality items check lists
- c) Non-compliance reporting methods

**2.11.19 Electrotechnology engineering practice**

Evidence shall show an understanding of engineering practice to an extent indicated by the following aspects:

- a) Scope of work and responsibilities
- b) Working with others in a project team
- c) Maintaining currency in technical and regulatory developments
- d) Applying and working to ethical standards

**2.11.20.1 Low voltage motor testing devices and techniques**

Evidence shall show an understanding of LV motor testing devices and techniques to an extent indicated by the following aspects:

- a) Test/measuring devices and their application
- b) Connection of test/measuring devices into a circuit encompassing:
  - safety procedures
  - circuit arrangement of test/measuring devices
- c) Taking and interpreting readings
- d) Storage, maintenance and care of test/measuring devices

**2.11.20.2 High voltage motor testing devices and techniques**

Evidence shall show an understanding of HV motor testing devices and techniques to an extent indicated by the following aspects:

- a) Test/measuring devices and their application
- b) Connection of test/measuring devices into a circuit encompassing:
  - safety procedures

- circuit arrangement of test/measuring devices
- c) Taking and interpreting readings
- d) Storage, maintenance and care of test/measuring devices

### **2.11.20.3 Electric motor mechanical measuring and testing devices and techniques**

Evidence shall show an understanding of electric motor mechanical testing devices and techniques to an extent indicated by the following aspects:

- a) Devices and techniques for measuring geometric attributes
- b) Operational Test/measuring devices and their application
- c) Setting up test/measuring devices encompassing:
  - safety procedures
  - set up procedures
- d) Taking and interpreting readings
- e) Storage, maintenance and care of test/measuring devices
- f) Measurement standards encompassing:
  - traceability relating to instruments and measurement
  - accuracy versus precision
  - quality assurance
  - errors in measurement
- g) Measuring device calibration and certification systems

## 2.12 Instrumentation

### 2.12.1 Instrumentation principles

Evidence shall show an understanding of instrumentation principles to an extent indicated by the following aspects:

- a) The role of measurement in industrial processes.
- b) Instrument measurement terminology.
- c) The standards applicable to instrumentation and process control.

Note:

Examples include fluids and respective process piping colour coding, instrument symbols

- d) Instrumentation basic calibration process

Notes:

Confined to Lever/Link mechanisms

- e) Instrumentation tables and graphs.

### 2.12.2 Pressure

Evidence shall show an understanding of pressure to an extent indicated by the following aspects:

- a) Concept of pressure and its units of measurement

Note:

For examples the relationship between pressure height and density of liquid columns and force exerted by pressure on a surface

- b) Factors defining pressure and their relationship.

Note:

Examples include absolute pressure, gauge pressure, and differential pressure

- c) Methods and devices for measuring pressure encompassing:

- Operation and characteristics of mechanical gauge elements
- Operation and characteristics of electrical pressure measuring devices
- Pressure measurement and calibration devices and methods.

- d) Factors affecting pressure measurement

### 2.12.3 Density and level

Evidence shall show an understanding of density and level to an extent indicated by the following aspects:

- a) Density and relative density
- b) Calculate density
- c) Level and/or density measuring instruments in common use.
- d) Electronic and a pneumatic level measuring instrument encompassing:
  - control loop
  - pneumatic level measuring device

#### 2.12.4 Fluid flow

Evidence shall show an understanding of fluid flow to an extent indicated by the following aspects:

- a) Principles of fluid flow (gas and liquid) encompassing:
  - basic laws of fluid flow
  - fluid flow characteristics.
- b) Units of fluid flow and flow rate encompassing:
  - SI and other commonly used units.
- c) Principles of operation of the common types of flow quantity meters encompassing:
  - principles of operation of selected quantity meters including positive displacement flow meters.
- d) Principles of operation and characteristics of the differential head types of flow rate meter encompassing:
  - principles of operation of the various differential head fluid flow meters.
  - characteristics of differential head flow meter
  - construction of selected examples of DP flow rate meters.
- e) Principles of operation and characteristics of a range of flow rate meters, other than differential head types, in use in industry.
- f) Principles of operation of selected flow rate meters
- g) Principles of operation of open channel flow meters encompassing:
  - the principles of operation of flumes and weirs.
  - various shapes of flumes and weirs.
- h) Square root extraction, integration and other computations used in relation to fluid flow encompassing:
  - Automatic computation in relation to fluid flow.
- i) Flow characteristics of a flow rate meter from practical data encompassing:
  - characteristics of a flow rate meter.
- j) Square root extraction instrument and/or a flow integrator encompassing:
  - program, calibrate or adjust a square root extractor or flow integrator.
  - report on the performance of the instrument.

#### 2.12.5 Temperature

Evidence shall show an understanding of temperature to an extent indicated by the following aspects:

- a) Temperature and other heat-related phenomena encompassing:
  - terms associated with temperature and other heat related phenomena.
- b) Temperatures between scales encompassing:
  - units commonly used in temperature measurement.
  - Imperial and SI units.
  - fixed points outlined in the International Practical Temperature Scale.
- c) Operation of the primary elements and measuring elements encompassing:
  - principles of operation and characteristics of the various temperature sensors and measuring systems.

- operation of the temperature measuring systems.
  - operation of the various compensation and protection devices utilised in temperature measuring systems.
  - techniques used for the measurement of temperature average and temperature difference using the various types of electrical thermometers.
- d) Calibration of temperature system of optimum performance.

### 2.12.6 Process control systems

Evidence shall show an understanding of process controller principles to an extent indicated by the following aspects:

- a) Controller types and basic operation and methods of achieving the control in each of the following

Note.

Examples of controller types are pneumatic: hydraulic: electronic and microprocessor

- b) Control modes used on PID controllers as they related to process requirements encompassing:

- control actions
- control options
- Set point change
- Process demand change

Note.

Examples are increasing and decreasing controller gain (in systems using P,PI, and PID); with and without Integral (in systems using PI and PID);increasing and decreasing Integral (in systems using PI and PID);with and without derivative (in systems using PID); and increasing and decreasing derivative (in systems using PID).

- c) Principles of controller alignment.
- d) Commonly accepted methods of tuning control loops
- e) Microprocessor based controllers configuration and tuning methods
- f) Purpose of various control modes and how they are applied

Note.

Examples of control modes are feedback, feedforward, cascade, ratio, batch and the like.

- g) Effect of control valve characteristics on the performance of a control loop.

### 2.12.7 Control valve principles

Evidence shall show an understanding of control valve principles to an extent indicated by the following aspects:

- a) Valve body and trim types and flow characteristics encompassing:

- control valve body types and their typical applications.
- seating and trim arrangements.
- flow characteristics of various valves.

- b) Control valve terms

Note.

Examples are leakage, turndown, rangeability, choked, flow, Cv rating, and perform basic calculations and Cv a rating

### 2.12.8 Control valve selection

Evidence shall show an understanding of control valve selection to an extent indicated by the following aspects:

- a) Valve purpose size and characteristic
- b) Valve manufactures specifications
- c) Valve faults

### 2.12.9 Actuators and positioners

Evidence shall show an understanding of actuators and positioners to an extent indicated by the following aspects:

- a) Spring opposed diaphragm actuator encompassing:
  - control valve actuators
  - air-to-raise
  - air-to-lower.
  - fail-safe action of a valve/actuator combination.
- b) Actuator characteristics and applications encompassing:
  - actuator forces, spring rate values and process pressure on valve performance.
  - spring opposed actuator to suit air-to-open and air-to-close valves. Adjust a single seating valve for shut-off.
- c) Valve positioners encompassing:
  - valve positioner operation.
  - Calibrate/adjust valve positioners for various signals.
  - cam and spring feedback positioners on control valves.
  - pneumatic, electro-pneumatic and electro hydraulic positioners/actuators.
  - Reverse positioner control action and adjust for split range.
- d) Power cylinder (piston actuator) types encompassing:
  - test power cylinders.
  - extension and retraction forces.
  - single acting positive
  - single acting negative
  - double acting
- e) Position controllers (positioners) encompassing:
  - position controllers.
- f) Directional control valves and pilot operators
- g) Power cylinder pilot valve combinations

Note.  
Examples are two, three and five port types, actuation and return modes: solenoid, mechanical, electrical, spring, regulator, filter and lubricator sets and pneumatic control circuits
- h) Self-acting pressure and temperature control valves encompassing:
  - pressure or temperature regulating valves.
  - self-acting valves to load changes.
  - pressure reducing and pressure relief valves.
  - self acting valve for required control point.

### **2.12.10 Transmitters and converters**

Evidence shall show an understanding of transmitters and converters to an extent indicated by the following aspects:

- a) Pneumatic and electronic transmitters, converters and transducers encompassing:
  - operation of transmitters, transducers and converters.
  - Calibration of various transmitters, converters and transducers
  - typical applications for a range of transmitters, transducers and converters.

#### **2.12.11.1 Industrial processes**

Evidence shall show an understanding of industrial processes to an extent indicated by the following aspects:

- a) Principles of operation of the processes studied using diagrams and circuits encompassing:
  - chemistry/physics underpinning the process.
- b) Instrumentation required for each of the selected processes.
- c) System faults encompassing:
  - causes of system failure.
  - fault location diagram.
  - methods to overcome common faults.

#### **2.12.11.2 Process control, commissioning**

Evidence shall show an understanding of commissioning process control instruments and systems to an extent indicated by the following aspects:

- a) Purpose of commissioning
- b) Commissioning planning and documentation
- c) Procedures for commissioning instrumentation encompassing:
  - configuring
  - calibrating
  - tuning
  - validating system to drawings
  - procedures followed to commission instrument systems.
- d) Purpose and importance of documentation

### **2.12.12 Distributive control principles (DCS)**

Evidence shall show an understanding of distributive control principles to an extent indicated by the following aspects:

- a) Concepts of a DCS encompassing:
  - differences between hierarchical and distributive systems.
  - Functional and geographical distribution.
- b) Individual features of a DCS encompassing:
  - Major components in a DCS

- historical and managerial data collection
- type and form of information at the operator and engineering interface levels.

Note.

Distributive control system may include programmable logic controllers, SCADA/touch screen systems, system server and smart devices connected by a control network.

- c) Function block technology to design control algorithm encompassing:
- various loop types, using function block technology from an available DCS.
- d) Optimum control of a variety of process loops.
- e) Connection of field instrumentation for selected control operation and diagnostic checking to ensure correct operation of system.
- f) On-line changes to parameters in a DCS with minimum interference to controlled variable.

### 2.12.13 Instrumentation and control communications

Evidence shall show an understanding of instrumentation and control communications to an extent indicated by the following aspects:

- a) Purpose and application of control system networks systems
- b) Open and common proprietary control system networks models (layers) and protocols
- Note.  
Examples of systems are CANopen, ControlNet, Devicenet, Ethernet, Foundation Fieldbus, Interbus, Modbus, Profibus.
- c) Control system networks interface.
- d) Remote measurement and control and typical application for telemetry systems.
- e) Categories of telemetry systems and the standards which refer to these systems.
- f) Major components of various types of telemetry system.
- g) Signal compatibility used with telemetry systems encompassing:
- signal conditioning.
  - standard signals levels
- h) Common types of signal conditioning, instruments encompassing:
- principles of operation signal conditioners and instruments
  - isolators and protection equipment.
- i) Analogue and digital signals encompassing:
- structure of a typical message block.
  - differences between analogue and digital signals.
  - typical message block used with a digital telemetry systems.
- j) Functions and operation of the main subsections of a digital telemetry system.
- k) Types of cable, connectors, sources and detectors used in a fibre optic telemetry system
- l) Types of transmission links,

### 2.12.14 Indicators and methods of recording process data

Evidence shall show an understanding of indicators and recorders to an extent indicated by the following aspects:

- a) Types of indicator and their principles of operation.
- b) Indicators in remote measurement loop.
- c) Calibration of indicators.

d) Methods and applications of recording process data encompassing:

- Need for process data
- Types of dedicated recorders and their principles of operation
- Computerised methods such as supervisory control and data acquisition (SCADA) systems

#### **2.12.15 Gas analysis**

Evidence shall show an understanding of gas analysis to an extent indicated by the following aspects:

a) Principle of operation of various indicators connected in remote measurement loop.

Note.

Examples are reagent analysers (eg. Orsat), electrolytic, paramagnetic - wind- dumbbell, zirconia oxide, thermal conductivity, thermal reaction, infra-red and the like.

b) Indicator calibration procedure

c) Types of recorder used in process measurement encompassing:

- sampling and conditioning systems.
- prescribed measuring elements.

d) Operation of hygrometers.

#### **2.12.16 Water analysis**

Evidence shall show an understanding of water analysis to an extent indicated by the following aspects:

a) Terms associated with industrial water analysis equipment.

b) Industrial applications of specified water analysis equipment.

c) Principle of operation of an analyser sensor.

d) Principle of operation of an analyser measuring elements.

e) Appropriate installation requirements for specified analysers

f) In system checks and instrument calibration

g) Water analyser maintenance procedures.

h) Manufacturers' specifications.

#### **2.12.17 Scientific analysis**

Evidence shall show an understanding of scientific analysis to an extent indicated by the following aspects:

a) Wavelength characteristics of the electromagnetic spectrum and radiation sources

b) Basic principles of refraction and dispersion encompassing:

- Wavelength and bandwidth of monochromatic devices.

c) Principle of operation of an absorption spectrometer

d) Principle of operation of an emission spectrometer

e) Principle of operation of an atomic absorption spectrometer encompassing:

f) Principle of operation of a gas chromatography

g) Principle of operation of a liquid chromatography.

h) Principles of operation of basic sample preparative instruments

### **2.12.18 Weight measurement principles**

Evidence shall show an understanding of weighing measurement principles to an extent indicated by the following aspects:

- a) Weighing and the relationship between force and weighing.
- b) Methods of weighing and common factors affecting weighing system performance.
- c) Principles of strain gauge measurement encompassing:
  - compression and tension stress.
  - relationship between stress and strain.
- d) Principles of operation of various load cells in common use encompassing:
  - Pneumatic and hydraulic load cells.
  - Linear Voltage Differential Transformer
- e) Methods of weighing materials in motion encompassing:
  - weigh feeder control
  - method of calibration of a belt weigher.
  - operation of a nuclear radiation conveyor weigher and the safety precautions to be observed.

### **2.12.19 Instrument calibration methods**

Evidence shall show an understanding of instrument calibration methods to an extent indicated by the following aspects:

- a) Purpose of calibration
- b) Calibration and set up techniques encompassing:
  - Following apparatus manufacturer's set up instructions and process requirements
  - Connecting necessary testing devices
  - Making adjustments
- c) Need to document calibration setting and procedures

#### **2.12.20.1 Process equipment installation requirements and techniques**

Evidence shall show an understanding of process equipment installation requirements and techniques to an extent indicated by the following aspects:

- a) Regulatory requirements
- b) Equipment specification
- c) Manufacturer's installation instructions
- d) System specifications
- e) Communication/signal cabling installation requirements
- f) Power wiring requirements
- g) Initial set up procedures

#### **2.12.20.2 Process control arrangements and equipment selection**

Evidence shall show an understanding of arrangement of electrical systems in buildings and equipment selection to an extent indicated by the following aspects:

- a) Typical apparatus and circuit loadings

- b) Apparatus arrangement considerations
- c) Control cable selection methods encompassing:
  - Environmental considerations
  - Signal requirements
  - Route length limitations
- d) Control tubing/piping selection criteria
- e) Selection of control cable and tubing/piping support
- f) Documentation of installation arrangements and equipment.

### 2.12.21 Control system installation, testing and verification methods

Evidence shall show an understanding of testing and verification of control installations to an extent indicated by the following aspects:

- a) Testing and verification requirements.
- b) Device calibration and set up
- c) Testing techniques
- d) Visual inspection methods
- e) Documentation

### 2.12.22.1 Medical equipment principles

Evidence shall show an understanding of medical equipment principles to an extent indicated by the following aspects:

- a) Equipment function and operation
- b) Hazards and safety procedures
- c) Causes of failure
- d) Safety testing requirements and methods

Note:

Categories and examples of medical equipment are:

- 1. Cardiovascular systems** including: blood warmers, cardiac catheterisation systems, defibrillators, electrocardiogram(ECG) machines, electrocardiogram(ECG) monitors, heart-lung machines, infusion pumps, intra-aortic balloon pumps, pacemakers, syringe pump and cardiac output measurement equipment.
- 2. Respiratory systems** including: anaesthetic delivery and monitoring units, medical gases, oxygen concentrator, pulse oximeter, respiratory humidifier, respiratory support units and ventilators.
- 3. Neurological systems** including: electroencephalograph (EEG recorder), electromyograph (EMG recorder) and intracranial pressure monitoring (ICP).
- 4. Renal systems** including: haemodialysis machine, CVVH machine and peritoneal dialysis.
- 5. Medical imaging** including: x-ray equipment, computerised axial tomography (CT scan), magnetic resonance imaging (MRI), nuclear medicine and diagnostic ultrasound equipment.
- 6. Physiological equipment** including: blood pressure monitors, foetal cardio-tocograph, infant care systems, multiparameter systems, thermometry, telemetry, networking and patient warmers.
- 7. Miscellaneous equipment** including: electrosurgery, electric stimulators, endoscopy and laparoscopy systems, laser, operating microscopes, therapeutic diathermy and ultra sound.

### 2.12.22.2 Medical equipment, anatomy and physiology and infection control

Evidence shall show an understanding of medical equipment principles to an extent indicated by the following aspects:

- a) Nature of infection
- b) Control of microbial growth
- c) Infection control strategies
- d) Body systems

### **2.12.23 Transducers and sensing devices**

Evidence shall show an understanding of transducer and sensing devices to an extent indicated by the following aspects:

- a) Measurement principles and concepts encompassing:
  - SI system of units
  - Standards, calibration and traceability
  - Accuracy precision sensitivity and sources of error
- b) Types and operating mechanisms encompassing:
  - Classifications
  - Operating principles measuring and sensing elements

Note.

Examples are detection and measurement of temperature, pressure, flow, and chemical make up; detection of linear, angular and rotary motion and proximity and level

- basic configurations of measuring circuits.
- typical device specifications
- c) Installation requirements encompassing:
  - Safety precaution for the various types of devices
  - Connecting devices
  - Locating, aligning and adjusting devices.

### **2.12.24 Calibration techniques**

Evidence shall show an understanding of calibration techniques to an extent indicated by the following aspects:

- a) Principles of common calibration techniques
- b) Purpose of Standards and calibration certification
- c) Minimising error during calibration encompassing:
  - source and type of errors
  - techniques to minimise errors during measurements
  - calculating the degree of error and calibration factors
- d) Determining the parameters to which the device will be calibrated
- e) Need for normal performance check.
- f) Purpose of calibration documentation

## 2.13 Maintenance and repair

### 2.13.1 RAPS plant area cleaning

Evidence shall show an understanding of RAPS plant area cleaning to an extent indicated by the following aspects:

- a) Needs for clean and tidy plant area
- b) RAPS system components and associated equipment and their location within the plant area

Note:

Associated equipment may include manual fuel pump

- c) Plant area cleaning techniques

Note:

Cleaning techniques include those for dealing with fuel, oil and acid and spills; removal of dust, insects, spiders, animals and removal of non-RAPS equipment

- d) Technique for reporting and dealing with cleaning issues.

### 2.13.2 RAPS systems battery bank maintenance techniques

Evidence shall show an understanding of RAPS systems battery bank maintenance to an extent indicated by the following aspects

- a) Scope of regular testing, checking and corrective actions
- b) Measurement of specific gravity and voltages of battery cells; checking and topping up electrolyte levels; checking for acid leakage, cracks in battery casing, corrosion of battery terminals and connections, cleaning of terminal connections and treating with an anticorrosive.

### 2.13.3 RAPS systems generator sets maintenance techniques

Evidence shall show an understanding of RAPS systems generator sets maintenance to an extent indicated by the following aspects

- a) Checking of radiator and oil level; periodic oil change and air, oil and fuel filter change.
- b) Maintaining log books and maintenance regime

### 2.13.4 RAPS systems photo voltaic array maintenance techniques

Evidence shall show an understanding of RAPS systems photo voltaic array maintenance to an extent indicated by the following aspects:

- a) Cleaning of photo voltaic modules; checking of module connections, connecting cable and integrity of the array structure
- b) Maintaining log books and maintenance regime

### 2.13.5 RAPS systems wind generator maintenance techniques

Evidence shall show an understanding of RAPS systems wind generator maintenance to an extent indicated by the following aspects

- a) Checking the integrity of support structure; visual inspection of wind generator operation
- b) Maintaining log books and maintenance regime

### **2.13.6 RAPS system use auditing techniques**

Evidence shall show an understanding of effective RAPS systems use to an extent indicated by the following aspects:

- a) Tidiness of RAPS plant area
- b) Appropriate use of RAPS system components

Note:

Appropriate use includes not overloading system components, using generator supply for heavy loads and the like.

- c) State of RAPS system components

### **2.13.7 RAPS systems maintenance scheduling**

Evidence shall show an understanding of RAPS systems maintenance scheduling to an extent indicated by the following aspects:

- a) Limitation of the role of the RAPS service worker
- b) Periodic maintenance planning procedures

Note:

Planning includes:

1. Development of vehicle booking procedures, check lists for replacement equipment, items to be checked, items to be replaced and procedures for recording and reporting.
2. Scheduling of maintenance at a number of homeland communities.
3. Check list for preparation of service vehicle and tools and equipment needed to carry out the maintenance
4. Processes for sourcing and funding replacement components

### **2.13.8 Scheduled maintenance processors**

Evidence shall show an understanding of maintenance processors to an extent indicated by the following aspects:

- a) Maintenance principles encompassing:
  - maintenance function
  - role of maintenance department
  - occupational health and safety requirements
- b) Maintenance systems encompassing:
  - maintenance terminology
  - preventative maintenance
  - predictive maintenance
  - corrective maintenance
- c) Data acquisition encompassing:
  - plant history cards/files
  - inspection techniques
  - predictive maintenance
  - remote visual inspection
  - non-destructive testing
  - thermography

- vibration analysis
  - oil analysis
- d) Maintenance plan encompassing:
- characteristics of plant operation
  - assessment of failure characteristics
  - link failure characteristics to maintenance systems
  - identify production windows
  - resources
  - labour
  - materials
  - establish plan
  - implementation procedures
- e) Review of maintenance plan encompassing:
- analysis of records
  - manual recording methods
- f) Computerised recording methods

### **2.13.9 Business equipment fundamentals**

Evidence shall show an understanding of business equipment to an extent indicated by the following aspects:

- a) Type of equipment
- b) Operating principles
- c) Component parts
- d) Routine faults and repairs
- e) Maintenance.

Note:

Documentation requirements for recording the maintenance process and results

### **2.13.10 Cooling plant maintenance procedures**

Evidence shall show an understanding of cooling plant maintenance procedures to an extent indicated by the following aspects:

- a) Cooling towers/evaporative condensers encompassing:
  - Types, applications.
  - Cleaning,
  - Decontamination.
- b) Humidifiers encompassing:
  - Types, applications.
  - Cleaning,
  - Decontamination.
- c) Condensate Trays and drains encompassing:
  - Fall,
  - Cleaning.
- d) Water treatment encompassing:

- Water tests,
  - Water testing procedures,
  - Ph,
  - Microbiological,
  - Suspended solids,
  - Corrosion,
  - Bleed,
  - Filtration,
  - Chemical Treatment,
  - Cathodic Protection.
- e) Air Filters encompassing:
- Types, applications.
  - Pressure drop,
  - Face Velocity,
  - Cleaning, Changing,
  - Fit.
- f) Maintenance programs encompassing:
- Purpose,
  - Methods of establishing specific requirements,
  - Planning,
  - Manual and Computer programs,
  - Log books
- g) Personal Safety encompassing:
- Risks to service personnel and public,
  - Safe practices,
  - Person protective equipment.
- h) Legal Requirements encompassing:
- Duty of Care.
- i) Codes and regulations encompassing:
- Regulation under Workplace Health and Safety Act,
  - NH&MRC recommendations,
  - Code of practice,
  - AS3666.

## **2.14. Rail signalling**

### **2.14.1 Basic rail operations**

Evidence shall show an understanding of basic rail operations to an extent indicated by the following aspects:

- a) Rail terminology
- b) Train dynamics
- c) Essentials of safe movement of trains
- d) Purpose of rail signalling

#### **2.14.2.1 Rail signalling principles, electrical**

Evidence shall show an understanding of electrical rail signalling principles to an extent indicated by the following aspects

- a) Overview of electrical rail signalling
- b) Purpose of elements of an electrical rail signalling systems.

Note:

Elements include signals, point actuating systems, locking and train detection systems, control input devices, indicators, diagrams and monitors, interlocking, and safe working systems.

#### **2.14.2.2 Rail signalling principles, mechanical**

Evidence shall show an understanding of mechanical rail signalling principles to an extent indicated by the following aspects:

- a) Overview of mechanical rail signalling
- b) Purpose of elements of a mechanical rail signalling systems.

Note:

Elements include signals, point actuating systems, locking and train detection systems, control input devices, indicators, diagrams and monitors, interlocking, and safe working systems.

### **2.14.3 Rail signalling, mechanical equipment**

Evidence shall show an understanding of rail signalling, mechanical equipment to an extent indicated by the following aspects:

- a) Equipment and their components
- b) Operating principles
- c) Servicing procedures.

### **2.14.4 Rail signalling, electrical equipment**

Evidence shall show an understanding of rail signalling, electrical equipment to an extent indicated by the following aspects:

- a) Equipment and their components
- b) Operating principles
- c) Servicing procedures.

#### **2.14.5 Rail signalling, point actuating devices**

Evidence shall show an understanding of point actuating devices to an extent indicated by the following aspects:

a) Equipment and their components

Notes:

Equipment include point machines, detectors, claw/clamp locks, swing nose mechanisms, in-bearer mechanisms

b) Operating principles

c) Servicing procedures

#### **2.14.6 Rail signalling, electronic equipment**

Evidence shall show an understanding of electronic equipment used in rail signalling to an extent indicated by the following aspects:

a) Equipment and their components

Notes:

Examples include telemetry (SCADA), monitoring systems, IASS, train describer, panel processors,

b) Operating principles and parameters

c) Servicing procedures.

#### **2.14.7 Rail signalling, computer-based interlocking**

Evidence shall show an understanding of computer-based equipment to an extent indicated by the following aspects:

a) Equipment and their components

Notes:

Examples include solid state interlocking (SSI), Microlock, Westrace

b) Operating principles and parameters

c) Servicing procedures.

#### **2.14.8 Rail signalling, computer applications**

Evidence shall show an understanding of application software used in rail signalling to an extent indicated by the following aspects:

a) Types of software and their scope

Note:

Examples include interrogator software for loggers, monitors and computer based interlocking, data base (work instruction, commissioning work structures, cable schedules.

b) Setting up and use.

#### **2.14.9 Rail signalling, train detection**

Evidence shall show an understanding of train detection to an extent indicated by the following aspects:

a) Equipment and their components

Notes:

Example include track circuits axel counters and treadles level crossing predictors

- b) Operating principles and parameters
- c) Servicing procedures

#### **2.14.10 Rail signalling, remote control systems**

Evidence shall show an understanding of rail signalling remote control systems to an extent indicated by the following aspects:

- a) Equipment and their components

Notes:

Examples include PLC, dedicated PCs, prep. systems

- b) Operating principles and parameters
- c) Servicing procedures.

#### **2.14.11.1 Rail signalling, interlocking systems, electrical**

Evidence shall show an understanding of electrical rail signalling interlocking systems to an extent indicated by the following aspects:

- a) Equipment and their components

Notes:

Examples include route setting (entrance, exit or OCS), automatic signalling, electromechanical, mechanical

- b) Operating principles and parameters
- c) Servicing procedures.

#### **2.14.11.2 Rail signalling, interlocking systems, mechanical**

Evidence shall show an understanding of mechanical rail signalling interlocking systems to an extent indicated by the following aspects:

- a) Equipment and their components
- b) Operating principles and parameters
- c) Servicing procedures.

#### **2.14.12 Rail signalling, power supplies**

Evidence shall show an understanding of rail signalling power supplies to an extent indicated by the following aspects:

- a) Equipment and their components

Notes:

1. Examples of sources include mains, transformers, motor alternator sets, photo voltaic arrays, primary and secondary battery banks, UPSs.

2. Components GGIs, automatic transfer switches circuit, earthing and surge protection, switchboards, rectifiers, converters, chargers and cabling

- b) Operating principles and parameters
- c) Servicing procedures.

#### **2.14.13 Rail signalling, electro-pneumatic equipment**

Evidence shall show an understanding of rail signalling electro-pneumatic equipment to an

extent indicated by the following aspects:

a) Equipment and their components

Notes:

Examples include compressors, air lines, control valves

b) Operating principles and parameters

c) Servicing procedures.

#### **2.14.14 Rail signalling, drawings and diagrams**

Evidence shall show an understanding of drawings, diagrams and schedules for rail signalling to an extent indicated by the following aspects:

a) Drawing types and applications encompassing:

- Drawing layouts and conventions.
- Drawing symbols

b) Cable and equipment schedules

#### **2.14.15 Rail signalling, regulations and codes**

Evidence shall show an understanding of regulations and codes for rail signalling to an extent indicated by the following aspects:

a) Codes philosophy and format

b) How to read and apply a code

c) Codes that apply to rail signalling

Note:

Codes are relevant to a particular rail network.

## 2.15 Refrigeration and air conditioning apparatus

### 2.15.1 Refrigeration compressors

Evidence shall show an understanding of refrigeration compressors to an extent indicated by the following aspects:

- a) Functions of the compressor in a refrigeration system
- b) Types of compressors and their application

Note:

Types of compressors include reciprocating; rotary; centrifugal; scroll; screw.

- c) The methods of lubrication
- d) Lubricants

Note:

Basic types and safe handling

### 2.15.2 Condensers, liquid receivers and cooling towers

Evidence shall show an understanding of refrigeration condensers, liquid receivers and cooling towers to an extent indicated by the following aspects:

- a) Functions of condensers, liquid receivers and cooling towers
- b) Types of condensers, liquid receivers and cooling towers, and their applications

### 2.15.3 Evaporators

Evidence shall show an understanding of evaporators to an extent indicated by the following aspects:

- a) Functions of evaporators
- b) Types of evaporators and their applications
- c) Types and applications of secondary refrigerants
- d) Water treatments in water cooled evaporators encompassing:
  - Need for water treatment
  - Water treatment methods
  - Regulatory requirements

#### 2.15.4.1 Refrigerant flow controls and distributors

Evidence shall show an understanding of refrigerant flow controls and distributors to an extent indicated by the following aspects:

- a) Types and application and operation of the various liquid flow controls and distributors found in a refrigeration system.
- b) Types, and application and operation of the various vapour flow controls and distributors found in a refrigeration system.
- c) Techniques for testing and adjusting liquid flow controls and distributors.
- d) Techniques for testing and adjusting vapour flow controls and distributors.
- e) Procedures for removing and installing refrigerant flow controls and distributors from operating systems with due regard to safety and refrigerant conservation.

#### **2.15.4.2 Refrigerant control selection**

Evidence shall show an understanding of refrigerant control selection to an extent indicated by the following aspects:

a) Types, application, operation, and selection of the refrigerant flow controls and distributors found in a refrigeration system.

Note:

Examples include TX valves and other metering devices, CPR valves, EPR valves, solenoid valves, hand valves

b) Types, application, operation and selection of the refrigerant pressure sensing controls found in a refrigeration system.

Note:

Examples include low pressure controls, high pressure controls and oil pressure controls

c) Types, application, operation and selection of the temperature/humidity sensing controls found in a refrigeration system.

Note:

Examples include thermostats, humidistats and defrost controls.

#### **2.15.5 Pumps**

Evidence shall show an understanding of pumps to an extent indicated by the following aspects:

a) Function of pumps in refrigeration and air conditioning systems

b) Types of controls associated with pumps and their function.

#### **2.15.6 Fans and air distribution**

Evidence shall show an understanding of fans and air distribution components to an extent indicated by the following aspects:

a) Functions, types, operation and application of fans

b) Air distribution methods and control devices

c) Air flow measurement and adjustment methods

d) Functions, types, operation and application of air filters

#### **2.15.7 Small appliance repair**

Evidence shall show an understanding of small appliance repair to an extent indicated by the following aspects:

a) Types, applications, operating principles and characteristics

b) Motors and drive mechanisms

c) Control and over current protection methods and devices

d) Typical small appliance faults encompassing:

- Motor faults
- Power supply faults
- Control faults
- Mechanical faults

#### **2.15.8 Domestic appliance principles**

Evidence shall show an understanding of domestic appliance principles to an extent indicated by the following aspects:

a) Major appliances encompassing:

Note.

Examples of major appliances are washing machines, clothes dryers, dishwashers, refrigerators, freezers, air conditioners, electrical and gas cookers and heaters

- Installation codes, statutory requirements and regulations
- Manufacturer and company installation requirements and warranty implications
- Site preparation and accessibility.
- Fixing and procedures and methods for connecting services.

b) Operation principles of major domestic appliances that use electrical, gas and/or water services and/or incorporate refrigeration encompassing:

- Purpose and operational options.
- Functions of major components.

c) Operational testing and set up procedures encompassing:

- Pre-start checking.
- Safety controls checking.
- Operating cycle testing and control adjustments

#### **2.15.9.1 Appliance refrigeration systems**

Evidence shall show an understanding of refrigerated appliances to an extent indicated by the following aspects:

- a) Types, applications, construction, components and operating characteristics
- b) Typical component wear or defects
- c) Typical faults
- d) Component repair/replacement methods
- e) Manufactures' parts catalogues and service reports

#### **2.15.9.2 Capillary systems**

Evidence shall show an understanding of capillary systems to an extent indicated by the following aspects:

- a) Requirements of Domestic Refrigeration Code of Practice.
- b) Function, types, construction, characteristics and applications encompassing:
  - system unloading
  - calculating system operating pressures
  - critical length
  - critical charge
- c) Faults leading to repair/replacement of a capillary tube
- d) Selection of replacement capillary tubes.
- e) Procedures for commissioning and servicing a capillary tube system.

