2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.2 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH027A Commission commercial radio frequency (RF) transmission and reception systems

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the setting-up and adjusting of RF transmission and reception systems for optimum performance. It encompasses safe working practices, signal testing and analysis, adjusting equipment, following procedures and documenting.</p>						
<b>Prerequisite Unit(s)</b>	<p>2)</p>						
<b>Competencies</b>	<p>2.1)</p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.</p> <p>UEENEEH072A Find and repair faults in the RF sections of electronic apparatus</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p>3)</p> <p>This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p> <p>Note:</p> <p>1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power</p>						

operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to set-up process measuring instruments.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.5 Measurement parameters are identified by reviewing transmission/reception requirements and equipment manufacturers instructions.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.7 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements.
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |  |     |   |
|---|--|-----|---|
| 2 | Set-up process measuring instruments.    | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |  | 2.2 | Testing/measuring devices are connected and set up in accordance with requirements for a particular control system.   |
|   |  | 2.3 | Measuring instruments are set up and adjusted in accordance with transmission/reception requirements and equipment manufacturer’s instructions.                           |
|   |  | 2.4 | Adjustments are made to provide optimum transmission/reception performance within regulatory requirements.  |
|   |  | 2.5 | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.                              |
|   |  | 2.6 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|   |  | 2.7 | Setting-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles. |
| 3 | Completion and report set-up activities. | 3.1 | OHS risk control work completion measures and procedures are followed.  |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 | Adjustment settings are documented and an appropriate person or persons notified in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning commercial radio frequency (RF) transmission and reception systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |  |
|---------|--|
| 2.10.9  | Electronic communications, antennas and wave propagation |
| 2.10.11 | Electronic communications, satellite                     |

process

2.18.1 Occupational Health and Safety principles

2.18.9 Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to setting-up and adjusting two different types of commercial radio frequency (RF) transmission and reception systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions

about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Commission commercial radio frequency (RF) transmission and reception systems as described in 7) and including:
    - A Identifying measurement parameters.
    - B Setting-up and adjusting in accordance with transmission/reception requirements and equipment manufacturer's instructions.
    - C Documenting adjustment settings with established procedures.

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in commissioning commercial radio frequency (RF) transmission and reception systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3; 2.4; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEH028A Install microwave and antennae and waveguides

### Unit Descriptor

1)

This unit covers the installation and testing of waveguides and antennae for microwave communications systems. It encompasses working safely and to installation standards, matching hardware and accessories with that specified for a given location, installation techniques, pre commission adjustment of antennas and waveguides and following instruction and procedures.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, schedules and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships and the like

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

- |   |   |     |   |
|---|---|-----|---|
| 1 | Prepare to install and microwave antennae and waveguides. | 1.1 | OHS procedures for a given work area are identified, obtained and understood through established routines.  |
|   |   | 1.2 | Established OHS risk control measures are followed in preparation for the work.   |
|   |   | 1.3 | Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.     |
|   |   | 1.4 | The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken. |
|   |   | 1.5 | Advice is sought from the work supervisor and/or other appropriate person to ensure the work is co-ordinated effectively with others.             |
|   |   | 1.6 | Sources of materials that may be required for the work are established in accordance with established routines.                                   |
|   |   | 1.7 | Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.                      |
| 2 | Install and microwave antennae and waveguides.            | 2.1 | Established OHS risk control measures for carrying out the work are followed.   |
|   |   | 2.2 | Circuits/components are checked as being isolated where necessary in strict accordance OHS requirements and procedures.                           |

- 2.3 Antennas are installed in their specified locations and within limitation imposed by regulation.
- 2.4 Hardware and accessories are installed straight and square in the required locations and within acceptable tolerances.
- 2.5 Cables and conductors are terminated at accessories in accordance with manufacture's and job specifications and regulatory requirements
- 2.6 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.7 The installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
- 3 Test and microwave antennae and waveguides and report.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Pre-commissioning adjustments are made to the installation and the system to optimise performance in accordance with system specification.
  - 3.3 Work site is cleaned and made safe in accordance with established procedures.
  - 3.4 Work supervisor is notified of the completion of the installation work in accordance with established routines.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing microwave and antennae and waveguides. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.10.18 Electronic communications, microwave antennas and wave guide fundamentals
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing, connecting and adjusting any microwave antennae and waveguides consisting of antennas, rectangular and curved sections, T sections, joints and couplers and on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for

Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install microwave and antennae and waveguides as described in 7) and including:
    - A Reading and interpreting drawings of circuit arrangements and component locations.
    - B Installing and securing antenna, waveguide hardware and accessories accurately.
    - C Terminating cable and conductors correctly.
    - D Pre commission adjusting for optimum performance.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing microwave and antennae and waveguides.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE002A Dismantle, assemble and fabricate electrotechnology components
- UEENEEE005A Fix and secure equipment
- UEENEEE007A Use drawings, schedules and service manuals
- UEENEEE008A Install wiring and accessories for extra-low voltage circuits

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills

enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH029A **Diagnose and rectify faults in navigation systems**

### Unit Descriptor

1)

This unit covers fault finding and repair of faults in navigation systems. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical diagnostic methods and knowledge of navigation system components, rectifying faults, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH016A Find and repair faults in the microwave amplifier sections of electronic apparatus

UEENEEH072A Find and repair faults in the RF sections of electronic apparatus

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to diagnose and rectify faults.	1.1	OHS procedures for a given work area are obtained and understood.
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
		1.4	The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel.
		1.5	Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
		1.6	Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
2	Diagnose and rectify faults.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Logical diagnostic methods are applied to diagnose navigation system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
  - 2.5 Suspected fault scenarios are tested as being the source of system problems.
  - 2.6 Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of electronics.
  - 2.7 Faults in the electronic components of the system are rectified to raise navigation system to its operation standard.
  - 2.8 System is tested to verify that the system operates as intended and to specified requirements.
  - 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
  - 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in navigation systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.10.26 Electronic communications, navigation systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise principles
- 2.18.9 Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four faults system faults an electronic navigation system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access

to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in navigation systems as detailed as described in 7) and including:

- A Applying logical diagnostic methods.
- B Using fault scenarios to test the source of system faults.
- C Identifying faults and competency needed to rectify them.
- D Rectifying faults in system electronics.
- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in navigation systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit E001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	2.4 to 2.8	2
--	------------	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## **UEENEEH030A    Diagnose and rectify faults in satellite-based surveillance and observation systems**

### **Unit Descriptor**

1)

This unit covers fault finding and repair faults in surveillance and observation systems. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of surveillance system components, rectify faults, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH016A    Find and repair faults in the microwave amplifier sections of electronic apparatus

UEENEEH072A    Find and repair faults in the RF sections of electronic apparatus

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 Established OHS risk control measures and procedures are followed in preparation for the work.

1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.

1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel.

1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.

1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Logical diagnostic methods are applied to diagnose satellite-based surveillance and observation system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of electronics.
- 2.7 Faults in the electronic components of the system are rectified to raise satellite-based surveillance and observation system to its operation standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.

- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in satellite-based surveillance and observation systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.10.11 Electronic communications, satellite
- 2.10.27 Electronic communications surveillance and observation
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise principles
- 2.18.9 Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four faults system faults an electronic satellite-based surveillance and observation system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in satellite based surveillance and observation systems as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the source of system faults.
    - C Identifying faults and competency needed to rectify them.
    - D Rectifying faults in system electronics.
    - E Verifying that the system operates correctly.
    - F Documenting fault rectification.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in satellite based surveillance and observation systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEH031A Diagnose and rectify faults in radar apparatus and systems

### Unit Descriptor

1)

This unit covers fault finding and repair faults in radar apparatus and system. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of radar system components, rectify faults, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH016A Find and repair faults in the microwave amplifier sections of electronic apparatus

UEENEEH072A Find and repair faults in the RF sections of electronic apparatus

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

- 2.4 Logical diagnostic methods are applied to diagnose radar apparatus and systems faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of electronics.
- 2.7 Faults in the electronic components of the system are rectified to raise radar apparatus and system to its operation standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in radar apparatus and systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.10.23	Electronics communications, secondary radar and related systems
2.10.24	Electronic communications, radar and sonar displays devices
2.10.25	Electronic communications, radar fundamentals
2.11.7.2	Advanced electronic testing and measuring devices techniques
2.18.1	Occupational Health and Safety principles
2.18.8.2	Occupational Health and Safety, enterprise principles
2.18.9	Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four faults system faults an electronic radar apparatus and system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range

statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Diagnose and rectify faults in radar apparatus and systems as described in 7) and including:
      - A Applying logical diagnostic methods.
      - B Using fault scenarios to test the source of system faults.
      - C Identifying faults and competency needed to rectify them.
      - D Rectifying faults in system electronics.
      - E Verifying that the system operates correctly.
      - F Documenting fault rectification.
      - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in Context of assessment’, which should also be used in the formal

learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in radar apparatus and systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit E001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEH032A **Diagnose and rectify faults in global positioning systems**

### **Unit Descriptor**

1)

This unit covers fault diagnosis and rectification in global positioning system. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of GPS system components, rectifying faults, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH016A Find and repair faults in the microwave amplifier sections of electronic apparatus

UEENEEH072A Find and repair faults in the RF sections of electronic apparatus

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

- |   |   |   |  |
|---|---|---|--|
|   | 2.4   | Logical diagnostic methods are applied to diagnose global positioning systems faults employing measurements and estimations of system operating parameters referenced to system operational requirements. |  |
|   | 2.5   | Suspected fault scenarios are tested as being the source of system problems.  |  |
|   | 2.6   | Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of electronics.   |  |
|   | 2.7   | Faults in the electronic components of the system are rectified to raise global positioning system to its operation standard.   |  |
|   | 2.8   | System is tested to verify that the system operates as intended and to specified requirements.  |  |
|   | 2.9   | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.  |  |
|   | 2.10  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |  |
|   | 2.11  | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.  |  |
| 3 | Complete and report fault diagnosis and rectification activities. | 3.1   | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2   | Work site is made safe in accordance with established safety procedures.   |
|   |   | 3.3   | Rectification of faults is documented in accordance with established procedures.   |
|   |   | 3.4   | Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in global positioning systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.10.28	Electronic communications global positioning systems
2.18.1	Occupational Health and Safety principles
2.18.8.2	Occupational Health and Safety, enterprise responsibilities
2.18.9	Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four faults system faults an electronic global positioning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in global positioning systems as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the source of system faults.
    - C Identifying faults and competency needed to rectify them.
    - D Rectifying faults in system electronics.
    - E Verifying that the system operates correctly.
    - F Documenting fault rectification.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in global positioning systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which

is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit E001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.9; 2.10

## **UEENEEH033A    Diagnose and rectify faults in telecommunication apparatus and systems**

### **Unit Descriptor**

**1)**

This unit covers fault diagnosis and rectification in telecommunication apparatus and systems. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of telecommunication system components, rectifying faults, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A    Find and repair faults in the digital components in electronic apparatus

UEENEEH013A    Find and repair faults in the amplifier sections of electronic apparatus

UEENEEH015A    Find and repair faults in the microprocessor components of electronic apparatus

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.

- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Diagnose and rectify faults.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Logical diagnostic methods are applied to diagnose telecommunication apparatus and systems em faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of electronics.
- 2.7 Faults in the electronic components of the system are rectified to raise telecommunication apparatus and system to its operation standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements.
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.

- |   |   |     |  |
|---|---|-----|--|
| 3 | Complete and report fault diagnosis and rectification activities. | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 | Work site is made safe in accordance with established safety procedures.   |
|   |   | 3.3 | Rectification of faults is documented in accordance with established procedures.   |
|   |   | 3.4 | Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in telecommunication apparatus and systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.1.2 Telephone system fundamentals
- 2.4.1.3 Telephone network facilities
- 2.4.2.1 Telecommunication earthing and protection
- 2.4.6 PABX fundamentals
- 2.4.7 PABX programming
- 2.4.8 Switches, hubs and routers
- 2.4.9 Decoders
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities
- 2.18.9 Electronic Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four faults system faults an electronic telecommunication apparatus and systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in telecommunication apparatus and systems as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the source of system faults.
    - C Identifying faults and competency needed to rectify them.
    - D Rectifying faults in system electronics.
    - E Verifying that the system operates correctly.
    - F Documenting fault rectification.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in telecommunication apparatus and systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEH034A **Diagnose and rectify faults in electronic medical equipment**

### **Unit Descriptor**

1)

This unit covers diagnosing and rectifying faults in the electronic aspects of electronic medical equipment. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of medical process controls to logical diagnosis procedures, rectifying faults, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Find and repair faults in the digital components in electronic apparatus

UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus

UEENEEH015A Find and repair faults in the microprocessor components of electronic apparatus

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c.

However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
  - 2.4 Logical diagnostic methods are applied to diagnose in electronic medical equipment faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
  - 2.5 Suspected fault scenarios are tested as being the source of system problems.
  - 2.6 Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of electronics.
  - 2.7 Faults in the electronic components of the system are rectified to raise global positioning system to its operation standard.
  - 2.8 System is tested to verify that the system operates as intended and to specified requirements.
  - 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
  - 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
    - 3.1 OHS work completion risk control measures and procedures are followed.
    - 3.2 Work site is made safe in accordance with established safety procedures.
    - 3.3 Rectification of faults is documented in accordance with established procedures.

- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in electronic medical equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.12.22.1 Medical equipment principles
- 2.12.22.2 Medical equipment, anatomy and physiology and infection control
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices
- 2.18.10 Medical equipment safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four faults system faults in four different types of electronic medical equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in electronic medical equipment as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the source of system faults.
    - C Identifying faults and competency needed to rectify them.
    - D Rectifying faults in system electronics.
    - E Verifying that the system operates correctly.
    - F Documenting fault rectification..
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in electronic medical equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit UEENEEE001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.9; 2.10

## UEENEEH035A Design custom electronic installations

### Unit Descriptor

1)

This unit covers the design of home entertainment aspects of custom electronic installations and energy control systems. It encompasses developing control scenarios based on a design brief, negotiating with architect/designer, builder and client and the like, applying knowledge of electronic audio/video components and home theatre acoustics and relevant electrical installation regulation, developing design drawings and obtaining approval for final design.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH005A Verify compliance and functionality of custom electronic installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to design custom electronic installations.	<p>1.1 OHS processes and procedures for a given work area are obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed custom electronic installation is determined from the design brief or in consultations with appropriate person(s).</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.</p>
2 Develop installation design.	<p>2.1 Knowledge of audio/video components, home theatre acoustics and regulations is applied to the design.</p> <p>2.2 Alternative arrangements for the installation design are considered based on the requirements outlined in the design brief.</p> <p>2.3 Safety, functional and budgetary considerations are incorporated in the installation design.</p> <p>2.4 Installation design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.5 Installation design is documented for submission to appropriate person(s) for approval.</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation policy.</p>
3 Obtain approval for installation design.	<p>3.1 Installation design is presented and explained to client and/or other relevant person(s).</p> <p>3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.</p>

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing custom electronic installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.5 Technical standards, regulations and codes for extra-low voltage work
- 2.5.11 Environmental and heritage awareness
- 2.9.16.2 Acoustics, spatial treatment and sound reproduction
- 2.9.40 Integrated audio systems
- 2.9.80 Video and display set up
- 2.9.81 Audio/video control equipment
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by designing the entertainment aspects of two custom electronic installations one of which shall incorporate dedicated home theatre.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design custom electronic installations as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace

and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing custom electronic installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit E001A and other discipline specific occupational health and safety units(s) shall be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this	Refer to the following Performance Criteria for examples of application:	

competency?	1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEH036A Design commercial audio/video installations**

### **Unit Descriptor**

1)

This unit covers the design of audio/video facilities in meeting rooms, classrooms, studios, theatres, halls and the like. It encompasses applying knowledge of electronic audio/video components, acoustics and visual displays, analogue and digital communication, multimedia storage and reproduction, negotiating with clients and others and documenting design.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH037A Commission commercial audio/video systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to design commercial audio/video installations.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the proposed integrated installation is determined from the design brief or in consultations with appropriate person(s).
- 1.4 Design development work is planned to meet scheduled timelines in consultation with others involved in the work.

2 Develop installation design.

- 2.1 Knowledge of audio/video components, acoustics and visual displays, analogue and digital communication, multimedia storage and reproduction is applied to designing the installation.
- 2.2 Alternative arrangements for the installation design are considered based on the requirements outlined in the design brief.
- 2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
- 2.4 Installation design draft is checked for compliance with the design brief and regulatory requirements.
- 2.5 Installation design is documented for submission to appropriate person(s) for approval.
- 2.6 Solutions to unplanned situation are provided consistent with organisation policy.

3 Obtain approval for installation design.

- 3.1 Installation design is presented and explained to client representative and/or other relevant person(s).
- 3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing commercial audio/video installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.5 Technical standards, regulations and codes for extra-low voltage work
- 2.5.11 Environmental and heritage awareness
- 2.6.9.3 Venue lighting for audio/video/live presentations
- 2.9.16.2 Acoustics, spatial treatment and sound reproduction
- 2.18.1 Occupational Health and Safety principles

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by designing two commercial audio/video installations one of which shall incorporate analogue and digital communication, multimedia storage and reproduction.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range

statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Design commercial audio/video installations as described in 7) and including:
      - A Developing outlines of alternative designs.
      - B Developing the design within the safety and functional requirements and budget limitations.
      - C Documenting and presenting design effectively.
      - D Successfully negotiating design alteration requests.
      - E Obtaining approval for final design.
      - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace

and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing commercial audio/video installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) shall be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this	Refer to the following Performance Criteria for examples of application:	

competency?	1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH037A Program and commission commercial audio/video systems

### Unit Descriptor

1)

This unit covers testing, adjusting and balancing of audio/video facilities in meeting rooms, classrooms, studios, theatres, halls and the like. The unit encompasses working safely and to specifications, measuring and adjusting necessary parameters to meet specified performance, working with clients and documenting and certifying set performance parameters.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH010A Install commercial audio/video system components

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1	Prepare to commission.	1.1	OHS procedures for a given work area are obtained and understood.
		1.2	Established OHS risk control measures and procedures are followed in preparation for the work.
		1.3	Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
		1.4	The extent of programming and commissioning is determined from reports and other documentation and fro discussion with appropriate personnel.
		1.5	Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
		1.6	Tools, equipment and testing devices needed to program and commission are obtained in accordance with established procedures and checked for correct operation and safety.
2	Commission audio/video systems.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Audio/video devices are checked for correct location and alignment.
  - 2.5 Functional settings are made for each audio/video apparatus in accordance with design specifications.
  - 2.6 Audio/video system functions are tested in accordance with commissioning requirements.
  - 2.7 Sources of audio/video system anomalies are identified and corrected.
  - 2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
  - 2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 2.10 Commissioning activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report commissioning activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 ‘As-installed’ audio/video system is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and programming and commissioning commercial audio/video systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.50 Commercial audio/video systems commissioning process
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by commissioning at least two different commercial audio/video systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Program and commission commercial audio/video systems as described in 7) and including:
    - A Setting apparatus functions.
    - B Testing system functions.
    - C Identifying and correcting function anomalies.
    - D Documenting 'as-installed' system correctly.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in programming and commissioning commercial audio/video systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety units(s) shall be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.7 to 2.9	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.8; 2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8; 2.9

## UEENEEH038A Find and repair faults in complex power supplies

### Unit Descriptor

1)

This unit covers fault finding and repair of regulated and switch mode power supplies. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH011A Solve problems in d.c. power supplies with single phase input

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults in complex power supplies.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Fault finding is approached methodically drawing on knowledge of complex power supplies and circuits using measured and calculated values of power supply parameters.
  - 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Materials required for the repair work are sourced and obtained in accordance with established procedures.
  - 2.8 Effectiveness of the repair is tested in accordance with established procedures.
  - 2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
  - 2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Written justification is made for repairs to apparatus.
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and programming and commissioning commercial audio/video systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.11	Linear and switch mode power supplies
2.9.65	Regulated power supplies
2.9.66	Switching power supplies
2.11.7.1	Electronic testing and measuring devices and techniques
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing faults in a regulated power supply and a switch mode power supply.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access

to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Program and commission commercial audio/video systems as described in 7) and including:

- A Using methodical fault finding techniques.
- B Finding faults efficiently.
- C Replacing components without damage.
- D Providing written justification for the repairs.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in programming and commissioning commercial audio/video systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit E001A and other discipline specific occupational health and safety units(s) shall be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

**Skills Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEH039A Solve problems in basic amplifier circuits

### Unit Descriptor

1)

This unit covers determining correct operation of basic amplifier circuits. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in basic amplifier circuits.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH002A Carry out basic repairs to electronic apparatus by replacement of components

OR

UEENEEH070A Terminate and connect components, conductors, wiring and cables for electronic circuits

AND

UEENEEH014A Solve problems in frequency dependent circuits

OR

UEENEEG002A Solve problems in single and three phase low voltage circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved

contracts of training. It may also used to augment formally acquired competencies.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on basic amplifier circuits.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 OHS risk control work preparation measures and procedures are followed.

1.3 The natures of the amplifier circuit problems are obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

	1.6	Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.	
2	Solve basic amplifier circuit problems.	2.1	OHS risk control work measures and procedures are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		2.4	Established methods are used to solve problems from measure and calculated values as they apply to basic amplifier circuits.
		2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
		2.6	Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3	Complete work and document problem solving activities.	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Justification for solutions used to solve circuit problems is documented.
		3.4	Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in basic amplifier circuits. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.8 Amplifier Fundamentals
- 2.9.12 Electronic fault finding
- 2.11.7.1 Electronic testing and measuring devices and

techniques

2.18.1 Occupational Health and Safety principles

2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving at least two of the following types basic amplifier circuit problems:

- Determining the operating parameters of an amplifier existing circuit
- Alternating an existing amplifier circuit to comply with specified operating parameters
- Developing an amplifier circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access

to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in basic amplifier circuits as described in 7) and including:

- A Using methodical problem solving methods.
- B Taking measurements correctly and accurately.
- C Calculating parameters correctly and accurately.
- D Providing solution to amplifier circuit problems.
- E Providing written justification for the solutions to problems.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in basic amplifier circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEE001A and other discipline specific occupational health and safety units(s) shall be reassured in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH040A **Diagnose and rectify faults in sonar apparatus and systems**

### Unit Descriptor

1)

This unit covers fault finding and the repair of faults in sonar apparatus and system. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of sonar system components, rectifying faults, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A	Find and repair faults in the digital components in electronic apparatus
UEENEEH013A	Find and repair faults in the amplifier sections of electronic apparatus
UEENEEH015A	Find and repair faults in the microprocessor components of electronic apparatus
UEENEEH016A	Find and repair faults in the microwave amplifier sections of electronic apparatus
UEENEEH072A	Find and repair faults in the RF sections of electronic apparatus

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |   |      |   |
|---|---|------|---|
| 2 | Diagnose and rectify faults.                                      | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |   | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.  |
|   |   | 2.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
|   |   | 2.4  | Logical diagnostic methods are applied to diagnose sonar apparatus and system faults employing measurements and estimations of system operating parameters referenced to system operational requirements. |
|   |   | 2.5  | Suspected fault scenarios are tested as being the source of system problems.  |
|   |   | 2.6  | Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of electronics.   |
|   |   | 2.7  | Faults in the electronic components of the system are rectified to raise sonar apparatus and system to its operation standard.  |
|   |   | 2.8  | System is tested to verify that the system operates as intended and to specified requirements.  |
|   |   | 2.9  | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.  |
|   |   | 2.10 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|   |   | 2.11 | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.  |
| 3 | Complete and report fault diagnosis and rectification activities. | 3.1  | OHS work completion risk control measures and procedures are followed.  |
|   |   | 3.2  | Work site is made safe in accordance with established safety procedures.  |

- 3.3 Rectification of faults is documented in accordance with established procedures.
- 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in sonar apparatus and systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.10.20 Electronic communications, sonar Transducers and arrays
- 2.10.21 Electronic communications, sonar system operating principles
- 2.10.22 Electronic communications, sonar measurement and set up
- 2.10.24 Electronic communications, radar and sonar displays devices
- 2.11.7.2 Advanced electronic testing and measuring devices and techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities
- 2.18.9 Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four faults system faults an electronic sonar apparatus and system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in sonar apparatus and systems as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the source of system faults.
    - C Identifying faults and competency needed to rectify them.
    - D Rectifying faults in system electronics.
    - E Verifying that the system operates correctly.
    - F Documenting fault rectification.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and  
specific  
resources for**
**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

**assessment**

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in sonar apparatus and systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in unit E001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## **UEENEEH041A    Manage and implement electronic projects**

### **Unit Descriptor**

**1)**

This unit covers the management and implementation of electronic projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, and critical path timelines and completion documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

**4)**

Electronics

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Establish the scope of the project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.3 Project’ deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).</p> <p>1.3 Measurable outcomes are identifies to evaluate the project on completion from project planning and other relevant documentation.</p> <p>1.4 Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation.</p> <p>1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.</p>
2 Manage and implement electronic project.	<p>2.1 OHS policies, procedures and programs are implemented and monitored.</p> <p>2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project.</p> <p>2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organization’s policy.</p> <p>2.4 Procurement processes and procedures are monitored to ensure on time supply of plant and materials and in accordance with organisation policy.</p> <p>2.5 Project is progress is monitored against schedule, quality requirements and budget.</p> <p>2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation policy.</p>

- |                     |     |   |
|---------------------|-----|---|
|                     | 2.7 | Variations are managed in accordance with agreed processes and in accordance with the contract.                                     |
|                     | 2.8 | Project records are maintained and progress reports written and forwarded to all appropriate person(s).                             |
| 3 Complete project. | 3.1 | Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.    |
|                     | 3.2 | Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation policy. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing electronic projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.2.17   | Project management  |
| 2.2.19   | Customer/Client relations                                   |
| 2.2.29   | Electronic industry sector customs and practices            |
| 2.18.8.2 | Occupational Health and Safety, enterprise responsibilities |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing an industry accepted medium sized electronic project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of 8.1)

## Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this unit

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in 6) Essential Knowledge and Associated Skills (EKAS) of this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred industry and/or regulatory benchmark requirements, namely a percentile grade
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Manage electronic projects as described in 7) and including:
    - A Establishing the scope of the project accurately.
    - B Ascertaining the input a project.
    - C Developing effective management processes.
    - D Managing resources and variations effectively.
    - E Resolving conflicts.
    - F Adopting risk management strategies.
    - G Maintaining records and submitting progress reports.
    - H Meeting project outcomes.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in managing electronic projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.4: 2.6 to 2.8	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 2.5; 2.7; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.3; 2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.8; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6
---	--	---

## UEENEEH042A **Solve problems in oscillator sections of electronic apparatus**

### Unit Descriptor

1)

This unit covers determining correct operation of discrete component and modularised oscillator sections of electronic apparatus. It encompasses working safely, problem solving procedures, including the use of; voltage, current, resistance and phase measuring devices, providing solutions derived from measurements and calculations to predictable problems in oscillator sections/circuits.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEH014A Solve problems in frequency dependant circuits

UEENEEE007A Use drawings, diagrams schedules and manuals

UEENEEH039A Solve problems in basic amplifier circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical

work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on oscillator sections.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 OHS risk control work preparation measures and procedures are followed.

1.3 The nature of oscillator problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve oscillator section problems.

2.1 OHS risk control work measures and procedures are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- |     |  |
|-----|--|
| 2.3 | Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
| 2.4 | Established methods are used to solve problems from measure and calculated values as they apply to oscillator sections in an electronic apparatus.     |
| 2.5 | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
| 2.6 | Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |
| 3   | Complete work and document problem solving activities.   |
| 3.1 | OHS work completion risk control measures and procedures are followed.   |
| 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
| 3.3 | Justification for solutions used to solve circuit problems is documented.  |
| 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures.                                 |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in oscillator sections of electronic apparatus.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.9.67 | Feedback filters and oscillators          |
| 2.18.1 | Occupational Health and Safety principles |
| 2.18.9 | Electronic Safe working practices         |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by solving at least three problems in typical oscillator sections of electronic apparatus

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in oscillator sections of electronic apparatus as described in 7) Range: and including:
    - A Using methodical problem solving methods.
    - B Taking measurements correctly and accurately.
    - C Calculating parameters correctly and accurately.
    - D Providing solution to oscillator component/circuit problems.
    - E Providing written justification for the solutions to problems.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

---

**Context of and 8.3)**

**specific resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in oscillator sections of electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence in this unit may be assessed concurrently with unit:.

UEENEEH002A      Carry out basic repairs to electronic equipment

UEENEEH039A      Solve problems in basic amplifier circuits

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling  
Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH043A **Diagnose and rectify faults in digital subsystems of electronic controls**

### **Unit Descriptor**

1)

This unit covers diagnosing and rectifying faults in digital components of electronic control systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of digital subsystems to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG008A Find and repair faults in electrical apparatus and circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |   |  |  |
|---|---|--|--|
|   | 2.4   | Logical diagnostic methods are applied to diagnose electronic control system apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements. |  |
|   | 2.5   | Suspected fault scenarios are tested as being the cause(s) of system fault.  |  |
|   | 2.6   | Cause of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the digital subsystems.  |  |
|   | 2.7   | Faults in the electronic components of the system are rectified to raise apparatus and system to its operational standard.   |  |
|   | 2.8   | System is tested to verify that the system operates as intended and to specified requirements  |  |
|   | 2.9   | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.   |  |
|   | 2.10  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |  |
|   | 2.11  | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.           |  |
| 3 | Complete and report fault diagnosis and rectification activities. | 3.1  | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2  | Work site is made safe in accordance with established safety procedures.   |
|   |   | 3.3  | Rectification of faults is documented in accordance with established procedures.   |
|   |   | 3.4  | Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified. |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in digital subsystems of electronic controls. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.4.1 Digital electronics fundamentals
- 2.9.12 Electronic fault finding
- 2.11.7.1 Electronic testing and measuring devices and techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four of the following faults in digital subsystems.

- Open-circuit
- Short-circuit
- Incorrect or failed connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in digital subsystems of electronic controls as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the cause(s) of system faults.
    - C Identifying faults and their cause and competency needed to rectify them.
    - D Rectifying faults in system digital subsystems.
    - E Verifying that the system operates correctly.
    - F Documenting fault rectification.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in digital subsystems of electronic controls.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG008A Find and repair faults in electrical apparatus and circuits

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## **UEENEEH044A    Diagnose and rectify faults in analogue circuits and components in electronic control systems**

### **Unit Descriptor                    1)**

This unit covers diagnosing and rectifying faults in analogue applications in electronic control systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of analogue circuits and components to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

Note.  
Examples of analogue applications are power and differential amplifiers, integrators, comparators function generators precision rectifiers, active filters and the like.

### **Prerequisite Unit(s)            2)**

### **Competencies                    2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG008A    Find and repair faults in electrical apparatus and circuits

### **Literacy and numeracy skills            2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit                    3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise                3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the

workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to diagnose and rectify faults	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p> <p>1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel</p> <p>1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site</p> <p>1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Diagnose and rectify faults	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p>

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Logical diagnostic methods are applied to diagnose electronic control system apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the cause(s) of system fault.
- 2.6 Cause of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the analogue circuits and components.
- 2.7 Faults in the electronic components of the system are rectified to raise apparatus and system to its operational standard.
- 2.8 System is tested to verify that the system operates as intended and to specified requirements
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in analogue circuits and components in electronic control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.8	Amplifier fundamentals
2.9.9.1	Advanced amplifiers
2.9.9.2	Amplifier applications
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.9	Electronic Safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four of the following faults in analogue circuits and components:

- Open-circuit
- Short-circuit
- Incorrect or failed connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in analogue circuits and components in electronic control systems as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the cause(s) of system faults.
    - C Identifying faults and their cause and competency needed to rectify them.
    - D Rectifying faults in system analogue circuits and components.
    - E Verifying that the system operates correctly.
    - F Documenting fault rectification.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in analogue circuits and components in electronic control systems

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG008A Find and repair faults in electrical apparatus and circuits

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key**

**8.6)**

**competencies**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment**
**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEH045A    **Develop solutions to analogue electronic problems**

### **Unit Descriptor**

1)

This unit covers developing engineering solutions to resolve problems with analogue electronics. It encompasses working safely, apply extensive knowledge of analogue electronics circuit and device operation and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical analogue electronic problems are those encountered in meeting performance requirements and compliance standards, revising analogue electronics operating parameters and dealing with analogue electronic malfunctions.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH039A    Solve problems in basic amplifier circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work plant and equipment which is directly connected to installation wiring that operates at voltages above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to develop engineering solution for analogue electronic problems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the analogue electronic problem is determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

2 Develop engineering solution for analogue electronic problems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of analogue electronics circuit, device operation, characteristics and applications are applied to developing solutions to analogue electronic problems.
- 2.3 Parameters, specifications and performance requirements in relation to each analogue electronic problem are obtained in accordance with established procedures.

- |   |   |  |
|---|---|--|
|   | 2.4   | Approaches to resolving analogue electronic problems are analysed to provide most effective solutions.   |
|   | 2.5   | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.  |
|   | 2.6   | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards  |
| 3 | Test, document and implement engineering solution for analogue electronic problems. |  |
|   | 3.1   | Solutions to analogue electronic problems are tested to determine their effectiveness and modified where necessary.  |
|   | 3.2   | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.   |
|   | 3.3   | Appropriately competent and qualified person(s) required to implement solutions to analogue electronic problems are coordinated in accordance with regulatory requirements and enterprise policy. (See Note) |
|   | 3.4   | Justification for solutions used to solve analogue electronic problems is documented for inclusion in work/project development records in accordance with professional standards.                            |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing solutions to analogue electronic problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.9.84 | Advanced analogue electronics             |
| 2.9.85 | Advanced power amplifiers                 |
| 2.18.1 | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four analogue electronic problems.

Note.

Typical analogue electronic problems are those encountered in meeting performance requirements and compliance standards, revising an analogue electronic operating parameters and dealing with analogue electronic malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop solutions to analogue electronic problems as described in 7) and including:
    - A Understanding the extent of the analogue electronic problem.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining analogue electronic parameters, specifications and performance requirements appropriate to each problem.
    - D Testing and solutions to analogue electronic problems.
    - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
    - F Documenting justification of solutions implemented in accordance with professional standards.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing solutions to analogue electronic problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2,

Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>
------------------------------	-------------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH046A Solve fundamental problems in electronic communications systems

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers ascertaining correct operation of communications systems and solving fundamental system problems as met in engineering support work functions. It encompasses working safely, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements to predictable problems in electronic communication systems.</p>						
<b>Prerequisite Unit(s)</b>	<p>2)</p>						
<b>Competencies</b>	<p>2.1)</p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.</p> <p>UEENEEH013A Solve problems in amplifier sections of electronic apparatus</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 33%;">Reading</td> <td style="width: 10%;">5</td> <td style="width: 33%;">Writing</td> <td style="width: 10%;">5</td> <td style="width: 14%;">Numeracy</td> <td style="width: 10%;">5</td> </tr> </table>	Reading	5	Writing	5	Numeracy	5
Reading	5	Writing	5	Numeracy	5		
<b>Application of the Unit</b>	<p>3)</p> <p>This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 4 level or higher.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p>						

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to solve fundamental problems in electronic communications systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
- 1.4 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve fundamental problems in electronic communications systems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |  |  |   |
|---|--|--|---|
|   | 2.4  | Knowledge of fundamental characteristics communication system components and transmission media is applied to solving system problems.                 |   |
|   | 2.5  | Logical approaches are used to solve system problems from measure and calculated values as they apply to communication systems.                        |   |
|   | 2.6  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |   |
|   | 2.7  | Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |   |
| 3 | Complete work and document problem solving activities. | 3.1  | OHS risk control work completion measures and procedures are followed.        |
|   |  | 3.2  | Work site is cleaned and made safe in accordance with established procedures. |
|   |  | 3.3  | Reports are written outlining system problem and justifying solutions used.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving fundamental problems in electronic communications systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.10.1.1 | Electronic communications, principles     |
| 2.18.1   | Occupational Health and Safety principles |
| 2.18.9   | Electronic safe working practices         |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by solving four problems in electronic communications systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

---

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve fundamental problems in electronic communications systems as described in 7) and including:
    - A Applying knowledge of communication system and transmission media characteristics.
    - B Using logical and methodical approaches to solving system problems.
    - C Solving system problems.
    - D Providing written justification for solutions used.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving fundamental problems in electronic communications systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEH047A Assess compliance of electronic apparatus

### Unit Descriptor

1)

This unit covers assessing electronic apparatus for compliance with a standard and/or regulation for the purpose of certification or approval. The unit encompasses safe working practices, determining specified requirements, inspecting, setting up performance tests, evaluating inspection and test results and documenting evaluation outcomes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after all other relevant competency standard units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work

environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to evaluate electronic apparatus.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Examination and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
- 1.4 Relevant documentation is obtained and read to determine the certification/approval specifications for which the equipment is to be assessed. (see note 1)
- 1.5 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.

2 Evaluate electronic apparatus.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 In depth knowledge of the operating requirements of the electronic apparatus under scrutiny is applied to the assessment process.

- |   |  |   |
|---|--|---|
|   | 2.5  | Apparatus examination and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.                 |
|   | 2.6  | Apparatus examination and tests are carried out methodically and results and comments systematically noted.   |
|   | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   | 2.8  | Assessment is carried out without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.        |
| 3 | Complete work and document evaluate results. | 3.1 OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2 Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 Examination and test results are evaluated and non-compliance issues identified.  |
|   |  | 3.4 Examination, test results and comments on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures. |

Note 1

Examples of documentation are those specifying safety requirements, technical standard, as marketed technical performance, product quality endorsement standards and the like.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assessing compliance of electronic apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.2.24 | Technical examination and testing methods                           |
| 2.5.8  | Technical standards, regulations and codes for electronic apparatus |
| 2.18.1 | Occupational Health and Safety principles                           |
| 2.18.9 | Electronic Safe working practices                                   |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by assessing four different electronic apparatus.

Note:

Examples of apparatus are audio amplifiers, radio and televisions receivers, video displays, audio and video recording/replay devices, two-way radios, cell phones, instrumentation devices, control devices and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for

Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assess compliance of electronic apparatus as described in 7) and including:
    - A Interpreting compliance documents.
    - B Setting up and conducting appropriate examinations and tests.
    - C Identifying non-compliance defects.
    - D Reporting examination and test results and non-compliance issues clearly and accurately.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and 8.3)**

**specific resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assessing compliance of electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG031A      Assess compliance of electrical apparatus

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5; 2.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5; 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5; 2.6	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

# UEENEEH048A Design and develop advanced digital systems

## Unit Descriptor

1)

This unit covers development of digital electronic systems as occur in engineering product development work. It encompasses working safely, following design brief, applying knowledge of digital components/devices, interpreting device/component specifications, constructing prototype devices, applying programming techniques to programmable devices, testing developed system prototype operation and documenting design and development work.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A      Solve problems in digital components of electronic apparatus

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

## Competency Field

4)

Electronics

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to design and develop advance digital systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed digital system development is determined from the design brief or in consultations with appropriate person(s).</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site.</p> <p>1.5 Materials and devices/components required for the work are selected on compatibility of their specifications with digital system requirements and project budget constraints.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Design and develop advance digital systems.	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 Knowledge of digital devices and systems and compliance standards are applied to the design</p> <p>2.3 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.</p> <p>2.4 Safety, functional and budget considerations are incorporated in the design.</p> <p>2.5 Prototype devices and circuits are constructed and tested for compliance with the design brief and regulatory requirements.</p> <p>2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.</p>

	2.7	Digital system design is documented for submission to appropriate person(s) for approval.
	2.8	Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for advance digital systems design.	3.1	Digital system design is presented and explained to client representative and/or other relevant person(s).
	3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3	Final design is documented and approval obtained from appropriate person(s).
	3.4	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and developing advanced digital systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.4.4	Digital applications
2.11.7.2	Advanced electronic testing and measuring devices and techniques
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and developing a digital system with at least five interacting functions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and develop advanced digital systems as described in 7) and including:
    - A Developing the design within the safety and functional requirements and budget limitations.
    - B Documenting and presenting design effectively.
    - C Successfully negotiating design alteration requests.
    - D Obtaining approval for final design.
    - E Developing the design within the safety and functional requirements and budget limitations.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and developing advanced digital systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.3; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 2.5; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3

**Skills Enabling  
Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 2.3; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.7; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

# UEENEEH049A    **Develop solutions to audio electronic problems**

**Unit Descriptor**

1)

This unit covers developing engineering solutions to resolve problems with audio electronics. It encompasses working safely, applying extensive knowledge of audio electronics circuits and device operation and application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives

Note.

