|   |  | 3.5 | Appropriate records are updated in accordance with instructions and established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and identifying effects of energy on machinery and materials in an electrotechnology environment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.15.2 Applied physics concepts

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to identifying effects of energy on machinery and materials in electrotechnology environments in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation

- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Identify effects of energy on machinery and materials in an electrotechnology environment as described in 7) and including:
    - A Understanding work instruction.
    - B Obtaining and checking tools and equipment.
    - C Following work schedules.
    - D Identifying the effects of energy appropriately.
    - E Returning tools and surplus resources as required.
    - F Updating work records.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:  
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:  
Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in identifying effects of energy on machinery and materials in an electrotechnology environment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:  
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	1.1; 1.2; 2.3; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 2.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4, 3.1	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  3.3	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  3.1

## UEENEEE047A Identify building techniques, methods and materials used in electrotechnology work activities

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers identifying a range of techniques, methods and materials used in Electrotechnology work activities including types of fixing devices, segregation requirements, fixing structures, walls and floor structures, lifting techniques and other related building materials.</p> <p>It encompasses working safely, applying knowledge of identifying building techniques, methods and materials used in electrotechnology work activities.</p>						
<b>Prerequisite Unit(s)</b>	2)						
<b>Competencies</b>	<p>2.1)</p> <p>There are no prerequisite units for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p>2.2)</p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p>3)</p> <p>This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.</p>						
<b>Licence to practise</b>	<p>3.1)</p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.</p> <p>Note:</p> <p>1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.</p>						

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to identify building techniques, methods and materials.

- 1.1 Instructions for identifying building techniques, methods and materials used in electrotechnology work are communicated and confirmed to ensure clear understanding.
- 1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.
- 1.3 Tools, equipment and personnel protective equipment necessary for the work are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.
- 1.4 Appropriate personnel are consulted to ensure the identification of building techniques, methods and materials used is coordinated effectively with others involved.
- 1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures.
- 1.6 Schedule for identifying building techniques, methods and materials used including practices for working safely are confirmed in accordance with instructions and requirements.

2 Identify building techniques, methods and materials.

- 2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents.
- 2.2 Schedule to identify building techniques, methods and materials used is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.

- |   |  |  |  |
|---|--|--|--|
|   | 2.3  | Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions. |  |
|   | 2.4  | Ongoing checks of work quality are undertaken in accordance with instructions and requirements.                |  |
| 3 | Confirm building techniques, methods and materials used. | 3.1  | Final checks are made to ensure the identification of building techniques, methods and materials used conforms with instructions and to requirements.                |
|   |  | 3.2  | Appropriate personnel are notified of completion to identify techniques, methods and materials used.   |
|   |  | 3.3  | Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures. |
|   |  | 3.4  | Work area is cleaned up and made safe and sustainable energy practices are followed.   |
|   |  | 3.5  | Appropriate records are updated in accordance with instructions and established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and identifying building techniques, methods and materials used in electrotechnology work activities.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.2.40   | Electrotechnology Industry organisations and practises |
| 2.5.1.1  | Drawing Interpretation and Sketching                   |

| 2.11.1   | Hand tools   |
| 2.11.2.1 | Power tools  |

2.11.4 Dismantling and assembly techniques

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to identifying building techniques, methods and materials used in electrotechnology work activities in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in

a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Identify building techniques, methods and materials used in electrotechnology work activities as described in 7) and including:
    - A Understanding work instruction.
    - B Obtaining and checking tools and equipment.
    - C Following work schedules.
    - D Returning tools and surplus resources as required.
    - E Updating work records.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in identifying building techniques, methods and materials used in electrotechnology work activities.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the

Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3; 2.4	1
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4; 3.1

## UEENEEE048A Carry out routine work activities in an electrotechnology environment

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers undertake scheduled routine work activities in the Electrotechnology Industry in an agreed time, to a quality standard and with a minimum of waste It encompasses working safely, applying knowledge of carrying out routine work activities in electrotechnology environments.</p>

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to undertake routine work activities.	<p>1.1 Instructions for preparing the work activity are communicated and confirmed to ensure clear understanding.</p> <p>1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.</p> <p>1.3 Tools, equipment and personnel protective equipment necessary for the work are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.</p> <p>1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved.</p> <p>1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures.</p> <p>1.6 Schedule of work including practices for working safely are confirmed in accordance with instructions and requirements.</p>
2 Carry out work as instructed.	<p>2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents.</p> <p>2.2 Schedule of work is followed to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.</p> <p>2.3 Knowledge of electrotechnology practices and electrical principles are applied to routine work activities.</p> <p>2.4 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.</p> <p>2.5 Ongoing checks of work quality are undertaken in accordance with instructions and requirements.</p>