#### **2.15.9.3 Retrofitting domestic refrigeration systems**

Evidence shall show an understanding of retrofitting domestic refrigeration systems to an

extent indicated by the following aspects:

- a) Reasons for retrofitting encompassing:
  - Montreal Protocol
  - Kyoto Summit
  - Global warming
  - AS Codes of Practice
  - Acts and Regulations
- b) System Analysis encompassing:
  - Equipment identification
  - Systems options
- c) Refrigerant selection encompassing:
  - Safety considerations
  - ANSI / ASHRAE Standard 34
  - AIRAH Refrigerant Selection Guide
  - Transitional and drop in-refrigerants
  - Medium and long term refrigerants
  - Refrigerant selection considerations
  - Domestic refrigeration system performance testing
  - Refrigerant recovery, recycling or reclaim
  - Lubricant selection considerations
- d) Retrofit procedure encompassing:
  - Flushing procedures
  - Retrofit procedure for CFC to blended refrigerants
- e) Performing a retrofit encompassing:
  - Refrigerant recovery
  - Flushing the system
  - Oil and drier replacement
  - Evacuation
  - Refrigerant charging
  - System labelling

#### **2.15.9.4 Split air conditioning systems**

Evidence shall show an understanding of split air conditioning systems to an extent indicated by the following aspects:

- a) Wall hung and floor mounted types and applications
- b) Construction and components

Note:

Examples are compressors, condensers, evaporators, metering devices, service ports; functions, types, basic operation

- c) Evaporation and condensing temperatures and pressure design and operating characteristics

#### **2.15.10 Clothes washers and dryers**

Evidence shall show an understanding of clothes washers and dryers to an extent indicated by the following aspects:

- a) Types, applications, construction, components and operating characteristics
- b) Typical component wear or defects
- c) Typical faults
- d) Component repair/replacement methods
- e) Manufactures' parts catalogues and service reports

#### **2.15.11 Dish washing machines**

Evidence shall show an understanding of dish washing machines to an extent indicated by the following aspects:

- a) Types, applications, construction, components and operating characteristics
- b) Typical component wear or defects
- c) Typical faults
- d) Component repair/replacement methods
- e) Manufactures' parts catalogues and service reports

#### **2.15.12 Gas cooking appliances**

Evidence shall show an understanding of gas cooking appliances to an extent indicated by the following aspects:

- a) Types, applications, construction, components and operating characteristics
- b) Typical component wear or defects
- c) Typical faults
- d) Component repair/replacement methods
- e) Manufactures' parts catalogues and service reports

#### **2.15.13 Room air conditioners**

Evidence shall show an understanding of room air conditioners to an extent indicated by the following aspects:

- a) Types, applications, construction, components and operating characteristics
- b) Typical component wear or defects
- c) Typical faults
- d) Component repair/replacement methods
- e) Manufactures' parts catalogues and service reports

#### **2.15.14 Appliance, testing and compliance verification methods**

Evidence shall show an understanding of appliance testing and compliance verification to an extent indicated by the following aspects:

- a) Mandatory testing and verification requirements.
- b) Appliance efficiency
- c) Testing techniques
- d) Visual inspection methods

### 2.15.15 HVAC control systems fundamentals

Evidence shall show an understanding of HVAC control systems to an extent indicated by the following aspects:

- a) Control fundamentals
  - control terminology
  - HVAC system characteristics
  - control system characteristics
  - control system components
  - product knowledge
- b) Types of control equipment
  - pneumatic:
    - terminology
    - symbols
    - pneumatic control systems
    - air supply equipment
    - thermostats
    - controllers
    - actuators
    - relays - switches
  - electrical:
    - classification of circuits
    - two position control
    - floating control
    - sensors
    - controllers
    - flow control devices
  - electronic:
    - operating principles
    - sensors
    - controllers
    - control systems
- c) DDC systems
  - terminology
  - controllers
  - controller software
  - basic controller programming
  - applications
- d) Control systems applications
  - air handling system controls
  - ventilation
  - heating
  - building airflow system control

- airflow control - singles and multi -
  - zones
  - chiller boiler and distribution system control (chilled water, boiler, distribution systems)
- e) Supervisory control systems
- systems function
  - configurations
  - introduction building management
  - remote building control interface and modem

### **2.15.16 Energy management systems for commercial refrigeration**

Evidence shall show an understanding of energy management systems for commercial refrigeration to an extent indicated by the following aspects:

- a) Functions of a commercial refrigeration E.M.S.
- General control function
  - Inputs
  - Outputs
  - Communications
  - Graphing
  - Supervising
  - Data logging
  - Scheduling
  - Alarms
  - Power consumption
- b) E.M.S. control components
- Identify components
  - Pressure sensors
  - Temperature sensors
  - Timeclocks
  - Humidity sensors
  - Liquid level sensors
  - Leak detector sensor
  - State the function and operating parameters of components
  - Pressure sensors
  - Temperature sensors
  - Timeclocks
  - Humidity sensors
  - Liquid level sensors
  - Leak detector sensors
- c) Installation requirements and consideration
- Installation of controller(s)
  - Installation of refrigerant leak detector

- Systems
  - Installation of accessory boards
  - Installation of pressure transducers & wiring
  - Installation of temperature sensors & wiring
  - Control wiring considerations
- d) System design and applications
- Select control components to suit given applications
  - Determine system operating parameters
  - Pressure sensors
  - Temperature sensors
  - Timeclocks
  - Humidity sensors
  - Liquid level sensors
  - Leak detector sensors
  - Defrost
  - Alarm panel
- e) Programming a control system
- Display terminal and keypad functions
  - Calibration of sensors
  - Changing original settings
  - Program a given set of parameters to suit an application
- f) Component testing and fault finding
- Trouble shooting
  - Testing of components

### **2.15.17 Refrigeration/HVAC direct digital controls**

Evidence shall show an understanding of refrigeration/HVAC direct digital controls to an extent indicated by the following aspects:

- a) Computer based control fundamentals
- Definitions
  - Principles
- b) Controller configuration
- Equipment
  - Zone level controllers
  - System level controllers
- c) Controller software
- Operating software
  - Application software
- d) Controller programming
- System diagrams
  - Control diagrams
  - Configuration

- Programming
  - Initialisation
  - EMS, BMS
  - SCADA system
  - Lan, Bacnet
- e) Sensors and actuators
- f) Applications
- Refrigeration systems
  - HVAC systems
  - Logic analysis
  - Energy management
  - Asset management
  - Life cycle

### **2.15.18 Refrigeration/HVAC pneumatic controls**

Evidence shall show an understanding of refrigeration/HVAC pneumatic controls to an extent indicated by the following aspects:

- a) Control fundamentals
- Pneumatic control terminology
  - Definitions
- b) Control basics
- Air supply
  - Pilot bleed system
  - Signal amplifier
  - Sensing elements
  - Relays and switches
- c) Air supply system
- Air drying methods
  - Pressure regulating valves
  - Pressure reducing valves
- d) System controllers
- Thermostats
  - Sensors
  - Actuators
  - Dampers
- e) System control configuration
- Sequence control
  - Limit control
  - Changeover control
  - Compensated control
  - Recycling control
  - Pneumatic – electric control

f) Control systems

- Refrigeration systems
- Ventilation systems
- Multi-zone A/C systems
- Variable air volume A/C systems
- Face and by-pass system
- Economiser system
- Chilled water systems
- Hot water systems

**2.15.19 HVAC air systems**

Evidence shall show an understanding of HVAC air systems to an extent indicated by the following aspects:

a) Air distribution principles

- air diffuser selection
- factors affecting the design of ductwork systems
- types of ductwork systems
- static, velocity and total pressure
- laminar and turbulent flow
- moody diagram
- parameters that control cost

b) Pressure loss

- friction and dynamic
- Colebrook - White formula
- in ducts, friction charts
- in fittings, loss co-efficients
- fitting selection criteria
- diffuser pressure loss

c) System sizing

- velocity method
- equal friction method
- static regain method
- balanced pressure drop method
- circular to rectangular equivalent
- standard duct sizes and gauges
- balancing

d) Heat and leakage losses

- heat gain/loss calculation
- bare vs insulated
- leakage

e) Overview of noise in duct systems

- noise sources in duct systems

- attenuation
  - impact on design
  - methods of control
- f) Fans
- types and characteristics
  - fan laws
  - system effect
  - fan selection
  - fan and system curves
- g) Air systems
- dual and single duct constant volume
  - variable volume
  - induction units
  - multi-zone
  - diversity factors

### 2.15.20 HVAC hydronic systems

Evidence shall show an understanding of HVAC hydronic systems to an extent indicated by the following aspects:

- a) Systems operation
- closed/open systems
  - pump head/lift, static head (high rise building)
  - system friction losses
  - nett positive suction head
  - system curves
- b) Pumps
- types
  - selection criteria
  - performance characteristics
  - bladder tanks
  - coil characteristics
  - heat exchangers: plate, shell and tube, tube in tube
  - flow measurements: types
  - flow switchers
  - builders: types and performance characteristics
  - cooling towers: elementary cooling thermodynamics and types
- c) Valves - flow control devices
- types and applications
  - throttling characteristics
  - flow measurements
  - selection and applications
- d) Piping systems

- balancing and commissioning
- air venting
- water treatment
- vacuum breaking and air breaks

### 2.15.21 Refrigeration/HVAC electronic controls

Evidence shall show an understanding of refrigeration/HVAC electronic controls to an extent indicated by the following aspects:

- a) Control fundamentals
  - Electronic control terminology
  - Definitions
- b) Electronic control basics
  - Voltage supplies
  - Analogue control
  - Controller basics
  - Inputs and outputs
- c) Controllers
  - Variable (e.g temperature)
  - Step
  - Enthalpy
  - Compensation
  - Time proportional
- d) Sensors
  - Temperature
  - Humidity
  - Enthalpy
  - Pressure
  - Velocity
- e) Actuators
  - Water valves
  - Dampers
  - Relays
- f) Control systems
  - Refrigeration systems
  - Ventilation systems
  - Multi-zone A/C systems
  - Variable air volume A/C systems
  - Face and by-pass system
  - Economiser system
  - Chilled water systems
  - Hot water systems

### 2.15.22 HVAC control systems

Evidence shall show an understanding of HVAC control systems to an extent indicated by the following aspects:

- a) Control diagrams
  - electric/electronic control diagrams
  - electrical installation documents
  - pneumatic diagrams
  - DDC diagrams
  - controls/electrical power circuit interface
  - nomographs
- b) Evaluate existing automatic control systems
  - review of HVAC system components
  - specifications
  - briefs
  - descriptions of operation
- c) Control requirements
  - standard and statutory requirements
  - economy of operation (energy management)

### 2.15.23 Microbial control fundamentals

Evidence shall show an understanding of microbial control fundamentals to an extent indicated by the following aspects:

- a) Legislation and regulatory requirements for microbial control
- b) Types of air and water systems that require control of harmful microbes.
- c) Harmful microbes and they effects in left uncontrolled
- d) Methods of controlling harmful microbes

Note.

Methods include regular cleaning/decontamination of effected plant, sample testing and approved treatment.

- e) Safe handling and application of treatment materials.

### 2.15.24 Cool rooms/freezer rooms

Evidence shall show an understanding of cool rooms/freezer rooms to an extent indicated by the following aspects:

- a) Food spoilage encompassing:
  - Effects of storage conditions
  - Controlled atmosphere
  - Relative humidity
  - Evaporator temperature difference
- b) Types and construction encompassing:
  - Pre-fabricated and permanent type walk-in cool rooms and freezer rooms
  - Construction

- Insulation
  - Vapour barrier
  - Frost heave
  - Interior fittings
- c) Layouts and installation encompassing:
- Location of equipment
  - Equipment site arrangements and building services
  - Access and obstructions
  - Power supply and electrical services
  - Arrangement of piping
- d) Components and features encompassing:
- Refrigerant controls
  - Evaporators
  - Solenoid valves
  - Crankcase pressure regulators
  - Defrosting method and mullions
  - Drain facilities and heaters
  - Pressured relief valves
  - Door hardware
  - Lighting and germicidal lamps
- e) System and defrost controls encompassing:
- Operating conditions
  - Thermostat and pressure controls
  - Defrost timers and controllers
  - Overloads and safety control
  - Electrical control circuits

#### **2.15.25 Package air conditioning systems**

Evidence shall show an understanding of package air conditioning systems to an extent indicated by the following aspects:

- a) Types and applications encompassing:
- Safety, environmental and Legislative Issues
  - Construction features
  - Component and their characteristics
  - Ancillary equipment
- b) System design features encompassing:
- Heat Loads
- c) Characteristics

#### **2.15.26 Merchandising and display cabinets**

Evidence shall show an understanding of merchandising and display cabinets to an extent indicated by the following aspects:

- a) Types and construction encompassing:
  - Deep freeze meat, dairy, and fruit and vegetables
  - Multi deck display type
  - Single deck, well type and island cases
  - Glass door/reach-in merchandiser
- b) Components and features encompassing:
  - Condensing units
  - Refrigerant controls
  - Evaporators and fans
  - Defrosting method and mullions
  - Drain facilities and drain heaters
  - Air distribution and air-flow curtains
  - Cabinet air temperature, velocity and direction
  - Accessories
  - Lighting
- c) Layouts and installation encompassing:
  - Location of equipment
  - Equipment site arrangements and building services
  - Access and obstructions
  - Power supply and electrical services
  - Arrangement of piping
- d) System and defrost controls encompassing:
  - Operating conditions
  - Alarm systems
  - Thermostats and pressure controls
  - Defrost timers and controllers
  - Electrical control circuits
- e) Multiple systems encompassing:
  - Multiple compressors
  - Multiple evaporators
  - Heat reclaim systems
  - Multi-temperature accessories
  - Controls and sequencing

### **2.15.27 Cooling towers, evaporative condensers, evaporative coolers and associated equipment**

Evidence shall show an understanding of cooling towers, evaporative condensers, evaporative coolers and associated equipment to an extent indicated by the following aspects:

- a) Health requirements under the Act and regulations
- b) Types, applications and their construction encompassing:
  - System components and their function
  - System operation

- Process cooling operation
- c) Installation requirements encompassing:
- Water supply and drainage requirements
  - Electrical requirements
  - Special site requirements
  - Location and securing of equipment
  - Provision for water treatment
  - Foundation requirements
  - Local authority requirements and codes
  - Relevant legislation, legal obligations
  - Development/building approvals
- d) Installation and assembly methods encompassing:
- Tower identification
  - Manufacturer's drawings, specifications and assembly instructions
- e) Water pumps and pumping systems encompassing:
- Pump characteristics from pump curves
  - Pumping flow controllers

### **2.15.28 Residential air conditioning**

Evidence shall show an understanding of residential air conditioning to an extent indicated by the following aspects:

- a) Regulations and codes to installation and service of residential air conditioning systems.
- Types, application, construction and operation of residential air conditioners.
  - Construction and operation of the major components within a system.
  - Operation of a typical system.
  - Typical application for various types of systems
- b) Procedures for selecting a system for a specific application encompassing:
- Note.  
Procedures include determining heat load sources using estimated methods and using manufacturer's data.
- c) Installation procedures.

### **2.15.29 Servicing refrigeration and air conditioning systems**

Evidence shall show an understanding of refrigeration and air conditioning to an extent indicated by the following aspects:

- a) Preventative maintenance schedules and procedures.
- b) Normal and abnormal system and component operations
- c) Gathering and evaluation symptoms
- d) Determining and testing for faults
- e) Procedures for rectifying faults

### **2.15.30 Commissioning refrigeration and air conditioning systems**

Evidence shall show an understanding of refrigeration and air conditioning to an extent

indicated by the following aspects:

- a) Determining system design and operating conditions.
- b) Testing, measurements and adjustments
- c) Design and “as installed” drawings
- d) Commissioning reports

## 2.16 Refrigeration and air conditioning installations

### 2.16.1 Refrigeration pipework and accessories

Evidence shall show an understanding of refrigeration pipework and accessories to an extent indicated by the following aspects:

a) Appropriate piping arrangements

Note:

Adequate piping arrangements include those for discharge lines, liquid lines, suction lines, incorporation valves, dryers, site glasses, accumulators, oil separators, heat exchangers, traps and piping for multiple compressor systems

b) Pipe work accessories and their location

Note:

Pipe work accessories include clamps, joiners, fittings and connections.

c) Pipe work installation techniques

### 2.16.2 Refrigeration pipework layout

Evidence shall show an understanding of refrigeration pipework layout to an extent indicated by the following aspects:

a) Position of equipment in relation pipework

b) Requirements for vertical and horizontal pipe runs.

c) Requirements for oil return and prevention of flood back

d) Techniques for the prevention of noise and vibration

e) Pipework insulation requirements

### 2.16.3 Refrigeration installations, equipment requirements

Evidence shall show an understanding of refrigeration installations, equipment requirements to an extent indicated by the following aspects:

a) Standards, codes and requirements applicable to installing refrigeration equipment.

b) Techniques for installing equipment and accessories encompassing:

- Application of accessories
- Locating and placing components
- Terminating piping
- Maintenance of fire rating integrity.

### 2.16.4 Refrigeration pipe selection and sizing

Evidence shall show an understanding of refrigeration pipe selection and sizing to an extent indicated by the following aspects:

a) Use of velocity/pressure drop tables

b) Pressure drop in lines, components and fittings

c) Oil migration stabilisation

d) Refrigerant velocity

e) Effect of varying system capacity

f) Oil traps, risers and double risers

- g) Liquid migration
- h) Parallel components and multiplex systems

### **2.16.5 Refrigeration and air conditioning installations, testing and verification methods**

Evidence shall show an understanding of testing and verification to an extent indicated by the following aspects:

- a) Mandatory testing and verification requirements.
- b) Optional testing and their appropriate use
- c) Testing techniques
- d) Visual inspection methods

### **2.16.6 Split air conditioning system installation**

Evidence shall show an understanding of installing split air conditioning systems to an extent indicated by the following aspects:

- a) Relevant codes for the installation of residential split air conditioning systems encompassing:
  - building codes, electrical, health, environmental
- (b) Types, construction, operation and application of residential split air conditioners encompassing:
  - Types: floor and wall mounted, ducted, cassette
  - refrigeration system and reverse cycle
  - control systems
  - air distribution, fans, filters
  - noise and vibration
- c) Installation of unit and pipework encompassing:
  - respect for customers premises
  - unit location and mounting
  - fixing, securing and mounting methods
  - safe lifting, use of ladder and platforms
  - manufacturers installation and start up instructions
  - refrigerant piping: layout, installation, insulation, fastening and covering
  - condensate drains and pumps
- d) Starting up system encompassing:
  - manufacturers start up instructions
  - pressure testing
  - evacuation
  - opening outdoor unit valves
  - checking refrigerant charge: pressures, temperature, sweat line and evaporator superheat
  - adding refrigerant
  - leak detection
  - controls - operating and safety

- customer familiarisation

### **2.16.7 High pressure refrigerant installation**

Evidence shall show an understanding of installing high pressure refrigerant systems to an extent indicated by the following aspects:

- a) The function, types, properties, applications, requirements, handling and disposal of refrigerant oils used in the high pressure systems.
- b) The essential service tools required to work with high pressure refrigerants encompassing:
  - Gauge manifold and hoses
  - Vacuum Gauge (Microns)
  - Leak Detectors
  - Flaring Tools
  - Torque wrench for flare nuts
  - Refrigerant Scales
  - Digital temperature measuring thermocouples
- c) Installation, commissioning and service procedures required for high pressure refrigerant systems encompassing:
  - Flaring and brazing
  - Pressure testing (as per HB40 and AS/NZS1677)
  - Evacuation
  - Charging and Recharging
  - Leak detection
  - Recovery
- d) The correct safety procedures required to work with high pressure refrigerants encompassing:
  - Personal safety protection equipment
  - Refrigerant and oil handling
  - Material Safety Data Sheets (MSDS)
  - HB40, AS/NZS1677, AS2030, copper tube code
  - Storage, filling and transport of refrigerant cylinders
  - Equipment rooms, job site safety, ventilation and environmental considerations.

### **2.16.8 Fault-finding and diagnostic techniques**

Evidence shall show an understanding of fault-finding and diagnostic skills to an extent indicated by the following aspects:

- a) Establish an accurate description of the fault situation by appropriate questioning of client or operator
  - Demonstrate questioning techniques to efficiently and effectively obtain from a client/operator a description of a fault situation.
- b) Confirm the fault history and symptoms through observation and application of first-line tests.
  - Demonstrate ability to draw valid conclusions from observations. Identify concepts of broad first-line testing.

c) In the absence of the client or operator, to establish the symptoms through application of systematic tests and observation.

- Identify appropriate diagnostic tests for given symptoms using manufacturers' charts, handbooks, specification sheets.
- Use results of systematic tests to identify symptoms.

### **2.16.9 Commissioning - HVAC systems**

Evidence shall show an understanding of commissioning - HVAC systems to an extent indicated by the following aspects:

a) Fundamentals

- building specifications/requirements/responsibilities
- building codes
- local government regulations
- human comfort - comfort chart
- reporting procedures
- review fluid mechanic principles
- pre-commissioning checks
- calibration of instruments, data collection and recording, documentation

b) Air systems

- Air testing and balancing
- air flow
- pressure
- temperature
- fan testing
- air balancing procedures
- leakage testing
- system capacity calculations

c) Hydronic systems

- hydronic tab instruments
- fluid flow
- pressure
- temperature
- pumps: pump curves and system curves
- pump testing
- hydronic
  - balancing procedures
  - general
  - compensation method
  - balancing valves
  - capacity calculations

d) Plant and equipment

- controls
- heat exchangers

- chillers
- boilers
- cooling towers

#### 2.16.10 Commissioning commercial / industrial refrigeration systems

Evidence shall show an understanding of commissioning commercial/industrial refrigeration systems to an extent indicated by the following aspects:

a) Fundamentals

- Building specifications/requirements/responsibilities
- Building Codes
- Local Government regulations
- Design conditions
- Reporting procedures
- Review fluid mechanics principles
- Pre – commissioning checks

b) Air Systems (excluding air balancing)

- Air Tabulation instruments
- air flow
- pressure
- temperature
- fan testing
- leakage testing
- system capacity calculations

c) Hydronic Systems

- Hydronic tabulation instruments
- fluid flow
- pressure
- temperature
- Pumps
- Pump curves and system curves
- Pump testing
- Hydronic
- balancing procedures
- general
- compensation method
- Balancing valves
- Capacity calculations

d) Refrigeration Systems

- AS1677
- HB40
- Pressure testing
- Evacuation

- Charging
  - Control setting
  - Commissioning reports
  - System performance and capacity
- e) Plant and equipment
- Controls
  - Heat exchangers
  - Chillers
  - Boilers
  - Cooling towers

### **2.16.11 Air conditioning drawing**

Evidence shall show an understanding of air conditioning drawing to an extent indicated by the following aspects:

- a) Standards, regulations and codes
- b) Architectural and mechanical drafting conventions encompassing:
- Fire, hydraulic, electrical layout diagrams,
  - Sketching of pipework circuits and mechanical services,
  - Drawing standards and symbols,
  - Working, detail and assembly drawings,
  - Ductwork layouts and conventions,
  - Pipework layouts and conventions,
- c) Computer aided drawing techniques

### **2.16.12.1 Energy management fundamentals**

Evidence shall show an understanding of energy management fundamentals to an extent indicated by the following aspects:

- a) Typical energy sources and characteristics
- supply authorities
  - standard units of measurement
  - electricity
  - steam
  - hot water
  - high temperature hot water
  - town gas
  - LP Gas
  - solar
  - waste heat
  - petrol
  - diesel
- b) Energy Usage
- office lighting

- air conditioning systems
  - refrigeration systems
  - security systems
  - computer systems
  - standby/emergency systems
  - lifts and escalators
- c) Energy auditing process
- energy costs and tariffs
  - energy consumption
  - predicting future costs
  - plotting consumption trends
  - historical data
  - collecting information using surveys
  - comparisons of actual to recorded usage
  - energy balance
  - instrumentation
  - building management systems
  - estimating savings potential
- d) System operation for energy efficiency
- types of systems
  - efficiency in building structures
  - operation of a vehicle fleet
  - proportion total energy consumption against individual systems
  - passive building design
  - preventative maintenance procedures
  - monitoring building management systems
  - operation of major and minor plant
  - inappropriate energy management procedures
  - building plant control systems
  - Australian standards/local authority requirements
  - case studies
- e) Implementing energy management procedures for a building
- recording base year data
  - climatic conditions for locality
  - establishing energy costs and tariffs
  - building and systems surveys
  - pay back period
  - survey analysis
  - energy conservation procedures
  - informing stockholders
  - recommendations and documentation
  - implementation issues

- monitoring, evaluation and follow up

### 2.16.12.2 Energy management

Evidence shall show an understanding of energy management to an extent indicated by the following aspects:

- a) Identification of major energy consuming plant
  - review of HVAC system components
  - lighting systems
  - building energy profiles
- b) Methods of energy conservation
  - review of energy conserving strategies
  - house keeping
    - a. time schedules
    - b. lighting control
  - good maintenance practices
    - c. filters, fans, appropriate set points, dead bands etc.
  - HVAC system control
    - d. night cycle
    - e. optimum stop/start
    - f. purge cycles
    - g. chiller/boiler/cooling tower sequencing
    - h. economy cycles (based on temperature or enthalpy).
    - i. supply air reset
    - j. condenser water temperature reset
  - electrical load control
    - k. power demand control
    - l. load limiting
    - m. load shedding
    - n. set point relaxation
    - o. ventilation cycles
- c) Tests and data collection procedures
  - use of BMS for data collection (trending)
  - use of data recorders (loggers)
  - monitoring of building operations generally
- d) Analyse results from test data
  - compare against standards (BOMA)
  - review current practices against ideal
  - total consumption vs peak load
  - electricity tariffs and implications
- e) Methods of reducing energy usage
  - plant retrofits
  - controls - application of strategies in 2
  - plant - fixed OA to economy, boiler to electric reheat, constant volume to VAV etc.

cost/benefit (payback).

### 2.16.13 Building management systems

Evidence shall show an understanding of building management systems to an extent indicated by the following aspects:

a) Functions of a BMS

- autonomous Functions
- input
- output
- general I/O
- installation management items
- energy management
- risk management
- information processing
- objectives
- building running costs
- smoke control as per AS 1668 part 1

b) BMS hardware

- system architecture
- communication devices
- substations
- PC's
- interfaces with other systems

c) Input and output functions

- digital inputs/outputs
- digital output with status feedback
- analogue input/output
- sensors
- alarms

d) Energy management

- night cycle
- optimum stop/start
- time and event programs
- night purge
- outside air percentage control
- enthalpy control
- power demand control
- duty cycle
- presence detection
- lighting control

e) Information processing functions

- computer systems

- central system management
  - programs
  - system configuration and security
  - operator - machine interface
  - data points
- f) Risk and maintenance management
- system files
  - fire, intruder control
  - access control

### **2.16.14 Management of indoor air quality**

Evidence shall show an understanding of management of indoor air quality to an extent indicated by the following aspects:

- a) Indoor air quality factors
- interactive nature of pollutants
  - comfort criteria
  - source of odours
  - pathway from source to occupants
  - occupant activities
  - impact on productivity
- b) Cause of IAQ problems
- moisture
  - mould and mildew
  - bacterial growths
  - asbestos and other particulate
  - volatile chemicals produced in the building
  - chemical products
- c) HVAC systems
- types of HVAC systems
  - system components
  - duct cleaning
  - system commissioning
  - operation of system
  - damper adjustment
- d) Measurements
- common parameters to measure
  - measurement devices available
  - instrument calibration
  - analysing and interpreting results
  - laboratory tests
  - standards
- e) Resolving IAQ problems

- conducting IAQ investigations
  - the walk-through
  - building history
  - HVAC system information
  - occupant interviews
  - troubleshooting
- f) IAQ management
- building IAQ profile
  - location of potential IAQ problems
  - procedures to control IAQ
  - communication
  - response to complaints
  - equipment preventive maintenance
  - chemical inventory

### 2.16.15 Computer aided drafting

Evidence shall show an understanding of computer aided drafting to an extent indicated by the following aspects:

- a) Specific procedures
- Creating symbols for library files
  - Program specific commands
    - Speed enhancement
  - Configuring the digitising tablet
- b) Methodology for creating layers
- Name
  - Colour
  - Linetype
- c) Methodology for drawing variables
- Limits
  - Grid
  - Snap
  - Dimensions
  - Text
  - Units
- d) ISO drawing sheets
- e) Advanced drawings
- f) Multiple three dimensional views
- Setting up environment on screen
  - Top view
  - Front and side views
  - Three dimensional views
- g) Movement through space

- Draw on any created views
  - Relocate coordinate system as necessary
- h) Creation of views
- Creation of three dimensional geometric shapes
  - Creation of three dimensional complex view by:
    - p. Manipulation of drawing planes
    - q. Location of geometric shapes
- i) Editing
- Use of function to facilitate modification of geometric shapes in completion of a three dimensional view
- j) Display of three dimensional view
- Wire Line
  - Solid Face
  - Isometric
  - Perspective
  - Orthographic
- k) Saving
- Use of assembly drawing file for plotting

### **2.16.16 Refrigeration system components and piping**

Evidence shall show an understanding of refrigeration system components and piping to an extent indicated by the following aspects:

- a) Standards and Codes encompassing:
- AS1677, detailed understanding
  - AS 3666, overview  
ozone protection regulations
  - IAR Ammonia Data Book
  - ANSI/IAR standards
  - ANSI/ASHRAE Mechanical Refrigeration and IAR
  - bulletins and standards
- b) Calculation of capacity in heat exchangers encompassing:
- $Q = UA (LMTD)$
  - $Q = mc \otimes t$
  - $Q = m \otimes h$
- c) Evaporators encompassing:
- commercial types and applications
  - coil bypass factor
  - effects of evaporator TD on space humidity
  - effects of air circulation on product conditions
  - selection criteria and selection tables
- d) Condensers encompassing:
- commercial types and applications

- effects of ambient conditions
  - condenser control
  - heat rejection factor
  - condenser TD
  - selection criteria and selection tables
- e) Compressors encompassing:
- types and applications
  - capacity
  - displacement
  - volume flow rate
  - theoretical capacity
  - total volumetric efficiency
  - effect of operating conditions, including suction
  - pressure drop and superheating
  - actual capacity
  - power
  - theoretical requirement
  - effects of operating conditions
  - actual requirements
  - post defrost loads
  - pull down torque requirements, high, medium and low back pressure compressors
  - selection tables, motor selection
- f) Liquid expansion devices
- types, operation and applications
  - effects from sub-cooling
  - distributor types, operation and applications
  - selection tables
- g) System load balance point encompassing:
- graphical representation
- h) Line sizing an design
- velocity tables
  - pressure drop in lines and fittings
  - oil migration stabilisation
  - refrigerant velocity
  - effect of varying system capacity
  - oil traps
  - risers
  - double risers
  - liquid migration
  - design for parallel components and multiplex systems
- i) Automatic controls
- fin spacing, suction temp to evaporator suction

- hot-gas bypass valves
- electronic control of valves PLC control
- refrigerant regulating valves
- solenoid valves
- condenser pressure regulating valves
- evaporator pressure regulating valves
- crankcase pressure regulating valves
- cycling controls
- pressure-stats
- thermostats,
- defrost controls
- monitoring and alarm controls
- refrigeration automation systems
- control strategies
- control modes

#### **2.16.17 Retrofitting refrigeration systems**

Evidence shall show an understanding of retrofitting refrigeration systems to an extent indicated by the following aspects:

- a) Systems and refrigerants suitable for retrofitting encompassing:
  - Code and regulation for retrofitting a refrigeration system.
  - Suitable refrigerants for retrofitting into existing systems.
- b) Retrofitting a refrigerant into a system encompassing:
  - Retrofit procedures.
  - Selection of refrigerant, oil and components.
- c) Procedures for modify an existing system to meet the requirements of the alternative refrigerant encompassing:
  - Evaluating performance of a system prior to being retrofitted.
  - Testing refrigerant oil in accordance with industry standard.
  - Reclaiming and evacuate system.
  - Removing and replacing components.
  - Pressure testing, evacuating and charging.
- d) Procedures for commissioning a retrofitted system to the prescribed standard encompassing:
  - Setting operational and safety controls.
  - Testing electrical components.
  - Adjusting controls and checking system operation.
- e) Evaluating key performance factors of a system before and after a retrofit.

## **2.17 Refrigeration and air conditioning principles and applications**

### **2.17.1.1 Refrigeration fundamentals**

Evidence shall show an understanding of refrigeration fundamentals to an extent indicated by the following aspects:

- a) Principles of heat transfer
- b) Temperature scales and measurement
- c) Pressure scales and measurement
- d) Relationship between pressure and temperature
- e) The operation of the vapour compression refrigeration cycle.
- f) Refrigeration system components
- g) High and low side pressure
- h) Saturation, superheat, subcooling and enthalpy
- i) Basic pressure, temperature, state and heat cycles
- j) Applications of refrigeration

### **2.17.1.2 Basic refrigeration system operating conditions**

Evidence shall show an understanding of basic refrigeration system operating conditions to an extent indicated by the following aspects:

- a) Evaporator temperature difference
- b) Condenser temperature difference
- c) Ambient conditions
- d) Low side temperatures and pressures
- e) High side temperatures and pressures

### **2.17.2.1 Refrigerants**

Evidence shall show an understanding of refrigerants to an extent indicated by the following aspects:

- a) Properties for refrigerants in current use and their alternatives
- b) Causes and effects of contamination in refrigeration systems
- c) Procedures for working with refrigerants encompassing:
  - Reclaiming/recovering refrigerants
  - Pressure testing refrigeration systems
  - Dealing with contamination in refrigeration systems
  - Evacuating refrigeration systems
  - Detecting refrigerant leaks
  - Charging refrigerant
- d) Properties and applications of refrigeration oils in current use

### **2.17.2.2 Split air conditioning refrigerants**

Evidence shall show an understanding of refrigerants commonly used in split air conditioning systems to an extent indicated by the following aspects:

- a) Properties for refrigerants in current use
- b) Causes of contamination in the system
- c) Procedures for working with refrigerants encompassing:
  - Reclaiming/recovering refrigerants
  - Pressure testing systems
  - Evacuating systems
  - Detecting refrigerant leaks
  - Charging refrigerant
- d) Properties of refrigeration oils in current use

### 2.17.2.3 Appliance refrigerants

Evidence shall show an understanding of refrigerants commonly used in refrigeration and freezer appliances to an extent indicated by the following aspects:

- a) Properties for refrigerants in current use
- b) Causes of contamination in the systems
- c) Procedures for working with refrigerants encompassing:
  - Reclaiming/recovering refrigerants
  - Pressure testing systems
  - Dealing with contamination in refrigeration systems
  - Evacuating systems
  - Detecting refrigerant leaks
  - Charging refrigerant
- d) Properties of refrigeration oils in current use

### 2.17.2.4 High pressure refrigerants

Evidence shall show an understanding of installing high pressure refrigerant to an extent indicated by the following aspects:

- a) The phase out CFC/HCFC refrigerants in favour of environmentally friendly refrigerants and the responsibilities of installers and manufacturers
- b) The chemistry of R22 and its replacement high pressure refrigerants (R407C and R410A), their properties and applications
- c) The function, types, properties, applications, requirements, handling and disposal of refrigerant oils used in the high pressure systems
- d) The essential service tools required to work with high pressure refrigerants
- e) The differences in the materials required for high pressure refrigerant systems
- f) Installation, commissioning and service procedures required for high pressure refrigerant systems
- g) Safety procedures required to work with high pressure refrigerants.

