1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.5; 3.8
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8; 3.2; 3.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8; 2.9

## UEENEEN026A    **Develop rail signalling maintenance programs**

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the development of programs for the maintenance of rail signalling equipment and infrastructure. It encompasses safe working, regulatory requirements, work procedures including identifying tasks and work responsibilities and reporting.</p>						
<b>Prerequisite Unit(s)</b>	<p>2)</p>						
<b>Competencies</b>	<p>2.1)</p> <p>Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p>3)</p> <p>This unit shall apply to qualifications in installation and maintenance of rail signalling.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit may only be practised in the workplace under the codes of practice and regulations of the State/Territory for which the work is carried out. This includes the ‘Code of Practice for the Define Interstate Rail Network’ for work carried out on that network.</p>						
<b>Competency Field</b>	<p>4)</p> <p>Rail</p>						

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Prepare to develop maintenance programs.	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	Safety hazards that have previously been identified are noted, and established risk control measures are implemented.
		1.4	Maintenance programming is appropriately sequenced in accordance with job schedule.
		1.5	Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
		1.6	Location of equipment to be maintained is determined from job specifications and diagrams.
2	Develop maintenance programs	2.1	Maintenance programs are developed to cover all work requirements with regard to relevant workplace conditions
		2.2	Programs are arranged to allow sufficient flexibility to allow contingency plans to be implemented
		2.3	Programs are circulated in accordance with workplace policies and procedures for review by affected personnel
		2.4	Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
3	Finalise maintenance program.	3.1	Feedback from personnel associated with the maintenance program is addressed and acceptable modifications agreed.
		3.2	Final rosters are documented and distributed to ensure work requirements are accurately communicated.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing maintenance programs. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.5.11	Environmental and heritage awareness
2.14.1	Basic rail operations
2.14.2.2	Rail signalling principles, mechanical
2.14.3	Rail signalling, mechanical equipment
2.14.5	Rail signalling, point actuators devices
2.14.11.2	Rail signalling, interlocking systems, Mechanical
2.14.13	Rail signalling, electro-pneumatic equipment
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State or Territory codes of practice and safe working requirements
- Equipment relevant to a particular rail network
- Code of practice for Defined Interstate Rail Networks

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop maintenance programs as described in 7) and including:
    - A Interpreting specifications correctly
    - B Checking that technical/operational specifications are met and that equipment is in compliance with work orders
    - C Ensuring safe train movement through work area
    - D Following relevant codes of practice, OHS and environmental protection procedures and requirements
    - E Completing relevant records and documentation
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

## Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing maintenance programs.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.5; 2.2; 3.2	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3; 2.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8; 2.2 to 3.2	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6; 3.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEN027A Decommission electrical and electro-mechanical signalling from service

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the de-commissioning of electrical and electro-mechanical signalling systems from service on rail networks. It encompasses safe working, regulatory requirement work procedures, disconnection of operating and redundant circuitry, equipment and components, testing of remaining circuitry and equipment, finding and repairing faults, testing of control and indicating equipment and reporting.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 25%;">Reading</td> <td style="width: 5%;">3</td> <td style="width: 25%;">Writing</td> <td style="width: 5%;">3</td> <td style="width: 25%;">Numeracy</td> <td style="width: 5%;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit may only be practised in the workplace under the codes of practice and regulations of the State/Territory for which the work is carried out. This includes the ‘Code of Practice for the Define Interstate Rail Network’ for work carried out on that network.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Rail</p>						

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1	Prepare to disconnect electrical/electromechanical circuits, equipment and components	1.1	OHS procedures for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	The extent of disconnection is determined from, job specifications, design drawings and regulatory requirements.
		1.4	Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
		1.5	Materials needed for the safe disconnection of circuits, equipment and components are obtained in accordance with established procedures and checked against job requirements.
		1.6	Tools, equipment and testing devices needed to disconnect circuits, equipment and components are obtained in accordance with established procedures and checked for correct operation and safety.
2.	Perform disconnection of circuits, equipment and components	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Where applicable on-track safety requirements are complied with to enterprise standards
		2.3	Visual inspection is carried out and all circuits, equipment and components are checked to ensure they are in accordance with manufacturer and systems specifications.
		2.4	Disconnecting work includes the isolation and removal of redundant wiring and the termination of altered wiring, checking and adjusting levels, checking indicators and system operation is carried out to organisation requirements.
		2.5	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.

- |  |     |   |
|--|-----|---|
|  | 2.6 | Disconnection is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.                |
| 3. Find and repair faults  | 3.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|  | 3.2 | System and design faults are verified using appropriate technical information, fault finding and diagnostic techniques to identify faulty signalling equipment.                             |
|  | 3.3 | Faulty signalling equipment is replaced, adjusted and secured in accordance with manufacturer specifications and organisation procedures.   |
|  | 3.4 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|  | 3.5 | Fault finding and repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 4. Test and adjust remaining signalling circuits, equipment and components | 4.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|  | 4.2 | Control equipment is adjusted and tested using appropriate test procedures and equipment to ensure it operates within the specified technical parameters.                                   |
| 5. Finalise decommissioning work   | 5.1 | OHS work completion risk control measures and procedures are followed.  |
|  | 5.2 | System faults are identified and reported for follow-up action.   |
|  | 5.3 | Test results are documented in accordance with organisation requirements and faulty or replaced equipment is tagged and dispatched to maintain equipment spares.                            |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and decommissioning electrical and electro-mechanical signalling from service. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.2 Enterprise work activities records
- 2.4.11 Personal computers, hardware basic
- 2.4.16 Personal computers, engineering applications software basic
- 2.4.13 Computer peripherals
- 2.5.4 Technical standards, regulations and codes rail networks
- 2.5.10 Technical manuals and catalogues
- 2.9.3.2 Inverters
- 2.9.3.3 Electronic switching
- 2.9.11
  - Linear and switch mode power supplies
- 2.10.1.1 Electronic communications, principles
- 2.14.6 Rail signalling, electronic equipment
- 2.14.7 Rail signalling, computer-based equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.10 Rail signalling, remote control systems
- 2.14.11.1 Rail signalling interlocking systems, electrical
- 2.14.11.2 Rail signalling interlocking systems, mechanical
- 2.14.12 Rail signalling, power supplies
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State or Territory codes of practice and safe working requirements
- Equipment relevant to a particular rail network
- Code of practice for Defined Interstate Rail Networks

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its

‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Decommission electrical and electro-mechanical signalling from service as described in 7) and including:
    - A Reading and interpreting specifications correctly
    - B Disconnecting signalling circuits, equipment and components to meet operational and technical standards
    - C Using effective fault diagnosis and repair/replacement techniques to specified model level
    - D Confirming circuits, equipment and components operated within specified technical parameters

- E Testing equipment and instruments
- F Using tools correctly
- G Following relevant codes of practice, environmental protection procedures and requirements
- H Completing relevant records and documentation
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in decommissioning electrical and electro-mechanical signalling from service.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 4.2; 5.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.2	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5; 3.2 to 3.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.2; 4.2	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills

enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 2.2 to 2.4; 3.2; 3.3; 4.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.4

## UEENEEN028A Test and commission power signalling equipment

### Unit Descriptor

1)

This unit covers the testing and commissioning of power signalling equipment into service on rail networks. It encompasses safe working, regulatory requirement work procedures, connection of wiring circuitry, equipment and components, testing of wiring circuitry, equipment and components, finding and repairing faults, testing of control and indicating equipment and reporting.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.

### Licence to practise

3.1)

The skills and knowledge described in this unit may only be practised in the workplace under the codes of practice and regulations of the State/Territory for which the work is carried out. This includes the ‘Code of Practice for the Define Interstate Rail Network’ for work carried out on that network.

### Competency Field

4)

Rail

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to test and commission power signalling circuits, equipment and components.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of testing and commissioning is determined from job specifications, design drawings and regulatory requirements.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.5 Materials needed for the testing and commissioning of power signalling circuits, equipment and components are obtained in accordance with established procedures and checked against job requirements.</p> <p>1.6 Tools, equipment and testing devices needed to test and commission power signalling circuits, equipment and components are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2. Perform testing and commissioning of power signalling circuits, equipment and components	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Where applicable on-track safety requirements are complied with to enterprise standards</p> <p>2.3 Visual inspection is carried out and all circuits, equipment and components are checked to ensure they are in accordance with manufacturers and systems specifications.</p> <p>2.4 Testing and commissioning work includes the installation, termination and operation of the equipment, checking and adjusting levels and checking indicators and system operation is carried out to organisation requirements.</p> <p>2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p>

- 2.6 Testing and commissioning is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3. Find and repair faults.
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 System and design faults are verified using appropriate technical information, fault finding and diagnostic techniques to identify faulty wiring, equipment and components
  - 3.3 Identified irregularities and non-conforming wiring, equipment or components are documented and immediate follow up action is initiated to ensure all faults are rectified
  - 3.4 Faulty signalling equipment is replaced, adjusted and secured in accordance with manufacturer specifications and organisation procedures.
  - 3.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 3.6 Fault finding and repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 4. Finalise testing and commissioning work.
  - 4.1 OHS work completion risk control measures and procedures are followed.
  - 4.2 Test results are documented in accordance with organisation requirements and faulty or replaced equipment is tagged and dispatched to maintain equipment spares.
  - 4.3 Fully operational equipment is handed over to approved personnel ensuring that hand over procedures are accurately followed and final documentation is completed

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and testing and commissioning power signalling equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.2.2 Enterprise work activities records

- 2.4.11 Personal computers, hardware basic
- 2.4.13 Computer peripherals
- 2.4.16 Personal computers, engineering applications software basic
- 2.5.4 Technical standards, regulations and codes rail networks
- 2.5.10 Technical manuals and catalogues
- 2.9.3.2 Inverters
- 2.9.3.3 Electronic switching
- 2.9.11
  - Linear and switch mode power supplies
- 2.10.1.1 Electronic communications, principles
- 2.14.6 Rail signalling, electronic equipment
- 2.14.7 Rail signalling, computer-based equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.10 Rail signalling, remote control systems
- 2.14.11.1 Rail signalling interlocking systems, electrical
- 2.14.11.2 Rail signalling interlocking systems, mechanical
- 2.14.12 Rail signalling, power supplies
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State or Territory codes of practice and safe working requirements
- Equipment relevant to a particular rail network

- Code of practice for Defined Interstate Rail Networks

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Test and commission power signalling equipment as described in 7) and including:
    - A Reading and interpreting specifications correctly
    - B Testing and commissioning signalling circuits, equipment and components to meet operational and technical standards
    - C Using effective fault diagnosis and repair/replacement techniques to specified model level
    - D Confirming circuits, equipment and components operated within specified technical parameters
    - E Testing equipment and instruments
    - F Using tools correctly
    - G Following relevant codes of practice, environmental protection procedures and requirements
    - H Completing relevant records and documentation
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in testing and commissioning power signalling equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 5.2; 5.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.2	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5; 3.2 to 3.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.2; 4.2	2

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 2.2 to 2.4; 3.2; 3.3; 4.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.4

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## UEENEEJ002A Prepare refrigerant tubing and fittings

### Unit Descriptor

1)

This unit covers the basic connection of refrigeration and air conditioning piping/tubing and fittings. It encompasses the safe use of hand, fixed and portable power tools for cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, Bundy tube and brass and steel fittings, measurement and reading drawings and diagrams.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components.

UEENEEE007A Use drawings, diagrams, schedules and manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to fabricate tubing and attach fittings for refrigeration and/or air conditioning systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 The nature of work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Fabricate tubing and attach fittings for refrigeration and/or air conditioning systems

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Work in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Established methods used to cut, flare, swage, bend, silver braze tubing and fittings as they apply to the refrigeration/air conditioning equipment arrangements.

	2.4	Refrigerant tubing and fittings are silver brazed with the use of dry nitrogen to prevent contamination.
	2.5	Fabricate tubing and attach fittings are prepared efficiently without waste of materials or damage/contamination to apparatus and the surrounding environment or services and using sustainable energy practices.
	2.6	Routine quality checks are carried out in accordance with work instructions/or specifications including dimensions, routes, and locations.
3	Complete work and report	3.1 OHS work completion risk control measures and procedures are followed.
		3.2 Work site is cleaned and made safe in accordance with established procedures.
		3.3 Work supervisor is notified of the completion of the work in accordance with established procedures.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and preparing refrigerant tubing and fittings. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.11.13.1 Brazing and soldering equipment and techniques
- 2.11.14 Piping and tubing techniques
- 2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to preparing refrigerant tubing and fittings for at least two basic different refrigeration/air conditioning equipment layouts, which require cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, Bundy tube, brass and steel fittings.

Note:

This includes piping/tubing and fittings for high pressure refrigerants.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

---

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Prepare refrigerant tubing and fittings as described in 7) and including:
    - A Applying tubing and fitting appropriately to equipment layout
    - B Using established methods to cut, flare, bend, swage and silver brazing copper tube
    - C Attaching fittings correctly
    - D Conducting component routine quality checks
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and  
specific  
resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in preparing refrigerant tubing and fittings.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to determine the basic operating conditions of vapour compression systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 Expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to determine the basic operating conditions are obtained and checked for correct operation and safety

2 Determine the basic operating conditions of vapour compression systems

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed
- 2.2 Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
- 2.3 System is checked and isolated where necessary, in strict accordance OHS requirements and procedures

- |   |                          |   |
|---|--------------------------|---|
|   | 2.4                      | Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to particular vapour compression systems. |
|   | 2.5                      | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   | 2.6                      | Unexpected situations are dealt with safely and with the approval of an authorised person   |
|   | 2.7                      | Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices                                   |
| 3 | Complete work and report | 3.1 OHS work completion risk control measures and procedures are followed   |
|   |                          | 3.2 Work site and equipment is cleaned and made safe in accordance with established procedures  |
|   |                          | 3.3 Operation conditions are documented, including identification of any parameter that is not within the specified range for the system  |
|   |                          | 3.4 Work supervisor is notified of the completion of the work in accordance with established procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the basic operating conditions of vapour compression systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.11.9.1 | Basic refrigeration testing and measuring field devices |
| 2.11.9.2 | Fitting and removing refrigeration service gauges       |
| 2.15.1   | Refrigeration compressors                               |
| 2.15.2   | Condensers  |
| 2.15.3   | Evaporators   |
| 2.17.1.1 | Refrigeration fundamentals                              |
| 2.17.1.2 | Basic refrigeration system operating conditions         |

- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining operating conditions using measurement and basic calculation methods of vapour compression systems whether used for refrigeration or air conditioning. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Determine the basic operating conditions of vapour compression systems as described in 7) and including:
    - A Selecting and using appropriate measuring devices correctly
    - B Recording measurements
    - C Using calculation methods accurately
    - D Identifying the conditions of a refrigerant at various

locations in the vapour compression system

- E Documenting operating conditions correctly
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in determining the basic operating conditions of vapour compression systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	2

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5; 1.5; 2.2 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEJ004A Determine the basic operating conditions of air conditioning systems

### Unit Descriptor

1)

This unit covers the determination of basic operating conditions of air conditioning systems. It encompasses working safely, determining air temperature, air flow rates and relative humidity using measurement and basic calculation methods.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It is suitable for augmenting previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to determine the basic operating conditions of air conditioning systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 Expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to determine the basic operating conditions are obtained and checked for correct operation and safety

2 Determine the basic operating conditions of air conditioning systems

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed
- 2.2 Measuring system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
- 2.3 System is checked and isolated where necessary, in strict accordance OHS requirements and procedures

- |   |                          |  |
|---|--------------------------|--|
|   | 2.4                      | Established procedures are used to determine actual and specified range of operating conditions from measured and calculated values as they apply to particular air conditioning systems |
|   | 2.5                      | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented   |
|   | 2.6                      | Unexpected situations are dealt with safely and with the approval of an authorised person  |
|   | 2.7                      | Operating conditions are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices                                |
| 3 | Complete work and report | 3.1 OHS work completion risk control measures and procedures are followed  |
|   |                          | 3.2 Work site and equipment is cleaned and made safe in accordance with established procedures   |
|   |                          | 3.3 Operation conditions are documented, including identification of any parameter that is not within the specified range for the system   |
|   |                          | 3.4 Work supervisor is notified of the completion of the work in accordance with established procedures  |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the basic operating conditions of air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.11.10.1 Basic air conditioning measurement devices
- 2.17.4 Air conditioning fundamentals
- 2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining the basic operating conditions using measurement and basic calculation methods of air side components of air conditioning systems. These conditions include air dry and wet bulb temperatures, relative humidity, air

velocity and volume flow rates across a grille/register.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Determine the basic operating conditions of air conditioning systems as described in 7) and including:
    - A Selecting and using appropriate measuring devices correctly
    - B Interpreting measurements
    - C Using calculation methods accurately
    - D Identifying parameters not within the specified range
    - E Documenting operating conditions correctly
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in determining the basic operating conditions of air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.4; 2.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5; 1.5; 2.2 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEJ005A **Position, assemble and start up split air conditioning systems**

### **Unit Descriptor**

**1)**

This unit covers the assembly, installation and starting up and de-commissioning of single head split air conditioning systems up to a maximum of 18kW<sub>r</sub> refrigeration capacity. It encompasses working safely and to standards, following routine procedures to install equipment, connecting pipe work, pressure testing, evacuating, perform functional checks and complete installation / regulatory documentation.

Note: The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ002A Prepare refrigeration tubing and fittings

UEENEEJ072A Recover, pressure and leak test, evacuate and charge refrigerants — split air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment previously acquired competencies.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training

is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.
2. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
3. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to assemble, install and start up split air conditioning systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
- 1.4 The work is appropriately sequenced in accordance with job schedule
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.6 The layout of the pipe work to be installed is determined from job/manufacture specifications and diagrams
- 1.7 Materials needed to carry out the work are obtained in accordance with established procedures and checked against job requirements

- |   |   |      |   |
|---|---|------|---|
|   |   | 1.8  | Tools, equipment and testing devices needed to conduct the work are obtained in accordance with established procedures and checked for correct operation and safety                         |
|   |   | 1.9  | Appropriately licensed electrician is engaged to carry out all electrical work for the air conditioning system  |
|   |   | 1.10 | Preparatory work is checked to ensure no damage has occurred and complies with requirements.  |
| 2 | Assemble, install and start up split air conditioning systems     | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |   | 2.2  | System components are positioned in the specified location and assembled in strict accordance with manufacturer instructions and industry standards   |
|   |   | 2.3  | Interconnecting piping/tubing is prepared and assembled in strict accordance with manufacturer instructions and industry standards.   |
|   |   | 2.4  | Components are pressure tested and evacuated in strict accordance with manufacturer instructions and industry standards   |
|   |   | 2.5  | Established methods for dealing with unexpected situations are discussed with appropriate person or persons, documented are dealt with safely and with the approval of an authorised person |
|   |   | 2.6  | Ongoing checks of the quality of installation and start up are undertaken in accordance with established procedures   |
|   |   | 2.7  | Notification is given to appropriate person(s) that the system is ready for electrical connection in accordance with established procedures. (see note 1)                                   |
|   |   | 2.8  | The work is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles            |
| 3 | Test single head wall split air conditioning systems and document | 3.1  | OHS risk control work completion measures and procedures are followed   |
|   |   | 3.2  | The system performance is tested to ensure compliance with technical standards, manufacturer/ job specifications and requirements (Note 2)  |

- 3.3 Work site and equipment is cleaned and made safe in accordance with established procedures. (Note 3)
- 3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

Note.

1. Electrical connection shall be carried out by an appropriately licensed electrician.
2. Unit performance is completed after associated electrical work is carried out by an appropriate electrically licensed person.
3. Making safe includes leak testing and fitting of caps to all refrigerant access ports, which could allow refrigerant to escape into the environment. It includes de-commissioning.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and positioning, assembling and starting up split air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.16.6 Split air conditioning system installation
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.2 Split air conditioning safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the assembly, installation and starting up and de-commissioning of single head split air conditioning systems up to a maximum of 18kW 'refrigeration' capacity. It encompasses working safely and to standards, following routine procedures to install equipment, connect pipe work, pressure test, evacuate, perform functional checks and complete installation/regulatory documentation.

Note:

1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill and the Ozone Protection and Synthetic Gas Management Regulations apply to this qualification. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.
2. This includes the installation, commissioning and de-commissioning of single head wall hung split air conditioning systems. The maximum plant capacity for each system is 18 kW.
3. This unit DOES NOT COVER COMPETENCIES FOR service, repair, maintenance, diagnostic/fault finding and electrical work and the safe and proper installation of commercial refrigeration and air conditioning plant and equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Position, assemble and start up split air conditioning systems as described in 7) and including:
    - A Determining job requirements correctly
    - B Positioning and assembling system components to specifications
    - C Assembling piping and tubing to specifications
    - D Pressure testing and evacuating the system in accordance with manufacturer's instructions and industry standards
    - E Giving notification to appropriate person for electrical connections to be completed
    - F Testing system performance correctly to manufacturer design specifications

- G Documenting work activities
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in positioning, assembling and starting up split air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 2.5; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.6 to 1.8	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 1.9; 2.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.9
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEJ006A Install pipe work for refrigeration and air conditioning systems

### Unit Descriptor

1)

This unit covers the installation, in buildings and premises, of refrigerant piping/tubing, fittings, flow controls, pressure sensing controls, and accessories for refrigeration and air conditioning systems. It encompasses working safely and to installation standards, routing pipe work to specified locations, connecting components and accessories and documenting installation work.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE005A Fix and secure equipment

UEENEEJ002A Prepare refrigeration tubing and fittings

UEENEEJ003A Determine the basic operating conditions of vapour compression systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It is suitable for augmenting previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training

such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to install pipe work

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
- 1.4 Pipe work installation is appropriately sequenced in accordance with job schedule
- 1.5 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken
- 1.6 Pipe work routes are planned within the constraints of the building structure, (heritage) significant, specifications and regulations
- 1.7 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.8 Materials needed install pipe work are obtained in accordance with established procedures and checked against job requirements
- 1.9 Tools, equipment and testing devices needed to install the pipe work are obtained in accordance with established procedures and checked for correct operation and safety

- |   |                                       |   |  |
|---|---------------------------------------|---|--|
|   | 1.10                                  | Preparatory work is checked to ensure no damage has occurred and complies with requirements |  |
| 2 | Install pipe work                     | 2.1   | OHS risk control measures and procedures for carrying out the work are followed  |
|   |                                       | 2.2   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OH&S requirements and procedures  |
|   |                                       | 2.3   | Pipework and accessories are installed to comply with technical standards and job specifications and requirements with sufficient access to affect connections and maintenance                             |
|   |                                       | 2.4   | Accessories are installed straight and square in the required locations and within acceptable tolerances   |
|   |                                       | 2.5   | Refrigerant tubing and fittings are silver brazed with the use of dry nitrogen to prevent contamination  |
|   |                                       | 2.6   | Problematic situations that arise from the installation of the pipe work are dealt with in an appropriate manner.  |
|   |                                       | 2.7   | Ongoing checks of the quality of pipe work are undertaken including pressure testing and repair of leaks in accordance with the relevant technical standards and specifications and established procedures |
|   |                                       | 2.8   | Pipe work is installed efficiently without waste of materials, damage or contamination to apparatus and the surrounding environment or services and using sustainable energy practices                     |
| 3 | Completion of pipe work installation. | 3.1   | OHS risk control measures and procedures at the completion of work are followed  |
|   |                                       | 3.2   | Work site is cleaned and made safe in accordance with established procedures   |
|   |                                       | 3.3   | Final check of the installed pipe work is made to verify that it complies to all requirements  |
|   |                                       | 3.4   | ‘As-installed’ pipe work and accessories are documented and an appropriate person or persons notified in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing pipe work for refrigeration and air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.3.5.1 Refrigerant pressure sensing controls
- 2.5.6 Technical standards, regulations and codes for refrigeration and air conditioning
- 2.15.1.4 Flow controls
- 2.16.1 Refrigeration pipe work and accessories
- 2.16.2 Refrigeration pipe work layout
- 2.16.3 Refrigeration installation requirements
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices
- 2.20.1 Sustainable energy principles
- 2.20.2 Environmental and heritage awareness

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the installation of pipe work, for at least two different types of refrigeration and/or air conditioning systems.

The pipe work shall include suction lines, liquid lines, discharge lines, control lines and condensate drain lines. Accessories shall include pipe work fittings and flow controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### **Overview of Assessment**

- 8.1) Longitudinal competency development approaches to assessment,

such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent

that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install pipe work for refrigeration and air conditioning systems as described in 7) and including:
    - A Reading and interpreting drawings related to pipe work layouts and apparatus locations
    - B Routing, placing and securing pipe work to comply with requirements
    - C Placing and securing accessories accurately
    - D Connecting pipe work and accessories to comply with requirements
    - E Cleaning pipe work of contaminants
    - F Ensuring pipe work will not leak under pressure
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in installing pipe work for refrigeration and air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE005A      Fix and secure equipment
- UEENEEJ002A      Prepare refrigerant tubing and fittings
- UEENEEJ003A      Determine the basic operating conditions of vapour compression systems
- UEENEEJ007A      Install refrigeration and air conditioning systems, major components and associated equipment

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.7; 2.3; 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.7

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.8

## **UEENEEJ007A Install refrigeration and air conditioning systems, major components and associated equipment**

### **Unit Descriptor**

**1)**

This unit covers the installation of unitary equipment, compressors, condensers, evaporators, liquid receivers, safety and cycling controls, ventilation and air handling (excluding central plant) and associated equipment. It encompasses working safely and to installation standards to match equipment with that specified for a given specification and location, connecting pipe work and components, and complete the necessary installation documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ006A     Install pipe work for refrigeration and air conditioning systems

UEENEEJ008A     Recover, pressure and leak test, evacuate and charge refrigerants

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 3 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may, in some jurisdictions, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational

health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to install major components and associated equipment

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
- 1.4 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken.
- 1.5 Component and equipment installation is appropriately sequenced in accordance with job schedule
- 1.6 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.7 Materials needed install pipe work are obtained in accordance with established procedures and checked against job requirements
- 1.8 Tools, equipment and testing devices needed to install the components and equipment are obtained in accordance with established procedures and checked for correct operation and safety

- |   |   |     |  |
|---|---|-----|--|
|   |   | 1.9 | Preparatory work is checked to ensure no damage has occurred and complies with requirements  |
| 2 | Install major components and associated equipment | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |   | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures   |
|   |   | 2.3 | Components and equipment are installed to comply with technical standards, job specifications and requirements with sufficient access to affect electrical and pipe work connections and maintenance.        |
|   |   | 2.4 | Components and equipment are installed straight and square in the required locations and within acceptable tolerances.   |
|   |   | 2.5 | Refrigerant tubing and fittings are silver brazed with the use of dry nitrogen to prevent contamination.   |
|   |   | 2.6 | Problematic situations that arise from the installation of components and equipment are dealt with in an appropriate manner.   |
|   |   | 2.7 | Ongoing checks of the quality of pipe work are undertaken, including pressure testing and repair of leaks in accordance with the relevant technical standards and specifications and established procedures. |
|   |   | 2.8 | Components and equipment are installed efficiently without waste of materials or damage/contamination to apparatus and the surrounding environment or services and using sustainable energy practices.       |
| 3 | Complete installation.                            | 3.1 | OHS risk control measures and procedures at the completion of work are followed.   |
|   |   | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 | Final check of the installed components and equipment is made to verify that it complies to all requirements   |
|   |   | 3.4 | ‘As-installed’ components and equipment is documented and an appropriate person or persons notified in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing refrigeration and air conditioning systems, major components and associated equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.3.5.2 Refrigeration system control
- 2.5.6 Technical standards, regulations and codes for refrigeration and air conditioning
- 2.15.6 Fans and air distribution
- 2.15.24 Cool rooms and freezer rooms systems
- 2.15.25 Package air conditioning systems
- 2.15.26 Merchandising and display cabinets
- 2.15.27 Cooling towers, evaporative condensers, evaporative coolers and associated equipment
- 2.15.28 Residential air conditioning
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to installing major components and associated equipment for at least 2 different types of refrigeration and/or air conditioning systems.

Major components shall include refrigeration compressors, condensers, condensing units, evaporators and liquid receivers.

Associated equipment shall include refrigerant flow controls, cycling controls, safety controls and isolation, monitoring and inspection accessories.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install refrigeration and air conditioning systems, major components and associated equipment as described in 7) and including:
    - A Reading and interpreting drawings related to pipe work layouts and apparatus locations.
    - B Placing aligning and securing components and equipment to comply with requirements
    - C Connecting components, equipment and pipe work to comply with requirements.
    - D Cleaning system of contaminants.
    - E Ensuring system will not leak under pressure.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in installing refrigeration and air conditioning systems, major components and associated equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ006A	Install pipe work for refrigeration and air conditioning systems
-------------	--

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.3; 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.8

## UEENEEJ008A Recover, pressure and leak test, evacuate and charge refrigerants

### Unit Descriptor

1)

This unit covers pressure and leak testing, evacuating, charging and recovery of refrigerants and lubricants from refrigeration systems and air conditioning systems. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and lubricants, and completing the necessary documentation.

Note:

Refrigeration systems may be those used for refrigerating or for air conditioning.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ002A Prepare refrigeration tubing and fittings

UEENEEJ003A Determine the basic operating conditions of refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 3 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit may, in some States/Territories, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to

occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

- |  |   |
|--|---|
| <p>1 Prepare to recover refrigerants, pressure and leak test, evacuate and charge refrigeration systems.</p> | <p>1.1 OHS procedures including codes of practice for a given work area are obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed</p> <p>1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented</p> <p>1.4 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken</p> <p>1.5 The work is appropriately sequenced in accordance with job schedule</p> <p>1.6 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.7 Refrigerants, lubricants and cleaning materials needed for the work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.8 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety</p> |
|--|---|

- |  |      |  |
|--|------|--|
|  | 1.9  | Preparatory work is checked to ensure no damage has occurred and complies with requirements  |
| 2 Recover refrigerants, pressure and leak test, evacuate and charge refrigeration systems. | 2.1  | OHS risk control measures and procedures for carrying out the work are followed  |
|  | 2.2  | Checks are carried out to ensure the system or component parts are isolated, when necessary, in strict accordance with OHS requirements and procedures   |
|  | 2.3  | Circuits/machines/plant are checked as being electrically isolated where necessary in strict accordance OHS requirements and procedures  |
|  | 2.4  | The systems refrigerant and lubricant are tested for contamination   |
|  | 2.5  | Refrigerants are removed from a system safely into suitably labelled containers in accordance with regulatory requirements and industry practices, using appropriate recovery/reclaim equipment                                  |
|  | 2.6  | Precautions are taken to prevent damage to components while pressure testing the system  |
|  | 2.7  | Pressure testing is conducted at a pressure compatible with the refrigerant to be used   |
|  | 2.8  | Leaks are located and rectified using testing methods appropriate to the system under test and in accordance with industry practices   |
|  | 2.9  | Systems are evacuated to the required level and cleaned of all moisture and other containments in accordance with industry practices   |
|  | 2.10 | A 'Drop test' is used to prove effectiveness of the evacuation in accordance with industry practice  |
|  | 2.11 | The system, vacuum pump and recovery/reclaim unit lubricants are checked and maintained in accordance with manufacturer requirements   |
|  | 2.12 | Systems are charged or retrofitted with the appropriate refrigerant in accordance with manufacturer requirements and industry practices. This includes recording refrigerant usage in an auditable recording system, eg logbook. |
|  | 2.13 | Problematic situations that arise during the work are dealt with in an appropriate manner  |

	2.14	Systems are pressure and leak tested, evacuated and charged efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
3 Complete and report refrigerants recovery, pressure and leak test and evacuate and charge work	3.1	OHS work completion risk control measures and procedures are followed
	3.2	Work site and equipment is cleaned and made safe in accordance with established procedures
	3.3	Contaminated refrigerant and lubricant is dealt with in accordance with legislative/regulatory requirements
	3.4	Completion of the work is documented and recorded, including refrigerant usage in an auditable logbook and an appropriate person or persons notified in accordance with established procedures

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and recovering, pressure and leak testing, evacuating and charging refrigerants. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.6	Technical standards, regulations and codes for refrigeration and air conditioning
2.11.9.3	Replacement of basic components on a refrigeration system
2.17.2.1	Refrigerants
2.17.2.4	High pressure refrigerants
2.17.2.5	Natural refrigerants
2.18.1	Occupational Health and Safety principles
2.18.3.1	Refrigeration and air conditioning safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to recovery, testing and charging refrigeration systems used for refrigeration or air conditioning encompassing the following:

- recovering refrigerant and lubricant from an existing system that may contain contaminants
- pressure and leak testing a newly installed or repaired system
- evacuating a system in preparation for charging with refrigerant
- selection of a suitable refrigerant and lubricant for a given application
- charging a system with refrigerant and lubricant with minimal loss

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Recover, pressure and leak test, evacuate and charge refrigerants and lubricants as described in 7) and including:
    - A Selecting appropriate materials and equipment
    - B Testing refrigerant and lubricant for contamination
    - C Removing and storing refrigerant correctly
    - D Conducting pressure testing at the appropriate pressure level and without damaging components

- E Locating and rectifying leaks
- F Decontaminating and evacuating the system to the required level
- G Charging the system with the appropriate refrigerant
- H Completing the necessary documentation
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in recovering, pressure and leak testing, evacuate and charging refrigerants.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ007A      Install refrigeration and air conditioning systems, major components and associated equipment

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.9	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7; 2.12	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.11	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance.

See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.9
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.12

## **UEENEEJ009A      Verify compliance and functionality of refrigeration and air conditioning installations**

### **Unit Descriptor**

1)

This unit covers testing and visual inspection for verifying that a refrigeration and air conditioning system and components are safe, comply with requirements and functions as intended. It encompasses working safely, conducting compliance tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEE001A	Apply OHS practices in the workplace
UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE003A	Solve problems in extra-low voltage single path circuits
UEENEEE005A	Fix and secure equipment
UEENEEE007A	Use drawings, diagrams, schedules and manuals
UEENEEE037A	Document occupational hazards and risks in electrotechnology
UEENEEE038A	Participate in development and follow a personal competency development plan
UEENEEJ002A	Prepare refrigeration tubing and fittings
UEENEEJ003A	Determine the basic operating conditions of vapour compression systems
UEENEEJ004A	Determine the basic operating conditions of air conditioning systems
UEENEEJ006A	Install pipe work for refrigeration and air conditioning systems

UEENEEJ007A	Install refrigeration and air conditioning systems, major components and associated equipment
UEENEEJ008A	Recover, pressure and leak test, evacuate and charge refrigerants
UEENEEJ010A	Select refrigerant pipe/tube, accessories and associated controls
UEENEEJ011A	Diagnose and rectify faults in refrigeration and air conditioning systems and components
UEENEEJ013A	Commission refrigeration and air conditioning systems
UEENEEJ036A	Evaluate and report on energy management
UEENEEJ070A	Diagnose and rectify faults in refrigeration and air conditioning control systems
UEENEEP001A	Disconnect and reconnect fixed wired electrical equipment connected to a Low Voltage supply
UEENEEP002A	Attach cords and plugs to electrical equipment for connection to a single phase 250 Volt supply
UEENEEP003A	Attach cords and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply
UEENEEP007A	Locate and rectify faults in electrical low voltage equipment following prescribed procedures

Elective units to a Unit Strand Total of at least 5 from Schedule 3.

**Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading      3      Writing      3      Numeracy      3

**Application of the Unit 3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to verify refrigeration and air conditioning installations

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.5 Location of system components is determined from specifications and diagrams
- 1.6 Inspection and tests are appropriately sequenced in accordance with job schedule

	1.7	Materials needed for the tests and verification are obtained in accordance with established procedures and checked against job requirements
	1.8	Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety
Visually inspect the installation	2.1	OHS risk control measures and procedures for carrying out the work are followed
	2.2	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.3	Pipe work is checked for appropriate type and size
	2.4	Pipe work, accessories and components are validated as being suitably located, securely fixed and suitably protected from damage or corrosion
	2.5	System components and accessories are validated as being appropriately rated per manufacture and design specifications
	2.6	Evidence that equipment complies with safety and functional requirements is cited
	2.7	Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented
	2.8	Unexpected situations are dealt with safely and with the approval of an authorised person
	2.9	Inspection is carried out efficiently without waste of materials, damage to, or contamination of apparatus and the surrounding environment or services and using sustainable energy practices
2 Conduct tests	3.1	OHS risk control measures and procedures for carrying out the work are followed
	3.2	Testing or measuring on a live and operating system in strict accordance with OHS requirements and within established safety procedures
	3.3	Circuits/machines/plant are checked as being isolated in strict accordance OHS requirements and procedures

- |   |   |   |
|---|---|---|
|   | 3.4   | Electrical tests are conducted to verify that the electrical circuit within the refrigeration installation are safe and function as intended                            |
|   | 3.5   | Refrigeration tests are conducted to verify that the refrigeration equipment and pipe work within the refrigeration installation is safe and functions as intended      |
|   | 3.6   | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented  |
|   | 3.7   | Unexpected situations are dealt with safely and with the approval of an authorised person   |
|   | 3.8   | Testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices |
| 4 | Report inspection and verification findings |   |
|   | 4.1   | OHS work completion risk control measures and procedures are followed   |
|   | 4.2   | Work site and equipment is cleaned and made safe in accordance with established procedures  |
|   | 4.3   | Non-compliance defects are identified and reported in accordance with established procedures  |
|   | 4.4   | Recommendations for rectifying defects are made in accordance with established procedures   |
|   | 4.5   | Work completion is documented and an appropriate person or persons notified in accordance with established procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of refrigeration and air conditioning installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.16.5   | Refrigeration and air conditioning installations, testing and verification methods |
| 2.18.1   | Occupational Health and Safety principles  |
| 2.18.2   | Electrical Safe working practices  |
| 2.18.3.1 | Refrigeration and air conditioning safe working                                    |

practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different new or existing refrigeration and air conditioning installations. Verification shall include:

- Visual inspection of the system, its components pipe work controls and accessories
- Conducting all electrical tests

Note:

1. Electrical testing include isolation testing; insulation resistance of equipment; resistance of the internal circuits of equipment; polarity of supply and equipment; continuity of earthing; correct electrical connections load current.  
2. Electrical testing may be limited by the scope permitted under restricted electrical work

- Conducting all refrigeration tests

Note:

Refrigeration testing includes pressure test apparatus/circuits; leak test apparatus/circuits; evacuation test apparatus/circuits; compressor efficiency; controls tests; refrigerant charge; operating pressures; system operation system capacity

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Verify compliance and functionality of refrigeration and air conditioning installations as described in 7) and including:
  - A Identifying visual defects
  - B Conducting all electrical tests safely and correctly
  - C Conducting all refrigeration tests safely and correctly
  - D Identifying non-compliant defects from test results
  - E Recommending appropriate corrective actions
  - F Acting within regulatory limits
  - G Reporting legibly and accurately
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in verifying compliance and functionality of refrigeration and air conditioning installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.3 to 2.6; 3.4; 3.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 3.4; 3.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 4.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.4; 3.5	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.2 to 1.8; 2.1; 3.1; 3.2

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.8; 3.7; 3.8

## **UEENEEJ010A      Select refrigerant pipe/tube, accessories and associated controls**

### **Unit Descriptor**

**1)**

This unit covers the selection of refrigerant pipe/tube, accessories and controls for refrigeration and air conditioning installations to comply with regulations, standards and specifications. It encompasses developing pipe work arrangements, selecting pipe work and fittings, refrigeration flow controls and accessories, and mechanical and electrical control devices based on specifications, standards and manufacturer catalogues to determine calculated and deemed-to-comply solutions and documenting all selection information.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ003A      Determine the basic operating conditions of refrigeration and air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It is suitable for augmenting previously acquired competencies.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to select pipe/tube, accessories and controls

- 1.1 The extent and nature of the refrigeration installation is determined from job specifications.
- 1.2 Safety and other regulatory requirements to which the refrigeration system shall comply, are identified, obtained and understood

2 Develop pipe work arrangements

- 2.1 The intended location of refrigeration equipment is determined from job specifications and site drawings or deemed to comply arrangements.
- 2.2 Pipe work arranged to ensure safe and functional operation of the system.
- 2.3 Pipe work is arranged to comply with technical standards and job specifications and requirements.

3 Select pipe/tube, accessories and controls

- 3.1 Pipe and tubing is selected for suitability for the environments in which it is to be installed
- 3.2 Pipe and tubing is sized to meet refrigeration parameters and capacity requirements for the refrigerant to be used.

- 3.3 Pipe and tubing quantities are determined from equipment location diagrams and job specifications.
  - 3.4 Refrigeration controls and accessories are selected to meet load requirements based on calculated or deemed-to-comply solutions.
  - 3.5 Control devices are selected to meet functional, specified and regulatory requirements.
  - 3.6 Electrical control devices are selected to meet current, voltage and IP ratings.
  - 3.7 Evidence is obtained that the selected refrigeration equipment and control devices comply with all requirements.
- 4 Document electrical installation
- 4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.
  - 4.2 Refrigeration installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting refrigerant pipe/tube, accessories and associated controls. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.1 Enterprise communication methods
- 2.5.6 Technical standards, regulations and codes for refrigeration and air conditioning
- 2.15.4.2 Refrigerant control selection
- 2.16.1 Refrigeration pipe work and accessories
- 2.16.2 Refrigeration pipe work layout
- 2.16.3 Refrigeration installations, equipment requirements
- 2.16.4 Refrigeration pipe selection and sizing
- 2.17.3.1 Refrigeration system capacity control
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the selection of refrigerant pipe/tube, accessories and associated controls for two different refrigeration systems. These include the following; refrigerant pipe (quick selection method) and fittings, refrigeration flow controls, isolation/access valves, filter-dryers, sight glasses, accessories, thermostats, pressure controls and humidity controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently

practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Select refrigerant pipe/tube, accessories and associated controls as described in 7) and including:
    - A Arranging pipe work to comply with regulatory and functional requirements.
    - B Selecting appropriate type, size and quantity of pipe and tubing
    - C Selecting refrigeration accessories that meets load requirements
    - D Selecting control devices that meet functional and regulatory requirements.