- |   |                                      |     |  |
|---|--------------------------------------|-----|--|
| 3 | Check results of the completed work. | 3.1 | Final checks are made to ensure the work conforms with instructions and to requirements.   |
|   |                                      | 3.2 | Appropriate personnel are notified of completion of the work.  |
|   |                                      | 3.3 | Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures. |
|   |                                      | 3.4 | Work area is cleaned up and made safe and sustainable energy practices are followed.   |
|   |                                      | 3.5 | Appropriate records are updated in accordance with instructions and established procedures.  |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out routine work activities in an electrotechnology environment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |  |
|---------|--|
| 2.2.40  | Electrotechnology Industry organisations and practises |
| 2.8.1.2 | Fundamental electrical principles                      |
| 2.8.2.1 | Direct current circuit principles                      |
| 2.18.1  | Occupational Health and Safety principles              |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out routine work activities in electrotechnology environments in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics

- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included

for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out routine work activities in an electrotechnology environment as described in 7) and including:
    - A Understanding work instruction.
    - B Obtaining and checking tools and equipment.
    - C Following work instructions.
    - D Returning tools and surplus resources as required.
    - E Updating work records.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out routine work activities in an electrotechnology environment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	1.4; 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 2.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  1.3; 3.3	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 3.3

## **UEENEEE049A Contribute to the operation of support plant and equipment used in electricity supply**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers contributing to the operation of support plant and equipment used in the Electricity Supply Industry for scheduled work, in an agreed time, to a quality standard and with a minimum of waste. It encompasses working safely, applying knowledge of contributing to the operation of support plant and equipment used in electricity supply.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite units for this unit.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">3</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">3</td> </tr> </table>	Reading	3	Writing	3	Numeracy	3
Reading	3	Writing	3	Numeracy	3		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.</p> <p>Note:</p> <ol style="list-style-type: none"> <li>1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.</li> <li>2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.</li> </ol>						

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to contribute to operating plant and equipment.

- 1.1 Instructions for preparing to contribute to operating plant and equipment are communicated and confirmed to ensure clear understanding.
- 1.2 OHS policies and procedures are communicated and confirmed to ensure they are understood as they apply to the carrying out of the work.
- 1.3 Tools, equipment and personnel protective equipment necessary for the work are identified, scheduled and checked to ensure they work correctly as intended and are safe to use in accordance with established procedures.
- 1.4 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved.
- 1.5 Resources and materials needed to do the work are confirmed, scheduled and obtained in accordance with established procedures.
- 1.6 Schedule of work including practices for working safely are confirmed in accordance with instructions and requirements.

2 Contribute to operating plant and equipment.

- 2.1 OHS policies and procedures and safe work practices are followed to eliminate or minimise incidents.
- 2.2 Plant and equipment is operated according to schedule of work to ensure work is completed in an agreed time, to a quality standard and with a minimum of waste.
- 2.3 Further instructions are sought from appropriate personnel in the event of unplanned happenings or conditions.
- 2.4 Ongoing checks of work quality are undertaken in accordance with instructions and requirements.

- |   |   |     |  |
|---|---|-----|--|
| 3 | Complete contribution to operating plant and equipment. | 3.1 | Final checks are made to ensure the operation of plant and equipment conforms with instructions and to requirements.   |
|   |   | 3.2 | Appropriate personnel are notified of completion of the work in contributing to operating plant and equipment..  |
|   |   | 3.3 | Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures. |
|   |   | 3.4 | Work area is cleaned up and made safe and sustainable energy practices are followed.   |
|   |   | 3.5 | Appropriate records are updated in accordance with instructions and established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and contributing to the operation of support plant and equipment used in electricity supply.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.40 Electrotechnology organisations and practises
- 2.5.1.1 Drawing Interpretation and Sketching
- 2.8.1.2 Fundamental electrical principles
- 2.8.2.1 Direct current circuit principles
- 2.8.8 Electrotechnology science and materials
- 2.8.13 Parts and components selection
- 2.11.1 Hand tools
- 2.11.2.1 Power tools
- 2.11.4 Dismantling and assembly techniques
- 2.18.17 Powerline safety practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to contributing to the operation of support plant and equipment used in electricity supply in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Contribute to the operation of support plant and equipment used in electricity supply as described in 7) and including:
  - A Understanding work instruction.
  - B Obtaining and checking tools and equipment.
  - C Following work instruction.
  - D Operating plant and equipment safely and correctly.
  - E Returning tools and surplus resources as required.
  - F Updating work records.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in contributing to the operation of support plant and equipment used in electricity supply.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.6; 2.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.1	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.3	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.2; 2.4; 3.1

## UEENEEE050A Undertake computations in an electrotechnology environment

### Unit Descriptor

1)

This unit covers computational and mathematical procedures to solve problems or to enhance given data. It encompasses working safely, applying knowledge of undertaking computations in electrotechnology environment.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite units for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.