Typical audio electronic problems are those encountered in meeting performance requirements and compliance standards, revising audio electronic operating parameters and dealing with audio electronic malfunctions.

**Prerequisite Unit(s)**

2)

**Competencies**

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEH039A      Solve problems in basic amplifier circuits

**Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading      5      Writing      5      Numeracy      5

**Application of the Unit**

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

**Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to develop engineering solution for audio electronic problems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the audio electronic problem is determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

2 Develop engineering solution for audio electronic problems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of audio electronics circuit, device/component operation, characteristics and applications are applied to developing solutions to audio electronic problems.
- 2.3 Parameters, specifications and performance requirements in relation to each audio electronic problem are obtained in accordance with established procedures.

- |     |   |  |     |  |     |  |     |   |     |  |
|-----|---|--|-----|--|-----|--|-----|---|-----|--|
|     | 2.4   | Approaches to resolving audio electronic problems are analysed to provide most effective solutions.  |     |  |     |  |     |   |     |  |
|     | 2.5   | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.  |     |  |     |  |     |   |     |  |
|     | 2.6   | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.   |     |  |     |  |     |   |     |  |
| 3   | Test, document and implement engineering solution for audio electronic problems.  | <table border="0"> <tr> <td>3.1</td> <td>Solutions to audio electronic problems are tested to determine their effectiveness and modified where necessary.</td> </tr> <tr> <td>3.2</td> <td>Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.</td> </tr> <tr> <td>3.3</td> <td>Appropriately competent and qualified person(s) required to implement solutions to audio electronic problems are coordinated in accordance with regulatory requirements and enterprise policy. (See Note)</td> </tr> <tr> <td>3.4</td> <td>Justification for solutions used to solve audio electronic problems is documented for inclusion in work/project development records in accordance with professional standards.</td> </tr> </table> | 3.1 | Solutions to audio electronic problems are tested to determine their effectiveness and modified where necessary. | 3.2 | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed. | 3.3 | Appropriately competent and qualified person(s) required to implement solutions to audio electronic problems are coordinated in accordance with regulatory requirements and enterprise policy. (See Note) | 3.4 | Justification for solutions used to solve audio electronic problems is documented for inclusion in work/project development records in accordance with professional standards. |
| 3.1 | Solutions to audio electronic problems are tested to determine their effectiveness and modified where necessary.  |  |     |  |     |  |     |   |     |  |
| 3.2 | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.  |  |     |  |     |  |     |   |     |  |
| 3.3 | Appropriately competent and qualified person(s) required to implement solutions to audio electronic problems are coordinated in accordance with regulatory requirements and enterprise policy. (See Note) |  |     |  |     |  |     |   |     |  |
| 3.4 | Justification for solutions used to solve audio electronic problems is documented for inclusion in work/project development records in accordance with professional standards.                            |  |     |  |     |  |     |   |     |  |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and developing advanced digital systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.9.16.2 | Acoustics, spatial treatment and sound reproduction              |
| 2.9.17.1 | Audio reproduction, electronic components                        |
| 2.9.86   | Audio system advance diagnostic techniques                       |
| 2.11.7.2 | Advanced electronic testing and measuring devices and techniques |
| 2.18.1   | Occupational Health and Safety principles                        |

## 2.18.9 Electronic Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four audio electronic problems.

Note.

Typical audio electronic problems are those encountered in meeting performance requirements and compliance standards, revising an audio electronic operating parameters and dealing with audio electronic malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions

about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and develop advanced digital systems as described in 7) and including:
    - A Understanding the extent of the audio electronic problem.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining audio electronic parameters, specifications and performance requirements appropriate to each problem.

- D Testing and solutions to audio electronic problems.
- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- F Documenting justification of solutions implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and developing advanced digital systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEEH050A Assemble and set up basic wired and wireless security systems**

### **Unit Descriptor**

**1)**

This unit covers installing electronic security systems with up to 50 connected devices typically used in single domestic and small commercial premises. It encompasses, working safely and to standards, following oral and written instructions and procedures, securely placing and connecting security system components, and applying customer relation protocols.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEE002A Dismantle, assemble and fabricate electro technology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, schedules and service manuals

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

### **Application of the Unit**

**3)**

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice of this unit in the work place is subject to State and Territory Security Industry regulations. Where the security system has a call-back-to-base facility practice in the workplace is also subject to ACA regulations to undertake cabling work.

Note:

Units 'UEENEEF001A and UEENEEF002A provide the required skill and knowledge for registration in accordance with ACA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to assemble and set up basic wired and wireless security systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines.
- 1.2 Established OHS risk control measures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

- |  |     |   |
|--|-----|---|
| 2 Assemble basic wired and wireless security systems.  | 2.1 | Established OHS risk control measures for carrying out the work are followed.   |
|  | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
|  | 2.3 | Security controllers, access, intrusion and surveillance devices are located for optimum performance within limitation imposed by customers and regulations.                        |
|  | 2.4 | Accessories are installed straight and square in the required locations and within acceptable tolerances.   |
|  | 2.5 | Cables and conductors are terminated at accessories in accordance with manufacture’s specifications and regulatory requirements.  |
|  | 2.6 | Procedures for referring non-routine events to immediate supervisor for directions are followed.  |
|  | 2.7 | Security installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 Complete and document security systems installation. | 3.1 | OHS work completion risk control measures and procedures are followed.  |
|  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.   |
|  | 3.3 | Security system is documented in accordance with regulatory requirement and established routines.   |

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and setting up basic wired and wireless security systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.11 Environmental and heritage awareness
- 2.5.20 Technical standards, regulations and codes for security systems
- 2.9.41.1 Security systems installation basics
- 2.18.1 Occupational Health and Safety principles

## 2.18.9 Electronic Safe working practices

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing at least two basic security system. Systems shall consist of a controller and access device and at least two other different connected device both wire and wireless.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment****8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational

requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble and set up basic wired and wireless security systems as described in 7) and including:
    - A Reading and interpreting drawings related to cable layouts and apparatus locations.
    - B Placing and securing devices and accessories accurately.
    - C Maintaining fire integrity.
    - D Terminating cable and conductors correctly.
    - E Documenting installation.

- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling and setting up basic wired and wireless security systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE002A	Dismantle, assemble and fabricate electro technology components
UEENEEE005A	Fix and secure equipment

UEENEEE007A Use drawings, schedules and service manuals

UEENEEE008A Lay wiring and terminate accessories for extra-low voltage circuits

UEENEEF001A Assemble and maintain cabling for direct access to telecommunication services

The critical aspects of occupational health and safety covered in UEENEEE001A and other

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH051A Install large wired and wireless security systems

### Unit Descriptor

1)

This unit covers installing, entering instructions and testing of electronic security systems with in excess of 50 connected devices in buildings, premises and precincts. It encompasses working safely and to standards, following and job specifications, securely placing and connecting security system components, and applying customer relation protocols.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEH050A Assemble and set up basic wired and wireless security systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice of this unit in the work place is subject to State and Territory Security Industry regulations. Where the security system has a call-back-to-base facility practice in the workplace is also subject to ACA regulations to undertake cabling work.

Note:

Units 'UEENEEF001A and UEENEEF002A provide the required skill and knowledge for registration in accordance with ACA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to Install and set up basic wired and wireless security systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines.
- 1.2 Established OHS risk control measures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Install basic wired and wireless security systems.

- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

- |   |  |   |
|---|--|---|
|   | 2.3  | Security controllers and devices are located for optimum performance within limitation imposed by customers and regulations. (See note 1)   |
|   | 2.4  | Accessories are installed straight and square in the required locations and within acceptable tolerances.   |
|   | 2.5  | Cables and conductors are terminated at accessories in accordance with manufacture’s specifications and regulatory requirements.  |
|   | 2.6  | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   | 2.8  | Security installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 | Set up basic wired and wireless security systems and document. | 3.1 OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2 Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 Security system is documented in accordance with regulatory requirement and established routines.   |

Note1:

Examples of security devices are, Reed switches, PIRs, Glass break facilities, Panic buttons, Monitored Door Strikes, Momentary Key Switches, Latching Key Switches, CCTVs, Monitors and Access panels.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing large wired and wireless security systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.9.59   | Closed circuit televisions                |
| 2.9.61   | Advanced security systems                 |
| 2.9.71.1 | Biometric devices                         |
| 2.18.1   | Occupational Health and Safety principles |
| 2.18.9   | Electronics Safe working practices        |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing at least two large security systems. Systems shall have controllers and more than 50 connected devices of five different types.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment

instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install large wired and wireless security systems as described in 7) and including:
    - A Reading and interpreting drawings related to cable layouts and apparatus locations.
    - B Placing and securing devices and accessories accurately.
    - C Maintaining fire integrity.
    - D Terminating cable and conductors correctly.
    - E Documenting installation.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing large wired and wireless security systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE008A	Lay wiring and terminate accessories for extra-low voltage circuits
UEENEEF001A	Install and maintain cabling for direct access to telecommunication services
UEENEEF002A	Lay and connect cables for multiple access to telecommunication services
UEENEEH050A	Assemble and set up basic wired and wireless security systems

The critical aspects of occupational health and safety covered in Unit E001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6; 2.7

## UEENEEH052A Enter instructions and test basic wired and wireless security systems

### Unit Descriptor

1)

This unit covers, entering instructions and testing electronic security systems with up to 50 connected devices typically used in single domestic and small commercial premises. It encompasses safe working practices, basic programming as directed in user manuals, adjusting security devices, system testing and following written and oral instruction and procedures and customer relations.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEH050A Install basic wired and wireless security systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice of this unit in the work place is subject to State and Territory Security Industry regulations. Where the security system has a call-back-to-base facility practice in the workplace is also subject to ACA regulations to undertake cabling work.

Note:

Units UEENEEF001A and UEENEEF002A provide the required skill and knowledge for registration in accordance with ACA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to enter instructions and test basic security systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines.
- 1.2 Established OHS risk control measures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Enter instructions and test basic wired and wireless security systems.

- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.3 Security devices are checked for correct location and alignment.
- 2.4 Security functions are entered into the system in accordance with manufacturer’s instructions.
- 2.5 Security system is tested in accordance with manufacturer’s instructions.
- 2.6 Security system operational malfunctions are identified and corrected.
- 2.7 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.8 Security program and testation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
- 3 Complete and document security systems set-up and testing.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Security system is documented in accordance with regulatory requirement and established routines.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and entering instructions, testing basic wired and wireless security systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.46 Security systems basic software functions and configurations
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronics Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by enter instructions and testing at least two basic security systems. Systems shall consist of a controller and access device and at least two other

different connected device both wire and wireless.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Enter instructions and test basic wired and wireless security systems as described in 7) and including:
    - A Entering system instructions.
    - B Testing system functions.
    - C Identifying and correcting operational malfunctions.
    - D Documenting ‘as-installed’ system correctly.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in entering instructions, testing basic wired and wireless security systems.

### **Method of assessment**

#### **8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

### **Concurrent assessment and relationship with other units**

#### **8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH050A	Install basic wired and wireless security systems
-------------	---

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH053A Program and test large wired and wireless security systems

### Unit Descriptor

1)

This unit covers programming functions and testing electronic security systems with in excess of 50 connected devices in buildings, premises and precincts. It encompasses safe working practices, programming, adjusting security devices, system testing and following written and oral instruction and procedures and customer relations.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEH054A Program and commission commercial security alarm systems

UEENEEH055A Program and commission commercial security access control systems

UEENEEH056A Program and commission commercial security closed circuit television (CCTV) systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical

work.

Practice of this unit in the work place is subject to State and Territory Security Industry regulations. Where the security system has a call-back-to-base facility practice in the workplace is also subject to ACA regulations to undertake cabling work.

Note:

Units ‘UEENEEF001A and UEENEEF002A provide the required skill and knowledge for registration in accordance with ACA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to program and test large security systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines.
- 1.2 Established OHS risk control measures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

- |   |   |     |  |
|---|---|-----|--|
| 2 | Program and test large wired and wireless security systems.     | 2.1 | Established OHS risk control measures for carrying out the work are followed.  |
|   |   | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   |   | 2.3 | Security devices are checked for correct location and alignment.   |
|   |   | 2.4 | Security function codes are entered into the system in accordance with manufacturer’s instructions.  |
|   |   | 2.5 | Security system is tested in accordance with manufacturer’s instructions.  |
|   |   | 2.6 | Security system operational defects are identified and corrected.  |
|   |   | 2.7 | Procedures for referring non-routine events to immediate supervisor for directions are followed.   |
|   |   | 2.8 | Security program and testation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 | Complete and document security systems programming and testing. | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 | Security system is documented in accordance with regulatory requirement and established routines.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and programming, testing large wired and wireless security systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.47 Security systems programming methods
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronics Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by program and testing at least two large security system. Systems shall have controllers and more than 50 connected devices of five different types.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when

choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Program and test large wired and wireless security systems as described in 7) and including:
    - A Entering system instructions.
    - B Testing system functions.
    - C Identifying and correcting operational malfunctions.
    - D Documenting 'as-installed' system correctly.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in programming, testing large wired and wireless security systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH054A	Program and commission commercial security alarm systems
UEENEEH055A	Program and commission commercial security access control systems
UEENEEH056A	Program and commission commercial security closed circuit television (CCTV) systems

The critical aspects of occupational health and safety covered in UEENEEH001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH054A Program and commission commercial security alarm systems

### Unit Descriptor

1)

This unit covers installation and testing of security alarm system typically used in commercial buildings and premises. The unit encompasses working safely, following specifications and security access scenarios, programming security alarm functions, using circuit diagrams and schedules, and providing as-programmed document.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH052A Enter instructions and test basic wired and wireless security systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to program and commission.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of programming and commissioning is determined from reports and other documentation and fro discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to program and commission are obtained in accordance with established procedures and checked for correct operation and safety.

2 Program and commission.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |   |  |
|---|---|--|
|   | 2.4   | Security alarm functions and instructions are entered into the system in accordance with design specifications.  |
|   | 2.5   | Security alarm devices are checked for correct location and alignment.   |
|   | 2.6   | Security alarms are tested in accordance with commissioning requirements.  |
|   | 2.7   | Sources of alarm anomalies are identified and corrected.   |
|   | 2.8   | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.   |
|   | 2.9   | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
|   | 2.10  | Programming and commissioning activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete and report programming and commissioning activities. |  |
|   | 3.1   | OHS work completion risk control measures and procedures are followed.   |
|   | 3.2   | Work site is made safe in accordance with established safety procedures.   |
|   | 3.3   | ‘As-installed’ security alarm system is documented and an appropriate person or persons notified in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and programming and commissioning commercial security alarm systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.4.48 | Security systems alarms programming       |
| 2.18.1 | Occupational Health and Safety principles |
| 2.18.9 | Electronics Safe working practices        |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by programming and commissioning at least two different commercial security alarm systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment

instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Program and commission commercial security alarm systems as described in 7) and including:
    - A Entering system functions.
    - B Testing system functions.
    - C Identifying and correcting function anomalies.
    - D Documenting 'as-installed' system correctly.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:  
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:  
Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in programming and commissioning commercial security alarm systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:  
Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH053A	Program large wired and wireless security systems
UEENEEH055A	Program and commission commercial security access control systems
UEENEEH056A	Program and commission commercial security closed circuit television (CCTV) systems

The critical aspects of occupational health and safety covered in UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.7 to 2.9	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.8; 2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8; 2.9

## **UEENEEH055A Program and commission commercial security access control systems**

### **Unit Descriptor**

**1)**

This unit covers installation and testing of security access control system typically uses in commercial buildings and premises The unit encompasses working safely, following specifications and security access scenarios, programming security functions, using circuit diagrams and schedules, and providing as-programmed document.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH052A      Enter instructions and test basic wired and wireless security systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.</p>
<p>1 Prepare to program and commission.</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p> <p>1.4 The extent of programming and commissioning is determined from reports and other documentation and fro discussion with appropriate personnel.</p> <p>1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.</p> <p>1.6 Tools, equipment and testing devices needed to program and commission are obtained in accordance with established procedures and checked for correct operation and safety.</p>
<p>2 Program and commission.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p>

- 2.4 Security access control instructions and functions are entered into the system in accordance with design specifications.
  - 2.5 Security access control devices are checked for correct location and alignment.
  - 2.6 Security access controls are tested in accordance with commissioning requirements.
  - 2.7 Sources of access control anomalies are identified and corrected.
  - 2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
  - 2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 2.10 Programming and commissioning activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report programming and commissioning activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 'As-installed' security access control system is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and programming and commissioning commercial security access control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.49.1 Security systems access control programming
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronics Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by programming and commissioning at least two different commercial security access control systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment

instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Program and commission commercial security access control systems as described in 7) and including:
    - A Entering system functions.
    - B Testing access control functions.
    - C Identifying and correcting function anomalies.
    - D Documenting 'as-installed' system correctly.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in programming and commissioning commercial security access control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH053A	Program large wired and wireless security systems
UEENEEH054A	Program and commission commercial security alarm systems
UEENEEH056A	Program and commission commercial security closed circuit television (CCTV) systems

The critical aspects of occupational health and safety covered in Unit E001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	1

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7 to 2.9	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.8; 2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8; 2.9

## **UEENEEH056A Program and commission commercial security closed circuit television (CCTV) systems**

### **Unit Descriptor**

1)

This unit covers installation and testing of security CCTV systems typically used in commercial buildings and premises. The unit encompasses working safely, following specifications and security observation scenarios, programming security functions, using circuit diagrams and schedules, and providing as-programmed document.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH052A      Enter instructions and test basic wired and wireless security systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to program and commission

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of programming and commissioning is determined from reports and other documentation and fro discussion with appropriate personnel
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site
- 1.6 Tools, equipment and testing devices needed to program and commission are obtained in accordance with established procedures and checked for correct operation and safety.

2 Program and commission

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

- |   |  |  |  |
|---|--|--|--|
|   | 2.4  | Security closed circuit television functions are entered into the system in accordance with design specifications.   |  |
|   | 2.5  | Security closed circuit television devices are checked for correct location and alignment.   |  |
|   | 2.6  | Security closed circuit televisions are tested in accordance with commissioning requirements.  |  |
|   | 2.7  | Sources of closed circuit television anomalies are identified and corrected.   |  |
|   | 2.8  | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.   |  |
|   | 2.9  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |  |
|   | 2.10   | Programming and commissioning activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |  |
| 3 | Complete and report programming and commissioning activities | 3.1  | OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2  | Work site is made safe in accordance with established safety procedures.   |
|   |  | 3.3  | ‘As-installed’ security closed circuit television system is documented and an appropriate person or persons notified in accordance with established procedures |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and programming and commissioning commercial security closed circuit television (CCTV) systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.49.2 Security systems closed circuit television programming

2.18.1 Occupational Health and Safety principles

2.18.8.2 Occupational Health and Safety, enterprise responsibilities

2.18.9 Electronics Safe working practices

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by programming and commissioning at least two different commercial security closed circuit television systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### **Overview of Assessment**

#### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions

about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Program and commission commercial security closed circuit television (CCTV) systems as described in 7) and including:
    - A Entering system functions.
    - B Testing closed circuit television functions.
    - C Identifying and correcting function anomalies.
    - D Documenting ‘as-installed’ system correctly.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in programming and commissioning commercial security closed circuit television (CCTV) systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEH053A Program large wired and wireless security systems
- UEENEEH054A Program and commission commercial security alarm systems
- UEENEEH055A Program and commission commercial security access control systems

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.7 to 2.9	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.8; 2.9

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.8; 2.9

## **UEENEEH057A    Develop basic integrated security systems plan**

### **Unit Descriptor**

**1)**

This unit covers integrating security components to form a complete security system with up to 100 connected intrusion and access devices and based on common security scenarios. It encompasses applying knowledge of common security scenarios and security network standards and protocols, selecting network topology and physical media, disaster recovery planning, performance management and documentation of work activities.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH053A      Program and test large wired and wireless security systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 4 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

**4)**

## Electronics

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to develop integrated security systems	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed integrated security system is determined from the system specification or in consultations with appropriate person(s)</p> <p>1.4 Development work is planned to meet scheduled timelines in consultation with others involved on the work site</p>
2 Develop integrated security system plan	<p>2.1 Knowledge of common security scenarios and security network standards and protocols, network topology, physical media and disaster planning is applied to the system plan.</p> <p>2.2 Alternative system arrangements are considered based on the requirements job specification.</p> <p>2.3 Safety, functional and budget considerations are incorporated in the system plan.</p> <p>2.4 System draft plan is checked for compliance with the job specifications and regulatory requirements.</p> <p>2.5 System plan is documented for submission to appropriate person(s) for approval</p> <p>2.6 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.</p>
3 Obtain approval for system plan	<p>3.1 System design is forwarded to client representative and/or other relevant person(s) for approval.</p> <p>3.2 Requests for alterations to the plan are negotiated with relevant person(s) in accordance with established procedures.</p> <p>3.3 Final system plan is documented and approval obtained from appropriate person(s).</p>

- 3.4 Quality of work is monitored against personal performance agreement.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing basic integrated security systems plan. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.78 Common security scenarios and solutions

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by planning two basic integrated security systems with up to 100 connected intrusion and access devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop basic integrated security systems plan as described in 7) and including:

- A Developing outlines of alternative system plan.
- B Developing the plan within the safety and functional requirements and budget limitations.
- C Documenting the plan effectively.
- D Obtaining approval for final plan.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing basic integrated security systems plan.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 2.6; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 3.2; 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.6

## UEENEEH058A Design integrated security systems for a single site

### Unit Descriptor

1)

This unit covers integrating security components to form a security system with multiple and interrelated subsystems. It encompasses applying knowledge of security scenarios and security network standards and protocols, selecting network topology and physical media, disaster recovery planning, performance management and negotiating with clients and others and documenting design..

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH016A      Develop network services

UEENEEH057A      Develop basic integrated security systems plan

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT****PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to design integrated security systems	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed integrated system is determined from the design brief or in consultations with appropriate person(s)</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site</p>
2 Develop integrated security system design	<p>2.1 Knowledge of security scenarios and security network standards and protocols, network topology, physical media and disaster planning is applied to the system design.</p> <p>2.2 Alternative arrangements for the system design are considered based on the requirements outlined in the design brief.</p> <p>2.3 Safety, functional and budget considerations are incorporated in the system design.</p> <p>2.4 System design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.5 System design is documented for submission to appropriate person(s) for approval</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation policy.</p>
3 Obtain approval for system design	<p>3.1 System design is presented and explained to client representative and/or other relevant person(s).</p> <p>3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.</p>

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing integrated security systems for a single site. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.50.1 Integrated security systems
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by designing two integrated security systems with multiple and interrelated subsystems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design integrated security systems for a single site as described in 7) and including:
    - A Developing outlines of alternative system plan.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing integrated security systems for a single site.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH059A Design integrated complex security systems

### Unit Descriptor

1)

This unit covers integrating security components to form a complex security system across multiple sites with multiple and related subsystems and remote monitoring and control. It encompasses applying knowledge of security scenarios and security network standards and protocols, selecting network topology and physical media, disaster recovery planning, performance management and negotiating with clients and others and documenting design.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH017A	Install and configure internetworking systems
UEENEEH058A	Design integrated security systems for a single site

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.3. Prerequisites

**Competency Field 4)**

Electronics

**ELEMENT****PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to design integrated complex security systems	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed integrated system is determined from the design brief or in consultations with appropriate person(s)</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site</p>
2 Develop integrated complex security system design	<p>2.1 Knowledge of complex security scenarios and security network standards and protocols, network topology, physical media and disaster planning and remote monitoring and control is applied to the system design.</p> <p>2.2 Alternative arrangements for the system design are considered based on the requirements outlined in the design brief.</p> <p>2.3 Safety, functional and budget considerations are incorporated in the system design.</p> <p>2.4 System design draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.5 System design is documented for submission to appropriate person(s) for approval</p> <p>2.6 Solutions to unplanned situation are provided consistent with organisation policy.</p>
3 Obtain approval for system design	<p>3.1 System design is presented and explained to client representative and/or other relevant person(s).</p> <p>3.2 Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.</p>

- 3.3 Final design is documented and approval obtained from appropriate person(s).
- 3.4 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing integrated complex security systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.50.2 Internetworking security systems
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design integrated complex security systems as described in 7) and including:
    - A This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
    - B This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
    - C This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
    - D This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
    - E This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.
    - F This unit shall be demonstrated by designing one integrated complex security system that extends across multiple sites with remote monitoring and control.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing integrated complex security systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6
---	--	---

## UEENEEH060A Plan electronic projects

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers development and documentation of electronics project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      3      Writing      3      Numeracy      3
<b>Application of the Unit</b>	<b>3)</b>  This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level or higher.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Electronics

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation's policies.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation's policies and procedures.</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation's policies and procedures.</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies.</p> <p>2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation's policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating in the project plan.</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.7 Project plan proposal is documented in accordance with organisation's policies and procedures.</p>
3 Obtain approval for project plan.	<p>3.1 Project plan is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p>

- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning electronic projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.16.1 Project Planning
- 2.2.18 Critical path and project analysis
- 2.2.29 Electronics industry sector customs and practices
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing an industry accepted medium sized electronic project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan electronic projects as described in 7) and including:
    - A Determining the project requirements accurately.
    - B Establishing a project budget.
    - C Developing effective work flow strategies.
    - D Documenting project plan proposal.
    - E Negotiating alterations to the proposed project plan successfully.
    - F Obtaining approval of the final plan.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning electronic projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential

knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6: 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	3

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.6; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.6 to 3.2	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 1.6; 3.1

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 1.7 to 3.2

## UEENEEH061A Position and terminate fire detection and warning system apparatus

### Unit Descriptor

1)

This unit covers installing electronic fire detection and warning systems in buildings and premises. It encompasses, working safely and to standards, following oral and written instructions and procedures, securely placing and connecting fire detection system and warning, components, and applying customer relation protocols.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE005A	Fix and secure equipment
UEENEEE007A	Use drawings, schedules and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work. Where the fire alarm system has a call-back-to-base facility practice in the workplace is also subject to ACA regulations to undertake cabling work.

Note:

Unit 'UEENEEF002A' provides the required skill and knowledge for registration in accordance with ACA regulations for undertaking cabling work

Practice in the workplace and during training is also subject to

regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to assemble and set up basic fire detection and warning systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines.
- 1.2 Established OHS risk control measures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

- |   |     |  |
|---|-----|--|
| 2 Assemble and set up basic fire detection and warning systems. | 2.1 | Established OHS risk control measures for carrying out the work are followed.  |
|   | 2.2 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   | 2.3 | Fire protection controller and detection and warning devices are located for optimum performance within limitation imposed by customers and regulations.                                   |
|   | 2.4 | Accessories are installed straight and square in the required locations and within acceptable tolerances.  |
|   | 2.5 | Cables and conductors are terminated at accessories in accordance with manufacture’s specifications and regulatory requirements.   |
|   | 2.6 | Procedures for referring non-routine events to immediate supervisor for directions are followed.   |
|   | 2.7 | Fire protection installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 Set up basic fire detection and warning systems.              | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|   | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   | 3.3 | Fire protection system is documented in accordance with regulatory requirement and established routines.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and positioning and terminating fire detection and warning system apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.5.21   | Technical standards, regulations and codes for fire protection and warning systems |
| 2.9.36   | Fire detection and warning system and apparatus fundamentals                       |
| 2.9.79.1 | Fire protection technologies   |

2.18.1 Occupational Health and Safety principles

2.18.11 Fire protection equipment safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing at least two-fire alarm and warning systems. Installation shall include the following system components:

- Fire alarm system with at least one Control & Indicating panel, 50 input devices, 5 output device and 2 system interface controls on at least of the following: Analogue addressable system, addressable system and or conventional system.
- Fire warning system with at least one Control & Indicating panel, 50 speakers, 5 interface communication devices and 2 warning indicators

Note:

1. Input devices can be conventional, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shutdown signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote Control and indicating equipment, Building monitoring systems, paging system, Colour graphics and or the like.
4. Interface communication devices can be Warden Incommunication phones, Remote PA inputs and the like.
5. Warning Indicators are flashing lights for hearing impaired persons, fire brigade building indication and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in

a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Position and terminate fire detection and warning system apparatus as described in 7) and including:
    - A Reading and interpreting drawings showing apparatus/device locations and connection arrangements.
    - B Placing and securing devices and accessories accurately.
    - C Maintaining fire integrity.
    - D Terminating cable and conductors correctly.
    - E Documenting installation.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in positioning and terminating fire detection and warning system apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE002A Dismantle, assemble and fabricate electrotechnology components
- UEENEEE005A Fix and secure equipment
- UEENEEE007A Use drawings, schedules and service manuals
- UEENEEE008A Install wiring and accessories for extra-low voltage circuits
- UEENEEF001A Install and maintain cabling for direct access to telecommunication services

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH062A **Verify compliance and functionality of fire protection installations**

**Unit Descriptor** 1)  
 This unit covers testing and visual inspection for verifying that a fire protection system and components are safe, and comply with requirements and functions as intended. It encompasses working safely, conducting compliance tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements.

**Prerequisite Unit(s)** 2)

**Competencies** 2.1)  
 Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH061A      Position and terminate fire detection and warning system apparatus

**Literacy and numeracy skills** 2.2)  
 Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading      3      Writing      3      Numeracy      3

**Application of the Unit** 3)  
 This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise** 3.1)  
 The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work. Where the fire alarm system has a call-back-to-base facility practice in the workplace is also subject to ACA regulations to undertake cabling work.

Note:  
 Unit ‘UEENEEF002A’ provides the required skill and knowledge for registration in accordance with ACA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to verify fire protection installations.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.5 Location of system components is determined from specifications and diagrams.
- 1.6 Inspection and tests are appropriately sequenced in accordance with job schedule.
- 1.7 Materials needed for the tests and verification are obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.

2 Visually inspect the installation.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 Cabling/wiring is checked for appropriate type and size.

- 2.4 Cabling/wiring, accessories and fire alarm warning components are validated as being suitably located, securely fixed and suitably protected from damage or corrosion.
  - 2.5 Accessories and components are validated as being appropriately rated and meeting functional requirements.
  - 2.6 Evidence that equipment complies with safety and functional requirements is cited.
  - 2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.9 Inspection is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Conduct tests.
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Back-to-base facilities and other system interfaces are isolated in accordance with established procedures.
  - 3.3 Testing or measuring on a live and operating system in strict accordance with OHS requirements and within established safety procedures.
  - 3.4 Circuits/machines/plant/other system interfaces are checked as being isolated to ensure the system is not activated during testing in strict accordance OHS requirements and procedures.
  - 3.5 Electrical tests are conducted to verify that the electrical circuit within the fire installation are safe and function as intended.
  - 3.6 System tests are conducted to verify that the fire protection equipment and cabling/wiring within the fire protection installation is safe and functions as intended.
  - 3.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.

- |   |  |  |
|---|--|--|
|   | 3.8  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 3.9  | Testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 4 | Report inspection and verification findings. |  |
|   | 4.1  | OHS work completion risk control measures and procedures are followed.   |
|   | 4.2  | Work site and equipment is cleaned and made safe in accordance with established procedures.  |
|   | 4.3  | Non-compliance defects are identified and reported in accordance with established procedures.  |
|   | 4.4  | Recommendations for rectifying defects are made in accordance with established procedures.   |
|   | 4.5  | Work completion is documented and an appropriate person or persons notified in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of fire protection installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |  |
|--|----------|--|
|  | 2.5.21   | Technical standards, regulations and codes for fire protection and warning systems |
|  | 2.7.5.3  | Fire protection installations, testing and verification methods                    |
|  | 2.9.36   | Fire detection and warning system and apparatus fundamentals                       |
|  | 2.9.37   | Fire alarm routine testing   |
|  | 2.9.79.1 | Fire protection technologies   |
|  | 2.18.1   | Occupational Health and Safety principles  |
|  | 2.18.11  | Fire protection equipment safe working practices                                   |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least two different new or existing fire protection installations and shall include:

The following components:

- Fire alarm system with at least 50 input devices, 20 output device and 2 system interface controls
- Fire warning system with at least 50 speakers, 5 interface communication devices and 2 warning indicators
- Voice message facilities

Note:

1. Input devices can be conventional, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shutdown signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote Control and indicating equipment, Building monitoring systems, paging system, Colour graphics and or the like.
4. Interface communication devices can be Warden Incommunication phones, Remote PA inputs and the like.
5. Warning Indicators are flashing lights for hearing impaired persons, fire brigade building indication and the like.

Verification by:

- Visual inspection of cabling/wiring, accessories and controls
- Conducting electrical tests

Note:

1. Electrical testing includes isolation testing; insulation resistance of equipment; resistance of the internal circuits of equipment; polarity of supply and equipment; continuity of earthing; correct electrical connections load current.
2. Electrical testing may be limited by the scope permitted under restricted electrical work

- Conducting system tests as required by regulations

Note:

1. System testing includes weekly requirements to annual performance verification
2. Examples of tests are operation and control of indicating equipment, in-situ testing of detectors, taking sound measurements and the like

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Verify compliance and functionality of fire protection installations as described in 7) and including:
    - A Identifying visual defects.
    - B Conducting all electrical tests safely and correctly.
    - C Conducting all fire alarm and warning tests safely and correctly.
    - D Identifying non-compliant defects from test results.
    - E Recommending appropriate corrective actions.
    - F Acting within regulatory limits.
    - G Reporting legibly and accurately.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in verifying compliance and functionality of fire protection installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.3 to 2.6; 3.4; 3.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 3.4; 3.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 4.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.4; 3.5	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.8; 2.1; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.8; 3.7; 3.8

## **UEENEEH063A Enter and verify programs in preparation for commissioning fire protection systems**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers programming fire protection systems that include multiple connected detection, warning and fire control devices and remote monitoring. It encompasses working safely, applying knowledge of fire protection scenarios, using fire protection standards and protocols, entering system instructions, testing functionality of fire protection components and system operation, and documentation of commissioning activities.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.</p> <p>UEENEEH062A    Verify compliance and functionality of fire protection installations</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Reading	4	Writing	4	Numeracy	4		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p> <p style="margin-left: 40px;">Note:1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing</p>						

tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to enter operating instructions.

1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.

1.2 Established OHS risk control measures and procedures are followed in preparation for the work.

1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.

1.4 The extent of programming work is determined from job specifications and in consultation with appropriate person(s).

1.5 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

1.6 Device installation is checked for compliance with job specification and regulations where they apply.

2 Enter software operating instructions.

2.1 Established OHS risk control measures and procedures for carrying out the work are followed.

2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

2.3 The required status of each function of the device is entered and their parameters set in accordance manufactures programming instructions.

2.4 Entered data are checked as meeting those specified by the work job specification.

	2.5	Methods for dealing with unexpected situations are decided on the basis of safety and required work outcomes.	
	2.6	Programming is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or other services.	
3	Test device operation and report.	3.1	Device operation is tested in strict accordance OHS requirements and procedures.
		3.2	Operating anomalies are identified and corrected in accordance with established routines.
		3.3	OHS work completion risk control measures and procedures are followed.
		3.4	Work site is cleaned and made safe in accordance with established procedures.
		3.5	Work completion is reported and an appropriate person or persons notified in accordance with established routines.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying programs in preparation for commissioning fire protection systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.51	Fire protection system programming methods
2.18.1	Occupational Health and Safety principles
2.18.11	Fire protection equipment safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to entering and verifying programs in preparation for commissioning fire protection systems in at least two types of microprocessor fire protection control and indicating equipment. Programming shall include the following parameters:

- At least 50 input devices
- At least 20 output device

- At least 1 system interface control
- At least 2 logic timers
- System variables

Note:

1. Input devices can be conventional alarm zones, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shutdown signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote Control and indicating equipment, Building monitoring systems, paging system, Colour graphics and or the like.
4. Logic times can be software programs that control the operation of non-latching detectors, timer periods before operation of fire system suppression systems and or the like.
5. System variables can be standard software functions that operate AS 1668 smoke detector controls, dual zone alarm configurations, alarm and fault global functions and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria & range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Enter and verify programs in preparation for commissioning fire protection systems as described in 7) and including:
    - A Understanding required operating functions and parameters.
    - B Identifying non-compliance conditions of device installation.

- C Entering functions and parameters correctly.
- D Correcting programming anomalies.
- E Testing and verify device operation.
- F Program backups, version controls and documentation.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in entering and verifying programs in preparation for commissioning fire protection systems

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**with other units**

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: NA	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: NA	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 3.2	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.2	1

**Skills Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.5; 3.2; 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH064A Commission commercial fire protection systems

### Unit Descriptor

1)

This unit covers commissioning fire protection systems that include multiple connected detection, warning and fire control devices and remote monitoring. It encompasses working safely, applying knowledge of fire protection scenarios, using fire protection standards and protocols, entering system instructions, testing functionality of fire protection components and system operation, and documentation of commissioning activities.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH063A Enter and verify programs in preparation for commissioning fire protection systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to commission.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of commissioning is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to program and commission are obtained in accordance with established procedures and checked for correct operation and safety.

2 Commission fire protection systems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |   |  |
|---|---|--|
|   | 2.4   | Fire protection system components are verified as complying with design specifications and regulations.  |
|   | 2.5   | Fire protection devices are checked for correct location and alignment.  |
|   | 2.6   | Fire protection functions are tested in accordance with commissioning requirements.  |
|   | 2.7   | Sources of fire protection system anomalies are identified and corrected.  |
|   | 2.8   | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.   |
|   | 2.9   | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
|   | 2.10  | Commissioning activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete and report programming and commissioning activities. | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 Work site is made safe in accordance with established safety procedures.   |
|   |   | 3.3 'As-installed' fire protection system is documented and an appropriate person or persons notified in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and commissioning commercial fire protection systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.9.79.2 | Fire protection systems, commissioning process   |
| 2.18.1   | Occupational Health and Safety principles        |
| 2.18.11  | Fire protection equipment safe working practices |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to commissioning at least two different fire alarms and warning systems. Commissioning shall include the following system components:

- Fire alarm system with at least 50 input devices, 20 output device and 2 system interface controls
- Fire warning system with at least 50 speakers, 5 interface communication devices and 2 warning indicators.
- Voice message facilities

Note:

1. Input devices can be conventional, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shutdown signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote Control and indicating equipment, Building monitoring systems, paging system, Colour graphics and or the like.
4. Interface communication devices can be Warden Incommunication phones, Remote PA inputs and the like.
5. Warning Indicators are flashing lights for hearing impaired persons, fire brigade building indication and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Commission commercial fire protection systems as described in 7) and including:

- A Identifying the extent of the fire protection system.
- B Verify compliance of components.
- C Testing system functionality.
- D Identifying and correcting function anomalies.
- E Documenting ‘as-installed’ system correctly.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in commissioning commercial fire protection systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.7 to 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.8; 2.9

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.8; 2.9

## **UEENEEH065A Find and repair faults in fire protection systems**

### **Unit Descriptor**

**1)**

This unit covers fault finding and repair of fire protection systems that include multiple connected detection, warning and fire control devices and remote monitoring to the sub-assembly level. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH064A Commission commercial fire protection systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant/system interfaces are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.

- 2.5 Fault finding is approached methodically drawing on knowledge of fire protection systems and components using measured values of system parameters.
  - 2.6 System components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.7 Faulty system/components are rechecked and their fault status and confirmed.
  - 2.8 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
  - 2.9 Effectiveness of the repair is tested in accordance with established procedures.
  - 2.10 Apparatus is reassembled, finally tested and prepared for return to service.
  - 2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.12 Fault finding and repair activities are carried out without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
  - 3.3 Fault finding and repair work activities are documented in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in fire protection systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.3 Fault finding techniques
- 2.2.4 Problem solving techniques
- 2.9.79.3 Fire protection systems' faults

- 2.18.1 Occupational Health and Safety principles
- 2.18.11 Fire protection equipment safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

Both a fire alarm and warning systems that include at least the following system components:

- Fire alarm system with at least 50 input devices, 20 output device and 2 system interface controls
- Fire warning system with at least 50 speakers, 5 interface communication devices and 2 warning indicators.
- Voice message facilities

Note:

1. Input devices can be conventional, analogue or analogue addressable fire detectors, flow switch connections or switch connections and the like.
2. Output devices can be shutdown signal, door or system release controls, solenoid valve controls and the like.
3. System interface controls can be communication signals to remote Control and indicating equipment, Building monitoring systems, paging system, Colour graphics and or the like.
4. Interface communication devices can be Warden Incommunication phones, Remote PA inputs and the like.
5. Warning Indicators are flashing lights for hearing impaired persons, fire brigade building indication and the like.