### 2.17.2.5 Natural refrigerants

Evidence shall show an understanding of natural refrigerants to an extent indicated by the following aspects:

- a) The phase out CFC / HCFC refrigerants in favour of environmentally friendly

refrigerants and the responsibilities of installers and manufacturers

- b) The chemistry natural refrigerants, their properties and applications
- c) The function, types, properties, applications, requirements, handling and disposal of refrigerant oils used in the natural systems
- d) The essential service tools required to work with natural refrigerants
- e) The differences in the materials required for natural refrigerant systems
- f) Installation, commissioning and service procedures required for natural refrigerant systems
- g) Safety procedures required to work with natural refrigerants

### **2.17.3.1 Refrigeration system capacity control**

Evidence shall show an understanding of refrigeration system capacity control to an extent indicated by the following aspects:

- a) Methods of system capacity control

Note:

Capacity control includes the role of oil pressure; refrigerant bypass; air flow; water flow; multiple units and compressor speed.

### **2.17.3.2 Refrigeration systems and compressor operation**

Evidence shall show an understanding of the operation of refrigeration systems and compressors to an extent indicated by the following aspects:

- a) The vapour-compression cycle

Note:

Vapour-compression cycle includes refrigeration effect; flow rate; specific volume; system capacity; discharge temperature; total heat rejection; heat of compression and refrigerant properties and effects

- b) Methods of system capacity control

Note:

Capacity control includes the role of oil pressure; refrigerant bypass; air flow; water flow; multiple units and compressor speed.

- c) System efficiency encompassing:

- Compressor parameters

Note:

Examples are piston displacement; compressor displacement; compression ratio; compressor efficiency and heat exchange design.

- Compressor drive methods

Note:

Examples are belt drives; direct drives; speed vs pulley size and alignment requirements.

### **2.17.4 Air conditioning fundamentals**

Evidence shall show an understanding of air conditioning fundamentals to an extent indicated by the following aspects:

- a) Psychrometric terms, basic processes, measurement and charts encompassing:

- Parameter
- Methods

- b) Basic air conditioning heat loads sources and effects encompassing:

- Elements of heat load
  - Industry check figures
  - Basic quick selection heat load tables/graphs
- c) Basic air conditioning process, terms, requirements, classifications and applications
- d) Basic ventilation terms, requirements, methods and applications
- e) Basic air conditioning systems, types, layout and applications

### **2.17.5 Central plant air conditioning systems**

Evidence shall show an understanding of central plant air conditioning systems to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components and typical layout arrangements.
- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods
- e) Secondary systems and refrigerants

### **2.17.6 Hydronic systems**

Evidence shall show an understanding of hydronic systems applied to refrigeration and/or air conditioning applications to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components and typical layout arrangements.
- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods

### **2.17.7 Beverage dispensers**

Evidence shall show an understanding of beverage dispensers to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components, and typical layout arrangements.
- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods
- e) Pure food act and HACCP
- f) Dispensed beverage product knowledge:

Note:

Examples are beer, wine, spirits, soft drinks, and the like

### **2.17.8 Transport refrigeration systems**

Evidence shall show an understanding of transport refrigeration systems to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components and typical layout arrangements.

- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods
- e) External power sources

Note:

Examples are diesel/petrol engines, electrical, dual power supplies

### **2.17.9 Ultra-low temperature refrigeration systems**

Evidence shall show an understanding of ultra-low temperature refrigeration systems to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components and typical layout arrangements.
- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods
- e) Suitability of refrigerants for each application

#### **2.17.10.1 Post mix refrigeration systems**

Evidence shall show an understanding of post mix refrigeration systems to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components and typical layout arrangements.
- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods
- e) Pure food act and HACCP
- f) Dispensed beverage product knowledge:

Note:

Examples are beer, wine, spirits, soft drinks, and the like

#### **2.17.10.2 Dairy refrigeration systems**

Evidence shall show an understanding of dairy refrigeration systems to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components and typical layout arrangements.
- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods
- e) Pure food act and HACCP
- f) Dispensed beverage product knowledge

#### **2.17.11 Ice making systems**

Evidence shall show an understanding of ice making systems to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components and

typical layout arrangements.

- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods
- e) Pure food act and HACCP
- f) Dispensed beverage product knowledge

#### **2.17.12 Industrial refrigeration systems**

Evidence shall show an understanding of industrial refrigeration systems to an extent indicated by the following aspects:

- a) System characteristics, design features, applications, construction, components and typical layout arrangements.
- b) Operating and control principles
- c) Maintenance schedules
- d) System faults and testing methods
- e) Secondary refrigerants and systems

#### **2.17.13 Refrigeration system analysis**

Evidence shall show an understanding of refrigeration system analysis to an extent indicated by the following aspects:

- a) Pressure Enthalpy Definitions
  - high pressure & low pressure refrigerants e.g. R124 & R23
  - triple point of new refrigerants
  - glide of trinary blends
  - differential evaporation of refrigerant blends
  - variable refrigerant volume
- b) Refrigeration cycle
  - expansion process
  - vaporising process
  - compression process
  - condensing process
  - compression ratio
- c) Enthalpy processes
  - co-efficient of performance
  - effect of suction temperature on cycle efficiency
  - effect of condensing temperature on cycle efficiency
- d) Actual refrigerating cycles
  - effects of superheating suction vapour
  - superheating without useful cooling
  - superheating that produces useful cooling
  - superheating in suction piping outside the refrigerated space
  - superheating the vapour inside the refrigerated space
  - effects of subcooling the liquid

- liquid - suction heat exchangers
- effects of pressure losses resulting from friction

#### 2.17.14.1 Refrigeration engineering mathematics fundamentals

Evidence shall show an understanding of engineering mathematics fundamentals to an extent indicated by the following aspects:

a) Arithmetic

- Rational and irrational numbers, surds
- SI units, conversion using unity brackets
- Laws of indices (base 10), scientific and engineering notation
- Estimations, errors and approximations, significant figures

b) Algebra

- Substitution
- +, -, x on simple polynomials. Simple indices
- Expanding brackets
- Factorising quadratics. Common factors, difference of two squares
- Simplifying algebraic fractions
- Transposition of engineering formulae
- Solving one variable equations
- Simple algebraic division.

c) Geometry

- Pythagoras Theorem
- Angles: degrees, radians. Parallel lines cut by a transverse
- Triangles: sum of angles, properties of equilateral and isosceles triangles
- Congruent triangles
- Similar triangles: ratio of corresponding sides
- Sin, cos, tan: ratios of a right angled triangle
- Sine and cosine rules
- Circles: circumference, arcs, chords, tangents, circle theorems
- Area and perimeter mensuration on above figures.

d) Coordinate geometry

- 2D plane;  $x$ - $y$  axes,  $s$ - $t$  axes
- Graph of linear function,  $y = ax + b$ . Functional notation,  $y = f(x)$
- Straight line given slope and one point or given two points
- Linear equations: solving algebraically and geometrically
- Solving 2 linear functions simultaneously, algebraically and geometrically
- Line segment: length and mid point.

#### 2.17.14.2 Refrigeration engineering advanced mathematics

Evidence shall show an understanding of engineering mathematics to an extent indicated by the following aspects:

a) Matrices

- The operations: addition (subtraction), scalar multiplication, matrix multiplication up to 3x3 matrices.
  - Identity matrix, inverse matrix
  - Elementary algebraic manipulation of matrices
  - Solve up to three equations (linear) in three unknowns using inverse matrices and determinants.
- b) Quadratic Functions
- Graphs of quadratic functions represented by parabolas and significance of the leading coefficient
  - Zeros represented graphically
  - Solve quadratic equations by factoring and quadratic formula
  - Solve simultaneously linear and quadratic equations algebraically and geometrically.
  - Engineering Mathematics- B
- c) Exponential and Logarithmic Functions
- Laws of indices
  - Graph of  $f(x) = kabx$ , emphasising  $a = 10, e$
  - Definition of the logarithm to any base
  - Graph of  $f(x) = k \log_a bx$ , emphasising  $a = 10, e$
  - Solve exponential and simple log equations using indices, logs, calculator, graphically
  - Change of log base, emphasising 10 and e
  - Growth and decay
- d) Trigonometric Functions
- The ratios: sin, cos, tan, cosec, sec, cot
  - Degrees, radians
  - Graphs of  $k f(ax + b)$  where  $f(x) = \sin x, \cos x, \tan x$ , and significance of  $k, a, b$ , for example  $V = V_m \sin(\omega t + \phi)$
  - Trigonometric identities
  - Solve trigonometric equations

### 2.17.15 Refrigeration science

Evidence shall show an understanding of refrigeration science to an extent indicated by the following aspects:

#### a) Engineering mechanics

- mass/density
- weight
- forces
- specific gravity
- equilibrium
- momentum
- friction loss
- velocity and speed
- energy in all forms

- mechanical advantage
- efficiency
- pressure/stress
- b) Molecular theory
  - changes of state
  - sublimation
  - expansion and contraction
  - electron flow
  - state of aggregation
  - internal potential energy
  - phase change diagrams
- c) Thermodynamics
  - temperature scales
  - conservation of energy
  - specific heat
  - sensible, latent and super heat
  - properties of steam
  - enthalpy
  - heat energy/temperature relationship
  - heat balance on a body
  - heat transfer
  - conductivity
  - calorimetry
  - Peltier effect
  - 1st and 2nd law of thermodynamics
- d) Gas laws and liquids
  - pressure
  - Boyles law
  - Charles law
  - Volumetric relationship
  - psychrometrics
  - latent heat of vaporisation
  - relative humidity
  - air conditioning processes
  - dynamic pressure loss
  - velocity and static pressure
  - bourdon tubes
  - density and relative density
  - Archimedes principle
  - Bernoulli's Equation
  - manometers
  - absorption refrigeration

- centrifugal compression
  - external work of a liquid
  - pressure volume diagrams
  - isothermal and adiabatic processes
  - polytropic processes
  - Dalton’s law of partial pressure
- e) Vapour compression
- pressure/enthalpy relationship
  - entropy
  - characteristics of the evaporation, condensation,
  - compression and pressure drop phases
  - co-efficient of performance
  - theoretical/practical cycles
  - characteristics of refrigerants
  - theoretical power input
  - pressure losses
  - heat exchange
  - effects of condensing condition changes
  - sub-cooling and super-heating

### **2.17.16 Heat load estimating of commercial refrigeration**

Evidence shall show an understanding of heat load estimating of commercial refrigeration to an extent indicated by the following aspects:

- a) Heat transfer
- factors affecting heat transfer
  - insulation material characteristics
  - vapour barriers (seals)
  - ambient conditions
  - composite walls (heat flows)
  - types of common insulation
  - thermal conductivity
  - film factors
- b) Air change load
- room volumes
  - room usage (average, medium, heavy)
  - heat removed from cooling air to refrigerated conditions
  - air curtains
  - temperature differences
  - door opening sizes
  - Tamm’s equation
- c) Product load
- sensible heat

- latent heat
  - heat of respiration
  - storage temperatures
  - unit running times
  - humidity
  - air flows
  - stacking of products
  - freeze, chill, thaw times
- d) Total freezer/cool room loads
- wall load
  - air change load
  - product load
  - miscellaneous
  - total load, safety factor and unit running times
  - floor loads in cool rooms
  - door opening loads (ASHRAE & RADS methods)
  - door opening loads (for trucks)
- e) Process cooling loads
- cooling chemical reactions
  - energy balance methods
  - sensible & latent cooling of gases
  - sensible & latent cooling of water vapour in gas streams
- f) Computer programs
- g) Cabinet construction and design
- deep freeze case
  - meat case
  - dairy case
  - fruit and vegetable case
  - drink cabinets

#### **2.17.17.1 HVAC load estimating fundamentals**

Evidence shall show an understanding of HVAC load estimating fundamentals to an extent indicated by the following aspects:

- a) Heat flow in buildings
- conduction
  - convection
  - radiation
  - heat paths
- b) Thermal storage
- c) Different methods of calculations
- ASHRAE
  - Carrier

- finite difference
- d) U Values.
- e) Film coefficients.
- f) Solar heat
  - direct
  - diffuse
  - sol air temperature
  - sun position calculations
- g) Design conditions
  - outdoor
  - monthly/daily corrections
  - comfort/critical
  - indoor
  - effective temperature
- h) Thermal comfort.
- i) Space characteristics.
- j) Equipment location.
- k) Zoning.
- l) Internal loads
  - lighting
  - equipment
  - people
  - load profiles
  - internal partitions
- m) Fresh air/AS 1668
- n) Calculation of fabric loads
  - walls
  - roofs
  - floors
- o) Windows
  - glass types and factors
  - shade factors
  - internal and external shading
  - shading from adjacent structures
- p) Air quantity calculation
  - psychrometrics
  - by-pass factor
  - coil load
  - VAV air quantities
- q) Piping and other losses.
- r) Refrigeration plant load.
- s) Equipment selection
  - coils

- air handling
- chillers/boilers
- t) Fresh air preconditioners.
- u) Fresh/exhaust air heat exchangers.
- v) Computer software
- responsible use

#### **2.17.17.2 HVAC load estimating**

Evidence shall show an understanding of HVAC load estimating to an extent indicated by the following aspects:

- a) System design parameters
  - human comfort
  - system requirements in accordance with AS1668
  - heat transfer calculations for complex structures and building components
  - heat and radiation transfer calculations through complex glass structures including various internal and external shading devices
  - indoor air quality
  - olfs and decipols
- b) Complex shading
  - solar data, azimuth and altitude angles
  - shading from adjacent structures
- c) Computer software
  - heat load estimating
  - building performance analysis

#### **2.17.18.1 Thermodynamics fundamentals**

Evidence shall show an understanding of thermodynamics to an extent indicated by the following aspects:

- a) Energy and humanity
  - Need for energy and relationship between energy usage and standard of living
  - Energy conversion - typical processes and efficiencies
  - Sources of energy
  - Solar energy - direct heating, photosynthesis, solar cells, power tower, hydrogen for solar energy, ocean thermal energy collector, solar ponds, wind and wave energy, hydro-electric power
  - Geothermal energy
  - Tidal energy
  - Nuclear energy - fission and fusion, burner and breeder reactors
  - Stored fuel reserves
  - Fuel conservation - reduction in wastage, recycling, greater usage efficiency and use of waste heat
  - Thermodynamics
- b) Basic Concepts

- Nature of matter - atoms, molecules, inter-molecular forces, molecular motion, states of matter
  - Mass and conservation of mass principle
  - Volume, density, specific volume, relative density
  - Force, weight, pressure (atmospheric, gauge and absolute)
  - Temperature (Celsius and Kelvin)
  - Systems and black box analysis
  - Reciprocating piston and cylinder mechanism – pressure ratio and compression ratio
- c) Energy
- Definition and principles
  - Potential energy
  - Kinetic energy
  - Work (linear and rotational), constant and variable force, relationship to pressure and volume change
  - Power (linear and rotational)
  - Sensible heat - specific heat capacity (constant pressure and constant volume)
  - Latent heat
  - Chemical energy - energy content of a fuel
  - Internal energy
- d) Energy transfer in closed and open systems
- Definition of a closed system
  - Calorimetry as an example of a closed system (with or without phase change)
  - Thermodynamics 1
  - Non-flow energy equation - typical applications such as stirring with simultaneous heating or cooling
  - Definition of an open system
  - Mass and volume flow rate and continuity equation
  - Steady flow energy equation (negligible change in kinetic or potential energy) leading to the concept of enthalpy - typical applications such as turbines, compressors, boilers and heat exchangers.
- e) Gases
- Definition of a perfect or ideal gas in terms of the molecular model
  - General gas equation
  - Characteristic gas equation (equation of state)
  - Constant pressure process
  - Constant volume process
  - Isothermal process
  - Polytropic process
  - Adiabatic process
- f) Heat engines
- Definition of a heat engine
  - Essentials of a heat engine - heat source, heat sink, working substance, mechanical power output, working cycle
  - Energy balance for a heat engine (as a black box) and efficiency

- Maximum possible efficiency (Carnot efficiency)
  - Types of heat engines according to working substance, heat source, mechanical arrangement and working cycle
  - Typical practical cycles - Stirling, Otto, Diesel, dual, two stroke (spark and compression ignition. Joule cycle.
  - Thermodynamics 1
- g) Heat engine performance
- Measurement of torque and power output - rope brake, shoe brake, hydraulic dynamometer, electric dynamometer
  - Heat supply rate, efficiency, specific fuel consumption
  - Measurement of indicated power - mechanical indicator, electric/electronic indicator, Morse test
  - Friction power, mechanical efficiency, indicated thermal efficiency
  - Volumetric efficiency
  - Energy balance
  - Performance curves - variable load constant speed, variable speed constant throttle setting.

### 2.17.18.2 Thermodynamics

Evidence shall show an understanding of thermodynamics to an extent indicated by the following aspects:

a) Heat transfer

- Modes of heat transfer
- Conduction through a flat plate, series flat plates, thick and thin wall pipe, composite pipes (eg lagged pipes and drums)
- Convection at a flat surface or tube
- Radiation from a flat surface or tube for black or grey bodies
- Combined conduction and convection through single or multiple flat plates or thin wall tubes
- Combined convection and radiation
- Combined conduction, convection and radiation such as fluid in a tank (convection to wall), through wall and/or insulation (conduction) to outside air (convection and radiation)
- Heat exchangers - parallel, counterflow and cross flow

b) Combustion and fuels

- The combustion process
- Fuels - desirable and undesirable characteristics, solid, liquid and gaseous types, their relative advantages and disadvantages and common methods of combustion
- Air/fuel ration - stoichiometric excess or insufficient air
- Emissions and pollutants and their control
- Combustion equations - element mass balance
- Combustion products - gravimetric basis

c) Steam

- Importance of steam for heat transfer and power production
- Steam/water properties and the inter-relationship between the various properties for

- unsaturated or saturated water or steam either superheated, saturated or wet
- Saturation temperature and pressure, specific enthalpy, specific volume, dryness fraction
- Temperature-specific enthalpy diagram for steam/water
- Use of steam table to determine steam/water properties (any condition except supercritical)
- Steam generation - water tube and fire tube boilers, boiler efficiency
- Safety devices and controls used with boilers
- Steam plant - steam traps, economiser, air, pre-heater, superheater, air/water separators, water treatment, feedwater pump, exhaust gas treatment
- Heat transfer rates to or from steam/water (any condition except supercritical)
- Steam throttling and formation of flash steam
- Steam heat exchangers and barrel calorimeters
- Steam plant for process heating
- Steam plant for power production
- d) Refrigeration/heat pump
  - Basic principles and terminology
  - Vapour compression cycle
  - Performance criteria
  - Types of refrigerant - designation, properties advantages and disadvantages
  - Refrigerant properties using the p-h diagram
  - Ideal vapour compression cycle on the p-h diagram
  - Energy balance and heat transfers in compressor, evaporator and condenser
  - Actual vapour compression cycle and variations from the ideal - pressure loss in lines and non-ideal compression
  - Superheating and subcooling with or without suction/liquid heat exchanger
  - Carnot principle applied to refrigerator and heat pump Principles of evaporative refrigeration, absorption refrigeration, air cycle refrigeration and thermo-electric refrigeration

### 2.17.18.3 Heater exchanger design

Evidence shall show an understanding of heater exchanger design to an extent indicated by the following aspects:

- a) Concepts
- b) Design parameters and limitations
- c) Construction material and components
- d) Testing requirements

### 2.17.19 Fluid mechanics fundamentals

Evidence shall show an understanding of fluid mechanics fundamentals to an extent indicated by the following aspects:

- a) Basic properties of fluids
  - Description of a fluid and the difference between solids and fluids, liquids and gases, hydraulics and pneumatics

- Chemical properties, reaction with metals, corrosiveness, flammability, toxicity, pollution and environmental
  - effects
  - Dissolves gases and particles in liquids (slurries)
  - Foaming of liquids. Basic properties and units - mass, volume, density, specific volume, relative density, force and weight, pressure (absolute, atmospheric and gauge), temperature (Celsius and Kelvin), viscosity, surface tension
  - Vapour pressure of a liquid - saturation vapour pressure
  - Temperature and pressure effects on the basic properties
  - Ideal/perfect gases and liquids
  - Gas laws for ideal gases
  - Fluid Mechanics 1
- b) Components
- Pipes, channels, tubes and ducts (rigid and flexible)
  - Valves - gate, globe, non-return/foot, needle, ball, plug cock, diaphragm, pressure regulating/reducing, safety
  - valves
  - Filters and strainers for gases and liquids
  - Gauges and instruments - pressure and temperature gauges, liquid level gauges, thermometers, thermocouples, manometers, piezometers
  - Pipe fittings - elbows/bends, enlargement/contractions, coupler/unions, tees
  - Tanks and vessels - storage tanks, pressure vessels, header and surge tanks, weirs/dams/reservoirs
  - Nozzles/spray heads
  - Flow measurement instruments - venturi and orifice meters, pitot tube, rotameter, anemometer (fan/hot wire)
  - Pumps/compressors, motors/turbines
  - Actuators - linear (cylinders) and rotary
  - Selection of equipment and instruments considering properties and compatibility
- c) Fluid statics
- Pressure at a point, direction of pressure on a surface
  - Pressure variation with depth in a liquid
  - Pascal's Principle
  - Manometer/piezometer calculations (vertical and inclined)
  - Forces due to fluid pressure on vertical, horizontal and inclined surfaces
  - Centre of pressure
  - Archimedes Principle - buoyancy, flotation, apparent weight and centre of buoyancy
- d) Fluid flow
- Steady and unsteady flow, streamlines and eddies
  - Velocity - average or mean and local
  - Mass and volume flow rate
  - Conservation of mass leading to the Continuity Equation for fluid flow
  - Modification of the Continuity Equation for volume flow of liquids or gases with small changes in density

- Bernoulli Equation for ideal fluids, meaning of pressure, velocity and potential head.  
Total head
- Causes of head loss and modification of the Bernoulli Equation to include a head loss term for real fluids
- e) Fluid power
  - Definition and units for work, torque and power
  - Relationship between force, velocity and power and torque, angular velocity and power
  - Work done by a gas expanding at constant pressure
  - Relationship between fluid power, mass flow rate and head
  - Relationship between fluid power, volume flow rate and pressure
  - Efficiency of a pump or turbine
  - Modification of the Bernoulli Equation to include a pump or turbine in the fluid circuit as well as a head loss term
- f) Forces developed by flowing fluids
  - Impulse-momentum equation for fluid flow
  - Force developed by a jet striking a stationary plate - perpendicular, inclined or curved
  - Force developed by a jet striking a moving plate or blade
  - Force developed by a jet striking a series of moving plates or blades - power developed and efficiency

### **2.17.20 Materials strength fundamentals**

Evidence shall show an understanding of strength of materials to an extent indicated by the following aspects:

- a) Stress and strain
  - normal stress and strain
  - modules of elasticity
  - deformation
  - Poisson's Ratio
  - shear stress and strain
  - modulus of rigidity
  - yield stress, ultimate stress, proportional limit
  - factor of safety
  - allowable stress
- b) Centrally loaded connections
  - bolted connections
  - shear, tensile and bearing stresses
  - centrally loaded welded connections
  - fillet and butt
  - method of failure
  - size and length
  - punching of plates
- c) Thin walled pressure vessels
  - define thin wall

- longitudinal stress
- hoop stress
- d) Properties of plane figures
  - first moment of area
  - second moment of area
- e) Simple beams (point and distribute loads)
  - shear force diagrams
  - bending moment diagrams
  - bending stress
  - deflection by formula
- f) Torsional stress
  - torque diagrams
  - angle of twist
  - torsional shear stress
- g) Thermal stress
  - coefficient of linear expansion
  - thermal stresses in single members

#### **2.17.21.1 Noise and vibration control fundamentals**

Evidence shall show an understanding of noise and vibration control fundamentals to an extent indicated by the following aspects:

- a) Fundamentals of sound
  - frequency
  - decibels
  - octave bands
  - direct sound
  - velocity
  - sound pressure level
  - sound power level
  - sound meters
- b) Noise and people
  - physical measurement of sound
  - weighting networks
  - NR curves
  - noise damage to hearing
  - evaluate daily noise exposures
  - peak noise levels
  - attenuation for hearing protectors
  - excess noise levels permissible
  - noise abatement acts
- c) Identify and analyse problems
  - one-dimensional sound waves

- standing waves
- energy in a sound wave
- sources
- effects of air turbulence
- transmitters
- amplifiers
- absorptivity
- reflectivity
- room characteristics
- acoustic design in buildings
- fan and air noise transmission in ducts
- d) Methods of control
  - natural attenuation
  - sound absorbing materials, placement
  - duct lining
  - lined plenums
  - lined duct splitters
  - duct attenuators
  - white noise
  - vibration isolators
- e) Acoustic specifications
  - attenuator ratings

#### **2.17.21.2 Advanced noise and vibration control**

Evidence shall show an understanding of advance noise and vibration control to an extent indicated by the following aspects:

- a) Fundamentals of sound
  - Frequency
  - Decibels
  - Octave bands
  - Direct sound
  - Velocity
  - Sound pressure level
  - Sound power level
  - Sound meters
- b) Noise and people
  - Physical measurement of sound
  - Weighting networks
  - NR curves
  - Noise damage to hearing
  - Evaluate daily noise exposures
  - Peak noise levels

- Attenuation for hearing protectors
  - Excess noise levels permissible
  - Noise Abatement Act
  - Advanced Noise and Vibration Control
- c) Sound in confined and unconfined spaces
- Inverse square laws
  - Direct and reflective sound
  - Define reverberation time
  - Sabine's formula
  - Absorption coefficients of surfaces
  - Types of absorbers and their operation
  - Insulation performances of partitions
- d) Sound insulation
- Plant room breakout
  - Controlling plant room noise
- e) Duct borne noise
- Sound power spectra for fans
  - Noise attenuation in ducts and fittings
  - Reducing fan noise transmission
  - Regeneration noise
  - Sources of regenerated noise
  - Use tables to estimate regenerative noises
  - Breakout situations
  - Fan noise breakout
  - List methods of controlling breakout
- f) Controlling the cost
- Economical use of attenuation
- g) Vibration
- SHM (Simple Harmonic Motion)
  - Period
  - Frequency
  - Amplitude
  - Estimate frequencies for fans, pumps and refrigeration plant
  - Estimate transmission of vibration
  - Vibration control for building structures
  - Use transmissibility graphs to select springs, vibration eliminators and pads
  - Types of isolation materials and mounting devices
  - Select isolation and mounting devices
  - Inertia blocks
- h) Noise and vibration analysis computer software packages.

### 2.17.22 Refrigeration and food storage technology

Evidence shall show an understanding of refrigeration and food storage technology to an extent indicated by the following aspects:

- a) Food spoilage and possible causes
  - physical damage
  - animal activity
  - chemical breakdown
  - enzyme activity
  - micro-organisms
  - effects of temperature change
  - effects of humidity change
  - effects of freezing on fresh produce
  - effects of slow freezing time
  - effect of refreezing
- b) Food preservation
  - removing or taking out a reactant
  - removing or inactivating the catalyst
  - reducing temperature
  - changing the reaction system
  - irradiation
- c) Micro-organisms
  - conditions for growth
  - potentially hazardous foods
  - cross contamination
- d) Identification of food spoilage
  - recognition and suggest possible cause
  - physical damage
  - animal activity
  - chemical breakdown
  - enzyme activity
  - micro - organisms
- e) Types of heat processing techniques
  - heat processing using steam and water
  - blanching
  - pasteurisation
  - sterilisation
  - evaporation
  - heat processing using hot air
  - dehydration
  - baking and roasting
- f) Types of chilling processing techniques
  - chilling and controlled atmosphere storage
  - freezing
  - freeze drying and freeze concentration

- modified atmosphere combined with low temperature cryovac.

### **2.17.23.1 Industrial refrigeration systems design fundamentals**

Evidence shall show an understanding of industrial refrigeration systems design fundamentals to an extent indicated by the following aspects:

a) Standards and codes

- AS1677, detailed understanding
- AS 3666, overview
- ozone protection regulations
- IIR Ammonia Data Book
- ANSI/IIR standards
- ANSI/ASHRAE Mechanical Refrigeration & IIR bulletins and standards (list will be provided by Rama)

b) Operating characteristics

- pH charts
- refrigerating effect, relate back to air and fluid coolers
- heat of compression, relate back to screw, rotary and reciprocating compressors
- heat rejected high side of the system, relate back to air cooled, evaporative, and water cooled condensers
- variable liquid refrigeration systems & liquid oversee systems
- required mass flow rate of refrigerant and volume flow rate at various points in system
- theoretical compressor power
- required condenser capacity

c) Major system components

- refrigerants, including R717 and R22
- secondary refrigerants
- component lubricant refrigerant compatibility
- evaporators
- condensers, cooling towers
- compressors
- expansion valves
- interconnecting piping and
- isolating valves
- pilot operated valves
- defrost system components for air, water, recycled water, hot gas, electric methods
- refrigerant accumulators and liquid pumps

### **2.17.23.2 Industrial refrigeration system design**

Evidence shall show an understanding of industrial refrigeration system design to an extent indicated by the following aspects:

a) Standards

- AS1677

- ANSI/IIAR Standards
  - ANSI/ASHRAE Standards
  - IIAR Bulletins
- b) Moderate and low temperature industrial refrigeration systems
- revise direct, flooded and pumped liquid recirculation systems
  - evaporators
  - multi-staged compression
  - direct staging
  - cascade staging
  - compound compressors
  - desuperheaters, liquid injection
  - direct expansion intercoolers
  - open and closed intercoolers
  - basic designs of accumulators/intercooler vessels
  - oil cooling methods
  - oil stabilisation, return and oil recovery in flooded systems
- c) Multiple evaporators and multiple compressors
- parallel evaporators
  - multiple temperature systems
  - evaporator pressure regulators
  - temperature control methods
  - parallel compressors
  - pipework layout
  - methods of establishing pressure drop in dry and wet suction lines
- d) Indirect refrigeration systems
- classification according to AS1677
  - applications
  - evaporators
  - heat exchangers, types, construction, selection
  - secondary refrigerants
  - brines
  - antifreeze solutions
- e) Flooded systems
- applications
  - equipment
  - accumulators
  - level controls
  - liquid recirculation pumps
  - liquid pressure relief valve
- f) Cryogenic systems
- applications and equipment
  - system components
  - refrigerants

- design safety
  - economics
  - cascade systems
- g) Basic control sequences
- maintaining evaporator conditions
  - staging and suction pressure control
  - maintaining condenser conditions
  - control of intermediate pressure, methods of industrial refrigeration compressor capacity control

#### **2.17.24 Commercial air conditioning systems design**

Evidence shall show an understanding of commercial air conditioning systems design to an extent indicated by the following aspects:

- a) Design parameters for single-storey buildings (eg offices, restaurants, hotels, bars)
- Customer and objective
  - Customer concept of environment desired
  - Economics
  - Client brief
- b) Relevant design criteria
- Building purpose, location, orientation and shape
  - External environment ambient conditions
  - Internal load diversity
  - Thermal capacity behaviour
  - Thermal load (full and partial)
- c) Zoning and building usage
- Space and building
  - Occupancies, single purpose, multi-purpose
- d) System selection criteria
- Economics
  - Environment
  - Control requirements
  - Existing structures
  - New structures
  - System components
  - Space for equipment and system
  - Selection of appropriate system, equipment, ductwork and components
- e) Systems and applications
- Design features, engineering and selection procedures for direct expansion air conditioning systems:
  - RAC's, split systems, package units
  - Free blow and ducted fan coil units
  - Cooling, heat pump and electric heating

**2.17.25 Statics**

Evidence shall show an understanding of statics to an extent indicated by the following aspects:

## a) Force and gravity

- the concept of force
- characteristics of force
- basic principles
- rectangular components of force
- graphical addition of forces
- mathematical addition of forces
- universal gravitation
- variation in gravity
- weight as force
- types of supports

## b) Equilibrium of concurrent coplanar forces

- concurrent forces
- conditions of equilibrium
- the equilibrant force
- support reactions
- the three force principle
- two and three force bodies

## c) Moment and torque

- moment of force
- addition of moments
- equilibrium of moments
- torque
- equivalent force moment systems

## d) Equilibrium of non-concurrent coplanar forces

- conditions of equilibrium
- calculation of beam reactions (simply supported, cantilever, point load, udi, self-weight)
- resultant of non-concurrent forces

## e) Friction

- coefficient of frictional resistance
- the laws of dry sliding friction
- the angle of friction
- the angle of repose
- friction on inclined planes
- resultant of normal reaction and friction force
- wedges
- stability - overturning versus sliding

## f) Couples

- definition
  - applications
  - moment of a couple
  - replacing a force with a force and a couple
- g) Forces in frames
- general principles
  - method of joints
  - combined force polygon (Maxwell diag)
  - method of sections
  - method of members