### Competency Field

4)

Electrotechnology

### ELEMENT

### PERFORMANCE CRITERIA

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1	Prepare to undertake computations.	1.1	Computational activities are planned and prepared to ensure OHS policies and procedures are followed, with the work appropriately sequenced in accordance with requirements.
		1.2	Data for computations are obtained and verified in accordance with established procedures and to comply with requirements.
		1.3	Location in which activities are undertaken or data gathered is determined from job requirements.
		1.4	Materials/devices needed to carry out the computations are obtained in accordance with established procedures.
2	Undertake computations.	2.1	OHS policies and procedures for undertaking monitoring activities are followed.
		2.2	Computations are undertaken in accordance with requirements.
		2.3	Unplanned events or conditions are responded to in accordance with established procedure.
		2.4	Ongoing checks of the quality/accuracy of the work are undertaken in accordance with established procedures.
3	Complete monitoring activities.	3.1	Computations are verified and checked against estimates.
		3.2	Documentation/reports/computations are completed to ensure all requirements are met.
		3.3	Work completion is notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and undertaking computations in an electrotechnology environment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.15.1 Applied mathematical concepts

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to undertaking computations in an electrotechnology environment in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Undertake computations in an electrotechnology environment as described in 7) and including:
  - A Understanding transporting instructions.
  - B Checking transport details against job instruction.
  - C Obtaining relevant plant and equipment.
  - D Transporting plant and equipment in accordance with requirements.
  - E Undertaking computations in accordance with requirements.
  - F Notifying work completing.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in undertaking computations in an electrotechnology environment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  All	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  3.2	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  N/A	

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## UEENEEE051A Transport apparatus and materials

### Unit Descriptor

1)

This unit covers transport apparatus, plant accessories and materials. It encompasses safe working practices and following work processes that satisfy electrical principles for transporting apparatus and materials.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite units for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to persons entering work in electrotechnology and may be used in school-based vocational programs.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to Occupational Health and Safety and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

### Competency Field

4)

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Plan and prepare for the transport of apparatus and materials.	<p>1.1 Transport of apparatus and materials is planned and prepared to ensure OHS policies and procedures are followed, the work is appropriately sequenced in accordance with requirements.</p> <p>1.2 Appropriate personnel are consulted to ensure apparatus, accessories, plant, equipment and/or materials are appropriately identified, and checked against manufacturer transport instructions and requirements.</p> <p>1.3 Transport details of apparatus and materials are checked against job requirements.</p> <p>1.4 Plant needed to carry out the work is obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.5 Where appropriate, team and individual work roles and responsibilities within the team are identified.</p> <p>1.6 Preparatory work is checked to ensure no damage has occurred and complies with requirements.</p>
2 Transport apparatus and materials.	<p>2.1 OHS policies and procedures for the transport of apparatus plant and materials are followed.</p> <p>2.2 Apparatus, plant and materials are transported in accordance with requirements, and manufacturer transport instructions without damage or distortion to the surrounding environment or services.</p> <p>2.3 Unplanned events or conditions are responded to in accordance with established procedure.</p> <p>2.4 Approval is obtained in accordance with established procedures from appropriate personnel before any contingencies are implemented.</p> <p>2.5 Ongoing checks of the work quality are undertaken in accordance with established procedures.</p>
3 Check and notify completion of work.	3.1 Final inspections are undertaken to ensure the transported apparatus and materials conforms to requirements.

- 3.2 Work completion is notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and transporting apparatus and materials.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.2.4 Problem solving techniques
- 2.2.5 Enterprise customer relations protocols
- 2.2.9 Enterprise stock control methods
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to transporting apparatus and equipment in any of the following disciplines:

- Appliances
- Business equipment
- Computers
- Data Communications
- Electrical
- Electrical Machines
- Electronics
- Fire protection
- Instrumentation
- Refrigeration and Air Conditioning
- Renewable / sustainable energy
- Security technology

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Transport apparatus and materials as described in 7) and including:
    - A Transporting apparatus.
    - B Transporting equipment.
    - C Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and  
specific  
resources for  
assessment**
**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in transporting apparatus and materials.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2; 2.4; 3.1 to 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: All	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.2; 2.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  N/A	
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  All	1

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.3

## UEENEEE060A Provide solutions for uses of materials and thermodynamic effects

### Unit Descriptor

1)

This unit covers the solution for the appropriate selection and use of materials and thermodynamic effects relative to an engineering problem. It encompasses working safely, problem solving procedures, including using measuring instruments, applying appropriate theorems and providing solutions derived from measurements and calculations and justification for such solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A Apply OHS practices in the workplace

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE007A Use drawings, diagrams, schedules and manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher. It may also be suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the characteristics and

behaviour of material in an engineering environment.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to provide solutions for the uses of materials and thermodynamics.

- 1.1 OHS procedures for a given work area are obtained and understood
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of equipment and products that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices necessary for the work are obtained and checked for correct operation and safety.

2 Provide solutions for the uses of materials and thermodynamics.

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure active systems is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Systems are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Established methods are used to solve system problems from measure and calculated values, as they apply to materials and thermodynamics.
- 2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.