Finding and repairing any six of the following faults in fire alarm and warning systems:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Program failure
- Apparatus/component failure
- Related mechanical failure
- Electrical induced interference

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in fire protection systems as described in 7) and including:
    - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
    - B Using methodical fault finding techniques.
    - C Finding faults efficiently.
    - D Rectifying faults effectively.
    - E Completing documentation correctly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in fire protection systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3;	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

**Skills Enabling  
Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEH066A **Fault find Microcontroller based hardware**

### **Unit Descriptor**

1)

This unit covers determining correct operation of microcontroller hardware and firmware. It encompasses working safely, problem solving procedures, providing solutions derived from measurements and calculations to predictable faults in microcontroller hardware and firmware.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

There are no pre-requisites recommended for this unit.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work

environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on microcontroller hardware and firmware.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 OHS risk control work preparation measures and procedures are followed.

1.3 The nature of microcontroller hardware and firmware problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve microcontroller hardware and firmware problems.

2.1 OHS risk control work measures and procedures are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

2.4 Established methods are used to solve problems from measure and calculated values as they apply to microcontroller hardware and firmware in an electronic apparatus.

	2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6	Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3	Complete work and document problem solving activities.	3.1 OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Justification for solutions used to solve circuit problems is documented.
	3.4	Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and fault finding Microcontroller based hardware. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.5.2	Microcontroller fundamentals
2.9.12	Electronic fault finding
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving at least two of the following types microcontroller hardware and firmware problems:

- Determining the operating parameters of microcontroller hardware and firmware of an electronic apparatus
- Modifying an existing microcontroller hardware and firmware to comply with specified operating parameters
- Developing microcontroller based hardware and firmware to comply with a specified function and operating parameters
- Finding and repairing a basic fault in microcontroller hardware

and firmware of an electronic apparatus

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Fault find Microcontroller based hardware as described in 7) and including:
    - A Using methodical problem solving methods.
    - B Taking measurements correctly and accurately.
    - C Calculating parameters correctly and accurately.
    - D Providing solution to digital component/circuit problems.
    - E Providing written justification for the solutions to problems.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and 8.3)**

**specific resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in fault finding Microcontroller based hardware.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEH002A Carry out basic repairs to electronic equipment
- UEENEEH012A Find and repair faults in the digital components in electronic apparatus
- UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus
- UEENEEH016A Find and repair faults in the microwave amplifier sections in electronic apparatus

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEEH070A Terminate and connect components, conductors, wiring and cables for electronic circuits**

### **Unit Descriptor**

1)

This unit covers the implementation, performance and evaluation of component connections and terminations of conductors, wiring, cables, and other recognised mediums. It encompasses implementing reliable termination and connection processes, working to specifications, safe use of connection and termination tools, safe use of termination and/or soldering devices, selection and placement of components, termination and connection preparation, termination and connection techniques, and evaluating termination and connection work.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electro technology components

UEENEEE007A Use drawings, schedules and service manuals

AND

UEENEEG012A Solve fundamental problems in electrical systems

OR

UEENEEG049A Solve problems in complex polyphase power circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit shall apply to persons entering work in electro technology and may be used in school based vocational programs.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to implement connection/termination processes that include components, conductors, wiring and cables for electronic circuits.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The scope and nature of work to be undertaken is determined from documentation and instructions from work supervisor.
- 1.5 An implementation and work plan is developed to ensure the work is co-ordinated effectively with others.
- 1.6 Materials required for the work are obtained in accordance with established routines and procedures.

		1.7	Tools, equipment, measuring and termination and connection devices needed to carry out the work are obtained and checked for correct operation and safety.
2	Connect/terminate components, conductors, wiring and cables.	2.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		2.2	Components and connection/termination methods and devices are selected in accordance with their specified type and rating. (See Note 1)
		2.3	Components and conductors are placed in accordance with specification/drawing and correct polarity.
		2.4	Terminations and connections are prepared in accordance to ensure reliability of connections in accordance with industry standards. (See Note 2)
		2.5	Termination and connections are made using devices and techniques that comply with manufacturer's requirements and industry standards.
		2.6	Procedures for identifying and responding to non-routine events including defects are coordinated and actioned in accordance with established procedures.
		2.7	Connection/termination activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3	Evaluate completed connections and terminations of components, conductors, wiring and cables.	3.1	Established OHS risk control measures and procedures for carrying out the work are followed.
		3.2	Defects in component placement, connections and terminations are identified by visual inspection and recorded.
		3.3	Solutions to non-compliant work are developed and responded to in accordance with established procedures and requirements
		3.4	Connections and terminations are performance tested for compliance with the specified Standard and non-compliance performance characteristics identified and recorded.
		3.5	Rework is carried out to rectify defects and non-compliant performance characteristics to manufacturer's requirements and industry standards. (See Note 3)

	3.6	Connections and terminations are confirmed compliant with established procedures and requirements
4 Complete and document connections and terminations activities.	4.1	OHS risk control work completion measures and procedures are followed.
	4.2	Work site is cleaned and made safe in accordance with established procedures.
	4.3	Evaluation documentation confirming compliance of the connections and terminations is verified in accordance with established procedures and requirements
	4.4	Inspection, testing, and rectification work is documented in accordance with established procedures.

Notes.

1. Connections methods include crimping, soldering and use of vendor specific devices.
2. Preparation includes sheath and insulation stripping and approved cleaning methods.
3. Rework may include the application of desoldering techniques

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and terminating and connecting components, conductors, wiring and cables for electronic circuits. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.1.4	Basic cable and conductor terminations
2.1.8	Electronic cable and conductor terminations
2.9.1.1	Electronic component basics
2.11.5	Basic electrical testing and measuring devices and techniques
2.11.11.1	Electronic soldering equipment and techniques
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to terminating and connecting components, conductors, wiring and cables for electronic circuits. This shall include:

- Selection and placement of at least five different types of electronic components.
- Connection of electronic components by soldering.
- Termination and connection of a coaxial cable.
- Termination and connection of a high performance copper cable.
- Termination of an insulated cable by using a crimped connection.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when

choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Terminate and connect components, conductors, wiring and cables for electronic circuits as described in 7) and including:
    - A Developing implementation and work plan
    - B Selecting components and termination and connection devices in accordance with their specified type and ratings.
    - C Placing components correctly.
    - D Preparing terminations and connections correctly.
    - E Making reliable terminations and connections in accordance with industry standards.

- F Identifying defects and non-compliant performance
- G Rectifying defects and non-compliant performance characteristics to requirements.
- H Evaluating reliability of termination and connection work
- I Providing solutions for non-compliant work
- J Documenting termination and termination activities accurately
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in terminating and connecting components, conductors, wiring and cables for electronic circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE002A Dismantle, assemble and fabricate electro technology components

UEENEEE007A Use drawings, schedules and service manuals

AND

UEENEEG012A Solve fundamental problems in electrical systems

OR

UEENEEG049A Solve problems in complex polyphase power circuits

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.7	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas	Refer to the following Performance Criteria for examples of application:	

and techniques used?	2.3; 2.4	1
----------------------	----------	---

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  NA	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5; 3.3; 3.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2; 3.3; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH071A Find and repair faults in television receivers

### Unit Descriptor

1)

This unit covers fault finding and repair of faults in signal processing and scanning and deflection sections of television receivers. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH019A Carry out repairs of predictable faults in television receivers

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Fault finding is approached methodically drawing on knowledge of chrominance and luminance signal processing and scanning and deflection sections of television receivers using measured and calculated values of apparatus parameters.
- 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
- 2.6 Faulty components are rechecked and their fault status confirmed.
- 2.7 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
- 2.8 Effectiveness of the repair is tested in accordance with established procedures.
- 2.9 Apparatus is reassembled, finally tested and prepared for return to service.
- 2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.11 Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Repair fault.
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 3.3 Materials required for the repair work are sourced and obtained in accordance with established procedures.
  - 3.4 Repairs are affected efficiently without damage to other components, apparatus or circuits.
  - 3.5 Effectiveness of the repair is tested in accordance with established procedures.
  - 3.6 Apparatus is reassembled, finally tested and prepared for return to customer.
- 4 Completion and report fault finding and repair activities.
  - 4.1 OHS work completion risk control measures and procedures are followed.

- 4.2 Work area is cleaned and made safe in accordance with established procedures.
- 4.3 Written justification is made for repairs to apparatus.
- 4.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in television receivers. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.29 Television scanning and deflection
- 2.9.30 Television chrominance and luminance
- 2.9.31.2 Power supplies for TVs and VCRs
- 2.9.31.3 Television RF Stages
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing faults in signal processing and scanning and deflection sections of television receivers.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of 8.1)

## Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this unit

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in television receivers as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Replacing components without damage.
    - D Providing written justification for the repairs.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in television receivers.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.6; 3.5; 3.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.6

## UEENEEH072A Find and repair faults in the RF sections of electronic apparatus

### Unit Descriptor

1)

This unit covers fault finding and repair of radio frequency sections in electronic apparatus. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

UEENEEH038A Find and repair faults in complex power supplies

UEENEEH046A Solve fundamental problems in electronic communications systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 2 Find faults
  - 2.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Fault finding is approached methodically drawing on knowledge of radio frequency sections and circuit using measured and calculated values of apparatus parameters.
  - 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.8 Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Repair fault.
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 3.3 Materials required for the repair work are sourced and obtained in accordance with established procedures.
  - 3.4 Repairs are affected efficiently without damage to other components, apparatus or circuits.
  - 3.5 Effectiveness of the repair is tested in accordance with established procedures.

- |   |  |   |
|---|--|---|
|   | 3.6                                      | Apparatus is reassembled, finally tested and prepared for return to customer. |
| 4 | Completion and report repair activities. | 4.1 OHS work completion risk control measures and procedures are followed.    |
|   | 4.2                                      | Work area is cleaned and made safe in accordance with established procedures. |
|   | 4.3                                      | Written justification is made for repairs to apparatus.                       |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in television receivers. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |   |
|--|----------|---|
|  | 2.9.9.2  | Amplifier applications                                  |
|  | 2.9.39   | AM and FM tuners  |
|  | 2.10.3   | Electronic communications, modulation                   |
|  | 2.10.4   | Electronic communications, modulation circuits          |
|  | 2.10.5   | Electronic communications, receivers                    |
|  | 2.10.6   | Electronic communications, transmitters                 |
|  | 2.11.7.1 | Electronic testing and measuring devices and techniques |
|  | 2.18.1   | Occupational Health and Safety principles               |
|  | 2.18.9   | Electronic safe working practices                       |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing faults in the radio frequency sections in at least two types of electronic apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in television receivers as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Replacing components without damage.
    - D Providing written justification for the repairs.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in television receivers.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |             |  |
|-------------|--|
| UEENEEH011A | Find and repair faults in the power supplies of electronic apparatus               |
| UEENEEH012A | Find and repair faults in the digital components in electronic apparatus           |
| UEENEEH013A | Find and repair faults in the amplifier sections of electronic apparatus           |
| UEENEEH016A | Find and repair faults in the microwave amplifier sections of electronic apparatus |
| UEENEEH046A | Solve fundamental problems in electronic communications systems                    |

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.4	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.6	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.5; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH073A Find and repair faults in professional audio reproduction components

### Unit Descriptor

1)

This unit covers fault finding and repair of professional and high-end audio amplifiers, preamplifiers, receivers, graphic equalizers, speakers and the like. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH024A Carry out repairs of predictable faults in audio components

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Fault finding is approached methodically drawing on knowledge of audio reproduction components and circuits using measured and calculated values of apparatus parameters.
- 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
- 2.6 Faulty components are rechecked and their fault status confirmed.
- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.8 Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Repair fault.
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 3.3 Materials required for the repair work are sourced and obtained in accordance with established procedures.
  - 3.4 Repairs are affected efficiently without damage to other components, apparatus or circuits.
  - 3.5 Effectiveness of the repair is tested in accordance with established procedures.
  - 3.6 Apparatus is reassembled, finally tested and prepared for return to customer.
- 4 Completion and report repair activities.
  - 4.1 OHS work completion risk control measures and procedures are followed.
  - 4.2 Work area is cleaned and made safe in accordance with established procedures.
  - 4.3 Written justification is made for repairs to apparatus.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in professional audio reproduction components. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.16.1 Sound reproduction fundamentals
- 2.9.17.1 Audio reproduction, electronic components
- 2.9.45.1 Audio electronics
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing four different faults in two different components of audio equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in professional audio reproduction components as described in 7) and including:

- A Using methodical fault finding techniques.
- B Finding faults efficiently.
- C Replacing components without damage.
- D Providing written justification for the repairs.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in professional audio reproduction components.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.6; 3.5; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH074A Find and repair faults in audio/video recording equipment

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers fault finding and repair of ACR, CD, VCR and DVD players/recorders. apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |  |  |
|---|--|--|
|   | 2.4                                      | Fault finding is approached methodically drawing on knowledge of audio/video recording and replay components and circuits using measured and calculated values of apparatus parameters.    |
|   | 2.5                                      | Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.   |
|   | 2.6                                      | Faulty components are rechecked and their fault status confirmed.  |
|   | 2.7                                      | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.8                                      | Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Repair fault.                            |  |
|   | 3.1                                      | OHS risk control measures and procedures for carrying out the work are followed.   |
|   | 3.2                                      | Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
|   | 3.3                                      | Materials required for the repair work are sourced and obtained in accordance with established procedures.   |
|   | 3.4                                      | Repairs are affected efficiently without damage to other components, apparatus or circuits.  |
|   | 3.5                                      | Effectiveness of the repair is tested in accordance with established procedures.   |
|   | 3.6                                      | Apparatus is reassembled, finally tested and prepared for return to customer.  |
| 4 | Completion and report repair activities. |  |
|   | 4.1                                      | OHS work completion risk control measures and procedures are followed.   |
|   | 4.2                                      | Work area is cleaned and made safe in accordance with established procedures.  |
|   | 4.3                                      | Written justification is made for repairs to apparatus.  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing in audio/video recording equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.51	Camcorders
2.9.52	Digital versatile disk processors
2.9.53	Compact disc players
2.9.54	VCR basic principles
2.9.55	VCR fault finding
2.9.56	VCR advanced principles
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing four different faults in two different audio/video record and replay components

Note:

Examples of faults are.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in audio/video recording equipment as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Replacing components without damage.
    - D Providing written justification for the repairs..
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in audio/video recording equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential

knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.4	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.6	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.5; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEH075A Find and rectify faults and malfunctions in security system installations**

### **Unit Descriptor**

1)

This unit covers fault finding and repair of security system installations. The unit encompasses safe working practices, interpreting circuit diagrams, applying knowledge of security systems to logical fault finding procedures, rectifying faults/malfunctions, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH053A Program large wired and wireless security systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and rectify faults and malfunctions.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and rectify faults and malfunctions.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Fault finding is approached methodically drawing on knowledge of security systems, circuits and diagnostic tools.
  - 2.5 Faulty security cables or terminations are identified, their fault status confirmed and repair or replace in accordance with established procedures.
  - 2.6 Faulty or malfunctioning security devices are identified, their fault status confirmed and readjusted or replace in accordance with established procedures.
  - 2.7 Malfunctions in security system software are identified and rectified following established routine procedures.
  - 2.8 Effectiveness of the repaired component is tested in accordance with established procedures.
  - 2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
  - 2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and rectification activities.
    - 3.1 OHS work completion risk control measures and procedures are followed.
    - 3.2 Work area is cleaned and made safe in accordance with established procedures.
    - 3.3 Written justification is made for repairs to apparatus including components and materials used.
    - 3.4 Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults and malfunctions in security system installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.41.2 Security systems installation faults

2.18.1 Occupational Health and Safety principles

2.18.9 Electronics Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and rectify at least four faults/malfunctions in two different of security systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria & range
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and rectify faults and malfunctions in security system installations as described in 7) and including:

- A Using methodical fault finding techniques.
- B Finding faults/malfunctions efficiently.
- C Rectifying faults/malfunctions effectively.
- D Providing written justification for the rectification work.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and rectifying faults and malfunctions in security system installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.10

## UEENEEH076A **Diagnose and rectify faults in display circuits**

### **Unit Descriptor**

1)

This unit covers fault finding and repair of faults in cathode ray tubes, liquid crystal and plasma display circuits. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of display circuit components, rectifying faults, safety and functional testing and completing the necessary service documentation..

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH071A Find and repair faults in television receivers

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Logical diagnostic methods are applied to diagnose display circuits faults employing measurements of circuit operating parameters referenced to display operating specifications.
  - 2.5 Suspected fault scenarios are tested as being the source of display circuit problems.
  - 2.6 Faults in the electronic components of the display circuits are rectified to raise display circuits to its operation standard.
  - 2.7 Circuits are tested to verify that the display operates as intended and to specified requirements.
  - 2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements.
  - 2.9 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that display circuit faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in display circuits. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.24 Cathode ray tube displays
- 2.9.25 Plasma displays
- 2.9.26.1 Liquid crystal displays
- 2.9.26.2 Display circuit diagnostics
- 2.11.7.2 Advanced electronic testing and measuring devices and techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four circuit faults in two different types of display.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with

- the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Diagnose and rectify faults in display circuits as described in 7) and including:
      - A Applying logical diagnostic methods.
      - B Using fault scenarios to test the source of circuit faults.
      - C Identifying the cause faults using logical diagnostic methods.
      - D Rectifying faults effectively.
      - E Verifying that the display operates correctly.
      - F Documenting fault rectification.
      - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in

display circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: all
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4; 2.1 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9
---	--	---

## UEENEEH077A Diagnose and rectify faults in recording and replay apparatus

### Unit Descriptor

1)

This unit covers fault finding and repair of faults in SACD, DVD and DVDA recording and replay apparatus. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of recording and replay apparatus components, rectifying faults, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH074A Find and repair faults in audio/video recording equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 Established OHS risk control measures and procedures are followed in preparation for the work.

1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.

1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.

1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.

1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Logical diagnostic methods are applied to diagnose recording and replay apparatus faults employing measurements of circuit operating parameters referenced to recording and replay apparatus operating specifications.
- 2.5 Suspected fault scenarios are tested as being the source of recording and replay apparatus problems.
- 2.6 Faults in the electronic components of the recording and replay apparatus are rectified to raise recording and replay apparatus to its operation standard.
- 2.7 Apparatus are tested to verify that they operate as intended and to specified requirements.
- 2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements.
- 2.9 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that recording and replay apparatus faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in recording and replay apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.45.2	Recording and replay apparatus diagnostics
2.11.7.2	Advanced electronic testing and measuring devices and techniques
2.18.1	Occupational Health and Safety principles
2.18.8.2	Occupational Health and Safety, enterprise responsibilities
2.18.9	Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four circuit faults in two different types of recording and replay apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies & workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in recording and replay apparatus as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the source of apparatus faults.
    - C Identifying the cause faults using logical diagnostic methods.
    - D Rectifying faults effectively.
    - E Verifying that the recording and replay apparatus operates correctly.
    - F Documenting fault rectification.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in recording and replay apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4; 2.1 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.9

## UEENEEH078A Diagnose and rectify faults in camera circuits

### Unit Descriptor

1)

This unit covers fault finding and repair of faults in camera circuits. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of camera circuit components, rectifying faults, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH018A Find and repair faults in electronic apparatus

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |   |  |
|---|---|--|
|   | 2.4   | Logical diagnostic methods are applied to diagnose camera circuit's faults employing measurements of circuit operating parameters referenced to camera operating specifications.                         |
|   | 2.5   | Suspected fault scenarios are tested as being the source of camera circuit problems.   |
|   | 2.6   | Faults in the electronic components of the camera circuits are rectified to raise camera circuits to its operation standard.   |
|   | 2.7   | Circuits are tested to verify that the camera operates as intended and to specified requirements.  |
|   | 2.8   | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements.   |
|   | 2.9   | Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete and report fault diagnosis and rectification activities. |  |
|   | 3.1   | OHS work completion risk control measures and procedures are followed.   |
|   | 3.2   | Work site is made safe in accordance with established safety procedures.   |
|   | 3.3   | Rectification of faults is documented in accordance with established procedures.   |
|   | 3.4   | Appropriate person or persons notified, in accordance with established procedures, that camera circuit faults have been rectified.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in camera circuits. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.9.32.1 | Camcorders and digital cameras             |
| 2.9.32.2 | Camera circuits diagnostics                |
| 2.18.1   | Occupational Health and Safety principles  |
| 2.18.8.2 | Occupational Health and Safety, enterprise |

responsibilities

2.18.9 Electronic Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four circuit faults in two different types of camera.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational

requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in camera circuits as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the source of circuit faults.
    - C Identifying the cause faults using logical diagnostic methods.
    - D Rectifying faults effectively.
    - E Verifying that the camera operates correctly.

- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in camera circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key**

**8.6)**

**competencies**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.1 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

## UEENEEH079A **Diagnose and rectify faults in digital television apparatus**

### **Unit Descriptor**

1)

This unit covers fault finding and repair of faults in digital television apparatus. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of digital television apparatus circuit components, rectifying faults, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH076A Diagnose and repair faults in display circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Logical diagnostic methods are applied to diagnose digital television apparatus faults employing measurements of circuit operating parameters referenced to apparatus operating specifications.
  - 2.5 Suspected fault scenarios are tested as being the source of apparatus problems.
  - 2.6 Faults in the electronic components of the digital television apparatus are rectified to raise digital television apparatus to its operation standard.
  - 2.7 Circuits are tested to verify that the apparatus operates as intended and to specified requirements
  - 2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements.
  - 2.9 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that apparatus faults have been rectified

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in digital television apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.34.1 Digital television receivers
- 2.9.34.2 Digital television principles
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four circuit faults in two different types of digital television apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices & workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in digital television apparatus as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the source of circuit faults.
    - C Identifying the cause faults using logical diagnostic methods.
    - D Rectifying faults effectively.
    - E Verifying that the apparatus operates correctly.
    - F Documenting fault rectification.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in digital television apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the

industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4; 2.1 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.9

## **UEENEEH080A      Diagnose and rectify faults in digital transmission systems**

### **Unit Descriptor**

**1)**

This unit covers fault finding and repair of faults in digital transmission systems. The unit encompasses safe working practices, interpreting diagrams, applying logical diagnostic methods and knowledge of digital transmission systems circuit components, rectifying faults, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH076A      Diagnose and repair faults in display circuits

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to diagnose and rectify faults.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 Established OHS risk control measures and procedures are followed in preparation for the work.

1.3 Safety hazards, which have not previously been identified, are documented and risk control measures devised and implemented in consultation with appropriate personnel.

1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.

1.5 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.

1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Logical diagnostic methods are applied to diagnose digital television apparatus faults employing measurements of circuit operating parameters referenced to apparatus operating specifications.
  - 2.5 Suspected fault scenarios are tested as being the source of apparatus problems.
  - 2.6 Faults in the electronic components of the digital television apparatus are rectified to raise digital television apparatus to its operation standard.
  - 2.7 Circuits are tested to verify that the apparatus operates as intended and to specified requirements
  - 2.8 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and consistent with job specifications and requirements.
  - 2.9 Diagnosis and rectification activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that apparatus faults have been rectified

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in digital transmission systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.34.3 Advanced digital television principles
- 2.10.29 Digital television transmission towers and equipment
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by diagnosing and rectifying at least four circuit faults in two different types of digital transmission systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Diagnose and rectify faults in digital transmission systems as described in 7) and including:
  - A Applying logical diagnostic methods..
  - B Using fault scenarios to test the source of circuit faults.
  - C Identifying the cause faults using logical diagnostic methods.
  - D Rectifying faults effectively.
  - E Verifying that the apparatus operates correctly.
  - F Documenting fault rectification.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in digital transmission systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which

is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.8	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4; 2.1 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.9

## UEENEEH081A Design printed circuit boards

### Unit Descriptor

1)

This unit covers the design of printed circuit boards and component loading ready for manufacture. The unit encompasses application of knowledge of electronic circuits, components, component assemblies, developing alternative design schemes based on design brief, customer relations and documenting designs.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE025A Solve problems in complex multiples path circuits

OR

UEENEEH002A Carry out basic repairs to electronic apparatus by replacement of components

UEENEEH012A Solve problems in digital components of electronic apparatus

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to design PCB assembly

- 1.1 OHS processes and procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the proposed electronic circuits and sub assemblies is determined from the design brief or in consultations with appropriate person(s)
- 1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site

2 Develop PCB assembly design

- 2.1 Knowledge of electronic components and sub assemblies and standards are applied to the design.
- 2.2 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.
- 2.3 Safety, functional and budget considerations are incorporated in the design.
- 2.4 PCB design draft is checked for compliance with the design brief and design rules.
- 2.5 PCB design is documented for submission to appropriate person(s) for approval
- 2.6 Solutions to unplanned situation are provided consistent with organisation policy.

3	Provide detailed assembly drawings and artwork files ready for production	3.1	PCB design is presented and explained to client representative and/or other relevant person(s).
		3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.
		3.3	Final design is documented and approval obtained from appropriate person(s).
		3.4	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in digital transmission systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.1.2	Electronic component parameters and selection methods
2.9.91	Printed circuit board design techniques
2.18.1	Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing PCBs for different component population densities and related sub assemblies.

- Single sided PCB
- Doubled sided PCB
- Multi-layer PCB
- Analogue and digital circuits and components

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in digital transmission systems as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in digital transmission systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	3

**Skills Enabling  
Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.2
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.2; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEH082A Develop solutions to RF amplifiers problems

### Unit Descriptor

1)

This unit covers developing engineering solutions to resolve problems with RF amplifiers. It encompasses working safely, applying extensive knowledge of RF amplifier circuits and device operation and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical RF amplifiers electronic problems are those encountered in meeting performance requirements and compliance standards, revising an RF amplifier electronic operating parameters and dealing with RF amplifiers electronic malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEH045A Develop solutions to analogue electronic problems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to develop engineering solution for RF amplifiers electronic problems.

- 1.1 OHS processes and procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the RF amplifiers problem is determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

2 Develop engineering solution for RF amplifiers electronic problems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of RF amplifiers circuit, device operation, characteristics and applications are applied to developing solutions to RF amplifiers problems.
- 2.3 Parameters, specifications and performance requirements in relation to each RF amplifiers problem are obtained in accordance with established procedures.

- |   |  |  |
|---|--|--|
|   | 2.4  | Approaches to resolving RF amplifiers problems are analysed to provide most effective solutions.   |
|   | 2.5  | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.  |
|   | 2.6  | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards  |
| 3 | Test, document and implement engineering solution for RF amplifiers electronic problems. |  |
|   | 3.1  | Solutions to RF amplifiers problems are tested to determine their effectiveness and modified where necessary.  |
|   | 3.2  | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.   |
|   | 3.3  | Appropriately competent and qualified person(s) required to implement solutions to RF amplifiers problems are coordinated in accordance with regulatory requirements and enterprise policy. (See Note) |
|   | 3.4  | Justification for solutions used to solve RF amplifiers problems is documented for inclusion in work/project development records in accordance with professional standards.                            |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing solutions to RF amplifiers problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.90 RF amplifiers

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four RF amplifiers electronic problems.

Note.

Typical RF amplifiers electronic problems are those encountered in meeting performance requirements and compliance standards, revising a RF amplifiers electronic operating parameters and dealing with RF amplifiers electronic malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its

‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop solutions to RF amplifiers problems as described in 7) and including:
    - A Understanding the extent of the RF-amplifiers electronic problem.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining RF-amplifiers electronic parameters, specifications and performance requirements appropriate to each problem.

- D Testing and solutions to RF-amplifiers electronic problems.
- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- F Documenting justification of solutions implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing solutions to RF amplifiers problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH083A Analyse the performance of wireless-based electronic systems

### Unit Descriptor

1)

This unit covers the analysis of wireless-based electronic systems to provide solutions to mobile communications performance. It encompasses working safely, applying extensive knowledge of mobile communications parameters, gathering and analysing data, applying problem solving techniques, developing and documenting results and solutions for use in design work.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEH046A Solve fundamental problems in electronic communications systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training or institutional based delivery. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

### Competency Field

4)

Electronics

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to analyse the performance of wireless-based systems	<p>1.1 OHS processes and procedures for a given work area are obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the wireless-based electronic systems issues are determined from performance specifications and situation reports and in consultations with relevant persons</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.</p>
2 Analyse the wireless-based electronic systems performance	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of wireless communications principles are applied to analytical solutions to electronic systems.</p> <p>2.3 Parameters, specifications and performance requirements in relation to wireless-based electronic systems are obtained in accordance with established procedures.</p> <p>2.4 Approaches to analysing wireless-based electronic systems parameters are carried out to provide the most effective solution.</p> <p>2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards</p>

- |   |   |     |  |
|---|---|-----|--|
| 3 | Document and report on the results of the wireless-based electronic systems performance analysis and actions taken. | 3.1 | Solutions to wireless-based electronic systems issues are evaluated to determine their effectiveness and modified where necessary.   |
|   |   | 3.2 | Analysis is documented including details of all findings, calculations and assumptions.  |
|   |   | 3.3 | Analysis is reported to appropriately personnel to establish appropriate action to be taken based on findings.   |
|   |   | 3.4 | Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards. |

### REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing the performance of wireless-based electronic systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.4.3.2 | Networking fundamentals                       |
| 2.4.4   | Wireless networks infrastructure              |
| 2.4.38  | Fundamentals of wireless security             |
| 2.10.7  | Electronic communications, digital techniques |
| 2.18.1  | Occupational Health and Safety principles     |

### RANGE STATEMENT

- 7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to analysing wireless-based electronic systems parameters in at least two different electronic/computer-based systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Analyse the performance of wireless-based electronic systems as described in 7) and including:
    - A Understanding the wireless-based electronic systems performance issues.
    - B Forming effective strategies for analysing wireless-based electronic systems performance.
    - C Obtaining wireless-based electronic systems performance parameters, specifications and performance requirements appropriate to each situation.
    - D Evaluating the results of the analysis.
    - E Documenting analysis details of all findings, calculations and assumptions.

- F Documenting justification of actions to be implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in analysing the performance of wireless-based electronic systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH084A Design DSP based systems

### Unit Descriptor

1)

This unit covers designing electronic DSP based systems incorporating DSPs and other digital and analogue elements. It encompasses working safely, following design brief, apply knowledge of digital and analogue devices, interpreting device specifications, constructing prototypes, testing developed system prototype operation and documenting design and development work.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

UEENEEH045A Develop solutions to analogue electronic problems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

## Electronics

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to design electronic DSP based systems	<p>1.1 OHS processes and procedures for a given work area are obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed electronic DSP based system is determined from the design brief or in consultations with appropriate person(s)</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site</p> <p>1.5 Materials and devices/components required for the work are determined on compatibility of their specifications with DSP based system requirements and project budget constraints.</p>
2 Design electronic DSP based systems	<p>2.1 OHS risk control measures and procedures are followed.</p> <p>2.2 Knowledge of digital and analogue elements used in DSP based systems and compliance standards are applied to the design</p> <p>2.3 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.</p> <p>2.4 Safety, functional and budget considerations are incorporated in the design.</p> <p>2.5 Prototype devices and circuits are constructed, programmed and tested for compliance with the design brief and regulatory requirements.</p> <p>2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.</p> <p>2.7 DSP based system design is documented for submission to appropriate person(s) for approval</p> <p>2.8 Solutions to unplanned situation are provided consistent with organisation policy.</p>

- |   |   |     |   |
|---|---|-----|---|
| 3 | Obtain approval for electronic DSP based systems design | 3.1 | DSP based system design is presented and explained to client representative and/or other relevant person(s).                    |
|   |   | 3.2 | Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.    |
|   |   | 3.3 | Final design is documented and approval obtained from appropriate person(s).  |
|   |   | 3.4 | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards |

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing DSP based systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.8.10.4 Engineering Mathematics with Calculus
- 2.9.4.2 Digital Signal Processing
- 2.9.4.3 Digital Signal Processing Principles
- 2.18.1 Occupational Health and Safety principles

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to an electronic DSP based system incorporating digital and analogue elements.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design DSP based systems as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Documenting justification of actions to be implemented in accordance with professional standards.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing DSP based systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.3; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 2.5; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 2.3; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.7; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## **UEENEEH085A    Design electronic data acquisition systems**

### **Unit Descriptor**

**1)**

This unit covers designing electronic data acquisition systems incorporating sensors and transducers and digital and analogue elements. It encompasses working safely, following design brief, apply knowledge of digital and analogue devices, interpreting device specifications, constructing prototypes, testing developed system prototype operation and documenting design and development work

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A    Solve problems in digital components of electronic apparatus

UEENEEH045A    Develop solutions to analogue electronic problems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 6 level.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

**5)** Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to design electronic data acquisition systems.

- 1.1 OHS processes and procedures for a given work area are obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the proposed electronic data acquisition system is determined from the design brief or in consultations with appropriate person(s)
- 1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site
- 1.5 Materials and devices/components required for the work are determined on compatibility of their specifications with data acquisition system requirements and project budget constraints.

2 Design electronic data acquisition systems

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 Knowledge of digital and analogue elements used in data acquisition systems and compliance standards are applied to the design
- 2.3 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.
- 2.4 Safety, functional and budget considerations are incorporated in the design.
- 2.5 Prototype devices and circuits are constructed, programmed and tested for compliance with the design brief and regulatory requirements.
- 2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.
- 2.7 Data acquisition system design is documented for submission to appropriate person(s) for approval

- |   |     |   |
|---|-----|---|
|   | 2.8 | Solutions to unplanned situation are provided consistent with organisation policy.  |
| 3 Obtain approval for electronic data acquisition systems design. | 3.1 | Data acquisition system design is presented and explained to client representative and/or other relevant person(s).             |
|   | 3.2 | Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.    |
|   | 3.3 | Final design is documented and approval obtained from appropriate person(s).  |
|   | 3.4 | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards |

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing DSP based systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.9.88 | Principles of Signal Conditioning         |
| 2.9.89 | Analogue Integrated Circuits              |
| 2.18.1 | Occupational Health and Safety principles |

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to an electronic data acquisition system incorporating digital and analogue elements and with at least three data acquisition interfaces.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design DSP based systems as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing DSP based systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.3; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 2.5; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 2.3; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.7; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## **UEENEEM001A Report on the integrity of explosion-protected equipment in hazardous areas**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects of plant and machinery operation and maintenance. It requires the ability to visually identify any damage or deterioration of explosion-protected equipment, monitor changes in the explosion hazard and to implement procedures established to limit the risk of an explosion.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after competencies in plant and general plant maintenance have been achieved. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit augments formally-acquired competencies and is intended to apply to any formal recognition for this standard at the aligned AQF 2 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to work in hazardous area.

1.1 Nature of the explosion hazard in the area is known and the status of the explosion hazard is ascertained through established procedures.

1.2 Operation and condition of plant and machinery, with regards to explosion-protection, is ascertained through established procedures.

1.3 Established procedures for use of the plant and machinery, with regards to explosion-protection techniques used in the area, are followed.

2 Observe condition of explosion-protection system area.

2.1 OHS policies and procedures, with regards to explosion-protection, are followed.

2.2 Performance of plant and machinery is monitored to identify faults that may affect the integrity of the explosion-protected equipment and wiring system.

2.3 Observations of explosion-protected equipment and wiring are made during normal operations and visual non-conformances that may affect the integrity of the explosion-protection technique are identified.

2.4 Explosion hazard monitoring equipment is observed and a potentially dangerous state of the hazard is identified, eg by using gas detectors.

3 Take actions to limit risk of an explosion.

3.1 Tools, equipment and testing devices needed to Non-conformances are reported and documented in accordance with established procedures.

3.2 Established procedures are followed in the event of a potential or immediate hazardous condition arising from any non-conformance identified in equipment/wiring or changes in the explosion hazard to a potentially dangerous state.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and reporting on the integrity of explosion protected equipment in hazardous areas. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.6 Hazardous area safe working practices
- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion protected equipment
- 2.19.23 Explosion-protection visual checks

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Report on the integrity of explosion-protected equipment in hazardous areas as described in 7) and including:
  - A Currency in the critical prerequisite requirements related to the safe working principles and practices
  - B Following work permits and clearance procedures.
  - C Monitoring hazards and following evacuation procedures.
  - D Correctly operation of plant and machinery.
  - E Following plant and electrical isolation procedures.
  - F Identifying visual damage or deterioration of explosion-protected equipment.
  - G Reporting visual defects.
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in reporting on the integrity of explosion protected equipment in hazardous areas.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the

essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
For optimisation of training and assessment effort, competency development in this unit may be arranged in combination with other competencies required by a given industry or enterprise for plant or machinery operation or in relation to installation, maintenance or service functions.

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3	1
-----------------------------------	---	---

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM002A Attend to breakdowns in hazardous areas**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects of attending to a breakdown in a hazardous area or of explosion-protected and associated equipment. It requires the ability to ascertain the nature of a breakdown, the extent of repairs required and the personnel needed to repair the breakdown.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEM001A Report on the integrity of explosion protected equipment in hazardous areas

AND

Competencies in attending to breakdowns in general electrical or instrumentation equipment. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit augments formally-acquired competencies and is intended to apply to any formal recognition for this standard at the aligned AQF 3 level or higher. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to

Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field**

**4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to attend breakdown.

- 1.1 Nature of the breakdown is confirmed with appropriate personnel to establish the need to enter the hazardous area.
- 1.2 Maintenance records of equipment related to the reported breakdown are review for possible causes.
- 1.3 Safety to enter the hazardous area is established in accordance with established procedures and relevant clearance to do the work is obtained.
- 1.4 Testing devices and tools, anticipated as being needed for the work, are obtained and checked for correct operation and safety.

2 Evaluate extent of work.

- 2.1 OHS policies and procedures for working in a hazardous area are followed.
- 2.2 Extent of breakdown is evaluated and confirmed with appropriate personnel.
- 2.3 Other personnel required to determine cause and rectify breakdown is ascertained from available evidence and arrangements made for their attendance where applicable.
- 2.4 Extent of repair work is ascertained from available evidence and confirmed with appropriate personnel.
- 2.5 Limits of repair work that can be carried out in-situ are established with regards to explosion risk and in accordance with established procedures and requirements.

3 Arrange repair work.

- 3.1 Equipment is isolated in accordance with established procedures.
- 3.2 Circuits of equipment being withdrawn from service are terminated or isolated safely and in manner approved for the classification of the area.