- E Documenting pipe work arrangement, specification for items selected and reasons for the selections made
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in selecting refrigerant pipe/tube, accessories and associated controls.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED001A Use basic computer applications’

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 3.1 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: (See Note)	1

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENED001A Use basic computer applications'

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEJ011A      Diagnose and rectify faults in refrigeration and air conditioning systems and components**

### **Unit Descriptor**

**1)**

This unit covers diagnosing, repairing faults and replacing faulty components in refrigeration and air conditioning systems, components, interconnecting circuits and equipment operating at voltages up to 1,000 V a.c. It encompasses working safely, reading electrical circuit diagrams, refrigeration, hydronic and air distribution system diagrams and manufacturers reference material, sketching diagrams from traced wiring and piping systems, applying logical fault finding procedures, conducting repairs, replacing components and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ007A	Install refrigeration and air conditioning systems, major components and associated equipment
UEENEEJ070A	Diagnose and rectify faults in refrigeration and air conditioning control systems
UEENEEP007A	Locate and rectify faults in electrical low voltage equipment following prescribed procedures

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and rectify faults

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The nature of the fault is obtained from documentation and/or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety

- |   |              |     |   |
|---|--------------|-----|---|
| 2 | Find faults  | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |              | 2.2 | The need to test or measure live and operating system is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures  |
|   |              | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures  |
|   |              | 2.4 | Fault finding is approached methodically drawing on knowledge of refrigeration and air conditioning systems using observation, measurement, calculations and comparison with normal system and component parameters/values. |
|   |              | 2.5 | Faults beyond the scope of refrigeration and air conditioning work are identified.  |
|   |              | 2.6 | System components are removed/dismantled where necessary and parts stored to protect them against loss or damage  |
|   |              | 2.7 | Faulty components are rechecked and their fault status confirmed.   |
|   |              | 2.8 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |              | 2.9 | Fault finding activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.   |
| 3 | Repair fault | 3.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |              | 3.2 | Arrangements are made for appropriately competent and authorised person to rectify faults that are beyond the scope of refrigeration and air conditioning work.   |
|   |              | 3.3 | Equipment is checked as being isolated where necessary in strict accordance OHS requirements and procedures   |
|   |              | 3.4 | Materials required to rectify faults are sourced and obtained in accordance with established procedures.  |

	3.5	Repairs are affected efficiently without damage to other components or apparatus and using sustainable energy principles.	
	3.6	Effectiveness of the repair is tested in accordance with established procedures.	
	3.7	System is reassembled and finally tested to ensure it is operating safely, effectively and complies with relevant requirements.	
4	Completion and report fault finding and rectification activities	4.1	OHS work completion risk control measures and procedures are followed.
		4.2	Work area is cleaned and made safe in accordance with established procedures.
		4.3	Written justification is made for repairs to circuits/apparatus.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in refrigeration and air conditioning systems and components. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.15.9.1	Appliance refrigerated systems
2.15.29	Servicing refrigeration and air conditioning systems
2.18.1	Occupational Health and Safety principles
2.18.3.1	Refrigeration and air conditioning safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to diagnosing and rectifying faults in the following refrigeration air conditioning systems and components:

- Compressors
- Condensers
- Evaporators/cooling coils
- Refrigerant flow controls
- Refrigerant piping and accessories
- Refrigeration systems
- Cycling controls
- Safety controls
- Motors

At least one of the following apparatus:

- Water systems, which includes cooling towers, evaporative condensers, evaporative coolers, hot water systems, chilled water systems, pumps, piping and associated equipment
- Air distribution systems

At least three of the following systems

- cool rooms
- freezer rooms
- merchandising and display cabinets
- residential air conditioning systems
- packaged or commercial air conditioning systems
- industrial air conditioning systems
- domestic refrigerators and freezers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in refrigeration and air conditioning systems and components as described in 7) and including:
    - A Using methodical fault finding techniques
    - B Finding faults efficiently
    - C Rectifying faults without damage
    - D Providing written justification for the rectifications undertaken
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

---

**Context of and  
specific  
resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in diagnosing and rectifying faults in refrigeration and air conditioning systems and components.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ013A Commission refrigeration and air conditioning systems

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.6; 2.7	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	2.6; 3.6; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 2.4 to 2.7; 3.2 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.8

## **UEENEEJ012A      Diagnose and rectify faults in complex refrigeration/air conditioning systems**

### **Unit Descriptor**

**1)**

This unit covers diagnosing and rectifying faults in complex refrigeration/air conditioning systems. It encompasses safe working practices, interpreting technical data, applying knowledge of complex refrigeration/air conditioning systems operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ009A      Verify compliance and functionality of refrigeration and air conditioning installations

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      4      Writing      4      Numeracy      4

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Logical diagnostic methods are applied to diagnose complex refrigeration/air conditioning systems faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the refrigeration and air-conditioning system.
- 2.7 Faults in system components of the system are rectified to raise the refrigeration/air conditioning systems to its operation standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in complex refrigeration/air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.3	Fault finding techniques
2.3.5	Refrigeration controls
2.3.6	Air conditioning controls
2.17.13	Refrigeration system analysis
2.18.1	Occupational Health and Safety principles
2.18.3.1	Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to diagnosing and rectifying at least four faults in complex refrigeration/air conditioning systems, incorporating multiple major components (i.e. compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in complex refrigeration/air conditioning systems as described in 7) and including:
    - A Applying logical diagnostic methods
    - B Using fault scenarios to test the cause of system faults
    - C Identifying faults and competency needed to rectify them
    - D Rectifying faults in system controls
    - E Verifying that the system operates correctly
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in diagnosing and rectifying faults in complex refrigeration/air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## **UEENEEJ013A Commission refrigeration and air conditioning systems**

### **Unit Descriptor**

**1)**

This unit covers commissioning of refrigeration and air conditioning systems. It encompasses working safely and to standards to commission the whole system and includes pre-commissioning tests, starting up the system, optimizing the refrigerant charge, basic air and water balancing and adjustment, checking and adjusting components and controls to ensure its efficient and balanced operation, and completing commissioning documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ007A	Install refrigeration and air conditioning systems, major components and associated equipment
UEENEEJ070A	Diagnose and rectify faults in refrigeration and air conditioning control systems
UEENEEP007A	Locate and rectify faults in electrical low voltage equipment following prescribed procedures

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to commission refrigeration and air conditioning systems

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Commissioning work is appropriately sequenced in accordance with job schedule
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.6 The extent of the system and location of system components is determined from site inspection and/or job specifications and diagrams
- 1.7 System control setting and operating parameters are determined from job specifications and requirements.

- 1.8 Tools, equipment and testing devices needed to commission the system are obtained in accordance with established procedures and checked for correct operation and safety
- 1.9 Pre commissioning checks are undertaken to ensure all components are in place and secure.
- 1.10 The need to test or measure a live and operating system is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2 Commission refrigeration systems
  - 2.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
  - 2.3 Refrigeration system pressure controls, valves and regulators are adjusted to their required settings.
  - 2.4 Testing/measuring devices are used to observe the operation of refrigeration system and fine adjustments of controls are made as necessary.
  - 2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.7 Commissioning is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Commission air handling systems
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
  - 3.3 Air distribution system dampers are adjusted to avoid air restrictions and allow maximum return volumes.

- 3.4 Balancing the air distribution system is carried out methodically drawing on knowledge of air distribution requirements using measured and calculated values of system parameters.
- 3.5 Air distribution system is balanced to ensure the flow rates meet the specified requirements for each outlet.
- 3.6 Testing/measuring devices are used to observe the operation of air conditioning system components and fine adjustments of controls are made as necessary.
- 3.7 Testing/measuring devices are used to observe the operation of refrigeration system and fine adjustments of controls are made as necessary.
- Note:  
Components can include fans, chillers, condensers, coils and heat exchangers, boilers and controls
- 3.8 Testing/measuring devices are used to observe the operation of the hydronic system and fine adjustments of controls are made as necessary.
- Note:  
Components can include chillers, condensers, coils and heat exchangers, boilers, cooling towers, pumps and controls
- 3.9 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 3.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 3.11 Commissioning is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 4 Complete and document commissioning work
- 4.1 OHS work completion risk control measures and procedures are followed.
- 4.2 Work site is cleaned and made safe in accordance with established procedures.
- 4.3 Results of commissioning are documented including final operating parameters and an appropriate person or persons notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning refrigeration and air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2 Enterprise communication methods
- 2.11.10.2 Air conditioning testing devices
- 2.15.30 Commissioning refrigeration and air conditioning systems
- 2.16.17 Retrofitting refrigeration systems
- 2.17.3 Refrigeration systems and compressor operations
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning the following refrigeration and air conditioning systems and components:

- Compressors
- Condensers
- Evaporators/cooling coils
- Refrigerant flow controls
- Refrigerant piping and accessories
- Refrigeration systems
- Cycling controls
- Safety controls
- Motors

At least one of the following apparatus:

- Water systems, which includes cooling towers, evaporative condensers, evaporative coolers, hot water systems, chilled water systems, pumps, piping and associated equipment
- Air distribution systems

At least three of the following systems

- cool rooms
- freezer rooms
- merchandising and display cabinets
- residential air conditioning systems
- packaged or commercial air conditioning systems
- industrial air conditioning systems
- domestic refrigerators and freezers

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Commission refrigeration and air conditioning systems and components as described in 7) and including:

- A Using methodical commissioning techniques
- B Commissioning efficiently
- C Optimising system performance and efficiency
- D Providing written commissioning reports
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning refrigeration and air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEJ014A Solve problems in hydronic systems

### Unit Descriptor

1)

This unit covers solving problems in hydronic systems. It encompasses working safely and to standards, applying knowledge of the components and solving problems in hydronic systems, using effective problem solving techniques and documenting solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ011A Diagnose and rectify faults in refrigeration and air conditioning systems and components

UEENEEJ013A Commission refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to solve problems in hydronic systems

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve problems in hydronic systems

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

- 2.4 Problems are approached methodically drawing on operational knowledge of hydronic systems using observation, measurement, calculations and comparison with normal operating values of system and components.
- 2.5 Information needed to solve problems is gathered and evaluated against normal operating parameters.
  - Note:  
Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.
- 2.6 Problems are dealt with safely and with the approval of an authorised person.
- 2.7 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Complete work and document problem solving activities in hydronic systems
  - 3.1 OHS risk control work completion measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Justification for solutions used to solve problems is documented
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in hydronic systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.6 Hydronic systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problem related to

hydronic systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in hydronic systems as described in 7) and including:
    - A Using methodical fault finding techniques
    - B Assessing relevant information
    - C Solving problems effectively
    - D Providing written justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

---

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in hydronic systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ011A	Diagnose and rectify faults in refrigeration and air conditioning systems and components
-------------	--

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.6; 2.4; 3.4; 3.6	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.4 to 3.7	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.4; 3.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.3 to 3.7	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.3 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6; 3.8; 3.9

## UEENEEJ015A Solve problems in beverage dispensers

### Unit Descriptor

1)

This unit covers solving problems in beverage dispensers. It encompasses working safely and to standards, applying knowledge of the components and operation of beverage dispensers, using effective problem solving techniques and documenting solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ011A Diagnose and rectify faults in refrigeration and air conditioning components and systems

UEENEEJ013A Commission refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

#### Competency Field 4)

#### Refrigeration and Air Conditioning

#### ELEMENT

#### PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to solve problems in beverage dispensers

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve problems in beverage dispensers

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Problems are approached methodically drawing on operational knowledge of beverage dispensers systems using observation, measurement, calculations and comparison with normal operating values of system and components.
- 2.5 Information needed to solve problems is gathered and evaluated against normal operating parameters.  

Note:  
Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.
- 2.6 Problems are dealt with safely and with the approval of an authorised person.
- 2.7 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Complete work and document problem solving activities
  - 3.1 OHS risk control work completion measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Justification for solutions used to solve problems is documented
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in beverage dispensers. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.7 Beverage dispensers
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problem related to refrigerated beverage dispensers.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in beverage dispensers as described in 7) and including:
    - A Using methodical problem solving techniques
    - B Accessing relevant information
    - C Solving problems effectively
    - D Providing written justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in beverage dispensers.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A      Carry out scheduled maintenance

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  4.3	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.6	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7

## **UEENEEJ016A      Solve problems in transport refrigeration systems**

### **Unit Descriptor**

  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in transport refrigeration systems as described in 7) and including:
    - A Using methodical problem solving techniques
    - B Accessing relevant information
    - C Solving problems effectively
    - D Providing written justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in transport refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A      Carry out scheduled maintenance

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7

## **UEENEEJ017A      Solve problems in ultra-low temperature refrigeration systems**

### **Unit Descriptor**

**1)**

This unit covers solving problems in ultra-low temperature refrigeration systems, including compound and cascade systems. It encompasses working safely and to standards, applying knowledge of the components and operation of ultra-low temperature refrigeration systems, using effective problem solving techniques and documenting solutions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ011A      Diagnose and rectify faults in refrigeration and air conditioning components and systems

UEENEEJ013A      Commission refrigeration and air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      3      Writing      3      Numeracy      3

### **Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to

occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to Solve problems in ultra-low temperature refrigeration systems.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

- |   |   |     |  |
|---|---|-----|--|
| 2 | Solve problems in ultra-low temperature refrigeration systems | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |   | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures  |
|   |   | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures   |
|   |   | 2.4 | Problems are approached methodically drawing on operational knowledge of Ultra-low temperature refrigeration systems using observation, measurement, calculations and comparison with normal operating values of system and components.  |
|   |   | 2.5 | Information needed to solve problems is gathered and evaluated against normal operating parameters.<br><br>Note:<br>Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters. |
|   |   | 2.6 | Problems are dealt with safely and with the approval of an authorised person.  |
|   |   | 2.7 | Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.   |
| 3 | Complete work and document problem solving activities.        | 3.1 | OHS risk control work completion measures and procedures are followed.   |
|   |   | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 | Justification for solutions used to solve problems is documented   |
|   |   | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in Ultra-low temperature refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.17.9	Ultra-low temperature refrigeration systems
2.18.1	Occupational Health and Safety principles
2.18.3.1	Refrigeration and air conditioning safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to ultra-low temperature refrigeration systems. Ultra-low temperature refrigeration systems cover compound and cascade systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in ultra-low temperature refrigeration systems as described in 7) and including:
    - A Using methodical problem solving techniques
    - B Accessing relevant information

- C Solving problems effectively
- D Providing written justification for the solutions used
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in Ultra-low temperature refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A      Carry out scheduled maintenance

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

## Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7

## **UEENEEJ018A      Solve problems in post mix refrigeration systems**

### **Unit Descriptor**

**1)**

This unit covers solving problems in post mix refrigeration systems. It encompasses working safely and to standards, applying knowledge of the components and operation of post mix refrigeration systems, using effective problem solving techniques and documenting solutions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ011A      Diagnose and rectify faults in refrigeration and air conditioning components and systems

UEENEEJ013A      Commission refrigeration and air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading      3      Writing      3      Numeracy      3

### **Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to solve problems in post mix refrigeration systems.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

|   |  | 2.6 | Problems are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.7 | Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.   |
| 3 | Complete work and document problem solving activities. | 3.1 | OHS risk control work completion measures and procedures are followed.   |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3 | Justification for solutions used to solve problems is documented   |
|   |  | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in post mix refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.10.1 Post mix refrigeration systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to post mix refrigeration systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in post m ix refrigeration systems as described in 7) and including:
    - A Using methodical problem solving techniques
    - B Accessing relevant information

- C Solving problems effectively
- D Providing written justification for the solutions used
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in post mix refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A      Carry out scheduled maintenance

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

## Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7

## UEENEEJ019A Solve problems in ice making systems

### Unit Descriptor

1)

This unit covers solving problems in ice making systems. It encompasses working safely and to standards, applying knowledge of the components and operation of ice making systems, using effective problem solving techniques and documenting solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ011A Diagnose and rectify faults in refrigeration and air conditioning components and systems

UEENEEJ013A Commission refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to solve problems in ice making systems.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve problems in ice making systems

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Problems are approached methodically drawing on operational knowledge of ice making systems using observation, measurement, calculations and comparison with normal operating values of system and components.
- 2.5 Information needed to solve problems is gathered and evaluated against normal operating parameters.
  - Note:  
Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.
- 2.6 Problems are dealt with safely and with the approval of an authorised person.
- 2.7 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Complete work and document problem solving activities.
  - 3.1 OHS risk control work completion measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Justification for solutions used to solve problems is documented
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in ice making systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.11 Ice making systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to ice making systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in ice making systems as described in 7) and including:
    - A Using methodical problem solving techniques
    - B Accessing relevant information
    - C Solving problems effectively
    - D Providing written justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in ice making systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A      Carry out scheduled maintenance

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7

## **UEENEEJ020A      Solve problems in industrial refrigeration systems**

### **Unit Descriptor**

**1)**

This unit covers solving problems in industrial refrigeration systems. It encompasses working safely and to standards, applying knowledge of the components and operation of industrial refrigeration systems, using effective problem solving techniques and documenting solutions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ011A      Diagnose and rectify faults in refrigeration and air conditioning components and systems

UEENEEJ013A      Commission refrigeration and air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      3      Writing      3      Numeracy      3

### **Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to solve problems in industrial refrigeration systems.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

- |   |  |     |  |
|---|--|-----|--|
| 2 | Solve problems in industrial refrigeration systems     | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |  | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures  |
|   |  | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures   |
|   |  | 2.4 | Problems are approached methodically drawing on operational knowledge of industrial refrigeration systems using observation, measurement, calculations and comparison with normal operating values of system and components.   |
|   |  | 2.5 | Information needed to solve problems is gathered and evaluated against normal operating parameters.<br><br>Note:<br>Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters. |
|   |  | 2.6 | Problems are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.7 | Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.   |
| 3 | Complete work and document problem solving activities. | 3.1 | OHS risk control work completion measures and procedures are followed.   |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3 | Justification for solutions used to solve problems is documented   |
|   |  | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in industrial refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.12 Industrial refrigeration systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to industrial refrigeration systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in industrial refrigeration systems as described in 7) and including:
    - A Using methodical problem solving techniques
    - B Accessing relevant information

- C Solving problems effectively
- D Providing written justification for the solutions used
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in industrial refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A      Carry out scheduled maintenance

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

## Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7

## **UEENEEJ021A Monitor and adjust energy management systems on refrigeration systems**

### **Unit Descriptor**

**1)**

This unit covers the setting-up and adjusting energy management systems on refrigeration systems for effective energy use. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ009A    Verify compliance and functionality of refrigeration and air conditioning installations

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to monitor and adjust energy management systems on refrigeration systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.5 System energy parameters are identified by reviewing system specifications and component technical data.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

2	Monitor and adjust energy management systems on refrigeration systems.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
		2.3	Monitoring and adjustments are made to equipment components and controls to provide effective energy use in accordance with system specifications and regulatory requirements.
		2.4	Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
		2.5	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
		2.6	Monitoring and adjusting is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3	Completion and report monitoring adjusting activities.	3.1	OHS risk control work completion measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Monitoring and adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and monitoring and adjusting energy management systems on refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.15.16	Energy management systems for commercial refrigeration
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to monitoring and adjusting two different types of energy management systems for refrigeration systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Monitor and adjust energy management systems on refrigeration systems as described in 7) and including:
    - A Identifying system energy parameters
    - B Monitoring and adjusting system components and controls to provide effective energy use
    - C Ensuring system energy use is accordance with requirements
    - D Documenting adjustment settings with established procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in monitoring and adjusting energy management systems on refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	3

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.3; 2.4; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5; 2.6

## UEENEEJ022A **Diagnose faults in complex refrigeration or HVAC control systems**

### Unit Descriptor

1)

This unit covers diagnosing and rectifying faults in complex refrigeration or heating, ventilation and air conditioning (HVAC) control systems. It encompasses safe working practices, interpreting technical data, applying knowledge of complex refrigeration or heating, ventilation and air conditioning (HVAC) control systems operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ012A     Diagnose and rectify faults in complex refrigeration/air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during

training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- |   |   |  |
|---|---|--|
|   | 2.3   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   | 2.4   | Logical diagnostic methods are applied to diagnose control system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.            |
|   | 2.5   | Suspected fault scenarios are tested as being the source of system problems.   |
|   | 2.6   | Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the control system.   |
|   | 2.7   | Faults in system components of the system are rectified to raise the refrigeration or heating, ventilation air conditioning systems to its operation standard.   |
|   | 2.8   | System is tested to verify that the system operates as intended and to specified requirements.   |
|   | 2.9   | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.   |
|   | 2.10  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
|   | 2.11  | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete and report fault diagnosis and rectification activities. | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 Work site is made safe in accordance with established safety procedures.   |
|   |   | 3.3 Rectification of faults is documented in accordance with established procedures.   |
|   |   | 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.   |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing faults in complex refrigeration or HVAC control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.15.17 Refrigeration/HVAC direct digital controls

2.15.18 Refrigeration/HVAC pneumatic controls

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to diagnosing and rectifying at least four faults in complex refrigeration or HVAC control systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose faults in complex refrigeration or HVAC control systems as described in 7) and including:
    - A Applying logical diagnostic methods
    - B Using fault scenarios to test the cause of system faults

- C Identifying faults and competency needed to rectify them
- D Rectifying faults in system controls
- E Verifying that the system operates correctly
- F Documenting fault rectification
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in diagnosing faults in complex refrigeration or HVAC control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	32

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## **UEENEEJ023A Commission complex heating, ventilation and air conditioning (HVAC) systems**

### **Unit Descriptor**

**1)**

This unit covers the setting-up and adjusting complex heating, ventilation and air conditioning (HVAC) systems for optimum performance. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ012A Diagnose and rectify faults in complex refrigeration/air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to commission complex heating, ventilation and air conditioning systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.5 System operating parameters are identified by reviewing system specifications and component technical data.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

	1.9	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2 Commission complex heating, ventilation and air conditioning systems.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
	2.3	Measurements and adjustments are made to equipment components and controls to provide optimum system performance in accordance with system specifications and regulatory requirements.
	2.4	Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.5	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6	Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report commissioning activities.	3.1	OHS risk control work completion measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning complex heating, ventilation and air conditioning (HVAC) systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.19 HVAC air systems
- 2.16.9 Commissioning HVAC system
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning two different types of complex heating, ventilation and air conditioning systems, incorporating multiple major components (i.e. compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when

choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Commissioning complex heating, ventilation and air conditioning (HVAC) systems as described in 7) and including:
    - A Identifying system design operating parameters
    - B Measuring and adjusting system components and controls to provide optimum system performance
    - C Ensuring system operates within regulatory requirements
    - D Documenting adjustment settings with established procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning complex heating, ventilation and air conditioning (HVAC) systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	3

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.3; 2.4; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to commission hydronic systems for refrigeration and air conditioning

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.5 System operating parameters are identified by reviewing system specifications and component technical data.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

	1.9	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2 Commission hydronic systems for refrigeration and air conditioning.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
	2.3	Measurements and adjustments are made to equipment components and controls to provide optimum system performance in accordance with system specifications and regulatory requirements.
	2.4	Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.5	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6	Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report commissioning activities.	3.1	OHS risk control work completion measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning hydronic systems for refrigeration and/or air conditioning. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.20 HVAC hydronic systems
- 2.16.9 Commissioning HVAC system
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning two different hydronic systems for refrigeration and/or air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for

Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Commission hydronic systems for refrigeration and/or air conditioning systems as described in 7) and including:
    - A Identifying system operating parameters
    - B Measuring and adjusting system components and controls to provide optimum system performance
    - C Ensuring system operates within regulatory requirements
    - D Documenting adjustment settings with established procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning hydronic systems for refrigeration and/or air conditioning.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	2

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	3

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.3	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3; 2.4; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## **UEENEEJ025A Commission complex refrigeration systems**

### **Unit Descriptor**

**1)**

This unit covers the setting-up and adjusting complex refrigeration systems for optimum performance. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ012A Diagnose and rectify faults in complex refrigeration/air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to commission complex refrigeration systems.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.5 System operating parameters are identified by reviewing system specifications and component technical data.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

	1.9	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2	Commission complex refrigeration systems.	2.1 OHS risk control measures and procedures for carrying out the work are followed.
	2.2	Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
	2.3	Measurements and adjustments are made to equipment components and controls to provide optimum system performance in accordance with system specifications and regulatory requirements.
	2.4	Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.5	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6	Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3	Completion and report commissioning activities.	3.1 OHS risk control work completion measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning complex refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.16.9 Commissioning HVAC system

2.16.10 Commissioning commercial/industrial refrigeration systems

## 2.18.1 Occupational Health and Safety principles

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning two different types of complex refrigeration systems, incorporating multiple major components (i.e. compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment****8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently

practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Commission complex refrigeration systems as described in 7) and including:
    - A Identifying system operating parameters
    - B Measuring and adjusting system components and controls to provide optimum system performance
    - C Ensuring system operates within regulatory requirements
    - D Documenting adjustment settings with established procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning complex refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		1.3; 2.4; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## **UEENEEJ026A Commission complex control systems for refrigeration/air conditioning**

### **Unit Descriptor**

**1)**

This unit covers the setting-up and adjusting complex control systems for refrigeration and air conditioning for optimum performance. It encompasses safe working practices, system parameter testing and analysis, adjusting equipment and controls, following procedures and documenting final operating parameters and settings.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ012A Diagnose and rectify faults in complex refrigeration/air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to commission complex control systems for refrigeration and air conditioning.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.5 System operating parameters are identified by reviewing system specifications and component technical data.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

	1.9	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
2 Commission complex control systems for refrigeration and air conditioning.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	Testing/measuring devices are connected and set up in accordance with requirements for a particular system.
	2.3	Measurements and adjustments are made to equipment components and controls to provide optimum system performance in accordance with system specifications and regulatory requirements.
	2.4	Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
	2.5	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6	Commissioning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.
3 Completion and report commissioning activities.	3.1	OHS risk control work completion measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning complex control systems for refrigeration/air conditioning. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.21 Refrigeration/HVAC electronic controls
- 2.16.9 Commissioning HVAC system
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to commissioning two different complex control systems for refrigeration and air conditioning.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for

Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Commission complex control systems for refrigeration/air conditioning as described in 7) and including:
    - A Identifying system operating parameters
    - B Measuring and adjusting system components and controls to provide optimum system performance
    - C Ensuring system operates within regulatory requirements
    - D Documenting adjustment settings with established procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in commissioning complex control systems for refrigeration/air conditioning.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	2

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.3; 2.4; 2.5

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## **UEENEEJ027A Determine thermodynamic parameters of refrigeration and air conditioning systems**

### **Unit Descriptor**

1)

This unit covers the determination of the thermodynamic parameters of refrigeration and air conditioning systems. It encompasses working safely, determining thermodynamic parameters of using measurement and basic calculation methods and documenting results.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ064A Analyse the operation of HVAC/R systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 4 level.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to determine thermodynamic parameters of refrigeration and air conditioning systems

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, equipment and testing devices needed to determine the basic operating conditions are obtained and checked for correct operation and safety
- 1.6 The expected operating conditions are obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

2	Determine thermodynamic parameters of refrigeration and air conditioning systems	2.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Measurement of thermodynamic system operating parameters is conducted in strict accordance with OHS requirements and established safety procedures
		2.3	System is checked and isolated where necessary, in strict accordance OHS requirements and procedures
		2.4	Established procedures are used to determine actual and specified range of thermodynamic parameters from measured and calculated values as they apply to particular refrigeration or air conditioning systems.
		2.5	Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
		2.6	Unexpected situations are dealt with safely and with the approval of an authorised person.
		2.7	Thermodynamic parameters are determined without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3	Document determined thermodynamic parameters	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work site and equipment is cleaned and made safe in accordance with established procedures.
		3.3	Thermodynamic parameters are documented including identification of any parameter that is not within the specified range for the system.
		3.4	Work supervisor is notified of the completion of the work in accordance with established procedures.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining thermodynamic parameters of refrigeration and air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.14.1 Refrigeration engineering mathematics fundamentals
- 2.17.15 Refrigeration science
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining thermodynamic parameters using measurement and calculation methods of a refrigeration or air conditioning system, including temperature, pressure, relative humidity and enthalpy.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Determine thermodynamic parameters of refrigeration and air conditioning systems as described in 7) and including:
    - A Selecting and using appropriate measuring devices correctly
    - B Interpreting measurements
    - C Using calculation methods accurately
    - D Identifying parameters not within the specified range

- E Documenting thermodynamic parameters correctly
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in determining thermodynamic parameters of refrigeration and air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.4; 2.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	2
-----------------------------------	---	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 2.2 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEJ028A Produce HVAC/R design drawings

### Unit Descriptor

1)

This unit covers interpreting technical data and project specifications and produce HVAC/R design drawing. It encompasses safe working practices, interpreting technical data and specifications, applying knowledge heating, ventilation, air conditioning and/or refrigeration systems design drawing protocols, using appropriate drawing tools and documenting design. .

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ064A Analyse the operation of HVAC/R systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

## Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

## Refrigeration and Air Conditioning

**ELEMENT****PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to produce HVAC/R design drawings.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 The extent of the work is determined from project specifications and discussion with appropriate personnel
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.5 Software tools and equipment a needed for the work are obtained in accordance with established procedures

2 Produce HVAC/R design drawings

- 2.1 OHS risk control measures and procedures for carrying out the work are followed
- 2.2 The types of design drawings and layouts required are determined from project specifications
- 2.3 Technical data of system components is interpreted to determine parameters that are to be included in the drawings
- 2.4 Appropriate software tools are used to produce drawing based on standard protocols
- 2.5 Drawings are checked for accuracy are compliance with project specifications

		2.6	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
3	Complete and report HVAC/R design drawings	3.1	Completed drawings are submitted to an appropriate person to be checking for accuracy and compliance with project specifications.
		3.2	Any alterations, additions or correction instructions are followed and drawings are re-submitted for final approval
		3.3	Copies of completed drawings are filed securely in accordance with established procedures

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and producing HVAC/R design drawings. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.16.11 Air conditioning drawing

2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to producing design drawings for at least two different HVAC/R projects.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to design commercial refrigeration systems.	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	The extent and nature of the refrigeration system is determined from design specifications
		1.3	Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood
		1.4	Work supervisor or customers are consulted to determine which functions of the system are to be use and the parameter of each and written confirmation sought.
		1.5	Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2	Design commercial refrigeration systems	2.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Knowledge of refrigeration and food storage technology, refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design
		2.3	Safety, functional and budgetary considerations are incorporated in the installation design.

- 2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
  - 2.5 Location of components of the system is documented to ensure correct operation of system functions.
  - 2.6 System design draft is checked for compliance with the design brief and regulatory requirements.
  - 2.7 System design is documented for submission to appropriate person(s) for approval.
  - 2.8 Solutions to unplanned situation are provided consistent with organisation's policy.
- 3 Obtain approval for engineering computer applications design
- 3.1 System design is presented and explained to client representative and/or other relevant person(s).
  - 3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
  - 3.3 Final design is documented and approval obtained from appropriate person(s).
  - 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and determining the heat loads for commercial refrigeration and air conditioning applications. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.16 Heat load estimating for commercial refrigeration
- 2.17.17.1 HVAC load estimating fundamentals
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to determining heat loads using quick selection

short form paper and computer based methods for a refrigeration or air conditioning system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. **Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	1

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 2.2 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## **UEENEEJ030A Produce HVAC/R control system design diagrams**

### **Unit Descriptor**

**1)**

This unit covers interpreting technical data and project specifications and produce HVAC/R control system diagrams. It encompasses safe working practices, interpreting technical data and specifications, applying knowledge heating, ventilation, air conditioning and/or refrigeration control systems drawing protocols, using appropriate drawing tools and documenting design.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ064A Analyse the operation of HVAC/R systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 4 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### **Competency Field**

**4)**

## Refrigeration and Air Conditioning

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to produce HVAC/R control system design diagrams	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the work is determined from project specifications and discussion with appropriate personnel.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.5 Software tools and equipment a needed for the work are obtained in accordance with established procedures</p>
2 Produce HVAC/R control system design diagrams	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The types of control diagrams and layouts required are determined from project specifications.</p> <p>2.3 Technical data of control system components is interpreted to determine parameters that are to be included in the diagrams</p> <p>2.4 Appropriate software tools are used to produce diagrams based on standard protocols.</p> <p>2.5 Diagrams are checked for accuracy are compliance with project specifications.</p> <p>2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p>
3 Complete and report HVAC/R control system design diagrams	3.1 Completed control diagrams are submitted to an appropriate person to be checked for accuracy and compliance with project specifications.

- 3.2 Any alterations, additions or correction instructions are followed and diagrams are re-submitted for final approval
- 3.3 Copies of completed diagrams are filed securely in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and producing HVAC/R control system design diagrams. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.15.15 HVAC control system fundamentals

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to producing control system design diagrams for at least two different HVAC/R projects.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However,

it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Produce HVAC/R control system design diagrams as described in 7) and including:
    - A Understanding the extent of the drawing work accurately
    - B Determining appropriate types of diagrams and their layouts correctly
    - C Including appropriate technical data parameters in the diagrams
    - D Checking and correcting diagrams accurately
    - E Filing copies of completed drawing securely
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in producing HVAC/R control system design diagrams.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3 to 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEJ031A Provide solutions to vibration problems in HVAC/R system design**

### **Unit Descriptor**

**1)**

This unit covers the solution for the appropriate selection and use of materials relative to vibration problems in HVAC/R system. It encompasses working safely, problem solving procedures, including using measuring instruments, applying appropriate theorems and providing solutions derived from measurements and calculations and justification for such solutions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ065A Evaluate fluid and thermodynamic parameters of refrigeration systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 5 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the characteristics and behaviour of material in an engineering environment.

### **Competency Field**

**4)**

Refrigeration and Air Conditioning

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to Provide solutions to vibration problems in HVAC/R system design	<p>1.1 OH&amp;S procedures for a given work area are obtained and understood</p> <p>1.2 OH&amp;S risk control work preparation measures and procedures are followed.</p> <p>1.3 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of equipment and products that may be required for the work are established in accordance with established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety</p>
2 Provide solutions to vibration problems in HVAC/R system design	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure active systems is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Systems are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Established methods are used to solving vibration problems from measure and calculated values, as they apply to HVAC/R system design.</p> <p>2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices with the minimum waste and rework.</p>

- |   |  |     |  |
|---|--|-----|--|
| 3 | Document solutions to vibration problems in HVAC/R system design | 3.1 | OH&S work completion risk control measures and procedures are followed.  |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3 | Justification for solutions used to solve system problems is documented.   |
|   |  | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to vibration problems in HVAC/R system design. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.17.20 Materials strength fundamentals

2.17.21.1 Noise and vibration control fundamentals

2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to providing solutions to vibration problems in at least two HVAC/R system designs.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide solutions to vibration problems in HVAC/R system design as described in 7) and including:
    - A Determining the characteristics and application of materials and the effects of thermodynamics
    - B Using established problem solving methods
    - C Taking relevant measurements accurately
    - D Interpreting measured values appropriately
    - E Providing effective solutions to system problems from measurements and calculations
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in providing solutions to vibration problems in HVAC/R system design.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4; 2.4	3

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	3

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEEJ032A      Design commercial refrigeration systems**

### **Unit Descriptor**

**1)**

This unit covers the design of commercial refrigeration systems. It encompasses applying knowledge of refrigeration and food storage technology, refrigeration system components and piping, safety and regulatory requirements, following design specifications and customer requirements and documenting system designs.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ031A      Provide solutions to vibration problems in HVAC and Refrigeration system design

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 5 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to design commercial refrigeration systems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 The extent and nature of the refrigeration system is determined from design specifications.
- 1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood
- 1.4 Work supervisor or customers are consulted to determine which functions of the system are to be use and the parameter of each and written confirmation sought.
- 1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.

2 Design commercial refrigeration systems.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of refrigeration and food storage technology, refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design
- 2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
- 2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
- 2.5 Location of components of the system is documented to ensure correct operation of system functions.
- 2.6 System design draft is checked for compliance with the design brief and regulatory requirements.

	2.7	System design is documented for submission to appropriate person(s) for approval.
	2.8	Solutions to unplanned situation are provided consistent with organisation's policy.
3	Obtain approval for engineering computer applications design	
	3.1	System design is presented and explained to client representative and/or other relevant person(s).
	3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3	Final design is documented and approval obtained from appropriate person(s).
	3.4	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing commercial refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.6	Technical standards, regulations and codes for refrigeration and air conditioning
2.16.16	Refrigeration System Components and Piping
2.17.22	Refrigeration and food storage technology
2.18.1	Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different commercial refrigeration systems encompassing only one of each major component (i.e. condenser, compressor and evaporator) and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects  
of evidence  
required to  
demonstrate  
competency in  
this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design commercial refrigeration systems as described in 7) and including:
    - A Understanding required operating functions and parameters from the design specification
    - B Developing the design within the safety, regulatory and functional requirements and budget limitations
    - C Documenting and presenting design effectively,
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing commercial refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 3.1 to 3.3	2

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4; 3.1 to 3.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.8; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## UEENEEJ033A Design industrial refrigeration systems

### Unit Descriptor

1)

This unit covers the design of industrial refrigeration systems. It encompasses applying knowledge of refrigeration and food storage technology, industrial refrigeration system components and piping, safety and regulatory requirements, following design specifications and customer requirements and documenting system designs.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ031A Provide solutions to vibration problems in HVAC and Refrigeration system design

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 5 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### Competency Field

4)

Refrigeration and Air Conditioning

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit		Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.	
1	Prepare to design industrial refrigeration systems.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	The extent and nature of the refrigeration system is determined from design specifications.
		1.3	Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood
		1.4	Work supervisor or customers are consulted to determine which functions of the system are to be use and the parameter of each and written confirmation sought.
		1.5	Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2	Design industrial refrigeration systems.	2.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Knowledge of refrigeration and food storage technology, refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design
		2.3	Safety, functional and budgetary considerations are incorporated in the installation design.
		2.4	Equipment required for the system is selected in accordance with the design specifications and established requirements.
		2.5	Location of components of the system is documented to ensure correct operation of system functions.
		2.6	System design draft is checked for compliance with the design brief and regulatory requirements.
		2.7	System design is documented for submission to appropriate person(s) for approval.
		2.8	Solutions to unplanned situation are provided consistent with organisation's policy.

- |   |  |     |  |
|---|--|-----|--|
| 3 | Obtain approval for engineering computer applications design | 3.1 | System design is presented and explained to client representative and/or other relevant person(s).                               |
|   |  | 3.2 | Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.   |
|   |  | 3.3 | Final design is documented and approval obtained from appropriate person(s).   |
|   |  | 3.4 | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing industrial refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |           |   |
|-----------|---|
| 2.5.6     | Technical standards, regulations and codes for refrigeration and air conditioning |
| 2.16.16   | Refrigeration System Components and Piping  |
| 2.17.22   | Refrigeration and food storage technology   |
| 2.17.23.1 | Industrial refrigeration systems design fundamentals                              |
| 2.18.1    | Occupational Health and Safety principles   |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different commercial refrigeration systems encompassing only one of each major component (i.e. condenser, compressor and evaporator) and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design industrial refrigeration systems as described in 7) and including:
    - A Understanding required operating functions and parameters from the design specification
    - B Developing the design within the safety, regulatory and functional requirements and budget limitations
    - C Documenting and presenting design effectively,
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing industrial refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 3.1 to 3.3	2

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.7	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.8; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  All	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## **UEENEEJ034A      Design heating, ventilation and air conditioning (HVAC) systems**

### **Unit Descriptor**

**1)**

This unit covers the design of heating, ventilation and air conditioning systems. It encompasses applying knowledge of commercial air conditioning systems, components and piping, safety and regulatory requirements, following design specifications and customer requirements and documenting system designs.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ031A      Provide solutions to vibration problems in HVAC and Refrigeration system design

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      4      Writing      4      Numeracy      4

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 5 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to design commercial refrigeration systems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 The extent and nature of the refrigeration system is determined from design specifications.
- 1.3 Safety and other regulatory requirements to which the system shall comply are identified, obtained and understood
- 1.4 Work supervisor or customers are consulted to determine which functions of the system are to be use and the parameter of each and written confirmation sought.
- 1.5 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.

2 Design commercial refrigeration systems.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of refrigeration and food storage technology, refrigeration system components and piping, performance standards and compliance methods are applied to developing the system design
- 2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
- 2.4 Equipment required for the system is selected in accordance with the design specifications and established requirements.
- 2.5 Location of components of the system is documented to ensure correct operation of system functions.
- 2.6 System design draft is checked for compliance with the design brief and regulatory requirements.

	2.7	System design is documented for submission to appropriate person(s) for approval.
	2.8	Solutions to unplanned situation are provided consistent with organisation’s policy.
3	Obtain approval for engineering computer applications design	3.1 System design is presented and explained to client representative and/or other relevant person(s).
	3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation’s policy.
	3.3	Final design is documented and approval obtained from appropriate person(s).
	3.4	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing heating, ventilation and air conditioning (HVAC) systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.6	Technical standards, regulations and codes for refrigeration and air conditioning
2.16.16	Refrigeration System Components and Piping
2.17.24	Commercial air conditioning systems design
2.18.1	Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different heating, ventilation and air conditioning encompassing only one of each major component (i.e. air handling plant, condenser, compressor and evaporator) and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design heating, ventilation and air conditioning (HVAC) systems as described in 7) and including:
    - A Understanding required operating functions and parameters from the design specification
    - B Developing the design within the safety, regulatory and functional requirements and budget limitations
    - C Documenting and presenting design effectively
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing heating, ventilation and air conditioning (HVAC) systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 3.1 to 3.3	2

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.8; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## **UEENEEJ035A Design control systems for a heating, ventilation, air conditioning or refrigeration system**

### **Unit Descriptor**

1)

This unit covers the design control systems for a heating, ventilation, air conditioning or refrigeration system. It encompasses applying knowledge of refrigeration and air conditioning, control systems components, safety and regulatory requirements, following design specifications and customer requirements and documenting system designs..

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ030A Produce R/HVAC control system design diagrams

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training or institutional based delivery at the aligned AQF 4 level.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### **Competency Field**

4)

Refrigeration and Air Conditioning

|   |  | 3.4 | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing control systems for a heating, ventilation, air conditioning or refrigeration system. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.5.6   | Technical standards, regulations and codes for refrigeration and air conditioning |
| 2.15.17 | Refrigeration/HVAC direct digital controls  |
| 2.15.18 | Refrigeration/HVAC pneumatic controls   |
| 2.18.1  | Occupational Health and Safety principles   |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing a control system for at least two different heating, ventilation, air conditioning or refrigeration systems encompassing only one of each major component (i.e. condenser, compressor and evaporator) and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design control systems for a heating, ventilation, air conditioning or refrigeration system as described in 7) and including:
    - A Understanding required operating functions and parameters from the design specification
    - B Developing the design within the safety, regulatory and functional requirements and budget limitations
    - C Documenting and presenting design effectively
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing control systems for a heating, ventilation, air conditioning or refrigeration system.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	1.4; 3.1 to 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.7	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.8; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## **UEENEEJ036A Evaluate and report on energy management**

### **Unit Descriptor**

**1)**

This unit covers evaluation of energy management building services plant and machinery. It encompasses working safely, setting up and conducting evaluation measurements, evaluating energy use from measured parameters and reporting results including recommending any resulting corrective actions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ009A    Verify compliance and functionality of refrigeration and air conditioning installations

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of refrigeration or air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting

equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to evaluate and report on energy management.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of evaluation is determined from specifications of building services plant and machinery and discussion with appropriate personnel.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.