- |   |   |  |
|---|---|--|
|   | 2.6   | Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices with the minimum waste and rework. |
| 3 | Complete work and document solutions to discovered problem. | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 Justification for solutions used to solve system problems is documented.   |
|   |   | 3.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions for uses of materials and thermodynamic effects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.21.9  | Material science                          |
| 2.21.10 | Thermodynamics                            |
| 2.18.1  | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to analysing materials and thermodynamic effects relative to two different engineering applications.

Note.

Typical engineering applications are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide solutions for uses of materials and thermodynamic effects as described in 7) and including:
    - A Determining the characteristics and application of materials and the effects of thermodynamics.
    - B Using established problem solving methods.
    - C Taking relevant measurements accurately.
    - D Interpreting measured values appropriately.
    - E Providing effective solutions to system problems from measurements and calculations.
    - F Giving written justification of solutions provided.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing solutions for uses of materials and thermodynamic effects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	3

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5

## UEENEEE061A Analyse static and dynamic parameters of equipment

### Unit Descriptor

1)

This unit covers the analysis of static and dynamic parameters of equipment associated with plant and machinery. It encompasses working safely, applying extensive knowledge of equipment operation and construction and its application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE001A	Apply OHS practices in the workplace
UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE007A	Use drawings, diagrams, schedules and manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to analyse static and dynamic parameters of machinery.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of the machine analysis is determined from performance specifications and situation reports and in consultation with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Strategies are identified to ensure efficient development and implementation of solution(s).

2 Analyse static and dynamic parameters of machinery.

- 2.1 OHS risk control work measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of statics and dynamics are applied to developing analytical solutions to machine parameters.
- 2.3 Parameters, specifications and performance requirements in relation to each machine analysed are obtained in accordance with established procedures.
- 2.4 Approaches to analysing machine parameters are carried out so as to provide the most effective solution.

	2.5	Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.
	2.6	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.
3	Document and report the results of the analysis of static and dynamic parameters of machines.	
	3.1	Solutions to machine analysis are tested to determine their effectiveness and modified where necessary.
	3.2	Analysis is documented including details of all findings, calculations and assumptions.
	3.3	Analysis is reported to appropriate personnel to establish action to be taken based on findings.
	3.4	Justification for findings, and any actions to be undertaken in relation to the equipment, is documented for inclusion in work/project or development records in accordance with professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing static and dynamic parameters of equipment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.21.4 Statics and dynamics

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to analysing static and dynamic parameters on at least two different types of machine.

Note.

Typical machines are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.2; 2.3	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5

## UEENEEE062A **Select drive components for equipment design**

### Unit Descriptor

1)

This unit covers the selection of drive components based on design concepts for the operation of plant and equipment. It encompasses working safely, applying extensive knowledge of drive component operation and characteristics, their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical drive components are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE061A Analyse static and dynamic parameters of equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5

Electrotechnology

**ELEMENT****PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to select drive components.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 The extent of the drive selection is determined from performance specifications and situation reports and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Strategies are identified to ensure efficient development and implementation of solution(s).</p>
2 Select drive components	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of drive components is applied to engineering design concepts.</p> <p>2.3 Parameters, specifications and performance requirements in relation to drive components are established in accordance with established procedures.</p> <p>2.4 Drive components are selected to provide the most effective solution(s).</p> <p>2.5 Unplanned events are dealt with safely and effectively and consistent with regulatory requirements and enterprise policy.</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.</p>

- |   |   |     |   |
|---|---|-----|---|
| 3 | Document and report the results of the selection of drive components relative to engineering design concepts. | 3.1 | Selection of drive components is tested to determine their effectiveness and modified where necessary.  |
|   |   | 3.2 | Selection is documented including details of all findings, calculations and assumptions.  |
|   |   | 3.3 | Selection is reported to appropriate personnel to establish action to be taken based on findings.   |
|   |   | 3.4 | Justification for selection and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting drive components for equipment design.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.21.2 Mechanical drives and engineering

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to selection of two different types of drive components.

Note.

Typical drive components are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with mechanical drive malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Selecting drive components for equipment design as described in 7) and including:
    - A Understanding drive components relative to engineering design concepts.
    - B Forming effective strategies for selecting drive components.
    - C Obtaining drive component parameters, specifications and performance requirements appropriate to each situation.
    - D Testing the results of the selection.
    - E Documenting instruction for implementing any actions resulting from the selection that incorporates risk control measure to be followed.
    - F Documenting justification of actions to be

implemented in accordance with professional standards.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in selecting drive components for equipment design.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE063A Analyse materials for suitability in equipment

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2,

Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEE063A Analyse materials for suitability in equipment

### Unit Descriptor

1)

This unit covers the analysis of materials for their suitable use in the construction of equipment. It encompasses working safely, apply extensive knowledge of materials and their properties as they relate to equipment construction and operation, gathering and analysing data, applying problem solving techniques, developing and documenting findings, solutions and providing alternatives.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE0061A Analyse static and dynamic parameters of equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Electrotechnology