- |   |                             |  |  |
|---|-----------------------------|--|--|
|   | 3.3                         | Certification documentation for replacement equipment is sighted to ensure that it is identical with the equipment it replaces and is in accordance with the explosion-protection system design. |  |
|   | 3.4                         | Repair work carried out in-situ is done in accordance with established procedures and requirements.  |  |
| 4 | Confirm completion of work. | 4.1  | Explosion-protected equipment and systems are inspected and tested after repairs are completed to ensure the integrity of the system.                          |
|   |                             | 4.2  | Appropriate personnel are notified of the completion of the repair work and details are documented in accordance with established procedures and requirements. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and attending to breakdowns in hazardous areas. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.18.6 | Hazardous area safe working practice                      |
| 2.19.1 | Hazardous areas and explosion-protection principles       |
| 2.19.2 | Explosion-protected equipment                             |
| 2.19.3 | Flameproof (Ex'd) explosion-protection technique          |
| 2.19.4 | Increased safety (Ex'e) explosion-protection technique    |
| 2.19.5 | Non-sparking (Ex'n) explosion-protection technique        |
| 2.19.6 | Intrinsic safety (Ex'i) explosion-protection technique    |
| 2.19.7 | Pressurization (Ex'p) explosion-protection technique      |
| 2.19.8 | Explosion-protection techniques for dusts                 |
| 2.19.9 | Common characteristics of explosion-protection techniques |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall/may be demonstrated in relation to any classified hazardous area and explosion-protection techniques and will be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex 'd']
- Increased safety [Ex 'e']
- Non-sparking [Ex 'n']
- Intrinsic safety [Ex 'i']
- Pressurization [Ex 'p']
- Dust-exclusion enclosures [Ex 'tD']
- Pressurization, dust [Ex 'pD']
- Encapsulation, dust [Ex 'mD']
- Intrinsic safety, dust [Ex 'iD']

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Attend to breakdowns in hazardous areas as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Following work permits and clearance procedures
    - C Monitoring hazards and following evacuation procedures
    - D Following plant and electrical isolation procedures
    - E Correctly evaluating extent of breakdowns
    - F Interpreting certification documentation in relation to repair and replacement
    - G Following established breakdown procedures
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in attending to breakdowns in hazardous areas.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the

Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM001A Report on the integrity of explosion protected equipment in hazardous areas

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.4	1
-----------------------------------	---	---

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM003A Use and maintain the integrity of portable gas detection devices**

### **Unit Descriptor 1)**

This unit covers the gas detection aspects of ensuring a work place is safe from explosive and toxic gases and vapours. It requires the ability to use measuring instruments accurately, follow written instructions and to write instructions for others.

### **Prerequisite Unit(s) 2)**

### **Competencies 2.1)**

Competency in this unit shall be assessed concurrently with or after other competencies required by a given industry or enterprise for plant or machinery operation, installation, maintenance or service functions. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills 2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit 3)**

This unit augments formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to use portable gas detection device.	<p>1.1 The need to initiate gas detection is identified by OHS requirements and established procedures.</p> <p>1.2 The gas or vapour to be detected is established from plant/site records or consultation with relevant personnel.</p> <p>1.3 Gas detection device(s) for the gas/vapour to be detected is/are checked for calibration and response in accordance with manufacturer instructions.</p>
2 Establish safety of the area with regards to the presence of gases or vapours.	<p>2.1 OHS policies and procedures relating to gas/vapour detection are followed.</p> <p>2.2 Gas detection device is used in accordance with manufacturer instructions and with regards to environmental conditions.</p> <p>2.3 Observations of gas detection readings are recorded in accordance with established procedures.</p> <p>2.4 Safe-to-work is determined from gas detection reading and then clearance to work is issued in accordance with established procedures.</p>
3 Monitor gas detection devices for the presence of gases/vapours.	<p>3.1 The frequency of monitoring is determined from the nature of gas/vapour and the effect of environmental conditions (e.g. ambient temperature rise).</p> <p>3.2 Others are instructed in procedures to carry out monitoring and these instructions are documented.</p>
4 Follow procedures to maintain gas detection devices.	<p>4.1 Gas detection devices are stored in accordance with manufacturer recommendations.</p> <p>4.2 Gas detection devices are formally checked and calibrated periodically as recommended by the manufacturer.</p>

- 4.3 Storage, use and calibration record of the gas detection devices is maintained, in accordance with the established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and using and maintaining the integrity of portable gas detection devices. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.6 Hazardous area safe working practices
- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.24 Gas detection-portable devices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area or confined space.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Use and maintain the integrity of portable gas detection devices as described in 7) and including:
  - A Currency in the critical prerequisite requirements related to the safe working principles and practices
  - B Following work permits and clearance procedures.
  - C Monitoring hazards and following evacuation procedures.
  - D Determining whether the gas/vapour level in a work area is safe.
  - E Following procedures to maintain the integrity of gas detection devices
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in using and maintaining the integrity of portable gas detection devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

For optimisation of training and assessment effort competency development in this unit may be arranged in combination with other competencies required by a given industry or enterprise for plant or machinery operation, installation, maintenance or service functions.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM004A Install explosion-protected equipment and wiring systems**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects for installing explosion-protected and associated equipment and wiring systems. It requires the ability to match equipment with that specified for a given location, work safely, and to installation standards and complete the necessary installation documentation

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

UEENEEM001A Report on the integrity of explosion protected equipment in hazardous areas

AND

Competencies in installation of general low voltage or extra low voltage electrical/electronic equipment and wiring systems. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit augments formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1	Prepare for installation of equipment and wiring.	1.1	OHS policies and procedures for preparing to work in a hazardous area are followed.
		1.2	Types of explosion-protected equipment and wiring systems to be installed are verified from design documents.
		1.3	Location in which specific items of equipment and circuits are to be installed is determined from design documents.
		1.4	Explosion-protected equipment markings are checked to ensure they conform to design specifications and certification documents.
		1.5	Certification document supplied with each item of equipment is collected for forwarding to appropriate personnel.
		1.6	Special tools, equipment and testing devices needed to carry out the installation work are obtained and checked for correct operation and safety.
2	Install the equipment and wiring systems	2.1	OHS policies and procedure for working in a hazardous area are followed.
		2.2	Equipment is installed to conform with design specifications and standards and within the limits specified by the equipment certification.
		2.3	Equipment and wiring system components are dismantled where necessary and parts stored to protect them against loss or damage.
		2.4	Equipment and wiring are installed in a manner that does not reduce the type of protection afforded by the equipment design.
		2.5	Circuits are tested prior to connection to devices to ensure resistance of earthing is sufficiently low, installation resistance is safe and polarity and connections are correct and each circuit complies with requirements.

- |   |   |     |   |
|---|---|-----|---|
| 3 | Confirm that the installation is completed. | 3.1 | Arrangements are made, in accordance with requirements, for an initial inspection to be carried out on the installation.                                |
|   |   | 3.2 | Appropriate action is taken to rectify non-conformances found during the initial inspection to ensure the installation complies with requirements.      |
|   |   | 3.3 | The completed installation is documented in accordance with requirements and forwarded to personnel responsible for compiling the verification dossier. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing explosion protected equipment and wiring systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.6 Hazardous area safe working practices
- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex‘d’) explosion-protection technique
- 2.19.4 Increased safety (Ex‘e’) explosion-protection technique
- 2.19.5 Non-sparking (Ex‘n’) explosion-protection technique
- 2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
- 2.19.7 Pressurization (Ex‘p’) explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.10 Hazardous areas installation and maintenance requirements
- 2.19.11 Hazardous areas cable termination techniques

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This competency must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and will be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

k	• Flameproof	[Ex 'd']
	• Increased safety	[Ex 'e']
	• Non-sparking	[Ex 'n']
	• Intrinsic safety	[Ex 'i']
	• Pressurization	[Ex 'p']
	• Dust-exclusion enclosures	[Ex 'tD']
	• Pressurization, dust	[Ex 'pD']
	• Encapsulation, dust	[Ex 'mD']
	• Intrinsic safety, dust	[Ex 'iD']

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install explosion protected equipment and wiring systems as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Working safely in a potentially hazardous area including, the use of work permits and clearances, hazard monitoring and evacuation procedures, and plant and electrical isolation.
    - C Handling and installing equipment and wiring in a manner that does not reduce the type of protection afforded by the equipment design.
    - D Checking equipment against certification documents and design specifications.
    - E Documenting installation completion.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing explosion protected equipment and wiring systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM001A Report on the integrity of explosion protected equipment in hazardous area

AND/OR

UEENEEM006A Maintain equipment in hazardous areas

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.3	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.2

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM005A Install and maintain integrity of fixed gas detection equipment**

### **Unit Descriptor**

1)

This unit covers the installation, calibration and response checking of permanent gas detection equipment. It requires the ability to match equipment with that specified for a given location and to use manufacturer manuals to maintain accuracy of gas monitoring devices.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEM004A Install explosion-protected equipment and wiring systems

OR

UEENEEM006A Maintain equipment in hazardous areas

This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions

subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1	Prepare for installation gas detection equipment.	1.1	OHS policies and procedures for preparing to work in a hazardous area are followed.
		1.2	Location in which gas detection of equipment is to be installed is determined from design documents.
		1.3	Detection equipment markings are checked to ensure they conform to design specifications and certification documents.
		1.4	Certification document supplied with each item of gas detection equipment is collected for inclusion in site records.
2	Install gas detection equipment.	2.1	OHS policies and procedures are followed.
		2.2	Gas detection equipment is installed in appropriate locations and in conformance with design specifications and standards and within the limits specified by the equipment certification and manufacturer.
		2.3	Gas detection is installed in a manner that does not reduce the type of protection afforded by any associated explosion-equipment design.
3	Response checking and calibration of gas detection equipment.	3.1	OHS policies and procedures are followed.
		3.2	Gas detection equipment is formally checked and calibrated periodically as specified by the manufacturer.
		3.3	Installation and maintenance of gas detection equipment is documented in accordance with requirements and forwarded to personnel responsible for compiling site dossier.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining integrity of fixed gas detection equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.6	Hazardous areas safe working practices
2.19.1	Hazardous areas and explosion-protection principles
2.19.2	Explosion-protected equipment
2.19.3	Flameproof (Ex'd') explosion-protection technique
2.19.4	Increased safety (Ex'e') explosion-protection technique
2.19.5	Non-sparking (Ex'n') explosion-protection technique
2.19.6	Intrinsic safety (Ex'i') explosion-protection technique
2.19.7	Pressurization (Ex'p') explosion-protection technique
2.19.8	Explosion-protection techniques for dusts
2.19.9	Common characteristics of explosion-protection techniques
2.19.10	Hazardous areas installation and maintenance requirements
2.19.11	Hazardous areas cable termination techniques
2.19.25	Gas detection-fixed equipment

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### **Overview of Assessment**

#### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### **Critical aspects of evidence required to**

#### **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and maintain integrity of fixed gas detection equipment as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Working safely in a potentially hazardous area or confined space including the use of work permits and clearances, hazard monitoring and evacuation procedures and plant and electrical isolation
    - C Handling and installing equipment and wiring in a manner that does not reduce the integrity afforded by the equipment design
    - D Checking equipment against certification documents and design specifications
    - E Documenting installation and maintenance activities
    - F Following procedures to maintain the integrity of gas detection
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining integrity of fixed gas detection equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM004A      Install explosion protected equipment and wiring systems

AND/OR

UEENEEM006A      Maintain equipment in hazardous areas

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEM006A Maintain equipment in hazardous areas

### Unit Descriptor

1)

This unit covers the explosion-protection aspects for maintaining explosion-protected and associated equipment and wiring systems. It requires the ability to follow a maintenance program, work safely, carry out maintenance to standards and manufacturer instructions and complete the necessary maintenance documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed and competencies in the maintenance of general low-voltage or extra-low-voltage electrical/electronic equipment and wiring systems have been achieved.

UEENEEM001A Report on the integrity of explosion protected equipment in hazardous areas

AND

Competencies in maintaining general low voltage or extra-low voltage electrical/electronic equipment. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit augments formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to carry out maintenance.

- 1.1 OHS policies and procedures for preparing to work in a hazardous area are followed.
- 1.2 Area classification and details of explosion-protected equipment and wiring are ascertained from hazardous area layout drawings and equipment certification documents held in hazardous area records.
- 1.3 Extent of maintenance to be conducted is established from the maintenance schedule and reports held in hazardous area records.
- 1.4 Special tools, equipment and testing devices needed to carry out the maintenance work are obtained and checked for correct operation and safety.

2 Carry out maintenance.

- 2.1 OHS policies and procedures for working in a hazardous area are followed.
- 2.2 Work is carried out to plan schedule to ensure all items are correctly maintained.
- 2.3 Equipment is checked and tested in accordance with established procedures to determine whether it functions correctly, complies with approval documentation and is not subject to deterioration or damage.

- |   |  |  |
|---|--|--|
|   | 2.4  | Equipment is adjusted or repaired within the limits permitted by the equipment certification and in accordance with manufacturer instructions.   |
|   | 2.5  | Certification documentation for replacement equipment is sighted to ensure that it is identical to the equipment it replaces and is in accordance with the explosion-protection system design. |
|   | 2.6  | Circuits of equipment being withdrawn from service are terminated or isolated safely and in the manner approved for the classification of the area.  |
|   | 2.7  | Flexible cables and cords are examined and removed from service if they are not in immediate use or are found to be defective or damaged.  |
|   | 2.8  | Spare equipment, flexible cables and cords are maintained and suitably stored where they are not likely to suffer deterioration or damage.   |
| 3 | Complete maintenance work inspections and documentation. | 3.1 Detailed inspection of explosion-protected equipment and systems subject to the maintenance work is arranged in accordance with established procedures and requirements.                   |
|   |  | 3.2 Results of inspections and maintenance activities are recorded in accordance with established procedures and requirements.   |
|   |  | 3.3 Appropriate personnel are notified of the completion of maintenance and details are documented in accordance with established procedures and requirements.                                 |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining integrity of fixed gas detection equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.18.6 | Hazardous area safe working practices               |
| 2.19.1 | Hazardous areas and explosion-protection principles |
| 2.19.2 | Explosion-protected equipment                       |
| 2.19.3 | Flameproof (Ex 'd') explosion-protection technique  |

2.19.4	Increased safety (Ex‘e’) explosion-protection technique
2.19.5	Non-sparking (Ex‘n’) explosion-protection technique
2.19.6	Intrinsic safety (Ex‘i’) explosion-protection technique
2.19.7	Pressurization (Ex‘p’) explosion-protection technique
2.19.8	Explosion-protection techniques for dusts
2.19.9	Common characteristics of explosion-protection techniques
2.19.10	Hazardous areas installation and maintenance requirements
2.19.11	Hazardous areas cable termination techniques

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and must be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex ‘d’]
- Increased safety [Ex ‘e’]
- Non-sparking [Ex ‘n’]
- Intrinsic safety [Ex ‘i’]
- Pressurization [Ex ‘p’]
- Dust-exclusion enclosures [Ex ‘tD’]
- Pressurization, dust [Ex ‘pD’]
- Encapsulation, dust [Ex ‘mD’]
- Intrinsic safety, dust [Ex ‘iD’]

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and maintain integrity of fixed gas detection equipment as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Working safely in a potentially hazardous area or confined space including the use of work permits and clearances, hazard monitoring and evacuation procedures and plant and electrical isolation
    - C Identifying defects and faults.
    - D Interpreting certification documentation in relation to maintenance, repair and replacement
    - E Following established maintenance procedures.
    - F Documenting maintenance details.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining integrity of fixed gas detection equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM001A Report on the integrity of explosion protected equipment in hazardous area

AND/OR

UEENEEM004A Install explosion protected equipment and wiring systems

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM007A Overhaul and repair explosion-protected equipment**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects of overhauling and repairing explosion-protected equipment. It requires the ability to establish and document the level of work required, arranging for the overhaul/repair to be carried, verify compliance of overhauled/repared equipment and complete the necessary documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competence in this unit shall be assessed only after competencies in the overhaul and repair of general low-voltage or extra-low-voltage electrical/electronic equipment have been achieved. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit augments formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1	Prepare for overhaul/repair of equipment.	1.1	Instructions on overhaul and/or repair are received and expected outcomes of the work confirmed with appropriate personnel.
		1.2	Certification documents for the equipment are sought and received in order to check that the equipment complies with the certification.
2	Establish the level of overhaul required.	2.1	Measurements, tests and inspections are carried out on the equipment in accordance with OHS and other established procedures.
		2.2	The extent of work to be done is determined from measurement, test and inspection results and their correspondence with original certification and the requirements of Standards.
		2.3	Specifications and instructions for the overhaul/repair work are documented in accordance with requirements.
3	Arrange overhaul/repair work.	3.1	Arrangements are made for the overhaul/repair work to be done in accordance with established procedures.
		3.2	A copy of overhaul/repair specifications and instructions is provided to personnel responsible for carrying out the work.

4	Verify that equipment complies with original certification.	4.1	Level of testing required to verify that overhauled/repared equipment complies with original certification specifications is determined in accordance with requirements.
		4.2	Verification tests are conducted in accordance with established procedures.
5	Document overhaul/repair work.	5.1	Equipment marking is checked and marked where applicable, in accordance with original certification.
		5.2	Overhaul/repair work is documented in accordance with requirements stating that the equipment complies with the original certification.
		5.3	Documentation of the repair work is filed in hazardous area records and a copy is issued with the equipment.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and overhauling and repairing explosion protected equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex‘d’) explosion-protection technique
- 2.19.4 Increased safety (Ex‘e’) explosion-protection technique
- 2.19.5 Non-sparking (Ex‘n’) explosion-protection technique
- 2.19.6 Intrinsic safety (Ex‘i’) explosion-protection technique
- 2.19.7 Pressurization (Ex‘p’) explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.13.1 Explosion protected equipment overhaul and

repair, general requirements

### 2.19.13.2 Overhaul and repair requirements specific to each explosion-protection technique

#### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and must be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex 'd']
- Increased safety [Ex 'e']
- Non-sparking [Ex 'n']
- Intrinsic safety [Ex 'i']
- Pressurization [Ex 'p']
- Dust-exclusion enclosures [Ex 'tD']
- Pressurization, dust [Ex 'pD']
- Encapsulation, dust [Ex 'mD']
- Intrinsic safety, dust [Ex 'iD']

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Volume 2, Part 2.1.

#### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range

Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Overhaul and repair explosion-protected equipment as described in 7) and including:
      - A Currency in the critical prerequisite requirements related to the safe working principles and practices
      - B Following OHS procedures.
      - C Interpreting certification documentation and Standards.
      - D Measuring, testing and inspecting equipment for compliance with certification and Standards.
      - E Specifying overhaul/repair work.
      - F Documenting overhaul/repair work.
      - G Using quality systems.
      - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in overhauling and repairing explosion protected equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort competency development in this unit may be arranged concurrently with competence in the overhaul and repair of general low-voltage or extra-low-voltage.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1
How is team work used within this	Refer to the following Performance Criteria for examples of application:	

competency?	3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the	Refer to the following Performance Criteria for examples of application:

**UEENEEM007A – Overhaul and repair explosion-protected equipment**

	meaningful work task	1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM008A Assess explosion-protected equipment for compliance with Standards**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects of assessing compliance of electrical equipment. It requires the ability to assess and to report on the integrity of equipment, gather assessment and test documentation from accredited testing stations and prepares submissions to accredited certification bodies.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competence in this unit shall be assessed only after competencies in the compliance assessment of general low-voltage or extra-low-voltage electrical/electronic equipment has been achieved. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

**Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships and the like

**Competency Field**

**4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare for examination of certified equipment.

1.1 Documentation in accordance with established procedures is obtained and read to determine the certification specifications for which the equipment is to be assessed.

1.2 Tools and measuring devices needed for examination are obtained and checked for correct, accurate and safe operation.

1.3 Examination area is checked to ensure it is safe to conduct examinations in accordance with established procedures.

2 Conduct equipment examination.

2.1 Examination is set up in accordance with established procedures.

2.2 Examination is carried out in accordance with OHS and other established procedures.

2.3 Any tests required to establish conformity are determined.

3 Document and submit examination and test results.

3.1 Assessment results reporting on the integrity of explosion-protected electrical equipment are documented in accordance with requirements and established procedures.

- 3.2 Assessment and test documentation, and where appropriate, issued documentation from accredited testing stations, are recorded in accordance with requirements and established procedures.
- 3.3 Assessment and test documentation is forwarded to appropriate personnel, or accredited certification bodies, responsible for issuing certificates of conformity in accordance with requirements and established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assessing explosion protected equipment for compliance with Standards. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex 'd') explosion-protection technique
- 2.19.4 Increased safety (Ex 'e') explosion-protection technique
- 2.19.5 Non-sparking (Ex 'n') explosion-protection technique
- 2.19.6 Intrinsic safety (Ex 'i') explosion-protection technique
- 2.19.7 Pressurization (Ex 'p') explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.21 Explosion-protected equipment conformity assessment

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and must be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex 'd']
- Increased safety [Ex 'e']
- Non-sparking [Ex 'n']
- Intrinsic safety [Ex 'i']
- Pressurization [Ex 'p']
- Dust-exclusion enclosures [Ex 'tD']
- Pressurization, dust [Ex 'pD']
- Encapsulation, dust [Ex 'mD']
- Intrinsic safety, dust [Ex 'iD']

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assess explosion protected equipment for compliance with Standards as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Following OHS procedures
    - C Interpreting certification documentation and Standards
    - D Examining equipment for compliance with specifications.
    - E Determining conformity tests required, in association with certification and testing stations
    - F Interpreting results
    - G Reporting examination and test outcomes to an accredited certification body
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assessing explosion protected equipment for compliance with Standards.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort competency development in this unit may be arranged concurrently with competence in the overhaul and repair of general low-voltage or extra-low-voltage.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3	1
-----------------------------------	---	---

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEM009A Test installations in hazardous areas

### Unit Descriptor

1)

This unit covers the explosion-protection aspects for electrical installations for hazardous areas. It requires the ability to select, prepare and use appropriate testing devices, work safely and to Standards and to interpret and record test results.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEM004A Install explosion-protected equipment and wiring systems

OR

UEENEEM006A Maintain equipment in hazardous areas

This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit augments formally-acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable

contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to conduct testing.

- 1.1 OHS policies and procedures for preparing to work in an area where a potentially explosive atmosphere may be present are followed.
- 1.2 Area classification is ascertained from the hazardous area layout drawings or other classification documents.
- 1.3 Location of each item of equipment and of circuits subject to testing is determined from design drawings and documentation.
- 1.4 Special tools, equipment and testing devices needed for the testing work are obtained and checked for correct operation and safety.

2 Conduct testing.

- 2.1 OHS policies and procedures for working in a hazardous area are followed.
- 2.2 Parts of equipment that are dismantled in order to conduct testing are stored to protect them against loss or damage.
- 2.3 Certified and approved low energy testing devices are selected and used to test into areas where explosive hazard may be present.
- 2.4 Sensitive circuit components that require to be tested which are likely to be damaged by high-test voltages are tested by an appropriate testing method.
- 2.5 Tests necessary to determine whether the electrical system complies with requirements for the explosion-protection techniques to be used and for electrical safety are conducted in accordance with established procedures.
- 2.6 When testing has been completed, equipment parts and circuit connections are replaced in a manner that ensures the integrity of the explosion-protection system.

- |   |                                    |     |   |
|---|------------------------------------|-----|---|
| 3 | Confirm and document test results. | 3.1 | Non-conformances and faults revealed by the testing and the resulting recommended actions are documented and reported to appropriate personnel.   |
|   |                                    | 3.2 | Completion of testing is verified and a copy of the testing documentation submitted to the appropriate personnel for inclusion in the hazardous area records in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and testing installations in hazardous areas. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.18.6  | Hazardous areas safe working practices                    |
| 2.19.1  | Hazardous areas and explosion-protection principles       |
| 2.19.2  | Explosion-protected equipment                             |
| 2.19.3  | Flameproof (Ex‘d’) explosion-protection technique         |
| 2.19.4  | Increased safety (Ex‘e’) explosion-protection technique   |
| 2.19.5  | Non-sparking (Ex‘n’) explosion-protection technique       |
| 2.19.6  | Intrinsic safety (Ex‘i’) explosion-protection technique   |
| 2.19.7  | Pressurization (Ex‘p’) explosion-protection technique     |
| 2.19.8  | Explosion-protection techniques for dusts                 |
| 2.19.9  | Common characteristics of explosion-protection techniques |
| 2.19.10 | Hazardous areas installation and maintenance requirements |
| 2.19.11 | Hazardous areas cable termination techniques              |
| 2.19.22 | Hazardous areas installation testing                      |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and must be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex 'd']
- Increased safety [Ex 'e']
- Non-sparking [Ex 'n']
- Intrinsic safety [Ex 'i']
- Pressurization [Ex 'p']
- Dust-exclusion enclosures [Ex 'tD']
- Pressurization, dust [Ex 'pD']
- Encapsulation, dust [Ex 'mD']
- Intrinsic safety, dust [Ex 'iD']

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Test installations in hazardous areas as described in 7) and including:
  - A Currency in the critical prerequisite requirements related to the safe working principles and practices
  - B Working safely in a potentially hazardous area in relation to work permits and clearances, hazard monitoring and evacuation procedures, plant and electrical isolation
  - C Handling and installing equipment and wiring in a manner that does not reduce the type of protection afforded by the equipment design
  - D Conducting tests
  - E Documenting testing outcomes
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in testing installations in hazardous areas.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM002A Attend to breakdowns in hazardous areas

OR

UEENEEM004A Install explosion protected equipment and wiring systems

OR

UEENEEM006A Maintain equipment in hazardous areas

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM010A    Conduct close inspection of existing hazardous areas installations**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects for conducting visual and close inspections of electrical installations for hazardous areas. It requires the ability to follow inspection programs, work safely, and identify conditions that affect the integrity of explosion-protection and document inspection findings.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEM002A    Attend to breakdowns in hazardous areas  
OR

UEENEEM004A    Install explosion-protected equipment and wiring systems  
OR

UEENEEM006A    Maintain equipment in hazardous areas  
OR

UEENEEM016A    Design electrical installations in hazardous areas

This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

**Application of the Unit 3)**

This unit applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1	Prepare for inspection.	1.1	Type of inspection is ascertained from the inspection schedule retained in the hazardous area records.
		1.2	Areas classification is ascertained from hazardous area layout drawings retained in the hazardous area records.
2	Conduct inspection.	2.1	Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
		2.2	OHS policies and procedures are followed.
		2.3	Equipment and installation is checked for damage or deterioration in accordance with the inspection schedule.
3	Report inspection results.	3.1	Non-conformances and result of the inspection documented and reported to appropriate personnel in accordance with established procedures.

- 3.2 Completion of inspection is verified and a copy of the inspection documentation submitted to the appropriate personnel for inclusion in the hazardous area records in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and testing installations in hazardous areas. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.6 Hazardous areas safe working practices
- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex'd') explosion-protection technique
- 2.19.4 Increased safety (Ex'e') explosion-protection technique
- 2.19.5 Non-sparking (Ex'n') explosion-protection technique
- 2.19.6 Intrinsic safety (Ex'i') explosion-protection technique
- 2.19.7 Pressurization (Ex'p') explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.10 Hazardous areas installation and maintenance requirements
- 2.19.18 Hazardous areas close inspection requirements

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and must be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex 'd']
- Increased safety [Ex 'e']
- Non-sparking [Ex 'n']
- Intrinsic safety [Ex 'i']
- Pressurization [Ex 'p']
- Dust-exclusion enclosures [Ex 'tD']
- Pressurization, dust [Ex 'pD']
- Encapsulation, dust [Ex 'mD']
- Intrinsic safety, dust [Ex 'iD']

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Test installations in hazardous areas as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Working safely in a potentially hazardous area in relation to work permits and clearances, hazard monitoring and evacuation procedures, plant and electrical isolation
    - C Inspecting equipment and wiring in a manner that does not reduce the type of protection afforded by the equipment design
    - D Conducting close inspections
    - E Documenting inspection outcomes
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in testing installations in hazardous areas.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM002A Attend to breakdowns in hazardous areas

OR

UEENEEM004A Install explosion protected equipment and wiring systems

OR

UEENEEM006A Maintain equipment in hazardous areas

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM011A    Conduct detailed inspection of hazardous areas installations**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects of conducting initial, periodic and sample audit inspections of explosion-protected equipment and installations. It requires the ability to audit a site dossier, work safely in a hazardous area, inspect against Standards and report and act on inspection results.

Note:

1. This unit is endorsed for each of the explosion-protection techniques in which competency is demonstrated. Designation for each endorsement is given in Clause '5 Range statement' in this unit.
2. This unit is equivalent to 'UTENES410B Conduct detailed inspection of hazardous areas installations'

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEM010A    Conduct close inspection of existing hazardous areas installations

This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      4      Writing      4      Numeracy      4

### **Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1	Audit records system	1.1	Records system is reviewed to verify that essential hazardous area documentation is retained and procedures for maintaining records are established
		1.2	Hazardous area classification and design drawings and documentation are checked to verify that appropriate procedures have been followed in assuring the area is safe
2	Prepare for inspection	2.1	Type and intended location of each item of equipment and circuits subject to inspection are determined from design drawings and documentation
		2.2	OHS policies and procedures for preparing to work in a hazardous area are followed
		2.3	Special tools, equipment and devices needed for the inspection are obtained and checked for correct operation and safety
3	Conduct inspection	3.1	OHS policies and procedure for working in a hazardous area are followed

- 3.2 Parts of equipment that are dismantled in order to conduct inspection are stored to protect them against loss or damage
- 3.3 Equipment, systems and installation are inspected for compliance with the design specifications retained in hazardous area records and in accordance with requirements
- 3.4 Where applicable, after the inspection of each item, equipment parts and circuit connections are replaced in a manner that ensures the integrity of the explosion-protection system
- 4 Report inspection results
  - 4.1 Any non-conformances, faults or unauthorised modifications are documented in accordance with established procedures
  - 4.2 Where applicable, a non-conformance report, including the actions taken and a statement on whether circuits have been re-energised, is made and forwarded to the appropriate personnel
  - 4.3 Documentation in relation to all aspects of the inspection are forwarded to the appropriate personnel for inclusion in hazardous area records in accordance with requirements

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting detailed inspection of hazardous areas installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.18.6 Hazardous areas safe working practices
- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex'd') explosion-protection technique
- 2.19.4 Increased safety (Ex'e') explosion-protection technique

2.19.5	Non-sparking (Ex'n') explosion-protection technique
2.19.6	Intrinsic safety (Ex'i') explosion-protection technique
2.19.7	Pressurization (Ex'p') explosion-protection technique
2.19.8	Explosion-protection techniques for dusts
2.19.9	Common characteristics of explosion-protection techniques
2.19.10	Hazardous areas installation and maintenance requirements
2.19.12	Hazardous areas detailed inspection techniques
2.19.18	Hazardous areas close inspection requirements

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and must be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex 'd']
- Increased safety [Ex 'e']
- Non-sparking [Ex 'n']
- Intrinsic safety [Ex 'i']
- Pressurization [Ex 'p']
- Dust-exclusion enclosures [Ex 'tD']
- Pressurization, dust [Ex 'pD']
- Encapsulation, dust [Ex 'mD']
- Intrinsic safety, dust [Ex 'iD']

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct detailed inspection of hazardous areas installations as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Handling and installing equipment and wiring in a manner that does not reduce the type of protection afforded by the equipment design
    - C Identifying non-compliant apparatus
    - D Identifying non-compliant installation methods
    - E Documenting inspection outcomes
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Note:**

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting detailed inspection of hazardous areas installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM010A      Conduct close inspection of existing hazardous areas installations

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.3	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.3

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM012A    Develop and manage maintenance programs for hazardous areas electrical equipment**

### **Unit Descriptor**

1)

This unit covers the explosion-protection aspects of plant maintenance schemes. It requires the ability to develop and manage maintenance programs incorporating strategies for periodic inspections, repair/overhaul/replacement of components and recording of maintenance outcomes.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEM006A    Maintain equipment in hazardous areas

OR

Competencies in developing and managing general electrical/instrumentation maintenance programs. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions

subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1 Establish maintenance requirements.

- 1.1 Policies and procedures are developed to include OHS practices, skills required and frequency and level of maintenance work.
- 1.2 Systems are established to manage and record maintenance work and up-to-date hazardous area records in accordance with requirements.
- 1.3 Level of repair to be done under maintenance work is established in accordance with requirements.
- 1.4 Arrangements are made to check that the hazardous area, explosion-protected equipment and installation comply with hazardous area records.
- 1.5 Discrepancies between the hazardous area, explosion-protected equipment and installation and the hazardous area records are documented and arrangements made to ensure the area is appropriately classified and explosion-protection systems are adequate.

2 Develop and implement maintenance schedule.

- 2.1 Maintenance schedules are developed from recommendations of Standards and equipment manufacturers and in accordance with requirements.
- 2.2 Procedures are developed and implemented to ensure the maintenance program is followed in accordance with the planned schedule and requirements.
- 2.3 Procedures are developed and implemented to ensure the hazardous area records are maintained in accordance with planned schedule and requirements.

3 Evaluate maintenance program.

- 3.1 Periodic and sample inspection reports are used to ascertain maintenance quality and the need for revision of maintenance schedule and frequency.

- 3.2 Maintenance schedule is periodically reviewed and revised to maintain the integrity of the explosion-protection system.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing and managing maintenance programs for hazardous areas electrical equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex'd') explosion-protection technique
- 2.19.4 Increased safety (Ex'e') explosion-protection technique
- 2.19.5 Non-sparking (Ex'n') explosion-protection technique
- 2.19.6 Intrinsic safety (Ex'i') explosion-protection technique
- 2.19.7 Pressurization (Ex'p') explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.10 Hazardous areas installation and maintenance requirements
- 2.19.19 Hazardous areas management

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and must be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex ‘d’]
- Increased safety [Ex ‘e’]
- Non-sparking [Ex ‘n’]
- Intrinsic safety [Ex ‘i’]
- Pressurization [Ex ‘p’]
- Dust-exclusion enclosures [Ex ‘tD’]
- Pressurization, dust [Ex ‘pD’]
- Encapsulation, dust [Ex ‘mD’]
- Intrinsic safety, dust [Ex ‘iD’]

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical

equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop and manage maintenance programs for hazardous areas electrical equipment as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Establishing maintenance policies and procedures that

encompass OHS responsibilities

- C Establishing management maintenance systems that address the special requirements for explosion-protected equipment and installations
- D Ensuring a hazardous area is appropriately classified and explosion-protection strategies are adequate
- E Developing and implementing maintenance plans and schedules in relation to explosion-protected equipment and installations
- F Evaluating maintenance programs in relation to explosion-protected equipment and installations
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing and managing maintenance programs for hazardous areas electrical equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM006A      Maintain equipment in hazardous areas

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.3	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM013A Ensure the safety of hazardous areas**

### **Unit Descriptor**

1)

This unit covers the explosion-protection aspects of ensuring that potentially explosive atmospheres, generated by production, processing or servicing activities, do not pose a hazard to persons, property or the environment.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competence in this unit shall be assessed only after competencies in general plant management have been achieved. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Hazards

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
1 Establish possibility of explosive hazard.	<p>1.1 Competent person(s) are engaged to provide advice on the nature and extent of any explosive hazard on the site.</p> <p>1.2 Measures are taken to ensure explosive hazards are identified and the area classified by competent person(s) in accordance with requirements.</p> <p>1.3 Arrangements are made to establish a hazardous area records system in accordance with requirements.</p>
2 Establish explosion-protection strategies for site.	<p>2.1 Competent person(s) are engaged to design the explosion-protection system and installation.</p> <p>2.2 Where applicable explosion-protection system and installation design is verified with Statutory Authority for compliance with requirements.</p>
3 Implement explosion-protection strategies.	<p>3.1 Competent person(s) are engaged to install explosion-protected equipment and wiring system.</p> <p>3.2 Procedures are implemented to ensure the explosion-protected equipment and wiring system installation is tested and inspected in accordance with requirements.</p>
4 Establish and implement procedures for maintaining explosion-protection.	<p>4.1 Competent person(s) are engaged to develop inspection/maintenance schedules, including the level and intervals for periodic inspections, for the explosion-protected equipment and wiring system.</p> <p>4.2 Procedures are developed to ensure periodic inspections; testing and maintenance are carried out to documented schedule and in accordance with requirements.</p> <p>4.3 Procedures are established for assuring data related to explosion-protection is filed in hazardous area records in accordance with requirements.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and ensuring the safety of hazardous areas. The extent of the essential knowledge and skills required is given Volume 2 Part 2, Section 2:

2.19.1 Hazardous areas and explosion-protection principles

2.19.19 Hazardous areas management

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be

required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Ensure the safety of hazardous areas as described in 7) and including:
    - A Currency in the critical prerequisite requirements

related to the safe working principles and practices

- B Applying relevant statutory requirements
- C Establishing procedures for engaging competent persons
- D Establishing and maintaining procedures for identifying potentially explosive hazards
- E Establishing procedures for implementing and maintaining explosion-protection strategies
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in ensuring the safety of hazardous areas.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competence development in this unit may be arranged concurrently with competencies in plant management.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3; 2.2	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 4.2; 4.3	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3; 2.1	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2; 3.1; 3.2; 4.1; 4.3	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM014A Design and develop modifications to explosion-protected equipment**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects of designing and developing modifications to explosion-protected equipment. It requires the abilities in technical design and compliance assessments and documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competence in this unit shall be assessed only after competencies in general plant management have been achieved.

UEENEEM007A Overhaul and repair explosion protected equipment

This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable

contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare for modification of equipment.

1.1 Instructions on modification are received and expected outcomes of the work confirmed with appropriate personnel.

1.2 Certification documents for the equipment are sought and received in order to check that the equipment complies with the certification.

1.3 Where certification documents for the equipment are not available arrangements are made to seek re-certification in accordance with requirements.

1.4 Tools, measuring/testing devices and equipment needed to check compliance with certification and determine the extent of the work are obtained and checked for correct, accurate and safe operation.

2 Determine the level of modification.

2.1 Measurements, tests and inspections are carried out on the equipment in accordance with OHS policies and procedures and other established procedures.

2.2 The extent of work to be done is determined from measurement, test and inspection results and the requirements of Standards.

3 Design modifications.

3.1 Modifications are designed to comply with the requirements of Standards.

3.2 Specifications and instructions for the modification work are documented and processed in accordance with requirements.

4 Establish the need for re-certification.

4.1 Need for supplementary certification or re-certification is determined in accordance with requirements.

4.2 Level of testing required after equipment is modified is determined in accordance with requirements.

5	Arrange modification work.	5.1	Arrangements are made for the modification work to be done in accordance with established procedures.
		5.2	A copy of modification specifications and instructions is provided to personnel responsible for carrying out the work.
6	Arrange assessment of modified equipment.	6.1	Arrangements are made to obtain supplementary approval and/or re-certification for the modified equipment in accordance with requirements.
		6.2	Arrangements are made for non-compliance and non-conformances found during testing and the assessment of modified equipment to be rectified in accordance with established procedures.
7	Document certification of modified equipment.	7.1	Equipment marking is checked and, where applicable, marked according to certification documentation and requirements.
		7.2	Modification work is documented in accordance with established procedures and requirements.
		7.3	Documentation of the modification work is filed in hazardous area records and a copy issued with the equipment.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and developing modifications to explosion-protected equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex'd') explosion-protection technique
- 2.19.4 Increased safety (Ex'e') explosion-protection technique
- 2.19.5 Non-sparking (Ex'n') explosion-protection technique
- 2.19.6 Intrinsic safety (Ex'i') explosion-protection technique

- 2.19.7 Pressurization (Ex‘p’) explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.13.1 Explosion protected equipment overhaul and repair, general requirements
- 2.19.13.2 Overhaul and repair requirements specific to each explosion-protection technique
- 2.19.14.1 Explosion-protected equipment modification, general requirements
- 2.19.14.2 Modification requirements specific to each explosion-protection technique

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and must be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex ‘d’].
- Increased safety [Ex ‘e’].
- Non-sparking [Ex ‘n’].
- Intrinsic safety [Ex ‘i’].
- Pressurization [Ex ‘p’].
- Dust-exclusion enclosures [Ex ‘tD’].
- Pressurization, dust [Ex ‘pD’].
- Encapsulation, dust [Ex ‘mD’].
- Intrinsic safety, dust [Ex ‘iD’].