2 Evaluate energy management.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 In-depth knowledge of the energy management of building services plant and machinery is applied to the evaluation process
- 2.4 Energy evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
- 2.5 Energy evaluation tests are carried out methodically and results and comments systematically noted.
- 2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.

	2.7	Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
3	Report on energy management	3.1 OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Results of energy management evaluation are documented including recommendations and justification for improvements.
	3.4	Energy evaluation report is forwarded to appropriate person(s).

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating and reporting on energy management. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.16.12 Energy management fundamentals
- 2.16.13 Building management systems
- 2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different types of building services plant and machinery.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Evaluate and report on energy management as described in 7) and including:
    - A Determining the extent of the evaluation.
    - B Setting up and conducting appropriate examinations and tests.
    - C Reporting evaluation including recommendation for improving energy efficiency
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in evaluating and reporting on energy management.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4; 2.6	3
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEJ037A Evaluate and report on air quality in buildings**

### **Unit Descriptor**

1)

This unit covers evaluation of air quality in building. It encompasses working safely, setting up and conducting evaluation measurements, evaluating air quality from measured parameters and reporting results including recommending any resulting corrective actions.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ009A    Verify compliance and functionality of refrigeration and air conditioning installations

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of refrigeration or air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to evaluate and report on air quality in buildings..

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of evaluation is determined from specifications of building ventilation/air conditioning and internal and external environmental factors and discussion with appropriate personnel.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.

2 Evaluate air quality in buildings.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 In-depth knowledge of the air quality requirements and regulations in buildings is applied to the evaluation process.
- 2.4 Air quality evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
- 2.5 Air quality evaluation tests are carried out methodically and results and comments systematically noted.

	2.6	Unexpected situations are dealt with safely and with the approval of an authorised person.	
	2.7	Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.	
3	Report on air quality buildings.	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Results of air quality evaluation are documented including unacceptable conditions and recommendation for improvement.
		3.4	Energy evaluation report is forwarded to appropriate person(s).

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating and reporting on air quality in buildings. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.16.14 Management of indoor air quality

2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different types of buildings with or without air conditioning.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Evaluate and report on air quality in buildings as described in 7) and including:
    - A Determining the extent of the evaluation.
    - B Setting up and conducting appropriate examinations and tests.
    - C Reporting evaluation including recommendation for improving energy efficiency
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in evaluating and reporting on air quality in buildings.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4; 2.6	3
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	3.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEJ038A Analyse noise and vibration in refrigeration and air conditioning systems**

### **Unit Descriptor**

1)

This unit covers the analysis of refrigeration and air conditioning systems to provide solution to noise and vibration issues. It encompasses working safely, apply extensive knowledge of noise, vibration and thermodynamic parameters, gathering and analysing data, applying problem solving techniques, developing and documenting results and solutions for use in design work.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ065A Evaluate fluid and thermodynamic parameters of refrigeration systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to analyse noise and vibration in refrigeration and air conditioning systems	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	The extent of the noise and vibration issue is determined from performance specifications and situation reports and in consultations with relevant persons.
		1.4	Activities are planned to meet scheduled timelines in consultation with others involved in the work.
		1.5	Effective strategies are formed to ensure solution development and implementation is carried out efficiently.
2	Analyse noise and vibration in refrigeration and air conditioning systems.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Knowledge of noise, vibration and thermodynamics are applied to analytical solutions to refrigeration and air conditioning systems.
		2.3	Parameters, specifications and performance requirements in relation to refrigeration and air conditioning systems are obtained in accordance with established procedures.
		2.4	Approaches to analysing noise, vibration and thermodynamic parameters are carried out to provide the most effective solution.

- |   |   |  |
|---|---|--|
|   | 2.5   | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.  |
|   | 2.6   | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards  |
| 3 | Document and report on the results of the noise and vibration and analysis and actions taken. | 3.1 Solutions to noise and vibration issues are evaluated to determine their effectiveness and modified where necessary.   |
|   | 3.2   | Analysis is documented including details of all findings, calculations and assumptions.  |
|   | 3.3   | Analysis is reported to appropriately personnel to establish appropriate action to be taken based on findings.   |
|   | 3.4   | Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing noise and vibration in refrigeration and air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |           |   |
|-----------|---|
| 2.5.6     | Technical standards, regulations and codes for refrigeration and air conditioning |
| 2.17.18.2 | Thermodynamics  |
| 2.17.21.1 | Noise and vibration parameters and requirements                                   |
| 2.17.21.2 | Advanced noise and vibration control  |
| 2.17.25   | Static  |
| 2.18.1    | Occupational Health and Safety principles   |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to analysing noise and vibration in at least two different refrigeration and air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment

instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

Analyse noise and vibration in refrigeration and air conditioning systems as described in 7) and including:

- A Understanding the noise and vibration issues
- B Forming effective strategies for analysing refrigeration and air conditioning systems performance
- C Obtaining noise, vibration and thermodynamic parameters, specifications and performance requirements appropriate to each situation.
- D Evaluating the results of the analysis
- E Documenting analysis details of all findings, calculations and assumptions.

- F Documenting justification of actions to be implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in analysing noise and vibration in refrigeration and air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEEJ039A      Develop specifications and prepare drawings for HVAC/R projects**

### **Unit Descriptor**

**1)**

This unit covers specification development and documentation of HVAC/R projects. It encompasses safe working practices, following a design brief, applying knowledge heating, ventilation, air conditioning and/or refrigeration systems to selecting system components, operating within established project budget and developing project specifications and design drawings.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ028A      Produce HVAC/R design drawings

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to develop specifications and prepare drawings

- 1.1 OHS processes and procedures for a given work area are identified, identified, obtained and understood
- 1.2 The extent of the project is established from design brief and/or other relevant documentation and from discussions with appropriate person(s).
- 1.3 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved in the work
- 1.4 Software tools and equipment a needed for the work are obtained in accordance with established procedures

2 Develop specifications and prepare drawings

- 2.1 Sources of components and materials needed for the project are established and selected for their availability, suitability for purpose and cost in accordance with organisation policies and procedures.
- 2.2 Specifications are developed that include the necessary performance requirements for components and system.
- 2.3 Risk management strategies for the project are sought and obtained for incorporating in the specification.
- 2.4 Appropriate software tools are used to develop specifications and produce drawing based on standard protocols.
- 2.5 Project specifications and drawings are reviewed against all inputs and adjusted to rectify any anomalies.
- 2.6 Project specifications and drawings are documented in accordance with organisation policies and procedures.

	2.7	Solutions to unplanned situation are provided consistent with organisation's policy.	
	2.8	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards	
3	Obtain approval for specifications and drawings.	3.1	Project specifications and drawings are presented and discussed with person(s) of higher authority.
		3.2	Alterations to the project specifications and drawings resulting from the presentation / discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.
		3.3	Final project specifications and drawings are documented and approval obtained from appropriate person(s).

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing specifications and preparing drawings for HVAC/R projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.11.2 Specification development

2.16.15 Computer aided drafting

2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing specifications and preparing drawings for at least two different HVAC/R projects for at least two different HVAC/R projects.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

Develop specifications and prepare drawings for HVAC/R projects as described in 7) and including:

- A Determining the project requirements accurately
- B Establishing source and availability of components appropriately
- C Including the performance requirements of components and the system and risk management strategies in the specifications
- D Negotiating alterations to the project specifications and drawings successfully
- E Documenting project specifications and drawings in accordance with organisation policies and procedures

- F Obtaining approval for the completed project specifications and drawings
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in developing specifications and preparing drawings for HVAC/R projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.6; 3.1 to 3.3	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.2; 2.1	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 3.1; 3.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.6	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.1; 3.2	3

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.3	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEJ040A Manage refrigeration and air conditioning projects

### Unit Descriptor

1)

This unit covers the management of refrigeration and air conditioning projects involving design, modifications, installation, and/or maintenance of systems and equipment. It encompasses covers management of safety, budget, variation, personnel, resources, and critical path timelines all necessary progress and completion documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher..

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Refrigeration and Air Conditioning

### ELEMENT

### PERFORMANCE CRITERIA

5)	Elements describe the essential outcomes of a unit		Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1	Establish the scope of the project.	1.1	OHS processes and procedures for a given work area are identified, identified, obtained and understood
		1.2	Project' deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).
		1.3	Measurable outcomes are identifies to evaluate the project on completion from project planning and other relevant documentation.
		1.4	Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation.
		1.5	Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.
2	Manage project.	2.1	OHS policies, procedures and programs are implemented and monitored.
		2.2	Achievement of project outcomes is delegated to appropriately competent persons involved in the project.
		2.3	Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organization's policy.
		2.4	Procurement processes and procedures are monitored to ensure on time supply of plant and materials and in accordance with organisation's policy.
		2.5	Project is progress is monitored against schedule, quality requirements and budget.
		2.6	Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation's policy.

- |   |                   |   |   |
|---|-------------------|---|---|
|   | 2.7               | Variations are managed in accordance with agreed processes and in accordance with the contract.         |   |
|   | 2.8               | Project records are maintained and progress reports written and forwarded to all appropriate person(s). |   |
| 3 | Complete project. | 3.1   | Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.      |
|   |                   | 3.2   | Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation's policy. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing refrigeration and air conditioning projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |  |
|--|----------|--|
|  | 2.2.17   | Project management   |
|  | 2.2.19   | Customer/Client relations  |
|  | 2.2.31   | Refrigeration and air conditioning industry sector customs and practices |
|  | 2.18.8.2 | Occupational Health and Safety, enterprise responsibilities              |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized refrigeration or air conditioning project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

Manage refrigeration and air conditioning projects as described in 7) and including:

- A Establishing the scope of the project accurately,
- B Ascertaining the input a project
- C Developing effective management processes,
- D Managing resources and variations effectively
- E Resolving conflicts
- F Adopting risk management strategies
- G Maintaining records and submitting progress reports
- H Meeting project outcomes
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in managing refrigeration and air conditioning projects

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.2 to 1.4; 2.6 to 2.8	3

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 2.5; 2.7; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>
------------------------------	-------------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.3; 2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEJ041A Design complex commercial refrigeration system

### Unit Descriptor

1)

This unit covers the design of complex commercial refrigeration systems. It encompasses applying knowledge of complex commercial refrigeration systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system designs.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ032A Design commercial refrigeration systems

UEENEEJ038A Analyse noise, vibration and thermodynamic parameters of refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.3. Prerequisites.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to design complex commercial refrigeration system	<p>1.1 OHS processes and procedures for a given work area are identified, identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.</p>
2	Design complex commercial refrigeration system	<p>2.1 Knowledge of commercial refrigeration processes and methods are applied to the design.</p> <p>2.2 Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)</p> <p>2.3 Safety, functional and budget considerations are incorporated in the design.</p> <p>2.4 System design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.5 System design is documented for submission to appropriate person(s) for approval.</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation’s policy.</p>
3	Obtain approval for complex commercial refrigeration system design	<p>3.1 System design is presented and explained to client representative and/or other relevant person(s).</p> <p>3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation’s policy.</p>

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing a complex commercial refrigeration system. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.17.26 Commercial refrigeration system design

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing a commercial refrigeration system incorporating multiple major components (i.e. compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:

Design a complex commercial refrigeration system as described in 7) and including:

- A Developing outlines of alternative designs
- B Developing the design within the safety, regulatory, functional requirements and budget limitations
- C Documenting and presenting design effectively
- D Successfully negotiating design alteration requests
- E Obtaining approval for final design
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing a complex commercial refrigeration system.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ040A Prepare complex HVAC or refrigeration system proposals

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 2.6; 3.2	3

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3
-----------------------------------	--	---

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEJ042A **Design complex industrial refrigeration systems**

### **Unit Descriptor**

1)

This unit covers the design of complex industrial refrigeration systems. It encompasses applying knowledge of industrial refrigeration systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system designs.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ033A      Design industrial refrigeration systems

UEENEEJ038A      Analyse noise, vibration and thermodynamic parameters of refrigeration and air conditioning systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to design complex commercial refrigeration system

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).
- 1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.

2 Design complex commercial refrigeration system

- 2.1 Knowledge of industrial refrigeration system, processes and methods are applied to the design.
- 2.2 Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)
- 2.3 Safety, functional and budget considerations are incorporated in the design.
- 2.4 System design draft is checked for compliance with the design brief and regulatory requirements.
- 2.5 System design is documented for submission to appropriate person(s) for approval.
- 2.6 Solutions to unplanned situation are provided consistent with organisation’s policy.

- |   |  |     |  |
|---|--|-----|--|
| 3 | Obtain approval for complex commercial refrigeration system design | 3.1 | System design is presented and explained to client representative and/or other relevant person(s).                               |
|   |  | 3.2 | Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation’s policy.   |
|   |  | 3.3 | Final design is documented and approval obtained from appropriate person(s).   |
|   |  | 3.4 | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards. |

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

### **REQUIRED SKILLS AND KNOWLEDGE**

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing complex industrial refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.17.23.2 Industrial refrigeration system design

2.18.1 Occupational Health and Safety principles

### **RANGE STATEMENT**

- 7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing a complex industrial refrigeration system incorporating multiple major components (i.e. compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

- 8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

- in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Design complex industrial refrigeration systems as described in 7) and including:
      - A Developing outlines of alternative designs
      - B Developing the design within the safety, regulatory, functional requirements and budget limitations
      - C Documenting and presenting design effectively
      - D Successfully negotiating design alteration requests
      - E Obtaining approval for final design
      - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing

complex industrial refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEJ043A Design complex air conditioning systems

### Unit Descriptor

1)

This unit covers the design of complex air conditioning systems. It encompasses applying knowledge of complex air conditioning systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system designs.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ034A Design heating, ventilation and air conditioning (HVAC) systems

UEENEEJ038A Analyse noise, vibration and thermodynamic parameters of refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Refrigeration and Air Conditioning

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit		Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.	
1	Prepare to design complex commercial refrigeration system	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).
		1.4	Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2	Design complex commercial refrigeration system	2.1	Knowledge of complex air conditioning processes and methods are applied to the design.
		2.2	Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)
		2.3	Safety, functional and budget considerations are incorporated in the design.
		2.4	System design draft is checked for compliance with the design brief and regulatory requirements.
		2.5	System design is documented for submission to appropriate person(s) for approval.
		2.6	Solutions to unplanned situation are provided consistent with organisation's policy.
3	Obtain approval for complex commercial refrigeration system design	3.1	System design is presented and explained to client representative and/or other relevant person(s).
		3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing complex air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.17.2 HVAC load estimating
- 2.17.27 Air conditioning system design
- 2.17.28 Psychometrics - advanced
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing a complex air conditioning system incorporating multiple major components (i.e. air handling plant, compressors, condenser or evaporators) circuits or systems and associated components and controls.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile

- graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Design complex air conditioning systems as described in 7) and including:
      - A Developing outlines of alternative designs
      - B Developing the design within the safety, regulatory, functional requirements and budget limitations
      - C Documenting and presenting design effectively
      - D Successfully negotiating design alteration requests
      - E Obtaining approval for final design
      - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing complex air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 2.6; 3.2	3

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEJ044A Design mechanical ventilation/exhaust systems

### Unit Descriptor

1)

This unit covers the design of mechanical ventilation/exhaust systems. It encompasses applying knowledge mechanical ventilation/exhaust systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system designs.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ034A Design heating, ventilation and air conditioning (HVAC) systems

UEENEEJ038A Analyse noise, vibration and thermodynamic parameters of refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field** 4)

Refrigeration and Air Conditioning

**ELEMENT****PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to design complex commercial refrigeration system	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).
		1.4	Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2	Design complex commercial refrigeration system	2.1	Knowledge of mechanical ventilation/exhaust processes and methods are applied to the design.
		2.2	Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)
		2.3	Safety, functional and budget considerations are incorporated in the design.
		2.4	System design draft is checked for compliance with the design brief and regulatory requirements.
		2.5	System design is documented for submission to appropriate person(s) for approval.
		2.6	Solutions to unplanned situation are provided consistent with organisation's policy.
3	Obtain approval for complex commercial refrigeration system design	3.1	System design is presented and explained to client representative and/or other relevant person(s).
		3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing mechanical ventilation/exhaust systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.17.29 Exhaust systems design

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different mechanical ventilation and exhaust systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in

a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design mechanical ventilation/exhaust systems as described in 7) and including:
    - A Developing outlines of alternative designs
    - B Developing the design within the safety, regulatory, functional requirements and budget limitations
    - C Documenting and presenting design effectively
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing mechanical ventilation/exhaust systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and

demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	3

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.6

## UEENEEJ045A Design hydronic systems

### Unit Descriptor

1)

This unit covers the design of hydronic systems. It encompasses applying knowledge of hydronic systems, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system designs..

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ038A	Analyse noise, vibration and thermodynamic parameters of refrigeration and air conditioning systems
-------------	---

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

## Refrigeration and Air Conditioning

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<b>5)</b> Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to design complex commercial refrigeration system	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.</p>

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEJ046A Design complex control systems for heating, ventilation, air conditioning or refrigeration systems**

### **Unit Descriptor**

1)

This unit covers the design of complex control systems for heating, ventilation, air conditioning or refrigeration system. It encompasses applying knowledge of complex control systems for a heating, ventilation, air conditioning or refrigeration system, safety and regulatory requirements, developing alternative design schemes based on a design brief and customer requirements and documenting system designs.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ035A	Design control systems for a heating, ventilation, air conditioning or refrigeration system
-------------	---

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Refrigeration and Air Conditioning

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit		Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.	
1	Prepare to design complex commercial refrigeration system	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	The extent of the proposed refrigeration system is determined from the design brief or in consultations with appropriate person(s).
		1.4	Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.
2	Design complex commercial refrigeration system	2.1	Knowledge of complex control processes and methods are applied to the design.
		2.2	Alternative concepts for the design are evaluated based on the requirements outlined in the design brief. (See Note)
		2.3	Safety, functional and budget considerations are incorporated in the design.
		2.4	System design draft is checked for compliance with the design brief and regulatory requirements.
		2.5	System design is documented for submission to appropriate person(s) for approval.
		2.6	Solutions to unplanned situation are provided consistent with organisation's policy.
3	Obtain approval for complex commercial refrigeration system design	3.1	System design is presented and explained to client representative and/or other relevant person(s).
		3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

Note.

Design concepts should be evaluated by real or virtual prototyping where it cannot be shown easily by other means that particular aspects of the design met specified requirements.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing complex control systems for heating, ventilation, air conditioning or refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.17 Refrigeration/HVAC direct digital controls
- 2.15.18 Refrigeration/HVAC pneumatic controls
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different complex control systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design complex control systems for heating, ventilation, air conditioning or refrigeration systems as described in 7) and including:
    - A Developing outlines of alternative designs
    - B Developing the design within the safety, regulatory, functional requirements and budget limitations
    - C Documenting and presenting design effectively
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in designing complex control systems for heating, ventilation, air conditioning or refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ035A Design control systems for a heating, ventilation, air conditioning or refrigeration system

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	2.1 to 2.4; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEJ047A Audit energy use for commercial HVAC/R systems

### Unit Descriptor

1)

This unit covers assessing the energy used by commercial HVAC/R systems in relation to its performance for the purpose of improving efficiency and/or certification as meeting energy efficiency standards. It encompasses safe working practices, determining efficiency requirements, setting up performance and energy tests, evaluating results and documenting test outcomes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ036A Evaluate and report on energy management

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to audit energy use for a commercial HVAC/R application

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 System assessment and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
- 1.4 Relevant documentation is obtained and read to determine the performance/certification requirements against which the system is to be assessed.

Note:  
Examples of documentation are those specifying safety requirements, technical standard and as marketed technical energy performance

- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.

2 Audit energy use for a commercial HVAC/R application

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Circuits/apparatus/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.3 In depth knowledge of the performance and energy efficiency requirements of HVAC/R system and assessment methods are applied to the audit process.

- |   |  |   |
|---|--|---|
|   | 2.4                                      | Apparatus assessment and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.                        |
|   | 2.5                                      | System assessment and tests are carried out methodically and results and comments systematically noted.   |
|   | 2.6                                      | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   | 2.7                                      | Auditing is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.                              |
| 3 | Document auditing activities and results | 3.1 OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2 Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 Assessment and test results are evaluated and non-compliance issues identified.   |
|   |  | 3.4 Assessment, test results and recommendations on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and auditing energy use for commercial HVAC/R systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.16.12.2 Energy management

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to auditing energy use by at least two different commercial HVAC/R systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Audit energy use for commercial HVAC/R systems as described in 7) and including:
    - A Interpreting performance/certification requirements correctly.
    - B Setting up and conducting appropriate system assessments and tests.
    - C Identifying non-compliance issues.
    - D Reporting assessment and test results and non-compliance issues and recommendations appropriately.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in auditing energy use for commercial HVAC/R systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4; 3.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.4; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.5 to 2.8

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEJ048A Audit HVAC/R control systems for compliance with standards and regulations

### Unit Descriptor

1)

This unit covers control safety and performance evaluation of heating, ventilating, air conditioning and refrigeration control systems across their operating range. It encompasses working safely, setting up and conducting evaluation measurements, evaluating performance from measured parameters and documenting results and recommending any resulting corrective actions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ035A	Design control systems for a heating, ventilation, air conditioning or refrigeration system
-------------	---

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to audit energy use for a commercial HVAC/R application

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Examination and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
- 1.4 Relevant documentation is obtained and read to determine the performance/certification requirements against which the system is to be assessed.

Note:

Examples of documentation are those specifying safety requirements, technical standard and as marketed technical performance, product quality endorsement standards .

- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.

2 Audit HVAC/R control systems for compliance with standards and regulations.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- |   |   |  |
|---|---|--|
|   | 2.3   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   | 2.4   | In depth knowledge of the performance and energy efficiency requirements of HVAC/R system and assessment methods are applied to the audit process.                 |
|   | 2.5   | Control system examination and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.           |
|   | 2.6   | Control system examination and tests are carried out methodically and results and comments systematically noted.   |
|   | 2.7   | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.8   | Assessment is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.                     |
| 3 | Complete auditing work and document results | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 Examination and test results are evaluated and non-compliance issues identified.   |
|   |   | 3.4 Examination, test results and comments on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and auditing HVAC/R control systems for compliance with standards and regulations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.15.22 HVAC control systems

2.16.5 Refrigeration and air conditioning installations, testing and verification methods

2.16.13 Building management systems

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different types of HVAC/R control systems encompassing at least four different control scenarios.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational

requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Audit HVAC/R control systems for compliance with standards and regulations as described in 7) and including:
    - A Interpreting compliance documents
    - B Setting up and conducting appropriate examinations and tests
    - C Identifying non-compliance defects
    - D Reporting examination and test results and non-compliance issues clearly and accurately

**Context of and specific 8.3)**

**resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in auditing HVAC/R control systems for compliance with standards and regulations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	3

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEJ049A      **Develop specifications for heat exchanger designs**

### **Unit Descriptor**

**1)**

This unit covers the analysis of refrigeration parameters and develop specification for heat exchanger design. It encompasses working safely, apply extensive knowledge of refrigeration parameters, gathering and analysing data, developing and documenting results and solutions for use in design work.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ038A	Analyse noise, vibration and thermodynamic parameters of refrigeration and air conditioning systems
-------------	---

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to develop specifications for exchanger designs

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of analysis to develop specifications is determined from design brief and situation reports and in consultations with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure analysis is carried out efficiently.

2 Develop specifications for exchanger designs.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of refrigeration parameters are applied to developing heat exchanger specifications.
- 2.3 Parameters and performance requirements in relation to refrigeration systems are obtained in accordance with established procedures.
- 2.4 Approaches to analysing refrigeration parameters are carried out to provide the most effective solution.
- 2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
- 2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

3 Document specifications for exchanger design

- 3.1 Analysis is documented including details of all findings, calculations and assumptions.

- 3.2 Specification for heat exchanger are developed from analysis findings and in accordance with established procedures
- 3.3 Developed specification and analysis is reported to appropriately person(s) for endorsement.
- 3.4 Justification for findings and any actions to be undertaken in relation to the design is documented for inclusion in work/project or development records in accordance with professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing specifications for heat exchanger designs. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.17.18.2 Thermodynamics

2.17.18.3 Heater exchanger designs

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing specifications for at least two different heat exchangers.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile

- graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop specifications for heat exchanger designs as described in 7) and including:
    - A Interpreting compliance documents
    - B Setting up and conducting appropriate examinations and tests
    - C Identifying non-compliance defects
    - D Reporting examination and test results and non-compliance issues clearly and accurately

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in developing specifications for heat exchanger designs.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEJ050A Evaluate alternative and new technologies applicable to electrotechnology applications**

### **Unit Descriptor**

**1)**

This unit covers evaluation of alternative and new technologies applicable to electrotechnology applications. It encompasses working safely, comparing manufacturer's technical data for alternative or new technologies with specifications for a proposed project, conducting evaluation tests, evaluating systems/components from technical data, calculations and/or measured parameters and reporting findings for use in design work.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed in conjunction with other Units covering specific technologies in an Electrotechnology Advanced Diploma qualification.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of refrigeration or air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to evaluate and report on alternative and new technologies

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of evaluation is determined from proposed project specifications and discussion with appropriate personnel.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, testing devices, and manufacture’s technical data needed to carry out the work are obtained and checked for correct operation and safety.

2 Evaluate alternative and new technologies.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 In-depth knowledge of the electrotechnology discipline applicable to the alternative or new technology being considered is applied to the evaluation process.
- 2.3 Manufacture’s technical data for alternative or new technologies is compared with proposed project specifications, budget and regulations.
- 2.4 Evaluation tests, where used, are set up in strict accordance with OHS requirements and established test methods for each particular component under scrutiny.
- 2.5 Evaluation is carried out methodically and results and comments systematically noted.

		2.6	Unexpected situations are dealt with safely and with the approval of an authorised person.
		2.7	Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
3	Report on use of alternative and new technologies	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Where applicable, the work site is cleaned and made safe in accordance with established procedures.
		3.3	Results of the evaluation are documented for use in design work including recommendations and justifications for adoption or rejection of the alternative and new technologies evaluated.
		3.4	Report is forwarded to appropriate person(s) for endorsement.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating alternative and new technologies applicable to electrotechnology applications. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.17.32	Sources of technical development and processes for their adoption
2.18.1	Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to evaluating alternative and new technologies for two different proposed projects in any of the following electrotechnology disciplines.

- Automated systems
- Computer systems
- Electrical
- Electronics
- Industrial electronics and control
- Refrigeration and air conditioning
- Renewable energy

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence

decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Evaluating alternative and new technologies applicable to electrotechnology applications as described in 7) and including:
    - A Determining the extent of the evaluation.
    - B Comparing manufacture’s technical data for alternative or new technologies with proposed project specifications, budget and regulations accurately.
    - C Reporting evaluation including recommendations and justifications for adoption or rejection of the

alternative and new technologies evaluated.

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in evaluating alternative and new technologies applicable to electrotechnology applications.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEJ051A **Service small appliances and power tools**

### **Unit Descriptor**

**1)**

This unit covers maintaining the effective and efficient operation of small appliances and power tools. It encompasses working safely, applying knowledge of small appliances and power tools, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
-------------	--

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit may apply to persons entering work in electrotechnology and may be used in school based vocational programs.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting

equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to service small appliances and power tools

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are accessed in accordance with established routines and procedures.
- 1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Service small appliances and power tools

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Apparatus is dismantled in accordance with manufacturer’s guide and supervisor’s instructions.

		2.5	Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.
		2.6	Repairs are affected efficiently without damage to other components, apparatus or circuits.
		2.7	Apparatus is assembled in an appropriate sequence with all parts placed, secured and connected in accordance with manufacturer’s guide or industry practice.
		2.8	Procedures for referring non-routine events to immediate supervisor for directions are followed.
		2.9	Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3	Complete and report service work activities.	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Repaired apparatus is prepared and forwarded to appropriate person(s) for testing.
		3.3	Work area is cleaned and made safe in accordance with established procedures.
		3.4	Work supervisor is notified of the completion of the repair work in accordance with established procedures.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing small appliances and power tools. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.25	Hand power tool repairs
2.15.7	Small appliance repair
2.18.1	Occupational Health and Safety principles
2.18.13	Appliance servicing safe working practice

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing at least two different small appliances and two different power tools. These include the following:

- Small appliances: Toasters, garbage disposal units, food mixer/processors, small heating appliances (e.g. hair dryers), range hoods, etc.
- Hand Power Tools: Drills (pistol, hammer, cordless, screw driver), circular saws, mitre saws, routers, sanders, grinders, planers, cut off machines, heat guns, etc.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational

requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Service small appliances and power tools as described in 7) and including:
    - A Following manufactures service instructions for access to components
    - B Removing at least three different types of components specified in the work instructions
    - C Replacing components to manufacturers' requirements.
    - D Terminating internal wiring correctly.

- E Reassembling the apparatus correctly
- F Testing apparatus operation
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing small appliances and power tools.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills

enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## UEENEEJ052A Carry out repairs to appliance refrigeration systems

### Unit Descriptor

1)

This unit covers the repairing appliance refrigeration systems refrigerated appliances. It encompasses working safely, following service manuals, locating and replacing faulty refrigeration components, evacuating and recharging refrigerant and completing service reports.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE005A	Fix and secure equipment
UEENEEE007A	Use drawings, diagrams, schedules and manuals
UEENEEJ003A	Determine the basic operating conditions of vapour compression systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It is suitable for augmenting previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V

d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing refrigeration or air conditioning appliance in particular when working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to carry out repairs to appliance refrigeration systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials/parts that may be required for the work are established in accordance with established routines and procedures.
- 1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Carry out repairs to appliance

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.

refrigeration systems	2.2	Routine operational tests of the refrigeration system are conducted to identify fault and locate component.	
	2.3	Appliance is checked as being isolated where necessary in strict accordance OHS requirements and procedures	
	2.4	Refrigeration system is evacuated and refrigerant recovered in accordance with regulatory requirements and industry codes.	
	2.5	System is dismantled as necessary to replace faulty component in accordance with manufacturer’s service manual and industry standards and codes	
	2.6	Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.	
	2.7	Replacement component/parts are obtained in accordance with established routine procedures.	
	2.8	Apparatus is assembled in an appropriate sequence with replacement component/parts in accordance with manufacturer’s service manual and industry standards and codes.	
	2.9	Refrigeration system is recharged and any leaks rectified in accordance with regulatory requirements and industry codes.	
	2.10	Procedures for referring non-routine events to immediate supervisor for directions are followed.	
	2.11	Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.	
3	Complete repairs and report	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work area is cleaned and made safe in accordance with established procedures.
		3.3	Service report is completed and verified by an appropriate person in accordance with established routine procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out repairs to appliance refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.8 Appliance refrigeration systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices
- 2.18.13 Appliance servicing safe working practice

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to carrying out repairs to appliance refrigeration systems of at least two different refrigerated appliances.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be

required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out repairs to appliance refrigeration systems as described in 7) and including:
    - A Determining the nature of the repair

- B Identifying and locating faulty components through routine operational tests
- C Evacuating system and recovering refrigerant in accordance with regulations
- D Dismantling and assembling system/components effectively
- E Recharging refrigeration system in accordance with regulations
- F Testing appliance functions effectively
- G Completing service report accurately
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in carrying out repairs to appliance refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.4; 2.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 2.2 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEJ053A Find and rectify faults in appliance motors and associated controls

### Unit Descriptor

1)

This unit covers finding and repairing faults in appliance motors and associated controls. It encompasses working safely, applying knowledge of appliance motor systems and their controls, reading circuit diagrams, sketching diagrams from traced circuits, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE003A	Solve problems in extra-low voltage single path circuits
UEENEEE005A	Fix and secure equipment
UEENEEE007A	Use drawings, diagrams, schedules and manuals
UEENEEJ008A	Recover, pressure and leak test, evacuate and charge refrigerants

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing refrigeration or air conditioning appliance in particular when working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and rectify faults

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |   |      |   |
|---|---|------|---|
| 2 | Find and repair faults                                    | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |   | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures                   |
|   |   | 2.3  | Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures   |
|   |   | 2.4  | Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.             |
|   |   | 2.5  | Fault finding is approached methodically drawing on knowledge of appliance motor systems and their controls using measured and calculated values of circuit/motor parameters. |
|   |   | 2.6  | Appliance is dismantled where necessary and parts stored to protect them against loss or damage   |
|   |   | 2.7  | Suspected faulty motor, component or circuit circuits is rechecked and its fault status confirmed.  |
|   |   | 2.8  | Replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.  |
|   |   | 2.9  | Effectiveness of the repair is tested in accordance with established procedures.  |
|   |   | 2.10 | Apparatus is reassembled, finally tested and prepared for return to service.  |
|   |   | 2.11 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |   | 2.12 | Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.    |
| 3 | Completion and report fault finding and repair activities | 3.1  | OHS work completion risk control measures and procedures are followed.  |
|   |   | 3.2  | Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares inventory.   |

- 3.3 Maintenance work activities are documented in accordance with established procedures. (See Note)

Note.

Examples of documentation are component faults reports, test results, authorisations, permits, parts/component dispatch and stores records.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in appliance motors and associated controls. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.1 Protection devices and applications
- 2.6.26 Appliance motors and circuits
- 2.11.5 Basic electrical testing and measuring devices and techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

- 7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and repairing the following faults, in single and/or three phase appliance motors and associated controls in each of three different types of appliances/systems:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Motor component failure
- Control circuit component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and rectify faults in appliance motors and associated controls as described in 7) and including:
    - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s)
    - B Using methodical fault finding techniques
    - C Finding faults efficiently
    - D Rectifying faults effectively
    - E Completing documentation correctly
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in finding and rectifying faults in appliance motors and associated controls

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.4 to 2.8

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## **UEENEEJ054A Find and rectify faults in appliance control devices and systems**

### **Unit Descriptor**

**1)**

This unit covers finding and repairing faults in appliance control systems and devices. It encompasses working safely, applying knowledge of appliance control systems and devices, reading circuit diagrams, sketching diagrams from traced circuits, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ053A	Find and rectify faults in appliance motors and associated controls
-------------	---

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing refrigeration or air conditioning appliance in particular when working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and rectify faults

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures

- 2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.
  - 2.5 Fault finding is approached methodically drawing on knowledge of appliance control systems and devices using measured and calculated values of circuit/control parameters.
  - 2.6 Appliance is dismantled where necessary and parts stored to protect them against loss or damage
  - 2.7 Suspected faulty control device, component or circuit is rechecked and its fault status confirmed.
  - 2.8 Replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
  - 2.9 Effectiveness of the repair is tested in accordance with established procedures.
  - 2.10 Apparatus is reassembled, finally tested and prepared for return to service.
  - 2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares inventory.
  - 3.3 Maintenance work activities are documented in accordance with established procedures. (See Note)

Note.

Examples of documentation are component faults reports, test results, authorisations, permits, parts/component dispatch and stores records.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in appliance control devices and systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.3.15	Appliances, controls and communications basics
2.11.9.4	Appliance diagnostic tools
2.18.1	Occupational Health and Safety principles
2.18.3.1	Refrigeration and air conditioning safe working practices
2.18.13	Appliance servicing safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and repairing any four of the following faults in appliance control systems and devices in each of two different types of appliance.

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Motor component failure
- Control circuit component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and rectify faults in appliance control devices and systems as described in 7) and including:
    - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s)
    - B Using methodical fault finding techniques
    - C Finding faults efficiently
    - D Rectifying faults effectively
    - E Completing documentation correctly
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in finding and rectifying faults in appliance control devices and systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEJ055A      **Service refrigerated appliances**

### **Unit Descriptor**

**1)**

This unit covers maintaining the effective and efficient operation of refrigerated appliances. It encompasses working safely, applying knowledge of refrigerated appliance, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ054A	Find and rectify faults in appliance control systems
-------------	--

UEENEEJ062A	Recover, pressure and leak test, evacuate and charge refrigerants/appliances
-------------	--

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing refrigeration or air conditioning appliance in particular when

working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to service refrigerated appliances

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Service refrigerated appliances

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- |   |   |  |
|---|---|--|
|   | 2.3   | Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures  |
|   | 2.4   | Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.   |
|   | 2.5   | Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer’s service manuals and industry codes of practice. |
|   | 2.6   | Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.   |
|   | 2.7   | Appliance is dismantled where necessary and parts stored to protect them against loss or damage  |
|   | 2.8   | Defective, worn or faulty appliance components are rechecked and their status confirmed.   |
|   | 2.9   | Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.   |
|   | 2.10  | Effectiveness of the repair is tested in accordance with established procedures.   |
|   | 2.11  | Apparatus is reassembled, finally tested and prepared for return to service.   |
|   | 2.12  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.13  | Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.  |
| 3 | Completion and report fault finding and repair activities | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 Work area is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 Service report is completed and verified by an appropriate person in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in appliance control devices and systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.8 Domestic appliance principles
- 2.15.9.1 Appliance refrigeration systems
- 2.15.9.2 Capillary systems
- 2.15.9.3 Retrofitting domestic refrigeration systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices
- 2.18.13 Appliance servicing safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing refrigerated appliances with any four of the following defects/faults in appliance refrigeration system in each of two different types of appliance.

- Higher energy use than previously experienced
- Not cold enough
- Appliance ices-up
- Appliance light not working
- Electric shock received from appliance cabinet

The types of refrigeration appliances include: single door refrigerators, two door refrigerators/freezers and single door freezers in either cyclic defrost or frost free.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### **Overview of Assessment**

#### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### **Critical aspects of evidence required to**

#### **8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and rectify faults in appliance control devices and systems as described in 7) and including:
    - A Determining the nature of the work from service request
    - B Identifying defective components affecting appliance efficiency
    - C Finding faults efficiently
    - D Rectifying defects/faults effectively
    - E Testing appliance functions effectively
    - F Completing service report accurately
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and  
specific  
resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in finding and rectifying faults in appliance control devices and systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEJ056A Service clothes washers and dryers

### Unit Descriptor

1)

This unit covers maintaining the effective and efficient operation of clothes washers and dryers. It encompasses working safely, applying knowledge of clothes washers and dryers, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ054A	Find and rectify faults in appliance control systems
-------------	--

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing clothes washes and dryers. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

#### **Competency Field 4)**

#### Refrigeration and Air Conditioning

#### **ELEMENT**

#### **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to service clothes washers and dryers.

1.1 OHS procedures for a given work area are identified, obtained and understood

1.2 OHS risk control measures and procedures in preparation for the work are followed.

1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).

1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Service clothes washes and dryers.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

2.3 Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.
  - 2.5 Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer’s service manuals and industry codes of practice.
  - 2.6 Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.
  - 2.7 Appliance is dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.8 Defective, worn or faulty appliance components are rechecked and their status confirmed.
  - 2.9 Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.
  - 2.10 Effectiveness of the repair is tested in accordance with established procedures.
  - 2.11 Apparatus is reassembled, finally tested and prepared for return to service.
  - 2.12 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.13 Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities.
    - 3.1 OHS work completion risk control measures and procedures are followed.
    - 3.2 Work area is cleaned and made safe in accordance with established procedures.
    - 3.3 Service report is completed and verified by an appropriate person in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing clothes washers and dryers. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.8 Domestic appliance principles
- 2.15.10 Clothes washers and dryers
- 2.18.1 Occupational Health and Safety principles
- 2.18.13 Appliance servicing safe working practice

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing clothes washers and dryers with any four of the following defects/faults in appliance clothes washers and dryer systems in each of two different types of appliance.

- Washers
  - Higher energy use than previously experienced
  - Not cold enough
  - Appliance ices-up
  - Appliance light not working
  - Electric shock received from appliance cabinet
- Dryers
  - Heater not operating
  - Fan not working
  - Timer not working correctly
  - Electric shock received from appliance cabinet

The types of appliances include:

- Washing machines: Automatic washers (top load and front load), twin tub washers, washer/dryer combinations
  - Clothes Dryers: Tumble and static

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

---

## **Critical aspects of evidence required to**

### **8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Service clothes washers and dryers as described in 7) and including:
    - A Determining the nature of the work from service request
    - B Identifying defective components affecting appliance efficiency
    - C Finding faults efficiently
    - D Rectifying defects/faults effectively
    - E Testing appliance functions effectively
    - F Completing service report accurately
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and  
specific  
resources for**
**8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing clothes washers and dryers.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.4; 2.12; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEJ057A Service electric heating appliances

### Unit Descriptor

1)

This unit covers maintaining the effective and efficient operation of electric heating appliances. It encompasses working safely, applying knowledge of electric heating appliances, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ054A	Find and rectify faults in appliance control systems
-------------	--

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing electric heating appliances. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to service electric heating appliances.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Service electric heating appliances.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures.

- |  |  |  |     |  |  |     |   |  |     |  |
|--|--|--|-----|--|--|-----|---|--|-----|--|
| 2.4  | Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.   |  |     |  |  |     |   |  |     |  |
| 2.5  | Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer’s service manuals and industry codes of practice.   |  |     |  |  |     |   |  |     |  |
| 2.6  | Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.   |  |     |  |  |     |   |  |     |  |
| 2.7  | Appliance is dismantled where necessary and parts stored to protect them against loss or damage.   |  |     |  |  |     |   |  |     |  |
| 2.8  | Defective, worn or faulty appliance components are rechecked and their status confirmed.   |  |     |  |  |     |   |  |     |  |
| 2.9  | Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.   |  |     |  |  |     |   |  |     |  |
| 2.10   | Effectiveness of the repair is tested in accordance with established procedures.   |  |     |  |  |     |   |  |     |  |
| 2.11   | Apparatus is reassembled, finally tested and prepared for return to service.   |  |     |  |  |     |   |  |     |  |
| 2.12   | Unexpected situations are dealt with safely and with the approval of an authorised person.   |  |     |  |  |     |   |  |     |  |
| 2.13   | Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.  |  |     |  |  |     |   |  |     |  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing electric heating appliances. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.27.1 Electric heating appliances
- 2.18.1 Occupational Health and Safety principles
- 2.18.13 Appliance servicing safe working practice

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing electric heating appliances with any three of the following defects/faults in electric heating systems in each of two different types of appliance.