**ELEMENT****PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to analyse materials.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 The extent of the machine analysis is determined from performance specifications and situation reports and in consultation with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Strategies are identified to ensure efficient development and implementation of solution(s).</p>
2 Analyse materials.	<p>2.1 OHS risk control work measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of materials is applied to developing machine parts.</p> <p>2.3 Characteristics, specifications and performance requirements in relation to materials are obtained in accordance with established procedures.</p> <p>2.4 Approaches to analysing materials are carried out so as to provide the most effective solution.</p> <p>2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.</p>
3 Document and report the results of the materials analysis.	<p>3.1 Solutions to materials analysis are tested to determine their effectiveness and modified where necessary.</p> <p>3.2 Analysis is reported to appropriate personnel to establish action to be taken based on findings.</p>

- 3.3 Analysis is reported to appropriate personnel to establish action to be taken based on findings.
- 3.4 Justification for findings and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and analysing materials for suitability in equipment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.21.3 Materials and strengths of materials
- 2.18.1 Occupational health and safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to analysing 4 different types of materials.

Note.

Typical materials are those encountered in meeting performance requirements and compliance standards, characteristics and operating parameters.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Analyse materials for suitability in equipment as described in 7) and including:
    - A Understanding the material properties.
    - B Forming effective strategies for analysing machine performance.
    - C Obtaining machine characteristics, specifications and performance requirements appropriate to each situation.
    - D Testing the results of the analysis.
    - E Documenting instruction for implementing any actions resulting from the analysis that incorporates risk control measure to be followed.
    - F Documenting justification of actions to be implemented in accordance with professional standards.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in analysing materials for suitability in equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE062A Select drive components for equipment design

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5
---	--	---

## UEENEEE064A Design machine drives and production layout plans

### Unit Descriptor

1)

This unit covers the design of machine drives and the layout of machinery for the efficient production of goods produced by automated equipment. It encompasses working safely, applying extensive knowledge of machine drives and equipment layout arrangements, their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical machine drives and production layout plans are those encountered in meeting performance requirements and compliance standards, production requirements and efficient use of materials and human resources.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE062A	Select drive components for equipment design
UEENEEE063A	Analyse materials for suitability in equipment
UEENEEE026A	Provide solutions to pneumatic/hydraulic system operations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety, codes of work practice and standard work procedures related to the operation of automated machinery.

**Competency Field 4)**

Electrotechnology

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to design machines and production layout plans.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of the machine design and production layout plans are determined from performance specifications and situation reports and in consultation with relevant persons
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Strategies are identified to ensure efficient development and implementation of solution(s).

2 Design machines and production layout plans

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of machine designs and production layout plans is applied to engineering design concepts.
- 2.3 Parameters, specifications and performance requirements in relation to machine design and production layout plan are established in accordance with established procedures.
- 2.4 Approaches to selecting machine designs and production layout plans are carried out so as to provide the most effective solution.
- 2.5 Unplanned events are dealt with safely and effectively and consistent with regulatory requirements and enterprise policy.

	2.6	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards	
3	Document and report the results of the machine design and production layout plans relative to engineering design concepts.	3.1	Machine design and production layout plan is tested to determine their effectiveness and modified where necessary.
		3.2	Design and layout is documented including details of all findings, calculations and assumptions.
		3.3	Design and layout is reported to appropriate personnel to establish action to be taken based on findings.
		3.4	Justification for design and layout and any actions to be undertaken in relation to the equipment is documented for inclusion in work/project or development records in accordance with professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing machine drives and production layout plans.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.21.1 Machine design and positioning

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to selection of two different types of machine design and two different production layout plans.

Note.

Typical machine designs and production layout plans are those encountered in meeting performance requirements and compliance standards, the initial design or revising a machine operating parameters and dealing with efficient production processes.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design machine drives and production layout plans as described in 7) and including:
    - A Understanding machine design and production layout issue relative to engineering design concepts.
    - B Forming effective strategies for machine designs and plant layout.
    - C Obtaining parameters, specifications and performance requirements appropriate to each situation.
    - D Testing the results of the design and/or layout.
    - E Documenting instruction for implementing any actions resulting from the design and layout that incorporate risk control measure to be followed.
    - F Documenting justification of actions to be implemented in accordance with professional standards.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing machine drives and production layout plans.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEEE070A Write specifications for computer systems engineering projects**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers developing requirement to be incorporated into the writing of specifications for computer systems engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.</p>

<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Electrotechnology</p>						

### **ELEMENT**

### **PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare specification requirements.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2	Established techniques for specification writing are reviewed are adopted in accordance with organisation policies.
	1.3	The scope of the specification is established using a formal evaluation/survey processes.
	1.4	Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).
2 Write specification.	2.1	Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.
	2.2	Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.
	2.3	Competent persons required for the project are identified and their roles specified in the specification.
	2.4	Specification is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5	Specification is developed in accordance with organisation policies and procedures.
3 Approval of specification is obtained.	3.1	Specification is presented and discussed with person(s) of higher authority.
	3.2	Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.
	3.3	Specification is finalised and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