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## **Critical aspects of evidence required to**

---

### **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and develop modifications to explosion protected equipment as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Following OHS procedures.
    - C Interpreting certification documentation and Standards.
    - D Checking equipment for compliance with certification and Standards.
    - E Specifying modification design.
    - F Establishing need for re-certification.
    - G Documenting modification design.
    - H Using quality management systems
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and developing modifications to explosion-protected equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with competencies in plant management.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.1; 3.2; 4.2	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.2; 1.4; 2.2; 4.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.1; 2.2; 3.1; 4.1; 4.2	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.3; 2.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.4; 2.1; 3.1; 4.2	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEM015A Classify hazardous areas

### Unit Descriptor

1)

This unit covers knowledge and skills to classify areas where potentially explosive materials may exist. It requires the ability to gather and analyse data relative to explosion hazards, determine the extent of risk and establish and document zones delineating the levels of risk.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the competencies have been granted in relation to gathering and analysing technical data and using this data for risk assessment. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.
1 Determine the type and extent of explosion hazard.	<p>1.1 Functions and process equipment in the area are determined and hazardous materials identified from specifications, hazard and risk assessment and/or written consultation with process specialist personnel.</p> <p>1.2 Explosion and physical properties of hazardous materials are listed, together with the title of the authority from which the data is obtained.</p> <p>1.3 Gas Groupings and temperature class of flammable gases and vapours that may be present in the area are established from collected data.</p> <p>1.4 Potential sources of release are identified from specifications, risk assessment and/or written consultation with process specialist personnel.</p> <p>1.5 Likely impact of any risk of an explosion affecting the environment is assessed in accordance with requirements and established procedures.</p>
2 Establish the type and extent of classes/zones.	<p>2.1 Zones are determined by similarity to examples in standards or from first principles.</p> <p>2.2 Where first principles are used, grades, sources and magnitude of release are established from specifications and diagrams and reviewed with process specialist personnel.</p>
3 Document classification and delineation of zones.	<p>3.1 Area classification documentation is completed in accordance with requirements and submitted to appropriate personnel.</p> <p>3.2 Classification documentation records are for future reference and in accordance with requirements.</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and classifying hazardous areas. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.19.1 Hazardous areas and explosion-protection principles

2.19.17 Hazardous areas classification techniques

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any hazardous areas in which the classification cannot be directly identified by common situations or specific examples.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access

to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Classify hazardous areas as described in 7) and including:

- A Currency in the critical prerequisite requirements related to the safe working principles and practices
- B Accessing necessary information and identifying hazardous products involved in a given process, explosive properties of materials involved in a given process, and potential sources and characteristics of release of hazardous products
- C Analysing data in the context of explosion risk
- D Determining area delineation and documenting area classifications
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in classifying hazardous areas.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with competencies related to gathering and analysing technical data and using this data for assessing risk.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5; 2.2; 3.1; 3.2	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.1; 1.5; 2.2	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	2.1; 2.3	1
--	----------	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEM016A Design electrical installations in hazardous areas

### Unit Descriptor

1)

This unit covers the explosion-protection aspects planning electrical installations for hazardous areas. It requires the ability to identify hazardous area zones from classification diagrams, identical examples of previously classified areas or those given in standards and to select and locate explosion-protected equipment and wiring systems and other items that may influence the explosion-protection technique.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has been confirmed.

UEENEEM004A Install explosion-protected equipment and wiring systems

This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during

training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1 Verify hazardous classification for the area.

- 1.1 Nature and characteristics of explosion hazards in the area are identified from plant specifications.
- 1.2 In the absence of classification documentation, arrangements are made to ensure the explosion hazard in the area is assessed and the area classified.
- 1.3 Classification, extent of zonings of the area, gas groups and temperature class are verified by reference to classification documents or determined from Standards in which the explosion hazard area classification and zonings are clearly identified.
- 1.4 Area classification determined from standards in which the explosion hazard area classification and zonings are clearly identified is documented in accordance with requirements.

2 Select and check equipment, wiring and accessories.

- 2.1 Equipment and accessories are selected to suit area activities and comply with explosion-protection requirements.
- 2.2 Wiring systems are selected to suit area activities, and comply with explosion-protection, load and duty requirements.
- 2.3 Equipment compliance certification is checked for suitability for the area classification and zonings.
- 2.4 Cables and accessories are checked for suitability for the area classification and zonings and load and duty requirements.

3 Document design.

- 3.1 Design and specifications are documented in accordance with established procedures and requirements.

- 3.2 Arrangements are made to file design documentation in hazardous area records in accordance with established procedures and requirements.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing electrical installations in hazardous areas. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.19.1 Hazardous areas and explosion-protection principles
- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex'd') explosion-protection technique
- 2.19.4 Increased safety (Ex'e') explosion-protection technique
- 2.19.5 Non-sparking (Ex'n') explosion-protection technique
- 2.19.6 Intrinsic safety (Ex'i') explosion-protection technique
- 2.19.7 Pressurization (Ex'p') explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.10 Hazardous areas installation and maintenance requirements
- 2.19.15 Hazardous areas installation planning
- 2.19.16 Common classified hazardous areas

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and will be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated

with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex ‘d’].
- Increased safety [Ex ‘e’].
- Non-sparking [Ex ‘n’].
- Intrinsic safety [Ex ‘i’].
- Pressurization [Ex ‘p’].
- Dust-exclusion enclosures [Ex ‘tD’].
- Pressurization, dust [Ex ‘pD’].
- Encapsulation, dust [Ex ‘mD’].
- Intrinsic safety, dust [Ex ‘iD’].

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design electrical installations in hazardous areas as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices

- B Interpreting area classification documentation.
- C Classifying area from Standards.
- D Documenting area classification.
- E Selecting equipment for a given classified area.
- F Selecting wiring systems for a given classified area.
- G Checking equipment certification for suitability for a given classified area
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing electrical installations in hazardous areas.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEM004A Install explosion-protected equipment and wiring systems

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1; 2.3; 2.4	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEM017A Design explosion-protected electrical systems**

### **Unit Descriptor**

**1)**

This unit covers the explosion-protection aspects of design electrical systems. It requires the ability to establish design briefs and to pursue economical and effective design solutions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after the competencies have been granted in designing electrical systems and installations. This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

1	Establish design brief.	1.1	Site and plant specifications are obtained and reviewed to establish the system requirements.
		1.2	Classification of the area is obtained from the hazardous area layout drawings or other classification documents.
		1.3	Organizational policies and specifications for hazardous area electrical systems are obtained or established with the appropriate personnel.
2	Design system and installation.	2.1	Safety, functional and economic considerations are incorporated in system design.
		2.2	Design complies with all hazardous area requirements and includes specifications and all other necessary documentation for explosion-protected equipment, accessories and wiring systems.
3	Check and finalise design.	3.1	Design is checked under established procedures for compliance with all relevant requirements.
		3.2	Design is submitted for appropriate organizational approval and, where applicable, statutory or regulatory approval.
		3.3	Approved copies of design documents are issued for retention in hazardous area records in accordance with established procedures and requirements.

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing explosion-protected electrical systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.19.1 Hazardous areas and explosion-protection principles

- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex ‘d’) explosion-protection technique
- 2.19.4 Increased safety (Ex ‘e’) explosion-protection technique
- 2.19.5 Non-sparking (Ex ‘n’) explosion-protection technique
- 2.19.6 Intrinsic safety (Ex ‘i’) explosion-protection technique
- 2.19.7 Pressurization (Ex ‘p’) explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.10 Hazardous areas installation and maintenance requirements
- 2.19.15 Hazardous areas installation planning
- 2.19.16 Common classified hazardous areas
- 2.19.20 Explosion-protected electrical systems design
- 2.19.25 Gas detection-fixed equipment

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to any classified hazardous area and explosion-protection techniques and will be endorsed for each technique in which competency is demonstrated. The endorsement(s) for each explosion-protection technique is designated with an [Ex ] as a suffix to the unit title. The unit endorsements are as follows:

- Flameproof [Ex ‘d’].
- Increased safety [Ex ‘e’].
- Non-sparking [Ex ‘n’].
- Intrinsic safety [Ex ‘i’].
- Pressurization [Ex ‘p’].

- Dust-exclusion enclosures [Ex ‘tD’].
- Pressurization, dust [Ex ‘pD’].
- Encapsulation, dust [Ex ‘mD’].
- Intrinsic safety, dust [Ex ‘iD’].

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment

instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design explosion-protected electrical systems as described in 7) and including:
    - A Currency in the critical prerequisite requirements related to the safe working principles and practices
    - B Accessing and interpreting relevant information.
    - C Providing design options and justifications including hazard risk, functionality and economic considerations.
    - D Following checking and documentation procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should also be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing explosion-protected electrical systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment primarily intended for learning/assessment which incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort competency development in this unit may be arranged concurrently with competencies in designing electrical systems and installations, at AQF Certificate VI level or higher.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.1; 2.2	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 3.1; 3.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEM018A Design gas detection systems

### Unit Descriptor

1)

This unit covers the selection aspects of gas detection equipment for the design of gas detection systems for hazardous areas. It requires the ability to establish equipment parameters and to evaluate these against manufacturer specifications.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the competencies have been granted in designing electrical systems and installations.

UEENEEM017A Design explosion-protected electrical systems

This is to be augmented with evidence to confirm that the prerequisites related to specific and critical safe working principles and practices are current.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to

Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Hazards

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.	
1 Establish gas detection parameters.	1.1	Requirements for gas detection are obtained or established with the appropriate personnel.
	1.2	The parameters for gas detection are obtained and documented from consultation with appropriate personnel.
	1.3	An explosion-protection requirement for gas detection equipment is established from area classification documents.
2 Select gas detection equipment.	2.1	Manufacturer specification and limitations of appropriate gas equipment are sought.
	2.2	Manufacturer specification and limitations are compared with the established parameters for gas detection.
	2.3	Gas detection equipment is selected on compatibility with the established parameters and economic considerations.
3 Document details of gas detection equipment to be used.	3.1	Proposed gas detection equipment is checked under established procedures for compliance with all relevant requirements.
	3.2	A complete specification for gas detection equipment to be used is documented in accordance with established procedures.

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing gas detection systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.19.1 Hazardous areas and explosion-protection principles

- 2.19.2 Explosion-protected equipment
- 2.19.3 Flameproof (Ex ‘d’) explosion-protection technique
- 2.19.4 Increased safety (Ex ‘e’) explosion-protection technique
- 2.19.5 Non-sparking (Ex ‘n’) explosion-protection technique
- 2.19.6 Intrinsic safety (Ex ‘i’) explosion-protection technique
- 2.19.7 Pressurization (Ex ‘p’) explosion-protection technique
- 2.19.8 Explosion-protection techniques for dusts
- 2.19.9 Common characteristics of explosion-protection techniques
- 2.19.10 Hazardous areas installation and maintenance requirements
- 2.19.15 Hazardous areas installation planning
- 2.19.16 Common classified hazardous areas
- 2.19.20 Explosion-protected electrical systems design
- 2.19.26 Evaluation and selection of gas detection equipment (portable and fixed)

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the design of electrical systems for any classified hazardous area.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of the unit and performed in accordance with the Assessment

Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AEShareNet Free for Education instant licence (AEShareNet-FfE Licence). The onus rests with you to ensure compliance with the AEShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AEShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AEShareNet-FfE Licence conditions should be directed to the AEShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AEShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## ICTTC056C

## Install telecomm network equipment

### Scope/Descriptor

This unit may apply to switching, transmission and radio (both fixed and mobile) network and the various transmission paths, ie cable, optic fibre, radio, microwave and satellite.

The unit applies to installation of both new, additional and replacement equipment.

Termination of cables are covered broadly in this standard and thus it should be read in conjunction with Telecommunications Cabling Competency Standards:

Unit ICTTC008C – Terminate metallic conductor cable

Unit ICTTC010C – Place, secure and terminate optical fibre cable

Unit ICTTC011C – Place, secure and terminate coaxial cable.

**IMPORTANT NOTES:** Notes for the use of this imported Competency Standard Unit within this national Training Package:

1. This latest Competency Standard Unit has been selected by the Industry for inclusion in the Electrotechnology Training Package (UEE06).
2. This Unit is drawn from the Information Communication Training Package (ICT02).
3. The Industry would prefer that the most current version of this unit be used. That is, the most current version used in the Information Communication Training Package (ICT02).
4. Where the current unit in the origin national Training Package is superseded or deleted the Industry would prefer the latest NTIS archived version of this unit be used in its place.

For the latest version of this unit from its origin national Training Package, RTOs are directed to locate the unit on the NTIS via the following link: <http://www.ntis.gov.au>

### Important

Training Packages are living documents. Changes are made periodically to reflect the latest industry practices.

As a user of the Training Package, and before commencing any form of training or assessment, you must ensure delivery is from the current version.

Ensure you are complying with this requirement by:

- checking the version identifier code of the version you currently have (see imprint page, just below the copyright statement)
- accessing the ISC/Training Package Developer ([www.ee-oz.com.au](http://www.ee-oz.com.au)) or Australian Training Products (ATP) (<http://www.atpl.net.au>) website and comparing the version identifier. This information is displayed in the first few pages of the Training Package.

**ICTTC083C****Locate and rectify complex CPE fault  
(PABX repair)****Scope/Descriptor**

This unit applies to all contexts for indoor and outdoor installation within a customer premises and applies to both customer premises cabling and customer premises equipment.

This unit applies to all communications applications whether digital or analogue including telephony, data, video including digital broadcasting, computer networks including LANs and WANs, and multi media.

This unit may be applied to domestic, commercial or industrial installations.

**IMPORTANT NOTES:** Notes for the use of this imported Competency Standard Unit within this national Training Package:

1. This latest Competency Standard Unit has been selected by the Industry for inclusion in the Electrotechnology Training Package (UEE06).
2. This Unit is drawn from the Information Communication Training Package (ICT02).
3. The Industry would prefer that the most current version of this unit be used. That is, the most current version used in the Information Communication Training Package (ICT02).
4. Where the current unit in the origin national Training Package is superseded or deleted the Industry would prefer the latest NTIS archived version of this unit be used in its place.

For the latest version of this unit from its origin national Training Package, RTOs are directed to locate the unit on the NTIS via the following link: <http://www.ntis.gov.au>

**Important**

Training Packages are living documents. Changes are made periodically to reflect the latest industry practices.

As a user of the Training Package, and before commencing any form of training or assessment, you must ensure delivery is from the current version.

Ensure you are complying with this requirement by:

- checking the version identifier code of the version you currently have (see imprint page, just below the copyright statement)
- accessing the ISC/Training Package Developer ([www.ee-oz.com.au](http://www.ee-oz.com.au)) or Australian Training Products (ATP) (<http://www.atpl.net.au>) website and comparing the version identifier. This information is displayed in the first few pages of the Training Package.

## ICTTC085C

## Monitor, analyse and action alarms

### Scope/Descriptor

This unit may apply to switching, transmission and radio (both fixed and mobile) network and the various transmission paths, ie cable, optic fibre, radio, microwave and satellite.

**IMPORTANT NOTES:** Notes for the use of this imported Competency Standard Unit within this national Training Package:

1. This latest Competency Standard Unit has been selected by the Industry for inclusion in the Electrotechnology Training Package (UEE06).
2. This Unit is drawn from the Information Communication Training Package (ICT02).
3. The Industry would prefer that the most current version of this unit be used. That is, the most current version used in the Information Communication Training Package (ICT02).

## UETTDRIS04A

### Perform high voltage field switching operation to a given schedule

#### Scope/Descriptor

This Unit covers the carrying out of high voltage switching operations involving the operation of circuit breaking and isolation devices from a given switching schedule and according to enterprise procedures. It also encompasses the process of communicating with the Switching Control Officer or Electrical Control Officer, isolating the electrical equipment and the line or work site, as well as proving that the area is de-energised and earthed, issuing/accepting electrical permits and the returning of the affected circuits to service.

**IMPORTANT NOTES:** Notes for the use of this imported Competency Standard Unit within this national Training Package:

1. This latest Competency Standard Unit has been selected by the Industry for inclusion in the Electrotechnology Training Package (UEE06).
2. This Unit is drawn from the ESI – Transmission, Distribution and Rail Training Package (UET05).
3. The Industry would prefer that the most current version of this unit be used. That is, the most current version used in the ESI – Transmission, Distribution and Rail Training Package (UET05).
4. Where the current unit in the origin national Training Package is superseded or deleted the Industry would prefer the latest NTIS archived version of this unit be used in its place.

## **BSBFLM509B Facilitate continuous improvement**

### **Scope/Descriptor**

This unit replaces BSBFLM509A Promote continuous improvement.

Frontline managers have an active role in managing the continuous improvement process in achieving the organisation's objectives. Their position, closely associated with the creation and delivery of products and services, means that they play an important part in influencing the on-going development of the organisation. At this level, work will normally be carried out within complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. This unit builds on BSBFLM409A Implement continuous improvement. Consider co-assessment with BSBFLM512B Ensure team effectiveness, BSBFLM505B Manage operational plan, BSBFLM507B Manage quality customer service, BSBMGT505A Ensure a safe workplace, BSBFLM510B Facilitate and capitalise on change and innovation, and BSBFLM511B Develop a workplace learning environment.

**IMPORTANT NOTES:** Notes for the use of this imported Competency Standard Unit within this national Training Package:

1. This latest Competency Standard Unit has been selected by the Industry for inclusion in the Electrotechnology Training Package (UEE06).
2. This Unit is drawn from the Business Services national Training Package (BSB01).
3. The Industry would prefer that the most current version of this unit be used. That is, the most current version used in the Business Services national Training Package (BSB01).
4. Where the current unit in the origin national Training Package is superseded or deleted the Industry would prefer the latest NTIS archived version of this unit be used in its place.

## BSBFLM510B Facilitate and capitalise on change and innovation

### Scope/Descriptor

This unit replaces BSBFLM510A Facilitate and capitalise on change and innovation. Frontline management has an active role in fostering change and acting as a catalyst in the implementation of change and innovation. They have a creative role in ensuring that individuals, the team and the organisation gain from change; and that the customer benefits through improved products and services. At this level, work will normally be carried out within complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. This unit builds on BSBCMN412A Promote innovation and change. Consider co-assessment with BSBFLM512A Ensure team effectiveness, BSBFLM505B Manage operational plan, and BSBFLM509B Promote continuous improvement.

**IMPORTANT NOTES:** Notes for the use of this imported Competency Standard Unit within this national Training Package:

## **BSBFLM512A      Ensure team effectiveness**

### **Scope/Descriptor**

This unit replaces BSBFLM502A Provide leadership in the workplace and BSBFLM504A Facilitate work teams, which have been combined to create this unit. Frontline management has an important facilitative role in the development and empowerment of work teams. This will be evident in the way Frontline managers work with teams and individuals, work across teams and the initiative they take in strengthening the links between teams and the organisations management. At this level, work will normally be carried out within complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. This unit builds on BSBFLM412A Promote team effectiveness.

**IMPORTANT NOTES:** Notes for the use of this imported Competency Standard Unit within this national Training Package:

1. This latest Competency Standard Unit has been selected by the Industry for inclusion in the Electrotechnology Training Package (UEE06).
2. This Unit is drawn from the Business Services national Training Package (BSB01).
3. The Industry would prefer that the most current version of this unit be used. That is, the most current version used in the Business Services national Training Package (BSB01).
4. Where the current unit in the origin national Training Package is superseded or deleted the Industry would prefer the latest NTIS archived version of this unit be used in its place.

# UEENEEI001A Install and set up transducers and sensing devices

## Unit Descriptor

1)

This unit covers the installation and setting up of transducers and sensors. It encompasses working safely and to installation standards, matching equipment with that specified for a given location, placing and securing equipment accurately, making required pneumatic, hydraulic and electrical circuit connections, adjusting and setting up devices to specifications and manufacturer instructions and completing the necessary installation documentation.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and service manuals

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	2	Writing	2	Numeracy	2
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to install and set up transducers and sensing devices

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Installation of transducer and sensing devices are prepared in consultation with others affected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.

- 1.7 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.9 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements.
- 2 Install and set up transducers and sensing devices
  - 2.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
  - 2.4 Transducers and sensing devices are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.
  - 2.5 Wiring and tubing is terminated at transducers and sensing devices in accordance with manufacture’s specifications and functional and regulatory requirements.
  - 2.6 Transducers and sensing devices are adjusted and set up drawing on knowledge of measurement and detection parameters applicable to the particular types and in accordance with regulatory requirements and manufacturer instructions
  - 2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.9 Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures.

- |   |  |   |  |
|---|--|---|--|
|   | 2.10   | Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. |  |
| 3 | Completion and report installation and setting up activities | 3.1   | OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2   | Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3   | Final checks are made to that the installed devices conform to requirements.   |
|   |  | 3.4   | ‘As-installed’ transducers and sensing devices are documented and appropriate person(s) notified in accordance with established procedures |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and setting up transducers and sensing devices. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- |  |         |  |
|--|---------|--|
|  | 2.1.4   | Basic cable and conductor terminations   |
|  | 2.3.4   | Pneumatic/hydraulic control tubing/piping  |
|  | 2.5.14  | Technical standards, regulations and codes applicable to instrumentation and control |
|  | 2.12.1  | Instrumentation principles   |
|  | 2.12.23 | Transducers and sensing devices  |
|  | 2.18.1  | Occupational Health and Safety principles  |
|  | 2.18.7  | Instrumentation safe working practices   |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least two different types of transducers and two different types of sensing devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and set up transducers and sensing devices as described in 7) and including:
    - A Reading and interpreting drawings related to and device locations
    - B Placing and securing devices accurately
    - C Connecting apparatus and associated equipment to comply with requirements
    - D Setting up and adjusting transducers and sensing devices to requirements
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note: Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and setting up transducers and sensing devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE007A Use drawings, diagrams, schedules and service manuals
- UEENEEI007A Install process instrumentation and control cabling and tubing

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.9

## UEENEEI002A Solve problems in pressure measurement systems

### Unit Descriptor

1)

This unit covers setting up pressure measuring systems and providing solutions to pressure measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating pressure measuring systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in pressure measurement systems.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI001A Install and set up transducers and sensing devices

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. The unit may also be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the work place. However they are subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on pressure measurement systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the pressure measurement problem is obtained from documentation or from an appropriate person to establish the scope of work to be undertaken.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved or affected by the work.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve pressure measurement problems

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure any electrical components live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Pressure measurement apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Established methods are used to solve measurement problems from tests and calculated values as they apply to pressure measurement systems

	2.5	Unexpected situations are dealt with safely and with the approval of an authorised person
	2.6	Problems are solved using sustainable energy principles and without damage to apparatus, the surrounding environment or services
3	Complete work and document work activities	
	3.1	OHS work completion risk control measures and procedures are followed
	3.2	Work site is cleaned and made safe in accordance with established procedures
	3.3	Written justification is made for solutions to pressure measurement problems
	3.4	Work completion is documented and appropriate person(s) notified in accordance with established procedures

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in pressure measurement systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.12	Instrumentation testing and measuring field devices
2.12.2	Pressure
2.18.1	Occupational Health and Safety principles
2.18.7	Instrumentation safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to pressure measurement apparatus and systems as they apply to chemical, industrial or medical processes associated with installation, fault finding, maintenance or development work functions, and at least three of the following types pressure measurement problems on at least two occasions:

- Determining the operating parameters of a pressure measuring system
- Setting up and calibrating a pressure measuring system
- Alternating an existing pressure measuring system to comply with specified operating parameters
- Developing a pressure measuring system to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points

are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in pressure measurement systems as described in 7) and including:
    - A Determining the operating parameters of a pressure measuring system
    - B Setting up and calibrating a pressure measuring system
    - C Alternating an existing pressure measuring system to comply with specified operating parameters
    - D Developing a pressure measuring system to comply with a specified function and operating parameters

- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in pressure measurement systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |             |  |
|-------------|--|
| UEENEEE007A | Use drawings, diagrams, schedules and service manuals          |
| UEENEEI007A | Install process instrumentation and control cabling and tubing |

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2,

Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI003A Solve problems in density/level measurement systems

### Unit Descriptor

1)

This unit covers setting up density/level measuring systems and providing solutions to density/level measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating density/level measuring systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in density/level measurement systems.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on density/level measurement systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the density/level measurement problem is obtained from documentation or from an appropriate person to establish the scope of work to be undertaken.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved or affected by the work.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve density/level measurement problems

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure any electrical components live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Density/level measurement apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Established methods are used to solve measurement problems from tests and calculated values as they apply to density/level measurement systems.

	2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6	Problems are solved using sustainable energy principles and without damage to apparatus, the surrounding environment or services.
3	Complete work and document work activities	
	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Written justification is made for solutions to density/level measurement problems.
	3.4	Work completion is documented and appropriate person(s) notified in accordance with established procedures.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in density/level measurement systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.12	Instrumentation testing and measuring field devices
2.12.3	Density/level
2.18.1	Occupational Health and Safety principles
2.18.7	Instrumentation safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the density/level measurement apparatus and systems as they apply to chemical, industrial or medical processes associated with installation, fault finding, maintenance or development work functions, and at least three of the following types density/level measurement problems on at least two occasions:

- Determining the operating parameters of a density/level measuring system
- Setting up and calibrating density/level measuring system
- Alternating an existing density/level measuring system to comply with specified operating parameters
- Developing a density/level measuring system to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points

are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in density/level measurement systems as described in 7) and including:
    - A Determining the operating parameters of a density/level measuring system
    - B Setting up and calibrating a density/level measuring system
    - C Alternating an existing density/level measuring system to comply with specified operating parameters
    - D Developing a density/level measuring system to comply with a specified function and operating parameters

- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in density/level measurement systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

---

UEENEEI002A	Solve problems in pressure measurement systems
UEENEEI004A	Solve problems in flow measurement systems
UEENEEI005A	Solve problems in temperature measurement systems

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling 8.7)**

**Employment**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.1 to1 .6; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI004A Solve problems in flow measurement systems

### Unit Descriptor

1)

This unit covers setting up flow measuring systems and providing solutions to flow measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating flow measuring systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in flow measurement systems.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI002A Solve problems in pressure measurement systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. The unit may also be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the work place. However they are subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on flow measurement systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the flow measurement problem is obtained from documentation or from an appropriate person to establish the scope of work to be undertaken.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved or affected by the work.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve flow measurement problems

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure any electrical components live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Flow measurement apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Established methods are used to solve measurement problems from tests and calculated values as they apply to flow measurement systems.

	2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6	Problems are solved using sustainable energy principles and without damage to apparatus, the surrounding environment or services.
3	Complete work and document work activities	<p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures.</p> <p>3.3 Written justification is made for solutions to flow measurement problems.</p> <p>3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures.</p>

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in flow measurement systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.12	Instrumentation testing and measuring field devices
2.12.4	Fluid flow principles
2.18.1	Occupational Health and Safety principles
2.18.7	Instrumentation safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the flow measurement apparatus and systems as they apply to chemical, industrial or medical processes associated with installation, fault finding, maintenance or development work functions, and, and at least three of the following types flow measurement problems on at least two occasions:

- Determining the operating parameters of a flow measuring system
- Setting up and calibrating a flow measuring system
- Alternating an existing flow measuring system to comply with specified operating parameters
- Developing a flow measuring system to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points

are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in flow measurement systems as listed as described in 7) and including:
    - A Determining the operating parameters of a flow measuring system
    - B Setting up and calibrating a flow measuring system
    - C Alternating an existing flow measuring system to comply with specified operating parameters
    - D Developing a flow measuring system to comply with a specified function and operating parameters
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in flow measurement systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |             |   |
|-------------|---|
| UEENEEI002A | Solve problems in pressure measurement systems      |
| UEENEEI003A | Solve problems in density/level measurement systems |
| UEENEEI005A | Solve problems in temperature measurement systems   |

The critical aspects of occupational health and safety covered in UEENEEI001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills

enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI005A Solve problems in temperature measurement systems

### Unit Descriptor

1)

This unit covers setting up temperature measuring systems and providing solutions to temperature measurement problems as they apply to various process and control work functions. It encompasses working safely, setting up and calibrating temperature measuring systems, problem solving techniques, the use of a range of measuring devices, providing solutions derived from measurements and calculations to predictable problems in temperature measurement systems.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI001A Install and set up transducers and sensing devices

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. The unit may also be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the work place. However they are subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on temperature measurement systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the temperature measurement problem is obtained from documentation or from an appropriate person to establish the scope of work to be undertaken.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved or affected by the work.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Solve temperature measurement problems

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure any electrical components live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Temperature measurement apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Established methods are used to solve measurement problems from tests and calculated values as they apply to flow measurement systems.

	2.5	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.6	Problems are solved using sustainable energy principles and without damage to apparatus, the surrounding environment or services.
3	Complete work and document work activities	
	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Written justification is made for solutions to flow measurement problems.
	3.4	Work completion is documented and appropriate person(s) notified in accordance with established procedures.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in temperature measurement systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.11.12	Instrumentation testing and measuring field devices
2.12.5	Temperature principles
2.18.1	Occupational Health and Safety principles
2.18.7	Instrumentation safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to temperature measurement apparatus and systems as they apply to chemical, industrial or medical processes associated with installation, fault finding, maintenance or development work functions, and, and at least three of the following types temperature measurement problems on at least two occasions:

- Determining the operating parameters of a temperature measuring system
- Setting up and calibrating a temperature measuring system
- Alternating an existing temperature measuring system to comply with specified operating parameters
- Developing a temperature measuring system to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points

are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in temperature measurement systems as listed as described in 7) and including:
    - A Determining the operating parameters of a temperature measuring system
    - B Setting up and calibrating a temperature measuring system
    - C Alternating an existing temperature measuring system to comply with specified operating parameters
    - D Developing a temperature measuring system to comply with a specified function and operating parameters

- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in temperature measurement systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI002A Solve problems in pressure measurement systems

UEENEEI003A Solve problems in density/level measurement systems

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI006A **Solve problems in process controllers, transmitters and converters**

### Unit Descriptor

1)

This unit covers providing solutions to predictable problems in process controllers, transmitters and converters. It encompasses working safely, applying logical problem solving procedures, evaluating performance, the use of measuring devices, providing solutions to predictable control problems, and documenting solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI003A Solve problems in density/level measurement systems

UEENEEI004A Solve problems in flow measurement systems

UEENEEI005A Solve problems in temperature measurement systems

And any one of the following:

UEENEEG002A Solve problems in single and three phase low voltage circuits

OR

UEENEEH014A Solve problems in frequency dependent circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved

contracts of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Instruments

**ELEMENT PERFORMANCE CRITERIA**

<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.</p>
<p>1 Prepare to work on process controllers, transmitters and converters</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 OHS risk control work preparation measures and procedures are followed</p> <p>1.3 The nature of the control problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are established in accordance with established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety</p>
<p>2 Solve process controller transmitters and converters problems</p>	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p>

- 2.3 Process controller/transmitters/converters and control loops are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Known solutions that include the use of measured and calculated values are used for solving predictable process controller problems.
- 2.5 Written justification is made for solutions used to solve process controller problems.
- 2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.7 Problems are solved without damage to apparatus, the surrounding environment or services and using sustainable energy principles.
- 3 Complete work and provide status report(s)
  - 3.1 OHS risk control work completion measures and procedures are followed.
  - 3.2 Status report(s) is/are completed and work supervisor notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in process controllers, transmitters and converters. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.3.3 Process control principles
- 2.5.10 Technical manuals and catalogues
- 2.5.14 Technical standards, regulations and codes applicable to instrumentation and control
- 2.11.12 Instrumentation testing and measuring field devices
- 2.12.6 Process control systems
- 2.12.10 Transmitters and converters
- 2.18.1 Occupational Health and Safety principles
- 2.18.7 Instrumentation safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to a hydraulic or pneumatic controller and a microprocessor-based controller and solving at least two of the following problems:

- Determining the operating parameters of a controller, in an existing control loop
- Configuring/tuning a controller in an existing control loop to comply with specified operating parameters
- Configuring/tuning a controller to comply with a specified function

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in process controllers, transmitters and converters as listed as described in 7) and including:
    - A Determine the operating parameters of a controller in an existing control loop.
    - B Configure/tune a controller in an existing control loop to comply with specified operating parameters.

- C Configure/tune a controller to comply with a specified function
- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in process controllers, transmitters and converters.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEI002A Solve problems in pressure measurement systems
- UEENEEI003A Solve problems in density/level measurement systems
- UEENEEI004A Solve problems in flow measurement systems
- UEENEEI005A Solve problems in temperature measurement systems

The critical aspects of occupational health and safety covered in UEENEEI001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.5; 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.3; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.5; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 1.6

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 2.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEI007A **Install process instrumentation and control cabling and tubing**

### **Unit Descriptor**

1)

This unit covers the installation and termination of instrument and control cabling and tubing for chemical, industrial or food processing systems or equipment used in medical procedures. It encompasses working safely and to standards, routing cables and tubing to specified locations, terminating cables and tubing and connecting wiring at accessories and at instruments and control apparatus and completing the necessary installation documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI001A    Install and set up transducers and sensing devices

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to install cabling and tubing

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Health and safety risks are identified, and established risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Installation of cabling and tubing is prepared in consultation with other effected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 Cable and tube routes are planned within the constraints of the building and plant structure, significant and regulations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |   |  |
|---|---|--|
|   | 1.10  | Preparatory work is checked to ensure no damage has occurred and that work complies with requirements.   |
| 2 | Install cabling, tubing and accessories       | <p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Plant/machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.3 Cabling, tubing and accessories are installed to comply with technical standards and job specifications and requirements with sufficient excess to affect terminations.</p> <p>2.4 Accessories are installed in the required locations and within acceptable tolerances.</p> <p>2.5 Cables and conductors are terminated at accessories in accordance with manufacture’s specifications and regulatory requirements</p> <p>2.6 Tubing is terminated at accessories in accordance with manufacture’s specifications and regulatory requirements</p> <p>2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.</p> <p>2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.9 Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.</p> <p>2.10 Cabling and tubing installation is carried out efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services and using sustainable energy principles.</p> |
| 3 | Completion and report installation activities | <p>3.1 OHS work completion risk control measures and procedures are followed.</p> <p>3.2 Work site is cleaned and made safe in accordance with established procedures.</p> <p>3.3 Final checks are made to that the installed wiring conforms to requirements.</p>   |

- 3.4 'As-installed' cables, tubes and accessories are documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing process instrumentation and control cabling and tubing. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.3 Cables in buildings, structures and premises
- 2.1.4 Basic cable and conductor terminations
- 2.1.8 Electronic cable and conductor terminations
- 2.3.4 Pneumatic/hydraulic control tubing/piping
- 2.5.14 Technical standards, regulations and codes applicable to instrumentation and control
- 2.18.1 Occupational Health and Safety principles
- 2.18.7 Instrumentation safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least three different wiring systems and two types of tubing.

Note:

1. Examples of wiring systems include armoured cable; fire performance cables eg. MIMS; thermoplastic insulated cable; thermoplastic sheathed cable; UTP, FTP, STP and coaxial communications cables.
2. Tubing types include low pressure metallic and non-metallic tubing and high pressure tubing

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of 8.1)

## Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this unit

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and

associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install process instrumentation and control cabling and tubing as listed as described in 7) and including:
    - A Reading and interpreting drawings related to cable and tube layouts, schedules and process control apparatus locations
    - B Routing, placing and securing cables and tubing to comply with requirements
    - C Placing and securing accessories accurately
    - D Maintaining fire integrity
    - E Terminating cables and tubing to comply with requirements
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing process instrumentation and control cabling and tubing.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI008A      Install process control apparatus and associated equipment

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.8

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEI008A **Install process control apparatus and associated equipment**

### Unit Descriptor

1)

This unit covers the installation of measurement, monitoring and control apparatus and associated equipment. It encompasses working safely and to installation standards, matching equipment with that specified for a given location, placing and securing equipment accurately, making required pneumatic, hydraulic and electrical circuit connections and completing the necessary installation documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI001A      Install and set up transducers and sensing devices

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to process control apparatus and associated equipment

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Installation of apparatus is prepared in consultation with other effected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 Location of process control apparatus and associated equipment is planned within the constraints of the building structure, significant and regulations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |  |  |   |
|---|--|--|---|
|   | 1.10   | Preparatory work is checked to ensure no damage has occurred and that work complies with requirements. |   |
| 2 | Install process control apparatus and associated equipment | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |  | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.  |
|   |  | 2.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures  |
|   |  | 2.4  | Process control apparatus and associated equipment is installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance. |
|   |  | 2.5  | Wiring and tubing is terminated at process control apparatus and associated equipment in accordance with manufacture’s specifications and functional and regulatory requirements.                                     |
|   |  | 2.6  | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   |  | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.8  | Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures.  |
|   |  | 2.9  | Apparatus installation is carried out efficiently without waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.                       |
| 3 | Completion and report installation activities              | 3.1  | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2  | Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3  | Final checks are made to that the installed apparatus conforms to requirements.   |

- 3.4 'As-installed' apparatus and associated equipment is documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing process control apparatus and associated equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |  |
|---------|--|
| 2.1.8   | Electronic cable and conductor terminations  |
| 2.3.4   | Pneumatic/hydraulic control tubing/piping  |
| 2.5.14  | Technical standards, regulations and codes applicable to instrumentation and control |
| 2.12.20 | Process equipment installation requirements and techniques                           |
| 2.18.1  | Occupational Health and Safety principles  |
| 2.18.7  | Instrumentation safe working practices   |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to at least four different process apparatus and associated equipment.

Note:

1. Examples of process systems include pressure measurement apparatus and systems, temperature measurement apparatus and systems, level/density measurement apparatus and systems, flow measurement apparatus and systems, and chemical measurement apparatus and systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of 8.1)

## Assessment

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this unit

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and

associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install process control apparatus and associated equipment as listed as described in 7) and including:
    - A Reading and interpreting drawings related to and apparatus locations and tubing electrical circuit connections.
    - B Placing and securing apparatus accurately
    - C Connecting apparatus and associated equipment to comply with requirements.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing process control apparatus and associated equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the

Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE007A Use drawings, diagrams, schedules and service manuals

UEENEEI007A Install process instrumentation and control cabling and tubing

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas	Refer to the following Performance Criteria for examples of application:	

and techniques used?	2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

	routine or contingent situations	2.7
--	----------------------------------	-----

## UEENEEI009A Set up process measuring and control instruments

### Unit Descriptor

1)

This unit covers the calibration of instruments for measuring chemical and physical characteristics as it applies to the control of processes. It encompasses working safely and to standards, following set-up and calibration procedures, testing and reporting.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI006A Solve problems in process controllers, transmitters and converters

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

#### Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to

currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to set-up process measuring instruments

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.5 Measurement parameters are identified by reviewing process requirements and instrument manufacturers service manual.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety
- 1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 1.9 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

2 Set-up process measuring instruments

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- |   |   |   |
|---|---|---|
|   | 2.2                                     | Testing/measuring devices are connected and set up in accordance with requirements for a particular control system.   |
|   | 2.3                                     | Measuring instruments are set up and adjusted in accordance with process requirements and instrument manufacturer service manual.   |
|   | 2.4                                     | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   | 2.5                                     | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   | 2.6                                     | Setting-up is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles. |
| 3 | Completion and report set-up activities | 3.1 OHS risk control work completion measures and procedures are followed.  |
|   |   | 3.2 Work site is cleaned and made safe in accordance with established procedures.   |
|   |   | 3.3 Adjustment settings are documented and appropriate person(s) notified in accordance with established procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up process measuring and control instruments. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.12.11.1 Industrial processes
- 2.12.14 Indicators and methods of recording process data
- 2.12.15 Gas analysis
- 2.12.16 Water analysis
- 2.12.17 Scientific analysis
- 2.12.18 Weight measurement principles
- 2.12.19 Instrument calibration methods
- 2.18.1 Occupational Health and Safety principles

## 2.18.7 Instrumentation safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up and adjusting two different types of process measuring instruments.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment

method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up process measuring and control instruments as listed as described in 7) and including:
    - A Identifying measurement parameters
    - B Setting-up and adjusting in accordance with process requirements and instrument manufacturer's service manual
    - C Documenting adjustment settings with established procedures

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency setting up process measuring and control instruments.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3; 2.4; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4; 2.5

## UEENEEI010A Set up and adjust process control loops

### Unit Descriptor

1)

This unit covers basic setting up and adjustment of controllers and control elements to specified output. It encompasses working safely and to standards, following set-up and adjustment procedures, applying knowledge of process requirements, testing and reporting.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEI006A Solve problems in process controllers, transmitters and converters

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety

measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to tune control loop

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.5 Control loop parameters are identified by reviewing process specification and equipment manuals.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety
- 1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 1.9 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

2 Tune control loop

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Testing/measuring devices are connected and set up in accordance with requirements for a particular control system.