- Heater not operating
- Fan not working
- Timer not working correctly
- Electric shock received from appliance cabinet

The types of appliances include: Electric stoves, ovens, hot plates and ranges, space heaters, and hot water systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Service electric heating appliances as described in 7) and including:
    - A Determining the nature of the work from service request
    - B Identifying defective components affecting appliance efficiency
    - C Finding faults efficiently
    - D Rectifying defects/faults effectively
    - E Testing appliance functions effectively
    - F Completing service report accurately
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing

electric heating appliances.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.4; 2.12; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEJ058A Service dish washing machines

### Unit Descriptor

1)

This unit covers maintaining the effective and efficient operation of dish washing machines. It encompasses working safely, applying knowledge of dish washing machines, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ054A	Find and rectify faults in appliance control systems
-------------	--

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing dish washing machines. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to service dish washing machines.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Service dishwashing machines.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.
  - 2.5 Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer’s service manuals and industry codes of practice.
  - 2.6 Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.
  - 2.7 Appliance is dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.8 Defective, worn or faulty appliance components are rechecked and their status confirmed.
  - 2.9 Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.
  - 2.10 Effectiveness of the repair is tested in accordance with established procedures.
  - 2.11 Apparatus is reassembled, finally tested and prepared for return to service.
  - 2.12 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.13 Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Service report is completed and verified by an appropriate person in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing dish washing machines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.11 Dishwashing machines
- 2.18.1 Occupational Health and Safety principles
- 2.18.13 Appliance servicing safe working practice

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing dish washing machines with any four of the following defects/faults in the dish washing machine system in each of two different types of appliance.

- Not enough or too much water entering machine
- No wash cycle
- No rinse cycle
- Heater not operating
- Timer not working correctly
- Electric shock received from appliance cabinet

The types of dish washing machines include: Automatic washers, side load, front load, and semi-automatic.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

---

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Service dish washing machines as described in 7) and including:
    - A Determining the nature of the work from service request
    - B Identifying defective components affecting appliance efficiency
    - C Finding faults efficiently
    - D Rectifying defects/faults effectively
    - E Testing appliance functions effectively
    - F Completing service report accurately
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and  
specific  
resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing dish washing machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.4; 2.12; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

	the context of the work task	1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEJ059A Service gas appliances

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers maintaining the effective and efficient operation of gas appliances. It encompasses working safely, applying knowledge of the gas appliance, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed</p> <p>UEENEEJ054A      Find and rectify faults in appliance control systems</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing gas appliances. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p> <p>Note:</p> <p>1. Compliance with permits may be required in various jurisdictions and</p>						

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit		Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.	
1	Prepare to service gas appliances.	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	OHS risk control measures and procedures in preparation for the work are followed.
		1.3	The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
		1.4	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
		1.5	Sources of materials/parts that may be required for the work are established in accordance with established procedures.
		1.6	Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.
2	Service gas appliances.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures.

- |   |  |  |  |
|---|--|--|--|
|   | 2.4  | Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.   |  |
|   | 2.5  | Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer’s service manuals and industry codes of practice. |  |
|   | 2.6  | Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.   |  |
|   | 2.7  | Appliance is dismantled where necessary and parts stored to protect them against loss or damage.   |  |
|   | 2.8  | Defective, worn or faulty appliance components are rechecked and their status confirmed.   |  |
|   | 2.9  | Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.   |  |
|   | 2.10   | Effectiveness of the repair is tested in accordance with established procedures.   |  |
|   | 2.11   | Apparatus is reassembled, finally tested and prepared for return to service.   |  |
|   | 2.12   | Unexpected situations are dealt with safely and with the approval of an authorised person.   |  |
|   | 2.13   | Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.  |  |
| 3 | Completion and report fault finding and repair activities. | 3.1  | OHS work completion risk control measures and procedures are followed.                                       |
|   |  | 3.2  | Work area is cleaned and made safe in accordance with established procedures.                                |
|   |  | 3.3  | Service report is completed and verified by an appropriate person in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing dish washing machines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.12 Gas appliances
- 2.18.1 Occupational Health and Safety principles
- 2.18.13 Appliance servicing safe working practice

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing gas appliances with any four of the following defects/faults in appliance gas system in each of two different types of appliance.

- No pilot flame
- No main jet ignition
- Not hot enough
- Timer not working correctly
- Electric shock received from appliance cabinet
- Gas leaking

The types of gas appliances include: Stoves, ovens, hot plates and ranges, space heaters, and hot water systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Service dish washing machines as described in 7) and including:
    - A Determining the nature of the work from service request
    - B Identifying defective components affecting appliance efficiency
    - C Finding faults efficiently
    - D Rectifying defects/faults effectively
    - E Testing appliance functions effectively
    - F Completing service report accurately
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing dish washing machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.4; 2.12; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEJ060A Service room air conditioners

### Unit Descriptor

1)

This unit covers maintaining the effective and efficient operation of room air conditioners. It encompasses working safely, applying knowledge of room air conditioners, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ054A	Find and rectify faults in appliance control systems
-------------	--

UEENEEJ062A	Recover, pressure and leak test, evacuate and charge refrigerants/appliances
-------------	--

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing air conditions. Practice in workplace and during training is also subject to regulations directly related to occupational

health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field**

**4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to service room air conditioners.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials/parts that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Service room air conditioners.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- |   |  |  |
|---|--|--|
|   | 2.3  | Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures.   |
|   | 2.4  | Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel.   |
|   | 2.5  | Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer’s service manuals and industry codes of practice. |
|   | 2.6  | Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters.   |
|   | 2.7  | Appliance is dismantled where necessary and parts stored to protect them against loss or damage.   |
|   | 2.8  | Defective, worn or faulty appliance components are rechecked and their status confirmed.   |
|   | 2.9  | Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures.   |
|   | 2.10   | Effectiveness of the repair is tested in accordance with established procedures.   |
|   | 2.11   | Apparatus is reassembled, finally tested and prepared for return to service.   |
|   | 2.12   | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.13   | Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.  |
| 3 | Completion and report fault finding and repair activities. | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2 Work area is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3 Service report is completed and verified by an appropriate person in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing room air conditioners. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.15.13 Room air conditioners
- 2.17.4 Air conditioning fundamentals
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.2 Split air conditioning systems safe working practices
- 2.18.13 Appliance servicing safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing room air conditioners with any four of the following defects/faults in appliance refrigeration system in each of two different types of appliance.

- Higher energy use than previously experienced
- Not cooling/heating enough.
- Fan not operating
- Appliance noisy
- Electric shock received from appliance cabinet

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Service room air conditioners as described in 7) and including:
    - A Determining the nature of the work from service request
    - B Identifying defective components affecting appliance efficiency
    - C Finding faults efficiently
    - D Rectifying defects/faults effectively
    - E Testing appliance functions effectively
    - F Completing service report accurately
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing room air conditioners.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.4; 2.12; 3.3	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## **UEENEEJ061A      Verify compliance and functionality of appliances**

### **Unit Descriptor**

**1)**

This unit covers testing and visually inspecting appliances to verifying that they are safe and comply with requirements. It encompasses procedures for conducting safety and functionality tests, conducting visual inspections, identifying non-compliance defects, documenting results and recommendations and initiating the rectification of any defect.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after all other core units and nominated elective units have been achieved.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

**4)**

Refrigeration and Air Conditioning

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to verify compliance and functionality of appliances	<p>1.1 OHS procedures for a given work area are identified, identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.5 Inspection and tests are appropriately sequenced in accordance with job schedule.</p> <p>1.6 Materials needed for the tests and verification are obtained in accordance with established procedures and checked against job requirements</p> <p>1.7 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety</p>
2 Visually inspect appliances	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Appliances are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 Accessories and components are validated as being appropriately rated and meeting functional requirements.</p> <p>2.4 Evidence that equipment complies with safety and functional requirements is cited.</p> <p>2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.</p> <p>2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.</p>

- |   |   |     |   |
|---|---|-----|---|
|   |   | 2.7 | Inspection is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Conduct tests                               | 3.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |   | 3.2 | Testing or measuring on a live and operating system in strict accordance with OHS requirements and within established safety procedures                                     |
|   |   | 3.3 | Appliances are checked as being isolated in strict accordance OHS requirements and procedures   |
|   |   | 3.4 | Electrical tests are conducted to verify that the electrical circuit within the appliance is safe and function as intended.   |
|   |   | 3.5 | Refrigeration tests are conducted to verify that the refrigeration components and pipe work within the appliance is safe and functions as intended.                         |
|   |   | 3.6 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   |   | 3.7 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |   | 3.8 | Testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.    |
| 4 | Report inspection and verification findings | 4.1 | OHS work completion risk control measures and procedures are followed.  |
|   |   | 4.2 | Appliance is cleaned and made safe in accordance with established procedures.   |
|   |   | 4.3 | Non-compliance defects are identified and reported in accordance with established procedures.   |
|   |   | 4.4 | Recommendations for rectifying defects are made in accordance with established procedures.  |
|   |   | 4.5 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of appliances. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.15.14	Appliance, testing and compliance verification methods
2.18.1	Occupational Health and Safety principles
2.18.3.1	Refrigeration and air conditioning safe working practices
2.18.13	Appliance servicing safe working practice

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing room air conditioners with any four of the following defects/faults in appliance refrigeration system in each of two different types of appliance.

- Visual inspection of appliances
- Conducting all electrical tests

Note:

1. Electrical testing include isolation testing; insulation resistance of equipment; resistance of the internal circuits of equipment; polarity of supply and equipment; continuity of earthing; correct electrical connections load current.
2. Electrical testing may be limited by the scope permitted under restricted electrical work

- Conducting all refrigeration tests

Note:

Refrigeration testing includes pressure test apparatus/circuits; leak test apparatus/circuits; evacuation test apparatus/circuits; compressor efficiency; controls tests; refrigerant charge; operating pressures; system operation system capacity

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Verify compliance and functionality of appliances as described in 7) and including:
    - A Identifying visual defects
    - B Conducting all electrical tests safely and correctly
    - C Conducting all refrigeration tests safely and correctly
    - D Identifying non-compliant defects from test results
    - E Recommending appropriate corrective actions
    - F Acting within regulatory limits
    - G Reporting legibly and accurately
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in verifying compliance and functionality of appliances.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.5; 1.6; 2.3 to 2.6; 3.4; 3.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 3.4; 3.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  4.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  3.4; 3.5	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.8; 2.1; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.8; 3.7; 3.8

## **UEENEEJ062A Recover, pressure and leak test, evacuate and charge refrigerants — appliances**

### **Unit Descriptor**

**1)**

This unit covers the recovery of refrigerants from appliances, pressure and leak testing evacuation and charging refrigerants in appliances. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and completing the necessary documentation.

Note:

Refrigeration systems may be those used for refrigerating or for air conditioning.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ002A Prepare refrigerant tubing and fittings

UEENEEJ003A Determine the basic operating conditions of refrigeration and air conditioning systems.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 3 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may, in some States/Territories, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to

occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to recover refrigerants, pressure and leak test, evacuate and charge refrigeration appliance.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken.
- 1.5 The work is appropriately sequenced in accordance with job schedule
- 1.6 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.7 Refrigerants, lubricants and cleaning materials needed for the work are obtained in accordance with established procedures and checked against job requirements
- 1.8 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety

- |   |  |      |  |
|---|--|------|--|
|   |  | 1.9  | Preparatory work is checked to ensure no damage has occurred and complies with requirements  |
| 2 | Recover refrigerants, pressure and leak test, evacuate and charge refrigeration appliance. | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |  | 2.2  | Checks are carried out to ensure the system or component parts are isolated, when necessary, in strict accordance with OHS requirements and procedures |
|   |  | 2.3  | Circuits/machines/plant are checked as being electrically isolated where necessary in strict accordance OHS requirements and procedures                |
|   |  | 2.4  | Refrigerants are removed from a appliance safely into suitably labelled containers in accordance with regulatory requirements and industry practices.  |
|   |  | 2.5  | Precautions are taken to prevent damage to components while pressure testing the appliance.  |
|   |  | 2.6  | Pressure testing is conducted at a pressure compatible with the refrigerant to be used.  |
|   |  | 2.7  | Leaks are located and rectified using testing methods appropriate to the appliance under test and in accordance with industry practices.               |
|   |  | 2.8  | Appliances are evacuated to the required level and cleaned the appliance of all moisture and other containments in accordance with industry practices. |
|   |  | 2.9  | A ‘Drop test’ is used to prove effectiveness of the evacuation in accordance with industry practice.   |
|   |  | 2.10 | Components lubricants are checked and maintained in accordance with manufacturer’s requirements.   |
|   |  | 2.11 | Appliances are charged with the appropriate refrigerant in accordance with manufacturer’s requirements and industry practices.                         |
|   |  | 2.12 | Problematic situations that arise during the work are dealt with in an appropriate manner.   |

	2.13	Appliances are pressure and leak tested, evacuated and charged efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3	Complete and report refrigerants recovery, pressure and leak test and evacuate and charge work	3.1 OHS work completion risk control measures and procedures are followed.
	3.2	Work site and equipment is cleaned and made safe in accordance with established procedures.
	3.3	Contaminated refrigerant is dealt with in accordance with legislative/regulatory requirements.
	3.4	Completion of the work is documented and an appropriate person or persons notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and recovering, pressure and leak testing, evacuating and charging refrigerants — appliances. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.16.7	High pressure refrigerant installation
2.17.2.3	Appliance refrigerants
2.17.3	Refrigeration systems and compressor operations
2.18.1	Occupational Health and Safety principles
2.18.3.1	Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to testing and charging refrigeration appliances used for refrigeration or air conditioning encompassing the following:

- Recovering refrigerant from an existing appliance that may contain contaminants

- Pressure and leak testing a newly installed or repaired appliance
- Evacuating a appliance in preparation for charging with refrigerant
- Charging an appliance with refrigerant with minimal loss.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Recover, pressure and leak test, evacuate and charge refrigerants — appliances as described in 7) and including:
    - A Selecting appropriate materials and equipment
    - B Removing and storing refrigerant correctly
    - C Conducting pressure testing at the appropriate pressure level and without damaging components
    - D Locating and rectifying leaks
    - E Evacuating the system to the required level
    - F Charging the system with the appropriate refrigerant
    - G Completing the necessary documentation.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in recovering, pressure and leak testing, evacuating and charging refrigerants — appliances.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.9	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7; 2.12	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.11	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.9
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.12

## **UEENEEJ063A Analyse the psychrometric and thermodynamic performance of HVAC/R systems**

### **Unit Descriptor**

**1)**

This unit covers the analysis of heating, ventilating, air conditioning and refrigeration (HVAC/R) systems to provide solution to psychrometric and thermodynamic performance issues. It encompasses working safely, apply extensive knowledge of psychrometric and thermodynamic parameters, gathering and analysing data, applying problem solving techniques, developing and documenting results and solutions for use in design work.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies to this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to analyse the psychrometric and thermodynamic performance of HVAC/R systems	1.1	OHS processes and procedures for a given work area are identified, identified, obtained and understood
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	The extent of the psychrometric and thermodynamic issues are determined from performance specifications and situation reports and in consultations with relevant persons
		1.4	Activities are planned to meet scheduled timelines in consultation with others involved in the work.
		1.5	Effective strategies are formed to ensure solution development and implementation is carried out efficiently.
2	Analyse the psychrometric and thermodynamic performance of HVAC/R systems	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Knowledge of psychrometric and thermodynamic principles are applied to analytical solutions to refrigeration and air conditioning systems.
		2.3	Parameters, specifications and performance requirements in relation to refrigeration and air conditioning systems are obtained in accordance with established procedures.
		2.4	Approaches to analysing psychrometric and thermodynamic parameters are carried out to provide the most effective solution.
		2.5	Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.

	2.6	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards
3	Document and report on the results of the psychrometric and thermodynamic performance analysis and actions taken.	3.1 Solutions to psychrometric and thermodynamic issues are evaluated to determine their effectiveness and modified where necessary.
	3.2	Analysis is documented including details of all findings, calculations and assumptions.
	3.3	Analysis is reported to appropriately personnel to establish appropriate action to be taken based on findings.
	3.4	Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing the psychrometric and thermodynamic performance of HVAC/R systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.33 Refrigeration systems
- 2.17.34 Air conditioning systems
- 2.17.35 Applied psychometrics
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to analysing psychrometric and thermodynamic parameters in at least two different refrigeration and air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Analyse the psychrometric and thermodynamic performance of HVAC/R systems as described in 7) and including:
    - A Understanding the psychrometric and thermodynamic performance issues
    - B Forming effective strategies for analysing refrigeration and air conditioning systems performance
    - C Obtaining psychrometric and thermodynamic performance parameters, specifications and performance requirements appropriate to each situation.
    - D Evaluating the results of the analysis
    - E Documenting analysis details of all findings, calculations and assumptions.

- F Documenting justification of actions to be implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in analysing the psychrometric and thermodynamic performance of HVAC/R systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

	routine or contingent situations	2.5
--	----------------------------------	-----

## UEENEEJ064A Analyse the operation of HVAC/R systems

### Unit Descriptor

1)

This unit covers the analysis the operating parameters of heating, ventilating, air conditioning and refrigeration (HVAC/R) systems to determine whether performance requirements are being met. It encompasses working safely, apply knowledge of operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting results and solutions for use in design work..

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ063A Analyse the psychrometric performance of HVAC/R systems

OR

UEENEEJ009A Verify compliance and functionality of refrigeration and air conditioning installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies and is suitable for institutional based delivery. It applies to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to

occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field**

**4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to analyse the operation of HVAC/R systems

- 1.1 OHS processes and procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of operating analysis is determined from performance specifications and situation reports and in consultations with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

2 Analyse the operation of HVAC/R systems

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of HVAC/R system operating parameters is applied to analytical solutions to refrigeration and air conditioning systems.
- 2.3 Parameters, specifications and performance requirements in relation to HVAC/R systems are obtained in accordance with established procedures.
- 2.4 Approaches to analysing operating parameters are carried out to provide the most effective solution.
- 2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
- 2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

3	Document and report on the results of the operation of HVAC/R systems analysis and actions taken.	3.1	Results of system operating analysis are evaluated to determine whether performance requirements are being met.
		3.2	Analysis is documented including details of all findings, calculations and assumptions.
		3.3	Analysis is reported to appropriately personnel to establish appropriate action to be taken based on findings.
		3.4	Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing the operation of HVAC/R systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.15.19	HVAC air systems
2.15.20	HVAC hydronic systems
2.16.16	Refrigeration System Components and Piping
2.17.36	Ventilation systems
2.18.1	Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to analysing operating parameters in at least two different HVAC/R systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Analyse the operation of HVAC/R systems as described in 7) and including:
    - A Understanding the operating performance
    - B Forming effective strategies for analysing refrigeration and air conditioning systems performance
    - C Obtaining operating parameters, specifications and performance requirements appropriate to each situation.
    - D Evaluating the results of the analysis
    - E Documenting analysis details of all findings, calculations and assumptions.
    - F Documenting justification of actions to be

implemented in accordance with professional standards.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in analysing the operation of HVAC/R systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEEJ065A Evaluate fluid and thermodynamic parameters of refrigeration systems**

### **Unit Descriptor**

**1)**

This unit covers evaluation of fluid and thermodynamic parameters of refrigeration systems. It encompasses working safely, setting up and conducting evaluation measurements, evaluating fluid and thermodynamic parameters from measured parameters and reporting results for use in design work.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ027A Determine thermodynamic parameters of refrigeration and air conditioning systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training . It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of refrigeration or air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to evaluate fluid and thermodynamic parameters of refrigeration systems

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of evaluation is determined from specifications for the refrigeration system and discussion with appropriate personnel.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.

2 Evaluate fluid and thermodynamic parameters of refrigeration systems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 In-depth knowledge of the fluid and thermodynamic parameters is applied to the evaluation process
- 2.4 Energy evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
- 2.5 Fluid and thermodynamic parameters evaluation tests are carried out methodically and results and comments systematically noted.

		2.6	Unexpected situations are dealt with safely and with the approval of an authorised person.
		2.7	Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
3	Report on evaluation of fluid and thermodynamic parameters of refrigeration systems	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Results of fluid and thermodynamic parameters evaluation are documented for use in design work
		3.4	Energy evaluation report is forwarded to appropriate person(s) for endorsement.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing the operation of HVAC/R systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.14.2 Refrigeration engineering advanced mathematics
- 2.17.18.1 Thermodynamics fundamentals
- 2.17.19 Fluid mechanics fundamentals
- 2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to evaluating and reporting fluid and thermodynamic parameters at least two different types of refrigeration systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## **Critical aspects of evidence required to**

---

### **8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Analyse the operation of HVAC/R systems as described in 7) and including:
    - A Determining the extent of the evaluation
    - B Setting up and conducting appropriate examinations and tests
    - C Documenting evaluation results for use in design work
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in analysing the operation of HVAC/R systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.5 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7
---	--	---

## UEENEEJ066A Solve problems in dairy refrigeration systems

### Unit Descriptor

1)

This unit covers solving problems in dairy refrigeration systems. It encompasses working safely and to standards, applying knowledge of the components and operation of dairy refrigeration systems, using effective problem solving techniques and documenting solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEJ011A Diagnose and rectify faults in refrigeration and air conditioning components and systems

UEENEEJ013A Commission refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to solve problems in dairy refrigeration systems	<p>1.1 OHS procedures for a given work area are identified, identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.</p> <p>1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.</p> <p>1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety</p>
2 Solve problems in dairy refrigeration systems	2.1 OHS risk control measures and procedures for carrying out the work are followed.

- |   |   |  |
|---|---|--|
|   | 2.2   | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures  |
|   | 2.3   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures   |
|   | 2.4   | Problems are approached methodically drawing on operational knowledge of dairy refrigeration systems using observation, measurement, calculations and comparison with normal operating values of system and components.  |
|   | 2.5   | Information needed to solve problems is gathered and evaluated against normal operating parameters.<br><br>Note:<br>Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters. |
|   | 2.6   | Problems are dealt with safely and with the approval of an authorised person.  |
|   | 2.7   | Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.   |
| 3 | Complete work and document problem solving activities | 3.1 OHS risk control work completion measures and procedures are followed.   |
|   |   | 3.2 Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 Justification for solutions used to solve problems is documented   |
|   |   | 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in dairy refrigeration systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

### 2.17.10.2 Dairy refrigeration systems

- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to dairy refrigeration systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to

its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in dairy refrigeration systems as described in 7) and including:
    - A Using methodical problem solving techniques
    - B Accessing relevant information
    - C Solving problems effectively
    - D Providing written justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in dairy refrigeration systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A	Carry out scheduled maintenance
UEENEEJ006A	Install pipe work for refrigeration and air conditioning systems
UEENEEJ007A	Install refrigeration and air conditioning systems, major components and associated equipment
UEENEEJ010A	Select refrigerant piping and associated accessories and controls

UEENEE011A	Diagnose and rectify faults in refrigeration and air conditioning components and systems
UEENEEJ013A	Commission refrigeration and air conditioning systems
UEENEEP007A	Locate and rectify faults in electrical low voltage equipment following prescribed procedures

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.6	2
-----------------------------------	--	---

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7

## UEENEEJ067A **Solve problems in central plant air conditioning systems**

### **Unit Descriptor**

1)

This unit covers solving problems in central plant air conditioning systems. It encompasses working safely and to standards, applying knowledge of the components and operation of central plant systems, using effective problem solving techniques and documenting solutions.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ011A Diagnose and rectify faults in refrigeration and air conditioning components and systems

UEENEEJ013A Commission refrigeration and air conditioning systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices, site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to solve problems in central plant air conditioning systems

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve problems in central plant air conditioning systems

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- |   |   |  |
|---|---|--|
|   | 2.3   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures   |
|   | 2.4   | Problems are approached methodically drawing on operational knowledge of dairy refrigeration systems using observation, measurement, calculations and comparison with normal operating values of system and components.  |
|   | 2.5   | Information needed to solve problems is gathered and evaluated against normal operating parameters.<br><br>Note:<br>Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters. |
|   | 2.6   | Problems are dealt with safely and with the approval of an authorised person.  |
|   | 2.7   | Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.   |
| 3 | Complete work and document problem solving activities | 3.1 OHS risk control work completion measures and procedures are followed.   |
|   |   | 3.2 Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 Justification for solutions used to solve problems is documented   |
|   |   | 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in central plant air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.17.5   | Central plant air conditioning                            |
| 2.18.1   | Occupational Health and Safety principles                 |
| 2.18.3.1 | Refrigeration and air conditioning safe working practices |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to central plant air conditioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for

Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in central plant air conditioning systems as described in 7) and including:
    - A Using methodical problem solving techniques
    - B Accessing relevant information
    - C Solving problems effectively
    - D Providing written justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in central plant air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A                      Carry out scheduled maintenance

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7

## UEENEEJ068A **Maintain microbial control of air and water systems**

### **Unit Descriptor**

1)

This unit covers the quality assurance and risk management compliance processes for maintenance of the air and water systems associated with refrigeration and air conditioning. It encompasses working safely and to technical, quality and risk management standards, work specifications and maintenance schedules, sample inspections, evaluating components and completing the necessary maintenance documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

There are no prerequisite competencies to this unit.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit apply to any qualification in this standard at an AQF 2 level.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the work place where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Where refrigeration and air conditioning are involved practice in the workplace is subject to Federal/State/Territory regulations covering public health and the relevant codes of practice; in some jurisdictions a licence is required.

Practice in the workplace is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

**Competency Field**

4)

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to maintain microbial control of air and water systems.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The maintenance schedule and process compliance requirements are confirmed and work appropriately sequenced in accordance with established procedures.
- 1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Location equipment to be maintained is determined from maintenance schedule procedures and/or system specifications and diagrams.
- 1.7 Resources needed to conduct the maintenance is obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to conduct the maintenance are obtained in accordance with established procedures and checked for correct operation and safety.

2 Maintain microbial control of air and water systems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 Water samples are taken and tested in accordance with established methods and routines.

- |   |  |   |
|---|--|---|
|   | 2.4  | Apparatus to be maintained is inspected and evaluated for compliance with requirements in accordance with maintenance schedule.   |
|   | 2.5  | Non compliant apparatus/components/samples are documented and arrangements made for their rectification in accordance with established procedures.  |
|   | 2.6  | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   | 2.7  | Ongoing checks of the quality of the maintenance are undertaken in accordance with established procedures.  |
|   | 2.8  | Maintenance process compliance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete of maintenance processes and documentation. | 3.1 OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2 Work site and equipment is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 Final checks are made to verify that the maintenance complies with requirements.  |
|   |  | 3.4 Maintenance completion is documented and an appropriate person or persons notified in accordance with established procedures and regulations.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining microbial control of air and water systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.13.8  | Scheduled maintenance processes           |
| 2.15.23 | Microbial control fundamentals            |
| 2.18.1  | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to maintaining microbial control of at least two different air and water systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain microbial control of air and water systems as described in 7) and including:
    - A Interpreting maintenance schedule requirements correctly
    - B Following quality assurance and risk management compliance processes
    - C Following maintenance schedule
    - D Sampling water condition
    - E Inspecting and evaluating apparatus for quality assurance and risk compliance
    - F Arranging for corrective action of non compliant apparatus
    - G Documenting maintenance work.

- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in maintaining microbial control of air and water systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 2.4; 2.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEJ069A Plan refrigeration and air conditioning projects

### Unit Descriptor

1)

This unit covers development and documentation of Refrigeration and air conditioning project proposals, milestones and completions. It encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Refrigeration and Air Conditioning

<b>ELEMENT</b>		<b>PERFORMANCE CRITERIA</b>	
5) Elements describe the essential outcomes of a unit		Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.	
1	Prepare to plan project.	1.1	OHS processes and procedures for a given work area are identified, identified, obtained and understood
		1.2	Established techniques for project planning are reviewed are adopted in accordance with organisation policies.
		1.3	The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).
2	Develop project plan proposal.	2.1	Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures.
		2.2	Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures.
		2.3	Knowledge of critical path analysis is applied to developing workflow strategies.
		2.4	Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.
		2.5	Risk management strategies are sought and obtained for incorporating in the project plan.
		2.6	Project plan is reviewed against all inputs and adjusted to rectify any anomalies.
		2.7	Project plan proposal is documented in accordance with organisation policies and procedures.
3	Obtain approval for project plan.	3.1	Project plan is presented and discussed with person(s) of higher authority.
		3.2	Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.

- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning refrigeration and air conditioning projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.16.1 Project Planning
- 2.2.18 Critical path and project analysis
- 2.2.31 Refrigeration and air conditioning industry sector customs and practices
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized refrigeration or air conditioning project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances,

assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan refrigeration and air conditioning projects as described in 7) and including:
    - A Determining the project requirements accurately,
    - B Establishing a project budget
    - C Developing effective work flow strategies,
    - D Documenting project plan proposal
    - E Negotiating alterations to the proposed project plan successfully
    - F Obtaining approval of the final plan
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in planning refrigeration and air conditioning projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6 to 3.2	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 1.6; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.7 to 3.2

## **UEENEEJ070A      Diagnose and rectify faults in refrigeration and air conditioning control systems**

### **Unit Descriptor**

**1)**

This unit covers diagnosing, repairing faults and replacing faulty components in refrigeration and air conditioning control systems, components, interconnecting circuits and equipment operating at voltages up to 1000 V a.c. It encompasses working safely, reading circuit diagrams, system diagrams and manufacturers reference material, sketching diagrams from traced wiring, applying logical fault finding procedures, conducting repairs, replacing components and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ003A	Determine the basic operating conditions of refrigeration and air conditioning systems.
UEENEEJ004A	Determine the basic operating conditions of air conditioning systems
UEENEEJ007A	Install refrigeration and air conditioning systems, major components and associated equipment
UEENEEJ053A	Find and rectify faults in appliance motors and associated controls

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      3      Writing      3      Numeracy      3

**Application of the Unit 3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and rectify faults

1.1 OHS procedures for a given work area are identified, identified, obtained and understood

1.2 OHS risk control measures and procedures in preparation for the work are followed.

1.3 The nature of the fault is obtained from documentation and/or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

- 1.5 Sources of materials that may be required for the work are accessed in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety
- 2 Find faults
  - 2.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 The need to test or measure live and operating system is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
  - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS and regulatory requirements and procedures
  - 2.4 Fault finding is approached methodically drawing on knowledge of refrigeration and air conditioning control systems using measured and calculated values of system and component parameters.
  - 2.5 Faults beyond the scope of refrigeration and air conditioning system are identified.
  - 2.6 Control system components are dismantled where necessary and parts stored to protect them against loss or damage
  - 2.7 Faulty components are rechecked and their fault status and confirmed.
  - 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.9 Fault finding activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Repair fault
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Arrangements are made for appropriately competent and authorised person to rectify faults that are beyond the scope of refrigeration and air conditioning work.

	3.3	Equipment is checked as being isolated where necessary in strict accordance OHS requirements and procedures
	3.4	Materials required to rectify faults are sourced and obtained in accordance with established procedures.
	3.5	Repairs are affected efficiently without damage to other components or apparatus and using sustainable energy principles.
	3.6	Effectiveness of the repair is tested in accordance with established procedures.
	3.7	Apparatus is reassembled, finally tested and prepared for return to customer.
4	Completion and report fault finding and rectification activities	4.1 OHS work completion risk control measures and procedures are followed.
		4.2 Work area is cleaned and made safe in accordance with established procedures.
		4.3 Written justification is made for repairs to circuits/apparatus.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in refrigeration and air conditioning control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.1	Enterprise communication methods
2.2.3	Fault finding techniques
2.3.5	Refrigeration system controls
2.3.6	Air conditioning system controls
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical safe working practices
2.18.3.1	Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to diagnose and rectify the following faults in at least two refrigeration and air conditioning control systems.

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Control apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in refrigeration and air conditioning control systems as described in 7) and including:
    - A Using methodical fault finding techniques,
    - B Finding faults efficiently,

- C Rectifying faults without damage
- D Providing written justification for the rectifications undertaken
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in diagnosing and rectifying faults in refrigeration and air conditioning control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ013A Commission refrigeration and air conditioning systems

**Key**

**8.6)**

**competencies**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.6; 2.7	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.6; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7; 3.2 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## UEENEEJ071A Solve problems in refrigerated beverage vending cabinets

### Unit Descriptor

1)

This unit covers solving problems in refrigerated beverage vending cabinets. It encompasses working safely and to standards, applying knowledge of the components and operation of refrigerated beverage vending cabinets, using effective problem solving techniques and documenting solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ011A Diagnose and rectify faults in refrigeration and air conditioning components and systems

UEENEEJ013A Commission refrigeration and air conditioning systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for undertaking refrigeration and air conditioning work and in particular working with refrigerants. Practice in workplace and during training is also subject to regulations directly related to

occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to solve problems in refrigerated beverage vending cabinets

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.6 Sources of materials that may be required for the work are accessed in accordance with established procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve problems in refrigerated beverage vending cabinets

- 2.1 OHS risk control measures and procedures for carrying out the work are followed

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Problems are approached methodically drawing on operational knowledge of refrigerated beverage vending cabinets using observation, measurement, calculations and comparison with normal operating values of system and components
- 2.5 Information needed to solve problems is gathered and evaluated against normal operating parameters.  
  - Note:  
 Examples of information needed to solve problems are system specifications, as-installed drawings, maintenance and service records and measured and calculated values of component operating parameters.
- 2.6 Problems are dealt with safely and with the approval of an authorised person
- 2.7 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
- 3 Complete work and document problem solving activities
  - 3.1 OHS risk control work completion measures and procedures are followed
  - 3.2 Work site is cleaned and made safe in accordance with established procedures
  - 3.3 Justification for solutions used to solve problems is documented
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.  
 Evidence shall show that knowledge has been acquired of safe working practices and solving problems in refrigerated beverage vending cabinets. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.17.37 Beverage vending cabinets

- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in solving at least three operational problems related to refrigerated beverage vending cabinets.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to

its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in refrigerated beverage vending cabinets as described in 7) and including:
    - A Using methodical fault finding techniques,
    - B Assessing relevant information
    - C Solving problems effectively
    - D Providing written justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in solving problems in refrigerated beverage vending cabinets.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEJ009A      Carry out scheduled maintenance

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7

## **UEENEEJ072A      Recover, pressure and leak test, evacuate and charge refrigerants — split air conditioning systems**

### **Unit Descriptor**

**1)**

This unit covers the recovery of refrigerants from split air conditioning systems pressure and leak tests, recover and charge refrigerants in split air conditioning systems. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and completing the necessary documentation.

Note: The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ002A      Prepare refrigerant tubing and fittings

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading      3      Writing      3      Numeracy      3

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 2 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit may, in some States/Territories, require a licence to practise in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.
2. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
3. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to recover refrigerants, pressure and leak test, evacuate and charge split air conditioning systems.

- 1.1 OHS procedures for a given work area are identified, identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 The work is appropriately sequenced in accordance with job schedule.
- 1.6 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.

- |   |   |      |   |
|---|---|------|---|
|   |   | 1.7  | Refrigerants, lubricants and cleaning materials needed for the work are obtained in accordance with established procedures and checked against job requirements   |
|   |   | 1.8  | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety   |
|   |   | 1.9  | Preparatory work is checked to ensure no damage has occurred and complies with requirements.  |
| 2 | Recover refrigerants, pressure and leak test, evacuate and charge split air conditioning systems. | 2.1  | OHS risk control measures and procedures for carrying out the work are followed   |
|   |   | 2.2  | Checks are carried out to ensure the system or component parts are isolated, when necessary, in strict accordance with OHS requirements and procedures  |
|   |   | 2.3  | Machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures and circuits are isolated and confirmed by appropriately competent personnel  |
|   |   | 2.4  | Refrigerants are removed from a split air conditioning system safely into suitably labelled containers in accordance with regulatory requirements and industry practices, and any electrical work is referred to an appropriate licensed person |
|   |   | 2.5  | Precautions are taken to prevent damage to components while pressure testing the system   |
|   |   | 2.6  | Pressure testing is conducted at a pressure compatible with the refrigerant to be used  |
|   |   | 2.7  | Leaks are located and rectified using testing methods appropriate to the system under test and in accordance with industry practices  |
|   |   | 2.8  | Split air conditioning is evacuated to the required level and cleaned the system of all moisture and other containments in accordance with industry practices   |
|   |   | 2.9  | A ‘Drop test’ is used to prove effectiveness of the evacuation in accordance with industry practice   |
|   |   | 2.10 | Components lubricants are checked and maintained in accordance with manufacturer’s requirements   |

- |   |  |      |   |
|---|--|------|---|
|   |  | 2.11 | Split air conditioning is charged with the appropriate refrigerant in accordance with manufacturer requirements and industry practices  |
|   |  | 2.12 | Problematic situations that arise during the work are dealt with in an appropriate manner   |
|   |  | 2.13 | Split air conditioning are pressure and leak tested, evacuated and charged efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices |
| 3 | Complete and report refrigerants recovery, pressure and leak test and evacuate and charge work | 3.1  | OHS risk control work completion measures and procedures are followed   |
|   |  | 3.2  | Work site is cleaned and made safe in accordance with established procedures  |
|   |  | 3.3  | Contaminated refrigerant is dealt with in accordance with legislative/regulatory requirements   |
|   |  | 3.4  | Completion of the work is documented and an appropriate person or persons notified in accordance with established procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and recovering, pressure and leak testing, evacuating and charging refrigerants — split air conditioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |   |
|--|----------|---|
|  | 2.11.9.1 | Basic refrigeration testing and measuring field devices |
|  | 2.11.9.2 | Fitting and removing refrigeration service gauges       |
|  | 2.15.1   | Refrigeration compressors                               |
|  | 2.15.2   | Condensers  |
|  | 2.15.3   | Evaporators   |
|  | 2.15.4.1 | Refrigerant flow controls and distributors              |
|  | 2.15.9.4 | Split air conditioning systems                          |
|  | 2.17.1.1 | Refrigeration fundamentals                              |
|  | 2.17.1.2 | Basic refrigeration system operating conditions         |

- 2.17.2.2 Split air conditioning refrigerants
- 2.18.1 Occupational Health and Safety principles
- 2.18.3.1 Refrigeration and air conditioning safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to testing and charging split air conditioning systems encompassing the following:

- Recovering refrigerant from an existing split air conditioning system
- Pressure and leak testing a newly installed systems
- Evacuating newly systems in preparation for charging with refrigerant
- Charging newly installed systems with refrigerant

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Recover, pressure and leak test, evacuate and charge refrigerants — split air conditioning systems as described in 7) and including:
  - A Selecting appropriate materials and equipment
  - B Removing and storing refrigerant correctly
  - C Conducting pressure testing at the appropriate pressure level and without damaging components
  - D Locating and rectifying leaks
  - E Evacuating the system to the required standard and using appropriate vacuum measuring instruments
  - F Charging the system with the appropriate refrigerant
  - G Completing the necessary documentation
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in recovering, pressure and leak testing, evacuating and charging refrigerants — split air conditioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.9	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.7; 2.12	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.11	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.9
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.12

## UEENEEJ073A Service microwave ovens

### Unit Descriptor

1)

This unit covers maintaining the effective and efficient operation of microwave ovens. It encompasses working safely, applying knowledge of microwave ovens, following service manuals, testing appliance function, locating and rectifying faults and defective components and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEJ054A	Find and rectify faults in appliance control systems
-------------	--

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where appliances are connected to fixed wiring at voltage above 50 V a.c. or 120 V d.c. In some States/Territories a licence is required to practise this unit in the workplace subject to regulations for servicing electrical appliance. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Refrigeration and Air Conditioning

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to service microwave ovens.	1.1	OHS procedures for a given work area are identified, obtained and understood
		1.2	OHS risk control measures and procedures in preparation for the work are followed
		1.3	The extent of work to be undertaken is determined from service/fault request and/or discussions with appropriate person(s)
		1.4	Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
		1.5	Sources of materials/parts that may be required for the work are established in accordance with established procedures
		1.6	Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety
2	Service microwave ovens	2.1	OHS risk control measures and procedures for carrying out the work are followed
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
		2.3	Appliance is checked as being correctly isolated where necessary in strict accordance OHS requirements and procedures

- 2.4 Safety hazards resulting from the defect or fault are documented and risk control measures devised and implemented in consultation with appropriate personnel
  - 2.5 Appliances are tested for efficient operation and components affecting efficiency are inspected for wear or defects in accordance with standards, manufacturer service manuals and industry codes of practice
  - 2.6 Appliance faults and their cause are identified through the application of refrigerated appliances and using measured and calculated values of appliance parameters
  - 2.7 Appliance is dismantled where necessary and parts stored to protect them against loss or damage
  - 2.8 Defective, worn or faulty appliance components are rechecked and their status confirmed
  - 2.9 Replacement parts required to rectify defects/faults are sourced and obtained in accordance with established procedures
  - 2.10 Effectiveness of the repair is tested in accordance with established procedures
  - 2.11 Apparatus is reassembled, finally tested and prepared for return to service
  - 2.12 Unexpected situations are dealt with safely and with the approval of an authorised person
  - 2.13 Servicing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS risk control work completion measures and procedures are followed
  - 3.2 Work site is cleaned and made safe in accordance with established procedures
  - 3.3 Service report is completed and verified by an appropriate person in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing microwave ovens. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.27.2 Microwave ovens
- 2.18.1 Occupational health and safety principles
- 2.18.13 Appliance servicing safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to servicing microwave ovens with any four of the following defects/faults in electric heating systems in each of two different types of appliance:

- Higher energy use than previously experienced
- Not cold enough.
- Appliance light not working.
- Electric shock received from appliance cabinet.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Service microwave ovens as described in 7) and including:
  - A Determining the nature of the work from service request
  - B Identifying defective components affecting appliance efficiency
  - C Finding faults efficiently
  - D Rectifying defects/faults effectively
  - E Testing appliance functions effectively
  - F Completing service report accurately
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in servicing microwave ovens.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.4; 2.12; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

This work is copyright and licensed under the AEShareNet Free for Education instant licence (AEShareNet-FfE Licence). The onus rests with you to ensure compliance with the AEShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AEShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AEShareNet-FfE Licence conditions should be directed to the AEShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AEShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

Training Copyright

## **UEENEEK001A Maintain safety and tidiness of remote area power supply (RAPS) systems**

### **Unit Descriptor**

**1)**

This unit covers maintaining safety of RAPS system by ensuring that only RAPS equipment is present and is in its allotted place and that the system is free of litter. It encompasses working safely, regularly checking systems, cleaning techniques and reporting safety issues.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

### **Competency Field**

**4)**

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to maintain safety and tidiness of RAPS system	<p>1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.</p> <p>1.4 The nature and location of the RAPS system is obtained from work schedule and supervisor to establish the scope of work to be undertaken.</p> <p>1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community.</p> <p>1.6 Tools and equipment needed to carry out the cleaning work are obtained and checked for correct operation and safety</p>
2 Maintain safety and tidiness of RAPS system	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/system are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Routine procedures are used to clean RAPS system and area.</p> <p>2.5 Cleaning is carried out efficiently without waste of materials and energy or damage to apparatus, circuits, the surrounding environment or services.</p> <p>2.6 Routine quality checks are carried out in accordance with work instructions.</p>

3	Complete work and report	3.1	OHS risk control work completion measures and procedures are followed.
		3.2	Procedures for referring cleaning and tidiness issues to the local community are followed.
		3.3	Completion of cleaning work and issues are reported to work supervisor in accordance with established routines.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining safety and tidiness of remote area power supply (RAPS) systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.13.1	RAPS plant area cleaning
2.18.1	Occupational Health and Safety principles
2.18.4	Remote area power supply safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems incorporating a battery bank and at least two of the following:

- Generator set
- Photo voltaic array
- RAP system
- Wind generator

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. Assessment, in part or full, can occur outside the workplace, however, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement OHS workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified

in the Performance Criteria and Range Statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain safety and tidiness of remote area power supply (RAPS) systems as described in 7) and including:
    - A Removing non-RAPS equipment
    - B Safely removing insects, spiders and any animals
    - C Safely removing dust and dirt from floors and equipment
    - D Identifying and reporting at least two safety issues
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining safety and tidiness of remote area power supply (RAPS) systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with units UEENEEE001A Apply OHS practices in the workplace.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 3.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.6

## **UEENEEK002A Work safely with remote area power supply (RAPS) systems**

### **Unit Descriptor**

**1)**

This unit covers safety practices for working on RAPS systems. It encompasses identifying safety hazards, using risks control measures and following routine procedures for prescribed system maintenance.