### 2.17.26 Commercial refrigeration system design

Evidence shall show an understanding of commercial refrigeration system design to an extent indicated by the following aspects:

a) Commercial refrigeration system types

- medium and low temperature applications
- operating conditions
- system operating and service requirements
- refrigerant types
- components
- multiple evaporator systems
- multiple temperature systems
- multiple compressor (rack) systems
- two stage compressors
- multiplex systems
- defrost requirements and methods
- electric defrost systems
- hot gas defrost systems
- cool gas defrost systems

b) Manufacturer's data

- rating tables
- selection tables
- catalogues.

c) Operating characteristics

- Effects of temperature glide with blended refrigerants,
- Ph Charts,
- Refrigerating Effect,
- Heat of compression,
- Heat Rejected on High Side of the System,
- Required mass flow rate of refrigerant,
- Volume flow rate at various points in system,

- Theoretical compressor power,
  - Required condenser capacity.
- d) Review automatic controls
- refrigerant regulating valves
  - solenoid valves
  - expansion valves
  - pressure regulating valves
  - cycling controls
  - pressure-stats
  - thermo-stats
  - defrost controls
  - monitoring and alarm controls
  - energy management systems
  - refrigeration automation systems
  - control strategies
  - control modes

### **2.17.27 Air conditioning system design**

Evidence shall show an understanding of air conditioning system design to an extent indicated by the following aspects:

- a) Design parameters for multi-storey building
- customer and objective
  - customer concept of environment desired
  - economic
  - client brief
- b) Relevant design criteria
- building purpose, location, orientation and shape
  - external environment ambient conditions
  - internal load diversity
  - thermal capacity behaviour
  - thermal load (full and partial)
- c) Zoning and building usage
- space and building
  - occupancies, single purpose, multi-purpose
- d) System selection criteria
- economics
  - environment
  - control requirements
  - existing structures
  - new structures
  - system components
  - space for equipment and system

- selection of appropriate system
- e) System and applications
  - design features, engineering procedures and controls for:
  - direct expansion - self contained room/zone, heat pump, multi-zone fan-coils, central station
  - all water - room fan-coil
  - all-air - constant volume variable temperature, face and bypass, reheat, constant temp variable volume, constant volume induction, dual-duct, dual-conduit
  - air water - induction unit, primary air fan- coil
- f) HVAC energy conservation techniques
  - heat recovery systems
  - night cycle
  - optimum stop/start
  - purge cycles
  - chiller/boiler/cooling tower sequencing
  - economy cycles (based on temperature or enthalpy)
  - supply air reset
  - supply water reset
  - condenser water temperature reset
  - power demand control
  - load limiting
  - load shedding
  - set point relaxation
  - ventilation cycles
  - plant - fixed OA to economy, boiler to electric reheat, constant volume to VAV etc.
  - cost-benefit (payback)

### **2.17.28 Psychrometrics - advanced**

Evidence shall show an understanding of advanced psychrometrics to an extent indicated by the following aspects:

- a) Complex psychrometric processes
  - revise sensible cooling and heating and evaporative (adiabatic) cooling
  - cooling and dehumidification
  - cooling and dehumidification with high latent load
  - cooling and dehumidification all out door air
  - cooling and dehumidification all out door air with dehumidified air requirements less than supply air
  - cooling with evaporative humidification
  - cooling with near isothermal humidification
  - spray process to include cooling and dehumidification, cooling and humidification with heated spray water, heating and humidification.
  - partial load processes
  - reheat

- bypass of, RA only and mix of RA & OA
- variable air volume
- variable coil effective surface temperature
- split coil, horizontal, vertical and intertwined.
- b) System performance
  - saturation efficiency of sprayers
  - system capacity calculated from air quantity and enthalpy change
- c) Required plant capacity and airflow rates
  - effects of coil bypass factor and ADP
  - calculation of dehumidified air quantity, using both TSH and ERSH methods.
- d) Recap on psychrometrics formulae and charts
  - properties of air
  - gas constants
  - derivation of air constants
  - combined gas laws
  - Dalton’s law of partial pressures
  - Carrier’s equation
  - psychrometric property tables
  - psychrometric charts
  - air mixing equations
  - air quantity equations
  - indirect evaporative coolers
  - analysis of cooling coil selection and performance
  - psychrometric analysis of:
    - air conditioning in tropics
    - all outdoor air
    - LCV/HWF systems
    - psychrometric analysis using equations and tables

### **2.17.29 Exhaust systems design**

Evidence shall show an understanding of exhaust systems design to an extent indicated by the following aspects:

- a) Relevant codes and regulations
  - health and safety
  - noise
  - smoke
  - fire
  - hazard identification
- b) System types
  - applications
  - application flow charts
  - system requirements

- hazard identification
  - effluent types and removal
  - relationship with smoke spill systems
  - supply air dilution applications
  - natural ventilation applications
  - fan assisted exhaust applications
  - replenishment of exhaust air
  - system components
- c) Duct design
- static, velocity, total pressure
  - pressure drop
  - fouling
  - transitions
  - elbows
  - fan position and mounting
  - noise and noise attenuation
  - requirements for access and maintenance
  - system integrity
- d) Fan and motor selection
- applications
  - suitable fan types
  - motor rating and suitability
  - balancing the fan duct system
  - flame proofing
- e) Filters and filter selection
- types and applications
  - capture velocity
- f) Outlet design and location
- prevailing winds
  - position relative to air intakes
  - weather and bird proofing
- g) Cycling/operation control
- applications
  - code/regulation requirements
  - monitoring of contaminants
  - contaminant detection
  - sensors
  - variable speed fans
  - flame proofing of control equipment

### **2.17.30 Heating systems design**

Evidence shall show an understanding of heating systems design to an extent indicated by

the following aspects:

a) Heating techniques:

- electric resistance heaters
- hot water boilers
- steam boilers
- refrigeration heat pump
- heat reclaim
- thermal storage systems
- comparative heating costs
- Australian Standards

b) Heating equipment selection

- double bundle condensers
- heat pumps
- boilers
- coils
- expansion tanks
- pumps, characteristics curves
- control valves, types, flow diagrams,
- air purge points
- water treatment
- pipe anchors and expansion joints

c) Hydronic system configuration

- piping configurations
- single pipe closed circuit
- two pipe closed circuit
- direct return
- three pipe closed circuit with reversed return
- three way diverting valves
- risers and headers
- component location
- evaluation of piping configurations
- capital cost
- owning and operating costs
- noise vibration
- maintenance
- future expansion
- commissioning and balancing
- operating characteristics
- cavitation

d) System pipe sizes

- pipe dynamic and friction losses for different materials
- fitting pressure losses for different materials

- thermal heat losses
- bare, insulated and underground pipes

### **2.17.31 Hydronic system design**

Evidence shall show an understanding of hydronic system design to an extent indicated by the following aspects:

a) Principles of fluid flow

- properties of fluids
- flow of ideal fluids
- fluid flow equipment
- Bernoulli Theorem
- fluid flow in pipes

b) Pressure loss and static head - calculation

- flow throughout system
- pressure throughout system
- friction losses
- pressure loss charts for: copper, steel, UPVC
- dynamic losses
- fitting pressure losses
- fitting interaction
- total losses
- calculating system (static and dynamic) head

c) Pump performance and selection

- pump classification and types
- pump performance terminology, discharge, head, power, efficiency, speed, net positive suction head required
- pump performance curves
- pump laws
- system head and 'K' factor
- balance points
- energy considerations
- pump cavitation
- calculation of net positive suction head available
- Series and parallel operation

d) Pipe sizing

- maximum friction rate
- erosion and equipment life
- industry standards
- recommended system water velocities
- economic balance - first cost and operating cost

### **2.17.32 Sources of technical development and processes for their adoption**

Evidence shall show an understanding of sources of technical development and processes for their adoption to an extent indicated by the following aspects:

- a) Sources of information on alternative or new technologies
  - Industry organisations
  - Industry technical journals
  - Government and private research papers/literature
  - Manufacturers' bulletins
- b) Comparison of technical data from different manufacturers
- c) Evaluating performance benefits and limitations of new and developed technologies for given applications, encompassing:
  - Capital cost benefits
  - Operations efficiency
  - Risk hazardous and issues related to environmental and health and safety
  - Functionality
- d) Processes to facilitate adoption

Note:

Research; analyses; reporting; recommending; and the like, utilising a range of techniques, processes and technologies

### **2.17.33 Refrigeration systems**

Evidence shall show an understanding of introduction to refrigeration to an extent indicated by the following aspects:

- a) Major components, type and functions:
  - evaporators
  - compressors
  - expansion devices
  - ancillary components
  - refrigerants
- b) System operation and performance:
  - thermodynamic properties of refrigerants
  - pressure enthalpy charts
  - the refrigerant cycle
  - the refrigerant cycle represented on pH charts
  - introduction to refrigerating effect, heat of compression, heat rejected on high side, co-efficient of performance, liquid sub-cooling suction superheating
  - effects on performance of changing operating pressures, liquid sub-cooling, suction superheating
- c) Application of refrigeration:
  - introduction to industrial refrigeration, specific system component types and refrigerants applied.
  - scope of commercial refrigeration, specific system component types and refrigerants applied
- d) Refrigerated enclosures and cabinets:
  - merchandising and display cabinets:

- deep freeze meat
  - dairy
  - fruit and vegetable
  - multi-deck display
  - single deck
  - well type
  - island cases
  - glass door
  - reach door
  - reach in merchandisers
  - defrosting methods
  - cold rooms and freezer rooms
    - types and construction
    - insulation
    - vapour barrier
    - frost heave
    - interior fittings
    - location of equipment
    - defrosting methods
    - cold tracking
    - trace heating
  - storage conditions
    - temperature
    - relative humidity
    - air velocity
    - air patterns
    - load limits
- e) Air conditioning chills & DX coil types and construction

### **2.17.34 Air conditioning systems**

Evidence shall show an understanding of air conditioning to an extent indicated by the following aspects:

a) Occupational health requirements:

- WH&S requirements
- BCA requirements
- AS1668 parts 1 & 2
- AS3666
- noise and vibration
- air quality
- sick building syndrome

b) Operating requirements:

- ventilation
- air distribution

- terminal velocity
- temperature
- relative humidity
- air quality
- noise
- basic psychrometrics
- c) Operating modes
  - ventilation
  - evaporative cooling
  - ventilation and cooling
  - ventilation and heating
  - dehumidification
  - dehumidification
  - dehumidification and reheat
  - humidification
- d) Operating terminology/characteristics:
  - throw, drop
  - primary and secondary air
  - coanda effect
- e) HVAC system components and functions:
  - fans
  - ducting
  - registers
  - dampers
  - filters
  - cooling coils
  - heating coils
  - induction units
  - fan coil units
  - terminal units
  - humidifiers, pumps and sprayers
  - hydronic systems and components
- f) Applications and construction of air conditioning systems:
  - applications
    - residential, commercial, low and high rise, industrial ventilation and air conditioning
  - packaged plant
    - RACs, split systems (wall and floor console, ceiling fan coil), wall facia, roof top, reverse cycle option central station plant
  - all air systems, constant volume variable temperature, constant temperature variable volume, air/water systems
  - all water system, multi-zoning, thermal storage systems
  - basic air conditioning system diagrams
  - duct layout

- hydronic layout
- unit/conditioner drawings
- g) HVAC control systems:
  - basic principles
  - terminology
  - symbols and diagrams
  - basic applications

### 2.17.35 Applied psychrometrics

Evidence shall show an understanding of applied psychrometrics to an extent indicated by the following aspects:

- a) Fundamentals and terms
  - sensible heat factor (conditioned space and grand total)
  - quantity of air
  - effective surface temperature
  - bypass factor
- b) Coil characteristics
  - processes
  - sensible cooling
  - cooling, dehumidification
  - sensible heating
- c) Spray processes
  - saturation efficiency
  - processes
  - adiabatic/evaporative cooling
  - cooling & humidification
  - sensible cooling
  - cooling and/or humidification
  - chemical dehumidification process: dehumidification & heating
  - cooling tower characteristics: humidification & cooling
  - indirect evaporative cooling process
- d) System analysis
  - partial load
  - reheat control
  - bypass control
  - volume control
  - dump back systems
  - low velocity coils
- e) Psychrometric formulae and charts
  - properties of air
  - gas constants
  - derivation of air constants

- combined gas laws
- Dalton’s law of partial pressures
- Carrier’s equation
- psychrometric property tables
- air mixing equations
- air quantity equations

### **2.17.36 Ventilation systems**

Evidence shall show an understanding of ventilation to an extent indicated by the following aspects:

- a) Requirements necessary to supply/install/maintain a ventilation/air conditioning system. (not design)
- b) Fan classifications and applications.
- c) Identification and correct usage of various items of test equipment.
- d) Procedures to be followed when conducting an air balance.
- e) Filtration applications and service requirements of ventilation - air conditioning systems.
- f) Noise and vibration sources in a ventilation – air conditioning system.
- g) Site work/architectural drawings.
- h) Auxiliary equipment.
- i) Layout and zoning of duct work system.
- j) Occupational health aspects.

### **2.17.37 Beverage vending cabinets**

Evidence shall show an understanding of beverage vending cabinets to an extent indicated by the following aspects:

- a) Types, construction and operation of refrigerated drink vending cabinets encompassing:
  - Coin operated mechanism on the refrigerated vending cabinet.
  - Electro-mechanical mechanism on the coin operated vending cabinet.
  - Electronic mechanism on the coin operated vending cabinet.
- b) Specialised components and features required for the operation of a coin operated refrigerated vending cabinet encompassing:
  - Electrical / electronic control circuitry.
  - Air distribution and air flow curtains.
  - Lighting arrangements.
- c) Installation requirements for a refrigerated coin operated vending cabinet encompassing:
  - Location requirements
  - Access requirements and avoidance obstruction
  - Power supply and electrical service requirements
- d) System operating conditions for a coin operated refrigerated vending cabinet.
- e) Commissioning, service and maintenance procedures of a refrigerated coin operated vending cabinet encompassing:
  - Electrical / electronic control devices checks and adjustments.
  - Air flow checks and adjustments.

- Mechanical checks and adjustments
- Typical faults

## 2.18 Safety

### 2.18.1 Occupational Health and Safety principles

Evidence shall show an understanding of Occupational Health and Safety to an extent indicated by the following aspects

- a) The basic legal requirements covering occupational health and safety in the workplace encompassing:
  - general aims and objectives of the relevant state or territory legislation relating to OHS.;
  - employer and employee responsibilities, rights and obligations
  - major functions of safety committees and representatives); and
  - powers give to Occupational Health and Safety Inspectors.
- b) The requirements for personal safety in the workplace encompassing:
  - the safety precautions that are required to ensure personal safety in the workplace
  - potential hazards in relation to improper industrial housekeeping; and
  - sources of pollution in an engineering environment and outline control measures
- c) Workplace safety check, identifying potential workplace hazards and suggested measures for accident prevention encompassing:
  - safety checklist for a typical workplace environment,
  - identifying and reporting potential workplace hazards
  - methods of prevention of safety hazards within a typical workplace environment
- d) working safely with electrical tools or equipment encompassing:
  - causes of electrical accidents and state the effects that electric shock can cause.);
  - purpose of circuit protection devices, such as fuses, circuit breakers and Residual Current Devices (RCDs), and
  - safe isolation of an electrical supply.
- e) emergency procedures for the rescue of an electric shock victim equipment
- f) emergency first aid for an electric shock victim

Note:

Emergency first aid is limited to first-on-the scene assistance to a victim of electric shock , and basics of CPR.

### 2.18.2 Electrical safe working practices

Evidence shall show an understanding of working safely on or around electrical equipment through the application of risk management principles and control measures for dealing with non-electrical hazards and extra-low voltage, low-voltage and high-voltage hazards and high-current hazards. The following aspects indicate the extent of understanding required:

- a) Risk management and assessment of risk encompassing:
  - Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
  - Arrangement of power distribution and circuits in an electrical installations
  - Parts of an electrical system and equipment that operate at low-voltage and extra-

low voltage,

- Parts of an electrical system and equipment where high-currents are likely.

Risks and control measures associated with high-voltage encompassing:

- Parts of an electrical system and equipment that operate at high-voltage,
- The terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of high-voltage, and
- Control measures used for dealing with the hazards of high-voltage.

d) Optical fibre safety encompassing:

- Coherent optical sources and joining procedures
- Laser safety class 3a devices or their replace

e) Risks and control measures associated with low voltage encompassing:

- Risks associated with modifying electrical installations, fault finding, maintenance and repair.
- Control measures before, while and after working on electrical installations, circuits or equipment.
- Isolation and tagging-off procedures.
- Risks and restrictions in working live.
- Control measures for working live.

f) Risks and control measures associated with harmful dusts and airborne contaminants.

Note

Sources include thermal insulation, fibrous cement materials and asbestos and other fibre reinforced switchboard materials.

g) Safety, selection, use, maintenance and care of test equipment encompassing:

- Safety characteristics of electrical testing devices,
- Safe use of electrical testing device, and
- Checks and storage methods for maintaining the safety of testing devices.

### **2.18.3.1 Refrigeration and air conditioning safe working practices**

Evidence shall show an understanding of working safely with refrigeration and air conditioning systems through the application of risk management principles and control measures for dealing with refrigerant gas hazards and health hazards associated with open water systems. The following aspects indicate the extent of understanding required.

a) Risk management and assessment of risk encompassing:

- Principle and purpose of risk management, and
- Processes for conducting a risk assessment

b) Hazards and risk control measures associated with refrigeration/air conditioning components and systems encompassing:

- Harmful effects of refrigerant gases
- Control measures for the use, handling and storage of refrigerants
- Risks associated with modifying refrigeration/air conditioning installations, fault finding, maintenance and repair.
- Control measures before, while and after working on refrigeration/air conditioning components and systems.

c) Safety, selection, use, maintenance and care of test equipment encompassing:

- Safety characteristics of refrigeration/air conditioning testing/measuring devices,

- Safe use of testing/measuring device, and
- Checks and storage methods for maintaining the safety of testing/measuring devices.

### 2.18.3.2 Split air conditioning systems safe working practices

Evidence shall show an understanding of working safely on or around split air conditioning systems through the application of risk management principles and control measures for dealing with electrical, chemical and other hazards. The following aspects indicate the extent of understanding required.

- a) Risk management and assessment of risk encompassing:
- Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards and risk control measures associated with split air conditioning components and systems encompassing:
- Harmful effects of refrigerant gases
  - Control measures for the use of refrigerants
  - Risks associated with installations of split air conditioning systems
  - Control measures before, while and after installing on split air conditioning systems.
- c) Safety, selection, use, maintenance and care of tools and equipment encompassing:
- Safety characteristics of refrigeration/air conditioning testing/measuring devices,
  - Safe use of testing/measuring device, and
- d) Checks and storage methods for maintaining the safety of testing/measuring devices.

### 2.18.4 Remote area power supply safe working practices

Evidence shall show an understanding of working safely on or around remote area power supplies (RAPS) through the application of risk management principles and control measures for dealing with hazards typical of RAPS systems. The following aspects indicate the extent of understanding required.

- a) Types of hazards in and around remote area power supplies

Note:

In addition to the safety hazards found in most workplace RAPS systems are likely to have the hazards related to electricity supplied from more than one source, rotating machines, fuels and oils, exhaust fumes, and acids and flammable gases from batteries.

- b) Measures for dealing with hazards in and around remote area power supplies encompassing:

- Purpose and methods for isolation and de-energisation of power supplies

Note:

Isolation and de-energisation includes processes for preventing generator from automatically starting and isolating photo voltaic arrays, wind driven generators, battery and inverter power sources prior to and during maintenance & repair activities

- Purpose and method for ensuring adequate area ventilation

Note:

Adequate ventilation is in reference to exhaust fumes from generator prime movers and safe fuel storage.

- Safe fuel storage practices
- Methods for limiting access to plant areas

- Types and locations of safety signs.
- c) Purpose and use of personal protective equipment

### **2.18.5 Rail safe working practices**

Evidence shall show an understanding of working safely in rail networks and rail systems through the application of risk management principles and control measures for dealing with track and equipment hazards. The following aspects indicate the extent of understanding required:

- a) Rail enterprise safety standard and procedures
- b) Rail safe working requirements
- c) Possessions protection and management

### **2.18.6 Hazardous area safe working practices**

Evidence shall show an understanding of working safely in hazardous areas to an extent indicated by the following aspects:

- a) The main features and purpose of a ‘clearance to work’ system;
- b) Typical safety procedures that should be followed before entering a hazardous area;
- c) The purpose of gas detectors and their use and limitations encompassing:
  - Effects of temperature on gas and vapour detection;
  - Frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise;
  - Factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;
  - Safety in use of gas detectors, for example, ‘read and run concept’
- d) Safety measures to be taken when working in a hazardous area.
- e) The roles of the parties involved in the safety of hazardous areas encompassing:
  - common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;
  - where assistance and further information can be obtained to assist persons with hazardous area responsibilities.

Note:

1. Examples include Standard bodies, experienced consultants;
2. Persons with hazardous area responsibilities include the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities; insurers.

### **2.18.7 Instrumentation safe working practices**

Evidence shall show an understanding of working safely on or around process equipment through the application of risk management principles and control measures for dealing with hazardous materials and processes. The following aspects indicate the extent of understanding required.

- a) Risk management and assessment of risk encompassing:
  - Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards associated with processing and processed products, encompassing:
  - Types of materials encountered in instrumentation work
  - Hazardous materials
  - Hazardous areas
  - Safety and environmental consequences of uncontrolled hazardous materials
- c) Risk control measures associated with hazardous materials and hazardous areas
- d) Risk control measures associated with electrical equipment and systems.

#### **2.18.8.1 Occupational Health and Safety, supervisory responsibilities**

Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

- a) Provisions of relevant occupational health and safety legislation
- b) Principles and practice of effective occupational health and safety management
- c) Workplace hazards, range and selection of control measures
- d) Organisational health and safety management systems and policies and procedures needed for legislative compliance
- e) Impact of characteristics and composition of the workforce on occupational health and safety management
- f) Relevance of occupational health and safety management to other organisational management policies, procedures and systems.
- g) Analysis of entire work environment and judge occupational health and safety interventions
- h) Analysis of relevant workplace data
- i) Ability to assess resources needed for risk control.

#### **2.18.8.2 Occupational Health and Safety, enterprise responsibilities**

Evidence shall show an understanding of OHS enterprise responsibilities to an extent indicated by the following aspects:

- a) Provisions of relevant health and safety legislation
- b) Principles and practice of effective occupational health and safety management
- c) Management arrangements relating to regulatory compliance
- d) Enterprise hazards and risks, control measures and relevant expertise required
- e) Characteristics and composition of workforce and their impact on occupational health and safety management
- f) Relevance of enterprise management systems to occupational health and safety management
- g) Analysis of working environment and design of appropriate occupational health and safety management systems
- h) Analysis of relevant data and evaluation of occupational health and safety system effectiveness
- i) Assess resources to establish and maintain occupational health and safety management systems.

### 2.18.9 Electronic safe working practices

Evidence shall show an understanding of working safely on or around electronic equipment through the application of risk management principles and control measures for dealing with non-electrical hazards and extra-low voltage, low-voltage and high-voltage hazards and high-current hazards. The following aspects indicate the extent of understanding required.

- a) Risk management and assessment of risk encompassing:
  - Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
  - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
  - Parts of an electronic systems and equipment where high-currents are likely.
- c) Risks and control measures associated with high-voltage encompassing:
  - Parts of an electronic systems and equipment that operate at high-voltage,
  - The terms used - ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of high-voltage, and
  - Control measures used for dealing with the hazards of high-voltage.
- d) Risks and control measures associated with low voltage encompassing:
  - Risks associated with installation, fault finding, maintenance and repair.
  - Control measures before, while and after working on electronic systems or equipment
  - Isolation and tagging-off procedures.
  - Risks and restrictions in working live.
  - Control measures for working live.
- e) Risks and control measures associated with the high levels of radiation encompassing:
  - RF hazards
  - Maximum exposure levels to RF
  - Maximum exposure to microwave radiation
- f) Optical fibre safety encompassing:
  - Coherent optical sources and joining procedures
  - Laser safety class 3a devices or their replace
- g) Safety, selection, use, maintenance and care of test equipment encompassing:
  - Safety characteristics of electrical testing devices,
  - Chemical cleaning solvents, glues and joining wastes used in electronics,
  - Safe use of electrical testing device, and
  - Checks and storage methods for maintaining the safety of testing devices.

### 2.18.10 Medical equipment safe working practices

Evidence shall show an understanding of working safely with medical equipment and treatment areas the application of risk management principles and control measures for dealing with infection hazards. The following aspects indicate the extent of understanding required:

- a) Risk management and assessment of risk encompassing:

- Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards associated with medical equipment, encompassing:
- Infections
  - Toxic materials
  - Electrical components
  - Radiation
- c) Risks and control measures associated with working with medical equipment

### **2.18.11 Fire protection equipment safe working practices**

Evidence shall show an understanding of working safely on or around fire protection equipment through the application of risk management principles and control measures for dealing with electrical, chemical and other hazards. The following aspects indicate the extent of understanding required.

- a) Risk management and assessment of risk encompassing:
- Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
- Arrangement of power distribution and circuits in an electrical installations
  - Parts of an electrical system and equipment that operate at low-voltage and extra-low voltage,
  - Parts of an electrical system and equipment where high-currents are likely.
- c) Risks and control measures associated with fire protection equipment encompassing:
- Procedures for isolating/reinstating and disconnection and reconnection of supplies in excess of extra-low voltage
- Note.
1. Isolation and disconnection and reconnection is required to be performed by an appropriately qualified and authorised persons.
- Arrangements for isolating/reinstating fire protection systems to inhibit back-to-base signals to monitoring station.
  - Arrangements for isolating/reinstating fire protection systems to inhibit alarms operating fire protection suppression equipment
  - Arrangements for isolating/reinstating sections or parts of a fire protection system to inhibit alarms during building maintenance or system testing.
  - Interface arrangements to isolate control functions between different fire protection building service systems
  - Documentation and licensing requirements for working on fire protection systems
  - Identification of personal and environmental hazards in working on fire protection systems.
  - Control measures used for dealing with the hazards related to fire protection systems

### **2.18.12 Business equipment servicing safe working practices**

Evidence shall show an understanding of business equipment servicing safe working practices to an extent indicated by the following aspects:

- a) Risk management and assessment of risk encompassing:
  - Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
  - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
  - Parts of an electronic systems and equipment where high-currents are likely.
- c) Risks and control measures associated with high-voltage encompassing:
  - Parts of an electronic systems and equipment that operate at high-voltage,
  - The terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of high-voltage, and
  - Control measures used for dealing with the hazards of high-voltage.
- d) Risks and control measures associated with low voltage encompassing:
  - Risks associated with installation, fault finding, maintenance and repair.
  - Control measures before, while and after working on electronic systems or equipment
  - Isolation and tagging-off procedures.
  - Risks and restrictions in working live.
  - Control measures for working live.

### **2.18.13 Appliance servicing working practices**

Evidence shall show an understanding of appliance servicing working practices to an extent indicated by the following aspects:

- a) Risk management and assessment of risk encompassing:
  - Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
  - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
  - Parts of an electronic systems and equipment where high-currents are likely.
- c) Risks and control measures associated with high-voltage encompassing:
  - Parts of an electronic systems and equipment that operate at high-voltage,
  - The terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of high-voltage, and
  - Control measures used for dealing with the hazards of high-voltage.
- d) Risks and control measures associated with low voltage encompassing:
  - Risks associated with installation, fault finding, maintenance and repair.
  - Control measures before, while and after working on electronic systems or equipment
  - Isolation and tagging-off procedures.
  - Risks and restrictions in working live.
  - Control measures for working live.

#### 2.18.14 Aerial safety practice

Evidence shall show an understanding of working safely on or around aerial cabling through the application of risk management principles and control measures for dealing with electrical hazards. The following aspects indicate the extent of understanding required.

- a) Risk management and assessment of risk encompassing:
  - Principle and purpose of risk management, and
  - Processes for conducting a risk assessment
- b) Hazards associated with low-voltage, extra-low voltage and high-currents encompassing:
  - Parts of an electronic systems and equipment that operate at low-voltage and extra-low voltage,
  - Parts of an electronic systems and equipment where high-currents are likely.
- c) Risks and control measures associated with high-voltage encompassing:
  - Parts of an electronic systems and equipment that operate at high-voltage,
  - The terms ‘touch voltage’, ‘step voltage’, ‘induced voltage’ and ‘creepage’ as they relate to the hazards of high-voltage, and
  - Control measures used for dealing with the hazards of high-voltage.
- d) Risks and control measures associated with low voltage encompassing:
  - Risks associated with installation, fault finding, maintenance and repair.
  - Control measures before, while and after working on electronic systems or equipment
  - Isolation and tagging-off procedures.
  - Risks and restrictions in working live.
  - Control measures for working live.

#### 2.18.15 Trenching safety practices

Evidence shall show an understanding of working safely on or around cable trenches through the application of risk management principles and control measures for dealing with trenching hazards. The following aspects indicate the extent of understanding required.

- a) Identification of trenching conditions
- b) Notification of relevant authorities/utilities
- c) Digging and trenching equipment safety
- d) Methods of shoring
- e) Public safety
- f) Personal safety equipment
- g) Permits

#### 2.18.16 Documenting hazards and identifying risks

Evidence shall show an understanding of occupational hazard identification, risk assessment and control measures to eliminate or mitigate the risk to an extent indicated by the following aspects:

- a) Hazard identification by work-site inspections involving visual checks, looking at ways work can be carried out, consulting with others, review of prior incident reports, using manufactures equipment details
- b) Recording hazards and assessing the risk in relation to voltage levels, nature of the job, number of people involved, plant, machinery and equipment involved, working

- environment and conditions, capability and experience and age of the people doing the work and foreseeable abnormal conditions.
- c) Determine the degree of the risk in relation to high (potential to kill or permanent disability), medium (potential to cause an injury or illness of a permanent nature) or low (potential to cause a cause minor injury requiring first aid but no permanent disability)
  - d) Identify control measures so as to eliminate the risk (discontinue activity, use different approaches to the work, use different equipment or fix faulty machinery), redesign the equipment or work process and/or adopt administrative procedures and use of personal protective equipment.
  - e) Monitor and review processes to ensure control measures remain valid, are updated should an accident occur, unforeseen hazards are identified and/or work practices, equipment or material change.
  - f) Principles and legal responsibilities of respective parties in managing and administering hazards and assessing risk in the workplace; with particular attention to elimination and mitigation measures, and documentation requirements for identifying risks and documenting hazards.
  - g) Practices and processes associated with implementing hazards identification and risk management

### **2.18.17 Powerline safety practices**

Evidence shall show an understanding of working safely on or around powerlines through the application of risk management principles and control measures for dealing with hazards typical around powerlines. The following aspects indicate the extent of understanding required.

- a) Items of protective apparatus and apparel used by lineworkers and states their applications.
- b) Methods of carrying, erecting, collapsing and lower an extension ladder
- c) Maintenance requirements for wood and fiberglass ladders.
- d) Methods of climbing and working on an overhead structure encompassing:
  - determining whether a pole is safe to climb.
  - inspecting lineworkers body belt.
  - knots and hitches appropriate to the requirements of a lineworker.
- e) Procedures for establishing an effective road traffic management scheme encompassing:
  - purpose of traffic management in accordance with relevant statutory requirements.
  - lineworkers responsibilities in accordance with relevant statutory and electricity supply industry requirements.
  - procedure used to provide an effective traffic management scheme.
  - use of a two-way radio.
- f) Application of various fire fighting mediums and operation equipment used to extinguish small fires compassing:
  - extinguishing mediums for various types of fires.
  - precautions for personal protection when fighting small fires.
  - selection and operation of the appropriate portable fire extinguisher for a specific type of fire.
- g) Rescue procedures for victims who become incapacitated encompassing:
  - procedure for rescuing a person from heights.
  - procedure to rescue a person from confined spaces

## 2.19 Special requirements

### 2.19.1 Hazardous areas and explosion-protection principles

Evidence shall show an understanding of hazardous areas and explosion-protection principles to an extent indicated by the following aspects:

- a) Properties of combustible substances and their potential to create an explosive hazard encompassing:
- condition in the workplace that will lead to an explosion;
  - the terms ‘combustion’, ‘ignition’ and ‘propagation’;
  - explosive range of substances encountered in the workplace i.e. LEL/UEL;
  - explosive parameters of substances as given in tables of substance properties
- Note:  
Combustible materials are gases, vapours (from liquids), and dusts; flash point.
- the difference between gases and vapours; and
  - the toxic nature of gases and vapours and potential harmful consequences.
- b) The nature of hazardous areas encompassing:
- the Standards definition of a ‘hazardous area’;
  - the recommended methods for classifying the type and degree of explosion hazard in an area;
  - hazardous area classifications as defined by Standards; and
  - factors that are considered when a hazardous area is classified.
- c) The basics of how explosion-protection is achieved by the methods of exclusion, containment, energy limitation, dilution, avoidance of ignition source.
- d) Occupational Health and Safety responsibilities related to hazardous areas encompassing:
- the main features and purpose of a ‘clearance to work’ system;
  - typical safety procedures that should be followed before entering a hazardous area;
  - the purpose of gas detectors and their limitations;
  - effects of temperature on gas and vapour detection;
  - frequency of monitoring for presence of gas or vapours, i.e. effects of temperature rise;
  - factors affecting the accuracy of gas detectors, for example, contamination, condensation, temperature;
  - safety in use of gas detectors, for example, ‘read and run concept’
  - the safety precautions to be taken when working in a hazardous area.
- e) The roles of the parties involved in the safety of hazardous areas encompassing:
- common Acts and Regulations related to the safety of hazardous areas and the Authorities responsible for their implementation;
  - where assistance and further information can be obtained to assist persons with hazardous area responsibilities, for example, Standard bodies, experienced consultants; and
  - the hazardous area responsibilities of the owner of premises in which a hazardous area exists; the occupier of premises in which a hazardous area exists; enterprises and personnel engaged in installation and/or maintenance of explosion-protection systems; enterprises and personnel engaged in the classification of hazardous areas

and/or design of explosion-protection systems; enterprises and personnel engaged in the overhaul, modification and/or assessment of explosion-protected equipment; enterprises and personnel engaged in the inspection of explosion-protection installations; manufacturers of explosion-protected equipment; designated authorities; insurers.