- |   |  |   |
|---|--|---|
|   | 2.3  | Control set-point is established and control loop adjusted in accordance with process specification   |
|   | 2.4  | Process is observed and decisions made in consultation with process operation personnel to readjusted control loop settings to ensure process demand and output quality is met. |
|   | 2.5  | Process control loops are readjusted as required and checked.   |
|   | 2.6  | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   | 2.8  | Ongoing checks of the quality of process output are undertaken to ensure control loop is tuned as required.   |
|   | 2.9  | Tuning is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles.           |
| 3 | Completion and report control loop tuning activities | 3.1 OHS risk control work completion measures and procedures are followed.  |
|   |  | 3.2 Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 Control loop settings are documented and appropriate person(s) notified in accordance with established procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up process measuring and control instruments. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.12.11.1 Industrial processes

2.18.1 Occupational Health and Safety principles

2.18.7 Instrumentation safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall/may be demonstrated in relation to setting-up and adjusting process control loops for optimum stability and the following:

- Proportional response only
- Proportional plus integral
- Proportional plus integral plus derivative

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the

same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up process measuring and control instruments as listed as described in 7) and including:
    - A Identifying control loop parameters
    - B Adjusting control loop to satisfy process demand and quality
    - C Documenting control loop settings with established procedures
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up process measuring and control instruments.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEI002A Solve problems in pressure measurement systems
- UEENEEI003A Solve problems in density/level measurement systems
- UEENEEI004A Solve problems in flow measurement systems
- UEENEEI005A Solve problems in temperature measurement systems
- UEENEEI006A Solve problems in process controllers, transmitters and converters

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.7

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.1; 1.4; 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.7

## **UEENEEI011A Find and rectify faults in process control valve and associated equipment**

### **Unit Descriptor**

**1)**

This unit covers finding and repairing faults in control valves, actuators and positioners. It encompasses working safely, interpreting valve specifications, applying knowledge of control valve operating parameters, conducting tests and repairs and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEI007A Install process instrumentation and control cabling and tubing

UEENEEI008A Install process control apparatus and associated equipment

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to find and repair faults in control valves	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The nature of the fault is obtained from documentation, tests or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 The need to test or measure operating systems is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.6 Sources of materials that may be required for the work are established in accordance with established procedures.</p> <p>1.7 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety</p>
2 Find faults in control valves and associated equipment	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.3 Fault finding is approached methodically drawing on knowledge of processes, control valves, actuators and positioners using measured and calculated values.</p>

- |   |  |  |
|---|--|--|
|   | 2.4  | Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage  |
|   | 2.5  | Faulty components are rechecked and their fault status confirmed.  |
|   | 2.6  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.7  | Fault finding activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. |
| 3 | Rectify faults in control valves and associated equipment        |  |
|   | 3.1  | OHS risk control measures and procedures for carrying out the work are followed.   |
|   | 3.2  | Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures  |
|   | 3.3  | Materials required to rectify faults are sourced and obtained in accordance with established procedures.   |
|   | 3.4  | Rectification and repairs are affected efficiently without damage to other components, apparatus or circuits.  |
|   | 3.5  | Effectiveness of repairs is tested in accordance with established procedures.  |
|   | 3.6  | Apparatus is reassembled, finally tested and prepared for return to service.   |
|   | 3.7  | Repairs are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.                  |
| 4 | Completion and report fault finding and rectification activities |  |
|   | 4.1  | OHS work completion risk control measures and procedures are followed.   |
|   | 4.2  | Work area is cleaned and made safe in accordance with established procedures.  |
|   | 4.3  | Written justification is made for repairs to control valves  |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in process control valve and associated equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.12.7 Control valve principles
- 2.12.8 Control valve selection
- 2.12.9 Actuators and positioners
- 2.18.1 Occupational Health and Safety principles
- 2.18.7 Instrumentation safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation at least two types of control valves including the associated equipment.

Note:

1. Examples of control valves types (by application) are additive valves, level control valve, temperature control valve, flow control valve and pressure control valve.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Find and rectify faults in process control valve and associated equipment as listed as described in 7) and including:
  - A Using methodical fault finding techniques
  - B Finding faults efficiently
  - C Replacing/rectifying and repairing components without damage
  - D Providing written justification for the repairs
  - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and rectifying faults in process control valve and associated equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.1; 2.7

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEI012A **Verify compliance and functionality of process control installations**

### **Unit Descriptor**

1)

This unit covers pre-commissioning testing and visual inspection for verifying that installed process control apparatus in non-hazardous areas is safe and complies with requirements. It encompasses procedures for safely conducting safety tests, conducting visual inspections, identifying non-compliance defects and reporting requirements.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed only after all other core units and nominated elective units have been achieved.

UEENEEI005A Enter and verify operating instructions in microprocessor equipped devices

UEENEEI010A Set-up and adjust process control loops

UEENEEI013A Select equipment for process control systems

Elective units to a Unit Strand Total of at least 4 from Schedule 3.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment based programs under an approved contract of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions

subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to inspect and test a process control installations

- 1.1 OHS measures for the site are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards which have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety
- 1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements

2 Visually inspect the installation.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Instrument cabling and tubing is checked for suitability for the environments in which they are installed and suitably protected from damage.
  - 2.5 The type and configuration/sizing of instrument cabling and tubing is confirmed as meeting that specified for the installation.
  - 2.6 Evidence that control apparatus complies with safety and installation requirements is cited.
  - 2.7 Marking of control apparatus is checked for accuracy and clarity and compliance with requirements.
- 3 Conduct functional and safety testing.
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
  - 3.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 3.4 Where process control apparatus operates at low voltage arrangements are made for an authorised person to conduct and report on all required electrical safety tests.
  - 3.5 Insulation and continuity tests are conducted on process control cabling operating at extra-low voltage.
  - 3.6 Process control tubing/piping is pressure tested in accordance with established practice.
  - 3.7 Functional and test are checks are conducted on all process control apparatus in accordance with established practice.

- |   |                                     |     |   |
|---|-------------------------------------|-----|---|
| 4 | Report inspection and test findings | 4.1 | OHS risk control work completion measures and procedures are followed.                        |
|   |                                     | 4.2 | Work site is cleaned and made safe in accordance with established procedures.                 |
|   |                                     | 4.3 | Non-compliance defects are identified and reported in accordance with established procedures. |
|   |                                     | 4.4 | Recommendations for rectifying defects are made in accordance with established procedures.    |
|   |                                     | 4.5 | Verification documentation is completed in accordance with established procedures.            |

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of process control installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.12.21 | Control system installation, testing and verification methods |
| 2.18.1  | Occupational Health and Safety principles                     |
| 2.18.7  | Instrumentation safe working practices                        |

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to verifying compliance and functionality of at least one electrical/electronic and one pneumatic process control installation comprising a measuring transmitter, controller, final control element, indicator and cabling/tubing.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

- in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Verify compliance and functionality of process control installations as listed as described in 7) and including:
      - A Selecting correct tools and testing equipment.
      - B Identifying visual non-compliance defects
      - C Using effective methods for conducting tests
      - D Identifying non-compliance from test results.
      - E Identifying causes of non-compliance and recommending how these should be rectified.
      - F Completing verification documentation
      - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in verifying compliance and functionality of process control installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.10; 3.4; 3.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5; 2.6; 3.4; 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 4.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.4; 3.5	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4; 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  NA
---	--	--

## **UEENEEI013A      Select equipment for process control systems**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers selecting equipment for process control systems to meet performance standards. This encompasses the adoption of process control schemes that meet safety and process requirements, selection of control equipment and interconnecting cabling and tubing/piping based on calculated and deemed-to-comply arrangements.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.</p> <p>UEENEEI010A      Set-up and adjust process control loops</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0"> <tr> <td>Reading</td> <td>4</td> <td>Writing</td> <td>4</td> <td>Numeracy</td> <td>4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4

<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry level employment based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Instruments</p>						

**ELEMENT**

**PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to select equipment	<p>1.1 The extent and nature of the control system is determined from job specifications.</p> <p>1.2 Safety and other regulatory requirements to which the control system shall comply are identified, obtained and understood</p> <p>1.3 Control apparatus and interconnecting components need for the control system and how they are arranged is determined from job specifications and knowledge of process control systems.</p>
2 Select control apparatus	<p>2.1 Manufacturer's specifications and limitations of appropriate control apparatus is sought and comparisons made with process parameters and control requirements.</p> <p>2.2 Control apparatus is selected on compatibility with process parameters and control requirements and environmental conditions.</p> <p>2.3 Evidence of specified apparatus IP rating is sought from manufacturer where necessary.</p> <p>2.4 Control valves are selected based on percentage travel, flow and loop-and-process characteristics, optimum size, range ability, ability to cope with process pressures and environmental considerations.</p>
3 Select interconnecting cabling and tubing/piping	<p>3.1 Types of control cabling and their configuration are selected to meet environmental conditions and interconnection requirements.</p> <p>3.2 Tubing/piping and accessories are sized to meet capacity and pressure requirements</p> <p>3.3 Route lengths of cable and tubing/piping are determined from site drawings.</p>
4 Document process control system	<p>4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.</p> <p>4.2 Process control system arrange and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting equipment for process control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.10 Technical manuals and catalogues
- 2.5.14 Technical standards, regulations and codes applicable to instrumentation and control
- 2.5.15 Measurement standards applicable to process instrumentation
- 2.12.12 Distributive control principles
- 2.12.13 Instrumentation and control communications
- 2.12.14 Indicators and methods of recording process data
- 2.12.20.1 Process equipment installation requirements and techniques
- 2.12.20.2 Process control arrangements and equipment selection
- 2.18.1 Occupational Health and Safety principles
- 2.18.7 Instrumentation safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to selecting equipment for two process control systems each with more than one input and more than one final control element.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Select equipment for process control systems as listed as described in 7) and including:
    - A Arranging control system to comply with safety and other regulatory requirements and process functions
    - B Selecting compliant and compatible apparatus
    - C Selecting appropriate control cabling and tubing/piping
    - D Documenting control system arrangement, specification for items selected and reasons for the selections made
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and 8.3)**

**specific resources for assessment**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in selecting equipment for process control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE001A            Use basic computer applications relevant to a workplace

The critical aspects of occupational health and safety covered in UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  NA	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.2; 3.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3

## UEENEEI014A Find and rectify faults in process control systems

### Unit Descriptor

1)

This unit covers finding and rectifying faults in process control apparatus and systems. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of process controls to logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI009A Set up process measuring instruments

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to find and rectify faults.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are established in accordance with established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety</p>
2 Find faults.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Fault finding is approached methodically drawing on knowledge of industrial processes and control apparatus and systems using measured and calculated values of system parameters.</p>

- 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
- 2.6 Faulty components are rechecked and their fault status confirmed.
- 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.8 Fault finding activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.
- 3 Rectify fault.
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
  - 3.3 Materials required to rectify faults are sourced and obtained in accordance with established procedures.
  - 3.4 Repairs are affected efficiently without damage to other components or apparatus and using sustainable energy principles.
  - 3.5 Effectiveness of the repair is tested in accordance with established procedures.
  - 3.6 Apparatus is reassembled, finally tested and prepared for return to customer.
- 4 Completion and report fault finding and rectification activities
  - 4.1 OHS work completion risk control measures and procedures are followed.
  - 4.2 Work area is cleaned and made safe in accordance with established procedures.
  - 4.3 Written justification is made for repairs to apparatus.
  - 4.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in process control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.3	Fault finding techniques
2.3.3	Process control principles
2.12.6	Process control systems
2.18.1	Occupational Health and Safety principles
2.18.7	Instrumentation safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and rectifying faults in two different systems containing more than one control loop.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access

to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and rectify faults in process control systems as listed as described in 7) and including:

- A Using methodical fault finding techniques
- B Finding faults efficiently
- C Rectifying faults without damage
- D Providing written justification for the rectifications undertaken
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and rectifying faults in process control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to1 .6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.5; 4.3

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEI015A Find and rectify faults in medical equipment control systems

### Unit Descriptor

1)

This unit covers finding and rectifying faults in medical equipment systems. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of medical process controls to logical fault finding procedures, effective repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the core competencies in electronics or instrumentation at AQF level 3 have been acquired.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

#### Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and

site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and rectify faults

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety

2 Find faults

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Fault finding is approached methodically drawing on knowledge of medical equipment control systems using measured and calculated values of system parameters.

- |   |  |  |
|---|--|--|
|   | 2.5  | Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage  |
|   | 2.6  | Faulty components are rechecked and their fault status confirmed.  |
|   | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.8  | Fault finding activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. |
| 3 | Rectify fault.   |  |
|   | 3.1  | OHS risk control measures and procedures for carrying out the work are followed.   |
|   | 3.2  | Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures  |
|   | 3.3  | Materials required to rectify faults are sourced and obtained in accordance with established procedures.   |
|   | 3.4  | Repairs are affected efficiently without damage to other components or apparatus and using sustainable energy principles.  |
|   | 3.5  | Effectiveness of the repair is tested in accordance with established procedures.   |
|   | 3.6  | Apparatus is reassembled, finally tested and prepared for return to customer.  |
| 4 | Completion and report fault finding and rectification activities |  |
|   | 4.1  | OHS work completion risk control measures and procedures are followed.   |
|   | 4.2  | Work area is cleaned and made safe in accordance with established procedures.  |
|   | 4.3  | Written justification is made for repairs to apparatus.  |
|   | 4.4  | Work completion is documented and appropriate person(s) notified in accordance with established procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in medical equipment control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.12.22.1 Medical equipment principles
- 2.12.22.2 Medical equipment, anatomy and physiology and infection control
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.7 Instrumentation safe working practices
- 2.18.10 Medical equipment safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and rectifying faults in one item of equipment representative of each of the following categories:

- Cardiovascular systems
- Respiratory systems
- Neurological systems
- Renal systems
- Medical imaging
- Physiological equipment
- Miscellaneous medical equipment

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and rectify faults in medical equipment control systems as listed as described in 7) and including:
    - A Using methodical fault finding techniques
    - B Finding faults efficiently
    - C Rectifying faults without damage
    - D Providing written justification for the rectifications undertaken
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and  
specific  
resources for**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This

**assessment**

should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and rectifying faults in medical equipment control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.6; 3.5; 4.3
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

	the context of the work task	1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEI017A Calibrate and test measuring instruments

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers calibration, adjustment and testing of measuring instruments. It encompasses working safely and to standards, following calibration and adjustment procedures, applying knowledge of parameters to be measured, testing and reporting.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed only after the core competencies in electronics or instrumentation at AQF level 3 have been acquired.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">4</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">4</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4

<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p> <p>Note:</p> <ol style="list-style-type: none"> <li>1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.</li> <li>2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.</li> </ol>						

**Competency Field 4)**

Instruments

**ELEMENT****PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to calibrate and test measuring instruments	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.5 Instrument parameters are determined by reviewing process specification and equipment manuals.</p> <p>1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety</p>
2 Calibrate and test measuring instruments	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Calibration testing/measuring arrangement is connected and set up in accordance with manufacture's instructions and certification requirements for a particular instrument.</p> <p>2.3 Factors effecting instrument error are determined and taken into account in the calibration process.</p> <p>2.4 Instrument set-point is established and error adjustments are in accordance with manufacture's and compliance specification</p> <p>2.5 Instrument is tested and adjustment made as necessary to ensure instrument meets calibration requirements.</p>

- |   |  |  |
|---|--|--|
|   | 2.6  | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.  |
|   | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.8  | Ongoing checks of the quality of process output are undertaken to ensure control loop is tuned as required.  |
|   | 2.9  | Calibration is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles. |
| 3 | Completion and report calibration activities | 3.1 OHS risk control work completion measures and procedures are followed.   |
|   |  | 3.2 Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3 Calibration is documented in accordance with certification requirements.   |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and calibrating and testing measuring instruments. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |  |
|---------|--|
| 2.5.16  | Measurement standards applicable to scientific instrumentation |
| 2.9.14  | Fundamentals of calibration                                    |
| 2.12.24 | Calibration techniques   |
| 2.18.1  | Occupational Health and Safety principles                      |
| 2.18.7  | Instrumentation safe working practices                         |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to calibrating and test measuring one electrical/electronic and one non-electrical instrument. The calibrated instruments measure accurately within the prescribe tolerance.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Calibrate and test measuring instruments as listed as described in 7) and including:
    - A Identifying instrument parameters
    - B Setting up calibration arrangement in accordance with manufacture’s instructions and certification requirements for a particular instrument.
    - C Determining factors effecting error
    - D Calibrating instrument to measure within specified tolerance
    - E Documenting calibration with certification requirements
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment****8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in calibrating and testing measuring instruments.

**Method of assessment****8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 3.3	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.7
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	2.4; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.4; 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEI019A Set up field control devices

### Unit Descriptor

1)

This unit covers setting up field control devices such as transducers, sensors, and actuators. It encompasses working safely, following design brief, applying knowledge of device operating principles, interpreting device specifications, following manufacturer's set up specifications, testing device operation and documenting set up parameters.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE007A Use drawings, schedules and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to set up field control devices

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The field devices to be set up are determined from control system specifications and in consultations with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Set up field control devices

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Devices are set up drawing on knowledge of field device and operation, characteristics and applications.
- 2.3 Devices are positioned and adjusted in accordance with their operating principles, manufacturer instructions and control system requirements.
- 2.4 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.

- |   |   |   |
|---|---|---|
|   | 2.5   | Setting up devices is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Test and document set up of field control devices | 3.1 OHS risk control measures and procedures for carrying out the work are followed.  |
|   |   | 3.2 Field devices are tested and final adjustments made to correct any anomalies in their operation.  |
|   |   | 3.3 Field device set up is documented in accordance with established procedures.  |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up field control devices. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |         |  |
|--|---------|--|
|  | 2.1.4   | Basic cable and conductor terminations   |
|  | 2.3.4   | Pneumatic/hydraulic control tubing/piping  |
|  | 2.5.14  | Technical standards, regulations and codes applicable to instrumentation and control |
|  | 2.12.23 | Transducers and sensing devices  |
|  | 2.18.1  | Occupational Health and Safety principles  |
|  | 2.18.7  | Instrumentation safe working practices   |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up at least four different field control devices.

Note.

Examples are field control devices measurement/detection of flow, temperature, pressure, density, weight, level, smoke, motion.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up field control devices as listed as described in 7) and including:
    - A Determining the field control devices to be set up
    - B Positioning and adjusting devices accordance with their operating principles, manufacturer instructions and control system requirements
    - C Testing field devices and making final adjustments to correct any anomalies in their operation
    - D Documenting field control device set up in accordance established procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up field control devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.2	3

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.3 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4

## UEENEEI020A **Provide solutions to problems in basic industrial control systems**

### Unit Descriptor

1)

This unit covers solving problems in basic industrial control systems. The unit encompasses safe working practices, interpreting process and circuit diagrams, applying knowledge of industry controls to problem solving techniques, safety and functional testing and completing the necessary documentation.

Note.

Typical basic industrial control system problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies to this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to provide solutions to basic industrial control system problems

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of basic industrial control system problems are determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Provide solutions to basic industrial control system problems

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of basic industrial control system device and circuit operation, characteristics and applications are applied to developing solutions to control problems.
- 2.3 Parameters, specifications and performance requirements in relation to each basic industrial control system problems are obtained in accordance with established procedures.
- 2.4 Approaches to resolving basic industrial control system problems are evaluated to provide most effective solutions.

- |   |   |   |
|---|---|---|
|   | 2.5   | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|   | 2.6   | Problems are solved efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Test and document solutions to basic industrial control system problems |   |
|   | 3.1   | OHS risk control measures and procedures for carrying out the work are followed.  |
|   | 3.2   | Solutions to basic industrial control system problems are tested to determine their effectiveness and modified where necessary.                                       |
|   | 3.3   | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed. (See Note)                     |
|   | 3.4   | Justification for solutions used to solve basic industrial control system problems are documented in accordance with established procedures.                          |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to problems in basic industrial control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.12.6 Process control systems

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to providing solutions to at least four basic industrial control system problems.

Note.

Examples are field control devices measurement/detection of flow, temperature, pressure, density, weight, level, smoke, motion.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide solutions to problems in basic industrial control systems as described in 7) and including:
    - A Understanding the extent of the basic industrial control system problem
    - B Obtaining electronic device and circuit parameters, specifications and performance requirements appropriate to each problem.
    - C Testing and solutions to basic industrial control system problems
    - D Documenting justification of solutions implemented in accordance established procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Note:**

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing solutions to problems in basic industrial control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	3
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.2	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	1.3 to 1.5; 3.2 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI021A Find and repair faults in measuring and analysis systems

### Unit Descriptor

1)

This unit covers finding and repairing faults in measuring and analysis systems. It encompasses working safely, reading circuit diagrams and device specifications, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI012A      Verify compliance and functionality of process control installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States and Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Fault finding is approached methodically drawing on knowledge of measuring and analytical equipment and circuit using measured and calculated values of apparatus parameters.
  - 2.5 Equipment components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Faulty components are readjusted or replaced in accordance with established procedures.
  - 2.8 Effectiveness of the repaired component is tested in accordance with established procedures.
  - 2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
  - 2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Written justification is made for repairs to apparatus, including components and materials used.
  - 3.4 Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in measuring and analysis systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.13 Measurement circuits and applications

- 2.12.15 Gas analysis
- 2.12.16 Water analysis
- 2.12.17 Scientific analysis
- 2.12.18 Weight measurement principles
- 2.18.1 Occupational Health and Safety principles
- 2.18.7 Instrumentation safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to finding and repairing at least four faults in two different types of measuring and analytical equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in measuring and analysis systems as described in 7) and including:
    - A Using methodical fault finding techniques
    - B Finding faults efficiently

- C Replacing components without damage
- D Providing written justification for the repairs
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in measuring and analysis systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH011A	Find and repair faults in the power supplies of electronic apparatus
UEENEEH012A	Find and repair faults in the digital components in electronic apparatus

UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus

UEENEEH015A Find and repair faults in the microprocessor components of electronic apparatus

The critical aspects of occupational health and safety covered in UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8	2
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.10

## UEENEEI022A Assist in commissioning process control systems

### Unit Descriptor

1)

This unit covers commissioning of process control systems. It encompasses working safely and with others, complying with requirements, applying knowledge of process and control components, pre-commissioning tests, following start up procedures, checking and adjusting components and controls to ensure efficient and safe operation and completing commissioning documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI012A      Verify compliance and functionality of process control installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space and lifting and risk safety measures.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to assist in commissioning process control systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Commissioning plan is review with other team members to ensure commissioning procedures and the role of each member is understood and to ensure the work is coordinated effectively.
- 1.5 Measurement parameters are identified with the team by reviewing process requirements and equipment manufacturer instructions.
- 1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety
- 1.7 Preparatory work is checked to ensure no damage has occurred and that work complies with requirements
- 1.8 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 1.9 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures

- |   |   |     |   |
|---|---|-----|---|
| 2 | Assist in commissioning process control systems | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |   | 2.2 | Commissioning testing/measuring devices are connected and set up in accordance with requirements for a particular control system and team instructions.                                 |
|   |   | 2.3 | Process instruments and apparatus are set up and adjusted in accordance with process control requirements and equipment manufacturer instructions and team instructions.                |
|   |   | 2.4 | Adjustments are made to provide optimum transmission/reception performance within regulatory requirements.  |
|   |   | 2.5 | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and from job specifications   |
|   |   | 2.6 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|   |   | 2.7 | Commissioning assistance is carried out efficiently without waste of materials or damage to apparatus, the surrounding environment or services and using sustainable energy principles. |
| 3 | Completion and report commissioning activities  | 3.1 | OHS risk control work completion measures and procedures are followed.  |
|   |   | 3.2 | Work site is cleaned and made safe in accordance with established procedures.   |
|   |   | 3.3 | Adjustment settings are documented and appropriate person(s) notified in accordance with established procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assisting in commissioning process control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.12.11.2 Process control, commissioning

2.18.1 Occupational Health and Safety principles

## 2.18.7 Instrumentation safe working practices

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to process control systems incorporating closed loop control and digital and analogue elements and with at least five interacting control functions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment****8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points

are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assist in commissioning process control systems as described in 7) and including:
    - A Understanding the role of each commission team member
    - B Connecting and setting-up commissioning testing/measuring devices in accordance with requirements for a particular control system and team instructions
    - C Setting-up and adjusting process instruments and apparatus in accordance with process control requirements and equipment manufacturer instructions and team instructions.

- D Documenting adjustment settings in accordance with established procedures.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assisting in commissioning process control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed

in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 2.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.3; 2.4; 2.5
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEI023A Design electronic control systems

### Unit Descriptor

1)

This unit covers designing electronic control systems incorporating closed loop and digital and analogue elements. It encompasses working safely, following design brief, applying knowledge of digital and analogue devices, interpreting device specifications, constructing prototypes, using appropriate development software, applying programming techniques, testing developed system prototype operation and documenting design and development work.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Instruments

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to design electronic control systems	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of the proposed electronic control system is determined from the design brief or in consultations with appropriate person(s)</p> <p>1.4 Design development work is planned to meet scheduled timelines in consultation with others involved on the work site</p> <p>1.5 Materials and devices/components required for the work are determined on compatibility of their specifications with control system requirements and project budget constraints.</p>
2 Design electronic control systems	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 Knowledge of digital and analogue elements used in control systems and compliance standards are applied to the design</p> <p>2.3 Alternative arrangements for the design are considered based on the requirements outlined in the design brief.</p> <p>2.4 Safety, functional and budget considerations are incorporated in the design.</p> <p>2.5 Prototype devices and circuits are constructed, programmed and tested for compliance with the design brief and regulatory requirements.</p> <p>2.6 Prototype malfunctions are rectified and retested to ensure effective operation of design.</p> <p>2.7 Control system design is documented for submission to appropriate person(s) for approval</p>

	2.8	Solutions to unplanned situation are provided consistent with organisation policy.
3 Obtain approval for electronic control systems design	3.1	Control system design is presented and explained to client representative and/or other relevant person(s).
	3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation policy.
	3.3	Final design is documented and approval obtained from appropriate person(s).
	3.4	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing electronic control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.3.21 Complex control systems

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to an electronic control system incorporating closed loop control and digital and analogue elements and with at least five interacting control functions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

- in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Design electronic control systems as described in 7) and including:
      - A Developing outlines of alternative designs,
      - B Developing the design within the safety and functional requirements and budget limitations,
      - C Documenting and presenting design effectively,
      - D Successfully negotiating design alteration requests
      - E Obtaining approval for final design
      - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show

demonstrated competency in designing electronic control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.3; 3.1; 3.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	3

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2; 2.3; 2.5; 2.6; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.6	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 2.3; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.7; 3.1 to 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## UEENEEI025A Provide solutions to fluid circuit operations

### Unit Descriptor

1)

This unit covers the solution to problems associated with the operation of fluid controlled circuits. It encompasses working safely, problem solving procedures, including using measuring instruments, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed..

UEENEEE001A Apply OHS practices in the workplace

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE007A Use drawings, diagrams, schedules and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 3 or higher. It may also be suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of fluid operated automated machinery.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to provide solutions to fluid circuit problems

- 1.1 OHS procedures for a given work area are identified, obtained and understood
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2 Provide solutions to fluid circuit problems

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure active circuits is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Established methods are used for solving circuit problems from measure and calculated values, as they apply to fluid circuits.
- 2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.

	2.6	Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices with the minimum waste and rework
3	Complete work and document solutions to discovered problem	3.1 OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Justification for solutions used to solve circuit problems is documented.
	3.4	Work completion is documented and appropriate person(s) notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to fluid circuit operations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.21.13 Fluid power control

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to fluid power circuits as they apply to problems related to engineering diagnosis and development work functions in any 2 of the following types of circuit problems:

- determining the operating parameters of an existing circuit
- alternating an existing circuit to comply with specified operating parameters
- developing circuits to comply with a specified function and operating parameters

In relation to either types of the following pumps and their associated control equipment:

- hydraulic

- pneumatic

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide solutions to fluid circuit operations as described in 7) and including:
    - A Determining the operating parameters of existing circuit
    - B Using established problem solving methods
    - C Taking relevant measurements accurately
    - D Interpreting measured values appropriately
    - E Providing effective solutions to circuit problems from measurements and calculations
    - F Giving written justification of solutions provided
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and  
specific  
resources for**
**8.3)**

This unit must be assessed as it relates to normal work practice using

**assessment** procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing solutions to fluid circuit operations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	3

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI026A Provide solutions to pneumatic/hydraulic system operations

### Unit Descriptor

1)

This unit covers the set-up and maintenance of pneumatic and hydraulic systems. It encompasses working safely, problem solving procedures, including using measuring instruments, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI025A Provide solutions to fluid circuit operations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to provide solutions to pneumatic/hydraulic system operations	<p>1.1 OHS procedures for a given work area are identified, obtained and understood</p> <p>1.2 OHS risk control work preparation measures and procedures are followed.</p> <p>1.3 The nature of the system problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are established in accordance with established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety</p>
2 Provide solutions to pneumatic/hydraulic system operations	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure active systems is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Systems are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p> <p>2.4 Established methods are used for solving system problems from measure and calculated values, as they apply to pneumatic/hydraulic circuits.</p> <p>2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.</p> <p>2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices with the minimum waste and rework.</p>

- |   |  |     |   |
|---|--|-----|---|
| 3 | Complete work and document solutions to discovered problem | 3.1 | OHS work completion risk control measures and procedures are followed.                                      |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.                               |
|   |  | 3.3 | Justification for solutions used to solve system problems is documented.                                    |
|   |  | 3.4 | Work completion is documented and appropriate person(s) notified in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to pneumatic/hydraulic system operations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.18.1  | Occupational health and safety principles |
| 2.21.11 | Pneumatics                                |
| 2.21.12 | Hydraulics                                |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to pneumatic/hydraulic power systems as they apply to problems related to engineering diagnosis and development work functions in any of the following:

- determining the operating parameters of an existing system
- alternating an existing system to comply with specified operating parameters
- developing systems to comply with a specified function and operating

In relation to both types of the following systems:

- Pneumatics – any two of the following main components:
  - Cooler
  - Dryer
  - Filter
  - Receiver

Control devices – any two of the following components:

- Linear actuator
  - Rotary actuator
  - Directional control valve
  - Timer
  - Counter
- Hydraulics – any two of the following main components:
    - Two cylinder sequenced system
    - Single cylinder skip-check system

Control devices – any two of the following components:

- Rotary actuators
- Linear actuators
- Directional control valve
- Rotary control valve
- Pressure control valve

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide solutions to pneumatic/hydraulic system operations as described in 7) and including:
    - A Determining the operating parameters of existing systems

- B Using established problem solving methods
- C Taking relevant measurements accurately
- D Interpreting measured values appropriately
- E Providing effective solutions to system problems from measurements and calculations
- F Giving written justification of solutions provided
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing solutions to pneumatic/hydraulic system operations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed

in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	3

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI027A Analyse complex electronic circuits controlling fluids

### Unit Descriptor

1)

This unit covers the analysis of complex electronic control circuits that integrate with the operation of fluid control systems on machinery. It encompasses working safely, applying extensive knowledge of equipment and electronic and fluid control circuit operations, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed..

UEENEEI025A Provide solutions to fluid circuit operations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to analyse complex circuits controlling fluids.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the circuit analysis is determined from performance specifications and situation reports and in consultations with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

2 Analyse complex circuits controlling fluids

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of complex control concepts and electro-fluid control circuits are applied to developing analytical solutions to machine parameters.
- 2.3 Parameters, specifications and performance requirements in relation to each circuit are obtained in accordance with established procedures.
- 2.4 Approaches to analysing circuit parameters are carried out to provide the most effective solution.
- 2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
- 2.6 Quality of work is monitored against personal performance agreement and/or established organisational or professional standards

- |   |   |     |  |
|---|---|-----|--|
| 3 | Document and report on the results of the circuit analysis and actions taken. | 3.1 | Solutions to circuit analysis are tested to determine their effectiveness and modified where necessary.  |
|   |   | 3.2 | Analysis is documented including details of all findings, calculations and assumptions.  |
|   |   | 3.3 | Analysis is reported to appropriate personnel to establish suitable action to be taken based on findings.  |
|   |   | 3.4 | Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing complex electronic circuits controlling fluids. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.1 Occupational health and safety principles

2.21.7 Electronic control of fluid processes

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to analysing complex circuits controlling integrated electro-fluid systems on at least 2 types of machine:

Note.

Typical circuits are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Analyse complex electronic circuits controlling fluids as described in 7) and including:
    - A Understanding the operation of electronic and fluid controls
    - B Forming effective strategies for analysing circuit performance
    - C Obtaining circuit control parameters, specifications and performance requirements appropriate to each situation.
    - D Testing the results of the analysis
    - E Documenting instruction for implementing any actions resulting from the analysis that incorporates risk control measure to be followed.

- F Documenting justification of actions to be implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in analysing complex electronic circuits controlling fluids.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI026A      Set up pneumatic/hydraulic systems

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed

in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI028A Set up controls on complex fluid systems

### Unit Descriptor

1)

This unit covers the setting up, adjustment, maintenance and modification of electronically controlled complex systems that are integrated with hydraulic devices. It encompasses working safely, applying extensive knowledge of complex circuits designed to operate fluid systems and the integration to hydraulics, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note:

Typical problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI025A Design and configure human-machine interface networks

UEENEEI034A Configure and maintain industrial control system networks

UEENEEI052A Design embedded controller systems

UEENEEI019A Set up field control devices

UEENEEI027A Analyse complex electronic circuits controlling fluids

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to set up controls on complex fluid systems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the work to be undertaken is determined from performance specifications and situation reports and in consultations with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are determined to ensure solution development and implementation is carried out efficiently. **?? unclear**

2 Set up controls on complex fluid systems

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of complex controls and integrated fluid systems are applied to developing analytical solutions to machine parameters and operation.
- 2.3 Parameters, specifications and performance requirements in relation to each control circuit and fluid device are obtained in accordance with established procedures.
- 2.4 Approaches to setting up, maintenance and/or modification are carried out to provide the most effective solution(s).

- |   |   |  |
|---|---|--|
|   | 2.5   | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.  |
|   | 2.6   | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards  |
| 3 | Document and report on the results of the set up and actions taken. | 3.1 Solutions to set up, maintenance activity and/or modification are tested to determine their effectiveness and modified where necessary.  |
|   | 3.2   | Set-up, maintenance activity and/or modification is documented including details of all findings, calculations and assumptions.  |
|   | 3.3   | Set-up, maintenance activity and/or modification is reported to appropriate personnel to establish suitable action to be taken based on findings.  |
|   | 3.4   | Justification for findings and any actions to be undertaken in relation to the work activity is documented for inclusion in work/project or development records in accordance with professional standards. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up controls on complex fluid systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.18.1 Occupational health and safety principles

2.21.5 Advanced fluid mechanics

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up electronically controlled fluid operated complex systems on at least 2 types of machines.

Note.

Typical circuits are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to demonstrate competency in this unit

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated

---

within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up controls on complex fluid systems as described in 7) and including:
    - A Understanding the operation of electronic and hydraulic controls
    - B Forming effective strategies for analysing circuit and hydraulic performance
    - C Obtaining circuit control and hydraulic parameters, specifications and performance requirements appropriate to each situation.
    - D Testing the results of the analysis
    - E Documenting instruction for implementing any actions resulting from the analysis that incorporates risk control measure to be followed.
    - F Documenting justification of actions to be implemented in accordance with professional standards
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up controls on complex fluid systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.2 to 3.4	3
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI029A Set up electronically controlled mechanically operated complex systems

### Unit Descriptor

1)

This unit covers the setting up, adjustment, maintenance and modification to electronically controlled mechanically operated complex systems. It encompasses working safely, applying extensive knowledge of electronic circuits and the integration to mechanically operated equipment and systems, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note:

Typical problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEI025A	Design and configure human-machine interface networks
UEENEEI034A	Configure and maintain industrial control system networks
UEENEEI052A	Design embedded controller systems
UEENEEI019A	Set up field control devices
UEENEEI025A	Provide solutions to fluid circuit operations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

**Application of the Unit 3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to set up electronically controlled mechanically operated complex systems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work
- 1.3 The extent of the work to be undertaken is determined from performance specifications and situation reports and in consultations with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently

2 Set up electronically controlled mechanically operated complex systems

- 2.1 OHS risk control measures and procedures for carrying out the work are followed

- |   |   |   |
|---|---|---|
|   | 2.2   | Knowledge of complex controls and integrated mechanical systems are applied to developing analytical solutions to machine parameters and operation  |
|   | 2.3   | Parameters, specifications and performance requirements in relation to each circuit and mechanical device are obtained in accordance with established procedures  |
|   | 2.4   | Approaches to setting up, maintenance and/or modification are carried out to provide the most effective solution  |
|   | 2.5   | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy  |
|   | 2.6   | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards   |
| 3 | Document and report on the results of the set up and actions taken. | 3.1 Solutions to set up, maintenance activity and/or modification are tested to determine their effectiveness and modified where necessary  |
|   |   | 3.2 Set up, maintenance activity and/or modification is documented including details of all findings, calculations and assumptions  |
|   |   | 3.3 Set up, maintenance activity and/or modification is reported to appropriate personnel to establish suitable action to be taken based on findings  |
|   |   | 3.4 Justification for findings and any actions to be undertaken in relation to the work activity is documented for inclusion in work/project or development records in accordance with professional standards |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up electronically controlled mechanically operated complex systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |  |
|--------|--|
| 2.18.1 | Occupational health and safety principles    |
| 2.21.6 | Electronic interfacing to mechanical systems |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up electronically controlled mechanically operated complex systems on at least 2 types of machines.

Note.

Typical systems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the

same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up electronically controlled mechanically operated complex systems as described in 7) and including:
    - A Understanding the operation of electronic and mechanical controls
    - B Forming effective strategies for analysing circuit and mechanical performance
    - C Obtaining circuit control and mechanical parameters, specifications and performance requirements appropriate to each situation.
    - D Testing the results of the analysis

- E Documenting instruction for implementing any actions resulting from the analysis that incorporates risk control measure to be followed.
- F Documenting justification of actions to be implemented in accordance with professional standards
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up electronically controlled mechanically operated complex systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI030A Set up electronically controlled robotic systems

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

# UEENEEI030A Set up electronically controlled robotically operated complex systems

## Unit Descriptor

1)

This unit covers the setting up, adjustment, maintenance and modification to electronically controlled robotically operated complex systems. It encompasses working safely, applying extensive knowledge of electronic circuits and the integration to robotically operated equipment and systems, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note:

Typical circuits are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- UEENEEI025A Design and configure human-machine interface networks
- UEENEEI034A Configure and maintain industrial control system networks
- UEENEEI052A Design embedded controller systems
- UEENEEI019A Set up field control devices
- UEENEEI025A Provide solutions to fluid circuit operations

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 5 Writing 5 Numeracy 5

**Application of the Unit 3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Instruments

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to set up electronically controlled robotically operated complex systems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of the work to be undertaken is determined from performance specifications and situation reports and in consultations with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

2 Set up electronically controlled robotically operated complex systems

2.1 OHS risk control measures and procedures for carrying out the work are followed.

- |   |   |  |
|---|---|--|
|   | 2.2   | Knowledge of complex controls and integrated robot systems are applied to developing analytical solutions to machine parameters and operation.   |
|   | 2.3   | Parameters, specifications and performance requirements in relation to each circuit and robot device are obtained in accordance with established procedures.   |
|   | 2.4   | Approaches to setting up, maintenance and/or modification are carried out to provide the most effective solution.  |
|   | 2.5   | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.  |
|   | 2.6   | Quality of work is monitored against personal performance agreement and/or established organisational or professional standards  |
| 3 | Document and report on the results of the set up and actions taken. | 3.1 Solutions to set up, maintenance activity and/or modification are tested to determine their effectiveness and modified where necessary.  |
|   |   | 3.2 Set up, maintenance activity and/or modification is documented including details of all findings, calculations and assumptions.  |
|   |   | 3.3 Set up, maintenance activity and/or modification is reported to appropriate personnel to establish suitable action to be taken based on findings.  |
|   |   | 3.4 Justification for findings and any actions to be undertaken in relation to the work activity is documented for inclusion in work/project or development records in accordance with professional standards. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up electronically controlled robotically operated complex systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.18.1 | Occupational health and safety principles   |
| 2.21.8 | Electronic interfacing to robotic processes |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to setting up electronically controlled robotically operated complex systems on at least 2 types of machines.

Note.