Note:

Components of this unit are included in the critical aspects of evidence in each applicable unit to ensure that OHS practices are demonstrated as they apply to RAPS system servicing work functions and situations

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships

### **Competency Field**

**4)**

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to enter a RAPS system	<p>1.1 Instruction in hazards and risk control measures for RAPS systems maintenance are identified, obtained and understood.</p> <p>1.2 System access permit is obtained from work supervisor.</p> <p>1.3 Preparations for electrical and non-electrical isolation are made to prevent creation of hazards</p> <p>1.4 Tools and equipment needed for the work are checked for safety and correct functionality according to established safety routines.</p>
2 Apply safe working practices in RAPS system area.	<p>2.1 Workplace procedures and work instructions for controlling risk are followed accurately.</p> <p>2.2 Workplace procedures for dealing safe working practices in RAPS system are followed according to prescribed work procedures.</p> <p>2.3 Circuits/machines/system are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Routine procedures are used to apply safe working practices in RAPS system and area.</p> <p>2.5 Safe working practices are carried out efficiently without waste of materials and energy or damage to apparatus, circuits, the surrounding environment or services.</p> <p>2.6 Routine quality checks are carried out in accordance with work instructions.</p>
3. Follow workplace procedures for hazard identification and risk control in RAPS system areas	<p>3.1 Hazards are identified and prescribed control measures implemented and monitored through active participation in the consultation process with employer, other employees and local community.</p> <p>3.2 Hazards in the work are recognised and reported to work supervisor personnel according to established procedures.</p>

- 3.3 OHS records of incidents are completed in accordance with regulatory requirements and established procedures
- 3.4 Workplace instructions and training are followed accurately within established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and working safely with remote area power supply (RAPS) systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.18.4 Remote area power supply safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems incorporating a battery bank, a generator set and a photo voltaic array and at least one similar RAPS system with the additions of a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances,

assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Work safely with remote area power supply (RAPS) systems as described in 7) and including:
    - A Preparing to enter the RAPS system including, permission to enter the area and to isolate RAPS equipment
    - B Applying work procedures and instructions as they apply to risk control measures
    - C Dealing with accidents and emergencies
    - D Participating in consultation processes, identifying hazards and implementing and monitoring control measures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in working safely with remote area power supply (RAPS) systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence development in this unit may be arranged concurrently with other units in a qualification or possible skill clusters in which this unit is included.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:	
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 3.1	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.4	1
-----------------------------------	---	---

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEK003A    Conduct periodic maintenance of remote area power supply (RAPS) battery banks**

### **Unit Descriptor**

**1)**

This unit covers maintenance of remote area power supply battery banks where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of battery faults using routine procedures and completing the necessary maintenance reporting.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A    Apply OHS practices in the workplace

UEENEEE002A    Dismantle, assemble and fabricate electrotechnology components

UEENEEE003A    Solve problems in extra-low voltage single path circuits

UEENEEK001A    Maintain safety and tidiness of remote area power supply plant area

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

**License to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to conduct periodic maintenance of battery banks

- 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 The nature and location of RAPS system is identified from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Maintain RAPS systems battery banks.

2.1 Established OHS risk control measures and procedures for carrying out the work are followed

- |   |  |   |  |
|---|--|---|--|
|   | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures                     |  |
|   | 2.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures  |  |
|   | 2.4  | Prescribed maintenance procedures are used to test and check RAPS system battery banks  |  |
|   | 2.5  | Battery bank maintenance, including performance measurements and repairs are carried out safely and to prescribed routines and procedures                                       |  |
|   | 2.6  | Known types of battery functional faults are identified using routine fault finding procedures  |  |
|   | 2.7  | Procedures are followed for referring non-routine events to immediate supervisor for directions   |  |
|   | 2.8  | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |  |
|   | 2.9  | Routine quality checks are carried out in accordance with work instructions   |  |
| 3 | Complete maintenance work on battery banks and report. | 3.1   | OHS work completion risk control measures and procedures are followed  |
|   |  | 3.2   | Work site is cleaned and made safe in accordance with routine procedures   |
|   |  | 3.3   | Procedures for referring local maintenance issues to the community are followed  |
|   |  | 3.4   | Battery bank performance measurements are reported to the work supervisor through the established maintenance reporting procedures |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting periodic maintenance of remote area power supply (RAPS) battery banks. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |  |
|--------|--|
| 2.13.2 | RAPS systems battery bank maintenance techniques |
|--------|--|

- 2.18.1 Occupational Health and Safety principles
- 2.18.4 Remote area power supply safe working practice

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems in which the battery bank is charged from a generator set and a photo voltaic array and at least one similar RAPS system where the battery bank is charged from a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### **Overview of Assessment**

#### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will

contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct periodic maintenance of remote area power supply (RAPS) battery banks as described in 7) and including:
    - A Measuring and recording specific gravity of electrolyte
    - B Measuring and recording cell voltages
    - C Visual inspecting of batteries for low electrolyte levels; electrolyte leakage corroded terminals and connections
    - D Topping up low electrolyte levels

- E Identifying electrolyte leaks
- F Cleaning corroded terminals and connections and treating with an anticorrosive
- G Reporting all maintenance activities
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting periodic maintenance of remote area power supply (RAPS) battery banks.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK004A                      Conduct periodic maintenance of remote area power supply generator sets

UEENEEK005A Conduct periodic maintenance of remote area power supply photo voltaic arrays

UEENEEK007A Conduct periodic maintenance of remote area power supply wind generators

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit..

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.7; 2.5	1
-----------------------------------	--	---

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEK004A    Conduct periodic maintenance of remote area power supply (RAPS) generator sets**

### **Unit Descriptor**

**1)**

This unit covers maintenance of remote area power supply generator sets where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of generator faults using routine procedures and completing the necessary maintenance reporting

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A	Apply OHS practices in the workplace
UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE003A	Solve problems in extra-low voltage single path circuits
UEENEEK001A	Maintain safety and tidiness of remote area power supply plant area

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field**

**4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to conduct periodic maintenance on generator sets

- 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 The nature and location of RAPS system is identified from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Maintain RAPS systems generator sets

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- |   |  |   |
|---|--|---|
|   | 2.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures  |
|   | 2.4  | Prescribed maintenance procedures are used to test and check RAPS system generator sets   |
|   | 2.5  | Generator set maintenance, including performance measurements and repairs, are carried out safely and to prescribed routines and procedures                                     |
|   | 2.6  | Known types of generator set functional faults are identified using routine fault finding procedures  |
|   | 2.7  | Procedures are followed for referring non-routine events to immediate supervisor for directions   |
|   | 2.8  | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |
|   | 2.9  | Routine quality checks are carried out in accordance with work instructions.  |
| 3 | Complete maintenance work of generator sets and report | 3.1 OHS work completion risk control measures and procedures are followed   |
|   |  | 3.2 Work site is cleaned and made safe in accordance with routine procedures  |
|   |  | 3.3 Procedures for referring local maintenance issues to the community are followed   |
|   |  | 3.4 Generator set performance measurements are reported to the work supervisor through the established maintenance reporting procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting periodic maintenance of remote area power supply (RAPS) generator sets. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |  |
|--------|--|
| 2.13.3 | RAPS system generator sets maintenance techniques      |
| 2.18.1 | Occupational Health and Safety principles              |
| 2.18.4 | Remote Area Powers Supply system safe working practice |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems in which the generator set is charged from a generator set and a photo voltaic array and at least one similar RAPS system where the generator set is charged form a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct periodic maintenance of remote area power supply (RAPS) generator sets as described in 7) and including:
    - A Measuring and recording generator no-load and load voltages
    - B Measuring and recording generator out put for three load conditions
    - C Checking drive engine coolant and oil level
    - D Visually inspecting drive engine for coolant and oil leaks
    - E Checking condition of drive engine oil, oil filter and air filter

- F Identifying need to change drive engine oil, oil filter and air filter
- G Changing drive engine oil, oil filter and air filter
- H Topping up low coolant and oil levels
- I Identifying the cause of any coolant and oil leaks
- J Reporting all maintenance activities
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting periodic maintenance of remote area power supply (RAPS) generator sets.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEK003A            Conduct periodic maintenance of remote area power supply battery banks
- UEENEEK005A            Conduct periodic maintenance of remote area power supply photo voltaic arrays
- UEENEEK007A            Conduct periodic maintenance of remote area power supply wind generators

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas	Refer to the following Performance Criteria for examples of application:	

and techniques used?	N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.7; 2.5	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

	routine or contingent situations	2.6
--	--	-----

## **UEENEEK005A    Conduct periodic maintenance of remote area power supply (RAPS) photo voltaic arrays**

### **Unit Descriptor**

1)

This unit covers maintenance of remote area power supply photo voltaic arrays where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of photo voltaic array faults using routine procedures and completing the necessary maintenance reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A      Apply OHS practices in the workplace

UEENEEE002A      Dismantle, assemble and fabricate electrotechnology components

UEENEEE003A      Solve problems in extra-low voltage single path circuits

UEENEEK001A      Maintain safety and tidiness of remote area power supply plant area

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      3      Writing      3      Numeracy      3

### **Application of the Unit**

3)

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to conduct periodic maintenance on photo voltaic arrays

- 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 The nature and location of RAPS system is identified from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community.
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Maintain RAPS systems photo voltaic arrays

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Prescribed maintenance procedures are used to test and check RAPS system photo voltaic arrays.
- 2.5 Photo voltaic array maintenance, including performance measurements and repairs are carried out safely and to prescribed routines and procedures.
- 2.6 Known types of photo voltaic array functional faults are identified using routine fault finding procedures.
- 2.7 Procedures are followed for referring non-routine events to immediate supervisor for directions.
- 2.8 Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services
- 2.9 Routine quality checks are carried out in accordance with work instructions.
- 3 Complete maintenance work of photo voltaic arrays and report
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with routine procedures.
  - 3.3 Procedures for referring local maintenance issues to the community are followed.
  - 3.4 Photo voltaic array performance measurements are reported to the work supervisor through the established maintenance reporting procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting periodic maintenance of remote area power supply (RAPS) photo voltaic arrays sets. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.13.4 RAPS systems photovoltaic array maintenance techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.4 Remote Area Power Supply safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems in which the photo voltaic array is charged from a photo voltaic array and a photo voltaic array and at least one similar RAPS system where the photo voltaic array is charged from a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to

consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct periodic maintenance of remote area power supply (RAPS) photo voltaic arrays as described in 7) and including:
    - A Measuring and recording array no-load and load voltages together with ambient temperature
    - B Measuring and recording array output for three load conditions
    - C Visually inspecting array modules and support structure for physical damage
    - D Visually inspecting array connections and cables
    - E Identifying array defects and faults

- F Reporting all maintenance activities
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting periodic maintenance of remote area power supply (RAPS) photo voltaic arrays.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK003A	Conduct periodic maintenance of remote area power supply battery banks
UEENEEK004A	Conduct periodic maintenance of remote area power supply generator sets
UEENEEK006A	Conduct periodic maintenance of remote area power supply wind generators

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7; 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an

explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEK006A    Conduct periodic maintenance of remote area power supply (RAPS) wind generators**

### **Unit Descriptor**

**1)**

This unit covers maintenance of remote area power supply wind generators where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of wind generator faults using routine procedures and completing the necessary maintenance reporting.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A      Apply OHS practices in the workplace

UEENEEE002A      Dismantle, assemble and fabricate electrotechnology components

UEENEEE003A      Solve problems in extra-low voltage single path circuits

UEENEEK001A      Maintain safety and tidiness of remote area power supply plant area

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      3      Writing      3      Numeracy      3

### **Application of the Unit**

**3)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to conduct periodic maintenance on wind generators

- 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 The nature and location of RAPS system is identified from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community.
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Maintain RAPS systems wind generators

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Prescribed maintenance procedures are used to test and check RAPS system wind generators
- 2.5 Wind generator maintenance, including performance measurements and repairs, are carried out safely and to prescribed routines and procedures.
- 2.6 Known types of wind generator functional faults are identified using routine fault finding procedures.
- 2.7 Procedures are followed for referring non-routine events to immediate supervisor for directions.
- 2.8 Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services
- 2.9 Routine quality checks are carried out in accordance with work instructions.
- 3 Complete maintenance work of wind generators and report
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with routine procedures.
  - 3.3 Procedures for referring local maintenance issues to the community are followed.
  - 3.4 Wind generator performance measurements are reported to the work supervisor through the established maintenance reporting procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting periodic maintenance of remote area power supply (RAPS) wind generators. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.13.5 RAPS systems wind generator maintenance techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.4 Remote Area Power Supply safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems in which the wind generator is charged from a wind generator and a wind generator and at least one similar RAPS system where the wind generator is charged form a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct periodic maintenance of remote area power supply (RAPS) wind generators as described in 7) and including:
    - A Measuring and recording generator no-load and load voltages;
    - B Measuring and recording generator output for three load conditions;
    - C Visually inspecting generator and support structure for physical damage;
    - D Visually inspecting generator connections and cables;
    - E Identifying generator defects and faults;
    - F Reporting all maintenance activities

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting periodic maintenance of remote area power supply (RAPS) wind generators.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK003A	Conduct periodic maintenance of remote area power supply battery banks
UEENEEK004A	Conduct periodic maintenance of remote area power supply generator sets
UEENEEK005A	Conduct periodic maintenance of remote area power supply photo voltaic arrays

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit.

**Key**

**8.6)**

**competencies**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.7; 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEK007A      Conduct checks in the demand side use of remote area power supplies**

### **Unit Descriptor**

**1)**

This unit covers checking the community use of a remote area power supply. This encompasses working safely, taking system readings, replacing the data-logging chip, identifying known types of systems faults caused by inappropriate use of electrical apparatus supplied from a remote area power supply system and completing the necessary check report.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A      Apply OHS practices in the workplace

UEENEEK002A      Work safely in remote area power supply plant areas

UEENEEK003A      Conduct periodic check of remote area power supply battery banks

UEENEEK004A      Conduct periodic check of remote area power supply generator sets

UEENEEK005A      Conduct periodic check of remote area power supply photo voltaic array

UEENEEK006A      Conduct periodic check of remote area power supply

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      3      Writing      3      Numeracy      3

**Application of the Unit 3)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

**License to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to check RAPS system use

- 1.1 OHS procedures for a RAPS system are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor.
- 1.4 The nature and location of RAPS system is identified from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community.
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures.

- |   |   |   |  |
|---|---|---|--|
|   | 1.7   | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety |  |
| 2 | Check use of RAPS system                      | 2.1   | Established OHS risk control measures and procedures for carrying out the work are followed.   |
|   |   | 2.2   | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures  |
|   |   | 2.3   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures                                   |
|   |   | 2.4   | Prescribed check procedures are used to test and check RAPS systems  |
|   |   | 2.5   | Retrieval of performance data is carried out safely and to prescribed routines and procedures.   |
|   |   | 2.6   | Known types of functional faults are identified using routine fault finding procedures.  |
|   |   | 2.7   | Procedures are followed for referring non-routine events to immediate supervisor for directions.   |
|   |   | 2.8   | Checking is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |
|   |   | 2.9   | Routine quality checks are carried out in accordance with work instructions.   |
| 3 | Complete check of wind RAPS system and report | 3.1   | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2   | Work site is cleaned and made safe in accordance with routine procedures.  |
|   |   | 3.3   | Procedures for referring local check issues to the community are followed.   |
|   |   | 3.4   | Check results are reported to the work supervisor through the established check reporting procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and conducting checks in the demand side use of remote area power supplies. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.13.7	RAPS systems maintenance scheduling
2.18.1	Occupational Health and Safety principles
2.18.4	Remote Area Power Supply safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems in which the wind generator is charged from a wind generator and a wind generator and at least one similar RAPS system where the wind generator is charged form a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Conduct checks in the demand side use of remote area power supplies as described in 7) and including:
  - A Retrieving of performance data
  - B Identifying demand use issues
  - C Reporting all check activities

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting checks in the demand side use of remote area power supplies.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK003A	Conduct periodic maintenance of remote area power supply battery banks
-------------	--

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7; 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEK008A Plan periodic maintenance schedules of remote area power supplies**

### **Unit Descriptor**

1)

This unit covers plant maintenance planning and scheduling. It encompasses developing and self managing simple maintenance programs, replacing some specified components and reporting of maintenance work.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEE NEEE001A Apply OHS practices in the workplace

UEE NEEE033A Document occupational hazards and risks in electrical

UEE NEEK002A Work safely in remote area power supply plant areas

UEE NEEK003A Conduct periodic maintenance of remote area power supplies

UEE NEEK004A Plan periodic maintenance schedules for remote area power supplies

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 3 level or higher. Additionally, this unit may apply to indigenous persons entering work in remote area power supply (RAPS) servicing. The unit may also apply to renewable energy service work in general and be used in school-based vocational programs.

**License to practise 3.1)**

The skills and knowledge described in this unit may, in some States/Territories, require a licence to practise in the workplace subject to regulations for undertaking plant maintenance planning and scheduling related to RAPS work. Practice in workplace and during training may also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Establish maintenance requirements

- 1.1 OHS policies and procedures, skills required and frequency and level of maintenance work are determined in accordance with maintenance routines
- 1.2 Records are established to manage maintenance work and up-to-date accordance with routine procedures
- 1.3 Level of replacement or repair to be done under maintenance work is established in accordance with manufacturer and community requirements
- 1.4 Needed maintenance program, including basic periodic instruction in demand side use, is established in accordance with local community requirements

2 Develop and implement maintenance schedule

- 2.1 Maintenance schedules are developed from recommendations of equipment manufacturers and in accordance with RAPS system safety and performance requirements

	2.2	Procedures are developed and implemented to ensure the maintenance program is followed in accordance with the planned schedule and requirements
	2.3	Procedures are developed and implemented to ensure records are maintained in accordance with planned schedule and requirements
3	Evaluate maintenance program	3.1 Periodic and sample inspection reports are used to ascertain maintenance quality and the need for revision of maintenance schedule and frequency
		3.2 Maintenance schedule is periodically reviewed and revised to maintain the integrity of the RAPS system

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of plant maintenance planning and scheduling, encompassing the development and self management of simple maintenance programs, replacing some specified components and reporting of maintenance work. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.13.1 RAPS plant area cleaning
- 2.13.2 RAPS system battery bank maintenance techniques
- 2.13.4 RAPS systems photovoltaic array maintenance techniques
- 2.13.7 RAPS system maintenance schedule
- 2.13.8 Scheduled maintenance processes
- 2.18.1 Occupational Health and Safety principles
- 2.20.3 Introduction to renewable energy technologies
- 2.20.5 Remote area essential services facilities

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in plant maintenance planning and scheduling including developing and self managing simple maintenance programs, replacing some specified components and reporting of maintenance work according to established procedures and requirements.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop a plan for periodic maintenance of RAPS systems located in different communities as listed in 7) . It must incorporate the following components:
    - A Safety requirements
    - B Items to be check and tested
    - C Items to be replaced or repaired
    - D Frequency of the periodic maintenance
    - E Materials and equipment required
    - F Time needed to conduct maintenance on each RAPS system
    - G Travel distance and times to each community
    - H Protocols for working in different communities,
    - I Methods for recording and evaluating maintenance,
    - J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Access to a supervisor for obtaining work instructions and advice.
- Maintenance and repair materials
- Maintenance requirements for RAPS system incorporating Battery bank; Engine driven generator sets; Fuel storage; Inverter and regulator; Photo voltaic array, and Wind generators.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing a plan for periodic maintenance of RAPS systems located in different communities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |              |  |
|--------------|--|
| UEE NEEK003A | Conduct periodic maintenance of remote area power supply battery banks   |
| UEE NEEK004A | Conduct periodic maintenance of remote area power supply generator sets  |
| UEE NEEK006A | Conduct periodic maintenance of remote area power supply wind generators |

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 2.3 to 2.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an

explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEK009A Attend to breakdowns in remote area power supplies**

### **Unit Descriptor**

**1)**

This unit covers attending to a breakdown of remote area power supplies. It encompasses working safely, ascertaining the nature of a breakdown, the extent of repairs required and the personnel needed to repair the breakdown, and reporting so arrangements can be made for the repair work to be carried out. It also encompasses undertaking specified minor repairs.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A Apply OHS practices in the workplace

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE003A Solve problems in extra-low voltage single path circuits

UEENEEK001A Maintain safety and tidiness of remote area power supply plant area

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit must apply to indigenous persons entering work in remote area power supply (RAPS) servicing. The unit may also apply to renewable energy service work in general and be used in school-based vocational programs.

**License to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However they are subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to undertake maintenance work

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 The nature of maintenance work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Carry out maintenance work

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- |   |                          |  |
|---|--------------------------|--|
|   | 2.3                      | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures |
|   | 2.4                      | Procedures are followed for referring non-routine events to immediate supervisor for directions                            |
|   | 2.5                      | Work is done efficiently without waste of materials and energy   |
|   | 2.7                      | Work is done without damage to apparatus, circuits, the surrounding environment or services                                |
|   | 2.8                      | Routine quality checks are carried out in accordance with work instructions.   |
| 3 | Complete work and report |  |
|   | 3.1                      | OHS risk control work completion measures and procedures are followed  |
|   | 3.2                      | Work site is cleaned and made safe in accordance with established procedures   |
|   | 3.3                      | Work supervisor is notified of the completion of maintenance in accordance with established procedures and documented      |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and attending to breakdowns in remote area power supplies. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |        |  |
|--|--------|--|
|  | 2.13.1 | RAPS plant area cleaning                               |
|  | 2.13.2 | RAPS system battery bank maintenance techniques        |
|  | 2.13.4 | RAPS systems photovoltaic array maintenance techniques |
|  | 2.18.1 | Occupational Health and Safety principles              |
|  | 2.20.3 | Introduction to renewable energy technologies          |
|  | 2.20.5 | Remote area essential services facilities              |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit may be demonstrated in relation to attending to breakdowns in remote area power supplies.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Attend to breakdowns in remote area power supplies as described in 7) and including:
    - A Working safely
    - B Ascertaining the nature of a breakdown
    - C Ascertaining the extent of repairs required and the personnel needed to repair the breakdown
    - D Reporting so arrangements can be made for the repair work to be carried out
    - E Undertaking specified minor repairs
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in attending to breakdowns in remote area power supplies.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEK003A	Conduct periodic maintenance of remote area power supply battery banks
UEENEEK004A	Conduct periodic maintenance of remote area power supply generator sets
UEENEEK006A	Conduct periodic maintenance of remote area power supply wind generators

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7; 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEK010A Coordinate maintenance of renewable energy apparatus and systems**

### **Unit Descriptor**

**1)**

This unit covers coordinating the maintenance of renewable energy apparatus and systems. It encompasses working safely, following maintenance schedules, ascertaining the extent of any repairs required, and the personnel needed to repair the breakdown, providing technical support to maintenance personnel and reporting.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A Apply OHS practices in the workplace

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE003A Solve problems in extra-low voltage single path circuits

UEENEEK001A Maintain safety and tidiness of remote area power supply plant area

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

**License to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to coordinate maintenance

- 1.1 OHS procedures for a given work area are obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work
- 1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel
- 1.4 The extent of work is determined from job specifications, drawings and regulatory requirements
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.6 Competencies needed to undertake work are determined from job specifications and/or consultation with appropriate personnel
- 1.7 Personnel and materials needed to undertake maintenance are obtained in accordance with established procedures and checked against job requirements
- 1.8 Tools, equipment and testing devices needed to undertake maintenance are obtained in accordance with established procedures and checked for correct operation and safety

- 1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements
- 2 Carry out maintenance
  - 2.1 OHS risk control measures and procedures for carrying out the work are followed
  - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
  - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
  - 2.4 Maintenance is carried out in compliance with technical standards and job specifications and requirements
  - 2.5 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
  - 2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 2.7 Ongoing checks of the quality of maintenance are undertaken in accordance with job specification, technical standards and/or regulatory requirements
  - 2.8 Work efficiently without waste of materials and energy or damage to apparatus, circuits, the surrounding environment or other services
- 3 Complete work
  - 3.1 OHS risk control work completion measures and procedures are followed
  - 3.2 Work site is made safe in accordance with established safety procedures
  - 3.3 Verify maintenance conforms to requirements
  - 3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and co-ordinating maintenance of renewable energy apparatus and systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.13.1	RAPS plant area cleaning
2.13.2	RAPS system battery bank maintenance techniques
2.13.4	RAPS systems photovoltaic array maintenance techniques
2.18.1	Occupational Health and Safety principles
2.20.3	Introduction to renewable energy technologies
2.20.5	Remote area essential services facilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit may be demonstrated in relation to co-ordinating maintenance of renewable energy apparatus and systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Co-ordinate maintenance of renewable energy apparatus and systems as described in 7) and including:
    - A Interpreting maintenance schedule requirements correctly
    - B Accessing appropriate plant, materials and personnel
    - C Following maintenance schedule
    - D Evaluating apparatus for compliance with specified requirements
    - E Arranging for corrective action of non compliant apparatus
    - F Documenting maintenance work.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in co-ordinating maintenance of renewable energy apparatus and systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEK003A Conduct periodic maintenance of remote area power supply battery banks
- UEENEEK004A Conduct periodic maintenance of remote area power supply generator sets
- UEENEEK006A Conduct periodic maintenance of remote area power supply wind generators

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.7; 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEK011A Assemble and connect remote area power supplies (RAPS)**

### **Unit Descriptor**

**1)**

This unit covers installation of remote area power supply systems where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to installation standards, matching equipment with that specified for a given location, placing and securing equipment accurately, making required circuit connections and completing the necessary installation documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE003A	Solve problems in extra-low voltage single path circuits
UEENEEE007A	Use drawings, diagrams, schedules and service manuals

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

**License to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to install remote area power supplies

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Health and safety risks are identified, and established risk control measures and procedures are followed in preparation for the work
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented
- 1.4 Installation of apparatus is prepared in consultation with others effected by the work and sequenced appropriately
- 1.5 The nature and location of the work is determined from documentation or appropriate persons to establish the scope of work to be undertaken
- 1.6 Locations of apparatus and associated equipment is planned within the constraints of the building structure, significants and regulations
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others

Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements

Tools, equipment and testing devices needed for the installation work are obtained in accordance with established procedures and checked for correct operation and safety

Preparatory work is checked to ensure no damage has occurred and that it complies with requirements

2 Install remote area power supplies

- 2.1 OHS risk control measures and procedures for carrying out the work are followed
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Apparatus and associated equipment are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance
- 2.5 Wiring is terminated at apparatus and associated equipment in accordance with manufacturer specifications and functional and regulatory requirements
- 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented
- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.8 Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures
- 2.9 Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles

3	Complete maintenance work on battery banks and report	3.1	OHS work completion risk control measures and procedures are followed
		3.2	Work site is cleaned and made safe in accordance with established procedures
		3.3	Final checks are made so that the installed apparatus conforms to requirements
		3.4	‘As-installed’ apparatus and associated equipment is documented and appropriate person(s) notified in accordance with established procedures

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and assembling and connecting remote area power supplies (RAPS). The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.13.2	RAPS Systems battery bank maintenance techniques
2.18.1	Occupational Health and Safety principles
2.20.3	Introduction to renewable energy technologies
2.20.5	Remote area essential services facilities
2.20.6	Remote area essential services power plant

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to least two different RAPS systems in which the battery bank is charged from a generator set and a photo voltaic array and at least one similar RAPS system where the battery bank is charged form a wind generator.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble and connect remote area power supplies (RAPS) as described in 7) and including:
    - A Reading and interpreting drawings related to and apparatus locations and circuit connections.
    - B Placing and securing apparatus accurately
    - C Maintaining fire integrity
    - D Connecting apparatus and associated equipment to comply with requirements
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling and connecting remote area power supplies (RAPS).

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |             |   |
|-------------|---|
| UEENEEK004A | Conduct periodic maintenance of remote area power supply generator sets       |
| UEENEEK005A | Conduct periodic maintenance of remote area power supply photo voltaic arrays |
| UEENEEK007A | Conduct periodic maintenance of remote area power supply wind generators      |

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7; 2.5	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	2.4 to 2.8
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEK012A Provide basic sustainable energy solutions for energy reduction in domestic premises**

### **Unit Descriptor**

**1)**

This unit covers monitoring energy use and providing basic sustainable energy options to reduce the energy consumption in domestic residences. It encompasses working safely and providing basic sustainable energy solutions for energy reduction in domestic premises.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite units for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

### **Competency Field**

**4)**

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to monitor energy usage and provide basic solutions for energy reduction	<p>1.1 Monitoring activities are planned and prepared for to ensure OHS policies and procedures are followed with the work appropriately sequenced in accordance with requirements</p> <p>1.2 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved</p> <p>1.3 Materials are obtained and checked in accordance with established procedures and to comply with requirements</p> <p>1.4 Location in which monitoring activities are to be undertaken is determined from job requirements</p> <p>1.5 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Materials needed to carry out the monitoring are obtained in accordance with established procedures</p>
2 Undertake monitoring of energy usage and provide basic solutions for energy reduction	<p>2.1 OHS policies and procedures for undertaking monitoring activities are followed</p> <p>2.2 Monitoring activities are undertaken in accordance with requirements, without damage or distortion to the surrounding environment or services</p> <p>2.3 Unplanned events or conditions are responded to in accordance with established procedures</p> <p>2.4 Approval is obtained in accordance with established procedures from appropriate personnel before any contingencies are implemented</p> <p>2.5 Ongoing checks of the quality of the work are carried out in accordance with established procedures</p>
3 Complete monitoring activities and provide reports where necessary	3.1 Documentation/reports are completed to ensure administrative requirements are met

- 3.2 Work completion is notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and providing basic sustainable energy solutions for energy reduction in domestic premises. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.8.1.2 Fundamental electrical principles
- 2.8.2.1 Direct current circuits principles
- 2.18.1 Occupational Health and Safety principles
- 2.20.3 Introduction to renewable energy technologies

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the provision of basic sustainable energy solutions for energy reduction in domestic premises in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide basic sustainable energy solutions for energy reduction in domestic premises as described in 7) and including:
    - A Providing basic sustainable energy solutions for energy reduction in domestic premises
    - B Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing basic sustainable energy solutions for energy reduction in domestic premises.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.3; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.3; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## UEENEEK013A Apply sustainable energy practice in daily activities

### Unit Descriptor

1)

This unit covers applying sustainable energy practices in daily activities both at and outside the workplace. It encompasses applying sustainable energy practice in daily activities.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite units for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

### Competency Field

4)

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Plan and prepare to apply sustainable energy practice	<p>1.1 Activities are planned and prepared for to ensure OHS policies and procedures are followed with the work appropriately sequenced in accordance with requirements</p> <p>1.2 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved</p> <p>1.3 Materials are obtained and checked in accordance with established procedures and to comply with requirements</p> <p>1.4 Location in which activities are to be undertaken is determined from requirements</p> <p>1.5 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements</p>
2 Apply sustainable energy practice	<p>2.1 OHS policies and procedures for undertaking administrative functions are followed</p> <p>2.2 Activities are undertaken in accordance with requirements, without damage or distortion to the surrounding environment or services</p> <p>2.3 Unplanned events or conditions are responded to in accordance with established procedures</p> <p>2.4 Approval is obtained in accordance with established procedures from appropriate personnel before any contingencies are implemented</p> <p>2.5 Ongoing checks of the quality of the work are undertaken in accordance with established procedures</p>
3 Complete the application of sustainable energy	<p>3.1 Documentation/reports are completed to ensure detailed promotional activities requirements are met</p> <p>3.2 Completion is notified in accordance with established procedures</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and applying sustainable energy practices in daily activities. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.1	Occupational Health and Safety principles
2.20.3	Introduction to renewable energy technologies
2.20.4	Greenhouse reduction strategies

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to applying sustainable energy practice in daily activities in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Apply sustainable energy practice in daily activities as described in 7) and including:
    - A Applying sustainable energy practice in daily activities
    - B Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and specific resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

**assessment**

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in applying sustainable energy practices in daily activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.4; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.2; 2.4; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

	the context of the work task	1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## UEENEEK014A Promote sustainable energy practice in the community

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the promotion of recognised, safe, sustainable energy practices to others in the community.</p>

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Plan and prepare to promote sustainable energy practice	<p>1.1 Activities are planned and prepared to ensure OHS policies and procedures are followed with the work appropriately sequenced in accordance with requirements</p> <p>1.2 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved</p> <p>1.3 Materials are obtained and checked in accordance with established procedures and to comply with requirements</p> <p>1.4 Location in which activities are to be undertaken is determined from requirements</p> <p>1.5 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements</p>
2 Promote sustainable energy practice	<p>2.1 OHS policies and procedures for undertaking administrative functions are followed</p> <p>2.2 Activities are undertaken in accordance with requirements without damage or distortion to the surrounding environment or services</p> <p>2.3 Unplanned events or conditions are responded to in accordance with established procedures</p> <p>2.4 Approval is obtained in accordance with established procedures from appropriate personnel before any contingencies are implemented</p> <p>2.5 Ongoing checks of the quality of the work are undertaken in accordance with established procedures</p>
3 Complete the promotion of sustainable energy	<p>3.1 Documentation/reports are completed to ensure detailed promotional activities requirements are met</p> <p>3.2 Completion is notified in accordance with established procedure</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and promoting sustainable energy practices in the community. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.1	Occupational Health and Safety principles
2.20.3	Introduction to renewable energy technologies
2.20.4	Greenhouse reduction strategies

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to promoting sustainable energy practice in the community in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable/sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Promote sustainable energy practices in the community as described in 7) and including:
    - A Applying sustainable energy practice in the community
    - B Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in promoting sustainable energy practices in the community.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.2; 2.4	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.2; 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	3.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## **UEENEEK017A Maintain and repair facilities associated with remote area essential service operations**

### **Unit Descriptor**

1)

This unit covers basic maintenance of remote area infrastructure facilities. It encompasses working safely, to maintenance standards and following maintenance routines, identifying deterioration and damage to facilities using routine procedures, and completing the necessary maintenance reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A      Apply OHS practices

UEENEEE002A      Dismantle, assemble and fabricate electrotechnology components

UEENEEE003A      Solve problems in extra-low voltage single path circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      3      Writing      3      Numeracy      3

### **Application of the Unit**

3)

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to

occupational health and safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to maintain and repair facilities

- 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 The nature and location of service facilities is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Maintain and repair facilities

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed

- |   |   |   |   |
|---|---|---|---|
|   | 2.2   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures  |   |
|   | 2.2   | Prescribed procedures are used to check and identify deterioration and damage to facilities   |   |
|   | 2.4   | Faulty and damaged facilities are repaired using routine procedures   |   |
|   | 2.5   | Maintenance and repairs are carried out safely and within the prescribed limits, routines and procedures  |   |
|   | 2.6   | Procedures are followed for referring non-routine events to immediate supervisor for directions   |   |
|   | 2.7   | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |   |
|   | 2.8   | Routine quality checks are carried out in accordance with work instructions   |   |
| 3 | Complete maintenance and repair work report | 3.1   | OHS work completion risk control measures and procedures are followed   |
|   |   | 3.2   | Work site is cleaned and made safe in accordance with routine procedures  |
|   |   | 3.3   | Procedures are followed for referring maintenance issues beyond the scope of prescribed work to persons of higher authority |
|   |   | 3.4   | Work carried out is reported to the work supervisor through the established maintenance reporting procedures                |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining and repairing facilities associated with remote area essential service operations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.18.1 | Occupational Health and Safety principles       |
| 2.18.4 | Remote area power supply safe working practices |
| 2.20.5 | Remote area essential services facilities       |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to maintaining and repairing facilities associated with to least two different remote area essential service operations

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain and repair facilities associated with remote area essential service operations as described in 7) and including:
    - A Understanding the location and nature of the work required
    - B Identifying deterioration and damage to facilities correctly
    - C Carrying out maintenance and repairs effectively
    - D Identifying maintenance issues beyond the scope of prescribed work and notifying appropriate persons
    - E Documenting work activities accurately
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining and repairing facilities associated with remote area essential service operations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7; 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>
1   Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEK018A **Maintain operation of remote area water facilities**

### **Unit Descriptor**

1)

This unit covers maintenance of remote area water collection, storage and treatment facilities. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of water facility faults using routine procedures and completing the necessary maintenance reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK017A	Maintain and repair facilities associated with remote area essential service operations
-------------	---

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting

equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

**Competency Field**

**4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Maintain operation of remote area water facilities

- 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 The nature and location of the water facility is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Maintain operation of remote area water facilities

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.3 Prescribed maintenance procedures are used to test and check remote area water facilities

- |   |                                      |   |
|---|--------------------------------------|---|
|   | 2.4                                  | Known types of remote area water facilities functional faults are identified and repaired using routine procedures  |
|   | 2.5                                  | Maintenance, including performance measurements and repairs, are carried out safely and to prescribed routines and procedures   |
|   | 2.6                                  | Procedures are followed for referring non-routine events to immediate supervisor for directions   |
|   | 2.7                                  | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |
|   | 2.8                                  | Routine quality checks are carried out in accordance with work instructions   |
| 3 | Complete maintenance work and report | 3.1 OHS work completion risk control measures and procedures are followed   |
|   |                                      | 3.2 Work site is cleaned and made safe in accordance with routine procedures  |
|   |                                      | 3.3 Procedures are followed for referring maintenance issues beyond the scope of prescribed work to persons of higher authority   |
|   |                                      | 3.4 Work carried out is reported to the work supervisor through the established maintenance reporting procedures  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining operation of remote area water facilities. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.18.1 | Occupational Health and Safety principles       |
| 2.18.4 | Remote area power supply safe working practices |
| 2.20.8 | Remote area essential services water facilities |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to maintaining operation of at least two different remote area water facilities.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain operation of remote area water facilities as described in 7) and including:
    - A Understanding the location and nature of the work required
    - B Following prescribe procedures to testing and checking facility.
    - C Identifying and repairing known functional faults.
    - D Carrying out maintenance and repairs effectively.
    - E Identifying maintenance issues beyond the scope of prescribed work and notifying appropriate persons.
    - F Documenting work activities accurately.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining operation of remote area water facilities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7; 2.5	1

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEK019A **Maintain operation of remote area waste water facilities**

### **Unit Descriptor**

1)

This unit covers maintenance of remote area waste water facilities. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types waste water faults using routine procedures and completing the necessary maintenance reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK017A	Maintain and repair facilities associated with remote area essential service operations
-------------	---

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

**Competency Field**

4)

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Maintain operation of remote area waste water facilities

- 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 The nature and location of the waste water facility is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Maintain operation of remote area waste water facilities

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.3 Prescribed maintenance procedures are used to test and check remote area waste water facilities

- |   |                                      |   |
|---|--------------------------------------|---|
|   | 2.4                                  | Known types of remote area waste water facilities functional faults are identified and repaired using routine procedures  |
|   | 2.5                                  | Maintenance, including performance measurements and repairs, are carried out safely and to prescribed routines and procedures.  |
|   | 2.6                                  | Procedures are followed for referring non-routine events to immediate supervisor for directions   |
|   | 2.7                                  | Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services |
|   | 2.8                                  | Routine quality checks are carried out in accordance with work instructions   |
| 3 | Complete maintenance work and report | 3.1 OHS work completion risk control measures and procedures are followed   |
|   |                                      | 3.2 Work site is cleaned and made safe in accordance with routine procedures  |
|   |                                      | 3.3 Procedures are followed for referring maintenance issues beyond the scope of prescribed work to persons of higher authority   |
|   |                                      | 3.4 Work carried out is reported to the work supervisor through the established maintenance reporting procedures  |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining operation of remote area waste water facilities. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.18.1 | Occupational Health and Safety principles             |
| 2.18.4 | Remote area power supply safe working practices       |
| 2.20.7 | Remote area essential services waste water facilities |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to maintaining operation of at least two different remote area waste water facilities.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain operation of remote area waste water facilities as described in 7) and including:
    - A Understanding the location and nature of the work required
    - B Following prescribe procedures to testing and checking facility.
    - C Identifying and repairing known functional faults
    - D Carrying out maintenance and repairs effectively.
    - E Identifying maintenance issues beyond the scope of prescribed work and notifying appropriate persons.
    - F Documenting work activities accurately.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining operation of remote area waste water facilities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7; 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEK020A **Maintain operation of remote area power plant**

### **Unit Descriptor**

1)

This unit covers maintenance of remote area power plant where the exposed voltage is not greater than 50 V a.c. or 120 V d.c. It encompasses working safely and to maintenance standards and following maintenance routines, identifying known types of power plant faults using routine procedures and completing the necessary maintenance reporting..