### **2.19.2 Explosion-protected equipment**

Evidence shall show an understanding of the principles of the following explosion-protection techniques: Flameproof (Ex ‘d’); Increased safety (Ex ‘e’); Non-sparking (Ex ‘n’); Intrinsic safety (Ex ‘i’) and Pressurization (Ex ‘p’) for gas atmospheres and Dust-exclusion enclosures (Ex ‘tD’); Pressurization (Ex ‘pD’); Encapsulation (Ex ‘mD’); and Intrinsic safety (Ex ‘iD’) for dusts. The following aspects indicate the extent of understanding required:

- a) The principles of each explosion-protection technique, the methods used and how each technique works.
- b) How explosion-protected equipment is identified by the ‘Ex’ symbol marked on the equipment, including old equipment and equipment certified in another country.
- c) Visible conditions or actions that would void the explosion-protection provided by a particular technique.

### **2.19.3 Flameproof (Ex‘d’) explosion-protection technique**

Evidence shall show an understanding of the characteristic and application of Flameproof (Ex ‘d’) explosion-protection technique to an extent indicated by the following aspects:

- a) The purpose and characteristics of the design features of apparatus and circuits protected by the flameproof (Ex ‘d’) technique.

Note:

Examples of characteristics and design features are flame paths, integrity under pressure, pressure piling, and enclosure entries.

- b) Typical situations where the flameproof explosion-protection technique is used;
- c) Actions or conditions that would void the protection provided the Flameproof technique; and
- d) The use of Standards in determining the requirements to which the design of the flameproof explosion-protected apparatus shall comply.

### **2.19.4 Increased safety (Ex‘e’) explosion-protection technique**

Evidence shall show an understanding of the characteristic and application of Increased safety (Ex ‘e’) explosion-protection technique to an extent indicated by the following aspects:

- a) The purpose and characteristics of the design features of apparatus and circuits protected by the Increased safety (Ex ‘e’) technique.

Note:

Examples of characteristics and design features are temperature rise, maximum power dissipation, protection devices, certified components, creepage and clearance distances, absence of sparking contacts and enclosure entries.

- b) Typical situations where the Increased safety explosion-protection technique is used;
- c) Actions or conditions that would void the protection provided the Increased safety technique; and
- d) The use of Standards in determining the requirements to which the design of the

Increased safety explosion-protected apparatus shall comply.

### **2.19.5 Non-sparking (Ex'n') explosion-protection technique**

Evidence shall show an understanding of the characteristic and application of Non-sparking (Ex 'n') explosion-protection technique to an extent indicated by the following aspects:

a) The purpose and characteristics of the design features of apparatus and circuits protected by the Non-sparking (Ex 'n') technique.

Note:

Examples of characteristics and design features are creepage and clearance distances and restricted breathing.

b) Typical situations where the Non-sparking explosion-protection technique is used;

c) Actions or conditions that would void the protection provided the Non-sparking technique; and

d) The use of Standards in determining the requirements to which the design of the Non-sparking explosion-protected apparatus shall comply.

### **2.19.6 Intrinsic safety (Ex'i') explosion-protection technique**

Evidence shall show an understanding of the characteristic and application of Intrinsic safety (Ex 'i') explosion-protection technique to an extent indicated by the following aspects:

a) The purpose and characteristics of the design features of apparatus and circuits protected by the Intrinsic safety (Ex 'i') technique.

Note:

Examples of characteristics and design features are field devices, cables, safe area devices, earthing, entity versus integrated system concept, simple devices and interface devices and their parameters, segregation, infallible components, current and voltage limiting, creepage and clearance distances.

b) Typical situations where the Intrinsic safety explosion-protection technique is used;

c) Actions or conditions that would void the protection provided the Intrinsic safety; and

d) The use of Standards in determining the requirements to which the design of the Intrinsic safety explosion-protected apparatus shall comply.

### **2.19.7 Pressurization (Ex'p') explosion-protection technique**

Evidence shall show an understanding of the characteristic and application of Pressurization (Ex 'p') explosion-protection technique to an extent indicated by the following aspects:

a) The purpose and characteristics of the design features of apparatus and circuits protected by the Pressurization (Ex 'p') technique.

Note:

Examples of characteristics and design features are exclusion and dilution; purge periods, controlled shut down, monitoring and sources of internal release.

b) Typical situations where the pressurization explosion-protection technique is used;

c) Actions or conditions that would void the protection provided the pressurization technique; and

d) The use of Standards in determining the requirements to which the design of the pressurization explosion-protected apparatus shall comply.

### **2.19.8 Explosion-protection techniques for dusts**

Evidence shall show an understanding of the characteristic and application of Enclosures (Ex ‘tD’), Pressurization (Ex ‘pD’), Encapsulation (Ex ‘mD’), and Intrinsic safety (Ex ‘iD’) (for dusts) explosion-protection technique. The following aspects indicate the extent of understanding required.

a) The purpose and characteristics of the design features of apparatus and circuits protected by the techniques for dusts.

Note:

Examples of characteristics and design features are for Enclosures; Pressurization; Encapsulation; and Intrinsic safety.

- b) Typical situations where the each dust explosion-protection technique is used;
- c) Actions or conditions that would void the protection provided the each dust technique; and
- d) The use of Standards in determining the requirements to which the design of the dust explosion-protected apparatus shall comply.

### **2.19.9 Common characteristics of explosion-protection techniques**

Evidence shall show an understanding of the common characteristics of explosion-protection techniques to an extent indicated by the following aspects:

- a) The purposes of ‘temperature classification’ and ‘gas grouping/apparatus grouping’.
- b) Compliance plate markings.
- c) Limitations of non-metallic or specific alloy enclosures.
- d) The purpose of conformity and certification/approval for equipment used in hazardous areas.
- e) Environmental conditions that may impact on explosion-protection techniques.
- f) The principles and applications of other and mixed explosion-protection techniques.
- g) Other techniques include encapsulation Ex ‘m’; oil-immersion Ex ‘o’; powder-filling Ex ‘q’, ventilation Ex ‘v’ and special protection Ex ‘s’.

### **2.19.10 Hazardous areas installation and maintenance requirements**

Evidence shall show an understanding of hazardous area installation principles and maintenance techniques to an extent indicated by the following aspects:

- a) Preparation to install and maintain explosion-protected equipment in hazardous areas encompassing:
- OHS procedures to be followed when working in a hazardous area;
  - the significance of information provided on the certification documentation and schedules for a given item of explosion-protected equipment;
  - the typical contents of a site dossier and their purpose; and
  - limitations in the use of tools and testing devices in hazardous areas.
- b) The relationship between explosion-protected equipment, their certification documents and required locations given in specifications and layout drawings and/or written instructions encompassing:
- the purpose of markings on the compliance plate and certification documents for a given item of explosion-protected equipment;
  - matching explosion-protected equipment with certification documents and the equipment specified for an installation; and
  - the location the items of explosion-protected equipment for an installation from specifications and layout drawings and/or instructions.

- c) Installation Standards and requirements applicable to hazardous encompassing:
- the wiring systems permitted and not permitted in or above hazardous areas;
  - equipment not permitted in or above hazardous areas;
  - the regulations and Standards to which explosion-protected equipment and wiring must be installed in a hazardous area and how these are applied; and
  - the documentation required as a record of the installation process, including certification documentation.
- d) Maintenance procedures in hazardous areas that will ensure the integrity of the explosion-protection technique encompassing:
- the purpose of a maintenance schedule;
  - the purpose and extent of ‘visual’, ‘close’, ‘sample’ and ‘periodic’ inspections;
  - the features of each explosion-protection techniques that should be included in a maintenance schedule;
  - the impact of environmental conditions on explosion-protected equipment, including corrosion and frequency of maintenance; and
  - the documentation requirements for recording the maintenance process and results.

#### **2.19.11 Hazardous areas cable termination techniques**

Evidence shall show knowledge and skills in terminating cables suitable for use in hazardous areas to an extent indicated by the following aspects:

- a) Selecting compliant cable termination devices.
- b) Installing conduit seals to meet hazardous area requirements.
- c) Terminating MIMS cable in explosion-protected enclosures.
- d) Terminating steel wire armoured cable in explosion-protected enclosures.
- e) Terminating a cable with a barrier gland.
- f) Terminating an intrinsically safe cable in an enclosure.

#### **2.19.12 Hazardous areas detailed inspection techniques**

Evidence shall show an understanding of techniques used in auditing of site records and inspecting installations of explosion-protected and associated apparatus and hazardous area wiring. The following aspects indicate the extent of understanding required.

- a) Auditing of site records encompassing:
  - the documents that should be filed in a site dossier; and
  - procedures for auditing a site dossier;
- b) The relationship between the documentation held in a site dossier and the installed equipment encompassing:
  - consistency between the location and type of equipment with the area classification details in the site dossier; and
  - equipment certification and any attached conditions that relate to the equipment as it is installed.
- c) Inspecting a hazardous area installation encompassing:
  - typical processes for undertaking the inspection of a hazardous area installation;
  - requirements applicable to a given installation; and
  - reporting of an inspection of a hazardous area installation.

### **2.19.13.1 Explosion-protected equipment overhaul and repair, general requirements**

Evidence shall show an understanding of overhaul and repair procedures of explosion-protected equipment to an extent indicated by the following aspects:

- a) The scope and limitations for overhaul and repair of explosion-protected equipment encompassing:
  - the requirements for registration of a workshop;
  - the requirements of a ‘competent person’ for a registered workshop engaged in the overhaul/repair of explosion-protected equipment; and
  - the scope and limitations of work permitted under workshop registration.
- b) Repair and Overhaul (technical) Standard encompassing:
  - the documentation/information required to enable repairs/overhauls to be undertaken;
  - categories of work, for example, overhaul; no repair; overhaul-repair;
  - modifications that are, and are not, permitted within the equipment certification; and
  - the requirements for overhaul/repair processes relevant to the type of protection and equipment.
- c) Requirements for documentation and identification of overhauled/repared explosion-protected encompassing:
  - overhaul/repair report document; and
  - requirements for distribution of overhaul/repair reports.
- d) Quality management systems as covered by international Standards encompassing:
  - documentation regime of a quality management system;
  - principle of document and data control covering both internally and externally generated documents and data; and
  - principles of process control as applied to the overhaul and repair of explosion-protected equipment.

### **2.19.13.2 Overhaul and repair requirements specific to each explosion-protection technique**

Evidence shall show an understanding of overhaul and repair for specific explosion-protection techniques to an extent indicated by the following aspects:

- a) The level of overhaul/repair required encompassing:
  - Standards and their use for determining the requirement for a specific explosion-protection technique;
  - measurement/tests and equipment required to determine whether an item of equipment meets the certification requirements;
  - requirements for maintaining the accuracy/calibration of measuring/test equipment;
  - measurement/test procedures for determining whether an item of equipment meets the certification requirements;
  - level of overhaul/repair required from comparisons of test results and requirements specified in the original certification; and
  - specifying overhaul/repair work required to restore an item of explosion-protected equipment to conform with the original certification.

b) Measurement/tests procedures to verify that an item of equipment meets the original certification requirements

#### **2.19.14.1 Explosion-protected equipment modification, general requirements**

Evidence shall show an understanding of modifications to explosion-protected equipment to an extent indicated by the following

a) The scope and limitations for design and development of modifications of explosion-protected equipment encompassing:

- the requirements of a ‘competent person’ for a registered workshop engaged in design and development of modifications to explosion-protected equipment; and
- the scope and limitations of modification work permitted.

b) The requirements for documenting and identifying modified explosion-protected equipment encompassing:

- modification report document; and
- requirements for distribution of reports on modifications.

#### **2.19.14.2 Modification requirements specific to each explosion-protection technique**

Evidence shall show an understanding of modifications to specific explosion-protection techniques to an extent indicated by the following aspects

a) Design and development of modifications encompassing:

- verification that equipment to be modified complies with its certification;
- assessing the viability and impact of the requested modification in terms of the explosion-protection properties;
- document of modifications specifications;
- verification tests that can be carried out within a workshop; and
- assessing modified equipment and test results for conformance with applicable Standards.

b) Processes and procedures for obtaining certificate of compliance for modified explosion-protected equipment encompassing:

- Requirements for organizations to be recognised as testing/ certification bodies for explosion-protected equipment.
- Processes used in certifying/approving modified explosion-protected equipment.

#### **2.19.15 Hazardous areas installation planning**

Evidence shall show an understanding of hazardous area electrical installations planning and the selection of appropriate explosion-protected equipment and wiring. The following aspects indicate the extent of understanding required.

a) Interpretation of documents showing the classification of a hazardous area encompassing:

- the methods used for classifying hazardous areas;
- the delineation of zones, temperature classes and gas groups of a given hazardous area from classification documents;
- the delineation of zones, temperature classes and gas groups of a given hazardous area from similar situations previously classified, such as those given in Standards;

and

- situations where classification needs to be undertaken by a person competent in non-specific area classification i.e. a person who has attained Unit UTENES706B
- b) Selecting and checking equipment, wiring and accessories encompassing:
- the impact of environmental conditions, such as corrosion and maintenance requirements, on explosion-protected equipment and accessories;
  - explosion-protected equipment and accessories to suit the requirements of given hazardous areas;
  - wiring systems to suit the requirements of a hazardous area, load and duty requirements and consideration of capacitive/inductive effects and inductance/resistance ratio where applicable;
  - earthing and equipotential bonding requirements for a hazardous area installation;
  - procedures used to check the compliance certification of equipment used in a hazardous area; and
  - electrical protection systems and devices, for example, overloads, earth fault protection) appropriate to an explosion-protection technique.
- c) Documentation of hazardous area installation design encompassing:
- the items that should be included in the documentation for the design of a hazardous area installation;
  - installation layout, specification, work schedule and other documentation required for inclusion in a site dossier; and
  - the essential documentation that needs to be specified/requested from manufacturers when purchasing explosion-protected equipment/ accessories.

#### **2.19.16 Common classified hazardous areas**

Evidence shall show an understanding of common and specific hazardous areas for which classification examples are given in Standards. The following aspects indicate the extent of understanding required.

- a) The example classifications given in Standards
- b) Application of the classifications given in Standards to similar situations for the purpose of planning of electrical installations.

#### **2.19.17 Hazardous areas classification techniques**

Evidence shall show an understanding of processes involved in gathering and analysing technical data to classify non-specific hazardous areas. The following aspects indicate the extent of understanding required.

- a) The process of classifying hazardous areas encompassing:
- methods by which an area can be classified;
  - the characteristics/attributes of an area that should be considered in the classification process, for example, type of process, nature of plant, source and nature of release;
  - the requirements and Standards for classifying a hazardous area; and
  - the responsibilities of the owner/occupiers for classification of a hazardous area.
- b) The risk of an explosive hazard encompassing:
- ignition properties of materials relevant to determining the risk and extent of an explosive hazard;

- sources for obtaining data on ignition properties of materials under the conditions in which they could be present in a given process;
- methods for determining the risk related to hazardous areas and the circumstances appropriate to their use, and

Note:

Example of methods is 'hazard and operability study' (hazop) and 'fault tree analyses' (hazan);

- means for reducing hazard risk.
- c) The extent of an explosive hazard and classifying an area accordingly encompassing:
- the extent of classes and zones for an area given data on the explosive hazard risks for that area;
  - requirements for documenting the classification of a hazardous area; and
  - the extent of the zones, temperature classes and gas groups on site drawings in a hazardous area.

### **2.19.18 Hazardous areas close inspection requirements**

Evidence shall show an understanding of the purpose and process of close inspections to an extent indicated by the following aspects:

- a) Occupational, health and safety procedures encompassing:
- occupational, health and safety procedures to be followed before entering hazardous areas; and
  - occupational, health and safety procedures to be followed while conducting close inspection.
- b) Purpose, scope and limitations of close inspections.
- c) Documentation requirements resulting from a close inspection.

### **2.19.19 Hazardous areas management**

Evidence shall show an understanding of the management responsibilities related to hazardous areas, the strategies used to maintain the safety of hazardous areas and the maintenance requirements. The following aspects indicate the extent of understanding required.

- a) The responsibilities of a person managing activities or a site related to a hazardous area, encompassing:
- OHS procedures that are to be established;
  - responsibilities for ensuring that a hazardous area is safe; and
  - responsibilities and processes for establishing and maintaining a site dossier.
- b) Explosion-protection strategies in relation to a hazardous area, encompassing:
- the process of classifying a hazardous area;
  - various ways in which electrical systems /apparatus can be treated to prevent them from becoming an ignition source; and
  - the cost of the different ways of treating electrical systems/apparatus associated with hazardous areas.
- c) Requirements for the maintenance of electrical systems associated with hazardous areas, encompassing:
- the type and grades of inspection of hazardous areas;
  - maintenance programs for electrical explosion-protected systems/apparatus; and

- documentation requirements associated with maintenance procedures.

### **2.19.20 Explosion-protected electrical systems design**

Evidence shall show an understanding of explosion-protected electrical system design to an extent indicated by the following aspects:

- a) Process for establishing a design brief for an explosion-protected electrical system encompassing:
  - consultation processes for establishing client requirements and preparing a design brief; and
  - system requirements using site and plant specifications, hazardous area classifications and organization requirements.
- b) System design encompassing:
  - major considerations influencing explosion-protected electrical system designs;
  - requirements in Standards and regulations that affect the electrical system design; and
  - typical design process incorporating explosion-protection in an electrical system.
- c) Design documentation required for a hazardous area encompassing:
  - procedures for checking and approval of explosion-protected system design; and
  - requirements for documenting a final design including documents to be included in a site dossier.

### **2.19.21 Explosion-protected equipment conformity assessment**

Evidence shall show an understanding of explosion-protected equipment compliance assessment with to an extent indicated by the following aspects:

- a) The compliance certification and the 'Ex' scheme for recognition of certification encompassing:
  - the purposes of certification of explosion-protected equipment;
  - the parties involved in the assessment/testing and certification of explosion-protected equipment and their responsibilities; and
  - the scheme for recognition of assessment/testing and certification of explosion-protected equipment from other countries.
- b) The preparation required to assess explosion-protected equipment for compliance with Standards encompassing:
  - the special safety measures that should be taken when assessing/testing explosion-protected equipment;
  - documentation required prior to conducting conformity assessment;
  - tests necessary to establish that an item of explosion-protected equipment conforms with relevant Standards; and
  - situations where testing is not applicable or required.
- c) Assessing and testing explosion-protected equipment encompassing:
  - assessment and test requirements; and.
  - procedures for conducting a conformity assessment.
  - Recording and reporting requirements of conformity assessment.

### 2.19.22 Hazardous areas installation testing

Evidence shall show an understanding of testing installations of explosion-protected equipment, wiring and circuits associated with hazardous areas. The following aspects indicate the extent of understanding required.

- a) Preparation for conducting installation testing in a hazardous area encompassing:
  - OHS procedures to be followed for working in a hazardous area; and
  - procedures for determining whether a given hazardous area is safe to conduct electrical testing.
- b) Characteristics and limitations of testing equipment used to test installation in hazardous areas encompassing:
  - testing devices required to test an installation in a hazardous area; and
  - the suitability of testing device for use in a hazardous area.
- c) Testing methods and techniques encompassing:
  - purpose of each test that is required for an installation in a hazardous area

Note:  
Tests include earth continuity, insulation resistance, polarity, interconnection, earth loop impedance and injection tests;

  - preparation required for each test; and
  - interpretation of test results.
- d) Documentation of results of hazardous area installation tests encompassing:
  - test results that should be recorded in a site dossier; and
- e) Procedures and options for dealing with test results that show non-conformance.

### 2.19.23 Explosion-protection visual checks

Evidence shall show an understanding of visible conditions of explosion-protection equipment that indicate the protection is void and changes in the nature of the explosion hazard that may render the explosion-protection unsafe. The following aspects indicate the extent of understanding required.

- a) Occupational, health and safety procedures encompassing:
  - occupational, health and safety procedures to be followed before entering hazardous areas; and
  - occupational, health and safety procedures to be followed while conducting close inspection.
- b) Visible defects in explosion-protected equipment and wiring.
- c) Conditions that may indicate a change in a given explosion hazard.
- d) Reporting defects in explosion-protected equipment and wiring encompassing:
  - the purpose of a site dossier; and
  - various ways for reporting defects in explosion-protected equipment and wiring.
  - procedures to be followed in the event of a change in the explosion hazard.

### 2.19.24 Gas detection—portable devices

Evidence shall show an understanding of the principles of gas detection and the use and care of portable gas detection devices to an extent indicated by the following aspects:

- a) Fundamental principles in the use of gas and vapour instruments.

b) Use of manufacturer's instruction manual.

Note:

Instruction manuals include operating instructions, adjustment procedures, operational limitations, and storage.

c) Calibration and response checking.

**2.19.25 Gas detection—fixed equipment**

Evidence shall show an understanding of requirements and techniques for the installation and maintenance of fixed gas detection equipment to an extent indicated by the following aspects:

- a) Fundamental principles in the use of fixed gas and vapour instruments.
- b) Use of manufacturer's instruction manual, for example, operating instructions, adjustment procedures and operational limitations.
- c) Installation and maintenance Standards for gas detection equipment.
- d) Appropriate locations for fixed gas detectors.
- e) Common problems with fixed gas detectors.
- f) Calibration and response checking.

**2.19.26 Evaluation and selection of gas detection equipment (portable and fixed)**

Evidence shall show an understanding of the factors to consider in the evaluation and selection of portable and fixed gas detection equipment to an extent indicated by the following aspects:

- a) Requirements for gas detection for a given situation encompassing:
  - sources for obtaining data on physical chemistry of the gas to be detected; and
  - sources for obtaining data on the conditions under which the gas may be present.
- b) Processes of assessing the specifications of gas detection equipment against established requirements

**2.19.27 - 28 Reserved**

**2.19.29 Disconnect/reconnect**

Evidence shall show an understanding of the principles to disconnect and reconnect fixed wired equipment connected to supply up to 1000 V a.c or 1500 V d.c. The following aspects indicate to the extent of understanding required:

- a) Procedures for safely determining the availability of supply, encompassing:
  - Selection and setting of appropriate testing device.
  - Safe use of testing device.
  - Concept of 'testing the testing device'
- b) Isolation mechanisms, encompassing:
  - Electrical distribution arrangements within an installation.
  - Circuit isolation and protective devices
  - Appropriate isolation devices for a given load.
- c) Disconnection of an appliance from a single phase and/or multiphase supply of voltages up to 1000 V, encompassing::

- Type and arrangement of circuits supplying various equipment.
  - Note: Equipment can include motors, hot water systems, cooking appliances control devices and neon signs.
  - Procedures to be followed to ensure the safe isolation of the supply.
  - Procedures for disconnection of isolated equipment from fixed wiring.
- d) Suitability of an appliance for reconnection to the supply encompassing:
- Comparison of manufacturer specification between disconnected and replacement equipment.
  - Safety of equipment for connection to the supply.
  - Note: Safety of equipment includes sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating and arrangements for protection against dangers of mechanical movement are undamaged and in place.
- e) Procedures for ensuring the integrity of the circuit to which the equipment is to be connected, encompassing:
- Insulation resistance of the circuits active conductors.
  - Continuity of the protective earthing conductor to the metallic enclosure of the originating distribution board or main earth electrode.
  - Continuity between the neutral conductor and protective earthing conductor.
- f) Procedures for the reconnection of equipment to the supply, encompassing:
- The safe isolation of the supply before reconnection
  - Wiring preparations for reconnection to equipment.
  - Reconnecting equipment to fixed wiring.
- g) Procedures for verifying equipment is operational, encompassing:
- Energising supply.
  - Safe operation of equipment.

### 2.19.30 Flexible cords and plugs to 250 V

Evidence shall show an understanding of attaching flexible cords and plugs to electrical equipment connected to a single phase 250 V supply, to an extent indicated by the following aspects:

- a) Flexible cords and plugs to suit given applications, encompassing:
- Flexible cord for 250 V single phase load and service duty.
  - Types of three pin plugs for specific load and IP rating requirements.
- b) Safety of an appliance for connection to the supply, encompassing:
- Appropriate test equipment to check that an appliance is safe.
  - Procedures to be followed to ensure the correct use of test equipment.
  - Test results that show appliance is unsafe.
- c) Connection of flexible cords and plugs to appliances, encompassing:
- Preparation of flexible cords for connection to appliances.
  - Connection of flexible cords to appliances.
  - Connection of a plug top to a flexible cord.
- d) Safety of flexible cord and plug assembly, encompassing:
- Plug and cord testing procedures.

- Safe operation of appliance supplied by cord and plug assembly.

### **2.19.31 Flexible cords/cables and plugs to 1000 V**

Evidence shall show an understanding of attaching flexible cords/cables and plugs connected to a supply up to 1000 V a.c. or 1500 V d.c., to an extent indicated by the following aspects:

- a) Flexible cords/cables and plugs to suit given applications, encompassing:
  - Flexible cable for 1000 V multiphase load and service duty.
  - Types of multiphase plugs to 1000 V for a specific load and IP rating requirements.
- b) Safety of an appliance for connection to the supply, encompassing:
  - Appropriate test equipment to check that an appliance is safe.
  - Procedures to be followed to ensure the correct use of test equipment.
  - Test result that show appliance is unsafe.
- c) Connection of flexible cables and plugs to multiphase appliances, encompassing:
  - Preparation of flexible cables for connection to appliances.
  - Connection of flexible cables to appliances.
  - Connection of a plug top to a flexible cable.
- d) Safety of flexible cable and plug assembly, encompassing:
  - Plug and cord testing procedures.
  - Safe operation of appliance supplied by cable and plug assembly

### **2.19.32 Disconnect and reconnect HV electric propulsion components**

Evidence shall show an understanding of the principles for disconnection and reconnection of 3.3 kV electric propulsion components on off-road earth moving trucks. The following aspects indicate the extent of understanding required.

- a) Procedures for safely determining the isolation of supply, encompassing:
  - Selection and setting of HV testing device.
  - Safe use of HV testing device.
  - Concept of ‘testing the testing device’
  - Isolation mechanisms, encompassing:
    - Electrical distribution arrangements within a truck.
    - Drive isolation and protective devices
- b) Disconnection of 3.3 kV electric propulsion components, encompassing:
  - Arrangement of circuits supplying electric propulsion components.
  - Procedures to ensure the safe isolation of the supply.
  - Procedures for disconnection of isolated equipment.
  - Safety of replacement or repaired for reconnection to the truck.

Note: Safety of electric propulsion components includes sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, and arrangements for protection against dangers of mechanical movement are undamaged and in place..

- c) Procedures for the reconnection of electric propulsion components to the supply, encompassing:

- The safe isolation of the supply before reconnection
  - HV wiring preparations for reconnection to equipment.
  - Reconnecting electric propulsion components.
- d) Procedures for verifying electric propulsion components is operational, encompassing:
- Energising supply.
  - Methods for testing safe operation of equipment.

### 2.19.33 High voltage flexible cables and plugs exceeding 1000 V

Evidence shall show an understanding of attaching flexible cables and plugs to electrical equipment connected to a high voltage supply (i.e. exceeding 1000 V a.c. and 1,500 V d.c.) to an extent indicated by the following aspects.

- a) Flexible cords/cables and plugs to suit given H.V applications, encompassing:
- Flexible cables and plugs to suit given H.V applications
  - Types of multiphase plugs H.V for a specific load and IP rating requirements.
- b) Safety of a H.V electrical apparatus (including basic principles of its operation non-mathematical and control) of an appliance for connection to the supply, encompassing:
- Appropriate test equipment to check that apparatus is safe.
  - Procedures to be followed to ensure the correct use of test equipment.
  - Basic principles of operation and control of apparatus supplied by the flexible cables and plug.
  - Test results that show apparatus is unsafe.
- c) Connection of flexible cables and plugs to multiphase appliances, encompassing:
- Preparation of flexible cables for connection to H.V apparatus.
  - Connection of flexible cables to H.V. apparatus.
  - Connection of a HV plug to a flexible cable.
- d) Safety of flexible cable and plug assembly, encompassing:
- Plug and cord testing procedures.
  - Safe operation of apparatus supplied by HV cable and plug assembly.

### 2.19.34 Fault find to 250 V — Motors

Evidence shall show an understanding of locating and rectifying faults in electrical motors intended to be connected to a fixed wired supply up to 250 V, to an extent indicated by the following aspects:

- a) Safe work practices in fault finding and repair work, encompassing:
- Conducting live and dead testing.
  - Procedures for isolation of motor from supply.
- b) Procedures for identifying basic faults, encompassing:
- Types of faults that occur in 250 V motors.
  - Note: Motors include single-phase 'split-phase, capacitor motors and universal type motors.
  - Selection and setting of appropriate testing and measuring devices.

Notes:

1. Testing devices include approved test lamps and voltage indicators.
2. Measuring devices include multimeters, insulation testers, continuity testers, ammeters and

voltmeters.

3. It is recommended that voltage testers, multimeters and voltmeters be certified to IEC standard Category III

- Safe operation of single phase motors.
- Comparison of manufacturer specification between disconnected and replacement motors.

c) Procedures for verifying motor is operational, encompassing:

- Energising the supply.
- Safe operation of motor.

Note: Safety of equipment includes sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating and arrangements for protection against dangers of mechanical movement are undamaged and in place.

### 2.19.35 Fault find to 250 V — Water heaters

Evidence shall show an understanding of locating and rectifying faults in electrical water heaters intended to operate to a connected fixed wired supply up to 250 V a.c., to an extent indicated by the following aspects:

a) Safe work practices in fault finding and repair work, encompassing:

- Conducting live and dead testing.
- Procedures for isolation of water heater from supply.

b) Procedures for identifying basic faults in single phase water heaters, encompassing:

- Types of faults that occur in water heaters.

Note:

Faults are confined to those related heating elements and control circuits within the water heater.

- Selection and setting of appropriate testing and measuring devices.

Notes:

1. Testing devices include approved test lamps and voltage indicators.
2. Measuring devices include multimeters, insulation testers, continuity testers, ammeters and voltmeters.
3. It is recommended that voltage testers, multimeters and voltmeters be certified to IEC standard Category III

c) Procedures for verifying single phase water heaters are operational, encompassing:

- Comparison of manufacturer specifications between disconnected and replacement water heater.
- Energising the supply
- Safe operation of water heater.

Note:

Safety of equipment includes sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating.

### 2.19.36 Fault find to 250 V — General appliances

Evidence shall show an understanding of locating and rectifying faults in electrical equipment intended to operate to a connected fixed wired supply up to 250 V, to an extent indicated by the following aspects.

a) Safe work practices in fault finding and repair work of general appliances, encompassing:

- Conducting live and dead testing.

- Procedures for isolation of equipment from supply.
- b) Procedures for identifying basic faults in general appliances, encompassing:
- Types of faults that occur in general appliances.
  - Selection and setting of appropriate testing and measuring devices.
- Notes:
1. Testing devices include approved test lamps and voltage indicators.
  2. Measuring devices include multimeters, insulation testers, continuity testers, ammeters and voltmeters.
  3. It is recommended that voltage testers, multimeters and voltmeters be certified to IEC standard Category III
- In single phase appliances components and circuits.
- c) Procedures for verifying general appliances are safe for operation, encompassing:
- Comparison of manufacturer specifications between disconnected and replacement appliance.
  - Safe operation of appliance.
- Note:
- Safety of equipment includes sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating and arrangements for protection against dangers of mechanical movement are undamaged and in place

### 2.19.37 Fault find to 1000 V - Motors

Evidence shall show an understanding of locating and rectifying faults in electrical motors and controlgear intended for connection to a fixed wired supply up to 1000 V, to an extent indicated by the following aspects

- a) Safe work practices in fault finding and repair work, encompassing:
- Conducting live and dead testing.
  - Procedures for isolation of motor from supply.
- b) Procedures for identifying basic faults, encompassing:
- Types of faults that occur in three phase motors and starters.
  - Selection and setting of appropriate testing and measuring devices.
- Notes:
1. Testing devices include approved test lamps and voltage indicators.
  2. Measuring devices include multimeters, insulation testers, continuity testers, ammeters and voltmeters.
  3. It is recommended that voltage testers, multimeters and voltmeters be certified to IEC standard Category III
- Safe operation of three phase motors.
  - Comparison of manufacturer specification between disconnected and replacement motors.
- c) Procedures for verifying motor is operational, encompassing:
- Energising the supply.
  - Safe operation of motor.
- Note
- Safety of equipment includes sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating and arrangements for protection against dangers of mechanical movement are undamaged and in place

### 2.19.38 Fault find to 1000 V — Water heaters

Evidence shall show an understanding of locating and rectifying faults in electrical water heaters intended to operate to a connected fixed wired supply up to 1000 V a.c., to an extent indicated by the following aspects.

a) Safe work practices in fault finding and repair work on three phase water heaters, encompassing:

- Conducting live and dead testing.
- Procedures for isolation of water heater from supply.

b) Procedures for identifying basic faults in three phase water heaters, encompassing:

- Types of faults that occur in three phase water heaters.

Note:

Faults are confined to those related heating elements and control circuits within the water heater

- Selection and setting of appropriate testing and measuring devices.

Notes:

1. Testing devices include approved test lamps and voltage indicators.
2. Measuring devices include multimeters, insulation testers, continuity testers, ammeters and voltmeters.
3. It is recommended that voltage testers, multimeters and voltmeters be certified to IEC standard Category III

c) Procedures for verifying three phase water heaters are safe for operation, encompassing:

- Comparison of manufacturer specifications between disconnected and replacement water heater.
- Safety of water heater for connection to the supply.

Note:

Safety of equipment includes sufficiently high insulation resistance, arrangements for protection against indirect contact are undamaged and in place, appropriate IP rating.

### 2.19.39 Status reports using established procedures

Evidence shall show an understanding of status and service reporting to an extent indicated by the following aspects:

a) The purpose of reports

Note:

Example are parts of a safety or maintenance record, informing the extent of work undertaken or to be done in relation to charging, invoicing or quoting.

b) Content of reports

Note:

Depending on purpose typically inclusions are safety status of equipment and circuits, actions taken with regard to unsafe equipment and circuits, recommendations, item lists, labour and charges.

c) Types of reports

Note:

Example are handwritten, data logged and form completion types.