Typical systems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the

same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up electronically controlled robotically operated complex systems as described in 7) and including:
    - A Understanding the operation of electronic and robot controls
    - B Forming effective strategies for analysing circuit and robot performance
    - C Obtaining circuit control and robot parameters, specifications and performance requirements appropriate to each situation.
    - D Testing the results of the analysis

- E Documenting instruction for implementing any actions resulting from the analysis that incorporates risk control measure to be followed.
- F Documenting justification of actions to be implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up electronically controlled robotically operated complex systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEI029A Set up electronically controlled mechanically

operated processes

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEI034A Manage control projects

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the management of control projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses covers management of safety, budget variation, personnel, resources, critical path timelines and completion of documentation.</p>						
<b>Prerequisite Unit(s)</b>	2)

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Establish the scope of the project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.3 Project deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).</p> <p>1.3 Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation.</p> <p>1.4 Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation.</p> <p>1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.</p>
2 Manage project.	<p>2.1 OHS policies, procedures and programs are implemented and monitored.</p> <p>2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project.</p> <p>2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organisation policy.</p> <p>2.4 Procurement processes and procedures are monitored to ensure on time supply of plant and materials and in accordance with organisation policy.</p> <p>2.5 Project is progress is monitored against schedule, quality requirements and budget.</p> <p>2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation policy.</p>

- |   |                   |   |  |
|---|-------------------|---|--|
|   | 2.7               | Variations are managed in accordance with agreed processes and in accordance with the contract.     |  |
|   | 2.8               | Project records are maintained and progress reports written and forwarded to appropriate person(s). |  |
| 3 | Complete project. | 3.1   | Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.   |
|   |                   | 3.2   | Project completion acceptance is sought from appropriate person(s) and handover documented in accordance with organisation policy. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing control projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.2.17   | Project management  |
| 2.2.19   | Customer/Client relations                                   |
| 2.2.30   | Control industry sector customs and practices               |
| 2.18.1   | Occupational health and safety principles                   |
| 2.18.8.2 | Occupational Health and Safety, enterprise responsibilities |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized control project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Manage control projects as described in 7) and including:
    - A Establishing the scope of the project accurately,
    - B Ascertaining the input a project
    - C Developing effective management processes,
    - D Managing resources and variations effectively
    - E Resolving conflicts
    - F Adopting risk management strategies
    - G Maintaining records and submitting progress reports
    - H Meeting project outcomes

- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in managing control projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.4; 2.6 to 2.8	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 2.5; 2.7; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.3; 2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEI035A Plan control projects

### Unit Descriptor

1)

This unit covers development and documentation of control project proposals, milestones and completions. The unit encompasses establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Instruments

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures.</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures.</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies.</p> <p>2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating in the project plan.</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.7 Project plan proposal is documented in accordance with organisation policies and procedures.</p>
3 Obtain approval for project plan.	<p>3.1 Project plan is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p>

- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning control projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.16.1 Project planning
- 2.2.18 Critical path and project analysis
- 2.2.30 Control industry sector customs and practices
- 2.18.1 Occupational health and safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

- 7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized control project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

- 8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances,

assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies & workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan control projects as described in 7) and including:
    - A Determining the project requirements accurately,
    - B Establishing a project budget
    - C Developing effective work flow strategies,
    - D Documenting project plan proposal
    - E Negotiating alterations to the proposed project plan successfully
    - F Obtaining approval of the final plan
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning control projects.

### **Method of assessment**

#### **8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6 to 3.2	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 1.6; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.7 to 3.2

## **UEENEEI036A      Manage automated systems projects**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers the management of automated systems projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion of documentation.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      3      Writing      3      Numeracy      3
<b>Application of the Unit</b>	<b>3)</b>  This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Instruments

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Establish the scope of the project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.3 Project' deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).</p> <p>1.3 Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation.</p> <p>1.4 Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation.</p> <p>1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.</p>
2 Manage project.	<p>2.1 OHS policies, procedures and programs are implemented and monitored.</p> <p>2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project.</p> <p>2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organisation policy.</p> <p>2.4 Procurement processes and procedures are monitored to ensure on time supply of plant and materials and in accordance with organisation policy.</p> <p>2.5 Project is progress is monitored against schedule, quality requirements and budget.</p> <p>2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation policy.</p>

- |   |                   |   |   |
|---|-------------------|---|---|
|   | 2.7               | Variations are managed in accordance with agreed processes and in accordance with the contract.         |   |
|   | 2.8               | Project records are maintained and progress reports written and forwarded to all appropriate person(s). |   |
| 3 | Complete project. | 3.1   | Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.    |
|   |                   | 3.2   | Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation policy. |

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing automated systems projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |   |
|--|----------|---|
|  | 2.2.17   | Project management  |
|  | 2.2.19   | Customer/Client relations                                   |
|  | 2.2.26   | Automated systems industry sector customers and practices   |
|  | 2.18.1   | Occupational health and safety principles                   |
|  | 2.18.8.2 | Occupational Health and Safety, enterprise responsibilities |

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized automated systems project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this

Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Manage automated systems projects as described in 7) and including:
    - A Establishing the scope of the project accurately,
    - B Ascertaining the input a project
    - C Developing effective management processes,
    - D Managing resources and variations effectively
    - E Resolving conflicts
    - F Adopting risk management strategies
    - G Maintaining records and submitting progress reports
    - H Meeting project outcomes
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in managing automated systems projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.4; 2.6 to 2.8	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 2.5; 2.7; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.3; 2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.8; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEI037A Plan automated systems projects

### Unit Descriptor

1)

This unit covers development and documentation of automated systems project proposals, milestones and completions. The unit encompasses establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Instruments

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood</p> <p>1.2 Established techniques for project planning are reviewed are adopted in accordance with organisation policies.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation policies and procedures.</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation policies and procedures.</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies.</p> <p>2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating in the project plan.</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.7 Project plan proposal is documented in accordance with organisation policies and procedures.</p>
3 Obtain approval for project plan.	<p>3.1 Project plan is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p>

- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning automated systems projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.16.1 Project planning
- 2.2.18 Critical path and project analysis
- 2.2.26 Automated systems industry sector customers and practices
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to managing an industry accepted medium sized automated systems project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances,

assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria must be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan automated systems projects as described in 7) and including:
    - A Determining the project requirements accurately,
    - B Establishing a project budget
    - C Developing effective work flow strategies,
    - D Documenting project plan proposal
    - E Negotiating alterations to the proposed project plan successfully
    - F Obtaining approval of the final plan
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit must be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, the conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning automated systems projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6 to 3.2	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 1.6; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.7 to 3.2

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## UEENEEN001A Service mechanical signalling equipment and infrastructure

<b>Unit Descriptor</b>	1)  This unit covers servicing and cleaning of mechanical signalling and infrastructure. It encompasses safe working, regulatory requirements, following cleaning and servicing work procedures, checking operation and functionality of signalling equipment and infrastructure, and reporting.
<b>Prerequisite Unit(s)</b>	2)
<b>Competencies</b>	2.1)  Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.
<b>Literacy and numeracy skills</b>	2.2)  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      3      Writing      3      Numeracy      3
<b>Application of the Unit</b>	3)  This unit shall apply to qualifications in installation and maintenance of rail signalling.
<b>Licence to practise</b>	3.1)  The skills and knowledge described in this unit may only be practised in the workplace under the codes of practice and regulations of the State/Territory for which the work is carried out. This includes the ‘Code of Practice for the Define Interstate Rail Network’ for work carried out on that network.
<b>Competency Field</b>	4)  Rail

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to clean and service equipment	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.</p> <p>1.4 Cleaning and servicing is appropriately sequenced in accordance with job schedule</p> <p>1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.6 Location of equipment to be cleaned and serviced is determined from job specifications and diagrams</p> <p>1.7 Materials needed for cleaning and servicing work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.8 Tools, equipment and testing devices needed to cleaning and servicing work are obtained in accordance with established procedures and checked for correct operation and safety</p>
2 Clean and service equipment	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 All chemicals, lubricants and consumables are used and disposed of in compliance with material safety sheets and OHS codes and practices.</p> <p>2.3 All rubbish, weeds and obstructions are removed from equipment and housings.</p> <p>2.4 Initial visual check of operational equipment is performed to identify any equipment faults.</p> <p>2.5 External services are prepared/painted to organisation standards to protect the equipment.</p>

- 2.6 All internal services and operational components are cleaned and lubricated to ensure operational effectiveness.
- 2.7 Cleaning and servicing is carried out in accordance with relevant standards and requirements and established routines.
- 2.8 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
- 2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.10 Cleaning and servicing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Check equipment operation
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and procedures.
  - 3.3 Track clearance check is made before conducting equipment operation check to ensure safe train movement.
  - 3.4 Authorised equipment check is carried out in accordance with operating procedures to identify any equipment faults.
  - 3.5 Operational effectiveness of equipment is confirmed through observation during train movements if required.
  - 3.6 Equipments faults are correctly identified, recorded and appropriate corrective action is taken.
  - 3.7 Service equipment is locked and secured to prevent unauthorised access.
  - 3.8 Work completion is documented and appropriate person(s) notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and servicing mechanical signalling equipment and infrastructure. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.5.11	Environmental and heritage awareness
2.14.1	Basic rail operations
2.14.2.2	Rail signalling principles, mechanical
2.14.3	Rail signalling, mechanical equipment
2.14.5	Rail signalling, point actuators devices
2.14.11.2	Rail signalling interlocking systems, mechanical
2.14.13	Rail signalling, electro-pneumatic equipment
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Service mechanical signalling equipment and infrastructure as described in 7) and including:
    - A Interpreting specifications correctly
    - B Cleaning equipment in accordance with workplace procedures
    - C Using chemicals and tools safely
    - D Testing that equipment is fully functional after cleaning operations
    - E Checking that technical/operational specifications are met and that equipment is in compliance with work orders
    - F Applying effective fault diagnosis techniques,
    - G Ensuring safe trained movement through work area,
    - H Following relevant codes of practice, OHS and environmental protection procedures and requirements, and
    - I Completing relevant records and documentation.

- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in servicing mechanical signalling equipment and infrastructure.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 3.8	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 2.8	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8; 3.2; 3.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.8; 2.9	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.6; 2.10	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.5; 3.8
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8; 3.2; 3.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8; 2.9

## **UEENEEN002A Assemble and wire internal electrical signalling equipment**

### **Unit Descriptor**

**1)**

This unit covers assembly and wiring internal signalling equipment. It encompasses safe working, regulatory requirements and following work procedures assembling and mounting components, performing internal wiring, terminating cables, and wiring and testing to confirm system integrity.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEG004A Install low voltage electrical apparatus and associated equipment

AND

Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit shall apply to qualifications in installations and maintenance of rail signalling electrical power and control systems.

**Licence to practise 3.1)**

The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes codes of practice, such as ‘Code Of Practice for the defined Interstate Rail Network’ for work carried out on that network.

**Competency Field 4)**

Rail

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to assemble and wire internal signalling equipment

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Technical requirements relating to specific signalling equipment are established.
- 1.5 Assembly and wiring is appropriately sequenced in accordance with job schedule
- 1.6 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.7 Materials needed for assembly and wiring are obtained in accordance with established procedures and checked against job requirements
- 1.8 Tools, equipment and testing devices needed to assemble and wire equipment are obtained in accordance with established procedures and checked for correct operation and safety

2 Assemble signalling equipment

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 Equipment is assembled to comply with technical standards and job specifications and requirements.
- 2.3 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
- 2.4 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.5 Equipment is assembled efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Wire and connect internal equipment
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Equipment is wired, connected and labelled to comply with technical standards, job specifications and requirements.
  - 3.3 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
  - 3.4 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 3.5 Equipment is wired and connected efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 4 Test wiring and terminations
  - 4.1 OHS work completion risk control measures and procedures are followed.
  - 4.2 All terminations are tested in accordance with appropriate testing procedures to ensure tightness and functionality.
  - 4.3 Continuity and insulation tests are carried out as per appropriate test procedures to ensure system standards are met.
  - 4.4 Documentations including wiring diagrams are completed to establish procedures and requirements to ensure quality and safety issues are addressed.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and wiring internal electrical signalling equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.9.3.2	Inverters
2.14.6	Rail signalling, electronic equipment
2.14.7	Rail signalling, computer-based equipment
2.14.9	Rail signalling, train detection
2.14.10	Rail signalling, remote control systems
2.14.11.1	Rail signalling, interlocking systems, Electrical
2.14.12	Rail signalling, power supplies
2.14.13	Rail signalling, electro-pneumatic equipment
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble and wire internal electrical signalling equipment as described in 7) and including:
    - A Interpreting specifications correctly
    - B Assembling and wiring equipment to specified/technical workplace requirements
    - C Following correct testing procedures
    - D Ensuring assembled/wired equipment operates to specifications
    - E Using appropriate tools correctly and safely
    - F Following relevant codes of practice, OHS and environmental protection procedures and requirements
    - G Completing relevant records and documentation
    - H Interpreting signalling circuit diagram
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling and wiring internal electrical signalling equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	1.3; 1.6; 2.3; 4.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.4; 1.6 to 1.8	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.7; 1.8; 2.2; 3.2; 4.2; 4.3	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2; 1.4; 4.2; 4.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.2; 3.4

## UEENEEN003A Install and maintain track circuit leads and bonds

### Unit Descriptor

1)

This unit covers insulation of track circuit leads and bonds. It encompasses safe working, regulatory requirements and following work procedures, job planning, running and positioning, connecting track leads and bonds, maintaining and testing track leads and bonds and completing required documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEG017A Install electric power and control equipment for rail network signalling

AND

Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.

### Licence to practise

3.1)

The skills and knowledge described in this unit may only be practised in the w regulations related to electrical work, the codes of practice and regulations of t State/Territory in which the work is carried out. This includes codes of practic ‘Code Of Practice for the Defined Interstate Rail Network’ for work carried ou network.

**Competency Field 4)**

Rail

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install and maintain track circuit leads and bonds

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Installation and maintenance of track circuit leads and bonds is appropriately sequenced in accordance with job schedule.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Installation and maintenance instructions are reviewed to obtain clear and concise work requirements.
- 1.7 Site bonding layout plan is reviewed to clarify bonding requirements.
- 1.8 Material needed to install and maintain track circuit leads and bonds is obtained in accordance with established procedures and checked against job requirements
- 1.9 Tools, equipment and testing devices needed to install and maintain track circuit leads and bonds are obtained in accordance with established procedures and checked for correct operation and safety
- 1.10 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements

2 Install track circuit leads and bonds

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- |   |  |   |  |
|---|--|---|--|
|   | 2.2                                    | Specified leads of bonds are run and positioned appropriately to the formation conditions and to minimise potential damage from track maintenance machines.   |  |
|   | 2.3                                    | Positions of boxes and cable pits are checked to ensure compliance with specifications and appropriate follow up action is initiated where necessary.   |  |
|   | 2.4                                    | Components and rail services a prepared to ensure secure and sound connections can be made.   |  |
|   | 2.5                                    | Leads or bonds are connected using appropriate fastening techniques and ensuring technical appliance is achieved.   |  |
|   | 2.6                                    | Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.   |  |
|   | 2.7                                    | Unexpected situations are dealt with safely and with the approval of an authorised person.  |  |
|   | 2.8                                    | Track circuit leads and bonds are installed and connected efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |  |
| 3 | Maintain track circuit leads and bonds | 3.1   | OHS risk control work completion measures and procedures are followed.   |
|   |  | 3.2   | Bonds, leads and rail connections are checked for damage or determination and appropriate corrective action is initiated.  |
|   |  | 3.3   | Appropriate tests are completed to identify components requiring repair or replacement.  |
|   |  | 3.4   | Repair or replacement of components is carried out with due regard to train movements and safety of personnel involved.  |
|   |  | 3.5   | Temporary bonding is installed where required and electrical readings on bonds/lead connections and insulated rail joints are taken to ensure compliance with specifications and site bonding layout plan. |
|   |  | 3.6   | Track related equipment is inspected for faults or damage and all faults are documented and appropriate follow up action is initiated.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining track circuit leads and bonds. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.5.11	Environmental heritage awareness
2.14.1	Basic rail operations
2.14.9	Rail signalling, train detection
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and maintain track circuit leads and bonds as described in 7) and including:
    - A Interpreting specifications correctly
    - B Installing track circuit track leads and bonds correctly
    - C Applying bonding techniques correctly
    - D Ensuring bonds and leads testing and results comply with technical requirements
    - E Complying with any local fire bands restrictions
    - F Selecting and use tools correctly
    - G Following relevant codes of practice, OHS and environmental procedures and requirements
    - H Interpreting relevant diagrams and track insulation plans
    - I Completing relevant records and documentation
    - J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining track circuit leads and bonds.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.6	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.7	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7; 3.2 to 3.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.3	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.7 to 1.10
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  3.5; 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6; 2.7

## UEENEEN004A Perform cable tests

### Unit Descriptor

1)

This unit covers testing of signal and communication cables. It encompasses safe working, regulatory requirements and following work procedures determining the tools required setting up and conducting test, interpreting test results, determining activities to maintain system integrity and reporting activities.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEG005A Verify compliance and functionality of general electrical installation

AND

Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.

### Licence to practise

3.1)

The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.

**Competency Field** 4)

Rail

**ELEMENT****PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to perform cable system testing.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Access times and methods are confirmed to comply with customer requirements and relevant legislation
- 1.5 Service is checked for availability for testing and is isolated/disconnected from use and carriers network/equipment to ensure no equipment damage can occur during testing
- 1.6 Required tests and purpose of tests are identified from site, client documentation and manufacturer specifications
- 1.7 Tools and testing devices needed for cable testing are obtained in accordance with established procedures and checked for correct operation and safety
- 1.8 Testing devices calibration certification is checked and is current to ensure manufacturers specifications are achieved

2 Perform cable tests.

- 2.1 Work area and cable system is made safe for testing and other OHS risk control measures and procedures for carrying out the testing are followed.
- 2.2 Tests are set up and performed in accordance with safety measures and manufacturer specifications.
- 2.3 Test results are read accurately and compared against manufacturers and site specifications for cable performance

- 2.4 Established methods for dealing with unexpected situations are dealt with safely and with the approval of an authorised person
- 2.5 Testing is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 2.6 Available services are connected and tested for functionality to ensure all previous services have been resumed
- 3 Report test results.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Recommendations on actions needed to maintain cable system integrity resulting from cable tests are made and documented
  - 3.3 Results of tests are documented accurately and without delay to ensure test results remain current
  - 3.4 Site and installation files are updated to ensure traceability of information on system performance is maintained

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and performing cable system tests. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.2 Enterprise work activities records
- 2.4.16 Personal computers, engineering applications software basic
- 2.5.4 Technical standards, regulations and codes rail networks
- 2.5.10 Technical manuals and catalogues
- 2.5.11 Environmental heritage awareness
- 2.11.8 Data and voice cabling testing devices
- 2.14.1 Basic rail operations
- 2.14.9 Rail signalling, train detection

- 2.14.12 Rail signalling, power supplies
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.
- Testing and identifying at least five non-compliant test results.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Perform cable system tests as described in 7) and including:
  - A Interpreting plans and specifications correctly,
  - B Testing cable in accordance with workplace procedures,
  - C Using test equipment and tools correctly and safely,
  - D Confirming the integrity of a cable system,
  - E Checking that technically/operational specifications are met and that cable is in compliance with specification,
  - F Applying effective cable fault diagnosis and repair techniques,
  - G Following relevant codes of practice, procedures and requirements, and
  - H Completing relevant records and documentation
  - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in performing cable system tests.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 2.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.2	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2; 2.3	2
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.8; 2.2; 2.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4

## **UEENEEN005A    Install and maintain signalling power supplies**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers installation and maintenance of signalling power supplies. It encompasses working safely and to installation/maintenance standards, matching equipment with that specified for a given location, terminating cables and connecting wiring, compliance and functional testing and completing the necessary installation documentation.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading        4        Writing        4        Numeracy        4
<b>Application of the Unit</b>	<b>3)</b>  This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.
<b>Competency Field</b>	<b>4)</b>  Rail

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to install and maintain signalling power supplies.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards which have not previously been identified are noted, and established risk control measures are implemented.</p> <p>1.4 Nature of the work and location of power supply is determined by site inspection and from job instructions, specifications and/or diagrams.</p> <p>1.5 Materials needed for the installation, maintenance/repair work are obtained in accordance with established procedures and checked against job requirements.</p> <p>1.6 Tools, equipment and testing devices needed to install or maintain/repair power supplies are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Install signalling power supplies	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Power supply is installed to comply with technical standards and job specifications and requirements.</p> <p>2.3 Wiring is run and cables terminated to comply with technical standards and job specifications and requirements.</p> <p>2.4 Tests are conducted to ensure installed power supply complies with specifications and functions as intended.</p> <p>2.5 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.</p> <p>2.6 Installation of power supply is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>

3	Maintain/repair signalling power supplies	3.1	OHS risk control measures and procedures for carrying out the work are followed.
		3.2	Correct functioning of equipment is established from reference to manuals, system specifications and commissioning data.
		3.3	Faults are identified by reference to appropriate technical information and applying knowledge of power supplies to logical fault finding techniques.
		3.4	Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer specifications and enterprise requirements.
		3.5	Tests are conducted to ensure maintained/repaired power supply complies with specifications and functions as intended.
		3.6	Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
		3.7	Maintenance and repair of power supply is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
4	Complete installation and maintain of signalling power supplies	4.1	OHS work completion risk control measures and procedures are followed.
		4.2	Work site is cleaned and made safe in accordance with established procedures.
		4.3	Work completion is documented and appropriate person(s) notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining signalling power supplies. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.2.2	Enterprise work activities records
2.4.16	Personal computers, engineering applications software basic

2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.9.3.3	Electronic switching
2.9.3.2	Inverters
2.9.11	Linear and switch mode power supplies
2.14.12	Rail signalling, power supplies
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

- in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Install and maintain signalling power supplies as described in 7) and including:
      - A Interpreting specifications and circuit diagrams correctly
      - B Maintaining, repairing and installing power supplies correctly
      - C Using appropriate diagnostic and fault finding techniques
      - D Using tools and test instruments correctly
      - E Following relevant codes of practice, procedures and requirements
      - F Completing relevant records and documentation
      - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining signalling power supplies.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.5	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 3.1 to 3.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.6
---	--	--

## UEENEEN006A **Maintain remote control and non-vital interlocking control systems**

### **Unit Descriptor**

1)

This unit covers maintenance and repair of remote and non-vital interlocking control systems on rail networks. It encompasses safe working, regulatory requirements and following work procedures performing scheduled maintenance, finding and repairing faults, testing control and indicating equipment and reporting.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit shall be assessed only after the relevant workplace requirements in 'Work site protection' have been acquired.

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the 'Code Of Practice for the Define Interstate Rail Network' for work carried out on that network.

### **Competency Field**

4)

Rail

## **ELEMENT**

## **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to undertake maintenance, fault finding and repair	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.5 Materials needed for maintenance and repair work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed to maintenance and repair work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2. Perform scheduled maintenance	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Visual inspection is carried out and all equipment is checked to ensure module insertion security is in accordance with manufacturer and systems specifications.</p> <p>2.3 Action is implemented to ensure the sealing and security of mountings is made to comply with technical/manufacturer specifications.</p> <p>2.4 Maintenance work includes cleaning, vermin control, checking and adjusting levels, checking indicators and system operation is carried out to organisation requirements.</p> <p>2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p> <p>2.6 Maintenance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>

3. Find and repair faults	3.1	OHS risk control measures and procedures for carrying out the work are followed.
	3.2	System faults are verified using appropriate technical information, fault finding and diagnostic techniques to identify faulty control equipment.
	3.3	Faulty modules are replaced, adjusted and secured in accordance with manufacturer specifications and organisation procedures.
	3.4	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	3.5	Fault finding and repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
4. Test control and indicating equipment	4.1	OHS risk control measures and procedures for carrying out the work are followed.
	4.2	Control equipment is adjusted and tested using appropriate test procedures and equipment to ensure it operates within the specified technical parameters.
5. Finalise maintenance and repair work	5.1	OHS work completion risk control measures and procedures are followed.
	5.2	System faults identified beyond the scope of first level maintenance are reported for follow-up action.
	5.3	Test results are documented in accordance with organisation requirements and faulty or replaced module(s) are tagged and dispatched to maintain equipment spares.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining remote control and non-vital interlocking control systems and repairing faults. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.2.2	Enterprise work activities records
2.3.13	Using supervisory control and data acquisition systems
2.4.11	Personal computers, hardware basic

2.4.13	Computer peripherals
2.4.16	Personal computers, engineering applications software basic
2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.9.3.2	Inverters
2.9.3.3	Electronic switching
2.9.11	Linear and switch mode power supplies
2.10.1.1	Electronic communications, principles
2.14.6	Rail signalling, electronic equipment
2.14.8	Rail signalling, computer applications
2.14.10	Rail signalling, remote control systems
2.14.12	Rail signalling, power supplies
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain remote control and non-vital interlocking control systems and repair faults as described in 7) and including:
    - A Reading and interpreting specifications correctly,
    - B Maintaining and repairing relay interlocking systems to meet operational and technical standards,
    - C Using effective fault diagnosis and repair/replacement techniques to specified model level,
    - D Confirming equipment operated within specified technical parameters,
    - E Testing equipment and instruments,
    - F Using tools correctly,
    - G Following relevant codes of practice, environmental protection procedures and requirements, and
    - H Completing relevant records and documentation
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining remote control and non-vital interlocking control systems and repairing faults.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	1.4; 5.2; 5.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  3.2	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5; 3.2 to 3.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.6; 3.2; 4.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.2 to 2.4; 3.2; 3.3; 4.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5; 3.4

## **UEENEEN007A Maintain power signalling and protected level crossing equipment**

### **Unit Descriptor**

**1)**

This unit covers maintenance and repairing faults in power signalling and level crossing equipment on rail networks. It encompasses safe working, regulatory requirements and following work procedures, performing scheduled maintenance findings and repairing faults, performing operational tests and reporting.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after the relevant workplace requirements in 'Work site protection' have been acquired.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the 'Code Of Practice for the Define Interstate Rail Network' for work carried out on that network.

### **Competency Field**

**4)**

Rail

## **ELEMENT**

## **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to undertake maintenance, fault finding and repair	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others to minimise traffic disruption</p> <p>1.5 Materials needed for maintenance and repair work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed to maintenance and repair work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2. Perform scheduled maintenance	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The correct functioning of equipment is established from relevant technical manuals and operating instructions to identify accessible operating requirements.</p> <p>2.3 Equipment and components are cleaned, lubricated and adjusted to specified standards.</p> <p>2.4 Equipment/component abnormalities are identified and appropriate remedial action is taken to ensure equipment conforms and performs to technical specifications.</p> <p>2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p> <p>2.6 Maintenance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>

- |                               |     |   |
|-------------------------------|-----|---|
| 3. Find and repairs faults    | 3.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|                               | 3.2 | Equipment faults and/or damage to equipment are identified using efficient fault finding and diagnostic techniques, including fault indicators, error codes and maintenance records.        |
|                               | 3.3 | Repair, replacement and/or adjustment are performed using appropriate tools and test equipment to ensure signalling equipment operates to required technical and operational standards.     |
|                               | 3.4 | Faulty, worn, damaged or insecure components are replaced, repaired or secured to conform to manufacturers and workplace requirements.  |
|                               | 3.5 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|                               | 3.6 | Fault finding and repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 4. Perform operational checks | 4.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|                               | 4.2 | Equipment is tested and adjusted using appropriate test equipment and procedures to ensure it operates within the specified technical parameters.   |
|                               | 4.3 | Signal and level crossing lamp alignments are carried out as part of the testing and adjusting procedures where appropriate.  |
| 5. Finalise work and report   | 5.1 | OHS work completion risk control measures and procedures are followed.  |
|                               | 5.2 | Equipment is taken out of service/brought back into use as appropriate, and required documentation is completed to conform to workplace requirements.                                       |
|                               | 5.3 | Documentation required by the organisation is completed to ensure accurate maintenance records are maintained.  |
|                               | 5.4 | Work site/equipment is reinstated to organisation requirements and faulty components are tagged, recorded and despatched for repair/replacement.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining power signalling and protected level crossing equipment and repairing faults. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.2.2	Enterprise work activities records
2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.5.11	Environmental and heritage awareness
2.10.1.1	Electronic communications, principles
2.14.1	Basic rail operations
2.14.3	Rail signalling, mechanical equipment
2.14.4	Rail signalling, electrical equipment
2.14.5	Rail signalling, point actuators devices
2.14.9	Rail signalling, train detection
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain power signalling and protected level crossing equipment and repair faults as described in 7) and including:
    - A Interpreting specifications correctly
    - B Using appropriate fault finding techniques
    - C Maintaining electrically-operated signalling equipment to operational requirements
    - D Organising work to minimise traffic disruptions
    - E Using tools correctly
    - F Following relevant codes of practice, OHS and environmental protection procedures and requirements
    - G Completing relevant records and documentation.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:  
 Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:  
 Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining power signalling and protected level crossing equipment and repairing faults.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:  
 Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	5.2 to 5.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.4; 2.2	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2; 4.2; 4.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.2; 3.3; 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3; 4.2; 4.3	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.2 to 4.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 2.2 to 2.4; 3.3 to 3.4; 4.2; 4.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.5

## UEENEEN008A Maintain on-site power operated point-activating devices

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers on site maintenance of power point activating devices in rail networks. It encompasses safe working, regulatory requirements and following work procedures performing scheduled maintenance, repairing point activity devices, testing, verifying integrity of the maintenance work and reporting.</p>

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to undertake maintain and repair work	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.5 Materials needed for maintenance and repair work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed to maintenance and repair work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2. Perform schedules maintenance	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Maintenance work including cleaning, brushing and lubricating is carried out on point activating devices to ensure technical and operational specifications are met.</p> <p>2.3 Adjustments to point activating devices are made to ensure correct operation and perway fastenings and timbers are inspected for conformity to specifications.</p> <p>2.4 The position and mounting of point activating devices are checked to ensure conformity to site layout specifications.</p> <p>2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p>

- |   |     |   |
|---|-----|---|
|   | 2.6 | Maintenance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.                  |
| 3. Repairs and test point activating device | 3.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   | 3.2 | The correct function of the equipment is established from appropriate technical data and equipment operating procedures and maintenance handbooks.  |
|   | 3.3 | Faulty, worn, damaged or insecure components are replaced, repaired or secured to conform to technical and manufacturers specifications to ensure operational effectiveness.                |
|   | 3.4 | The equipment is tested using approved testing procedures and equipment to ensure operational and technical requirements are achieved.  |
|   | 3.5 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|   | 3.6 | Fault finding and repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 4. Finalise work and report                 | 4.1 | OHS work completion risk control measures and procedures are followed.  |
|   | 4.2 | Appropriate documentation is accurately completed to provide an accurate maintenance records database and inform train control of work status details.                                      |
|   | 4.3 | Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.   |
|   | 4.4 | Faulty Perway conditions/components are documented to provide details for corrective action.  |
|   | 4.5 | Point activating devices are taken out of service/booked back into use and certified as appropriate to organisation requirements and procedures.  |
|   | 4.6 | Maintenance work activities are recorded as per organisation requirements to provide accurate records.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining on site power operated point-activating devices. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.2.2	Enterprise work activities records
2.3.13	Using supervisory control and data acquisition systems
2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.5.11	Environmental and heritage awareness
2.14.1	Basic rail operations
2.14.3	Rail signalling, mechanical equipment
2.14.4	Rail signalling, electrical equipment
2.14.5	Rail signalling, point actuators devices
2.14.13	Rail signalling, electro-pneumatic equipment
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain on site power operated point-activating devices as described in 7) and including:
    - A Interpreting applications correctly
    - B Maintaining point activating devices to operational requirements
    - C Using appropriate fault finding techniques
    - D Documenting Perway defects accurately
    - E Using tools correctly
    - F Following relevant codes of practice, OHS and environmental protection procedures and requirements
    - G Completing relevant records and documentation
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining on site power operated point-activating devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	4.2 to 4.6	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.2 to 4.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.5; 1.6; 2.2 to 2.4; 3.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.5

## UEENEEN009A Maintain track circuit equipment

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers maintenance, fault finding and repair of track circuit equipment in a rail network. It encompasses safe working, regulatory requirements and following work procedures, performing maintenance finding, finding and repairing faults, adjusting and testing to verify operational integrity and reporting.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      4      Writing      4      Numeracy      4
<b>Application of the Unit</b>	<b>3)</b>  This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.
<b>Competency Field</b>	<b>4)</b>  Rail

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to maintain track circuit equipment and repair faults	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of maintenance is determined from maintenance schedules, job specifications, drawings and regulatory requirements</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.5 Materials needed for maintenance and repair work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed to maintenance and repair work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Maintain track circuit equipment and repair faults	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Maintenance is carried out to manufacturer specifications using procedures consistent with delegated authority.</p> <p>2.3 Normal function and operating parameters are confirmed using appropriate manuals, specifications and commissioning data.</p> <p>2.4 Fault finding and diagnostic techniques are completed to verify system/faults.</p> <p>2.5 Faulty, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer specifications and organisation procedures.</p> <p>2.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p>

- |   |     |  |
|---|-----|--|
|   | 2.7 | Maintenance and repair work is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3. Adjust and test track circuits           | 3.1 | OHS risk control measures and procedures for carrying out the work are followed.   |
|   | 3.2 | Appropriate readings are measured and recorded using relevant test instruments.  |
|   | 3.3 | Equipment is tested and adjusted in accordance with the specifications.  |
|   | 3.4 | Equipment operational tests are completed to specifications and procedures.  |
|   | 3.5 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
|   | 3.6 | Testing and adjusting is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.       |
| 4. Finalise work and record work activities | 4.1 | OHS risk control work completion measures and procedures are followed.   |
|   | 4.2 | Correct calibration of equipment is verified and equipment is confirmed as fulfilling functional tests in accordance with organisation certification procedures.                             |
|   | 4.3 | Work completion is documented and appropriate persons notified in accordance with established procedures   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining track circuit equipment and repairing faults. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.2.2  | Enterprise work activities records                          |
| 2.3.13 | Using supervisory control and data acquisition systems      |
| 2.4.16 | Personal computers, engineering applications software basic |

2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.14.1	Basic rail operations
2.14.9	Rail signalling, train detection
2.14.12	Rail signalling, power supplies
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

- in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Maintain track circuit equipment and repair faults as described in 7) and including:
      - A Interpreting specifications correctly
      - B Installing, maintaining and testing equipment in accordance with workplace procedures
      - C Using tools and test equipment safely
      - D Checking that technical operational specifications are met and that equipment is in compliance with work orders
      - E Following relevant codes of practice OHS and environmental protection procedures and requirements
      - F Completing relevant records and documentation
      - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

### **Context of and specific resources for assessment**

#### **8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining track circuit equipment and repairing faults.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.2, 3.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.3; 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.2	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.5; 1.6; 2.2 to 2.5; 3.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 3.5
---	--	--

## UEENEEN010A **Maintain electronic signalling and communication equipment**

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers maintain and repair faults electronic signalling and communications systems in a rail network. It encompasses safe working, regulatory requirements and following work procedures diagnosing and rectifying system faults, repairing and replacing faulty equipment, calibrating and testing and report work activities.</p>						
<b>Prerequisite Unit(s)</b>	<p>2)</p>						
<b>Competencies</b>	<p>2.1)</p> <p>Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">4</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">4</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4
Reading	4	Writing	4	Numeracy	4		
<b>Application of the Unit</b>	<p>3)</p> <p>This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.</p>						
<b>Competency Field</b>	<p>4)</p> <p>Rail</p>						

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to repair faults	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The nature and extent of the reported fault is clarified with the system user and review of formal fault report</p> <p>1.4 The normal function of the equipment is established through reference to operating manuals, systems, specifications and commissioning data.</p> <p>1.5 Materials needed to repair the fault are obtained in accordance with system specifications and established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to diagnose the fault are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.7 Symptoms/faults are verified using fault finding and diagnostic techniques and appropriate technical and other information available from fault indicators, error codes and maintenance records.</p>
2 Diagnose faults	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Cause of the fault is determined through consultation with the user, obtaining specialist or engineering advice and reviewing information from fault indicators, error codes and maintenance records.</p> <p>2.3 Faulty equipment is identified and recorded with failure details in accordance with organisation procedures.</p> <p>2.4 Function test using approved test equipment is carried out to determine the location and nature of the fault using the most effective diagnostic/fault finding techniques.</p>

- 2.5 All appropriate components are disconnected to enable accurate test measurements of faulty components.
- 2.6 Circuit diagrams and manufacturer specifications are used to determine the correct operating levels/performance of the equipment
- 2.7 Faults are diagnosed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Rectify faults
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 The fault is isolated and assessed to determine the most appropriate repair method, tools, test and measurement instruments to be used.
  - 3.3 Faulty, worn, damaged or insecure components are replaced, repaired, or secured to manufacturer/technical specifications and the equipment is returned to service.
  - 3.4 Parts/components identified as faulty and within the repair capacity of the service centre are repaired to manufacturer specifications.
  - 3.5 Parts/components requiring repairs beyond the repair capacity of the service centre are dispatched for external repairs or disposed of in accordance with the organisation procedures.
  - 3.6 Parts/components identified as suitable for replacement are replaced from available parts/component resources.
  - 3.7 Faults are rectified efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 4. Calibrate and test repair and replaced equipment
  - 4.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 4.2 Repaired/replaced equipment is tested using approved test equipment in accordance with appropriate test procedures to ensure equipment is fully operational.