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK017A	Maintain and repair facilities associated with remote area essential service operations
-------------	---

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended primarily for indigenous persons seeking qualifications in RAPS system servicing. The unit may also be applied to work entry qualifications in renewable energy service work in general and be used in school-based vocational programs.

### **License to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage

electrical installations is incorporated in unit UEENEEG005A and all prerequisite units it specifies.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Maintain operation of remote area power plant

- 1.1 OHS procedures for a RAPS plant are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards which have not previously been identified are reported and advice on risk control measures is sought from the work supervisor
- 1.4 The nature and location of the power plant is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with fellow workers and the local community
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2	Maintain operation of remote area power plant	2.1	Established OHS risk control measures and procedures for carrying out the work are followed
		2.2	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
		2.3	Prescribed maintenance procedures are used to test and check remote area power plant
		2.4	Known types of remote area power plant functional faults are identified and repaired using routine procedures
		2.5	Maintenance, including performance measurements and repairs are carried out safely and to prescribed routines and procedures
		2.6	Procedures are followed for referring non-routine events to immediate supervisor for directions
		2.7	Maintenance and repair work is carried out efficiently without waste of materials and energy and without damage to apparatus, circuits, the surrounding environment or services
		2.8	Routine quality checks are carried out in accordance with work instructions
3	Complete maintenance work and report	3.1	OHS work completion risk control measures and procedures are followed
		3.2	Work site is cleaned and made safe in accordance with routine procedures
		3.3	Procedures are followed for referring maintenance issues beyond the scope of prescribed work to persons of higher authority
		3.4	Work carried out is reported to the work supervisor through the established maintenance reporting procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and maintaining operation of remote area power plant. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.1 Occupational Health and Safety principles

2.18.4 Remote area power supply safe working practices

2.20.6 Remote area essential services power plant

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to maintaining operation of at least two different remote area power plants.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety

and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain operation of remote area power plant as described in 7) and including:
    - A Understanding the location and nature of the work required
    - B Following prescribe procedures to testing and checking plant.
    - C Identifying and repairing known functional faults
    - D Carrying out maintenance and repairs effectively.
    - E Identifying maintenance issues beyond the scope of

prescribed work and notifying appropriate persons.

- F Documenting work activities accurately.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining operation of remote area power plant.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) must be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.7; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7; 2.5	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEK021A Manage renewable energy projects

### Unit Descriptor

1)

This unit covers the management of renewable energy projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses covers management of safety, budget, variation, personnel, resources, and critical path timelines all necessary progress and completion documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit must be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Establish the scope of the project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.3 Project deliverables and budget are identified from project planning and other relevant documentation and from discussions with appropriate person(s)</p> <p>1.3 Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation</p> <p>1.4 Plant, materials and skills needed to meet project outcome are identified from project planning and other relevant documentation</p> <p>1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement</p>
2 Manage project.	<p>2.1 OHS policies, procedures and programs are implemented and monitored</p> <p>2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project</p> <p>2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organisation policy</p> <p>2.4 Procurement processes and procedures are monitored to ensure on-time supply of plant and materials and in accordance with organisation policy</p> <p>2.5 Project is progress is monitored against schedule, quality requirements and budget</p> <p>2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation policy</p> <p>2.7 Variations are managed in accordance with agreed processes and in accordance with the contract</p>

	2.8	Project records are maintained and progress reports written and forwarded to all appropriate person(s)
3 Complete project.	3.1	Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget
	3.2	Project completion acceptance is sought from appropriate person(s) and handover documented in accordance with organisation policy

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and managing renewable energy projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.17	Project management
2.2.19	Customer/Client relations
2.2.32	Renewable energy industry sector customs and practices
2.18.8.2	Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized renewable energy project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Manage renewable energy projects as described in 7) and including:
    - A Establishing the scope of the project accurately,
    - B Ascertaining the input a project
    - C Developing effective management processes,
    - D Managing resources and variations effectively
    - E Resolving conflicts
    - F Adopting risk management strategies
    - G Maintaining records and submitting progress reports
    - H Meeting project outcomes
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in managing renewable energy projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.4; 2.6 to 2.8	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 2.5; 2.7; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.3; 2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.8; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6
---	--	---

## UEENEEK022A Plan renewable energy projects

### Unit Descriptor

1)

This unit covers development and documentation of renewable energy project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit must be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s)</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies</p> <p>2.4 Sources and availability of materials and human resources needed for the project are identified in accordance with organisation policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating in the project plan</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies</p> <p>2.7 Project plan proposal is documented in accordance with organisation policies and procedures</p>
3 Obtain approval for project plan.	<p>3.1 Project plan is presented and discussed with person(s) of higher authority</p> <p>3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation policy</p>

- 3.3 Final project plan is documented and approval obtained from appropriate person(s)

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and planning renewable energy projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.16.1 Project planning
- 2.2.18.2 Critical path and project analysis
- 2.2.32 Renewable energy industry sector customs and practices
- 2.18.8 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized renewable energy project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances,

assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan renewable energy projects as described in 7) and including:
    - A Determining the project requirements accurately,
    - B Establishing a project budget
    - C Developing effective work flow strategies,
    - D Documenting project plan proposal
    - E Negotiating alterations to the proposed project plan successfully
    - F Obtaining approval of the final plan
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning renewable energy projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6 to 3.2	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 1.6; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.7 to 3.2

## **UEENEEK023A Carry out basic repairs to renewable energy apparatus by replacement of components**

### **Unit Descriptor**

**1)**

This unit deals with the replacement of electrical and non-electrical components of renewable energy apparatus. It encompasses safe working practices, following written and oral instructions and procedures, basic testing techniques, disconnecting and reconnecting electrical/electronic components, dismantling and assembling apparatus and reporting repair activities.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE004A      Solve problems in multiple path d.c circuits

UEENEEE008A      Lay wiring/cabling and terminate accessories for extra-low voltage circuits

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      3      Writing      3      Numeracy      3

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to repair renewable energy apparatus.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed
- 1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established routines and procedures
- 1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Repair renewable energy apparatus.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- 2.3 Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Apparatus is dismantled in accordance with manufacturer's guide and supervisor's instructions
- 2.5 Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage
- 2.6 Repairs are affected efficiently without damage to other components, apparatus or circuits.
- 2.7 Apparatus is assembled in an appropriate sequence with all parts placed, secured and connected in accordance with manufacturer guide or industry practice
- 2.8 Procedures are followed for referring non-routine events to immediate supervisor for directions
- 2.9 Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices
- 3 Complete and report repair work activities.
  - 3.1 OHS work completion risk control measures and procedures are followed
  - 3.2 Repaired apparatus is prepared for testing by an appropriate person
  - 3.3 Work area is cleaned and made safe in accordance with established procedures
  - 3.4 Work supervisor is notified of the completion of the repair work in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and carrying out basic repairs to renewable energy apparatus by replacement of components. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical safe working practices
- 2.20.3 Introduction to renewable energy technologies

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to carrying out basic repairs renewable energy apparatus limited to replacement or repair of components in which the fault has been previously established. This must include at least two different renewable energy apparatus in which three different types of components are faulty one of which is mechanical.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to

consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out basic repairs to renewable energy apparatus by replacement of components as described in 7) and including:
    - A Following manufactures service instructions for access to components
    - B Removing at least three different types of components specified in the work instructions
    - C Replacing components to manufacturer requirements.
    - D Reassembling the apparatus correctly.
    - E Testing apparatus operation
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out basic repairs to renewable energy apparatus by replacement of components.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE002A	Dismantle, assemble and fabricate electro technology components
UEENEEE003A	Solve problems in single path extra low voltage circuits
UEENEEE004A	Solve problems in multiple path d.c. circuits
UEENEEE007A	Use drawings, diagrams, schedules and manuals

UEENEEE019A Solve problems in multiple path a.c. circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## **UEENEEK024A Assemble and set up photovoltaic apparatus in domestic dwellings**

### **Unit Descriptor**

**1)**

This unit covers installing of photovoltaic apparatus in domestic dwellings. It encompasses safe working practices; secure placement and connection of apparatus, following written and oral instruction and procedures and customer relations.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK025A Solve basic problems in photovoltaic energy apparatus

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

### **Application of the Unit**

**3)**

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG005A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to

regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to install photovoltaic apparatus.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines
- 1.2 Established OHS risk control measures are followed in preparation for the work
- 1.3 Safety hazards, which have not previously been identified, are reported and advice on risk control measures, are sought from the work supervisor
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken
- 1.5 Advice is sought from the work supervisor and/or other appropriate person(s) to ensure the work is coordinated effectively with others
- 1.6 Sources of materials that may be required for the work are identified and accessed in accordance with established routines
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Install photovoltaic apparatus.

- 2.1 Established OHS risk control measures for carrying out the work are followed

- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.3 Photovoltaic apparatus are installed to comply standards and job specifications with sufficient space to affect terminations
- 2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances
- 2.5 Cables and conductors are terminated at accessories/apparatus in accordance with manufacturer specifications and regulatory requirements
- 2.6 Non-routine events are referred to immediate supervisor for directions
- 2.7 The installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices
- 3 Adjust and set up apparatus.
  - 3.1 OHS work set-up and completion risk control measures and procedures are followed
  - 3.2 Routine procedures are followed to set up and adjust apparatus ready for use.
  - 3.3 Work site is cleaned and made safe in accordance with established procedures
  - 3.4 Work supervisor is notified of the completion of the installation work and apparatus documentation is forwarded to appropriate persons in accordance with established routines

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and assembling and setting up photovoltaic apparatus in domestic dwellings. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.5 Technical standards, regulations and codes for extra-low voltage work
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practice

2.20.13 Photovoltaic installations

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated by assembling and setting up two different types of photovoltaic apparatus in domestic dwellings on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to

consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble and set up photovoltaic apparatus in domestic dwellings as described in 7) and including:
    - A Reading and interpreting drawings of circuit arrangements and component locations.
    - B Placing and securing apparatus and accessories accurately
    - C Maintaining fire integrity
    - D Terminating cable and conductors correctly
    - E Connecting apparatus to manufacturer instructions
    - F Setting functional controls to customer's requirements

- G Completing necessary documentation including handing over apparatus documents to the customer
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling and setting up photovoltaic apparatus in domestic dwellings.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE002A	Dismantle, assemble and fabricate electro technology components
UEENEEE005A	Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

UEENEEE008A Lay wiring and terminate accessories for extra-low voltage circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5; 3.2	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEK025A Solve basic problems in photovoltaic energy apparatus

### Unit Descriptor

1)

This unit covers providing known solutions to predictable problems in photovoltaic energy apparatus operated at extra-low voltage. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed..

UEENEEK023A Carry out basic repairs to renewable energy apparatus by replacement of components

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work..

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG005A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to work on photovoltaic energy apparatus

- 1.1 OHS procedures for a given work area are obtained and understood
- 1.2 OHS risk control work preparation measures and procedures are followed
- 1.3 The nature of the apparatus problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve problem in photovoltaic energy apparatus

- 2.1 OHS risk control work measures and procedures are followed
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

	2.3	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
	2.4	Established routines are used to solve photovoltaic energy apparatus problems using measured and calculated values of apparatus operating parameters
	2.5	Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
3	Complete work and document problem solving activities.	
	3.1	OHS work completion risk control measures and procedures are followed
	3.2	Work site is cleaned and made safe in accordance with established procedures
	3.3	Justification for solutions used to solve photovoltaic energy apparatus problems is documented
	3.4	Work completion is documented and appropriate person(s) notified in accordance with established routine procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and solving basic problems in photovoltaic energy apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practice
- 2.20.14 Photovoltaic power systems

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to photovoltaic energy apparatus as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following:

- In relation to at least three of the following types of photovoltaic

energy problems and on at least two occasions:

- determining the operating parameters of an existing apparatus
- identifying and locating electrical faults
- identifying and locating mechanical fault

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve basic problems in photovoltaic energy apparatus as described in 7) and including:
    - A Understanding the nature of the problem
    - B Using established routines to solve apparatus problems
    - C Providing viable solutions to apparatus problems.
    - D Documenting justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

**assessment**

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving basic problems in photovoltaic energy apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.5; 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEK026A    Install and set up grid connected photovoltaic power systems**

### **Unit Descriptor**

**1)**

This unit covers the installation, adjustment and set-up of photovoltaic power systems and connecting to a supply grid inverter. It encompasses working safely and to installation standards, matching components with that specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK025A    Solve basic problems in photovoltaic energy apparatus

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading    3    Writing    3    Numeracy    3

### **Application of the Unit**

**3)**

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work..

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG005A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to install photovoltaic power systems.

- 1.1 OHS procedures for a given work area are obtained and understood
- 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented
- 1.4 Installation of the system is prepared in consultation with others effected by the work and sequenced appropriately
- 1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken
- 1.6 Location of system components is planned within the constraints of the building structure, significant and regulations
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others
- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements

- |   |  |   |
|---|--|---|
|   | 1.9  | Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety                |
|   | 1.10   | Preparatory work is checked to ensure no damage has occurred and complies with requirements   |
| 2 | Install photovoltaic power systems.            |   |
|   | 2.1  | OHS risk control measures and procedures for carrying out the work are followed   |
|   | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures                                 |
|   | 2.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures  |
|   | 2.4  | System components are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance        |
|   | 2.5  | Wiring is terminated at components and associated equipment in accordance with manufacturer specifications and functional and regulatory requirements                                       |
|   | 2.6  | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented  |
|   | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person   |
|   | 2.8  | Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures   |
|   | 2.9  | System installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles |
| 3 | Completion and report installation activities. |   |
|   | 3.1  | OHS work completion risk control measures and procedures are followed   |
|   | 3.2  | Work site is cleaned and made safe in accordance with established procedures  |

- 3.3 Final checks are made so that the installed apparatus conforms to requirements
- 3.4 ‘As-installed’ apparatus and associated equipment is documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and installing and setting up grid connected photovoltaic power systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practice
- 2.20.19 Grid connected inverters

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to installing photovoltaic power systems in at least two different types of premises construction or environment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and set up grid connected photovoltaic power systems as described in 7) and including:
    - A Reading and interpreting drawings related to and apparatus locations and circuit connections
    - B Placing and securing system components accurately
    - C Maintaining fire integrity
    - D Connecting system components to comply with requirements
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and setting up grid connected photovoltaic power systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2; 2.7	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEK027A Diagnose faults in renewable energy control systems

### Unit Descriptor

1)

This unit covers diagnosing and rectifying faults in renewable energy control systems. It encompasses working safely, reading circuit diagrams, sketching diagrams from traced wiring, logically applying fault finding procedures, conducting repairs and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK025A Solve basic problems in photovoltaic energy apparatus

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any formal recognition for this standard at the aligned AQF 4 level or higher.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work..

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG005A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to Diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control measures and procedures are followed in preparation for the work
- 1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s)
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
  - 2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel
  - 2.5 Fault finding is approached methodically drawing on knowledge of renewable energy systems and interconnecting circuits using measured and calculated values of circuit/apparatus parameters
  - 2.6 Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
  - 2.7 Faulty circuits/components are rechecked and their fault status confirmed
  - 2.8 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures
  - 2.9 Effectiveness of the repair is tested in accordance with established procedures
  - 2.10 Apparatus is reassembled, finally tested and prepared for return to service
  - 2.11 Unexpected situations are dealt with safely and with the approval of an authorised person
  - 2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed
  - 3.2 Work area is cleaned and made safe in accordance with established procedures
  - 3.3 Written justification is made for repairs to apparatus
  - 3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and diagnosing faults in renewable energy control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.3	Fault finding techniques
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practice
2.20.15	Renewable energy system electronics

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and repairing any four of the following faults in renewable energy systems:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose faults in renewable energy control systems as described in 7) and including:
    - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate persons
    - B Using methodical fault finding techniques
    - C Finding faults efficiently
    - D Rectifying faults effectively
    - E Completing documentation correctly
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing faults in renewable energy control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas	Refer to the following Performance Criteria for examples of application:	

and techniques used?	2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

	routine or contingent situations	2.11
--	----------------------------------	------

## UEENEEK028A **Solve basic problems in stand-alone renewable energy systems**

### **Unit Descriptor**

1)

This unit covers providing known solutions to predictable problems in stand-alone renewable energy systems operated at extra-low voltage. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK023A      Carry out basic repairs to renewable energy apparatus by replacement of components

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

### **License to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work..

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG005A and all prerequisite units it specifies

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to work on stand-alone renewable energy systems

- 1.1 OHS procedures for a given work area are obtained and understood
- 1.2 OHS risk control work preparation measures and procedures are followed
- 1.3 The nature of the apparatus problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.5 Sources of materials that may be required for the work are identified and accessed in accordance with established procedures
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve problem in stand-alone renewable energy systems

- 2.1 OHS risk control work measures and procedures are followed
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

	2.3	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures	
	2.4	Established routines are used to solve stand-alone renewable energy systems problems using measured and calculated values of apparatus operating parameters	
	2.5	Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices	
3	Complete work and document problem solving activities.	3.1	OHS work completion risk control measures and procedures are followed
		3.2	Work site is cleaned and made safe in accordance with established procedures
		3.3	Justification for solutions used to solve stand-alone renewable energy systems problems is documented
		3.4	Work completion is documented and appropriate person(s) notified in accordance with established routine procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and solving basic problems in stand-alone renewable energy systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practice
2.20.9.1	Stand alone renewable energy system components

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to stand-alone renewable energy systems as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following:

- In relation to at least three of the following types of stand-alone renewable energy system problems and on at least two occasions:
  - Open-circuit
  - Short-circuit
  - Incorrect connections
  - Insulation failure
  - Unsafe condition
  - Apparatus/component failure
  - Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety

and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve basic problems in stand-alone renewable energy systems as described in 7) and including:
    - A Understanding the nature of the problem
    - B Using established routines to solve apparatus problems
    - C Providing viable solutions to apparatus problems.
    - D Documenting justification for the solutions used
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving basic problems in stand-alone renewable energy systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEK029A Design renewable energy heating systems

### Unit Descriptor

1)

This unit covers the design of renewable energy heating systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria..

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK028A Solve problems in stand-alone renewable energy systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field**

4)

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to design renewable energy heating systems.

1.1 OHS procedures for a given work area are obtained and understood

1.2 The extent and nature of the electrical installation is determined from design brief

1.3 Safety and other regulatory requirements to which the electrical installation must comply are obtained and understood

1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work

2 Develop renewable energy heating systems design.

2.1 Knowledge of renewable energy heating systems performance standards, compliance methods is applied to the design

2.2 Alternative arrangements for the heating systems design are considered based on the requirements outlined in the design brief

2.3 Safety, functional and budgetary considerations are incorporated in the design

2.4 Heating systems design draft is checked for compliance with the design brief and regulatory requirements

2.5 Heating systems design is documented for submission to appropriate persons for acceptance and approval

2.6 Solutions to unplanned situation are provided consistent with organisation policy

3 Obtain approval for renewable energy heating systems design.

3.1 Heating systems design is presented and explained to client representative and/or other relevant persons

- 3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy
- 3.3 Final design is documented and approval obtained from appropriate persons.
- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing renewable energy heating systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.18.2 Thermodynamics
- 2.18.1 Occupational Health and Safety principles
- 2.20.18 Solar water heating systems
- 2.20.20 Renewable energy heating

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing renewable energy heating systems and their installation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design renewable energy heating systems as described in 7) and including:
    - A Developing outlines of alternative designs,
    - B Developing the design within the safety and functional requirements and budget limitations,
    - C Documenting and presenting design effectively,
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing renewable energy heating systems.

**Method of**

**8.4)**

**assessment**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED001A Use basic computer applications’

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENED001A Use basic computer applications'

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEK030A Solve basic problems in wind energy conversion systems**

### **Unit Descriptor**

1)

This unit covers providing known solutions to predictable problems in wind energy conversion systems. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable circuit problems

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK023A	Carry out basic repairs to renewable energy apparatus by replacement of components
-------------	--

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

### **License to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG005A and all prerequisite units it specifies.

Practice in the workplace and during training is also subject to

regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc

**Competency Field 4)**

Renewable and Sustainable Energy

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.5; 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEK031A Design wind energy conversion systems rated to 10 kW**

### **Unit Descriptor**

**1)**

This unit covers the design of wind energy conversion systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK030A      Solve basic problems in wind energy conversion systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1	Prepare to design wind energy conversion systems	1.1	OHS processes and procedures for a given work area are identified, obtained and understood
		1.2	The extent and nature of the system is determined from design brief
		1.3	Safety and other regulatory requirements to which the electrical installation must comply are identified, obtained and understood
		1.4	Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work
2	Develop wind energy conversion systems design.	2.1	Knowledge of wind energy conversion systems performance standards, compliance methods is applied to the design
		2.2	Alternative arrangements for the wind energy systems design are considered based on the requirements outlined in the design brief
		2.3	Safety, functional and budgetary considerations are incorporated in the design
		2.4	Wind energy system design draft is checked for compliance with the design brief and regulatory requirements
		2.5	Wind energy system design is documented for submission to appropriate persons for acceptance and approval
		2.6	Solutions to unplanned situation are provided consistent with organisation policy
3	Obtain approval for wind energy conversion systems design.	3.1	Wind energy system design is presented and explained to client representative and/or other relevant persons

- 3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy
- 3.3 Final design is documented and approval obtained from appropriate persons
- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing wind energy conversion systems rated to 10 kW. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.1 Occupational Health and Safety principles

2.20.16.2 Wind energy conversion systems

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different wind energy conversion systems and their installation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design wind energy conversion systems rated to 10 kW as described in 7) and including:
    - A Developing outlines of alternative designs,
    - B Developing the design within the safety and functional requirements and budget limitations,
    - C Documenting and presenting design effectively,
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing wind energy conversion systems rated to 10 kW.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENED001A      Use basic computer applications

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with ‘UEENEED001A Use basic computer applications’

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEK032A      Develop strategies to address sustainability issues**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers developing strategies to address greenhouse gases and sustainability issues. It encompasses working safely, apply extensive knowledge of sustainable energy systems and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  There are no prerequisite competencies for this unit.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      5      Writing      5      Numeracy      5
<b>Application of the Unit</b>	<b>3)</b>  This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.
<b>License to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to develop strategies to address sustainability issues.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work</p> <p>1.3 The extent of the sustainability issues are determined from performance specifications and situation reports and in consultation with relevant persons</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work</p> <p>1.5 Effective strategies are determined to ensure solution development and implementation is carried out efficiently</p>
2 Develop strategies to address sustainability issues	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed</p> <p>2.2 Knowledge of sustainability is applied to developing strategies to address greenhouse gas and sustainability issues</p> <p>2.3 Parameters, specifications and performance requirements in relation to sustainability issues are set in accordance with established procedures</p> <p>2.4 Approaches to resolving sustainability issues are analysed to provide most effective solutions</p> <p>2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards</p>
3 Document strategies to address sustainability issues.	3.1 Solutions to sustainability issues are tested to determine their effectiveness and modified where necessary

- 3.2 Adopted solutions are documented, including instructions for implementation that incorporates risk control measures to be followed
- 3.3 Appropriately competent and qualified persons required to implement solutions to sustainability issues are coordinated in accordance with regulatory requirements and enterprise policy (See Note)
- 3.4 Justification for strategies used to solve sustainability issues is documented for inclusion in work/project development records in accordance with professional standards

Note:

A licence or permit to practise in the workplace is required for specified work on building and premises

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and developing strategies to address sustainability issues. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.20.11 Sustainability and greenhouse reduction strategies

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing strategies to address sustainability issues for at least four renewable energy problems.

Note.

Typical sustainability issues are those encountered in meeting sustainability performance standards, such as reducing needs for energy use, reducing causes of greenhouse gas emissions, revising a energy system operating parameters and dealing with energy system efficiencies.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified

in the Performance Criteria and Range Statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop strategies to address sustainability issues as described in 7) and including:
    - A Understanding the extent of the renewable energy problem
    - B Forming effective strategies for solution development and implementation
    - C Obtaining renewable energy system/component parameters, specifications and performance requirements appropriate to each problem
    - D Testing solutions to renewable energy problems
    - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed
    - F Documenting justification of solutions implemented in accordance with professional standards
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials

to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing strategies to address sustainability issues.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

	the context of the work task	2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEK033A Design hybrid power systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to design hybrid power systems	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 The extent and nature of the system is determined from design brief</p> <p>1.3 Safety and other regulatory requirements to which the electrical installation must comply are identified and understood</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work</p>
2 Develop hybrid power systems design	<p>2.1 Knowledge of hybrid power systems performance standards, compliance methods is applied to the design</p> <p>2.2 Alternative arrangements for the wind energy systems design are considered based on the requirements outlined in the design brief</p> <p>2.3 Safety, functional and budgetary considerations are incorporated in the design</p> <p>2.4 Wind energy system design draft is checked for compliance with the design brief and regulatory requirements</p> <p>2.5 Wind energy system design is documented for submission to appropriate persons for acceptance and approval</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation policy</p>
3 Obtain approval for hybrid power systems design	<p>3.1 Wind energy system design is presented and explained to client representative and/or other relevant persons</p> <p>3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy</p> <p>3.3 Final design is documented and approval obtained from appropriate persons</p>

- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing hybrid power systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.20.10 Hybrid Energy Systems

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different hybrid power systems and their installation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Design hybrid power systems as described in 7) and including:
  - A Developing outlines of alternative designs
  - B Developing the design within the safety and functional requirements and budget limitations
  - C Documenting and presenting design effectively
  - D Successfully negotiating design alteration requests
  - E Obtaining approval for final design
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing hybrid power systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENED001A      Use basic computer applications

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: (See Note)	2

Note:  
Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEED001A Use basic computer applications'

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following

performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEK035A Design grid connected power supply systems**

### **Unit Descriptor**

**1)**

This unit covers the design of grid connected power supply systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK025A	Solve basic problems in photovoltaic energy apparatus
-------------	---

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

### **Competency Field**

**4)**

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to design grid connected power supply systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 The extent and nature of the system is determined from design brief.</p> <p>1.3 Safety and other regulatory requirements to which the electrical installation must comply are identified, obtained and understood</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work.</p>
2 Develop grid connected power supply systems design.	<p>2.1 Knowledge of grid connected power supply systems performance standards, compliance methods is applied to the design.</p> <p>2.2 Alternative arrangements for the hybrid power systems design are considered based on the requirements outlined in the design brief.</p> <p>2.3 Safety, functional and budgetary considerations are incorporated in the design.</p> <p>2.4 Grid connected power supply system design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.5 Grid connected power supply system design is documented for submission to appropriate persons for acceptance and approval.</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation policy.</p>
3 Obtain approval for grid connected power supply systems design	<p>3.1 Grid connected power supply system design is presented and explained to client representative and/or other relevant persons.</p> <p>3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy.</p> <p>3.3 Final design is documented and approval obtained from appropriate persons.</p>

- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing grid connected power supply systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.2.1 Technical standards, regulations and codes for general electrical installations
- 2.5.12 Electricity distributors, supply requirements
- 2.6.2.2 Electrical metering arrangements
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.20.19 Grid connected inverters

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different grid connected power supply systems and their installation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design grid connected power supply systems as described in 7) and including:
    - A Developing outlines of alternative designs
    - B Developing the design within the safety and functional requirements and budget limitations
    - C Documenting and presenting design effectively
    - D Successfully negotiating design alteration requests
    - E Obtaining approval for final design
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing grid connected power supply systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENED001A      Use basic computer applications

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with ‘UEENEED001A Use basic computer applications’

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEK037A Install and set up micro-hydro systems

### Unit Descriptor

1)

This unit covers the installation and adjustment and set-up of micro-hydro systems. It encompasses working safely and to installation standards, matching components with that specified for a given location, placing and securing system components accurately, making required circuit connections and completing the necessary installation documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK023A	Carry out basic repairs to renewable energy apparatus by replacement of components
-------------	--

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment-based programs incorporated in approved contracts of training.

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Note.

Competency requirements to be granted a license to carry out installations, fault finding, repair or maintenance on low voltage electrical installations is incorporated in unit UEENEEG005A and all prerequisite units it specifies.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

**Competency Field 4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to install micro-hydro systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Health and safety risks are identified, and established risk control measures and procedures in preparation for the work are followed
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented
- 1.4 Installation of the system is prepared in consultation with others effected by the work and sequenced appropriately
- 1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken
- 1.6 Location of system components is planned within the constraints of the building structure, significants and regulations
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others
- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements

- |   |  |      |  |
|---|--|------|--|
|   |  | 1.9  | Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety                   |
|   |  | 1.10 | Preparatory work is checked to ensure no damage has occurred and complies with requirements  |
| 2 | Install micro-hydro systems.                   | 2.1  | OHS risk control measures and procedures are followed for carrying out the work  |
|   |  | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures                                    |
|   |  | 2.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures   |
|   |  | 2.4  | System components are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance           |
|   |  | 2.5  | Wiring is terminated at system components in accordance with manufacturer specifications and functional and regulatory requirements  |
|   |  | 2.6  | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented   |
|   |  | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person  |
|   |  | 2.8  | Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures  |
|   |  | 2.9  | Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles |
| 3 | Completion and report installation activities. | 3.1  | OHS work completion risk control measures and procedures are followed  |
|   |  | 3.2  | Work site is cleaned and made safe in accordance with established procedures   |
|   |  | 3.3  | Final checks are made so that the installed apparatus conforms to requirements   |

- 3.4 'As-installed' apparatus and associated equipment is documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and installing and setting up micro-hydro systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.20.17.1 Micro-hydro systems installation and maintenance processes

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to installing micro-hydro systems in at least two different types of premises construction or environment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However,

it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and set up micro-hydro systems as described in 7) and including:
    - A Reading and interpreting drawings related to and apparatus locations and circuit connections.
    - B Placing and securing system components accurately
    - C Maintaining fire integrity
    - D Connecting system components to comply with requirements
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and setting up micro-hydro systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety units must be reassessed in relation to this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEK038A Design micro-hydro systems

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the design of micro-hydro systems and their installation. ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to design micro-hydro systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 The extent and nature of the electrical installation is determined from design brief</p> <p>1.3 Safety and other regulatory requirements to which the electrical installation must comply are identified, obtained and understood</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work</p>
2 Develop micro-hydro systems design.	<p>2.1 Knowledge of micro-hydro systems performance standards, compliance methods is applied to the design</p> <p>2.2 Alternative arrangements for the hybrid power systems design are considered based on the requirements outlined in the design brief</p> <p>2.3 Safety, functional and budgetary considerations are incorporated in the design</p> <p>2.4 Micro-hydro system design draft is checked for compliance with the design brief and regulatory requirements</p> <p>2.5 Micro-hydro system design is documented for submission to appropriate persons for acceptance and approval</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation policy</p>
3 Obtain approval for micro-hydro systems design.	<p>3.1 Micro-hydro system design is presented and explained to client representative and/or other relevant persons</p> <p>3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy</p> <p>3.3 Final design is documented and approval obtained from appropriate persons</p>

- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing micro-hydro systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.20.17.1 Micro-hydro systems installation and maintenance processes
- 2.20.17.2 Micro-hydro systems

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different micro-hydro systems and their installation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Design micro-hydro systems as described in 7) and including:
  - A Developing outlines of alternative designs
  - B Developing the design within the safety and functional requirements and budget limitations
  - C Documenting and presenting design effectively
  - D Successfully negotiating design alteration requests
  - E Obtaining approval for final design
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing micro-hydro systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENED001A

Use basic computer applications

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: (See Note)	2

Note:  
Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEED001A Use basic computer applications'

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEK039A Design stand-alone renewable energy systems

### Unit Descriptor

1)

This unit covers the design of stand-alone renewable energy systems and their installation. It encompasses following design briefs, incorporating schemes for protection of persons and property from dangers of system malfunction, ensuring other safety and performance standards and functional requirements are met and documenting design calculations and criteria.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK028A	Solve problems in stand-alone renewable energy systems
-------------	--

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher..

### License to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

### Competency Field

4)

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to design stand-alone renewable energy systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 The extent and nature of the electrical installation is determined from design brief</p> <p>1.3 Safety and other regulatory requirements to which the electrical installation must comply are identified, obtained and understood</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work</p>
2 Develop stand-alone renewable energy systems design.	<p>2.1 Knowledge of stand-alone renewable energy systems performance standards, compliance methods is applied to the design</p> <p>2.2 Alternative arrangements for the hybrid power systems design are considered based on the requirements outlined in the design brief</p> <p>2.3 Safety, functional and budgetary considerations are incorporated in the design</p> <p>2.4 Stand-alone renewable energy system design draft is checked for compliance with the design brief and regulatory requirements</p> <p>2.5 Stand-alone renewable energy system design is documented for submission to appropriate persons for acceptance and approval</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation policy.</p>
3 Obtain approval for stand-alone renewable energy systems design.	<p>3.1 Stand-alone renewable energy system design is presented and explained to client representative and/or other relevant persons</p> <p>3.2 Requests for alterations to the design are negotiated with relevant persons within the constraints of organisation policy</p> <p>3.3 Final design is documented and approval obtained from appropriate persons</p>

- 3.4 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and designing stand-alone renewable energy systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.1 Occupational Health and Safety principles

2.20.9.2 Stand-alone renewable energy system design consideration

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to designing at least two different stand-alone renewable energy systems and their installation with at least three energy sources.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Design stand-alone renewable energy systems as described in 7) and including:
  - A Developing outlines of alternative designs
  - B Developing the design within the safety and functional requirements and budget limitations
  - C Documenting and presenting design effectively
  - D Successfully negotiating design alteration requests
  - E Obtaining approval for final design
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing stand-alone renewable energy systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE001A

Use basic computer applications

**Key competencies**
**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: (See Note)	2

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEK040A **Develop engineering solutions to renewable energy problems**

### **Unit Descriptor**

1)

This unit covers developing engineering solutions to resolve problems with renewable energy. It encompasses working safely, applying extensive knowledge of renewable energy systems and components and their operating parameters, gathering and analysing data, applying problem solving techniques, developing and documenting alternatives solutions.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK031A	Design wind energy conversion systems rated to 10 kW
UEENEEK032A	Develop strategies to address sustainability issues
UEENEEK035A	Design grid connected power supply systems
UEENEEK038A	Design micro-hydro systems
UEENEEK039A	Design stand-alone renewable energy systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

**License to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

**Competency Field**

**4)**

Renewable and Sustainable Energy

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.

1 Prepare to develop engineering solution for renewable energy problems

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work
- 1.3 The extent of the renewable energy problem is determined from performance specifications and situation reports and in consultation with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work
- 1.5 Effective strategies are determined to ensure solution development and implementation is carried out efficiently

2 Develop engineering solution for renewable energy problems

- 2.1 OHS risk control measures and procedures are followed for carrying out the work
- 2.2 Knowledge of renewable energy systems and components, their construction, operation, characteristics and applications are applied to developing solutions to renewable energy problems
- 2.3 Parameters, specifications and performance requirements in relation to each renewable energy problem are set in accordance with established procedures
- 2.4 Approaches to resolving renewable energy problems are analysed to provide most effective solutions

	2.5	Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy
	2.6	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards
3	Test, document and implement engineering solution for renewable energy problem	<p>3.1 Solutions to renewable energy problems are tested to determine their effectiveness and modified where necessary</p> <p>3.2 Adopted solutions are documented, including instructions for implementation that incorporates risk control measures to be followed</p> <p>3.3 Appropriately competent and qualified persons required to implement solutions to renewable energy problems are coordinated in accordance with regulatory requirements and enterprise policy (See Note)</p> <p>3.4 Justification for solutions used to solve renewable energy problems is documented for inclusion in work/project development records in accordance with professional standards</p>

Note

A licence or permit to practise in the workplace is required for specified work on building and premises

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and developing engineering solutions to renewable energy problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.17.18.1 Thermodynamics fundamentals
- 2.18.1 Occupational Health and Safety principles
- 2.20.21 Distributed generation

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing engineering solution for at least four renewable energy problems.

Note.

Typical renewable energy problems are those encountered in meeting performance requirements and

compliance standards, revising a system operating parameters and dealing with system malfunctions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop engineering solutions to renewable energy problems as described in 7) and including:
    - A Understanding the extent of the renewable energy problem
    - B Forming effective strategies for solution development and implementation
    - C Obtaining renewable energy system/component parameters, specifications and performance requirements appropriate to each problem.
    - D Testing and solutions to renewable energy problems
    - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
    - F Documenting justification of solutions implemented in accordance with professional standards
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence must be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing engineering solutions to renewable energy problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) must be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEK041A **Develop strategies for effective energy reduction in buildings**

### **Unit Descriptor**

1)

This unit covers evaluating energy used in buildings and developing and documenting strategies/methods to effectively reduce energy use without compromising occupancy standards. It encompasses working safely, setting up and conducting evaluation measurements and evaluating energy use from measured parameters.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEK032A      Develop strategies to address sustainability issues

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **License to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and contracts of training such as new apprenticeships.

### **Competency Field**

4)

Renewable and Sustainable Energy

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance must be consistent with the evidence guide.
1 Prepare to develop strategies for effective energy reduction in buildings.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work</p> <p>1.3 The extent of evaluation is determined from specifications of building(s) and services, plant and machinery and discussed with appropriate personnel</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others</p> <p>1.5 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety</p>
2 Develop strategies for effective energy reduction in buildings.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed</p> <p>2.2 Tests and measurements are carried out in strict accordance with OHS requirements safety procedures</p> <p>2.3 In-depth knowledge of the energy use of building services, plant and machinery is applied to the evaluation process</p> <p>2.4 Energy evaluation tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny</p> <p>2.5 Strategies to reduce energy use with compromising occupancy standards are developed from knowledge of energy management and evaluation test results.</p> <p>2.6 Unexpected situations are dealt with safely and with the approval of an authorised person</p> <p>2.7 Evaluation is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices</p>
3 Document and report strategies for effective energy reduction in buildings	3.1 OHS work completion risk control measures and procedures are followed

- 3.2 Work site is cleaned and made safe in accordance with established procedures
- 3.3 Results of energy use evaluation and recommended strategies and their criterion for energy reduction are documented in accordance with established procedures
- 3.4 Energy reduction report is forwarded to appropriate persons

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence must show that knowledge has been acquired of safe working practices and developing strategies for effective energy reduction in buildings. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.16.13 Building management systems
- 2.18.1 Occupational Health and Safety principles
- 2.20.12 Energy efficient building design

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to developing strategies for effective energy reduction in at least two buildings each used for a different purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit must be considered holistically. Each element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence must also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this must incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop strategies for effective energy reduction in buildings as described in 7) and including:
    - A Determining the extent of the evaluation.
    - B Setting up and conducting appropriate examinations and tests.
    - C Reporting evaluation including recommendation for improving energy efficiency
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing strategies for effective energy reduction in buildings.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## **UEENEER001A      Contribute to the planning of a research project**

### **Unit Descriptor**

**1)**

This unit covers the ability to gather background information relevant to a research project, understand the context of the research project and contribute to the development of a research plan to achieve quality outcomes.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'.

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

**4)**

Research

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Acquire and understand background information relevant to the Research project.	<p>1.1 Information sources about the research topic are identified and evaluated for reliability and validity.</p> <p>1.2 Information about the consumer, product, market and competition is collected, reviewed and understood.</p> <p>1.3 Key clients/stakeholders, their views and interests, are identified and recorded.</p> <p>1.4 The context (industrial, legal, ethical, political) of the research project is identified and understood.</p>
2 Understand the Logistics of a Research Project.	<p>2.1 Client, stakeholder and organisational requirements are identified and understood.</p> <p>2.2 Contractual obligations of the project are identified and understood.</p> <p>2.3 Resources available to support the project are identified and understood.</p> <p>2.4 Quality standards for the project are identified and understood.</p>
3 Contribute to the planning of a Research Project	<p>3.1 Project objectives, methodology and strategies appropriate to the requirements and contractual obligations of the project are identified and selected, in a team environment.</p> <p>3.2 Project phases, milestones, reporting and review points are identified, in a team environment.</p> <p>3.3 criteria for evaluating each project deliverable against pre-defined quality standards are developed, in a team environment.</p> <p>3.4 A Research Plan is developed, in a team environment.</p>
4 Seek endorsement and ensure distribution of a Research Project Plan	<p>4.1 The draft Research Plan is forwarded to clients/stakeholders/appropriate personnel for perusal and comment.</p>

- 4.2 The draft Research Plan is amended to incorporate recommended improvements from clients/stakeholders/appropriate personnel.
- 4.3 The final Research Plan is confirmed against overall project deliverables by appropriate personnel.
- 4.4 The final Research Plan is distributed to all appropriate personnel and team members.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and contribute to the planning of a research project.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.16.1 Project planning
- 2.2.17 Project management
- 2.2.25 Research concepts
- 2.2.33 Work in a team
- 2.2.34 Scientific writing and communication
- 2.2.35 Data collection techniques
- 2.2.36 Data analysis and presentation
- 2.2.37 Product development and trials
- 2.2.38 Intellectual property concepts
- 2.2.39 Commercialisation concepts
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit describes work conducted by technical personnel who contribute to the planning of research projects. Typically this work is performed by high-level technicians, working as part of a product/application/service research and/or design, development and implementation team. It generally involves working closely with a range of management and production/operations personnel and requires balancing the business and technical sides of the research process.

This unit does not require knowledge of industry sectors, equipment and/or materials other than that in which the learner works. It assumes an understanding of the operation of all relevant business processes but does not necessarily require them to be the responsibility of the learner.

At this level, personnel should be able to interpret and explain sections/types of legislation, codes, regulations, Australian Standards and Intellectual Property rights that apply to the subject matter to be researched.