**6)** This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for computer systems engineering projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.11.2 Specification development
- 2.2.19 Customer/client relations
- 2.2.20 Computer use basics
- 2.2.25 Research concepts
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a specifications for at least one medium sized computer systems engineering project

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Write specifications for computer systems engineering projects as described in 7) and including:
  - A Establishing the scope and parameters of the specification.
  - B Determining the impact of other related works.
  - C Developing the specification incorporating scenarios and all requirements.
  - D Identifying competencies required for the specification.
  - E Writing specifications.
  - F Negotiating alterations to the proposed specification successfully.
  - G Obtaining approval of the final specification.
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in writing specifications for computer systems engineering projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  All	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4;	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2

## UEENEEE071A Write specifications for electrical engineering projects

### Unit Descriptor

1)

This unit covers developing requirement to be incorporated into the writing of specifications for electrical engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit should be assessed in conjunction with other technical units in a qualification.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships

### Competency Field

4)

Electrotechnology

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for electrical engineering projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.11.2 Specification development
- 2.2.19 Customer/client relations
- 2.2.20 Computer use basics
- 2.2.25 Research concepts
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a specifications for at least one medium sized electrical engineering project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Write specifications for electrical engineering projects as described in 7) and including:
  - A Establishing the scope and parameters of the specification.
  - B Determining the impact of other related works.
  - C Developing the specification incorporating scenarios and all requirements.
  - D Identifying competencies required for the specification.
  - E Writing specifications.
  - F Negotiating alterations to the proposed specification successfully.
  - G Obtaining approval of the final specification.
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in writing specifications for electrical engineering projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: All	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2

## **UEENEEE072A Write specifications for electronics and communications engineering projects**

### **Unit Descriptor**

**1)**

This unit covers developing requirement to be incorporated into the writing of specifications for electronics and communication engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

### **Prerequisite Unit(s)**

Electrotechnology

## **ELEMENT**

## **PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare specification requirements.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2	Established techniques for specification writing are reviewed and adopted in accordance with organisation policies.
	1.3	The scope of the specification is established using a formal evaluation/survey processes.
	1.4	Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).
2 Write specification.	2.1	Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.
	2.2	Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.
	2.3	Competent persons required for the project are identified and their roles specified in the specification.
	2.4	Specification is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5	Specification is developed in accordance with organisation policies and procedures.
3 Approval of specification is obtained.	3.1	Specification is presented and discussed with person(s) of higher authority.
	3.2	Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.
	3.3	Specification is finalised and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

**6)** This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for electronics and communications engineering projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.11.2 Specification development
- 2.2.19 Customer/client relations
- 2.2.20 Computer use basics
- 2.2.25 Research concepts
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a specification for at least one medium sized electrical engineering project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:

  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Write specifications for electronics and communications engineering projects as described in 7) and including:
  - A Establishing the scope and parameters of the specification.
  - B Determining the impact of other related works.
  - C Developing the specification incorporating scenarios and all requirements.
  - D Identifying competencies required for the specification.
  - E Writing specifications.
  - F Negotiating alterations to the proposed specification successfully.
  - G Obtaining approval of the final specification.
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in writing specifications for electronics and communications engineering projects

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.4 to 1.4; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  All	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2

## **UEENEEE073A Write specifications for refrigeration and air conditioning engineering projects**

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers developing requirement to be incorporated into the writing of specifications for refrigeration and air conditioning engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.</p>

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare specification requirements.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for specification writing are reviewed and adopted in accordance with organisation policies.</p> <p>1.3 The scope of the specification is established using a formal evaluation/survey processes.</p> <p>1.4 Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).</p>
2 Write specification.	<p>2.1 Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.</p> <p>2.2 Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.</p> <p>2.3 Competent persons required for the project are identified and their roles specified in the specification.</p> <p>2.4 Specification is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.5 Specification is developed in accordance with organisation policies and procedures.</p>
3 Approval of specification is obtained.	<p>3.1 Specification is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p> <p>3.3 Specification is finalised and approval obtained from appropriate person(s).</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for refrigeration and air conditioning engineering projects.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.19	Customer/client relations
2.2.20	Computer use basics
2.2.11.2	Specification development
2.2.25	Research concepts
2.18.8.2	Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a specification for at least one medium sized electrical engineering project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Write specifications for refrigeration and air conditioning engineering projects as described in 7) and including:
    - A Establishing the scope and parameters of the specification.
    - B Determining the impact of other related works.
    - C Developing the specification incorporating scenarios and all requirements.
    - D Identifying competencies required for the specification.
    - E Writing specifications.
    - F Negotiating alterations to the proposed specification successfully.
    - G Obtaining approval of the final specification.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in writing specifications for refrigeration and air conditioning engineering projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: All	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	3

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2

## UEENEEE074A Write specifications for renewable energy engineering projects

### Unit Descriptor

1)

This unit covers developing requirement to be incorporated into the writing of specifications for renewable energy engineering projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit should be assessed in conjunction with other technical units in a qualification.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships

### Competency Field

4)