## 2.20 Sustainable energy and environment

### 2.20.1 Sustainable energy principles

Evidence shall show an understanding of sustainable energy principles to an extent indicated by the following aspects:

- a) Notions of sustainable energy
- b) Sustainable energy work practices

### 2.20.2 Environmental and heritage awareness

Evidence shall show an understanding of environmental and building regulation effecting electrotechnology work to an extent indicated by the following aspects:

- a) Types of heritage listings
- b) Purpose and principles of regulations related maintaining heritage sites
- c) Responsibilities of those working in and around heritage sites
- d) Scope of environmental protection and related regulations
- e) Purpose and principles of regulations related to environmental protection
- f) Responsibilities of those working in and around environmentally protected sites
- g) The protocols for working in and around protected environments and heritage sites.

### 2.20.3 Introduction to renewable energy technologies

Evidence shall show an understanding of renewable energy principles and technologies to the extent indicated by the following aspects:

- a) Major non-technical issues
  - impact of economic, social, environmental and political issues on the use of renewable energy technologies.
  - how each of the non-technical issues impact on the application of a selected renewable energy technology.
- b) Energy services and demand.
  - definition of the terms: energy, power, energy efficiency, end use energy, primary energy, embodied energy.
  - calculation relating to energy, power and time with the appropriate number and time with the appropriate number of significant figures.
  - units and symbols for energy, power, time and temperature using standard SI units and prefixes.
  - conversion of energy and power quantities from one unit to another using conversion tables
  - the two laws that apply to any energy conversion process.
  - efficiency of a simple energy conversion process.
  - energy services required by a domestic dwelling.
  - power and energy consumption of individual appliances and systems using appropriate meters or other methods.
  - calculation of the end use and primary energy required for these energy services.
  - selection of the most appropriate energy source for each of these services.

- justification in terms of environmental, economic, social and political constraints.
  - selection of appropriate energy efficient appliances and technologies.
- c) The solar resource
- definition of the terms: irradiation, latitude, solar constant, direct and diffuse radiation, azimuth and altitude angles, irradiance, solar window, tilt angle, solstice, equinox.
  - units and symbol for irradiation and irradiance and the conversion of one unit to another using conversion tables.
  - measurement of solar irradiance with a solarimeter.
  - solar radiation data tables and contour maps.
  - position of the sun for a given date, time and latitude using a sun path diagram.
  - times when an obstacle will shade a given collector.
  - how radiation varies throughout the year on the surface of a collector which is either fixed, single-axis tracking or double-axis tracking.
  - appropriate tilt angles for fixed and seasonally-adjustable collectors at a given latitude and given application
  - calculation of the effect of single-axis tracking and double-axis tracking on collected radiation using radiation data tables.
- d) Solar thermal systems
- definition of the terms: conduction, convection, radiation, collector heat loss coefficient, conductivity, specific heat, solar fraction.
  - components for a solar thermal system including collector, storage, reticulation and control.
  - solar collector types suitable for low, medium and high temperature applications.
  - different types of domestic solar hot water (SWH) systems.
  - how the components of thermosiphon and pumped storage systems operate.
  - heat loss mechanisms in collectors.
  - stratification in storage tanks.
  - backup energy systems.
  - control and protection strategies.
  - solar fraction of a domestic SHW system with the use of table or nomograms.
- e) Energy efficient building design
- definition of the terms: thermal comfort, passive system, active system, aspect of the site, orientation of the building, thermal mass.
  - the climate factors which affect building design.
  - relationship between thermal comfort and climate.
  - relationship between the seasonal variation of the sun's path and the heat gain of the building elements (roof, walls, windows, floor).
  - effect of the thermal conductivity of building materials on heat flows to and from the building
  - use of thermal mass in reducing temperature variations within the building.
  - use of ventilation.
  - thermal performance of a dwelling using both indoor and outdoor hourly temperature measurements over the period of at least one day.
  - effect of insulation, glazing, orientation, shading devices, thermal mass and

ventilation on the thermal performance of a building.

- an active solar system which could be used in a dwelling to complement passive design features in extreme climates.
- aspects of an existing dwelling that contribute to or detract from thermal performance.

f) Photovoltaic arrays

- definition of the terms: photovoltaic (PV) cell, module, series, parallel, array, maximum power point (MPP), nominal operating cell temperature (NOCT), short circuit current ( $I_{SC}$ ), open Circuit voltage ( $V_{OC}$ ), I-V curve, current at maximum power point ( $I_{MP}$ ), voltage at maximum power point ( $V_{MP}$ ).
- calculations relating to voltage, current and power with the appropriate number of significant figures and using standard SI units and prefixes.
- types of commercially available PV modules, their efficiency and typical applications.
- I-V curve for a typical PV module and label the approximate position of MPP and values of  $I_{SC}$ ,  $V_{OC}$ ,  $I_{MP}$  and  $V_{MP}$ .
- effect of irradiance and temperature on  $I_{SC}$ ,  $V_{OC}$ ,  $I_{MP}$  and  $V_{MP}$ .
- function of blocking and bypass diodes.
- current and voltage of a single module to produce the I-V characteristic curve.
- major specification criteria for a PV module.
- size and configuration of a PV array for a given load and system voltage using tables or nomograms.

g) Wind energy resources

- definition of the terms: kinetic energy, specific wind power, vertical wind speed profile, surface roughness, temperature inversion layer, cut in ( $v_C$ ), rated ( $v_R$ ) and furling ( $v_F$ ) wind speeds, rated power ( $P_R$ ), power co-efficient ( $c_P$ ), output co-efficient ( $c_O$ ), tip speed ratio.
- units and symbols for wind speed, specific wind power and air density.
- large scale wind patterns over the Australian continent, their causes and the effect of local terrain on wind speed, direction and turbulence.
- specific wind power for given wind speeds.
- wind speed at different heights above ground level.
- the mean wind speed based on wind speed frequency distribution data in the form of a histogram.
- suitable minimum tower height for a Wind.
- energy conversion System (WECS) sited downwind from an obstacle.
- isovent maps.
- types of wind-measuring instruments and the minimum requirements for assessing wind energy at a given site.
- measurement of wind speed and direction
- characteristics of horizontal axis and vertical axis, upwind and downwind, lift and drag propelled wind turbines.
- power vs wind speed curve for a typical WECS showing  $v_C$ ,  $v_R$ ,  $v_F$ , and  $P_R$ .
- major specification criteria for a WECS.
- sizing a WECS for a given load, efficiency and annual mean wind speed using

tables or a nomogram.

h) Micro-hydro system basis

- definition of the terms: flow rate, gross or static head, potential energy, net or dynamic head, hydraulic efficiency, MHS efficiency, equivalent pipe length, reaction turbine, impulse turbine
- units and symbols for: flow rate, head, gravitational constant
- methods each assessing flow rate and head.
- measurement of stream flow rate and head.
- assessment from contour maps.
- different MHS in terms of their physical and operating characteristics.
- major specification criteria for an MHS for electricity generation.
- suitable type and size of MHS for a given load, efficiency, available flow rate and net head using tables or a nomogram.

i) Energy storage

- methods of energy storage.
- energy density of the energy storage methods above by mass and volume.
- define the following terms in relation to batteries: nominal voltage, cell, primary and secondary cells, battery, charge and discharge rate, amp hour capacity, watt hour capacity, state of charge (SOC), depth of discharge (DOD), specific gravity (SG), watt hour and amp hour efficiency, cycle life.
- major features of common types of batteries suitable for stand-alone power systems.
- state of charge of a lead-acid battery through measurement of specific gravity or battery voltage using safe working practices.

j) Stand alone power system basis

- d.c. sub-system efficiency.
- block diagram of a typical SPS
- function of each SPS system component
- typical efficiencies of each component.
- major characteristics of different types of commercially available regulators, inverters and battery chargers.

k) Biomass

- definition of the terms: biogas, producer gas, biofuels, feedstock, gross and net calorific values.
- biofuels and their specific energy contents
- method of production of one of these five biofuels including: source of raw material/feedstock, conversion process, yield
- applications for each of the biofuels.
- assessment of the biomass resource required to meet a particular energy service eg cooking, hot water, space heat, transport, process heat, electricity.
- social, political and economic impact of large scale use of selected biomass resources.

#### 2.20.4 Greenhouse reduction strategies

Evidence shall show an understanding of greenhouse reduction strategies to the extent

indicated by the following aspects:

- a) Greenhouse gas emissions profile
  - *goals* and *principles* of the National Greenhouse Strategy
  - what a greenhouse gas inventory is, why it is required, and the sectors to which it applies
  - uses to which the National Greenhouse Gas Inventory can be applied.
- b) Understanding and communicating climate change and its impacts
  - the possible impact of climate change in Australia.
  - techniques for improving the understanding of climate change
  - techniques for communicating to and educating the general public on greenhouse gas induced climate change.
- c) Partnerships for greenhouse action
  - actions achievable by each level of government to implement the NGS.
  - methods by which the community activity can be engaged in the reduction of greenhouse gas emissions.
  - initiatives that can be undertaken by the private sector to reduce greenhouse gas emissions.
  - advantages of international partnerships.
  - emissions trading system.
- d) Efficient and sustainable energy use and supply
  - techniques for reducing the greenhouse intensity of energy supply.
  - types of renewable energy sources suitable for use in Australia.
  - methods and technique for improving end-use efficiency.
- e) Efficient transport and sustainable urban planning
  - how integrating land use and transport planning can assist the greenhouse problem.
  - how each of the following can be used to mitigate greenhouse gas; travel demand and traffic management strategies; encouraging greater use of public transport, walking and cycling; freight and logistics systems; improving vehicle fuel efficiency and fuel technologies;
- f) Greenhouse sinks and sustainable land management
  - how enhancing greenhouse sinks and encouraging sustainable forestry and vegetation management can complement the AGS.
  - how greenhouse gas emissions are obtained from agricultural production and describe techniques to mitigate the emissions.
- g) Models of greenhouse best practice in industrial processes and waste management
  - types and methods of reducing greenhouse gas emissions from industry.
  - methods of reducing methane emissions from waste treatment and disposal.
- h) Adaptation to climate change
  - salient points in each of the key sectors that require analysis and the strategies required in the need for adaptation to climate change
- i) Kyoto Protocol and greenhouse gas sinks
  - Kyoto Protocol
  - Greenhouse gas sinks and greenhouse mitigation

## 2.20.5 Remote area essential services facilities

Evidence shall show an understanding of remote area essential service facilities to an extent indicated by the following aspects:

- a) Window repair and maintenance encompassing:
  - Emergency repairs
  - Louvre type
  - Fixed pane type
  - Shutters
  - Safety awareness
- b) Repair and maintenance to fences and gates encompassing:
  - Emergency repairs
  - Locks and catches
  - Security fencing
  - Fence maintenance
  - Gates
  - Safety awareness
- c) Maintenance painting encompassing:
  - Preparation of surfaces
  - Block work
  - Concrete
  - Timber
  - Steel
  - Paint selection
  - Brush and roller selection
  - Paint application
  - Clean up process
  - Paint and accessories storage
  - Safety awareness
- d) Essential services facilities lighting encompassing:
  - Incandescent light globes
  - Fluorescent tubes
  - Fluorescent light starters
  - Diffusion devices
  - Safety awareness
- e) Essential services facilities safety and security and emergency checks encompassing:
  - Broken windows
  - Faulty lighting
  - Damaged gates
  - Logging the inspections
  - Notification of the situation
  - Safety awareness
- f) Telephone encompassing:
  - Answer calls promptly and clearly.
  - Using designated business protocol procedures.

- Making and receiving telephone calls in a workplace related
- context.
- Obtain accurate telephone numbers from an appropriate source.
- Establish contact using designated business protocol
- procedures.
- Convey purpose all call clearly and concisely.

g) Mathematics encompassing:

- Using basic mathematical skills to perform calculations with
- whole numbers.
- Fractions
- Decimals
- Percentages
- Ratios
- Proportions

h) Electrical encompassing:

- Identification and basic function of electrical components used
- for generating and distributing.
- Electricity safety procedures when working with electricity.
- Identification of faulty electrical components.
- Reporting of faulty electrical components.

i) Fire fighting equipment encompassing:

- Fire extinguishers and signage
- Types of fire extinguishers
- Contents and colour
- Correct identification
- Use of fire extinguishers
- Use of water hose and reel
- Safety awareness

### **2.20.6 Remote area essential services power plant**

Evidence shall show an understanding of remote area essential services power plant to an extend indicated by the following aspects:

a) Minor servicing of a power station's generating plant encompassing:

- Engine oil and filters
- Fuel filters
- Coolant filters
- Water trap devices
- Air cleaners

b) Minor maintenance of a power station's generating plant encompassing:

- Fan and accessory drive belts
- Repair of minor leaks: coolant, oil and fuel

c) Servicing of a power station's generating plants battery systems encompassing:

- Starting battery set
  - Switchboard (nicad) batteries
- d) Information displayed by the instruments/meters in a power station encompassing:
- Generating equipment (diesel engine)
  - Engine lubrication
  - System oil pressure
  - Engine cooling system coolant
  - Temperature (in and out)
  - Fuel pressure
  - Amperes
  - Voltage
  - Kilowatt
  - Kilowatt hours
  - Frequency hertz (Hz)
  - Engine running hours
  - Station services: Fuel tank dip; Lubricating oil tank level;
  - Fuel flow meter
- e) Use of the information gathered from instruments/meters encompassing:
- Ordering of: Fuel; Lubricating oil; Coolant
  - Schedule regular servicing and maintenance for: Engine oil and filter changes; Fuel filters; Drive belt (condition/adjustment); Valve adjustments (if applicable); Major and minor mechanical servicing by outside agents; Air cleaner (both dry paper and oil bath types)
- f) Power station log sheets and readings encompassing:
- Completed log sheets
  - Forwarding information to appropriate person/location at regular intervals (weekly)
- g) General cleanliness of the power stations plant and buildings encompassing:
- Generation plant
  - Oil leaks
  - Water leaks
  - Fuel leaks
  - Safety awareness
  - Plant buildings
  - Internal floor area
  - Used consumables
  - Spare parts storage
  - Spider webs & other pests
  - Rubbish containers
  - Ventilation
  - Power station compound
  - Fence and gate (if applicable)
  - Weeds
  - Grass (if applicable)

- Rubbish containers
- Fuel and oil supply, (drums)
- Water reticulation (if applicable)
- Tools and equipment
- Location/storage
- Cleanliness
- Maintenance
- Drain/drip tins
- Safety signage
- Location
- Condition
- Suitability

### **2.20.7 Remote area essential services waste water facilities**

Evidence shall show an understanding of remote area essential services waste water facilities to an extent indicated by the following aspects:

- a) Location of faults encompassing:
- b) Identification and isolation of faults encompassing:
  - Identifying fault/s
  - Types of fault/s
  - Make safe procedures
  - Isolating the fault/s
  - Gas and fume detection
  - Notification
  - Personal hygiene
  - Safety awareness
- c) Fumes and gases encompassing:
  - Breathing apparatus
- d) Public awareness encompassing:
- e) Emergency repairs and blockages encompassing:
  - Identifying the emergency
  - Locating the emergency
  - Prioritising the repairs
  - Notifying the appropriate person/s
  - Public safety precautions
  - Breathing apparatus
  - Safety signage
  - Repairing the system
  - Reactivating the system
  - Personal hygiene
  - Safety awareness
- f) Treatment and storage of pumping equipment maintenance encompassing:

- Identifying the systems pumping equipment
  - Identifying the systems control mechanism/s
  - Isolating the system
  - Make safe procedures
  - Operating the pumps
  - Maintenance of the system
  - Recording work details
  - Notification
  - Personal hygiene
  - Safety awareness
- g) Manhole and grounds maintenance encompassing:
- Safety barricades and fences
  - Safety signage
  - Manhole cover condition
  - Clearing debris
  - Grounds maintenance
  - Personal hygiene
  - Safety awareness
- h) Treatment pond maintenance encompassing:
- Weed and grass control
  - Pest control
  - Scraping of the pond/s
  - Closing pen stocks
  - Cleaning trash baskets
  - Reactivating the system
  - Removing the waste
  - Burying the waste
  - Housekeeping
  - Personal hygiene
  - Safety awareness
- i) Instrumentation, reading and recording of information encompassing:
- Locating the instrumentation
  - Identify the instruments
  - Read the displayed information
  - Log the information
  - Notification
  - Personal hygiene
  - Safety awareness

### **2.20.7 Remote area essential services waste water facilities**

Evidence shall show an understanding of remote area essential services waste water

facilities to an extent indicated by the following aspects:

a) Location of faults encompassing:

b) Identification and isolation of faults encompassing:

- Identifying fault/s
- Types of fault/s
- Make safe procedures
- Isolating the fault/s
- Gas and fume detection
- Notification
- Personal hygiene
- Safety awareness

c) Fumes and gases encompassing:

- Breathing apparatus

d) Public awareness encompassing:

e) Emergency repairs and blockages encompassing:

- Identifying the emergency
- Locating the emergency
- Prioritising the repairs
- Notifying the appropriate person/s
- Public safety precautions
- Breathing apparatus
- Safety signage
- Repairing the system
- Reactivating the system
- Personal hygiene
- Safety awareness

f) Treatment and storage of pumping equipment maintenance encompassing:

- Identifying the systems pumping equipment
- Identifying the systems control mechanism/s
- Isolating the system
- Make safe procedures
- Operating the pumps
- Maintenance of the system
- Recording work details
- Notification
- Personal hygiene
- Safety awareness

g) Manhole and grounds maintenance encompassing:

- Safety barricades and fences
- Safety signage
- Manhole cover condition
- Clearing debris
- Grounds maintenance

- Personal hygiene
  - Safety awareness
- h) Treatment pond maintenance encompassing:
- Weed and grass control
  - Pest control
  - Scraping of the pond/s
  - Closing pen stocks
  - Cleaning trash baskets
  - Reactivating the system
  - Removing the waste
  - Burying the waste
  - Housekeeping
  - Personal hygiene
  - Safety awareness
- i) Instrumentation, reading and recording of information encompassing:
- Locating the instrumentation
  - Identify the instruments
  - Read the displayed information
  - Log the information
  - Notification
  - Personal hygiene
  - Safety awareness

### **2.20.8 Remote area essential services water facilities**

Evidence shall show an understanding of remote area essential services water facilities to an extent indicated by the following aspects:

- a) Valve operation encompassing:
- Types of valves
  - Location
  - Identification
  - Isolation operations
  - Make safe procedures
  - Maintenance
  - Safety awareness
- b) Fault conditions encompassing:
- Location
  - Identification
  - Notification
  - Make safe protection
  - Rectification
  - Safety awareness
- c) Corrosion control encompassing:

- Identification
  - Descaling
  - Repair as necessary
  - Prevention procedures
  - Reporting procedures
  - Safety awareness
- d) Leaking pipes encompassing:
- Location
  - Identification
  - Repairing of the leak/s
  - Area protection
  - Isolation
  - Excavation (if necessary)
  - Emergency repairs
  - Safety awareness
- e) Water meters encompassing:
- Identification and location
  - Reading and recording
  - Fault identification
  - Isolation of the system
  - Changing a faulty meter
  - Notification
  - Safety awareness
- f) Valve systems isolation encompassing:
- Location
  - Identification
  - Isolation of valve systems
  - Operation of valve systems
  - Make safe procedures
  - Maintenance (filtration)
  - Recording of work performed
  - Safety awareness
- g) Treatment plant instrumentation encompassing:
- Location
  - Identification
  - Reading and recording
  - Recognition of fault/s
  - Fault condition/s
  - Notification of fault condition/s
  - Safety awareness
- h) Facilities maintenance encompassing:
- Corrosion control
  - Painting

- Descaling
  - Bolt replacement
  - Water leaks
  - Site clearing (debris and weeds)
  - Notification of work (completed or required)
  - Emergency repairs
  - Safety awareness
- i) Chemicals encompassing:
- Identification
  - Storage procedures
  - Ventilation
  - Signage
  - Haz-chem awareness
  - Fire control
  - Emergency procedures
  - Application
  - Personal protective equipment
  - Safety awareness
- j) Gas cylinders encompassing:
- Location
  - Identification
  - Hoses and fittings
  - Storage and handling
  - Signage
  - Personal protective equipment
  - Safety awareness
- k) Stock control encompassing:
- Recording
  - Receiving
  - Gas cylinders
  - Filters and seals
  - Chemicals
- l) Water sampling for analysis encompassing:
- Cleaning and scouring
  - Water samples
  - Chemical addition
  - Recording and reporting of information
  - Report findings
  - Safety awareness
- m) Operation of water pumps encompassing:
- Pump selection
  - Pump types
  - Water pump operation

- Diesel engine service
  - Bore operations
  - Safety awareness
- n) Reading and recording of the systems instruments encompassing:
- Reading and recording information
  - Mechanical instruments
  - Electrical instruments
  - Bore instruments
  - Flow meters
  - Notification of faults
  - Safety awareness
- o) Operation and isolation of components encompassing:
- Isolation valves
  - Identification and isolation
  - Systems isolation
  - Filtration equipment
  - Inspection of the system
  - Recognition of faults
  - Notification of repairs and maintenance
  - Safety awareness
- p) Maintenance encompassing:
- Painting preparation
  - Corrosion control
  - Paint selection
  - Application methods
  - Cleaning and storage
  - Solar panels
  - Structural
  - Storage tank
  - Reporting problems
  - Housekeeping
  - Safety awareness
- q) Water sampling ( analysis ) encompassing:
- Cleaning and scouring
  - Weeds and debris
  - Water samples
  - Recording and reporting information
  - Reporting of findings
  - Safety awareness

#### **2.20.9.1 Stand-alone renewable energy system components**

Evidence shall show an understanding of stand alone renewable energy system components

to an extent indicated by the following aspects:

a) ELV wiring and circuit protection for renewable power systems.

- extra low voltage (ELV) and low voltage (LV) circuits in a stand-alone or grid connected renewable power system and the regulatory restrictions regarding work at each level.
- earthing requirements for renewable power systems over a range of applications and environments
- required sizes for ELV cabling in a renewable power system, considering allowable voltage drops and cable current carrying capacity, in accordance with AS/NZS 3000 and AS 4509.
- Selection of suitable d.c. circuit protection and isolation for all relevant points in a stand-alone renewable power system, in accordance with AS/NZS 3000 and AS 4509

b) Electrical diagrams for a renewable power system

- functional block diagrams for typical stand-alone renewable power system configurations.
- circuit schematic of typical renewable power systems supplying d.c. and/or a.c. loads, including all major components, protection devices, earthing, isolation, switching and metering
- unit wiring diagram for a typical renewable stand-alone power system d.c. control board
- architectural and site diagrams to show the locations of equipment, fittings and cabling

c) Batteries

- major features of each of the major types of commercially available batteries for stand-alone power system applications including basic chemistry, physical structure, advantages and disadvantages
- factors affecting the life of a battery
- processes of sulphation and stratification in lead acid batteries, their causes, effects and methods of prevention or reduction.
- effect of depth of discharge and of temperature on the capacity and life of lead-acid batteries.
- major specifications for a lead-acid battery in a stand-alone power system application.
- main features of charging regimes suitable for the major types of stand-alone power system batteries, using real examples.
- life of a standalone power system battery in years, based on manufacturer's cycle life data and given capacity, configuration and operating conditions
- precautions required when handling, installing or maintaining lead-acid batteries.
- procedures required for safe disposal of the major commercially available types of batteries in accordance with AS 4509.

d) Balance of system components and common loads.

- features of commercially available inverters suitable for use in stand-alone power systems.
- major operating parameters of an inverter, including d.c. voltage operating window; efficiency, output voltage waveform and output voltage regulation over a range of loads up to 5 minute ratings.
- problems that may be caused by non-sine supply voltage waveforms on typical

loads, and the solutions used to overcome these

- significance of low power factor loads for inverter systems and the principle of power factor correction.
- operation of the major types of regulators for use in stand-alone renewable power systems, using commercially available equipment as examples.
- current vs voltage characteristics, efficiency and charging voltage waveform for a transformer/rectifier type and a switchmode type battery charger suitable for use in stand-alone renewable power systems.
- operation of and applications for MPPTs for photovoltaic arrays.
- basic operation, advantages and disadvantages of mechanical tracking devices for PV arrays.
- control parameters or data using digital displays on inverters, regulators or controllers

e) Basic lighting design.

- properties and features of the major lamp types including their suitability for use in stand-alone PV power systems.
- effect on room lighting levels, of luminaire design and positioning, décor, room construction and windows.
- Selection and sizing of suitable lamps and fittings and their placement in a household taking into account usage, lighting levels required by relevant standards, and energy efficiency considerations.

f) Generating sets

- major components in the construction of a generating set
- main components of gas, petrol or diesel internal combustion engines
- basic principle of operation of internal combustion engines, including different fuel types and ignition methods.
- operating characteristics, advantages and disadvantages of gensets using different fuel types, aspiration methods, operating speed and number of cylinders.
- major methods of mechanical coupling and power transmission between an engine and alternator
- function and ratings of mechanical and electronic speed governing systems.
- basic structure and operation of an alternator.
- advantages and disadvantages of different types of excitation system and voltage regulation used for genset alternators.
- components and basic operation of a brushless excitation system in an alternator, and the principle of self-excitation

g) Generator set sizing calculations

- major electrical and mechanical ratings which control the performance of a genset
- calculations relating to real and apparent power, power factor, mechanical power, voltage regulation and speed droop for single phase gensets
- derating factor for a genset given manufacturer's derating data and a given set of operating conditions.
- Selection of a suitable genset given maximum demand and surge loadings and derating factor.
- Calculation of the fuel consumption of a genset given manufacturer's data and operating conditions.

### 2.20.9.2 Stand-alone renewable energy system design consideration

Evidence shall show an understanding of stand alone renewable energy system components to an extent indicated by the following aspects:

- a) Load analysis and projected use
- b) Availability of sustainable /renewable energy sources
- c) Component selection factors encompassing:
  - Intended environment
  - Distance between system and users
  - Maintenance and serviceability requirements
  - Rating and diversity
- d) Installation requirement

### 2.20.10 Hybrid energy systems

- a) Energy demand
  - end-use services and energy demand for each service.
  - most appropriate energy sources for each energy service for a given application and location, taking into consideration economic, environmental and client requirements.
  - greenhouse gas savings from a hybrid energy system compared to an existing non-hybrid system, resulting from energy source switching and reduction in fuel usage.
  - daily load profiles illustrating average demand and maximum demand, based on time of use data for all electrical loads
  - daily load profiles based on given load data, with consideration of likely variations in usage patterns.
  - load management strategies and or energy source switching options to reduce the maximum and surge demand, based on load profile analysis
  - load profile using a.c. power logging equipment
  - daily load profiles illustrating average demand and maximum demand, based on time of use data for all electrical loads
- b) Hybrid energy system operation
  - Definition of the terms complementarity (in relation to renewable energy resources) availability
  - advantages and disadvantages of hybrid energy systems.
  - major features of typical system configurations including pure renewables; renewables and genset; series; switched; parallel (including those with nominal daily genset running)
  - operation of a hybrid system over the short term (e.g. daily) and long term (e.g. seasonal, annual).
  - response of a genset to a step change in load, and to an overload condition.
  - calculations relating to real and apparent power, power factor, mechanical power, voltage regulation and speed droop for single and three phase gensets.
  - Calculation of the average efficiency of a genset supplying a given daily load profile, given genset efficiency vs load data.
- c) System design

- system design criteria in consultation with a client.
- renewable energy resources available at a site through the use of on-site measurements and pre-existing weather data as appropriate.
- Selection of a suitable hybrid power system configuration
- Selection and sizing of suitable renewable energy generators for a hybrid energy system taking into consideration available renewable energy resources and daily and seasonal load profiles consistent with AS 4509.2.
- Analysis of load data to determine preferred time of day for genset running, and required energy storage in a parallel hybrid system.
- Selection and sizing of a suitable genset for any system configuration, including a parallel system, according to AS 4509.2
- Selection and sizing of suitable balance-of-system components for a hybrid energy system including energy storage, controls and inverters consistent with AS 4509.2.
- Selection and sizing of a battery bank to meet both energy and maximum power demands in a parallel hybrid system, using an appropriate battery discharge rate and considering load data and genset running times
- Selection of an inverter for a parallel hybrid system, considering load data, genset running times and battery charging requirement.
- Selection and sizing of suitable internal combustion generators (genset) for a hybrid energy system taking into consideration genset characteristics and de-rating requirements
- performance of the system given load data, resource data, equipment specifications, configuration and control strategy.
- Calculation of the load fraction contributed from each renewable energy generator and from the genset.
- Calculation of the genset run time and fuel usage
- Optimisation of the system design based on a mix of design criteria such as cost, availability and reliability, maintenance, environmental factors, convenience etc.
- system manual according to AS 4509.3 and AS 4509.2, given system components and design data

d) Life cycle costing

- present worth of a future payment
- major costs in the life cycle of a hybrid energy system to be considered in life cycle costing.
- Selection of an appropriate discount rate, inflation rates, and life cycle for a hybrid system life cycle cost analysis.
- life cycle cost analysis including the cost of finance and tax savings for a hybrid system using computer software
- most cost effective of a number of hybrid energy system options on the basis of life cycle costing analysis according to AS 4536, AS 3595 or similar standards.
- Comparison of the capital cost, simple pay back time and life cycle cost of a hybrid energy system with another energy supply option, according to AS 4536, AS 3595 or similar standards.
- sensitivity analysis of life cycle costing to variations in discount rate or other major parameters

e) Installation, commissioning and maintenance

- Specification of the installation and maintenance requirements for a complete hybrid energy system taking into consideration safety and relevant Australian

#### Standards

- installation requirements for fuel storage for a given genset in accordance with AS 1940, AS 4509 and local regulations
- considerations involved in providing adequate genset vibration isolation
- considerations involved in providing a genset exhaust system suitable for a given genset and installation site.
- major considerations and methods used in providing suitable noise attenuation for a genset installation.
- Specification of the physical accommodation requirements for a given genset to provide adequate air flow and noise attenuation, with due regard for safety, maintenance access, and in accordance with AS 3010 and AS 4509.
- methods used to allow extended service intervals for gensets
- main features of engine protection systems commonly used on small gensets, and the genset sizes to which these are applicable.
- installation and commissioning work on a small genset and controller observing relevant OHS guidelines.
- symptoms of common genset faults
- basic fault location and rectification on a genset with the aid of troubleshooting guides or flowcharts.
- symptoms, causes and possible solutions for the phenomenon of “hunting”.
- maintenance schedule for a hybrid power system.

#### f) Data communications

- typical applications of data communications in renewable energy systems.
- different types of cables and connectors used in data communications between electronic devices and computers.
- commonly used protocols used for serial data communications
- different communications ports on palmtop, laptop or desktop computers
- Correction of an electronic device (e.g. inverter or charge controller) to a computer directly, and via modems and telephony network, using appropriate cabling, connectors and computer ports
- dial-up connection from a computer to a remote electronic device, such as an interactive inverter.
- standard terminal program or proprietary communications software to send to and receive data from an electronic device.
- Programming and retrieving data from an interactive inverter via a computer and data communications link.
- logged data downloaded from an interactive inverter.

#### g) Data-logging

- general features and operation of on-site and remote data logging systems for monitoring and control of a hybrid energy system.
- logger programming, data downloading, display and interpretation of the results

#### h) Interactive inverters

- main features of different devices commonly used as controllers in hybrid energy systems
- function and operation of an interactive inverter.
- system control philosophies used in different interactive inverters

- program parameters for an interactive inverter, as required for the correct operation of a parallel hybrid system given system component details, load data and preferred genset running times.
- appropriate charging regime for the system battery, based on manufacturer's data and system operating conditions.
- Programming an interactive inverter through its front panel interface.
- function, operation and major features of a genset controller and how it interfaces with a system controller such as an interactive inverter.

### 2.20.11 Sustainability and greenhouse reduction strategies

Evidence shall show an understanding of sustainability to the extent indicated by the following aspects:

- a) Principles of sustainability
  - ways in which ecosystems moderate climate.
  - ways in which ecosystems purify and store water.
  - ways in which ecosystems recycle waste.
- b) Problems in a sustainable world
  - changes to Australian forest cover since white settlement, and the resulting loss of ecosystem and human benefits.
  - changes to Australia's soils since white settlement, and the resulting loss of ecosystem and human benefits.
  - changes to Australia's waterways since white settlement, and the resulting loss of ecosystem and human benefits.
  - place of environmental accounting in quantifying Australia's environmental losses.
  - limits to Australia's population carrying capacity.
- c) Sustainability principles
  - principles within sustainability including: environmental accounting and economics; full cost pricing; triple bottom line ethic; ecologically sustainable development; greenhouse gas abatement; energy efficiency; resource and water use efficiency; life cycle costing; renewable energy substitution, cleaner production; waste minimisation, reuse and recycling; ecological footprint.
- d) Addressing the problem of global warming
  - greenhouse gases and their sources and quantities that contribute to global warming.
  - global warming impacts for Australia for 2030 and 2070 predicted by CSIRO modelling.
  - requirements to achieve stable atmospheric concentrations of greenhouse gases.
  - ecologically and economically sustainable methods for achieving these stable concentrations.
- e) Greenhouse gas emissions profile
  - *goals* and *principles* of the National Greenhouse Strategy
  - what a greenhouse gas inventory is, why it is required, and the sectors to which it applies
  - uses to which the National Greenhouse Gas Inventory can be applied.
- f) Understanding and communicating climate change and its impacts
  - the possible impact of climate change in Australia.