- |                                      |     |  |
|--------------------------------------|-----|--|
|                                      | 4.3 | All test equipment used is checked to ensure it is within calibration standards.   |
|                                      | 4.4 | All appropriate adjustments and calibrations are carried out to the specified settings and values.   |
|                                      | 4.5 | Repaired/replaced equipment is calibrated and tested efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 5. Finalise and report fault repairs | 5.1 | OHS work completion risk control measures and procedures are followed.   |
|                                      | 5.2 | Required documentation is completed, including confirmation that equipment has been repaired to manufacturer specifications.   |
|                                      | 5.3 | Arrangements are made for the safe return of equipment to the customer and in accordance with workplace procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining and repairing faults in electronic signalling and communication systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.2.2   | Enterprise work activities records                          |
| 2.3.13  | Using supervisory control and data acquisition systems      |
| 2.4.11  | Personal computers, hardware basic                          |
| 2.4.16  | Personal computers, engineering applications software basic |
| 2.4.13  | Computer peripherals  |
| 2.5.4   | Technical standards, regulations and codes rail networks    |
| 2.5.10  | Technical manuals and catalogues                            |
| 2.9.3.3 | Electronic switching  |
| 2.9.3.2 | Inverters   |
| 2.9.11  | Linear and switch mode power supplies                       |

- 2.10.1.1 Electronic communications, principles
- 2.14.1 Basic rail operations
- 2.14.4 Rail signalling, electrical equipment
- 2.14.6 Rail signalling, electronic equipment
- 2.14.7 Rail signalling, computer-based equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.9 Rail signalling, train detection
- 2.14.10 Rail signalling, remote control systems
- 2.14.11.1 Rail signalling, interlocking systems, electrical
- 2.14.11.2 Rail signalling interlocking systems, mechanical
- 2.14.12 Rail signalling, power supplies
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects  
of evidence  
required to  
demonstrate  
competency in  
this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain and repair faults in electronic signalling and communication systems as described in 7) and including:
    - A Interpreting specifications correctly,
    - B Diagnosing equipment faults accurately and efficiently,
    - C Using effective and efficient fault finding techniques,
    - D Using resources efficiently,
    - E Repairing equipment in accordance with workplace procedures,
    - F Ensuring repaired equipment conforms to manufacturers specifications,
    - G Calibrating and using test equipment and tools correctly,

- H Following relevant codes of practice, environmental protection procedures and requirements, and
- I Following correct liaison procedures, and
- J Completing relevant records and documentation
- K Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining and repairing faults in electronic signalling and communication systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 5.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.2; 2.4; 4.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 2.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 4.2 to 4.4	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  5.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.2 to 2.6; 3.2 to 3.5; 4.2 to 4.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.2 to 2.6

## **UEENEEN011A      Install and maintain power operated signalling equipment**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers installation and maintenance of power operated signalling equipment. It encompasses safe working, regulatory requirements and following work procedures, assembling signal control equipment, installing equipment, components, wiring, connecting and checking and testing.</p>

### **ELEMENT**

### **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to install and maintain power operated signalling equipment	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p> <p>1.4 Appropriate personnel are consulted to ensure the work can proceed without delaying or compromising the operational safety of train movements.</p> <p>1.5 Materials needed for the installation/maintenance work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed for the installation/maintenance work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Assemble signalling control equipment	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Signal control equipment is checked to confirm technical specifications can be met.</p> <p>2.3 Sub assemblies of signal control equipment are assembled in accordance with work specifications and checked to confirm circuit integrity.</p> <p>2.4 Complete sub assemblies are tested off site where possible to ensure technical operations can be met.</p> <p>2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p> <p>2.6 Assembly of control equipment is done efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>
3 Install and connect wiring and equipment	<p>3.1 OHS risk control measures and procedures for carrying out the work are followed.</p>

- |   |     |   |
|---|-----|---|
|   | 3.2 | Signal control components and sub assemblies are checked and installed in accordance with job specifications.   |
|   | 3.3 | Component and wiring test are performed to ‘live test’ conditions to ensure control equipment functions correctly.  |
|   | 3.4 | Cables are installed and connected in accordance with job specifications and established procedures.  |
|   | 3.5 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|   | 3.6 | Equipment and wiring is installed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 4. Check and test equipment and components            | 4.1 | OHS risk control measures and procedures for carrying out the work are followed   |
|   | 4.2 | Appropriated operational test procedures are applied to ensure equipment and components are fully operational   |
|   | 4.3 | Control equipment is monitored and tested to ensure it operated within the technical parameters specified.  |
|   | 4.4 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|   | 4.5 | Testing is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.              |
| 5 Complete and document installation/maintenance work | 5.1 | OHS work completion risk control measures and procedures are followed.  |
|   | 5.2 | Work site is made safe in accordance with established safety procedures.  |
|   | 5.3 | Test results and documentation is completed to confirm operational compliance to system requirements and job specifications.  |

- 5.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining power operated signalling equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.2 Enterprise work activities records
- 2.3.13 Using supervisory control and data acquisition systems
- 2.5.4 Technical standards, regulations and codes rail networks
- 2.5.10 Technical manuals and catalogues
- 2.5.11 Environmental and heritage awareness
- 2.14.1 Basic rail operations
  - 2.14.2.1 Rail signalling principles, electrical
  - 2.14.3 Rail signalling, mechanical equipment
  - 2.14.4 Rail signalling, electrical equipment
  - 2.14.5 Rail signalling, point actuator devices
  - 2.14.7 Rail signalling, computer-based equipment
  - 2.14.13 Rail signalling, electro-pneumatic equipment
  - 2.14.14 Rail signalling, drawings and diagrams
  - 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions

about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and maintain power operated signalling equipment as described in 7) and including:
    - A Interpreting specifications and circuit diagrams correctly
    - B Using appropriate fault finding techniques
    - C Installing and maintaining power operated signalling equipment to operational requirements
    - D Organising work to minimise traffic disruptions

- E Using tools and test equipment correctly
- F Following relevant codes of practice and environmental protection procedures and requirements
- G Completing relevant documentation
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining power operated signalling equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key**

**8.6)**

**competencies**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 5.2; 5.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4; 2.2; 4.2; 4.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 5.1; 5.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 3.2 to 3.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 4.2; 4.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.3; 4.2; 4.3	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  5.2; 5.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.2 to 2.4; 3.2 to 3.4; 4.2; 4.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.5; 4.4

## **UEENEEN012A      Maintain power signalling and protective relay interlocking systems**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers maintenance and repair of power signalling and protective relay interlocking systems in a rail network. It encompasses safe working, regulatory requirements and following work procedures, performing schedules maintenance, diagnosing and repairing system faults, performing operational tests and reporting.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      4      Writing      4      Numeracy      4
<b>Application of the Unit</b>	<b>3)</b>  This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.
<b>Competency Field</b>	<b>4)</b>  Rail

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to maintain equipment and repair faults	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of maintenance and repair work is determined from job specifications, drawings and regulatory requirements</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others to minimise traffic disruptions.</p> <p>1.5 Materials needed maintenance and repair work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed for maintenance and repair work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Perform schedule maintenance	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Visual inspection or installation wiring and equipment is carried out to identify damaged or faulty equipment.</p> <p>2.3 Damaged or faulty components identified from visual inspection are replaced as per technical instructions, manufacturer specifications and maintenance procedures.</p> <p>2.4 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p> <p>2.5 Maintenance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>
3. Diagnose and repair system faults	3.1 OHS risk control measures and procedures for carrying out the work are followed.

- 3.2 Systems are interrogated using appropriate fault finding and diagnostic techniques to identify faults.
- 3.3 Fault indicators and maintenance records are used to assist in the identification of faults
- 3.4 Repairs, replacement and/or adjustment or equipment/systems are carried out using appropriate tools and test equipment to ensure equipment/systems function to required technical and operational standards.
- 3.5 Faulty, worn, damaged or insecure components are repaired, replaced or secured whilst ensuring system safety integrity is maintained and technical/manufacturers requirements are met.
- 3.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 3.7 Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 4. Perform operational testing
  - 4.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 4.2 The system is tested using approved test procedures and equipment to ensure it operates within specified technical parameters.
- 5 Report maintenance and repair activities
  - 5.1 OHS work completion risk control measures and procedures are followed.
  - 5.2 Reusable, faulty, worn components are tagged and dispatched for repair to maintain adequate spares.
  - 5.3 Maintenance work activities are recorded as per organisation requirements to provide accurate records
  - 5.4 Documentation including component faults, test results, authorisations and permits is completed to provide an accurate database and facilitate follow up action.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining power signalling and relay interlocking systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.2.2	Enterprise work activities records
2.3.13	Using supervisory control and data acquisition systems
2.4.16	Personal computers, engineering applications software basic
2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.14.1	Basic rail operations
2.14.2.1	Rail signalling principles, electrical
2.14.4	Rail signalling, electrical equipment
2.14.11	Rail signalling, interlocking systems
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain power signalling and relay interlocking systems as described in 7) and including:
    - A Interpreting specifications correctly,
    - B Using appropriate fault finding techniques,
    - C Maintaining electrically-operated signalling equipment to operational requirements,
    - D Organising work to minimise traffic disruptions,
    - E Using tools correctly,
    - F Following relevant codes of practice, OHS and environmental protection procedures and requirements, and
    - G Completing relevant records and documentation
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:  
 Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:  
 Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining power signalling and relay interlocking systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:  
 Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	5.2 to 5.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.2; 3.2; 3.3; 4.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.2; 4.2	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3; 3.2 to 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3; 4.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  5.2 to 5.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2; 2.3; 3.3 to 3.5; 4.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.7

## UEENEEN013A Install and test computer based interlocking equipment

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers installation and testing of computer based interlocking equipment for rail network signalling. It encompasses safe working, regulatory requirements and following installation specifications, installing computer equipment, associated electronic equipment and track side interfaces, pre-commissioning activities, operational testing and reporting.</p>						
<b>Prerequisite Unit(s)</b>	<p>2)</p>						
<b>Competencies</b>	<p>2.1)</p> <p>Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">5</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">5</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">5</td> </tr> </table>	Reading	5	Writing	5	Numeracy	5

### ELEMENT

### PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to install and test computer based interlocking equipment	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p> <p>1.4 The extent of the installation is determined from job specifications, drawings and regulatory requirements</p> <p>1.5 Tools, equipment and testing devices needed to install the computer based interlocking equipment are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.6 Preparatory work is checked to ensure no unnecessary damage has occurred and complies with requirements.</p>
2 Install interlocking computers and computer data and communication link equipment.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Cubicles, computer housings and associated equipment are installed in accordance with specifications and work orders.</p> <p>2.3 Computer data link equipment is installed in accordance with specifications and work orders</p> <p>2.4 Modems and associated equipment is installed in accordance with specifications and work orders.</p> <p>2.5 Cables are installed and connections/terminations made, including plug couplers, in accordance with specifications and work orders.</p> <p>2.6 Installation is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>

- |  |     |   |
|--|-----|---|
| 3. Install trackside interfaces                          | 3.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|  | 3.2 | Trackside function modules and interface equipment is installed in accordance with specifications and work orders.  |
|  | 3.3 | Cables are installed and connections/terminations made in accordance with specifications and work orders.   |
|  | 3.4 | Power supply is checked, adjusted and confirmed as being within specifications.   |
|  | 3.5 | Load required for testing is connected and confirmed in accordance with specifications  |
|  | 3.6 | Interface equipment is powered up in the correct sequence using correct fuse type and rating in preparation for testing.  |
|  | 3.7 | Installation is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 4. Conduct pre-commissioning power-up checks             | 4.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|  | 4.2 | All cards are checked for correct position and seating and all vital I/O connections isolated.  |
|  | 4.3 | Correct firmware module installation is confirmed in accordance with specifications   |
|  | 4.4 | Voltage level and polarities are confirmed through energising power supplies ‘off load’.  |
|  | 4.5 | Computer based interlocking equipment is energised and all message indications are checked as in compliance with specifications.  |
|  | 4.6 | ‘On load’ voltage levels are checked for compliance with specification.   |
| 5. Test computer based interlocking equipment operations | 5.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|  | 5.2 | Message generator is connected in accordance with testing procedures.   |

- |   |     |  |
|---|-----|--|
|   | 5.3 | Test sequences are run in accordance with testing procedures to confirm that equipment is installed correctly and to test all equipment functions. |
|   | 5.4 | Test results are monitored, measured and recorded to confirm all operations are with specification.  |
| 6 Document installation and testing completion work | 6.1 | OHS work completion risk control measures and procedures are followed.   |
|   | 6.2 | Work site is made safe in accordance with established safety procedures.   |
|   | 6.3 | Any non-compliance operation or equipment are identified and corrective action recorded.   |
|   | 6.4 | Corrective action is implemented to rectify installation defects or replace faulty equipment.  |
|   | 6.5 | Operational integrity of the system is confirmed and recorded in accordance with TFM analysis sheets and checklists.                               |
|   | 6.6 | All work completion is documented and appropriate person(s) notified in accordance with established procedures.                                    |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and testing computer based interlocking equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- |         |  |
|---------|--|
| 2.2.2   | Enterprise work activities records                       |
| 2.4.13  | Computer peripherals                                     |
| 2.5.4   | Technical standards, regulations and codes rail networks |
| 2.5.10  | Technical manuals and catalogues                         |
| 2.5.11  | Environmental and heritage awareness                     |
| 2.9.3.3 | Electronic switching                                     |
| 2.9.3.2 | Inverters  |
| 2.9.11  | Linear and switch mode power supplies                    |

- 2.10.1. Electronic communications, principles
- 2.14.1 Basic rail operations
- 2.14.6 Rail signalling, electronic equipment
- 2.14.7 Rail signalling, computer-based equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.10 Rail signalling, remote control systems
- 2.14.11.1 Rail signalling interlocking systems, electrical
- 2.14.11.2 Rail signalling interlocking systems, mechanical
- 2.14.12 Rail signalling, power supplies
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

- in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Install and test computer based interlocking equipment as described in 7) and including:
      - A Complying with operational requirements
      - B Interpreting specifications and plans correctly
      - C Using appropriate testing and fault finding techniques
      - D Organising work
      - E Using tools and test equipment correctly
      - F Following relevant codes of practice, procedures and requirements
      - G Completing relevant records and documentation
      - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions

must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and testing computer based interlocking equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 6.3 to 6.6	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4; 3.4; 5.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2; 3.3; 5.4; 6.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 6.3; 6.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.6; 5.2 to 5.4; 6.4; 6.5	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  6.3; 6.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.5; 3.2 to 3.6; 4.2 to 4.6; 5.2 to 5.4; 6.3 to 6.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  6.4
---	--	---

## **UEENEEN014A Maintain computer based and solid state interlocking systems**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers maintenance and repair of faults in computer based electronic equipment for rail network signalling system. It encompasses safe working, regulatory requirements and following work procedures monitoring system, responding to fault information, and replacing faulty equipment..</p>			
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>			
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.</p>			
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: center;">Reading</td> <td style="text-align: center;">Writing</td> <td style="text-align: center;">Numeracy</td> </tr> </table>	Reading	Writing	Numeracy
Reading	Writing	Numeracy		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.</p>			
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.</p>			
<b>Competency Field</b>	<p><b>4)</b></p> <p>Rail</p>			

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to maintain computer based interlocking equipment	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of maintenance and repair work is determined from job specifications, drawings and regulatory requirements</p> <p>1.4 Materials needed maintenance and repair work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.5 Tools, equipment and testing devices needed to maintenance and repair work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Monitor system and respond to fault information	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Up-to-date reports of fault logs are gained by assessing the diagnostic terminal</p> <p>2.3 Fault correction activities are prioritised by reviewing the fault reports and corrective actions are implemented</p> <p>2.4 Records or previously actioned faults are deleted/cleared from the terminal</p> <p>2.5 The source of the fault is correctly identified by assessing the diagnostics terminal</p> <p>2.6 The corrective action required is determined and implemented</p> <p>2.7 Appropriate mechanisms for the safe and efficient rectification of the fault are ensured</p> <p>2.8 Actioned faults are deleted/cleared from the terminal</p>

- |                               |      |  |
|-------------------------------|------|--|
|                               | 2.9  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
|                               | 2.10 | System monitoring is conducted efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.       |
| 3. Replace faulty equipment   | 3.1  | OHS risk control measures and procedures for carrying out the work are followed  |
|                               | 3.2  | The correct replacement equipment is obtained from spare stock to comply with identified fault repair requirements   |
|                               | 3.3  | Faulty component/equipment is correctly identified and removed as per organisation practices and procedures  |
|                               | 3.4  | Replacement component equipment is correctly installed, connected and powered up as per manufacturer specifications  |
|                               | 3.5  | Correct test procedures are identified and implemented to confirm all operations are within specifications   |
|                               | 3.6  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
|                               | 3.7  | Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.              |
| 4. Monitor and test equipment | 4.1  | OHS risk control measures and procedures for carrying out the work are followed  |
|                               | 4.2  | Equipment operations are monitored to ensure system integrity  |
|                               | 4.3  | Signal and voltage levels are monitored, checked and adjusted if required to ensure compliance with operational requirements   |
|                               | 4.4  | Complete statistical records and equipment/operational management information is accurately recorded and maintained to support ongoing monitoring of systems and equipment performance |

- |   |   |   |
|---|---|---|
|   | 4.5   | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
| 5 | Arrange repair of faulty equipment and report work activities | <p>5.1 OHS risk control work completion measures and procedures are followed.</p> <p>5.2 Non conforming equipment is identified and tagged for repair type and extent of fault is identified and recorded as required</p> <p>5.3 Faulty equipment requiring repair is segregated and appropriate records are completed in preparation for dispatch to repairer</p> <p>5.4 Spare equipment stocks are reviewed to ensure adequate availability</p> <p>5.5 Priority for repair or replacement of equipment is established by evaluation of stock levels and fault logs</p> <p>5.6 Work completion is documented and appropriate personnel notified of repair and replacement priorities in accordance with established procedures</p> |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintain computer based interlocking equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- |  |         |  |
|--|---------|--|
|  | 2.2.2   | Enterprise work activities records                       |
|  | 2.3.13  | Using supervisory control and data acquisition systems   |
|  | 2.4.11  | Personal computers, hardware basic                       |
|  | 2.4.13  | Computer peripherals                                     |
|  | 2.5.4   | Technical standards, regulations and codes rail networks |
|  | 2.5.10  | Technical manuals and catalogues                         |
|  | 2.9.3.3 | Electronic switching                                     |
|  | 2.9.3.2 | Inverters  |

- 2.9.11 Linear and switch mode power supplies
- 2.10.1.1 Electronic communications, principles
- 2.14.1 Basic rail operations
- 2.14.6 Rail signalling, electronic equipment
- 2.14.7 Rail signalling, computer-based equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.10 Rail signalling, remote control systems
- 2.14.11 Rail signalling, interlocking systems
- 2.14.12 Rail signalling, power supplies
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain computerised interlocking equipment as described in 7) and including:
    - A Maintaining computer based and solid state interlocking equipment to operational requirements and specifications
    - B Interpreting specifications and plans correctly
    - C Using appropriate testing and fault finding techniques
    - D Rectifying faults with minimal disruption to services
    - E Using tools and test equipment correctly
    - F Following relevant codes of practice, OHS and environmental protection procedures requirement
    - G Completing relevant records and documentation
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining computerised interlocking equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 5.2 to 5.6	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2 to 2.4; 4.3; 4.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 4.3; 4.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.8; 4.3;	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2; 2.4; 3.5; 4.3	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  5.2 to 5.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2 to 2.8; 3.2 to 3.5; 4.2 to 4.4; 5.2 to 5.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 3.6; 4.5
---	--	---

## **UEENEEN015A      Conduct routine inspecting and testing of new signal cables and lines**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers testing or newly installed signal and power cables for a rail network signalling system. It encompasses safe working, regulatory requirements and following work procedures, visual inspection, cable testing, rectifying defects and verifying and certifying integrity of cables.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">4</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">4</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4
Reading	4	Writing	4	Numeracy	4		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Rail</p>						

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to inspect and test cables and lines	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of inspection and testing is determined from job specifications, drawings and regulatory requirements</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.5 Materials needed for inspection and testing are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed to inspect and test are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Inspect and test cables and line	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Installed cable/line are inspected to ensure installation and cable conforms to organization and technical specifications for cable laying.</p> <p>2.3 Cable/line route specification and technical data is reviewed to ensure specified cables have been laid.</p> <p>2.4 Cable/line is tested to ensure continuity or circuit in accordance with technical requirements and /or specifications.</p> <p>2.5 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p> <p>2.6 Inspection and testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>

- |  |     |  |
|--|-----|--|
| 3. Rectify faults and defects                  | 3.1 | OHS risk control measures and procedures for carrying out the work are followed.   |
|  | 3.2 | Isolated cable/line faults are rectified in accordance with organization procedures and technical instructions to ensure cable/line route technical specifications are met                 |
|  | 3.3 | Defects in cable/line installation are rectified where necessary to ensure all aspects of cable/line route conforms to specifications including conduit, clamps and other securing devices |
|  | 3.4 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
|  | 3.5 | Faults and defects are rectified efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.         |
| 4. Certify cable and line integrity and report | 4.1 | OHS work completion risk control measures and procedures are followed.   |
|  | 4.2 | Faults and defects are documented and corresponding faults or defects. Detailed corrective action is recorded for subsequent engineering review  |
|  | 4.3 | All test results are documented and test compliance results are recorded for commissioning purposes  |
|  | 4.4 | Cable/line installation documentation required for commissioning is prepared for handover to engineers for commissioning   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting routine inspection and testing of newly installed signal cables and lines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.2.2  | Enterprise work activities records                          |
| 2.4.16 | Personal computers, engineering applications software basic |
| 2.5.4  | Technical standards, regulations and codes rail networks    |

- 2.5.10 Technical manuals and catalogues
- 2.5.11 Environmental and heritage awareness
- 2.11.8 Data and voice cabling testing and testing devices
- 2.14.4 Rail signalling, electrical equipment
- 2.14.5 Rail signalling, point actuators devices
- 2.14.6 Rail signalling, electronic equipment
- 2.14.7 Rail signalling, computer-based equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.9 Rail signalling, train detection
- 2.14.10 Rail signalling, remote control systems
- 2.14.11 Rail signalling, interlocking systems
- 2.14.12 Rail signalling, power supplies
- 2.14.13 Rail signalling, electro-pneumatic equipment
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network
- Code of practice for the defined interstate rail network
- Signal cable
- Low voltage cable
- High voltage power cable
- Optical fibre cable

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct routine inspection and testing of newly installed signal cables and lines as described in 7) and including:
    - A Interpreting plans and specifications correctly
    - B Testing new cable/line route in accordance with workplace procedures
    - C Using test equipment and tools correctly and safely
    - D Confirming the integrity of the cable system
    - E Checking that technical/operational specifications are met and that cable/line route in compliance with specifications
    - F Applying effective cable fault diagnosis and repair techniques
    - G Following relevant codes of practice, OHS and environmental protection procedures and requirements
    - H Completing relevant records and documentation
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting routine inspection and testing of newly installed signal cables and lines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.2 to 4.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 3.2; 3.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.2 to 4.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.2; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.4

## **UEENEEN016A      Maintain electronic switched and microprocessor-based remote control systems**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers maintain operational status of electronic switched microprocessor based remote control system for a rail network signalling system. It encompasses safe working, regulatory requirements and following work procedures, including co-ordinating and fault finding and repairs, inspecting and rectifying defects, analysing and determining the cause of faults, rectifying faults and recording.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">5</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">5</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">5</td> </tr> </table>	Reading	5	Writing	5	Numeracy	5
Reading	5	Writing	5	Numeracy	5		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Rail</p>						

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to maintain control system	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Maintenance programs/fault/irregularity reports are reviewed to establish work priorities, resources, logistics and site information</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others affected by the work and authorisations are obtained in accordance with established procedures.</p> <p>1.5 Materials needed for the work are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Inspect and rectify anomalies	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Visual inspection is carried out and all equipment checked to ensure performance is in accordance with operational specifications</p> <p>2.3 Security of fittings, terminations and mountings are checked for conformance with specifications and adjusted accordingly</p> <p>2.4 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p> <p>2.5 Inspection and rectification is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>
3. Analysis system performance	3.1 OHS risk control measures and procedures for carrying out the work are followed

- 3.2 Appropriate operating parameters are ascertained from specifications and commissioning data to enable performance checked to be completed
- 3.3 Appropriate diagnostic techniques are employed to verify symptoms or irregularities
- 3.4 Symptoms are reproduced, monitored and documented where appropriate
- 3.5 System is adjusted and operationally tested to technical parameters and design specifications
- 3.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 3.7 Analysis is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 4. Determine cause and rectify faults
  - 4.1 OHS risk control measures and procedures for carrying out the work are followed
  - 4.2 Appropriate conclusions are drawn from fault indicators, error codes, maintenance records and print outs to assist fault finding
  - 4.3 Appropriate technical support is obtained if required
  - 4.4 Faulty components are replaced or repaired in accordance with workplace procedures
  - 4.5 Components are terminated, connected, system levels adjusted and parameters set in accordance with specifications
  - 4.6 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 4.7 Fault diagnosis and rectification is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 5. Test system functionality and report
  - 5.1 OHS completion risk control work measures and procedures are followed.
  - 5.2 System is functionally tested to specified parameters

- 5.3 Maintenance documentation is completed as required and equipment is labelled, packaged and returned to service where appropriate

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining electronic switched and microprocessor-based remote control systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.2 Enterprise work activities records
- 2.3.13 Using supervisory control and data acquisition systems
- 2.4.11 Personal computers, hardware basic
- 2.4.16 Personal computers, engineering applications software basic
- 2.4.13 Computer peripherals
- 2.5.4 Technical standards, regulations and codes rail networks
- 2.5.10 Technical manuals and catalogues
- 2.9.3.2 Electronic switching
- 2.9.3.2 Inverters
- 2.9.3.3 Electronic switching
- 2.9.11 Linear and switch mode power supplies
- 2.10.1.1 Electronic communications, principles
- 2.14.6 Rail signalling, electronic equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.10 Rail signalling, remote control systems
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## 2.18.5 Rail safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State or Territory codes of practice and safe working requirements
- Equipment and systems relevant to the rail network for which competency is sought
- Code of practice for Defined Interstate Rail Networks
- System monitoring and performance analysis detecting and rectifying at least five different system faults

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material

present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain electronic switched and microprocessor-based remote control systems as described in 7) and including:
    - A Interpreting specifications, circuit diagrams and workplace procedures correctly
    - B Using appropriate diagnosis and fault finding techniques to sub-module level

- C Maintaining electronic switched and microprocessor-based remote control systems to operational requirements (to sub module level)
- D Working efficiently and effectively
- E Using tools and test equipment correctly
- F Following relevant codes of practice, OHS and environmental protection procedures and requirements
- G Completing relevant records and documentation
- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining electronic switched and microprocessor-based remote control systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3; 5.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.2; 2.3; 3.2 to 3.5; 4.2; 4.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 4.3	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2; 3.2 to 3.5; 4.2 to 4.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.3; 3.3 to 3.5; 4.5; 5.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  5.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2; 2.3; 3.2 to 3.5; 4.2 to 4.5; 5.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4; 3.6; 4.6

## UEENEEN017A Install and maintain transmission interface equipment

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to install, test or maintain services	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 The extent of installation, testing or maintenance is determined from job specifications, drawings and regulatory requirements</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others to minimise service disruptions.</p> <p>1.5 Materials needed for installation, testing or maintenance are obtained in accordance with established procedures and checked against job requirements</p> <p>1.6 Tools, equipment and testing devices needed for installation, testing or maintenance are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Install equipment and test services	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 New services and hardware are installed to ensure equipment/system performs to operational requirements.</p> <p>2.3 New service is tested using the appropriate test procedures and commissioning results are documented to industry and workplace requirements.</p> <p>2.4 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p> <p>2.5 Installation and testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.</p>

- |    |                               |     |   |
|----|-------------------------------|-----|---|
| 3. | Diagnose and repair faults    | 3.1 | OHS risk control measures and procedures for carrying out the work are followed   |
|    |                               | 3.2 | A fault and possible cause are narrowed down to system/unit/component using diagnostic fault finding procedures and appropriate test equipment  |
|    |                               | 3.3 | The nature and possible cause of the fault are established and using a range of test equipment to implement approved test procedures  |
|    |                               | 3.4 | Fault system/unit/component is replaced and configured to ensure compatibility with overall system  |
|    |                               | 3.5 | Services covered by the transmission system are tested to ensure all customers needs are met and the fault is 'cleared' from the indicator  |
|    |                               | 3.6 | Faulty equipment is tagged and documented and repair/replacement arrangements are initiated   |
|    |                               | 3.7 | The status of vital services affected is established  |
|    |                               | 3.8 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|    |                               | 3.9 | Diagnosis and fault repair is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 4. | Perform scheduled maintenance | 4.1 | OHS risk control measures and procedures for carrying out the work are followed   |
|    |                               | 4.2 | Routine maintenance is undertaken to ensure equipment is performing as required   |
|    |                               | 4.3 | Remote monitoring is maintained and periodic checks conducted to ensure remote monitoring is functional   |
|    |                               | 4.4 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|    |                               | 4.5 | Scheduled maintenance is performed efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.        |
| 5  | Finalise work and report      | 5.1 | OHS work completion risk control measures and procedures are followed.  |

- 5.2 Appropriate documentation is completed where required with fault/maintenance records being maintained for assessment/monitoring purposes

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining transmission interface equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.2 Enterprise work activities records
- 2.3.13 Using supervisory control and data acquisition systems
- 2.4.11 Personal computers, hardware basic
- 2.4.16 Personal computers, engineering applications software basic
- 2.4.13 Computer peripherals
- 2.5.4 Technical standards, regulations and codes rail networks
- 2.5.10 Technical manuals and catalogues
- 2.10.1.1 Electronic communications, principles
- 2.14.6 Rail signalling, electronic equipment
- 2.14.7 Rail signalling, computer-based equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.10 Rail signalling, remote control systems
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State or Territory codes of practice and safe working requirements
- Equipment and systems relevant to the rail network for which competency is sought
- Code of practice for Defined Interstate Rail Networks
- Installing and maintaining with at least five items of equipment with different transmission interface functions
- Locating and rectifying at least two different faults in each item of transmission interface equipment

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its

‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and maintain transmission interface equipment as described in 7) and including:
    - A Interpreting specifications, plans and circuit diagrams correctly,
    - B Responding to fault indicators appropriately,
    - C Using appropriate diagnostic and fault finding techniques
    - D Installing, maintaining and confirming integrity of transmission interface equipment to operational standards

- E Organising work to minimise traffic disruptions
- F Using tools and test instruments correctly
- G Following relevant codes of practice, OHS and environmental protection procedures and requirements
- H Completing relevant records and documentation
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining transmission interface equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 5.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 3.2; 3.3; 4.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2; 3.2; 3.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3; 3.2; 3.3; 4.3	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  5.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 2.2; 2.3; 3.2 to 3.7; 4.2; 4.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4; 3.8; 4.4

## **UEENEEN018A Find and repair wiring system faults**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers finding and repairing faults with signal, data, and power wiring systems. It encompasses safe working, regulatory requirements and following work procedures, predicting likely wiring system faults, using appropriate fault finding techniques, repairing or rectifying faults and reporting.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      4      Writing      4      Numeracy      4
<b>Application of the Unit</b>	<b>3)</b>  This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.
<b>Competency Field</b>	<b>4)</b>  Rail

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to find and repair wiring system faults	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p> <p>1.4 Appropriate persons are consulted to establish the nature of the fault and to coordinate effectively with others affected by the fault.</p> <p>1.5 Likely causes of the fault and order of probability are determined from system data and historical trend.</p> <p>1.6 Impact of the fault on system is ascertained and appropriate personnel notified in accordance with established procedures.</p> <p>1.7 Materials needed to find and repair the fault are obtained in accordance with established procedures and checked against job requirements</p> <p>1.8 Tools, equipment and testing devices needed to find and repair the fault are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.9 Circuits/equipment are checked as being isolated where necessary in strict accordance operational procedures and OHS requirements.</p>
2 Find wiring system faults	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of cable performance parameters is applied to appropriate fault finding techniques.</p> <p>2.3 Tests are conducted to determine the type and finding of the fault.</p>

- |   |                               |   |
|---|-------------------------------|---|
|   | 2.4                           | Wiring system is visually inspected for physical damage or installation defects where necessary.  |
|   | 2.5                           | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.   |
|   | 2.6                           | Ongoing checks of the wiring system are undertaken to confirm the continued existence of the fault.   |
|   | 2.7                           | Faults are located and identified efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Implement fault rectification |   |
|   | 3.1                           | OHS risk control measures and procedures for carrying out the work are followed.  |
|   | 3.2                           | Wiring system faults are rectified in accordance with established procedures  |
|   | 3.3                           | Unresolved faults are reported to appropriate persons for further action in accordance with established procedures.   |
|   | 3.4                           | Inspection and test results actions taken or recommended are documented and appropriate person(s) notified in accordance with established procedures.                               |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing of faults with signal, data, and power wiring systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.2.2   | Enterprise work activities records                          |
| 2.4.16  | Personal computers, engineering applications software basic |
| 2.4.13  | Computer peripherals  |
| 2.5.4   | Technical standards, regulations and codes rail networks    |
| 2.5.10  | Technical manuals and catalogues                            |
| 2.5.11  | Environmental and heritage awareness                        |
| 2.9.3.2 | Inverters   |

2.9.3.3	Electronic switching
2.9.11	Linear and switch mode power supplies
2.10.1.1	Electronic communications, principles
2.11.8	Data and voice cabling testing and testing devices
2.14.6	Rail signalling, electronic equipment
2.14.7	Rail signalling, computer-based equipment
2.14.8	Rail signalling, computer applications
2.14.10	Rail signalling, remote control systems
2.14.11.1	Rail signalling interlocking systems, electrical
2.14.11.2	Rail signalling interlocking systems, mechanical
2.14.12	Rail signalling, power supplies
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State or Territory codes of practice and safe working requirements
- Equipment and systems relevant to the rail network for which competency is sought
- Code of practice for Defined Interstate Rail Networks
- Finding and repairing three different types of faults on high performance copper data cable and low voltage power wiring systems

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair of faults with signal, data, and power wiring systems, as described in 7) and including:
    - A Interpreting plans and specifications correctly
    - B Identifying and interpreting fault history
    - C Identifying faults efficiently
    - D Rectifying faults promptly using appropriate diagnostic techniques
    - E Minimising interruption to services
    - F Using testing equipment and tools correctly and safely
    - G Confirming the integrity of the wiring system
    - H Following relevant codes of practice
    - I Completing relevant records
    - J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:  
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:  
Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing of faults with signal, data, and power wiring systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:  
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 2.3; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 1.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.2; 2.3	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.2	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.3; 2.6	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.2 to 2.6; 3.2; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEN019A Test equipment and isolate faults

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers the testing and isolation of signalling equipment and infrastructure. It encompasses safe working, regulatory requirements, work procedures, checking of operational and functional capabilities and the isolation of signalling equipment and infrastructure and reporting.</p>

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to test and/or isolate equipment	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.</p> <p>1.4 Testing is appropriately sequenced in accordance with job schedule.</p> <p>1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.6 Location of equipment to be tested/isolated is determined from job specifications and diagrams.</p> <p>1.7 Materials needed for testing obtained in accordance with established procedures and checked against job requirements.</p> <p>1.8 Tools, equipment and testing devices needed to test and/or isolate are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Test and/or isolate equipment.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 All consumables are used and disposed of in compliance with material safety sheets and OHS codes and practices.</p> <p>2.3 Application of on-track safety requirements is performed to enterprise standards</p> <p>2.4 Initial visual check of operational equipment is performed to identify any equipment faults.</p> <p>2.5 Identified equipment is isolated in accordance with relevant operational rules and procedures</p>

- |  |     |  |
|--|-----|--|
|  | 2.6 | Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.  |
|  | 2.7 | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
| 3. Check equipment operation.                      | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|  | 3.2 | Approval to conduct a check of equipment operation is obtained in accordance with relevant operational rules and procedures.                                     |
|  | 3.3 | Track clearance check is made before conducting equipment operation check to ensure safe train movement.   |
|  | 3.4 | Authorised equipment check is carried out in accordance with operating procedures to identify any equipment faults.  |
|  | 3.5 | Operational effectiveness of equipment is confirmed through observation during train movements if required.  |
|  | 3.6 | Equipments faults are correctly identified, recorded and appropriate corrective action is taken.   |
|  | 3.7 | Service equipment is locked and secured to prevent unauthorised access.  |
|  | 3.8 | Work completion is documented and appropriate person(s) notified in accordance with established procedures.  |
| 4. Finalise testing and/or isolation of equipment. | 4.1 | OHS work completion risk control measures and procedures are followed.   |
|  | 4.2 | Test results are documented in accordance with organisation requirements and faulty or replaced equipment is tagged and dispatched to maintain equipment spares. |
|  | 4.3 | Fully operational equipment is handed over to approved personnel ensuring that hand over procedures are accurately followed and final documentation is completed |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and . The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.2 Enterprise work activities records
- 2.4.11 Personal computers, hardware structure
- 2.4.16 Personal computers, engineering applications software basic
- 2.4.13 Computer peripherals
- 2.5.4 Technical standards, regulations and codes rail networks
- 2.5.10 Technical manuals and catalogues
- 2.5.11 Environmental and heritage awareness
- 2.9.3.2 Inverters
- 2.9.3.3 Electronic switching
- 2.9.11 Linear and switch mode power supplies
- 2.10.1.1 Electronic communications, principles
- 2.14.1 Basic rail operations
- 2.14.2.2 Rail signalling principles, mechanical
- 2.14.3 Rail signalling, mechanical equipment
- 2.14.5 Rail signalling, point actuators devices
- 2.14.6 Rail signalling, electronic equipment
- 2.14.7 Rail signalling, computer-based equipment
- 2.14.8 Rail signalling, computer applications
- 2.14.11.2 Rail signalling, interlocking systems, mechanical
- 2.14.13 Rail signalling, electro-pneumatic equipment
- 2.14.14 Rail signalling, drawings and diagrams
- 2.14.15 Rail signalling, regulations and codes

- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.5 Rail safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State/Territory codes of practice and safe working requirements.
- Equipment relevant to a particular rail network.
- Code of practice for the defined interstate rail network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material

present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Test equipment and isolate faults as described in 7) and including:
    - A Interpreting specifications correctly
    - B Application of on-track safety requirements to enterprise standards
    - C Testing that equipment is fully functional after testing

and isolation

- D Checking that technical/operational specifications are met and that equipment is in compliance with work orders
- E Applying effective fault diagnosis techniques
- F Ensuring safe train movement through work area
- G Following relevant codes of practice, OHS and environmental protection procedures and requirements
- H Completing relevant records and documentation
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining computerised interlocking equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.6; 1.7;	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 3.2;	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5; 3.4;	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7 and 3.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.6;	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.2 and 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3 and 2.7;

## **UEENEEN020A      Install electrical power and control equipment for rail networks**

### **Unit Descriptor**

**1)**

This unit covers installation of electrical power and control equipment. It encompasses working safely and to installation/maintenance standards, matching equipment with that specified for a given location, terminating cables and connecting wiring, compliance and functional testing and completing the necessary installation documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Competency in this unit shall be assessed only after the relevant workplace requirements in ‘Work site protection’ have been acquired.

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit shall apply to qualifications in installation and maintenance of rail signalling electrical power and control systems.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may only be practised in the workplace under regulations related to electrical work, the codes of practice and regulations of the State/Territory in which the work is carried out. This includes the ‘Code Of Practice for the Define Interstate Rail Network’ for work carried out on that network.

### **Competency Field**

**4)**

Rail

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to install electrical power and/or control equipment.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards which have not previously been identified are noted, and established risk control measures are implemented.</p> <p>1.4 Nature of the work and location of electrical power and/or control equipment is determined by site inspection and from job instructions, specifications and/or diagrams.</p> <p>1.5 Materials needed for the installation work are obtained in accordance with established procedures and checked against job requirements.</p> <p>1.6 Tools, equipment and testing devices needed to install electrical power and/or control equipment are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Install electrical power and/or control equipment	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Where applicable on-track safety requirements are complied with to enterprise standards</p> <p>2.2 Power and/or control equipment is installed to comply with technical standards and job specifications and requirements.</p> <p>2.3 Wiring is run and cables terminated to comply with technical standards and job specifications and requirements.</p> <p>2.4 Tests are conducted to ensure installed electrical power and/or equipment comply with specifications and functions as intended.</p> <p>2.5 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.</p>

		2.6	Installation of electrical power and/or control equipment is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3	Test electrical power and/or control equipment	3.1	OHS risk control measures and procedures for carrying out the work are followed.
		3.2	Correct functioning of equipment is established by reference to manuals, system specifications and commissioning data.
		3.3	Faults are identified by reference to appropriate technical information and applying knowledge of power operated signalling equipment and logical fault finding techniques.
		3.4	Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer specifications and enterprise requirements.
		3.5	Tests are conducted to ensure electrical power and/or control equipment comply with specifications and functions as intended.
		3.6	Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
4	Complete installation of electrical power and/or control equipment.	4.1	OHS work completion risk control measures and procedures are followed.
		4.2	Work site is cleaned and made safe in accordance with established procedures.
		4.3	Work completion is documented and appropriate person(s) notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing electrical power and control equipment for rail networks. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 – Part 2.2 EKAS. It forms an integral part of this unit.

2.2.2 Enterprise work activities records

2.4.16	Personal computers, engineering applications software basic
2.5.4	Technical standards, regulations and codes rail networks
2.5.10	Technical manuals and catalogues
2.9.3.2	Inverters
2.9.3.3	Electronic switching
2.9.11	Linear and switch mode power supplies
2.14.12	Rail signalling, power supplies
2.14.13	Rail signalling, electro-pneumatic equipment
2.14.14	Rail signalling, drawings and diagrams
2.14.15	Rail signalling, regulations and codes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.5	Rail safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State or Territory codes of practice and safe working requirements
- Equipment relevant to a particular rail network
- Code of practice for Defined Interstate Rail Networks

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified

in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install electrical power and control equipment for rail networks as described in 7) and including:
    - A Interpreting specifications and circuit diagrams correctly
    - B Maintaining, repairing and installing power supplies and control equipment correctly
    - C Using appropriate diagnostic and fault finding techniques
    - D Using tools and test instruments correctly
    - E Following relevant codes of practice, procedures and requirements
    - F Completing relevant records and documentation
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing electrical power and control equipment for rail networks.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2; 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.5	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 3.1 to 3.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.6

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- The relevant State or Territory codes of practice and safe

working requirements

- Equipment relevant to a particular rail network
- Code of practice for Defined Interstate Rail Networks

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Section 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety issues inherent in working with electricity, electrical equipment, gas or any other hazardous substance/material present a challenge for those determining competence. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Co-ordinate and manage track protection as described in 7) and including:
    - A Interpreting specifications correctly
    - B Application of on-track safety requirements to enterprise standards
    - C Checking that track safety specifications are met and that protection is in compliance with enterprise standards
    - D Ensuring safe train movement through work area
    - E Following relevant codes of practice, OHS and environmental protection procedures and requirements
    - F Completing relevant records and documentation
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items.

Note:  
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:  
Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in co-ordinating and managing track protection.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:  
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 2.2; 3.8	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 3.8	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8; 2.2 to 3.2; 3.3	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.8; 2.9	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.6; 2.10	1

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