Electrotechnology

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare specification requirements.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for specification writing are reviewed and adopted in accordance with organisation policies.</p> <p>1.3 The scope of the specification is established using a formal evaluation/survey processes.</p> <p>1.4 Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).</p>
2 Write specification.	<p>2.1 Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.</p> <p>2.2 Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.</p> <p>2.3 Competent persons required for the project are identified and their roles specified in the specification.</p> <p>2.4 Specification is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.5 Specification is developed in accordance with organisation policies and procedures.</p>
3 Approval of specification is obtained.	<p>3.1 Specification is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.</p> <p>3.3 Specification is finalised and approval obtained from appropriate person(s).</p>

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for refrigeration and air conditioning engineering projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.11.2	Specification development
2.2.19	Customer/client relations
2.2.20	Computer use basics
2.2.25	Research concepts
2.18.8.2	Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a specification for at least one medium sized electrical engineering project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Write specifications for renewable energy engineering projects as described in 7) and including:
    - A Establishing the scope and parameters of the specification.
    - B Determining the impact of other related works.
    - C Developing the specification incorporating scenarios and all requirements.
    - D Identifying competencies required for the specification.
    - E Writing specifications.
    - F Negotiating alterations to the proposed specification successfully.
    - G Obtaining approval of the final specification.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

es required to assess this unit are listed above in context of assessment’, which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in writing specifications for renewable energy engineering projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: All	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	3

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2

## UEENEEE075A Write specifications for industrial electronics and control projects

### Unit Descriptor

1)

This unit covers developing requirement to be incorporated into the writing of specifications for industrial electronics and control projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit should be assessed in conjunction with other technical units in a qualification.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships

### Competency Field

4)

Electrotechnology

## ELEMENT

## PERFORMANCE CRITERIA

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for industrial electronics and control projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.11.2 Specification development
- 2.2.19 Customer/client relations
- 2.2.20 Computer use basics
- 2.2.25 Research concepts
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a specification for at least one medium sized industrial electronics and control project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Write specifications for industrial electronics and control projects as described in 7) and including:
  - A Establishing the scope and parameters of the specification.
  - B Determining the impact of other related works.
  - C Developing the specification incorporating scenarios and all requirements.
  - D Identifying competencies required for the specification.
  - E Writing specifications.
  - F Negotiating alterations to the proposed specification successfully.
  - G Obtaining approval of the final specification.
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in writing specifications for renewable energy engineering projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary

equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: All	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.2	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2

## UEENEEE077A Write specifications for automated systems projects

### Unit Descriptor

1)

This unit covers developing requirement to be incorporated into the writing of specifications for automated systems projects. It encompasses determining the safety requirements to be met, establishing client expectations, ensuring cost effective solutions are pursued and documenting design and technical requirements.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit should be assessed in conjunction with other technical units in a qualification.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It is intended to apply to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrotechnology

### ELEMENT

### PERFORMANCE CRITERIA

<b>5)</b> Elements describe the essential outcomes of a unit of competency		Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare specification requirements.	1.1	OHS processes and procedures for a given work area are identified, obtained and understood.
	1.2	Established techniques for specification writing are reviewed and adopted in accordance with organisation policies.
	1.3	The scope of the specification is established using a formal evaluation/survey processes.
	1.4	Criteria from other related works impacting on the specification are determined from other relevant documentation, site visits and/or discussion with appropriate person(s).
2 Write specification.	2.1	Specification is developed to include scenarios/requirements established in consultation with appropriate person(s), and regulatory requirements.
	2.2	Specification is developed in collaboration with all relevant design professionals and contractors involved in the project.
	2.3	Competent persons required for the project are identified and their roles specified in the specification.
	2.4	Specification is reviewed against all inputs and adjusted to rectify any anomalies.
	2.5	Specification is developed in accordance with organisation policies and procedures.
3 Approval of specification is obtained.	3.1	Specification is presented and discussed with person(s) of higher authority.
	3.2	Alterations to the specification resulting from the discussion are negotiated with person(s) of higher authority within the constraints of organisation policy.
	3.3	Specification is finalised and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

**6)** This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and writing specifications for automated systems projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.11.2	Specification development
2.2.19	Customer/client relations
2.2.20	Computer use basics
2.2.25	Research concepts
2.18.8.2	Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing a specification for at least one medium sized automated systems project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Write specifications for automated systems projects as described in 7) and including:
  - A Establishing the scope and parameters of the specification.
  - B Determining the impact of other related works.
  - C Developing the specification incorporating scenarios and all requirements.
  - D Identifying competencies required for the specification.
  - E Writing specifications.
  - F Negotiating alterations to the proposed specification successfully.
  - G Obtaining approval of the final specification.
  - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above in Context of and specific resources for assessment, evidence should show demonstrated competency in writing specifications for automated systems projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which

is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: All	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	2.1 to 3.2	2
--	------------	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.4; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.1 to 3.2

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## **UEENEEF001A Lay and connect cabling for direct access to telecommunication services**

### **Unit Descriptor**

**1)**

This unit covers the installation and termination of telecommunications cabling in buildings and premises. It encompasses working safely and to Australian Communications and Media Authority's 'restricted' Cabling Provider Rule, installing telephone line, two-pair (quad) cables, terminating on socket outlets, testing and compliance checks and completing cabling documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE006A Solve problems in data and voice communications circuits

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to customer cabling that terminates directly on permitted sockets and the like, and to the installation, maintenance and modification of indoor, external, underground cabling. Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications, including for example: telecommunications (phones and facsimile), data, including video and multimedia, security and alarms, and fire protection.