This unit should be demonstrated in accordance with the organisation's:

- Occupational Health and Safety and Workplace Safety policies and procedures
- Goals, values, objectives, plans, systems and processes
- Business and performance plans
- Ethical standards
- Client service standards
- Quality and continuous improvement processes and standards
- Standard Operating Procedures
- Resources

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Contribute to the planning of a research project as described in 7) and including:
    - A Demonstrating consistent performance for each Element of the unit
    - B Meeting the Performance Criteria associated with each Element of the unit by employing techniques, procedures, information and resources available in the workplace
    - C Demonstrating an understanding of the Underpinning Knowledge and Skills identified in the section of this unit titled ‘Essential knowledge and associated skills’.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in contributing to the planning of a research project.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- BSXFM1504A Participate in, lead and facilitate work teams
- UEENEER002A Contribute to the conduct of a research project
- UEENEER003A Contribute to the development of a product/application/service
- UEENEER004A Contribute to the trial of a product/application/service
- UEENEER005A Contribute to intellectual property management
- BSBCM306A Produce business documents
- BSBSBM405A Monitor and manage business operations
- UEENEER00A Contribute to the commercialisation of a product/application/service
- PMBQUAL309A Solve problems using 'quality tools'

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  All	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  3.1 to 4.4	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.1 to 4.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  4.1	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  All

**UEENEER001A – Contribute to the planning of a research project**

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 2.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  All

## **UEENEER002A Contribute to the conduct of a research project**

### **Unit Descriptor**

**1)**

This unit covers the ability to identify information sources and collect and analyse information in accordance with confirmed research project objectives and compile and present results in accordance with current business practices.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'.

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

**4)**

Research

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Confirm research parameters	<p>1.1 Consultation with appropriate personnel is undertaken to ensure that the scope, objectives and expected outcomes of the research are understood.</p> <p>1.2 Timeframes, available resources, budget and quality standards for the research are confirmed and understood.</p> <p>1.3 The research methodology and strategies are confirmed and understood.</p>
2 Identify sources and availability of information	<p>2.1 The type and range of information required is clearly identified to meet research objectives.</p> <p>2.2 Information sources are identified and evaluated for their contribution to the research.</p> <p>2.3 Protocols and other procedures required to access information are clearly identified and appropriate action taken.</p> <p>2.4 Limitations on the availability of material are identified and appropriate action taken.</p> <p>2.5 Obstacles to the collection of information are identified and appropriate action taken.</p>
3 Collect information to achieve research objectives	<p>3.1 Information collection methods are applied correctly and consistently, in accordance with appropriate procedures and agreements reached with information sources.</p> <p>3.2 The types and range of information collected are in line with the research objectives.</p> <p>3.3 Information is recorded accurately and clearly in an appropriate format.</p>
4 Analyse and compile research information	<p>4.1 Methods of analysis and compilation are appropriate to the information collected and objectives of the research.</p> <p>4.2 Methodologies and procedures incorporate current technological developments and meet relevant industry standards.</p>

- |   |   |   |  |
|---|---|---|--|
|   | 4.3                                       | Results are obtained within the specified time, budget and quality constraints. |  |
|   | 4.4                                       | Results are recorded accurately and clearly in appropriate format.              |  |
|   | 4.5                                       | Results are carefully interpreted and conclusions drawn.                        |  |
|   | 4.6                                       | The results and conclusions are reviewed with appropriate personnel.            |  |
| 5 | Present research results and conclusions. | 5.1   | A report/summary/presentation detailing the research results and conclusions is developed in accordance with current business practices. |
|   |   | 5.2   | Confidential information is protected in accordance with predefined agreements and/or procedures.  |
|   |   | 5.3   | All sources of information are accurately acknowledged or cited in a recognised and appropriate format.                                  |
|   |   | 5.4   | The success of the research methodology is evaluated against the research objectives.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and contributing to the conduct of a research project.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |

| 2.18.1 | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit describes work conducted by technical personnel who contribute to the planning of research projects. Typically this work is performed by high-level technicians, working as part of a product/application/service research and/or design, development and implementation team. It generally involves working closely with a range of management and production/operations personnel and requires balancing the business and technical sides of the research process.

This unit does not require knowledge of industry sectors, equipment and/or materials other than that in which the learner works. It assumes an understanding of the operation of all relevant business processes but does not necessarily require them to be the responsibility of the learner.

At this level, personnel should be able to interpret and explain sections/types of legislation, codes, regulations, Australian Standards and Intellectual Property rights that apply to the subject matter to be researched.

This unit should be demonstrated in accordance with the organisation's:

- Occupational Health and Safety and Workplace Safety policies and procedures
- Goals, values, objectives, plans, systems and processes
- Business and performance plans
- Ethical standards
- Client service standards
- Quality and continuous improvement processes and standards
- Standard Operating Procedures
- Resources

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement OHS workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Contribute to the conduct of a research project as described in 7) and including:
    - A Demonstrating consistent performance for each Element of the unit
    - B Meeting the Performance Criteria associated with each Element of the unit by employing techniques, procedures, information and resources available in the workplace
    - C Demonstrating an understanding of the Underpinning Knowledge and Skills identified in the section of this unit titled ‘Essential knowledge and associated skills’.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in contributing to the conduct of a research project.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods outlined in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- BSXFM1504A Participate in, lead and facilitate work teams
- UEENEER001A Contribute to the planning of a research project
- UEENEER003A Contribute to the development of a product/application/service
- UEENEER004A Contribute to the trial of a product/application/service
- UEENEER005A Contribute to intellectual property management
- BSBCM306A Produce business documents
- BSBSBM405A Monitor and manage business operations
- UEENEER006A Contribute to the commercialisation of a product/application/service
- PMBQUAL309A Solve problems using ‘quality tools’

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 5.1 to 5.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 4.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1 to 4.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 3.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEER003A Contribute to the development of a product/application/service**

### **Unit Descriptor**

**1)**

This unit covers the ability to assist managers to plan, coordinate and report on the development of a product/application/service.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'.

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

**4)**

Research

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Contribute to the development of a design brief for a product/service/application.	<p>1.1 Technical specifications, regulatory, industrial, intellectual property and market requirements of the product/application/service to be developed are negotiated with client(s), stakeholders and management and agreed on.</p> <p>1.2 Technical specifications, regulatory, industrial, intellectual property and market requirements of the product/application/service to be developed are confirmed.</p> <p>1.3 Resource requirements, including personnel, equipment and materials needed to develop the product/application/service area confirmed.</p> <p>1.4 Quality requirements and standards for development of the product/application/service are confirmed.</p> <p>1.5 A design brief for the product/application/service is developed in a team environment.</p> <p>1.6 Approval is obtained for the design brief from appropriate personnel.</p>
2 Prepare to develop a product/application/service	<p>2.1 The required outcome(s) as identified in design brief is confirmed with appropriate personnel.</p> <p>2.2 The product/application/service is developed in consultation with appropriate production personnel.</p> <p>2.3 A development procedure is formulated to:                      - deliver required quality outcome(s)                      - ensure OHS, environmental, industrial and regulatory requirements are stringently observed                      - ensure tooling, process, materials and equipment specifications are addressed</p> <p>2.4 Approval is obtained of the development procedure from appropriate personnel.</p>
3 Contribute to the development of a	3.1 The development procedure is confirmed with appropriate personnel.

product/application/service	3.2	A product/application/ service product is developed in accordance with the design brief and development procedure.
	3.3	Development results are recorded in accordance with enterprise procedures.
	3.4	Development results and identify characteristics which are outside design and development specifications are identified.
	3.5	Changes are recommended, as necessary, to achieve product/application/ service quality and production requirements.
	3.6	Approval of changes is obtained from appropriate personnel.
	3.7	Revision of the product/ application/service to achieve quality and production requirements is coordinated where necessary.
	4 Document and report product/application/service development outcomes	4.1
4.2		Product/application/service development reporting requirements are completed.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and contributing to the development of a product/application/service.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.17 Project management
- 2.2.25 Research concepts
- 2.2.33 Work in a team
- 2.2.34 Scientific writing and communication
- 2.2.35 Data collection techniques
- 2.2.36 Data analysis and presentation
- 2.2.37 Product development and trials
- 2.2.38 Intellectual property concepts

## 2.18.1 Occupational Health and Safety principles

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit describes work conducted by technical personnel who contribute to the development of a product/application/service.

Product/application/service design and development briefs may be provided by external and/or internal clients.

Typically the work covered by this unit is performed by high-level technicians, working as part of a product/application/service research and/or design, development and implementation team. This generally involves working closely with a range of management and production/operations personnel and requires balancing the business and technical sides of the product/application/service being developed.

This unit does not require knowledge of industry sectors, equipment and/or materials other than that in which the learner works. It assumes an understanding of the operation of all relevant business processes but does not necessarily require them to be the responsibility of the learner.

At this level, personnel should be able to interpret and explain sections/types of legislation, codes, regulations, Australian Standards and Intellectual Property rights that apply to the subject matter to be researched.

This unit should be demonstrated in accordance with the organisation's:

- Occupational Health and Safety and Workplace Safety policies and procedures
- Goals, values, objectives, plans, systems and processes
- Business and performance plans
- Ethical standards
- Client service standards
- Quality and continuous improvement processes and standards
- Resources, which may be subject to negotiation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Contribute to the development of a product/application/service as described in 7) and including:
    - A Demonstrating consistent performance for each Element of the unit
    - B Meeting the Performance Criteria associated with each Element of the unit by employing techniques, procedures, information and resources available in the workplace
    - C Demonstrating an understanding of the Underpinning Knowledge and Skills identified in the section of this unit titled 'Essential knowledge and associated skills'.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in contributing to the development of a product/application/service.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

BSXFM1504A	Participate in, lead and facilitate work teams
UEENEER001A	Contribute to the planning of a research project
UEENEER002A	Conduct to the conduct of a research project
UEENEER004A	Contribute to the trial of a product/application/service
UEENEER005A	Contribute to intellectual property management
BSBCM306A	Produce business documents
BSBSBM405A	Monitor and manage business operations

UEENEER006A Contribute to the commercialisation of a product/application/service

PMBQUAL309A Solve problems using ‘quality tools’

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.7	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.7	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 2.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1 to 3.2; 3.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3 to 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 2.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEER004A Contribute to the trial of a product/application/service

### Unit Descriptor

1)

This unit covers the ability to assist the manager’s plan, coordinate and report on a product/application/service trial.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’.

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Research

### ELEMENT

### PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Acquire and understand background

1.1 Information sources about the research topic are identified and evaluated for reliability and validity.

information relevant to the trial of the product/application/service.	1.2	Information about the consumer, product, market and competition is collected, reviewed and understood.
	1.3	Key clients/stakeholders and their particular views and interests are identified and recorded.
	1.4	The context (industrial, legal, ethical, political etc) of the research project is identified and understood.
2 Understand the logistics of a trial of a product, application and/or service	2.1	Client, stakeholder and organisational requirements are identified and understood.
	2.2	Contractual obligations of the project are identified and understood.
	2.3	Resources available to support the project are identified and understood.
	2.4	Quality standards for the project are identified and understood.
3 Contribute to the trial of a product, application and/or service	3.1	Project objectives, methodology and strategies appropriate to the requirements and contractual obligations of the project are identified and selected in a team environment.
	3.2	Project phases, milestones, reporting and review points are identified in a team environment.
	3.3	Criteria for evaluating each project deliverable against predefined quality standards are developed in a team environment.
	3.4	A Research Plan is developed in a team environment.
4 Seek endorsement and ensure distribution of a trial of a product, application and/or service	4.1	The draft Research Plan is forwarded to clients/stakeholders/ appropriate personnel for perusal and comment.
	4.2	The draft Research Plan is amended to incorporate recommended improvements from clients/stakeholders/appropriate personnel
	4.3	The final Research Plan is confirmed against overall project deliverables by appropriate personnel.
	4.4	The final Research Plan is distributed to all appropriate personnel and team members.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and contributing to the trial of a product/application/service.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.17	Project management
2.2.25	Research concepts
2.2.33	Work in a team
2.2.34	Scientific writing and communication
2.2.35	Data collection techniques
2.2.36	Data analysis and presentation
2.2.37	Product development and trials
2.2.38	Intellectual property concepts
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit describes work conducted by technical personnel who contribute to the trial and, where necessary, retrial of products, applications and/or services to meet the requirements of a development brief.

Product/application/service design and development briefs may be provided by external and/or internal clients.

Typically the work covered by this unit is performed by high-level technicians, working as part of a product/application/service research and/or design, development and implementation team. This generally involves working closely with a range of management and production/operations personnel and requires balancing the business and technical sides of the product/application/service being developed.

This unit does not require knowledge of industry sectors, equipment and/or materials other than that in which the learner works. It assumes an understanding of the operation of all relevant business processes but does not necessarily require them to be the responsibility of the learner.

At this level, personnel should be able to interpret and explain those sections of legislation, codes, regulations, Australian Standards and Intellectual Property rights that apply to the

tasks undertaken in trailing products/applications/services. They should be aware of enterprise business goals and the impact of trials on these goals.

This unit should be demonstrated in accordance with the organisation's:

- Occupational Health and Safety and Workplace Safety policies and procedures
- Goals, values, objectives, plans, systems and processes
- Business and performance plans
- Ethical standards
- Client service standards
- Quality and continuous improvement processes and standards
- Resources, which may be subject to negotiation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity,

electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Contribute to the trial of a product/application/service as described in 7) and including:
    - A Demonstrating consistent performance for each Element of the unit

- B Meeting the Performance Criteria associated with each Element of the unit by employing techniques, procedures, information and resources available in the workplace
- C Demonstrating an understanding of the Underpinning Knowledge and Skills identified in the section of this unit titled ‘Essential knowledge and associated skills’.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in contributing to the trial of a product/application/service.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- BSXFM1504A Participate in, lead and facilitate work teams
- UEENEER001A Contribute to the planning of a research project
- UEENEER002A Conduct to the conduct of a research project

- UEENEER004A Contribute to the trial of a product/application/service
- UEENEER005A Contribute to intellectual property management
- BSBCM306A Produce business documents
- BSBSBM405A Monitor and manage business operations
- UEENEER006A Contribute to the commercialisation of a product/application/service
- PMBQUAL309A Solve problems using ‘quality tools’

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 2.7	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 2.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.2; 2.6 to 2.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.5; 3.1 to 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 2.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEER005A Contribute to Intellectual Property management**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers the ability to assist in the planning, management and protection of an organisation’s Intellectual Property.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  There are no prerequisite competencies for this unit.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’.  Reading      5      Writing      5      Numeracy      5
<b>Application of the Unit</b>	<b>3)</b>  This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Research

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Plan for the management of intellectual property within the organisation	<p>1.1 The types of Intellectual Property residing within the organization are identified.</p> <p>1.2 Sections of the organisation in which Intellectual Property management is required are identified.</p> <p>1.3 Intellectual Property rights appropriate to the types of Intellectual Property within the organization are identified.</p> <p>1.4 Intellectual Property rights of other like organizations are identified.</p> <p>1.5 An organisational Intellectual Property Management Plan, consistent with the organisation’s Business Plan, is developed/amended.</p> <p>1.6 Approval of the new/amended Intellectual Property Management Plan is sought from relevant personnel.</p>
2 Contribute to the management of intellectual property within the organisation	<p>2.1 A new/amended Intellectual Property Management Plan within the organization is implemented.</p> <p>2.2 Documentation, deeds, registration certificates etc related to the organisation’s Intellectual Property assets are managed.</p> <p>2.3 Intellectual Property management systems and structures, eg registrations, are monitored to ensure they are valid and working correctly.</p> <p>2.4 Evidence supporting the organisation’s entitlement to exercise its Intellectual Property rights is collected, stored and maintained.</p>
3 Contribute to protection of the organisation’s Intellectual Property.	<p>3.1 Sources of assistance in regard to the protection of the organisation’s Intellectual Property are identified.</p> <p>3.2 Networks and professional relationships beneficial to the protection of the organisation’s Intellectual Property are established and maintained.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and contributing to Intellectual Property Management.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.17	Project management
2.2.33	Work in a team
2.2.38	Intellectual property concepts
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit describes work conducted by technical personnel who contribute to the planning and conduct of research and/or development and/or trialling of products, applications and/or services and require knowledge and skills in Intellectual Property management in order complete these roles efficiently and effectively.

Typically the work covered by this unit is performed by high-level technicians, working as part of a product/application/service research and/or design, development and implementation team. This generally involves working closely with a range of management and production/operations personnel and requires balancing the business and technical sides of the product/application/service being researched, developed, trialled and/or commercialised.

This unit does not require knowledge of industry sectors, equipment and/or materials other than that in which the learner works. It assumes an understanding of the operation of all relevant business processes but does not necessarily require them to be the responsibility of the learner.

At this level, personnel should be able to interpret and explain those sections of legislation, codes, regulations, Australian Standards and Intellectual Property rights that apply to the research, development and, where appropriate, commercialisation of a product/application/service.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Contribute to Intellectual Property Management as described in 7) and including:
    - A Demonstrating consistent performance for each Element of the unit
    - B Meeting the Performance Criteria associated with each Element of the unit by employing techniques, procedures, information and resources available in the workplace
    - C Demonstrating an understanding of the Underpinning Knowledge and Skills identified in the section of this unit titled ‘Essential knowledge and associated skills’.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and  
specific  
resources for  
assessment**
**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in contributing to Intellectual Property Management.

### **Method of assessment**

#### **8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

### **Concurrent assessment and relationship with other units**

#### **8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

BSXFM1504A	Participate in, lead and facilitate work teams
UEENEER001A	Contribute to the planning of a research project
UEENEER002A	Conduct to the conduct of a research project
UEENEER003A	Contribute to the development of a product/application/service
UEENEER004A	Contribute to the trial of a product/application/service
BSBCM306A	Produce business documents
BSBSBM405A	Monitor and manage business operations
UEENEER006A	Contribute to the commercialisation of a product/application/service
PMBQUAL309A	Solve problems using ‘quality tools’

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1 to 2.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5 to 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 2.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEER006      Contribute to the commercialisation of products/applications/services**

### **Unit Descriptor**

**1)**

This unit covers the ability to assist managers identify and investigate opportunities for commercialisation within the organisation, commercialise a product, application or service and critically assess the commercialisation process.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

There are no prerequisite competencies for this unit.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'.

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

**4)**

Research

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Contribute to the identification and investigation of commercialisation opportunities.	<p>1.1 Commercialisation opportunities are identified and analysed in terms of their likely fit with the organisation’s goals.</p> <p>1.2 Each opportunity is evaluated to determine its impact on current business and customer base.</p> <p>1.3 An assessment of external factors, costs, benefits, risks, market opportunities and potential competitors is undertaken to determine the potential viability of each opportunity.</p> <p>1.4 Probable return on investment is determined.</p> <p>1.5 A design brief for the product/application/service is developed in a team environment.</p> <p>1.6 Approval for the design brief is obtained from appropriate personnel.</p>
2 Prepare to develop a product/ application/service	<p>2.1 Required outcome(s), as identified in design brief, with appropriate personnel are confirmed.</p> <p>2.2 Product/application/service is developed in consultation with appropriate production personnel.</p> <p>2.3 A development procedure is formulated to: <ul style="list-style-type: none"> <li>- deliver required quality outcome(s)</li> <li>- ensure OHS, environmental, industrial and regulatory requirements are stringently observed</li> <li>- ensure tooling, process, materials and equipment specifications are addressed.</li> </ul> </p> <p>2.4 Approval of the development procedure is obtained from appropriate personnel.</p>
3 Contribute to the development of a product, application and/or service.	<p>3.1 The development procedure is confirmed with appropriate personnel.</p> <p>3.2 Assist in coordinating the development of a product/application/ service product, in accordance with the design brief and development procedure.</p> <p>3.3 Development results in accordance with enterprise procedures are recorded.</p>

	3.4	Development results and characteristics which are outside design and development specifications are analysed and identified.
	3.5	Changes are recommended, as necessary, to achieve product/application/ service quality and production requirements.
	3.6	Approval of changes is obtained from appropriate personnel.
	3.7	The product/ application/service is revised, where necessary, to achieve quality and production requirements.
4	Document and report product, application and/or service development outcomes.	4.1 All product/application/service development objectives are met.
		4.2 Product/application/service development reporting requirements are completed.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and contributing to the commercialisation of products/applications/ services.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.33	Work in a team
2.2.38	Intellectual property concepts
2.2.39	Commercialisation concepts
2.18.1	Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit describes work conducted by technical personnel who contribute to the development and where necessary, redevelopment of products, applications and/or services to meet the requirements of design and development briefs.

Product/application/service design and development briefs may be provided by external and/or internal clients.

Typically the work covered by this unit is performed by high-level technicians, working as part of a product/application/service research and/or design, development and implementation team which may or may not include a research component. This generally

involves working closely with a range of management and production/operations personnel and requires balancing the business and technical sides of the product/application/service being developed.

This unit does not require knowledge of industry sectors, equipment and/or materials other than that in which the learner works. It assumes an understanding of the operation of all relevant business processes but does not necessarily require them to be the responsibility of the learner.

At this level, personnel should be able to interpret and explain those sections of legislation, codes, regulations, Australian Standards and Intellectual Property rights that apply to the tasks undertaken in developing products/applications/services. They should also be aware of enterprise business goals and the impact of their projects on these goals.

This unit should be demonstrated in accordance with the organisation's:

- Occupational Health and Safety and Workplace Safety policies and procedures
- Goals, values, objectives, plans, systems and processes
- Business and performance plans
- Ethical standards
- Client service standards
- Quality and continuous improvement processes and standards
- Resources, which may be subject to negotiation

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in

a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Contribute to the commercialisation of products/applications/ services as described in 7) and including:
    - A Demonstrating consistent performance for each Element of the unit
    - B Meeting the Performance Criteria associated with each Element of the unit by employing techniques, procedures, information and resources available in the workplace
    - C Demonstrating an understanding of the Underpinning Knowledge and Skills identified in the section of this unit titled ‘Essential knowledge and associated skills’.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in contributing to the commercialisation of products/applications/ services.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- BSXFM1504A Participate in, lead and facilitate work teams
- UEENEER001A Contribute to the planning of a research project
- UEENEER002A Conduct to the conduct of a research project
- UEENEER003A Contribute to the development of a product/application/service
- UEENEER004A Contribute to the trial of a product/application/service
- UEENEER005A Contribute to Intellectual Property management
- BSBCM306A Produce business documents
- BSBSBM405A Monitor and manage business operations
- PMBQUAL309A Solve problems using ‘quality tools’

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.7	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 3.7	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.7	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5 to 2.2; 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1 to 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 3.7

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## Electrotechnology Training Package UEE06 – Version Number 1. Review Date 31 Dec 2008

© Commonwealth of Australia 2006

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.asharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.asharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

# UEENEEP001A Disconnect and reconnect fixed wired electrical equipment connected to a Low Voltage supply

**Unit Descriptor** 1)

This unit covers disconnecting and reconnecting fixed wired electrical equipment. This may be incidental to or a primary and regular function of work related to a principle work function. It encompasses working safely, identifying supply arrangements, following isolation procedures, selecting and using testing and measuring devices, terminating and connecting cables and conductors, safely testing and reporting and excludes disconnecting or reconnecting circuits at a switchboard or to general electrical accessories (including switches, socket outlets, circuit protective devices etc); or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installing work).

**Prerequisite Unit(s)** 2)

**Competencies** 2.1)

Competency in the units is to be determined only after competency has been achieved in a relevant field to which the electrical work is incidental or a primary and regular ancillary function of the work to the primary work function, unless otherwise specified in a regulated Vocational Training Order/Agreement/Program. Such requirement is expected to include a broad application of skills and knowledge related to occupational health and safety in the selection, and knowledge, and use of, general hand and power tools relative to hot waters servicing, pool servicing, mechanical maintenance, appliance servicing, emergency services and equipment repair. For a summary of the prerequisite requirement refer to Part 1 - Competency Standards of this Resource Pack, Appendix A – Table A.1 Summary of Prerequisite Units and Competencies.

**Literacy and numeracy skills** 2.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 3 Writing 3 Numeracy 3

**Application of the Unit 3)**

This unit applies to any formal recognition for this standard at the aligned AQF 2/3 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit requires a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Restricted and Specialisations

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to disconnect electrical equipment.

- 1.1 Disconnection is planned to ensure OHS policies and procedures are followed.
- 1.2 Appropriate persons are consulted to ensure work is coordinated effectively with others involved in the work site.
- 1.3 Safety hazards which have not previously been electrical characteristics of electrical equipment and electrical supply are determined and recorded in accordance with established procedures.
- 1.4 The point of isolation of electrical equipment to be disconnected is determined.
- 1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |  |     |  |
|---|--|-----|--|
| 2 | Disconnect electrical equipment.           | 2.1 | OHS policies and procedures are followed.  |
|   |  | 2.2 | Electrical equipment is isolated in accordance with AS/NZS 4836:2001 and established procedures (see Range Statement).   |
|   |  | 2.3 | Conductor connection sequence is recorded and labelled in accordance with established procedures.  |
|   |  | 2.4 | Electrical equipment is disconnected from fixed wiring without damage to other components.   |
|   |  | 2.5 | Disconnected conductors/cables are terminated in accordance with requirements to ensure they are safe and present no potential hazard.                                 |
| 3 | Prepare to reconnect electrical equipment. | 3.1 | Reconnection is planned to ensure OHS policies and procedures are followed.  |
|   |  | 3.2 | Appropriate personnel are consulted to ensure work is coordinated effectively with others involved in the work site.   |
|   |  | 3.3 | The point of isolation of the circuit to which the electrical equipment is to be connected is determined.  |
|   |  | 3.4 | Replacement electrical equipment is selected on the basis of rating and characteristics being the same as that of the original electrical equipment.                   |
|   |  | 3.5 | Appropriate personnel are consulted in the event that replacement electrical equipment is not available.   |
|   |  | 3.6 | Original and/or replacement electrical equipment is tested to ensure it is safe to connect to the electrical supply and use.   |
|   |  | 3.7 | Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety. |
| 4 | Reconnect electrical equipment.            | 4.1 | OHS policies and procedures are followed.  |
|   |  | 4.2 | Measures are taken to ensure circuit to which electrical equipment is to be connected remains isolated in accordance with AS/NZS 4836:2001.                            |
|   |  | 4.3 | The continuity of the protective earthing conductor is tested to determine whether it is sufficiently low.   |

- |   |   |   |
|---|---|---|
|   | 4.4   | The resistance between the protective earthing conductor and the neutral conductor is tested to determine whether it is sufficiently low, ie not greater than 2W. |
|   | 4.5   | The insulation resistance of active conductors is tested to confirm that it is greater than 1M W.   |
|   | 4.6   | An appropriate qualified person is engaged to rectify any non-compliance condition revealed by the testing under item 4.3 to 4.5.                                 |
|   | 4.7   | Continuity between exposed conductive parts of the equipment and the main earth or metal switchboard enclosure is confirmed.                                      |
|   | 4.8   | Electrical equipment is connected to comply with requirements.  |
|   | 4.9   | Connections to the equipment are checked to confirm they are correct.   |
| 5 | Test the reconnected electrical equipment for safe operation. | 5.1 OHS policies and procedures, and established procedures for the reinstatement of isolated circuits and electrical equipment are followed.                     |
|   |   | 5.2 Arrangements are made with appropriate personnel to test the operation of the electrical equipment.   |
|   |   | 5.3 Operational non-conformances are identified and reported in accordance with established procedures.   |
| 6 | Provide status report(s).                                     | 6.1 Status report(s) are completed and notified in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and disconnecting and reconnecting fixed wired electrical equipment connected to a Low Voltage supply.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.1.5.1 | Power cable and conductor terminations    |
| 2.2.2   | Enterprise reporting and recording system |
| 2.5.1.2 | Drawings and diagrams                     |
| 2.8.1.1 | Basic electrical principles               |

- 2.8.8 Electrotechnology science and materials
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.19.29 Disconnect/Reconnect
- 2.19.39 Produce Status Reports using established procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to disconnecting and reconnecting at least one of the following endorsed types of electrical equipment connected to supplies up to 1,000V a.c or 1,500V d.c:

- Pre-assembled types 1 and 2 cold cathode neon signs (N)
- Composite equipment incorporating one or more current-using devices and/or controls (P)

Note: Examples of composite equipment are a self-contained refrigeration unit, machine tools, and modular telephone booths.

- Control devices (Q)
- Electrical water heaters (R)
- Motors (S)

Note:

1. Each endorsement achieved is to be reported separately.
2. Limitations of this unit. This unit does not cover the knowledge and skills necessary for work:
  - a. where high fault currents are possible
  - b. on complex electrical apparatus and circuits
  - c. associated with fixed wiring other than disconnecting and reconnecting electrical equipment as listed in the Range Statement, including locating and rectifying faults of circuits at a switchboard or to general electrical accessories (including switches, socket outlets, circuit protective devices); or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installing work),
  - d. on luminaires,
  - e. in hazardous areas or on electrical equipment that is part of an explosion-protection technique.
3. Safe Working. Safe procedures for working within in the scope of this unit shall be in accordance with AS/NZS 4836:2001 'Safe working on low-voltage electrical installations.'

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Disconnect and reconnect fixed wired electrical equipment connected to a Low Voltage supply as described in 7) for each endorsement and including:
    - A OHS practice
    - B Determining electrical characteristics of equipment
    - C Selecting tools, equipment, and testing devices
    - D Identifying point of installation
    - E Identifying and isolating circuit (including testing for safe isolation)
    - F Preparing to disconnect electrical equipment
    - G Disconnecting of electrical equipment
    - H Preparing to reconnect electrical equipment
    - I Reconnection of electrical equipment
    - J Testing of the reconnected electrical equipment for safe operation including polarity and earth continuity

- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in disconnecting and reconnecting fixed wired electrical equipment connected to a Low Voltage supply.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 3.5; 5.3; 6.1	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.4; 4.2; 4.4; 4.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.5; 4.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2; 4.2 to 4.7	2

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  6.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  5.2 to 6.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5; 5.2

## **UEENEEP002A      Attach cords and plugs to electrical equipment for connection to a single phase 250 Volt supply**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers attaching flexible cords and plugs to electrical equipment for connection to supplies up to 250V a.c. This may be incidental to or a primary and regular function of work related to a principle function in the workplace. It encompasses working safely, identifying plug configurations, selecting and using testing and measuring devices, terminating and connecting cords/plugs and conductors, safety testing and reporting.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  There are no prerequisite competencies for this unit
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      3      Writing      3      Numeracy      3
<b>Application of the Unit</b>	<b>3)</b>  This unit applies to any formal recognition for this standard at the aligned AQF 2 level or higher.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit may require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Restricted and Specialisations

ELEMENT	PERFORMANCE CRITERIA
<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Plan and prepare to attach flexible cord(s) and plug(s).</p>	<p>1.1 Work is planned and prepared to ensure OHS policies and procedures are followed, and the work is appropriately sequenced in accordance with requirements.</p> <p>1.2 Condition and ratings under which the flexible cords and plugs are to operate is determined from requirements and in consultation with appropriate personnel followed by written instruction.</p> <p>1.3 Flexible cords and plugs are selected to comply with standards and requirements for the condition and rating to be determined.</p> <p>1.4 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements.</p> <p>1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.6 Flexible cord(s) is prepared without damage to insulation and conductors and in accordance with requirements.</p>
<p>2 Attach flexible cord(s) and plug(s).</p>	<p>2.1 OHS policies and procedures are followed.</p> <p>2.2 Single insulated metal framed equipment is earthed in accordance with requirements.</p> <p>2.3 The integrity of double insulated equipment is maintained in accordance with requirements.</p> <p>2.4 Conductors are connected to terminals in accordance with requirements to ensure the required polarity is affected.</p>
<p>3 Test equipment for operation and safety.</p>	<p>3.1 Appropriate tests of the cord(s) and plug(s) connected to the electrical equipment are conducted in accordance with requirements and to established procedures to ensure safe installation and operation.</p>

- |   |  |  |
|---|--|--|
|   | 3.2  | Ongoing checks of the quality of work are undertaken in accordance with established procedures.  |
| 4 | Locate and repair fault(s) in attached flexible cord(s) and plug(s). | <p>4.1 Electrical equipment and attached flexible cord(s) and plug(s) are isolated, where necessary, in accordance with prescribed procedures.</p> <p>4.2 Other OHS policies and procedures are followed.</p> <p>4.3 Visual checks of the attached flexible cord(s) and plug(s) are carried out in accordance with prescribed procedures to detect any abnormal or obvious damage or fault.</p> <p>4.4 Fault(s) in attached flexible cord(s) and plug(s) are confirmed and components to be replaced are determined and details recorded in accordance with prescribed procedures.</p> <p>4.5 Fault(s) in attached flexible cord(s) and plug(s) are repaired in accordance with prescribed procedures, where necessary.</p> <p>4.6 Approval is obtained in accordance with prescribed procedures from appropriate personnel, before any contingencies are implemented.</p> |
| 5 | Provide status report(s).  | 5.1 Status report(s) are completed and notified in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and attaching cords and plugs to electrical equipment for connection to a single phase 250 Volt supply.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.8.1.1 | Basic electrical principles                         |
| 2.18.1  | Occupational Health and Safety principles           |
| 2.18.2  | Electrical Safe working practices                   |
| 2.19.30 | Flexible cords and plugs to 250V                    |
| 2.19.6  | Fault find to 250 V — General appliances            |
| 2.19.39 | Produce Status Reports using established procedures |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any cord and plug connected equipment or cord extension leads intended for single-phase supplies up to 250v.

Note: *Limitations of this unit.* This unit does not cover the knowledge and skills necessary for work:

- a) Competencies associated with high current faults
- b) On complex electrical apparatus, circuits and electrical work
- c) In hazardous areas or on electrical equipment that is part of and explosion protection technique
- d) Nor competencies associated with fixed wiring.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions

about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points should be considered when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement OHS workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Attach cords and plugs to electrical equipment for connection to a single phase 250 Volt supply as described in 7) and including:
    - A Demonstrating consistent performance for each element of the unit
    - B Meeting the Performance Criteria associated with each element of competence by employing the techniques, procedures, information and resources available in the workplace
    - C Demonstrating an understanding of the underpinning knowledge and skills shown in the Essential

Knowledge and Associated Skills section of the unit

- D Planing and preparing to attach flexible cord(s) and plug(s) up to 250 V a.c
- E Attaching, replacing and repairing flexible cord(s) and plugs(s) up to 250 V a.c
- F Testing flexible cord(s), plugs(s) and connected equipment for operation and safety up to 250 V a.c., including polarity and continuity testing
- G Finding and repairing fault(s) in attached flexible cord(s) and plug(s)
- H Providing status report(s)
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in attaching cords and plugs to electrical equipment for connection to a single phase 250 Volt supply.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.2	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.2; 4.1	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEP003A      Attach cords and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply**

### **Unit Descriptor**

1)

This unit covers attaching flexible cords/cables and plugs to electrical equipment connected to a supply up to 1,000V a.c. or 1,500V d.c. This may be incidental to or a primary and regular function of work related to a principle function in the workplace. It encompasses working safely, identifying plug configurations, selecting and using testing and measuring devices, terminating and connecting flexible cords/plugs and conductors, safety testing and reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEP002A      Attach cords and plugs to electrical equipment for connection to a single phase 250 Volt supply

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any formal recognition for this standard at the aligned AQF 2 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Restricted and Specialisations

**ELEMENT PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Plan and prepare to attach flexible cord/cables(s) and plug(s).</p>	<p>1.1 Work is planned and prepared to ensure OHS policies and procedures are followed, and the work is appropriately sequenced in accordance with requirements.</p> <p>1.2 Condition and ratings under which the flexible cord/cable(s) and plug(s) are to operate is determined from requirements and in consultation with appropriate personnel followed by written instruction.</p> <p>1.3 Flexible cord/cable(s) and plug(s) are selected to comply with standards and requirements for the condition and rating to be determined.</p> <p>1.4 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements.</p> <p>1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.6 Flexible cord/cable(s) is prepared without damage to insulation and conductors and in accordance with requirements.</p>
<p>2 Attach flexible cord(s)/cable(s) and plug(s).</p>	<p>2.1 OHS policies and procedures are followed.</p> <p>2.2 Single insulated metal framed equipment is earthed in accordance with requirements.</p> <p>2.3 The integrity of double insulated equipment is maintained in accordance with requirements.</p> <p>2.4 Conductors are connected to terminals in accordance with requirements to ensure the required polarity is affected.</p>

- |   |  |     |   |
|---|--|-----|---|
| 3 | Test equipment for operation and safety.                             | 3.1 | Appropriate tests of the cord/cable(s) and plug(s) connected to the electrical equipment are conducted in accordance with requirements and to established procedures to ensure safe installation and operation. |
|   |  | 3.2 | Ongoing checks of the quality of work are undertaken in accordance with established procedures.   |
| 4 | Locate and repair fault(s) in attached flexible cord(s) and plug(s). | 4.1 | Electrical equipment and attached flexible cord(s) and plug(s) are isolated, where necessary, in accordance with prescribed procedures.   |
|   |  | 4.2 | Other OHS policies and procedures are followed.   |
|   |  | 4.3 | Visual checks of the attached flexible cord(s) and plug(s) are carried out in accordance with prescribed procedures to detect any abnormal or obvious damage or fault.  |
|   |  | 4.4 | Fault(s) in attached flexible cord(s) and plug(s) are confirmed and components to be replaced are determined and details recorded in accordance with prescribed procedures.                                     |
|   |  | 4.5 | Fault(s) in attached flexible cord(s) and plug(s) are repaired in accordance with prescribed procedures, where necessary.   |
|   |  | 4.6 | Approval is obtained in accordance with prescribed procedures from appropriate personnel, before any contingencies are implemented.   |
| 5 | Provide status report(s).  | 5.1 | Status report(s) are completed and notified in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and attaching cords and plugs to electrical equipment for connection to 1000 V a.c. or 1500 V d.c. supply.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.19.31 Flexible cords/cables and plugs to 1000V
- 2.19.39 Produce Status Reports using established procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall/may be demonstrated in relation to any cord/cable and plug connected equipment or cord/cable extension leads intended for multi phase supplies up to 1,000V a.c. to 1,500V d.c.

Note:

Limitations of this unit. This unit does not cover the knowledge and skills necessary for work:

- a) Competencies associated with high current faults
- b) On complex electrical apparatus, circuits and electrical work
- c) In hazardous areas or on electrical equipment that is part of and explosion protection technique
- d) Nor competencies associated with fixed wiring.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Attach cords and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply as described in 7) and including:
    - A Demonstrating consistent performance for each element of the unit
    - B Meeting the Performance Criteria associated with each element of competence by employing the techniques, procedures, information and resources

available in the workplace

- C Demonstrating an understanding of the underpinning knowledge and skills shown in the Essential Knowledge and Associated Skills section of the unit
- D Planning and preparing to attach flexible cords/cables and plugs up to 1,000V a.c. to 1,500V d.c.
- E Attaching, replacing and repairing flexible cords/cables and plugs up to 1,000V a.c. to 1,500V d.c
- F Testing flexible cords/cables, plugs and equipment for operation and safety up to 1,000V a.c. to 1,500V d.c
- G Attaching, replacing and repairing flexible cords/cables, plugs and equipment for operation and safety up to 1,000V a.c. to 1,500V d.c
- H Providing status report(s)
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in attaching cords and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEP002A     Attach cords and plugs to electrical equipment for connection to a single phase 250 Volt supply

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.2	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 4.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: N/A

## **UEENEEP004A      Disconnect and reconnect explosion-protected electrical equipment connected to Low Voltage supply**

### **Unit Descriptor**

1)

This unit covers isolating, disconnecting and reconnecting flame proof, increased safety and intrinsic safety electrical equipment to supply up to 1,000V a.c. or 1,500V d.c. under restrictions of designated electrical equipment and conditions specified. It encompasses working safely in hazardous area, identifying supply arrangements, following isolation procedures, handling explosion-protection equipment, selecting and using testing and measuring devices, terminating and connecting cables and conductors, safety testing and reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEP001A      Disconnect and reconnect fixed wired electrical equipment connected to a Low Voltage supply

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any formal recognition for this standard at the aligned AQF 3 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

**Competency Field**

4)

Restricted and Specialisations

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare for disconnection or reconnection.

1.1 Electrical equipment to be disconnected or reconnected is identified and purpose of the work to be carried out is verified with the authorised personnel.

1.2 Occupational health and safety and other statutory requirements and established procedures are followed.

1.3 Work clearances are obtained, isolation procedures followed and the work area is proven safe.

2 Disconnect electrical equipment.

2.1 Electrical characteristics and explosion protection specifications are identified.

2.2 Electrical equipment is dismantled to the extent necessary for disconnection and without unnecessary damage.

2.3 Electrical equipment components are stored appropriately to protect them against damage.

2.4 Cables are identified and marked and connection sequence recorded.

2.5 Cables are disconnected without unnecessary damage to terminals or components.

2.6 Electrical equipment is inspected for damage to the explosion protection components and conclusions verified with authorised personnel.

2.7 Any repairs required to explosion protection are carried out in accordance with established procedures and requirements.

3 Reconnect electrical equipment.

3.1 Cables are connected without damage to terminals or components.

3.2 Connections are checked and tested to confirm correct polarity and continuity.

- |   |   |   |  |
|---|---|---|--|
|   | 3.3                                       | Electrical equipment is assembled to comply with the relevant Standards for the given explosion protection technique. |  |
|   | 3.4                                       | Electrical equipment is tested for safety and correct operation.  |  |
| 4 | Prepare electrical equipment for service. | 4.1   | Isolation devices are removed and work clearance is released in accordance with established procedures.                      |
|   |   | 4.2   | Documentation is completed in accordance with established procedures.  |
|   |   | 4.3   | Operational personnel are notified when electrical equipment is ready for service in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and disconnecting and reconnecting explosion-protected electrical equipment connected to Low Voltage supply.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.18.1  | Occupational Health and Safety principles           |
| 2.18.6  | Hazardous area safe working practices               |
| 2.19.1  | Hazardous area and explosion protection principles  |
| 2.19.2  | Explosion-Protected equipment                       |
| 2.19.11 | Hazardous areas cable termination techniques        |
| 2.19.39 | Produce Status Reports using established procedures |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to disconnecting and reconnecting at least on of the following types of explosion-protected electrical equipment connected to supplies up to 1,000V a.c or 1,500V d.c. for which endorsement applies:

- Flame proof (Ex d)
- Increased safety (Ex e)
- Intrinsically safety (Ex i)

Note:

1. Each endorsement achieved is to be reported separately.
2. Limitations of this unit. This unit does not cover the knowledge and skills necessary for work:
  - a) Where high fault currents are possible,
  - b) On complex electrical apparatus and circuits, and
  - c) Associated with fixed wiring other than disconnecting and reconnecting explosion-protected electrical equipment listed in the Range Statement of the unit.
3. Safe Working  
Safe procedures for working within in the scope of this unit shall be in accordance with AS/NZS 4836:2001 'Safe working on low-voltage electrical installations.'