- techniques for improving the understanding of climate change
  - techniques for communicating to and educating the general public on greenhouse gas induced climate change.
- g) Partnerships for greenhouse action
- actions achievable by each level of government to implement the NGS.
  - methods by which the community activity can be engaged in the reduction of greenhouse gas emissions.
  - initiatives that can be undertaken by the private sector to reduce greenhouse gas emissions.
  - advantages of international partnerships.
  - emissions trading system.
- h) Efficient and sustainable energy use and supply
- techniques for reducing the greenhouse intensity of energy supply.
  - types of renewable energy sources suitable for use in Australia.
  - methods and technique for improving end-use efficiency.
- i) Efficient transport and sustainable urban planning
- how integrating land use and transport planning can assist the greenhouse problem.
  - how each of the following can be used to mitigate greenhouse gas; travel demand and traffic management strategies; encouraging greater use of public transport, walking and cycling; freight and logistics systems; improving vehicle fuel efficiency and fuel technologies;
- j) Greenhouse sinks and sustainable land management
- how enhancing greenhouse sinks and encouraging sustainable forestry and vegetation management can complement the AGS.
  - how greenhouse gas emissions are obtained from agricultural production and describe techniques to mitigate the emissions.
- k) Models of greenhouse best practice in industrial processes and waste management
- types and methods of reducing greenhouse gas emissions from industry.
  - methods of reducing methane emissions from waste treatment and disposal.
- l) Adaptation to climate change
- salient points in each of the key sectors that require analysis and the strategies required in the need for adaptation to climate change

### 2.20.12 Energy efficient building design

Evidence shall show an understanding of energy efficient building design to the extent indicated by the following aspects:

- a) Climate and thermal comfort.
- characteristics of the different Australian climatic types.
  - use of climatic data in published and electronic forms to extract the quantities relevant to energy efficient design.
  - relationship between climate and comfort using bioclimatic or psychrometric charts.
  - calculation of heating or cooling degree days or degree hours for various locations.
  - calculation of thermal neutrality for a given location.
- b) Solar geometry and radiation

- definition of the terms: declination, hour angle, zenith angle, azimuth and altitude angles, the equation of time.
  - conversion of solar time to local time and vice versa.
  - position of the sun and the length of shadows with the aid of algorithms, tables, sun charts or computer software.
  - daily irradiation incident on a wall, window or roof of a given tilt and orientation.
  - relative summer and winter irradiation of windows facing the cardinal orientations.
- c) Heat transfer
- thermal processes of conduction, convection and radiation apply to the transfer of heat in buildings.
  - calculation of the summer and winter U-values of building elements using tables and software.
  - calculation of the infiltration heat transfer in a building.
- d) Glazing Systems
- different types of glazing systems and their characteristics.
  - different types of shading devices and the window orientations for which they are most appropriate.
  - solar heat gain for different glazing types and angles of incidence
  - calculation of the average daily irradiation of a window partly shaded by eaves, using computer software.
  - calculation of the average daily heat gain through a window partly shaded by eaves.
- e) Insulation
- different types of insulation and where they are used.
  - how different types of insulation are installed in roofs, walls and floors.
  - determination of the minimum R-values of roof insulation for different locations using Australian Standard AS2627 or similar standards.
- f) Thermal mass
- advantages and disadvantages of using substantial thermal mass in different climate types and for different heating and cooling regimes.
  - where thermal mass can be located in a building.
  - explain what is meant by the following terms: time lag, decrement factor, admittance, response factor.
- g) Comfort control strategies
- interpretation of the usefulness of a design strategy with the aid of a psychrometric chart showing control potential zones for a particular location.
  - selection of the most useful comfort control strategies for Australian climatic regions.
- h) Energy efficiency in buildings
- determination of the direction of the following: both true and magnetic, north winter and summer sunrise, winter and summer sunset.
  - solar access in summer and winter to various possible house locations on a site and room locations within the house.
  - how vegetation can be used to both funnel and deflect wind.
  - using cross ventilation as a cooling strategy.
- i) Thermal performance of a building
- heating requirements of a building using the heating degree day or hour method.

- dynamic performance predicted by a computer simulation program such as NatHERS or BERS.
- j) Integration of active solar systems
- active solar system types available which can provide hot water, space heating and cooling.
  - the best location on the roof, and the optimum tilt and orientation of the collector panels.
  - function of the main components of an air or water-based solar space heating system.
  - schematic of the fluid circuit of an air or water- based space heating system.
  - main solar cooling system types.
- k) Energy rating schemes
- differences in approach used by house energy rating schemes in Australia.
  - energy performance of a number of houses using a computer simulation program such as NatHERS or BERS.
  - other methods to reduce energy consumption within and outside a building including appliance efficiency, human behaviour changes, building management strategies and transportation minimisation.
  - additional cost of energy efficiency measures and cost savings using life cycle cost or simple pay back methods according to Aust. Standard AS3595 and AS4536.
- l) Sustainable and safe building materials
- common building materials and their embodied energy content.
  - environmental impact of the production of various building materials.
  - problems associated with the use or disposal of building materials.

### 2.20.13 Photovoltaic installations

Evidence shall show an understanding of photovoltaic installations to the extent indicated by the following aspects:

- a) PV array installation requirements
- OH&S requirements and methods for working on roofs.
  - common methods of roof construction and methods to ensure integrity of waterproofing.
  - common types of roof mounted and free-standing PV array frame construction and methods of tilt angle adjustment.
  - fixing methods for different roof types.
  - array mounting methods for non-north facing roof sections.
  - aesthetic considerations in choosing an appropriate array location and type of mounting.
  - the mounting and fixing methods for at least one type of commercially available building integrated PV product.
- b) Electrical installation requirements (AS 4509)
- methods used in wiring and connecting PV arrays
  - considerations involved in wiring of series connected PV modules in order to minimise power losses due to shading.
  - PV array wiring diagram including the placement of blocking and bypass diodes.

- considerations involved in choosing the location of regulators, d.c. control board and batteries.
  - cable route from array to battery so as to minimise the route length.
- c) System installation and maintenance
- installation work on a PV power system in accordance with relevant standards and OH&S guidelines.
  - correct isolation and shutdown procedures prior to carrying out maintenance tasks.
  - hazards present and OH&S requirements when handling and installing batteries.
  - basic maintenance tasks on flooded lead acid and VRLA batteries.
  - routine maintenance tasks on PV arrays.
  - required vegetation control to remove or reduce shading or soiling on a PV array

### 2.20.14 Photovoltaic power systems

Evidence shall show an understanding of photovoltaic power systems to the extent indicated by the following aspects:

- a) Daily irradiation
- definition of the terms: declination angle, reflectance, sunshine hours, extraterrestrial irradiation
  - solar radiation data tables and contour maps.
  - determination, using field measurements and a sun path diagram, the times and dates when a PV array will be shaded by obstacles at a particular site.
  - calculation of the daily average irradiation on a horizontal plane given extraterrestrial irradiation, location constants and sunshine hour data.
  - calculation of the monthly mean daily irradiation falling on a PV array for each month of the year, adjusted for the effects of shading, using irradiance and irradiation data tables and a sun path diagram and/or appropriate software.
- b) Photovoltaic modules
- definition of the terms: mono-crystalline, poly-crystalline, amorphous, band gap energy, semi-conductor
  - diagram of a basic crystalline silicon PV cell, showing its physical structure, with at least five major features labelled
  - major steps in the production of PV modules based on bulk silicon cells, in comparison with the production of thin film PV modules.
  - basic physical principles of PV cell operation for the main types of commercially available PV modules.
  - efficiency, spectral response, cost and typical applications of the main types of commercially available PV modules.
  - new photovoltaic technologies currently being developed towards commercialisation, and their major features.
  - mechanical and electrical features necessary for the long life of a PV module under a wide range of operating conditions.
- c) Module characteristics
- definition of the terms: I-V curve, fill factor, operating point, maximum power point (MPP), cell temperature co-efficient, nominal operating cell temperature (NOCT), current, voltage and power output co-efficient.
  - equivalent circuit for a PV cell, labelling each of the elements and the polarity of

the terminals.

- family of I-V curves for a PV module, labelling major points and showing the effects of variation in irradiance and variation in cell temperature.
- major ratings of a PV module from manufacturer’s information or nameplate data.
- determination of the operating point of a PV module with a resistive load, a constant voltage source or any other load with known I-V characteristics, using the load line method.
- configuration of a typical PV array, including the function, placement and ratings of blocking and bypass diodes.
- the effect of partial shading of a PV module or array, the impact of bypass diodes and the significance of their configuration on output current in typical operating conditions.
- calculation of the power at MPP, and the power under typical battery charging conditions, of a PV module, given irradiance and ambient air temperature.
- calculation of the daily energy output of a PV array in accordance with AS 4509.2, and by using “rule of thumb” de-rating factors.
- advantages and disadvantages of MPPTs in water pumping applications and in battery charging applications.
- the scope and content of Australian or international standards relevant to the performance of PV modules.
- the electrical characteristics of a PV module according to relevant Australian or International standards, using an outdoor test method.

d) PV powered water pumping system

- selection of pump type appropriate for a given pumping application.
- sizing pipes and fittings for a given pumping application.
- calculation of the mechanical power required to pump the peak flow rate.
- selection and sizing the motor and mechanical transmission
- circuit schematic of a typical PV water pumping system showing all components.
- calculation of the required size of a fixed array.
- selection of a commercially available water pumping system for a particular application.

e) Stand-alone PV power system design

- detailed load assessment including the assessment of total daily energy, maximum demand, surge demand and load management requirements, consistent with AS 4509.2.
- determination of an appropriate system voltage and the size of major components in the system using appropriate calculations.
- selecting and sizing a PV array, given load and solar radiation data and using a method consistent with AS 4509.2.
- selecting and sizing suitable regulators, inverter, battery, battery charger and backup generator for a given load and PV array size, in accordance with AS 4509.2.
- selecting and sizing suitable metering, switches, cabling, cabling hardware, protection and isolation devices and electrical enclosures for a PV RAPS system in accordance with AS 4509 and AS/NZS 3000.
- suitable material and design for a PV array mounting frame in a given application in accordance with AS 4509.

- battery accommodation in accordance with AS 4086.2, AS 4509.1 and AS 4509.2.
- complete design of PV power system using a series or switched configuration, consistent with the guidelines set out in AS 4509.2.
- estimation of the capital cost and running costs for the PV system, accounting for government rebates or other incentives.
- computer based tools for: load assessment, selection and sizing of components, life cycle costing
- compare the capital cost, simple pay back time and life cycle cost of a PV power system with another power supply option.
- produce a System Manual according to AS 4509.2 and AS 4509.3.

f) Grid connected PV systems

- operation of grid interactive PV systems including synchronisation, safety features, power flow control and metered energy for systems with and without energy storage.
- selecting and sizing a PV array for a grid connected inverter system, based on any of: annual energy demand, budget constraints, architectural constraints or limitations on available inverter sizes.
- schematic diagrams of common grid connected inverter circuit configurations with or without energy storage including metering arrangements, isolation and connection with respect to RCDs.
- major installation details for a proposed grid connected inverter system, based on the requirements set out in AS 4777 Parts 1 to 3.
- selecting and sizing an inverter and balance of system components including cabling, circuit protection and isolation equipment for a grid connected PV system with or without energy storage.
- major non-technical considerations impacting on the design, installation and operation of grid connected PV systems including economic, financial, contractual, institutional, legislative and regulatory.
- annual reduction in greenhouse gas emissions achieved by a given PV power system at a given location.

g) Installation and commissioning

- suitable location for the PV array, batteries and other components at a given installation site in accordance with AS 4509 and AS 4086.2.
- major installation requirements for all system components which will ensure correct operation, long life, safety and ease of maintenance consistent with AS 4509, AS 4086.2, AS/NZS 3000 and relevant OH&S guidelines.
- start-up and shut-down procedures as well as a commissioning procedure for a PV power system in accordance with AS 4509.
- test on a PV system to determine correct operation.
- installation and commissioning work on a PV power system in accordance with AS 4509, AS 4086.2, AS/NZS 3000 and AS 3010.1.

h) Maintenance and fault finding on a PV power system

- the safety hazards associated with gensets.
- installation and maintenance procedures on gensets using safe work practices in accordance with OH&S guidelines.
- basic periodic servicing requirements for a genset.
- testing gensets for correct operation

- electrical faults within a PV array, or in any other part of the system.
- maintenance requirements for a commercially available stand-alone power system battery, in accordance with AS 4086.2 and AS 4509.3 and manufacturer's specifications.
- maintenance schedule for a stand-alone PV power system.
- testing and maintenance tasks required for stand-alone PV systems in accordance with AS 4086.2 and AS 4509 and relevant OH&S regulations.

### 2.20.15 Renewable energy system electronics

Evidence shall show an understanding of renewable energy system electronics to the extent indicated by the following aspects:

#### a) Semiconductor components

- symbols for common semiconductor components including rectifier diodes, LEDs, zener diodes, bipolar transistors, Darlington pairs, MOSFETs, IGBTs, SCRs, and triacs.
- basic function of these devices above.
- major rating parameters of device above.
- applications for each device.
- I-V characteristics of diodes and the current gain characteristic of bipolar transistors.

#### b) Linear regulated d.c. power supplies

- label circuit diagrams for half wave and full wave, single phase and three phase rectifiers.
- voltage and current waveforms for these rectifier circuits with and without capacitor filtering
- peak output voltages from single phase and three phase rectifier circuits.
- block diagram showing the structure of a regulated DC power supply.
- main features of linear integrated circuit voltage regulator ICs.
- each of the major components and their physical location in a regulated power supply.

#### c) Switching power control circuits

- power dissipation of a transistor when operated as a switch.
- how Pulse Width Modulation (PWM) can provide a variable output voltage from a switch mode regulator.
- advantages and disadvantages of switch mode power circuits compared with linear power circuits.
- block diagram of a basic PV switching voltage regulator for battery charging.
- applications of switch mode circuits found in renewable energy systems.
- how power control in AC circuits is achieved using SCRs and triacs.
- methods used to reduce radio frequency interference (RFI) in DC and AC circuits utilising high speed switching.

#### d) Digital electronic circuits

- characteristic features that distinguish analogue and digital devices and circuits.
- how numbers or text information can be represented using binary numbers and how these are represented in digital circuits.

- operation of voltage comparators, Analogue to Digital (A-D) converters, and Digital to Analogue (D-A) converters, and give one example of each one's use in a renewable energy application.
- basic function of microcontrollers, volatile and non-volatile memory devices.
- operation of a solar hot water system pump differential controller, as an example of the use of logic in digital circuits.

e) Inverters

- basic function of inverters and d.c.-d.c. converters and their use in renewable power systems.
- the operation of an inverter bridge and half-bridge.
- output voltage waveforms for square wave, modified square wave and synthesised sine wave inverters showing typical voltages and timing.
- the function of PWM techniques in modified square wave and synthesised sine wave inverters.
- block diagrams showing the structure of common forms of d.c.-d.c. converters and inverters used in renewable energy applications.

f) Maintenance

- safety procedures for work on electronic systems, circuits and apparatus.
- hazards that may be encountered when performing tests on inverters, battery chargers or other equipment containing LV circuits.
- functionality of electronic equipment through appropriate client questioning and application of systematic tests and observation.
- various types of common faults and their causes in renewable energy electronic equipment.
- typical test equipment used to repair electronic and electrical equipment
- safe and correct use of tools and test equipment to locate electronic equipment faults under the direction of an electronics technician.
- replacement of circuit boards, observing appropriate handling precautions for static sensitive devices.
- replacement of socketed ICs such as EPROMs or microprocessors, using appropriate tools and methods.

### 2.20.16.1 Fundamentals of wind energy conversion

Evidence shall show an understanding of wind energy conversion systems (WECS) fundamentals to the extent indicated by the following aspects:

- a) Basic operation of lift and drag type WECS
- b) Characteristics of WECS in terms of power and torque, efficiency (power and output coefficients), solidity and tip speed ratio.
- c) Major categories and sub-categories of WECS.
- d) Advantages and disadvantages of each type of WECS.
- e) Suitable materials for the construction of WECS taking into consideration fatigue stresses and environmental conditions such as salt air, humidity and ice.
- f) Typical system configurations and components for: stand-alone power systems and water pumping.
- g) Strategies and/or mechanisms to control: mechanical stresses on the WECS in gale force winds and power output for battery charging.
- h) Appropriate types of WECS for a particular application.

### 2.20.16.2 Wind energy conversion systems

Evidence shall show an understanding of wind energy conversion systems (WECs) to the extent indicated by the following aspects:

a) Wind characteristics

- definition of the terms: weather charts, isobars, fronts and troughs, cyclone and anti-cyclone, atmospheric boundary layer, geostrophic wind, gradient wind, wind shear, wind rose
- major global wind circulations and the formation of major wind flows over your continent.
- major features of the atmospheric boundary layer including: variation of wind speed with height according to logarithmic and power Laws, effects of surface roughness
- atmospheric stability and temperature inversions turbulence.
- major local winds including: trade winds, sea and land breezes, katabatic and anabatic winds.
- likely effects on the major local winds from local topography, surface roughness, isolated barriers and temperature inversions.
- typical diurnal, monthly and seasonal patterns of winds over the local area.
- the formation and likely effects of extreme winds and wind shear.

b) Wind speed data measurement and analysis

- definition of the terms: porosity, internal boundary layer, speed-up factor, temperature inversion factor, wind speed frequency distribution, lull period, calms.
- interpretation of local and regional wind speed and direction data such as local records (Eg. Meteorological Bureau data), ecological indicators and wind speed/energy maps.
- wind speed and direction using data logging anemometers.
- manufacturer's calibration curves for anemometers to correct recorded data.
- calculation at a site, monthly and yearly average wind speed, and wind power density from existing, nearby data or on-site measurements, using appropriate software
- estimation of the wind speed at a WECS tower of suitable height and location given: wind speed data recorded at two or more elevations at the site, and wind speed data recorded at one elevation and appropriate surface roughness, temperature inversion and speed-up factors at the site.

c) Site selection

- the likely effects of local topography, surface roughness, isolated barriers and temperature inversions on a WECS at a given site.
- assessment of available local or regional wind speed, wind energy and direction data.
- selection of the most appropriate site-monitoring location taking into consideration factors such as: topography, accessibility, surface roughness, shielding from isolated barriers (obstacles), turbulence, temperature inversions, power transmission distance, environmental and heritage impacts eg. noise, visual, bird life, national parks or aboriginal sites.
- measurement of wind speed and direction data at an appropriate site and height(s) using a data logging anemometer over a sufficient period of time.

- analysis of the recorded wind speed and direction data to determine if the site is suitable for wind energy utilisation.

d) Selection of WECS

- selection of suitable WECS specifications to suit site load and wind speed data according to AS4509 including: cut-in, rated and furling wind speeds, blade diameter, rated power at an appropriate rated wind speed, materials of construction.
- select a suitable commercially available WECS that most closely fits the specifications above.
- suitable tower requirements at the site including site access, soil type and foundations, structural certification and planning approvals.
- calculation of the monthly and annual energy output of the selected WECS at the site from wind speed data and load data using appropriate computer software and in accordance with AS4509.
- height of the tower and the size of the WECS for optimum use.
- suitable system configurations.
- balance of system components including: battery storage, inverter, regulator, transmission cable, back-up battery charger and generator.
- equipment reliability and manufacturer/suppliers back-up service including availability of spare parts and service personnel
- installed capital and life cycle costs of various system configurations according to AS3595 and AS4536.
- environmental, cultural and social factors that impact on the implementation of a WECS such as: external costs, WECS manufacturing processes and embodied energy and energy payback time, noise levels, visual amenity, RFI.

e) Installation and maintenance of a WECS

- select an appropriate tower for the installation of a WECS taking into consideration: soil type and footings, local council approvals, appropriate codes such as AS1170.2, transport of tower.
- appropriate methods, using appropriate safety procedures, for: raising tower and WECS, lightning protection, tower maintenance, safety in the erection and maintenance of the tower and WECS, site management to minimise environmental impacts.
- appropriate electrical transmission voltage and cable size from the WECS to the load or energy storage.
- appropriate installation, commissioning, fault diagnosis and rectification, and maintenance methods using appropriate safety procedures. This will include: WECS power output, voltage regulation, transmission cable voltage drop, manual and automatic furling, shut-down.
- schematic and wiring diagrams for the WECS showing the general circuit layout and protection between the WECS, energy storage, inverter and loads according to AS/NZS 3000, AS4509 and lightning protection requirements.
- suitable layout for the location of energy storage to meet AS/NZS 3000, AS 3011.1 and AS4509.
- safety procedures for the installation, commissioning, fault diagnosis and maintenance of system components.
- maintenance schedule for the system.

### 2.20.17.1 Micro-hydro systems installation and maintenance processes

Evidence shall show an understanding of micro-hydro systems (MHS) installation and maintenance to the extent indicated by the following aspects:

- a) Selection of an appropriate MHS taking into account the topology of the site, local council approvals, environmental considerations, site access and transport of equipment, water and power transmission distances and daily and seasonal load profiles.
- b) Appropriate methods, using appropriate safety procedures, for: dam or weir construction; watercourse construction and/or penstock installation; turbine installation;
- c) Appropriate installation, commissioning, fault diagnosis and rectification procedures and maintenance methods using appropriate safety procedures.
- d) Maintenance schedule for the system.
- e) Schematic and wiring diagrams for the MHS showing the general circuit layout and protection between the MHS, batteries, inverter and loads according to Australian Standards AS3000, AS4509, and AS4086.2 requirements.
- f) Safety procedures for the installation, commissioning, fault diagnosis and maintenance of system components.

### 2.20.17.2 Micro-hydro systems

Evidence shall show an understanding of micro-hydro systems (MHS) to the extent indicated by the following aspects:

- a) Site evaluation
  - definition of the terms: potential and kinetic energy, micro-hydro system, gross head, net head, flow rate.
  - available head at a site using a dumpy level or theodolite, altimeter, pressure gauge and contour maps.
  - the accuracy, advantages and disadvantages of each method for flow and head assessment.
  - the flow rate of a given site using each of the following methods - catchment area calculations, water diversion to fill a container, stream velocity/area measurement and/or weir construction method.
  - advantages and disadvantages of each method of head and flow measurement with particular reference to their accuracy.
  - long term usable flow rate from long term stream flow if available able taking into account environmental considerations.
  - effects of seasonal variation using long term weather data.
  - typical daily and seasonal energy consumption profile at a given site.
  - effect of the energy demand profile both daily and seasonally at the site on the system sizing.
  - government regulatory requirements such as those covered under environmental or water resource legislation.
  - environmental constraints at a site including minimum stream flow rates, ecological impacts, visual and noise impacts.
- b) System components and configuration
  - structural differences between the Pelton, Turbo Impulse, Francis, propeller type, Michell or Banki cross flow turbines and PATs (Pumps As Turbines).
  - system configuration for each turbine type identifying all major components.
  - for impulse and cross flow turbine types, the comparison of bucket and blade

shapes, nozzle shapes and types, types of hydraulic and electrical controllers/governors, speed increasers and over speed clutches and their basic operation and appropriate application.

- operational parameters and efficiency of different turbines.
- circumstances under which battery storage would be used.
- respective merits and suitability of various turbine types for various micro hydro-electric applications.
- operation of hydraulic rams or similar water pumps.
- typical efficiencies of hydraulic ram systems and appropriate applications.
- advantages and disadvantages of water energy storage systems with other energy storage systems such as battery banks.

#### c) System design

- suitable MHS characteristics to suit site load, hydraulic head and stream flow rate characteristics and a suitable type of commercially available MHS to suit.
- frictional losses in delivery pipes using manufacturer's data.
- calculation of the energy output of the selected MHS at the site from water flow rate, head and manufacturer's data, allowing for seasonal variations in performance and environmental constraints.
- design of any required weirs or dams, open races or penstocks, strainer and intake systems.
- optimum the position of the MHS and size of the MHS.
- suitable balance of system components including delivery pipe and fittings, transmission cable and voltage, voltage and frequency regulation, battery storage type and capacity, battery charger, inverter, back-up generator, and load dump.
- likely environmental impacts of the MHS and appropriate measures to minimise these impacts.

#### d) System costing

- major costs to be considered in the life cycle costing method.
- calculation of the capital and life cycle cost that includes the cost of various system configurations for a micro hydro application.
- external costs that might impact on the cost effectiveness of a MHS.
- most cost effective of a number of options on the basis of life cycle costing analysis.

### 2.20.18 Solar water heating systems

Evidence shall show an understanding of solar water heating systems to the extent indicated by the following aspects:

#### a) Daily irradiation

- definition of the terms: declination angle, reflectance, sunshine hours, extraterrestrial irradiation.
- solar radiation data tables and contour maps.
- determination, using field measurements and a sun path diagram, the times and dates when a PV array will be shaded by obstacles at a particular site.
- calculation of the daily average irradiation on a horizontal plane given extraterrestrial irradiation, location constants and sunshine hour data.
- calculation of the monthly mean daily irradiation falling on a PV array for each

month of the year, adjusted for the effects of shading, using irradiance and irradiation data tables and a sun path diagram and/or appropriate software.

b) Energy balance

- definitions of the terms: transmittance, absorptance, emittance, specific heat, absorber, heat removal factor, stagnation temperature.
- explain the heat transfer mechanisms of conduction, convection and radiation and their operation in a simple fin and tube collector.
- how the transmittance, absorptance and emittance properties of materials used in the collector affect the performance of the collector.
- ways to reduce heat losses from a collector.
- energy balance and instantaneous efficiency equations for a collector.
- calculation of the collector constants from the instantaneous collector efficiency equation for a linear relationship.

c) The solar collector

- five major factors that affect the selection of materials for solar collectors.
- features of collectors for low, medium and high temperature applications in terms of heat transfer, optical properties and materials of construction.
- the scope and content of AS 2712 or similar standards.
- requirements of AS 2712 or similar standards in one aspect of collector construction.
- tests required by AS 2712 or similar standards with regard to collector construction.

d) Solar collector performance

- scope and content of Australian Standards AS 2535 and AS 2984 or similar standards.
- method for testing the thermal performance of a solar collector or a solar water heater according to AS 2535 and AS 2984 or similar standards.
- instantaneous efficiency of a solar collector for different inlet temperatures and flow rates.
- effect of varying inlet temperature and flow rate on the performance of a solar collector.
- efficiency curves for various types of solar collectors.
- performance of various types of solar water heaters in terms of their design, location and predicted solar fraction.

e) Hydraulic circuits

- definition of the terms: equivalent length, static head, dynamic head, heat exchanger.
- configuration of a hydraulic circuit for a pumped storage solar water heating system.
- function of the components in the circuit.
- effects of water quality on the life and performance of components in the hydraulic circuit.
- suitable type and size components to minimise hydraulic and energy losses including pipes, pumps, heat exchangers, expansion tanks, valves and filters for a hydraulic circuit with a given flow rate and head.
- safety requirements of the hydraulic circuit in terms of temperature, pressure and hydrogen gas release.
- requirements to balance flow through parallel/series combinations of collector

arrays.

- suitable water and energy conservation measures including user education, water conservation technologies and insulation.
- suitable types and level of insulation for system components to minimise heat losses.

f) Domestic solar water heaters

- definition of the terms: thermosiphon system, pumped storage system, sacrificial anode.
- function of the components in a domestic solar water heater including the collector, storage tank, valves, piping, differential controllers, pumps, insulation and support frames.
- schematic diagram of different types of system configurations showing collectors, storage tank, piping, pumps, filters, valves, heat exchangers and expansion tanks.
- factors which affect system performance including: storage tank and collector design, system location and collector orientation, water quality, hot water demand, usage pattern.
- safety requirements that prevent injury from high temperature water and hydrogen gas explosions during installation, maintenance and use of solar water heaters.
- demand for hot water and irradiation for a given location and collector tilt angle, orientation and shading.
- selection a suitably sized system for a given demand and location to meet a specific solar fraction and/or minimise life cycle cost.
- consequences of under/oversizing of solar water heating systems in terms of: the effect on system performance, safety, life expectancy of components.
- installation, commissioning and maintenance requirements for a given situation including location and mounting of collectors, storage tanks, valves, pumps, pipes and ancillary fittings.
- energy conservation and efficiency measures that will enhance the performance of a solar water heater such as: appropriate usage patterns, insulation, water conservation technologies, auxiliary energy tariffs.
- the capital cost, simple pay back and life cycle cost of solar and electric or gas hot water heaters according to AS 3595 and AS4536.

g) Commercial solar hot water heaters

- schematic diagrams for two different types of system configurations showing collectors, storage tank, piping, pumps, filters, valves, heat exchangers and expansion tanks.
- steps involved in the design of a commercial solar water heating system.
- assessment of the demand for hot water and irradiation for a given location and collector tilt angle, orientation and shading.
- selection of a suitably sized system for a given demand and location to meet a specific solar fraction and/or minimise life cycle cost.
- consequences of under/oversizing of a solar water heating system in terms of: system performance, safety, life expectancy of components.
- installation, commissioning and maintenance requirements for a given situation including location and mounting of collectors, storage tanks, valves, pumps, pipes and ancillary fittings.
- evaluation of energy conservation and efficiency measures that will enhance the performance of a solar water heater such as: appropriate usage patterns, insulation,

- water conservation technologies, auxiliary energy tariffs.
  - the capital cost, simple pay back time and life cycle cost of solar and electric or gas hot water heaters according to AS 3595 and AS4536.
- h) Pool solar hot water heaters
- function of the components of solar pool heating systems.
  - typical system configuration.
  - two factors which affect system performance.

### **2.20.19 Grid connected inverters**

Evidence shall show an understanding of grid connected inverters to an extent indicated by the following aspects:

- a) Basic function of an inverter, including the output waveforms of different types.
- b) Operation of an inverter bridge and half-bridge.
- c) Function of PWM techniques in modified square wave and synthesised sine wave inverters.
- d) Characteristics which distinguish inverters suitable for grid connected photovoltaic array application from standard inverters.
- e) Operation of grid interactive PV systems including synchronisation, power flow control, passive and active anti-islanding, and metered energy for systems with and without energy storage.
- f) Installation requirements for grid connected inverters

### **20.2.20 Renewable energy heating**

Evidence shall show an understanding of renewable energy heating to an extent indicated by the following aspects:

- a) Heating system technologies encompassing:
  - Types and their application
  - Operating parameters of common systems
- b) System component parameters and specifications
- c) System performance and requirements
- d) Installation specifications and requirements

### **2.20.21 Distributed generation**

Evidence shall show an understanding of distributed generation to an extent indicated by the following aspects:

- a) Structure of the existing generation, transmission and distribution system
- b) Benefits, issues and impacts
- c) Distributed generation technologies
- d) Electrical power distribution systems operation encompassing:
  - Electrical characteristics of feeders
  - Causes of voltage problems in a power distribution system
  - Voltage regulation limits
  - Calculations for feeder voltage drops
  - Methods of voltage control

- Fault types, causes and effects
  - Determination of fault levels
  - Fault level limitation
- e) Protection and relaying encompassing:
- Protection system purpose and features
  - Application of protection in a distribution network
  - Protection system terminology
  - Feeder protection systems
- f) Distributed generation issues encompassing:
- Utility requirements for interconnection
    - Safety of personnel
    - Islanding
    - Grid Stability
  - Voltage regulation
  - Potential benefits of DG
  - Limitations in design of distribution circuits (designed for 1-way operation)
  - Match between supply and demand
  - Operation: dispatchable and non-dispatchable supplies
  - Factors affecting the sizing of distributed generation
  - Use of energy storage
  - Case studies
- g) Renewable energy supplies issues encompassing:
- Limits to penetration
  - Factors affecting the value of renewables on the grid
  - Implications of renewable input on power system operation
  - Connection of energy systems via inverters: AS 4777
- h) Factors affecting the uptake of distributed generation encompassing:
- Institutional factors
  - Regulatory factors
  - Policy including mandated targets
  - Green power market
  - Financial issues
  - Contractual issues
  - Case studies

## 2.21 System, control and automated

### 2.21.1 Machine design and positioning

Evidence shall show an understanding of the design parameters of machines and their capability as well as the ability to redesign their operating performance as well as the location of machines in an assembly or manufacturing environment to maximise production efficiency to an extent indicated by the following aspects:

- a) Materials used in machine drive shafts
- b) Standard formulas and specifications to determine machine drive shaft sizes for power, deflection, torque, bending data, key sizes, spline size and pin size
- c) Selection of power prime movers from manufacturers catalogues
- d) Principles associated with systematic planning of material flow in a production process
- e) Adaptation of systematic layout planning to a production process
- f) Preparation of process layouts and materials flow patterns in a production process
- g) Materials handling methods and unit load concepts
- h) Types of materials handling systems
- i) Design of materials handling systems and the factors that guide the final selection of a system

### 2.21.2 Mechanical drives and engineering

Evidence shall show an understanding of mechanical drive components and engineering design concepts to an extent indicated by the following aspects:

- a) Function of common mechanical drive parts and components
- b) Australian Standards governing the design of parts and components in a drive system
- c) Selection criteria for a part or component or drive system to suit a particular application
- d) Design philosophy applicable to mechanical, civil and electrical engineering
- e) Essential features of a design specification
- f) Understanding of Australian Standards and Codes of practice for design
- g) Steps in a designing a design
- h) Ergonomics in design

### 2.21.3 Materials and strength of materials

Evidence shall show an understanding of materials used in engineering and the mechanical properties of these materials to an extent indicated by the following aspects:

- a) Structure of metals, polymers and ceramics
- b) Interpretation of phase equilibrium and isothermal transformation diagrams
- c) Heat treatment processes of low carbon steel, high carbon steel and tool steel as well as non-ferrous metals such as aluminium and copper
- d) Properties and specifications of metal and non-metal materials
- e) Common failures in materials
- e) Determining normal stresses, strains and deformations caused by axial load
- f) Shear stress on bolted connections
- g) Failures in fillet welds and determine appropriate weld size and length required on welded connections

- h) Centroid and second moment of gyration of plain figures
- i) Shear force and bending moment diagrams for supported and cantilever beams subjected to vertical point loads and UDLs
- j) Bending stress in beams
- k) Deflection of beams subjected to loads
- l) Torque distribution diagrams and calculation of torsional shear stress and angle of twist on circular shafts subjected to torque
- m) Coefficient of linear expansion to determine thermal stress in single members caused by restraint and changes in temperature

#### **2.21.4 Statics and dynamics**

Evidence shall show an understanding of statics and dynamics to an extent indicated by the following aspects:

- a) Units of mass, length, time and force and distinguish between vector and scalar quantities
- b) Resultant and equilibrant of systems of coplanar concurrent and non-concurrent forces
- c) Principles of movement
- d) Reactions of structures using equations of equilibrium and including the moment effect of a couple
- e) Laws of dry sliding friction applicable to horizontal and inclined planes
- f) Reactions and internal forces acting on the members of a pin jointed framed structure subjected to point loads at the joint
- g) Pin and support reactions for a non-coplanar non-concurrent force system
- h) Linear and angular equations of motion for constant accelerations
- i) Principles of the conservation of energy
- j) Mechanical advantage, velocity ratio and efficiency of machines
- k) Acceleration experienced by connected bodies so their motions are dependant upon one another
- l) Principle of conservation of momentum related to elastic collisions and departure masses

#### **2.21.5 Advanced fluid mechanics**

Evidence shall show an understanding of advanced fluid mechanics to an extent indicated by the following aspects:

- a) The relationship between Reynolds Number and flow regime
- b) Head loss in pipes and fittings and system head curves
- c) Head loss in parallel and serial pipes and how systems can be reduced to an equivalent single pipe system for analytical purposes
- d) Flow rates through open channels
- e) Positive displacement and rotodynamics of fluid machinery
- f) Duty point for a pump in a system including flow rate and head pressure
- g) Cavitation and the influence of inlet system design and fluid temperature and pressure on cavitation
- h) Circuits and operation of fluid hydraulic componentry in a system
- i) Technical specifications and associated data for the selection of hydraulic components for machine control operation
- k) Installation requirements for the installation, commissioning and testing hydraulic components and systems

### **2.21.6 Electronic interfacing to mechanical processes**

Evidence shall show an understanding of interfacing electronics with mechanical devices and systems to an extent indicated by the following aspects:

- a) Connection of sensors and actuators to an interface for communications with a discrete device electronic controller or programmable controller or computer for the operation of a process requiring continuously variable changes
- b) Description of the logic sequence for the integrated system including: operator actions, input signals, output actions, interlocks and safety and emergency requirements
- c) Transformation of the system logic into a program to carry out the desired task using a port address on a computer using programming software and codes
- d) Commissioning systems and perform fault diagnosis using computer automation
- e) Operation of circuits controlling hydraulics
- f) Technical specifications and data for the selection of hydraulic components for machine control
- g) Installation, commissioning and testing hydraulic systems

### **2.21.7 Electronic control of fluid processes**

Evidence shall show an understanding of interfacing electronics with hydraulic and pneumatic devices and systems to an extent indicated by the following aspects:

- a) Determining control static and dynamic operating conditions for stages in a control process from block diagrams
- b) Identification of process characteristics from process test data and process flow diagrams
- c) Linearisation functions and feedback
- d) Placement of sensors and actuators to eliminate dead time
- e) Lag reduction strategies
- f) Consideration of steady state gain vs offset and stability vs performance
- g) Controller tuning and calibration
- h) Analyse control system functions
- i) Construct a time-displacement diagram for a functional system
- j) Design relay logic ladder diagram for the system
- k) Identification of components required by a fluid power circuit
- l) Selection of proportional valves to suit fluid applications
- m) Determination of ramp time from motor and cylinder circuits
- n) Determine maximum flow rates in cylinder circuits that accelerate and decelerate a load and selection of an appropriate valve spool
- o) Determine pressure in cylinder circuits
- p) Design fluid power circuits using proportional valves
- q) Adjust points on a proportional valve control card to meet specifications

### **2.21.8 Electronic interfacing to robotic processes**

Evidence shall show an understanding of interfacing electronics with robot functions to an extent indicated by the following aspects:

- a) Robot types and selection and pre-selection planning
- b) Robot installation including pre-installation design, layout and system documentation
- c) Interfacing of robot controller with other external control systems

- d) Robot sensor devices, characteristics and application
- e) Diagnostic functions
- f) Maintenance scheduling and procedures
- g) Special features including safety, palletising and sub-routines

### **2.21.9 Material science**

Evidence shall show an understanding of materials and their characteristics to an extent indicated by the following aspects:

- a) Classification of materials on the basis of state
- b) Difference between elements, compounds and mixtures
- c) Atomic structure and bonding of materials
- d) Properties of ferrous and non-ferrous materials
- e) Properties of ceramic and composite materials
- f) Chemical, physical and mechanical properties of materials
- g) Corrosion and corrosion protection of metallic structures and systems
- h) Causes of degradation of polymer materials
- i) Non-destructive testing and types of test equipment
- j) Corrosion testing
- k) Evaluation and suitability of materials for specific applications
- l) Principles, advantages and limitations of casting, forging, extrusion and powder metallurgical processes
- m) Methods of joining materials, including limitations
- n) Methods used for surface finishing of materials, including limitations

### **2.21.10 Thermodynamics**

Evidence shall show an understanding of thermodynamics to an extent indicated by the following aspects:

- a) Relationship between energy usage and standard of living
- b) Energy conversion and conversion efficiencies
- c) Energy sources and their advantage in engineering processes
- d) Energy conservation
- e) State of matter in terms of molecular theory
- f) Relationship between mass, volume, density, force, pressure and temperature in thermodynamic concepts
- g) Compression ratio and pressure ratio calculations in a basic piston and cylinder mechanism
- h) Concepts, theorems and calculations related to potential energy, kinetic energy, work and power, heat and internal energy of object.
- i) Relationship between work and pressure/volume
- j) Concept and calculations related to energy transfer in a closed loop system
- k) Concept of and calculations about property changes and work, heat and internal energy transfer in gases in typical engineering processes
- l) Principle, operation and performance of common types of heat engines
- m) Heat engine performance parameters and typical performance tests

### **2.21.11 Pneumatics**

Evidence shall show an understanding of pneumatics to an extent indicated by the following aspects:

- a) Terms and their definitions used in pneumatic components and systems
- b) Application, operation and installation requirements of pneumatic components and systems
- c) Interpretation and selection of manufacturers equipment specifications to establish the performance of pneumatic components
- d) Construct circuits from control diagrams
- e) Location and correction of faults on pneumatic components and systems

### **2.21.12 Hydraulics**

Evidence shall show an understanding of hydraulics to an extent indicated by the following aspects:

- a) Terms and their definitions used in hydraulics components and systems
- b) Application, operation and installation requirements of hydraulics components and systems
- c) Interpretation and selection of manufacturers equipment specifications to establish the performance of hydraulics components
- d) Construct circuits from control diagrams
- e) Location and correction of faults on hydraulics components and systems

### **2.21.13 Fluid power control**

Evidence shall show an understanding of fluid power control to an extent indicated by the following aspects:

- a) Terms and their definitions used in fluid power systems
- b) Applications of fluid power
- c) Pascal's law as it relates to force transfer, multiplication and intensification
- d) Mathematical relationships involving temperature and volume (Charles law), pressure and volume (Boyles law), pressure and volume (Boyles law) and their combinational relationships
- e) Fluid power principles related to components and the identification of components
- f) Operation of fluid power components
- g) Interpretation of fluid system operation from circuit diagrams
- h) Operation and construction of basic pneumatic circuit
- i) Operation and construction of a basic hydraulic circuit
- j) Routing maintenance procedures
- k) Safety requirement

## T2.4 HV Switching

### T2.4.3 High voltage switching principles

Evidence shall show an understanding of high voltage switching principles to an extent indicated by the following aspects:

- Standards, codes, legislation, supply authority regulations and or enterprise requirements applicable to switching of high voltage to a given schedule
- Requirements for the use of manuals, system diagrams/plans and drawings encompassing:
  - Types, characteristics and capabilities of electrical apparatus
  - Use, characteristics and capabilities of specialised tools and testing equipment
  - Network interconnectors source of possible backfeed
- Role of the HV switching operator
- Operational forms, access authorities and permits associated with HV switching encompassing:
- Types of operational forms, access authorities and permits
- Purpose and procedure for operational forms, access authorities and permits
- Use and operation of equipment associated with HV overhead and substation equipment encompassing:
  - Test instruments
  - Sticks
  - Interrupters
  - Arc strangles
- Types and categories of HV switchgear
- Application, function and operating capabilities of switchgear
- Restrictions pertaining to HV switching equipment
- Procedures for the isolation of HV transmission main and working earths
- Earthing HV electrical apparatus practices and procedures for access encompassing:
  - Purposes of “Operational” and additional work part “on-site” earths
  - Factors determining the location and effectiveness of “Operational” earthing
  - Acceptable industry procedures
  - Personal protective equipment
- High voltage switching techniques
- Operate switching apparatus encompassing:
  - Identifying hazards, assessing and controlling risks associated with HV switchgear operation
  - Systematic and defensive techniques
  - Mobile radio procedures
  - Double isolation procedures

### T2.4.4 High voltage fault switching principles

Evidence shall show an understanding of high voltage fault switching principles to an extent indicated by the following aspects:

- Primary causes, effects and types of HV electrical faults

- HV protection devices encompassing:
  - Main components
  - Types
  - Categories
  - Applications
  - Functions
- Basic principle of operation of HV system protection devices
- Protection co-ordination and protection “zoning”
- HV feeder auto-reclosing suppression encompassing:
  - Function
  - Application
- Circuit condition requirements and switching considerations when paralleling and separating HV feeders

#### **T2.4.5 High voltage distribution transformer principles**

Evidence shall show an understanding of high voltage distribution transformer principles to an extent indicated by the following aspects:

- Operation of HV distribution transformers encompassing:
  - Principle governing factors for transformer ratings
  - Protection and alarms
  - Operating limitations and the relationship between transformer and HV fuse rating
  - Purpose and principle operation of HV distribution transformer tap changers
  - HV distribution transformer and transformer - cable combination switching practices
  - Paralleling requirements
  - Isolation and earthing procedures for access
  - Common distribution transformer and associated electrical apparatus faults
- HV underground switching equipment
  - Note:  
Examples include arc stranglers, switch operation, load break elbows, switching cubicles, canister fuses, bayonet fuses, F & G switching cubicles, voltage indicators and phasing testers

#### **T2.4.6 High voltage SWER system**

Evidence shall show an understanding of high voltage SWER system to an extent indicated by the following aspects:

- Application and function of SWER system components
- Circuit arrangement
- Principle of operation
- Hazards and procedures associated with faulty SWER earth systems
- Procedure to isolate, energise and commission SWER substations

#### **T2.4.7 Feeder automation system**

Evidence shall show an understanding of feeder automation system to an extent indicated by the following aspects:

- Function of feeder automation system and the main components
- Operation procedure for a remote field device from a local control station

- Functions of “System Control and Data Acquisition” (SCADA) (or any other relevant Data Acquisition and Control) systems and its main components
- SCADA system security interlocks and access restrictions
- SCADA system operation when switching apparatus or retrieving data via a remote access device such as; Remote Access Terminal (RAT), Dial Up Voice Annunciated System and Local Control Station
- Function of the main components of a local/remote control system
- Operation of a field devices using SCADA systems via a Remote Access Terminal (RAT), Dial Up Annunciated System and Local Control Station

<b>Volume 2 Part 2.3</b> .....	4
2.3.1 Language, Literacy and Numeracy .....	4
Table 6 – Reading, Writing and Numeracy – Indicators of Competence .....	5

## Volume 2 Part 2.3

### 2.3.1 Language, Literacy and Numeracy

The reading, writing and numeracy skills/competencies in each competency standard unit describe the recommended prerequisite entry requirements typically needed to successfully achieve competence in the unit. A nationally-recognised language, literacy and numeracy framework has been used to provide advice as to the relevant entry level required.

The information has been derived from the '*National Reporting System*' report, '*A mechanism for reporting outcomes of adult English language, literacy and numeracy programs*'. The Australian National Training Authority (ANTA) and the Department of Employment Education and Training (DEET), 1994-5, jointly funded the report. Australian Training Products Ltd (ATP) distributes it for and on behalf of Language Australia Victorian Office. Stock code 3010A, ISBN: 0 7306 7493 2, April 1999.

The report:

- identifies adult English language, literacy and numeracy competencies in industry
- facilitates student pathways
- generates ideas for curriculum and assessment

The report identifies a national framework of five vertical levels of competence related to complexity of language, literacy and numeracy competence. Six interrelated horizontal aspects of communication were found to apply in relation to differing orientations of social activity involving reading, writing, speaking, listening and/or numeracy. These were categorised as follows: Procedural Communication for performing tasks; Technical Communication for using technology; Personal Communication for expressing identity; Cooperative Communication for interacting in groups; Systems Communication for interacting in organisations; and Public Communication for interacting in the wider community.

The National Reporting System Report: A mechanism for reporting outcomes of adult English language, literacy and numeracy, should be referred to at all times for clarification, more detailed information and advice.

For the purposes of providing relevant entry-level advice, specific features of writing, reading and numeracy competencies have been selected from the five-level competence structure using the Technical Communication aspect of the national framework. These are outlined in the Table below. Registered Training Organisations should use this information to assist them in developing appropriate entry-level learning strategies, to assist learners meet the entry-level requirements of specific competency standard units.

## Table 6 – Reading, Writing and Numeracy – Indicators of Competence

These five levels of competence are interrelated with six aspects of communication of the National Reporting System (NRS). The NRS suggests that the ‘*report of a person’s competence derives from the interplay between the chosen activity, the features of the text/task, and the context and level of support under which the activity is performed*’. **Note:** These indicators of competency are not an assessment system and not a recruitment instrument for employers. They are not a curriculum; not a model of language acquisition; not a means for categorising students in terms of a simple ‘level’; not a set of ‘broad’ competency statements, but specific to reading writing and numeracy.

### Reading

Scale	IoC*	Indicators of Competence	Technical Communication
5	5.1	Reads and interprets structurally intricate texts in chosen fields of knowledge and across a number of genres, which involve complex relationship between pieces of information and/or propositions.	Defines the purpose and objectives for the use of a particular technology, eg writes a report, which includes a detailed analysis of technology as, applied in a particular workplace or environment. Draws on prior knowledge of the application of technology in researching the capacity of a new system, eg writes a briefing and recommends purchase or use of a particular system.
	5.2	Interprets subtle nuances, infers purpose of author and makes judgements about the quality of an argument.	Uses technological principles to reduce constraints presented by environmental or physical capacity, eg writes a report, which compares the effectiveness and efficiency of manual and computerised record management systems.
	5.3	Reads and critically evaluates texts containing data which includes some abstraction, symbolism, and technicality presented in graphic, diagrammatic, formatted or visual form.	Prepares a written or oral report, which critically evaluates the content, structure, and purpose of technical texts including graphic, diagrammatic or numerical information. Adapts task instructions to suit changes in technology, eg writes plain English instructions for the operation of a new machine based on the manufacturer’s instructions. Draws from a number of sources and uses computer skills to prepare a report, eg CV and job application letter.
4	4.1	Reads and interprets structurally intricate texts in chosen fields of knowledge which require integration of several pieces of information for generating meaning.	Compares and contrasts views on technology in newspaper articles. Interprets the purposes and objectives for the use of technology after the reading a brochure or manual. Selects technological practices to conform with the guidelines for health and safety, environmental impact and ethical practice, and uses them within those guidelines.
	4.2	Interprets texts, which include ambiguity, and inexplicitness where reader needs to distinguish fact from opinion and infer purpose. Interprets and extrapolates from texts containing data which includes some abstraction, symbolism, and technicality presented in graphic, diagrammatic, formatted or visual form.	Uses guidelines to ensure technological equipment is used to its full capacity. Uses a computer to prepare a typed report from a hand-drafted report. Compares and contrasts different technologies and their impact, eg argues the case for new practices when using new technologies, reports on the effects of installation of new machinery. Writes a report on the impact of a particular technology for a specific audience, eg management committees, tri-partite committees. Reads a complex diagram to identify components and procedures for dealing with a technical fault or breakdown.

\* *Indicators of Competency sub-level*

**Reading**

Scale	IoC	Indicators of Competence	Technical Communication
3	3.1 3.2 3.3	<p>3.1 Reads and interprets texts of some complexity, integrating (where relevant) a number of pieces of information in order to generate meaning.</p> <p>3.2 Displays awareness of purpose of text, including unstated meaning.</p> <p>3.3 Interprets and extrapolates from texts containing data which is unambiguously presented in graphic, diagrammatic, formatted or visual form.</p>	<p>Reads a technical manual where the information is supported by diagrams, sufficiently well to be able to locate and comprehend particular information required, eg programs a VCR to record two programs in advance.</p> <p>Uses the author, title, key word and other search indexes of a library computer.</p> <p>Comprehends short summary information on computer-managed learning packages to choose a relevant package to suit own needs.</p> <p>Uses the word processing program on a computer to produce texts.</p> <p>Writes simple instructions for using familiar technology, eg how to use an automatic teller machine.</p> <p>Completes a formatted workplace test, eg damage or breakdown report.</p> <p>Writes a brief report on uses of technology, eg for classroom, workplace, domestic or community purposes.</p>
2	2.1 2.2	<p>2.1 Reads and interprets short simple texts on a personally relevant topic.</p> <p>2.2 Locates specific information relating to familiar contexts in a text which may contain data in simple graphic, diagrammatic, formatted or visual form.</p>	<p>Reads short, relevant, explicit, clearly formatted texts related to technology, eg the author and title index of a library computer.</p> <p>Chooses a computer assisted learning package, having read short descriptions of one or two programs, to acquire a defined skill or area of knowledge.</p> <p>Writes a short description, eg describes a damaged part of a machine to facilitate repair.</p> <p>Extracts information from a list with language and numeracy components, eg price lists of components for computer systems.</p> <p>Records simple and routine information using the telephone, eg takes a phone message, on a form designed for this purpose.</p> <p>Interprets instructions, which combine pictorial and written information, eg directions on how to operate a piece of machinery safely.</p>
1	1.1 1.2	<p>1.1 Reads and identifies letters of the alphabet in the context of whole words, numbers, signs and symbols relating to personal details and immediate environment.</p> <p>1.2 Identifies specific information in a personally relevant text with familiar content, which may include personal details, location or calendar information in simple graphic, diagrammatic, formatted or visual form.</p>	<p>Recognises very short, explicit, pictorial texts, eg understands logos related to worker safety before using a piece of machinery, reads letters on a keyboard.</p> <p>Reads graphic instructions accompanying a new piece of technology to learn new information or skills about a technology or medium, eg uses an automatic teller machine by following instructions given graphically on the screen.</p> <p>Types own name or single words into a computer-assisted learning program.</p>

## Writing

Scale	IoC*	Indicators of Competence	Technical Communication
5	5.4 5.5	Demonstrates well-developed writing skills by selecting stylistic devices to express complex relationships between ideas and purposes.  Generates complex written texts with control over generic structure.	Defines the purpose and objectives for the use of a particular technology, eg writes a report, which includes a detailed analysis of technology as, applied in a particular workplace or environment.  Draws on prior knowledge of the application of technology in researching the capacity of a new system, eg writes a briefing and recommends purchase or use of a particular system.  Uses technological principles to reduce constraints presented by environmental or physical capacity, eg writes a report, which compares the effectiveness and efficiency of manual and computerised record management systems.  Prepares a written or oral report, which critically evaluates the content, structure, and purpose of technical texts including graphic, diagrammatic or numerical information.  Adapts task instructions to suit changes in technology, eg writes plain English instructions for the operation of a new machine based on the manufacturer's instructions.  Draws from a number of sources and uses computer skills to prepare a report, eg CV and job application letter.
4	4.4 4.5	Communicates complex relationships between ideas by matching style of writing to purpose and audience.  Generates written texts reflecting a range of genres and using appropriate structure and layout.	Compares and contrasts views on technology in newspaper articles.  Interprets the purposes and objectives for the use of technology after the reading a brochure or manual.  Selects technological practices to conform with the guidelines for health and safety, environmental impact and ethical practice, and uses them within those guidelines.  Uses guidelines to ensure technological equipment is used to its full capacity.  Uses a computer to prepare a typed report from a hand-drafted report.  Compares and contrasts different technologies and their impact, eg argues the case for new practices when using new technologies, reports on the effects of installation of new machinery.  Writes a report on the impact of a particular technology for a specific audience, eg management committees, tri-partite committees.  Reads a complex diagram to identify components and procedures for dealing with a technical fault or breakdown.

\* *Indicators of Competency sub-level*

## Writing

Scale	IoC	Indicators of Competence	Technical Communication
3	3.4  3.5	Communicates relationships between ideas through selecting and using grammatical structures and notations, which are appropriate to the purpose.  Produces and sequences paragraphs according to purpose of text.	Reads a technical manual where the information is supported by diagrams, sufficiently well to be able to locate and comprehend particular information required, eg programs a VCR to record two programs in advance.  Uses the author, title, key-word and other search indexes of a library computer.  Comprehends short summary information on computer-managed learning packages to choose a relevant package to suit own needs.  Uses the word processing program on a computer to produce texts.  Writes simple instructions for using familiar technology, eg how to use an automatic teller machine.  Completes a formatted workplace test, eg damage or breakdown report.  Writes a brief report on uses of technology, eg for classroom, workplace, domestic or community purposes.
2	2.3  2.4	Writes about a familiar topic using simple sentence structure and joining ideas through conjunctive links where appropriate.  Completes forms or writes notes using factual or personal information relating to familiar contexts.	Reads short, relevant, explicit, clearly formatted texts related to technology, eg the author and title index of a library computer.  Chooses a computer assisted learning package, having read short descriptions of one or two programs, to acquire a defined skill or area of knowledge.  Writes a short description, eg describes a damaged part of a machine to facilitate repair.  Extracts information from a list with language and numeracy components, eg price lists of components for computer systems.  Records simple and routine information using the telephone, eg takes a phone message, on a form designed for this purpose.  Interprets instructions, which combine pictorial and written information, eg directions on how to operate a piece of machinery safely.
1	1.3  1.4  1.5	Copies letters of the alphabet, numbers, and dates in order to convey personal details such as name, address, telephone number.  Writes basic personal details about self or others such as name, address, and signature.  Writes one or two phrases/simple sentences conveying an idea, message or opinion drawing from a modelled text.	Recognises very short, explicit, pictorial texts, eg understands logos related to worker safety before using a piece of machinery, reads letters on a keyboard.  Reads graphic instructions accompanying a new piece of technology to learn new information or skills about a technology or medium, eg uses an automatic teller machine by following instructions given graphically on the screen.  Types own name or single words into a computer-assisted learning program.

## Numeracy

Scale	IoC*	Indicators of Competence	Technical Communication
5	5.10 5.11 5.12	<p>Interprets, selects and investigates appropriate mathematical information and relationships highly embedded in an activity, item or text.</p> <p>Selects and applies a wide range of mathematical strategies flexibly to generate solutions to problems across a broad range of contexts.</p> <p>Uses a wide range of oral and written informal and formal language and representation including symbols, diagrams and charts to communicate mathematically.</p>	<p>Calculates distance, length and location using the trigonometry and geometry of triangles in relevant situations, eg locates grid reference on a map for a boat travelling on an given bearing with time and speed specified; uses dimensions provided on a scaled plan of a roof to find the pitch or slope of the roof. Calculates quantities of materials to tile the roof applying a 4% allowance for wastage.</p> <p>Plans and gathers information on a negotiated topic from a variety of sources including government, industry and media about relevant community or workplace issues. Organises information by grouping. Graphically represents and analyses information for a particular purpose. Presents, individually or in a team, a report expressing a viewpoint, which is substantiated by discussion of supporting statistical evidence.</p> <p>Interprets and applies metric quantities and numbers in scientific notation, eg calculates the amount of oil in litres spilled from a tanker if it covers a surface area of water of approximately 1200 hectares (<math>1.2 \times 10^7 \text{m}^2</math>) to a thickness of <math>6 \times 10^{-3} \text{mm}</math>.</p> <p>Uses financial formulae, eg simple and compound interest to calculate and contrast the interest incurred in borrowing money from financial institutions.</p>
4	4.10 4.11 4.12 4.13	<p>Selects and investigates appropriate mathematical information and relationships embedded in an activity, item or text.</p> <p>Selects and applies an expanding range of mathematical strategies flexibly to solve problems in a variety of contexts.</p> <p>Examines and questions the appropriateness, possible interpretations and implications of aspects of a mathematical activity.</p> <p>Uses a range of oral and written informal and formal language and representation including symbols, diagrams and charts to communicate mathematically.</p>	<p>Uses ratio and scale to interpret dimensions on a basic plan.</p> <p>Applies similarity and ratio to estimate and calculate lengths, eg finds height of a building, a tree.</p> <p>Compares quality and costs of using imported vs Australian tiles, discount vs brand name paints.</p> <p>Presents information in appropriate graphical format to show different interpretations and influences, eg analysis of government spending on education.</p> <p>Applies formulae and interprets results relevant to a familiar practical situation, measuring the dimensions needed and substituting them into the formula, adjusting units where necessary, eg length of edging for circular garden or pond, capacity of a water tank or bath.</p> <p>Uses area and perimeter to calculate a range of options, eg given a certain length of fencing, plan a range of options for paddock dimensions, which meet specific area requirements.</p> <p>Calculates and contrasts monthly income from average sales, given a variety of salary options involving retainers and commission rates.</p>

\* *Indicators of Competency sub-level*

**Numeracy**

Scale	IoC*	Indicators of Competence	Technical Communication
3	3.10 3.11 3.12 3.13	<p>3.10 Selects appropriate mathematical information embedded in a real life activity, item or text.</p> <p>3.11 Selects and applies a range of mathematical strategies to solve problems in contexts which are familiar and may be interrelated.</p> <p>3.12 Reflects on and questions reasonableness and appropriateness of the purpose, process and outcomes of a mathematical activity.</p> <p>3.13 Uses oral and written informal and formal language and representation including symbols and diagrams to communicate mathematically.</p>	<p>Uses a distance scale to find the shortest route between two locations on a map and considers road terrain conditions in deciding preferred route.</p> <p>Expresses and calculates with metric quantities, eg interprets and costs quantities of cheese given different forms such as 350g, 0.35kg.</p> <p>Measures common three-dimensional shapes, eg room, and represents the information on an appropriate diagram drawn to scale.</p> <p>Calculates with common, fractions and metric measurements, eg adjusts the quantities in a recipe by halving or doubling to obtain the required amount.</p> <p>Uses a variety of methods to analyse advertising by comparing savings on a number of different items, eg at 12% off, 15% off, 1/3 off, price reduced by \$10.</p> <p>Compares casual and permanent rates of pay over a given time span for work of the same nature.</p>
2	2.9 2.10 2.11 2.12	<p>2.9 Locates relevant mathematical information in a familiar real life activity text.</p> <p>2.10 Selects and uses straightforward mathematical actions in a familiar and predictable contexts.</p> <p>2.11 Uses estimation and prior experience to examine purpose and check reasonableness of the process and outcomes of a mathematical activity.</p> <p>2.12 Uses oral and written informal and formal language and representation using some symbols and diagrams to communicate mathematically.</p>	<p>Compares measurements taken with estimated lengths of familiar objects, eg estimates and measures storeroom dimensions.</p>
1	1.10 1.11 1.12 1.13	<p>1.10 Locates simple key mathematical information in a familiar real life activity text.</p> <p>1.11 Recognises and uses straightforward mathematical actions which relate to immediate contexts.</p> <p>1.12 Uses rough estimation and prior experience to identify purpose and check reasonableness of the process and outcomes of a mathematical activity.</p> <p>1.13 Uses everyday informal oral language and representation including familiar symbols and diagrams to communicate mathematically.</p>	<p>Estimates lengths of familiar objects using metric units, eg a person's height, height of doorway.</p>

## Electrotechnology Training Package UEE06 – Version Number 1. Review Date 31 Dec 2008

© Commonwealth of Australia 2006

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

Training Copyright  
Department of Education, Science and Training  
GPO Box 9880  
Canberra City ACT 2601 Australia  
or email [copyright@training.com.au](mailto:copyright@training.com.au)

This work is the result of wide consultations with Australian industry participants. It is a collaborative view and does not necessarily represent the view of DEST or any specific body. For the sake of brevity it may omit factors which could be pertinent in particular cases. While care has been taken in the preparation of this Training Package, DEST and the original developer do not warrant that any licensing or registration requirements specified here are either complete or up-to-date for your State or Territory. DEST and the original developer do not accept any liability for any damage or loss (including indirect and consequential loss) incurred by any person as a result of relying on the information contained in this Training Package.

The Commonwealth, through the Department of Education, Science and Training, does not accept any liability to any person for the information or advice (or the use of such information or advice) which is provided in this material or incorporated into it by reference. The information is provided on the basis that all persons accessing this material undertake responsibility for assessing the relevance and accuracy of its content. No liability is accepted for any information or services which may appear in any other format. No responsibility is taken for any information or services which may appear on any linked websites.

**Volume 2 Part 2. 4**

2.4.1 Key Competencies .....	2
2.4.2 Performance Levels .....	2
2.4.3 Working Example of Key Competencies .....	2

## **Volume 2 Part 2.4**

### **2.4.1 Key Competencies**

All Training Packages require the integration of Key Competencies either in each unit of competency or across a qualification, depending on industry needs and preferences.

The Key Competencies were first defined in 1992 in the project report, *Putting General Education to Work: The Key Competencies Report* (Mayer Committee 1992). The skills and knowledge they describe are essential for effective workplace participation and involve the sorts of capabilities commonly used by employers as selection criteria. They underpin the ability of employees to adapt to technological, organisational, societal and functional change.

The Key Competencies are generic, in that they apply to work in general, rather than to particular occupations or industries. They focus on the application of knowledge and skills in an integrated way in workplace situations.

A working example of how to use the key competencies in the ElectroComms and EnergyUtilities Industry has been developed by TAFE South Australia and has been included in this section for interested practitioners.

The seven Key Competencies are

#### **1 Collecting, analysing and organising information**

The capacity to locate information, sift and sort information in order to select what is required and present it in a useful way and evaluate both the information itself and the source and methods used to obtain it.

#### **2 Communicating ideas and information**

The capacity to communicate effectively with others using the range of spoken, written, graphic and other non-verbal means of expression.

#### **3 Planning and organising activities**

The capacity to plan and organise one's own work activities, including making good use of time and resources, sorting out priorities and monitoring one's own performance.

#### **4 Working with others and in teams**

The capacity to interact effectively with other people both on a one-to-one basis and in groups including understanding and responding to the needs of a client and working effectively as a member of a team to achieve a shared goal.

#### **5 Using mathematical ideas and techniques**

The capacity to use mathematical ideas such as number and space, and techniques such as estimation and approximation for practical purposes.

## **6 Solving problems**

The capacity to apply problem-solving strategies in purposeful ways, both in situations where the problem and the desired solution are clearly evident and in situations requiring critical thinking and a creative approach to achieve an outcome.

## **7 Using technology**

The capacity to apply technology combining the physical and sensory skills needed to operate equipment with the understanding of scientific and technological principles needed to explore and adapt systems.

### **2.4.2 Performance Levels**

#### **Performance Level 1**

Competence needed to undertake activities efficiently and with sufficient self-management to meet the explicit requirements of the activity and to make judgments about quality of outcome against established criteria.

#### **Performance Level 2**

Competence needed to manage activities requiring the selection, application and integration of a number of elements and to select from established criteria to judge quality of process and outcome.

#### **Performance Level 3**

Competence needed to evaluate and reshape processes, to establish and use principles in order to determine appropriate ways of approaching activities and to establish criteria for judging quality of process and outcome.

### **2.4.3 Working Example of Key Competencies**

A working model of key competencies has been developed by TAFE South Australia. It provides, free of charge, on-line resource materials and tools. The online website called 'LINKup Key Competencies' is designed for students, trainers, teachers, employers and anyone with a serious interest in practically assessing and nurturing the development of their own or others' Key Competencies. Part of the site is built to entertain and made suitable for general interest and simple exploration of Key Competencies or Generic Skills. The remainder of the site is very comprehensive and suited to people with a serious interest in practical implementation of Key Competencies assessment and development.

The innovative website offers a comprehensive, proven practical way to assess and improve Key Competencies. It is based on 13 years of action research and development, has achieved national and international acclaim, is used by students, trainers, teachers and employers.

It covers four key areas:

### **1. Discover**

This section provides an opportunity to just explore what Key Competencies are about.

### **2. Investigate**

This section provides numerous resources to inform about the LINKup assessment process called '*Validated Self Assessment*'. This process is designed to give formal recognition for Key Competencies AND to help people improve these important personal skills.

### **3. Try**

After 'Investigating' LINKup, individuals have a chance to try 'first-hand' a LINKup Key Competencies Assessment (via an online simulation) and to check their understanding of the 'Validated Self Assessment' process (via a short multiple-choice quiz). This also allows them to Register for free access to the complete package of LINKup resources.

### **4. Reflect**

This section provides individuals with an opportunity to reflect on how LINKup could help them. Also, for educators or trainers it offers some suggestions on different ways to implement LINKup in training programs and for employers there are some suggestions for incorporating this strategy into Performance Management for all staff.

### **Resources**

ALL LINKup resources are available FREE of charge upon successful registration. These can be accessed directly from the homepage via the 'resources' link.

Resources are listed in the following categories:

- **Online Resources**
  - Validated Self Assessment Sheets (including NEW interactive versions!)
  - Key Competencies Assessment (for Everyone)
  - Implementing Key Competencies Assessment (for Trainers)
  
- **Research Documents**
  - Key Competencies Assessment at Torrens Valley TAFE
  - Stories from the field
  
- **Complete Resource Pack**
  - Download ALL the LINKup resources in one convenient Pack

The website address is: <http://www.tvtafe.sa.edu.au/linkup/>

## Table of Contents

Volume 2 Part 2.5 .....	4
2.5.1 Skills Enabling Employment .....	4

## Volume 2 Part 2.5

### 2.5.1 Skills Enabling Employment

The Competency Standard Units incorporate a range of employment-based skills that are expected of individuals in a workplace. The skills for employment set out below should be achieved and confirmed consistent with Competency Standard Unit requirements and relative to the qualification to which the unit contributes. Assessment must be applied holistically and confirm that the critical aspects of evidence have been demonstrated to the required level.

Skill for employment	Critical aspect of evidence
1 Developing and using skills within a real workplace	Demonstrates an ability to develop and use spatial, dexterity and technology skills as well as health, safety and housekeeping skills meaningful to a workplace environment.
2 Learning to learn in the workplace	Demonstrates an ability to access, confirm and learn – can acquire knowledge and culture related to and used in a workplace environment.
3 Reflecting on the outcome and process of work task	Demonstrates an ability to reflect on performance of the work task, its outcome and the process(es) used in completing the task in a workplace environment.
4 Interacting and understanding of the context of the work task	Demonstrates an ability to interact in real work tasks, understand the context of the task within a work environment and speak and write to related personnel/communities to a standard expected in the workplace/industry sector.
5 Planning and organising the meaningful work task	Demonstrates an ability to prepare, organise and complete real work tasks to workplace standards, including selecting appropriate tools/equipment to complete tasks in a workplace environment, and setting and achieving personal goals.
6 Performing the work task in non-routine or contingent situations	Demonstrates an ability to seek and apply solutions to problems, using mathematical and cognitive skills relevant to a workplace environment, and/or seeking advice from appropriate personnel when in doubt.