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Disconnect and reconnect explosion-protected electrical equipment connected to Low Voltage supply as described in

7) for each endorsement and including:

- A Demonstrating consistent performance for each element of the unit
- B Meeting the Performance Criteria associated with each element of competence by employing the techniques, procedures, information and resources available in the workplace
- C Demonstrating an understanding of the underpinning knowledge and skills shown in the Essential Knowledge and Associated Skills section of the unit
- D Preparing to disconnecting explosion-protected electrical equipment
- E Disconnecting of explosion-protected electrical equipment
- F Preparing to reconnect explosion-protected electrical equipment
- G Reconnecting explosion-protected electrical equipment
- H Testing of the reconnected explosion-protected electrical equipment for safe operation
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in disconnecting and reconnecting explosion-protected electrical equipment connected to Low Voltage supply.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.2; 3.5	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3; 2.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  3.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2; 4.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEP005A Disconnect and reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles**

### **Unit Descriptor**

1)

This unit covers isolating, disconnecting and reconnecting HV electric propulsion components on engine driven, self-propelled earth moving vehicles under the restrictions of designated electrical equipment and conditions specified, operating at 3,300 volts. It encompasses working safely, identifying circuit and isolation arrangements, following isolation procedures, selecting and using HV testing and measuring devices, terminating and connecting HV cables and conductors, safety testing and reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in the units is to be determined only after competency has been achieved in a relevant field to which the electrical work is incidental or a primary and regular ancillary function of the work to the primary work function, unless otherwise specified in a regulated Vocational Training Order/Agreement/Program. Such requirement is expected to include a broad application of skills and knowledge related to occupational health and safety in the selection, and knowledge, and use of, general hand and power tools relative to mechanical maintenance of HV electric propulsion components off-road earth moving trucks.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any formal recognition for this standard at the aligned AQF 3 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Restricted and Specialisations

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare for disconnection or reconnection.

1.1 Designated electrical equipment to be replaced is identified and purpose of the work to be carried out is verified with the authorised personnel.

1.2 Occupational health and safety and other statutory requirements and established procedures are followed.

1.3 Work clearances are obtained; isolation and disconnection procedures are followed in accordance with established procedures.

2 Disconnect designated electrical equipment.

2.1 Relevant electrical characteristics and protection specifications are identified.

2.2 Where appropriate on –board cables are identified and marked and connection sequence recorded.

2.3 Designated electrical equipment is inspected for damage to components, and conclusions verified with authorised personnel..

2.4 On –board cables are, where appropriate, disconnected without unnecessary damage to terminals or components.

2.5 Designated electrical equipment is dismantled, removed and/or replaced in accordance with requirements to the extent necessary for disconnection, and without unnecessary damage.

- |   |  |  |   |
|---|--|--|---|
|   | 2.6  | Designated electrical equipment parts and/or associated components are stored appropriately to protect them against damage.      |   |
|   | 2.7  | Repairs, where appropriate, to the removed equipment are carried out in accordance with requirements and established procedures. |   |
| 3 | Reconnect designated electrical equipment.                     | 3.1  | Cables, where appropriate, are re-connected without damage to terminals or components.  |
|   |  | 3.2  | Connections are checked and tested to confirm correct polarity and continuity.  |
|   |  | 3.3  | Designated electrical equipment is assembled and checked to comply with the relevant Standards for the given technique.                           |
|   |  | 3.4  | Designated electrical equipment is tested for safety and correct operation.   |
| 4 | Prepare designated electrical equipment for return to service. | 4.1  | Isolation devices are removed and work clearance is released in accordance with established procedures.   |
|   |  | 4.2  | Documentation is completed in accordance with established procedures.   |
|   |  | 4.3  | Operational personnel are notified when designated electrical equipment is ready for return to service in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and disconnecting and reconnecting 3.3 kV electric propulsion components of self-propelled earth moving vehicles.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |  |
|---------|--|
| 2.18.1  | Occupational Health and Safety principles                  |
| 2.18.2  | Electrical safe working practices                          |
| 2.19.32 | Disconnect and reconnect HV electric propulsion components |
| 2.19.39 | Produce Status Reports using established procedures        |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to disconnecting and reconnecting of HV electric propulsion components of HV electric propulsion components on engine driven, self-propelled earth moving vehicles operating at 3,300 volts.

Note:

Limitations of this unit. This unit does not cover the knowledge and skills necessary for work:

- a) Where high fault currents are possible,
- b) On complex electrical work;
- c) Associated with other than to disconnect and reconnect of HV electric propulsion components of off-road HV electric propulsion components on engine driven, self-propelled earth moving vehicles earth moving vehicles operating at 3,300 volts
- d) Nor competencies associated with fixed wiring

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of

evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Disconnect and reconnect 3.3 kV electric propulsion components of self-propelled earth moving vehicles as described in 7) and including:
    - A Preparing to disconnect or reconnect of HV electric propulsion components of off-road self-propelled earth moving vehicles operating at 3,300 volts
    - B Disconnecting of HV electric propulsion components of off-road HV electric propulsion components on

engine driven, self-propelled earth moving vehicles operating at 3,300 volts

- C Repairing in accordance with established procedures HV electric propulsion components of off-road HV electric propulsion components on engine driven, self-propelled earth moving vehicles operating at 3,300 volts
- D Reconnecting of HV electric propulsion components of off-road self-propelled earth moving vehicles operating at 3,300 volts
- E Preparing of HV electric propulsion components of off-road HV electric propulsion components on engine driven, self-propelled earth moving vehicles operating at 3,300 volts for return to service
- F Providing status report(s);
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in disconnecting and reconnecting 3.3 kV electric propulsion components of self-propelled earth moving vehicles.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:  
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2; 4.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## **UEENEEP006A Attach flexible cables and plugs to electrical equipment connected to a high voltage supply**

### **Unit Descriptor**

1)

This unit covers attach flexible cable(s) and plug(s), including trailing and feeder cables, to high voltage electrical equipment connected to a supply exceeding 1,000 volts a.c. or 1,500 volts d.c. This may be incidental to or a primary and regular function of work related to a principle function in the workplace – typically mining. It encompasses working safely, identifying plug configurations, selecting and using testing and measuring devices, terminating and connecting HV flexible cables, plugs and conductors, safety testing and reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEP003A Attach cords and plugs to electrical equipment for connection to 1000 Va.c. or 1500 Vd.c. supply.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any formal recognition for this standard at the aligned AQF 3 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

**Competency Field 4)**

Restricted and Specialisations

**ELEMENT PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Plan and prepare to attach flexible cable(s) and plug(s).</p>	<p>1.1 Work is planned and prepared to ensure OHS policies and procedures are followed, and the work is appropriately sequenced in accordance with requirements.</p> <p>1.2 Condition and ratings under which the flexible cable(s) and plug(s) is to operate is determined from requirements and in consultation with appropriate personnel followed by written instruction.</p> <p>1.3 Flexible cable(s) and plug(s) are selected to comply with standards and requirements for the condition and rating to be determined.</p> <p>1.4 Materials necessary to complete the work are obtained in accordance with established procedures and checked against job requirements.</p> <p>1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
<p>2 Attach flexible cable(s) and plug(s).</p>	<p>2.1 OHS policies and procedures are followed.</p> <p>2.2 Flexible cable(s) is prepared without damage to insulation and conductors and in accordance with requirements.</p> <p>2.3 Equipment is earthed in accordance with requirements.</p> <p>2.4 The integrity of insulated equipment is maintained in accordance with requirements.</p> <p>2.5 Conductors are connected to terminals in accordance with requirements to ensure the required polarity is affected.</p>

- |   |  |     |   |
|---|--|-----|---|
| 3 | Test equipment for operation and safety. | 3.1 | Appropriate tests are conducted of the electrical equipment high voltage to ensure safe installation and operation.                                   |
|   |  | 3.2 | Approval is obtained from authorised personnel to confirm completion of work is in accordance with established procedures before supply is connected. |
| 4 | Provide status report(s).                | 4.1 | Status report(s) are completed and notified in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and attaching flexible cables and plugs to electrical equipment connected to a high voltage supply.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.18.1  | Occupational Health and Safety principles               |
| 2.18.2  | Electrical safe working principles                      |
| 2.19.33 | High voltage flexible cables and plugs exceeding 1000 V |
| 2.19.39 | Produce Status Reports using established procedures     |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to flexible cables and plugs for connecting equipment intended to operate at high voltage.

Note:

Limitations of this unit. This unit does not cover the knowledge and skills necessary for work:

- a) Where high fault currents are possible,
- b) On complex electrical work;
- c) Nor competencies associated with fixed wiring

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Attach flexible cables and plugs to electrical equipment connected to a high voltage supply as described in 7) and including:
    - A Planing and preparing to attach flexible cable(s) and plug(s) connected to HV electrical equipment
    - B Attaching, replacing and repairing flexible cable(s) and plug(s) connected to HV electrical equipment
    - C Testing flexible cable(s), plug(s) and electrical equipment connected to HV electrical equipment for operation and safety
    - D Providing status report(s)
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in attaching flexible cables and plugs to electrical equipment connected to a high voltage supply.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2; 4.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## **UEENEEP007A      Locate and rectify faults in electrical low voltage equipment following prescribed procedures**

### **Unit Descriptor**

1)

This unit covers locating and rectifying fault(s) in electrical equipment intended to operate to a connected supply up to 1,000 volts a.c. or 1,500 volts d.c. This may be incidental to or a primary and regular function in the workplace. It encompasses following prescribed procedures, working safely, reading circuit diagrams, isolation procedures, identifying faults according to procedures, identifying like for like replacement/repair components according to procedures, selecting and using testing and measuring devices, terminating and connecting cables and conductors, safety testing and reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UNITNEEP001A    Disconnect and reconnect fixed wired electrical equipment connected to supply up to 1,000V a.c or 1,500V d.c.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to

occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Restricted and Specialisations

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to identify fault(s)

- 1.1 Nature of the fault(s) is confirmed in accordance with established procedures and appropriate personnel.
- 1.2 The work is planned to ensure OHS policies and established procedures are followed.
- 1.3 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.5 Possible electrical equipment fault(s) are checked against job requirements and in accordance with established procedures.
- 1.6 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements.
- 1.7 Electrical characteristics of electrical equipment and electrical supply are determined and recorded in accordance with established procedures.
- 1.8 Electrical equipment and associated circuits are identified for isolation purposes, where necessary, in accordance with established procedures.

2 Locate fault(s) in the electrical equipment.

- 2.1 Electrical equipment and associated circuits are isolated, where necessary, in accordance with prescribed procedures.
- 2.2 Other OHS policies and procedures are followed.

- 2.3 Visual checks of the electrical equipment and components are carried out in accordance with prescribed procedures to detect any abnormal or obvious damage or fault.
- 2.4 Safety tests and circuit continuity are progressively carried out to assure isolation, and to detect operational, electrical or other non-conformances or fault(s).
- 2.5 Electrical equipment is dismantled and/or removed, where necessary, and components stored in accordance with established procedures to protect them against loss or damage.
- 2.6 Fault(s) are confirmed and components to be replaced or adjusted are determined and details recorded in accordance with prescribed procedures.
- 2.7 Ongoing checks of the quality of work are undertaken in accordance with established procedures.
- 3 Rectify fault(s).
  - 3.1 Isolation of electrical equipment and associated circuits is confirmed in accordance with requirements and prescribed procedures.
  - 3.2 Materials and resources necessary to complete the work are obtained in accordance with established procedures and checked against job requirements.
  - 3.3 Adjustments are made in accordance with prescribed procedures, where necessary, to ensure electrical equipment operates in accordance with intended parameters.
  - 3.4 Fault(s) are rectified in accordance with prescribed procedures, where necessary.
  - 3.5 Approval is obtained in accordance with prescribed procedures from appropriate personnel, before any contingencies are implemented.
  - 3.6 Tests on the electrical equipment are in accordance with prescribed procedures performed to ensure safe return to service and operation of the electrical equipment.
- 4 Provide status report(s).
  - 4.1 Status report(s) are completed and notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and locate and rectify faults in electrical low voltage equipment following prescribed procedures.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- General single phase motors, composite equipment, and/or control devices:
  - 2.18.1 Occupational Health and Safety principles
  - 2.18.13 Appliance servicing working practices
  - 2.19.36 Fault find to 250 V – General Principles
  - 2.19.39 Produce Status Reports using established procedures
- Multi phase motor endorsements, composite equipment, and/or control devices
  - 2.18.1 Occupational Health and Safety principles
  - 2.18.2 Electrical safe working practices
  - 2.19.34 Fault find to 250 V - Motors
  - 2.19.37 Fault find to 1000 V - Motors
  - 2.19.39 Produce Status Reports using established procedures
- Water heater endorsements
  - 2.18.1 Occupational Health and Safety principles
  - 2.18.2 Electrical safe working practices
  - 2.19.35 Fault find to 250 V – Water heaters
  - 2.19.38 Fault find to 1000 V – Water heaters
  - 2.19.39 Produce Status Reports using established procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall/may be demonstrated in relation to be demonstrated in relation to locating and rectifying fault(s) in at least one of the following types of electrical equipment endorsement intended to operate to a connected fixed wired supply up to 1,000V a.c or 1,500V d.c:

- Composite equipment incorporating one or more current-using devices and/or controls (P)

Note: Examples of composite equipment are a self-contained refrigeration unit, machine tools, and modular telephone booths.

- Control devices (Q)
- Electrical water heaters (R)
- Motors (S)

Note:

1. Each endorsement achieved is to be reported separately.
2. Limitations of this unit. This unit does not cover the knowledge and skills necessary for work:
  - a) Where high fault currents are possible,
  - b) On complex electrical apparatus and circuits, and
  - c) Associated with fixed wiring other than disconnecting and reconnecting electrical equipment, circuits at a switchboard or to general electrical accessories (including switches, socket outlets, circuit protective devices etc); or installation of or alteration to any part of the fixed electrical wiring system (defined as electrical installing work).listed in the Range Statement of the unit,
  - d) In hazardous areas or on electrical equipment that is part of an explosion protection technique.
3. Safe Working  
Safe procedures for working within in the scope of this unit shall be in accordance with AS/NZS 4836:2001 'Safe working on low-voltage electrical installations.'

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Locate and rectify faults in electrical low voltage equipment following prescribed procedures as described in 7) for each endorsement and including:
    - A Following safe work practices and procedures
    - B Identification, testing and isolation of electrical equipment according to requirements
    - C Preparing to locate faults and repairing electrical equipment according to requirement/procedures
    - D Using routine fault finding techniques and procedures
    - E Identifying and locating fault(s) in accordance with requirements
    - F Preparation to replace like for like, implementing routine repairs and reconnecting electrical equipment as per procedures
    - G Rectifying electrical equipment fault(s) in accordance with requirements
    - H Returning to service and testing for polarity and continuity in accordance with requirements/procedures
    - I Returning to service and testing for polarity and continuity in accordance with requirements/procedures
    - J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in locating and rectifying faults in electrical low voltage equipment following prescribed procedures.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  3.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2; 4.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.5

## **UEENEEP008A      Conduct in-service safety testing of electrical cord assemblies and cord connected equipment**

**Unit Descriptor**                    1)

This unit covers safety testing of electrical cord assemblies and cord connected equipment. It encompasses working safely, using portable apparatus tester, identifying faults, applying tagging, arranging for repair of faulty equipment and complete testing documentation.

**Prerequisite Unit(s)**            2)

**Competencies**                    2.1)

There are no prerequisite competencies for this unit.

**Literacy and numeracy skills**            2.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

**Application of the Unit**                                    3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise**                    3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, general electrical safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Restricted and Specialisations

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to test cord assemblies and cord connected apparatus	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 OHS risk control work preparation measures and procedures are followed.</p> <p>1.3 Advice is sought from an appropriate person to minimise disruption to the work place.</p> <p>1.4 Cord assemblies and cord connected apparatus to be tested are obtained.</p> <p>1.5 Portable apparatus testing device is checked for correct operation and safety.</p>
2 Test cord assemblies and cord connected apparatus	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 Measures are followed to ensure that cord assemblies and cord connected apparatus to be tested are not connected to the electrical supply.</p> <p>2.3 Knowledge of electrical safety requirements and parameters are applied to safety testing to ensure correct interpretation of test results.</p> <p>2.4 Established PAT routines are followed to test cord assemblies and cord connected apparatus.</p> <p>2.5 Unsafe cord assemblies and cord connected apparatus are identified from test results</p> <p>2.6 Testing is undertaken effectively with minimum waste of energy and damage to apparatus.</p>
3 Tag tested cord assemblies and cord connected apparatus and document testing activities	<p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures.</p> <p>3.3 Cord assemblies and cord connected apparatus are tagged according to their safety status.</p>

- 3.4 Arrangements are made for unsafe cord assemblies and cord connected apparatus to be repaired by a recognised competent person.
- 3.5 Safety testing activities are documented in accordance with requirements and established routines procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conduct in-service safety testing of electrical cord assemblies and cord connected equipment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.2.3 Technical standards, regulations and codes for testing and tagging portable and cord connected electrical apparatus
- 2.6.1 Protection devices and applications
- 2.8.1.1 Basic electrical principles
- 2.11.5 Basic electrical testing and measuring devices and techniques
- 2.11.15 Portable apparatus testing (PAT) devices
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.19.39 Produce Status Reports using established procedures

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to in-service safety testing of at least two different electrical cords and two different items of cord connected equipment with safety faults.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct in-service safety testing of electrical cord assemblies and cord connected equipment as described in 7) and including:
    - A Preparing the portable apparatus tester
    - B Connecting cords and apparatus to the testing apparatus
    - C Using test results to establish the safety status
    - D Identifying safe and unsafe cords and apparatus
    - E Applying appropriate tagging
    - F Documenting testing activities
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting in-service safety testing of electrical cord assemblies and cord connected equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 3.5	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3 to 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3 to 2.5	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3; 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4 to 2.5; 3.3 to 3.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: N/A

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## Essential Knowledge and Associated Skills (EKAS) – Maps

The information in this section is provided to assist users in developing holistic training support materials for respective qualifications and/or Competency Standard Units

### Map 1 – Unit to Essential Knowledge and Associated Skills Relationship

#### A – Assembly Units

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEA001A Assemble electronic apparatus	2.11.11.2 Surface mount soldering techniques
	2.18.1 Occupational Health and Safety principles
UEENEEA002A Select electronic components	2.9.1.1 Electronic component basics
	2.18.1 Occupational Health and Safety principles
UEENEEA003A Set up and check electronic component placement machines	2.11.16 Electronic component place equipment
	2.18.1 Occupational Health and Safety principles
UEENEEA004A Rework electronic sub assemblies	2.2.6 Enterprise quality management system, basics
	2.11.11.3 Printed circuit board repair techniques
	2.18.1 Occupational Health and Safety principles
UEENEEA005A Conduct functional and quality tests on assembled electronic apparatus	2.11.18 Electronic assembly functional and quality testing
	2.18.1 Occupational Health and Safety principles
UEENEEA006A Apply lead-free soldering techniques	2.2.6 Enterprise quality management system, basics
	2.11.11.4 Lead-free soldering technology
	2.18.1 Occupational Health and Safety principles
UEENEEA007A to A009A Reserved	Reserved
UEENEEA010A Assemble, mount and connect switchgear and controlgear	2.6.6.2 Alternating current rotating machines
	2.6.24.1 Switchgear/controlgear
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
UEENEEA011A Reserved	Reserved
UEENEEA012A Make up and assemble bus bars	2.1.5.2 Bus bar techniques
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
UEENEEA013A Assemble and wire control panels	2.1.5.1 Power cable and conductor terminations
	2.3.1 Electrical control devices
	2.3.2 Control circuit fundamentals

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.6.8.2 Single and three-phase transformers
	2.6.24.2 Control panel wiring
	2.7.4.1 Electrical installations, protection methods and devices
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices

**B – Broadcast Units**

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEB001A Operate and maintain an amateur radio communication station	2.10.32 Amateur radio communication principles, practices, and technical overview
	2.18.1 Occupational Health and Safety principles

## C – Common and commercial units

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills
UEENEEC001A Maintain documentation	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.2.20 Computer use basics
	2.18.1 Occupational Health and Safety principles
UEENEEC002A Source and purchase material/parts for installation or service jobs	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.2.7 Enterprise purchasing system
	2.2.20 Computer use basics
	2.18.1 Occupational Health and Safety principles
UEENEEC003A Provide quotations for installation or service jobs	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.2.5 Enterprise customer relations protocols
	2.2.8 Enterprise costing methods
	2.2.10 Job costing techniques
	2.18.1 Occupational Health and Safety principles
UEENEEC004A Prepare specifications for the supply of materials and equipment for electrotechnology projects	2.2.11.2 Specification development
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEC005A Estimate electrotechnology projects	2.2.11.1 Estimating techniques
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEC006A Prepare tender submissions for electrotechnology projects	2.2.12 Tendering requirements
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEC007A Manage contract variations	2.2.11.1 Estimating techniques
	2.2.14 Contracts, format, responsibilities and obligations
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEC008A Receive and store	2.2.1 Enterprise communication methods

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills
materials and equipment for electrotechnology work	2.2.2 Enterprise work activities records
	2.2.9 Enterprise stock control methods
	2.2.20 Computer use basics
	2.18.1 Occupational Health and Safety principles
UEENEEC009A Provide quotations for inspection and compliance audit services	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.2.5 Enterprise customer relations protocols
	2.2.8 Enterprise costing methods
	2.2.10 Job costing techniques
	2.18.1 Occupational Health and Safety principles
UEENEEC010A Deliver a service to customers	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.2.4 Problem solving techniques
	2.2.5 Enterprise customer relations protocols
	2.2.6 Enterprise quality management system, basics
	2.2.13 User instruction techniques
	2.18.1 Occupational Health and Safety principles
UEENEEC011A	Reserved
UEENEEC012A Direct technical and non-technical enquiries to appropriate personnel	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.2.5 Enterprise customer relations protocols
	2.2.6 Enterprise quality management system, basics
	2.2.22 Enterprise work/business coverage
	2.18.1 Occupational Health and Safety principles
UEENEEC013A Participate in business equipment work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC014A Participate in computer equipment work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills
UEENEEC015A Participate in electronic installations work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC016A Participate in voice and data communications work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC017A Participate in appliance servicing work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC018A Participate in electrical machine repair work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC019A Participate in switchgear and controlgearwork and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC020A Participate in electrical work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures

UEENEEC021A Participate in electronics and communications work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC022A Participate in fire protection control work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC023A Participate in gaming electronic work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC024A Participate in instrumentation and control work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC025A Participate in refrigeration and air conditioning work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC026A Participate in security equipment work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC027A Participate in rail communications and networks work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures

UEENEEC028A Participate in hazardous areas work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures
UEENEEC029A Participate in explosion-protected equipment overhaul work and competency development activities	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
	2.2.48 Enterprise work activities policies and procedures

## D – Computerised systems units

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills
UEENEED001A Use basic computer applications relevant to a workplace	2.2.20 Computer use basics
	2.18.1 Occupational Health and Safety principles
UEENEED002A Assemble, set up and test personal computers	2.4.11 Personal computers, hardware structure
	2.4.12.1 Computer hardware sub-assemblies
	2.4.14 Personal computer operating systems, basics
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEED003A Evaluate and modify programs written in object oriented code	2.4.43.1 Object oriented programming basics
	2.18.1 Occupational Health and Safety principles
UEENEED004A Use engineering applications software	2.4.16 Personal computers, engineering applications software basic
	2.18.1 Occupational Health and Safety principles
UEENEED005A Enter and verify operating instruction in microprocessor equipped devices	2.3.7 Smart device basics
	2.18.1 Occupational Health and Safety principles
UEENEED006A	Reserved
UEENEED007A Develop, enter and verify programs for programmable logic controllers using ladder instruction set	2.3.8 Programmable controller basics
	2.3.9 PLC programming basics
	2.3.10.1 PLC programming
	2.7.13 Electrical installations, programmable logic controller requirements
	2.18.1 Occupational Health and Safety principles
UEENEED008A Develop, enter and verify programs in Supervisory Control and Data Acquisition systems	2.3.14 Supervisory control and data acquisition systems programming
	2.18.1 Occupational Health and Safety principles
UEENEED009A Develop, enter and verify programs for industrial control systems using high level instructions	2.3.10.2 PLC high level programming
	2.18.1 Occupational Health and Safety principles
UEENEED010A Set up and create content for a web server	2.4.20 Programming elements
	2.4.21 Client side programming
	2.4.22 Server scripting
	2.4.23 Database access
	2.4.24 Web application and services
	2.18.1 Occupational Health and Safety principles

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills
UEENEED011A Create object oriented code	2.4.43.2 Object oriented programming
	2.18.1 Occupational Health and Safety principles
UEENEED012A Support computers software and hardware	2.4.3.2 Networking fundamentals
	2.4.13 Computer peripherals
	2.4.15 Computer operating systems
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEED013A Install and administer Unix based computers	2.4.15 Computer operating systems
	2.4.27.1 Unix fundamentals
	2.18.1 Occupational Health and Safety principles
	OR
	2.4.15 Computer operating systems
	2.4.27.2 Linux fundamentals
	2.18.1 Occupational Health and Safety principles
	OR
	2.4.15 Computer operating systems
	2.4.27.3 Mac OSX fundamentals
UEENEED014A Design and manage enterprise networks	2.4.25.2 Network services design processes
	2.4.26 Network services management processes
	2.18.1 Occupational Health and Safety principles
UEENEED015A Administer user networks	2.4.27.1 Unix fundamentals
	2.4.28 Network operating systems essentials
	2.4.29 Network operating systems implementation
	2.18.1 Occupational Health and Safety principles
UEENEED016A Develop network services	2.4.30 Network infrastructure
	2.4.31 Directory services
	2.18.1 Occupational Health and Safety principles
UEENEED017A Install and configure Internetworking systems	2.1.7.1 Performance (copper) data cable installation and terminations
	2.1.7.2 Coaxial cable installation and terminations
	2.1.7.3 Optical fibre cabling installation and terminations
	2.4.3.2 Networking fundamentals
	2.4.39 Internet, network basics

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills
	2.4.40 Internet, network routing
	2.5.7 Technical standards, regulations and codes for telecommunications cabling
	2.18.1 Occupational Health and Safety principles
UEENEED018A Design and implement internetworking systems	2.4.41 Internet, local area networking
	2.4.42 Internet, wide area networking
	2.18.1 Occupational Health and Safety principles
UEENEED019A Design and implement internetworking systems – advanced routing	2.4.34 Routing methods and protocols
	2.18.1 Occupational Health and Safety principles
UEENEED020A Design and implement internetworking systems – remote access	2.4.35 Networks, remote access
	2.18.1 Occupational Health and Safety principles
UEENEED021A Design and implement internetworking systems – multi-layer switching	2.4.36 Multi-layer switched networks
	2.18.1 Occupational Health and Safety principles
UEENEED022A Design and implement internetworking systems – security	2.4.37 Fundamentals of network security
	2.18.1 Occupational Health and Safety principles
UEENEED023A Design and implement internetworking systems – wireless LANs/WANs	2.4.38 Fundamentals of wireless security
	2.18.1 Occupational Health and Safety principles
UEENEED024A Integrate multiple computer operating systems on a client server network	2.4.32 Operating systems and networks fundamentals
	2.4.33 Operating systems and networks
	2.18.1 Occupational Health and Safety principles
UEENEED025A Design and configure Human-Machine Interface networks	2.3.11 Control system network basics
	2.4.30 Network infrastructure
	2.18.1 Occupational Health and Safety principles
UEENEED026A Design a computer based control system	2.3.10.3 PLC system applications
	2.3.12 Control network infrastructure
	2.3.19 Control programming fundamentals
	2.18.1 Occupational Health and Safety principles
UEENEED027A Develop structured programs for control sub systems to access external devices	2.3.19 Control programming fundamentals
	2.18.1 Occupational Health and Safety principles
UEENEED028A Develop and test basic specification for microcontroller equipped devices.	2.3.20 Microcontroller programming basics
	2.9.5.1 Microprocessor fundamentals
	2.9.5.2 Microcontroller fundamentals

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills
	2.18.1 Occupational Health and Safety principles
UEENEED029A Develop basic web pages for engineering applications	2.4.21 Client side programming
	2.4.22 Server scripting
	2.18.1 Occupational Health and Safety principles
UEENEED030A Select, install, configure and test multimedia devices	2.4.12.2 Multimedia computer components
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEED031A Develop and validate basic integrated systems	2.3.16 Integrated systems basics
	2.18.1 Occupational Health and Safety principles
UEENEED032A Design integrated systems	2.3.17 Integrated systems, subsystem interworking
	2.18.1 Occupational Health and Safety principles
UEENEED033A Design complex integrated systems	2.3.18 Complex integrated system programming
	2.18.1 Occupational Health and Safety principles
UEENEED034A Configure and maintain industrial control system networks	2.3.11 Control system network basics
	2.3.12 Control network infrastructure
	2.18.1 Occupational Health and Safety principles
UEENEED035A to UEENEED042A	Reserved
UEENEED043A Install and configure a computer operating system and software	2.4.14 Personal computer operating systems, basics
	2.4.15 Computer operating systems
	2.18.1 Occupational Health and Safety principles
UEENEED044A and UEENEED045A	Reserved
UEENEED046A Set up and configure basic local area network	2.4.25.1 Local area network fundamentals
	2.18.1 Occupational Health and Safety principles
UEENEED047A Manage computer projects	2.2.17 Project management
	2.2.19 Customer/Client relations
	2.2.27 Computer industry sector customs and practices
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEED048A Plan computer systems projects	2.2.16.1 Project Planning
	2.2.18 Critical path and project analysis
	2.2.27 Computer industry sector customs and practices
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills
UEENEED049A	Reserved
UEENEED050A Develop control programs for microcomputer equipped devices	2.3.20 Microcontroller programming basics
	2.4.44.1 Microprocessor/microcontroller assembler language programming
	2.4.44.2 High level programming
	2.18.1 Occupational Health and Safety principles
UEENEED051A Provide programming solution for engineering problems	2.4.44.2 High level programming
	2.4.44.3 Advanced high-level programming
	2.10.1.2 Electronic signals and systems
	2.18.1 Occupational Health and Safety principles
UEENEED052A Design embedded controller systems	2.3.3 Process control principles
	2.9.4.2 Digital signal processing
	2.9.4.3 Digital signal processing development
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEED053A Set up and test biometric devices	2.9.71.1 Biometric devices
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEED054A – Analyse and implement biometric techniques and applications	2.9.71.2 Biometrics Equipment Techniques and Applications
	2.9.71.3 Biometric Systems Techniques and Applications
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices
UEENEED055A – Develop and validate biometric systems installation	2.9.71.2 Biometrics Equipment Techniques and Applications
	2.9.71.3 Biometric Systems Techniques and Applications
	2.9.71.4 Biometrics and Security
	2.18.1 Occupational Health and Safety principles
	2.18.9 Electronic safe working practices

**E – Cross-discipline units**

<b>Competency Standard Units (CSUs)</b>	<b>Essential Knowledge and Associated Skills Clause</b>
UEENEEE001A Apply OHS practices in the workplace	2.18.1 Occupational Health and Safety principles
UEENEEE002A Dismantle, assemble and fabricate electrotechnology components	2.11.1 Hand tools
	2.11.2.1 Power tools
	2.11.4 Dismantling and assembling techniques
	2.18.1 Occupational Health and Safety principles
UEENEEE003A Solve problems in extra-low voltage single path circuits	2.8.1.2 Fundamental electrical principles
	2.18.1 Occupational Health and Safety principles
UEENEEE004A Solve problems in multiple path d.c circuits	2.8.2.1 Direct current circuit principles
	2.18.1 Occupational Health and Safety principles
UEENEEE005A Fix and secure equipment	2.11.1 Hand tools
	2.11.2.1 Power tools
	2.11.3.1 Fixing and support devices and techniques
	2.18.1 Occupational Health and Safety principles
UEENEEE006A Apply methods to maintain currency of industry developments	2.2.44 Requirements and methods for maintaining currency in industry developments
	2.18.1 Occupational Health and Safety principles
UEENEEE007A Use drawings, diagrams, schedules and service manuals	2.5.1.2 Drawings and diagrams
	2.18.1 Occupational Health and Safety principles
UEENEEE008A Lay wiring and terminate accessories for extra-low voltage circuits	2.1.1 Cable protection and support
	2.1.2 Cable types and applications
	2.1.3 Cables in buildings, structures and premises
	2.1.4 Basic cable and conductor terminations
	2.5.5 Technical standards, regulations and codes for extra-low voltage work
	2.5.11 Environmental and heritage awareness
	2.18.1 Occupational Health and Safety principles
UEENEEE009A Comply with scheduled and preventative maintenance program processes	2.13.8 Schedule maintenance processors
	2.18.1 Occupational Health and Safety principles
UEENEEE010A Develop and implement maintenance programs	2.13.8 Schedule maintenance processors
	2.18.1 Occupational Health and Safety principles
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEE011A Manage risk in electrotechnology activities	2.2.15 Risk management, application and techniques
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEE012A Manage electrotechnology projects	2.2.17 Project management
	2.2.19 Customer/Client relations
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEE013A Plan electrotechnology projects	2.2.16.1 Project Planning
	2.2.18 Critical path and project analysis
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEE014A Supervise and coordinate work activities	2.2.4 Problem solving techniques
	2.2.6 Enterprise quality management system, basics
	2.2.19 Customer/Client relations
	2.2.41 Supervision fundamentals
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEE015A Develop design briefs for electrotechnology projects	2.2.5 Enterprise customer relation protocols
	2.2.18 Critical path and project analysis
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEE016A Write specifications for electrotechnology projects	2.2.6 Enterprise quality management systems, basics
	2.2.7 Enterprise purchasing system
	2.2.10 Job costing techniques
	2.2.11.2 Specification development
	2.2.15 Risk management, application and techniques
	2.2.18 Critical path and project analysis
	2.2.19 Customer/client relations
	2.2.20 Computer use basics
	2.2.25 Research concepts
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEE017A Implement and monitor OHS policies and procedures	2.18.8.1 Occupational Health and Safety, supervisory responsibilities

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEE018A Establish, maintain and evaluate OHS systems	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEE019A Solve problems in multiple path a.c. circuits	2.8.2.2 Alternating current principles-power
	2.8.6 Electromagnetic principles
	2.11.1 Hand tools
	2.18.1 Occupational Health and Safety principles
UEENEEE020A Provide basic instruction in the use of electrotechnology apparatus	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.2.5 Enterprise customer relations protocols
	2.2.13 User instruction techniques
	2.18.1 Occupational Health and Safety principles
UEENEEE021A Plan an integrated cabling system	2.1.11 Integrated cabling arrangements
	2.5.2.1 Technical standards, regulations and codes for general electrical installations
	2.5.7 Technical standards, regulations and codes for telecommunications cabling
	2.5.9 Building codes, applicable to general electrotechnology installations
	2.7.4.2 Electrical installations, circuit arrangements and cable selection
	2.18.1 Occupational Health and Safety principles
	2.18.2 Electrical safe working practices
UEENEEE022A Carry out preparatory electrotechnology work activities	2.1.1 Cable protection and support
	2.11.1 Hand tools
	2.11.2.1 Power tools
	2.11.3.1 Fixing and support devices and techniques
	2.18.1 Occupational Health and Safety principles
UEENEEE023A Solve basic problems in electronic and digital equipment	2.9.1.5 Basic electronic principles
	2.9.1.6 Basic digital principles
	2.18.1 Occupational Health and Safety principles
UEENEEE024A Compile and produce an electrotechnology report	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.2.20 Computer use basics
	2.2.21 Engineering analysis, decision making and reporting
	2.2.25 Research concepts

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.2.33 Working in a team
	2.2.35 Data collection techniques
	2.2.36 Data analysis and presentation
	2.18.8.2 Occupational Health and Safety, enterprise responsibilities
UEENEEE025A Solve problems in complex multiple path circuits	2.8.9.1 Circuit analysis
	2.18.1 Occupational Health and Safety principles
UEENEEE026A Provide computational solutions to engineering problems	2.8.10.1 Engineering maths fundamentals
	2.8.10.2 Engineering maths
	2.18.1 Occupational Health and Safety principles
UEENEEE027A Use advanced computational processes to provide solutions to engineering problems	2.8.10.3 Advanced Engineering maths
	2.18.1 Occupational Health and Safety principles
UEENEEE028A Develop engineering solutions to photonic problems	2.9.87 Photonic principles and applications
	2.18.1 Occupational Health and Safety principles
UEENEEE029A Solve electrotechnical problems	2.8.1.3 Electrotechnical principles
	2.18.1 Occupational Health and Safety principles
UEENEEE030A Provide solutions to and report on routine electrotechnology problems	2.8.14.3 Electrotechnology Numeracy Diagnostic Assessment Methods
	2.8.14.4 Electrotechnology Literacy Diagnostic Assessment Methods
	2.18.1 Occupational Health and Safety principles
UEENEEE031A	RESERVED
UEENEEE032A Document occupational hazards and risks in computer systems	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.18.1 Occupational Health and Safety principles
	2.18.16 Documenting hazards and identifying risks
UEENEEE033A Document occupational hazards and risks in electrical	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.18.1 Occupational Health and Safety principles
	2.18.16 Documenting hazards and identifying risks
UEENEEE034A Document occupational hazards and risks in electronics	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.18.1 Occupational Health and Safety principles
	2.18.16 Documenting hazards and identifying risks
UEENEEE035A Document	2.2.1 Enterprise communication methods

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
occupational hazards and risks in instrumentation	2.2.2 Enterprise work activities records
	2.18.1 Occupational Health and Safety principles
	2.18.16 Documenting hazards and identifying risks
UEENEEE036A Document occupational hazards and risks in refrigeration and air-conditioning	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.18.1 Occupational Health and Safety principles
	2.18.16 Documenting hazards and identifying risks
UEENEEE037A Document occupational hazards and risks in electrotechnology	2.2.1 Enterprise communication methods
	2.2.2 Enterprise work activities records
	2.18.1 Occupational Health and Safety principles
	2.18.16 Documenting hazards and identifying risks
UEENEEE038A Participate in development and follow a personal competency development plan	2.2.45 Responsibilities under a competency development plan
	2.2.46 Methods of monitoring and reporting competency development activities
UEENEEE039A	RESERVED
UEENEEE040A Identify and select components/accessories/materials for electrotechnology work activities	2.2.40 Electrotechnology industry organisations and practices
	2.8.1.2 Fundamental electrical principles
	2.8.2.1 Direct current circuit principles
	2.8.13 Parts and component selection
	2.18.1 Occupational Health and Safety principles
UEENEEE041A Use of routine equipment/plant/technologies in an electrotechnology environment	2.2.40 Electrotechnology industry organisations and practices
	2.8.1.2 Fundamental electrical principles
	2.8.13 Parts and component selection
	2.18.1 Occupational Health and Safety principles
UEENEEE042A Produce routine products for carrying out electrotechnology work activities	2.2.40 Electrotechnology Industry organisations and practices
	2.5.1.1 Drawings interpretation and sketching
	2.8.1.2 Fundamental electrical principles
	2.8.2.1 Direct current circuit principles
	2.8.13 Parts and component selection
	2.11.1 Hand tools 2.11.2.1 Power tools

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
	2.11.4 Dismantling and assembling techniques 2.11.13.2 Introduction to welding 2.11.19 Electrotechnology engineering practices 2.18.1 Occupational health and safety principles
UEENEEE043A Produce routine tools/devices for carrying out electrotechnology work activities	2.2.40 Electrotechnology Industry organisations and practices 2.5.1.1 Drawings interpretation and sketching 2.8.1.2 Fundamental electrical principles 2.8.2.1 Direct current circuit principles 2.8.13 Parts and component selection 2.11.1 Hand tools 2.11.2.1 Power tools 2.11.4 Dismantling and assembling techniques 2.11.13.2 Introduction to welding 2.11.19 Electrotechnology engineering practices 2.18.1 Occupational health and safety principles
UEENEEE044A Apply technologies and concepts to electrotechnology work activities	2.2.20 Computer use basics 2.2.40 Electrotechnology industry organisations and practices 2.4.11 Personal computers hardware structure 2.5.1.1 Drawings Interpretation and Sketching 2.8.1.2 Fundamental electrical principles 2.8.2.1 Direct current circuit principles 2.8.13 Parts and component selection 2.11.1 Hand tools 2.11.2.1 Power tools 2.11.4 Dismantling and assembling techniques 2.18.1 Occupational Health and Safety principles
UEENEEE045A Apply computation when using equipment/materials/concepts in an electrotechnology environment	2.2.40 Electrotechnology industry organisations and practices 2.8.1.2 Fundamental electrical principles 2.8.2.1 Direct current circuit principles 2.8.13 Parts and component selection 2.8.15.1 Applied mathematical concepts 2.18.1 Occupational Health and Safety principles

Competency Standard Units (CSUs)	Essential Knowledge and Associated Skills Clause
UEENEEE046A Identify effects of energy on machinery and materials in an electrotechnology environment	2.8.15.2 Applied physics concepts
	2.18.1 Occupational Health and Safety principles
UEENEEE047A Identify building techniques, methods and materials used in electrotechnology work activities	2.2.40 Electrotechnology organisations and practices
	2.5.1.1 Drawings Interpretation and Sketching
	2.7.1.1 Electrotechnology, building systems and materials
	2.8.8 Electrotechnology science and materials
	2.8.1.2 Fundamental electrical principles
	2.8.2.1 Direct current circuit principles
	2.8.13 Parts and component selection
	2.11.1 Hand tools
	2.11.2.1 Power tools
	2.11.4 Dismantling and assembling techniques
UEENEEE048A Carry out routine work activities in an electrotechnology environment	2.2.40 Electrotechnology organisations and practices
	2.8.1.2 Fundamental electrical principles
	2.8.2.1 Direct current circuit principles
	2.18.1 Occupational Health and Safety principles
UEENEEE049A Contribute to the operation of support plant and equipment used in electricity supply	2.2.40 Electrotechnology organisations and practices
	2.5.1.1 Drawings Interpretation and Sketching
	2.8.1.2 Fundamental electrical principles
	2.8.2.1 Direct current circuit principles
	2.8.8 Electrotechnology science and materials
	2.8.13 Parts and component selection
	2.11.1 Hand tools
	2.11.2.1 Power tools
	2.11.4 Dismantling and assembling techniques
UEENEEE050A Undertake computations in an electrotechnology environment	2.8.15.1 Applied mathematical concepts
	2.18.1 Occupational Health and Safety principles