**Licence to practise 3.1)**

This unit meets the minimum ACMA ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’. Therefore, skills and knowledge described in this unit may only be practised under the requirements set out in ACMA ‘Restricted’ Cabling Provider Rule.

Practice of this competency standard unit is also subject to regulations directly related to occupational health and safe and contracts of training where they apply.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

- |   |   |
|---|---|
| <p>1 Prepare to lay and connect cabling for direct access to telecommunication services</p> | <p>1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.</p> <p>1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Remote power feeding is identified and established risk control measures prepared.</p> <p>1.4 The nature and location of the work is determined from documentation or discussions with appropriate person(s) to establish the scope of work to be undertaken.</p> <p>1.5 Cable routes are planned within the constraints of the building structure, significant and regulations.</p> |
|---|---|

- 1.6 Earthing requirements are determined with consideration of existing earthing arrangements, where applicable and of cable system earth upper and lower resistance limitations.
  - 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
  - 1.8 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
  - 1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Lay and connect cabling for direct access to telecommunication services
- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 Installed support structure is checked to ensure cable will not be exposed to damage during installation and general operation.
  - 2.3 Sufficient excess is allowed at cable ends to facilitate termination.
  - 2.4 Telecommunication outlet ends of cable are uniquely labelled to match identifier at originating location.
  - 2.5 Cable is placed and secured to maintain safety and interference segregation in accordance with legislative and industry standards.
  - 2.6 Cable ties not tightened to the point of causing cable sheath damage or transmission impairment are trimmed flush to prevent risk of personal damage.
  - 2.7 Cables installed as catenaries or supported by catenaries in external environment shall meet minimum above ground clearances and clearances from hazardous electrical services as per AS/ACIF S009.
  - 2.8 Cables installed underground shall meet minimum depth of cover and segregation from hazardous electrical and other services as per AS/ACIF S009.
  - 2.9 Over-voltage protection devices are fitted to all cable pairs, where required, to suppress voltage surges with the devices protectively earthed. in accordance with AS/ACIF S009.

- 2.10 TRC/CES/Earth wire insulation is protected against damage and TRC/CES and protective earths segregated in accordance with relevant industry and legislative standards AS/ACIF S009.
- 2.11 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.12 Cabling is installed efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
- 2.13 Routine quality checks are carried out to ensure cabling complies with requirements.
- 3. Terminate and test cables and earth wires.
  - 3.1 Established OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Cable sheath removed to allow for correct termination length and without damage to underlying conductors and their insulation.
  - 3.3 Network termination device is installed in accordance to manufacturer specifications and cable pairs neatly and sequentially fanned for termination.
  - 3.4 Conductors are terminated in accordance with recommended colour code sequence using appropriate termination tools in the manufacturer specified manner.
  - 3.5 Cable shield (if applicable) is earthed to manufacturer specifications and relevant industry codes of practice including AS/ACIF S009.
  - 3.6 Visual inspection is undertaken to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity.
  - 3.7 Cable pairs are tested and clearly labelled to provide an accurate identification in accordance with requirements.
  - 3.8 TRC/CES /Earth wires are terminated with connectors recommended by manufacturers in accordance with relevant industry codes of practice including AS/ACIF S009.
  - 3.9 TRC/CES /Earth wire continuity is maintained through out and interface requirements with electrical systems are observed.

- 3.10 TRC/CES /Earthing installation is tested for continuity, insulation resistance and conductive resistance as per relevant industry standards including AS/ACIF S009.
  - 3.11 Compatibility of alterations with existing systems is confirmed and new work tested both in isolation and when integrated with existing systems.
  - 3.12 Procedures for referring non-routine events to immediate supervisor for directions are followed.
  - 3.13 Cabling is terminated efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
  - 3.14 Routine quality checks are carried out and defects rectified to ensure cabling comply with requirements.
- 4 Complete cabling work, records and reporting.
- 4.1 OHS work completion risk control measures and procedures are followed.
  - 4.2 Work site is cleaned and made safe in accordance with established procedures.
  - 4.3 Cabling completion advice is documented and reported in accordance with requirements.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and laying and connecting cabling for direct access to telecommunication services. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.1.1 Telecommunications CPR regulations and installations
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to cabling installations applicable to single telephone line (two-pair) and directly connected to telephone sockets. It includes terminating, placing of cables on support structures and building faces, securing cables correctly for above locations, avoiding cable damage, reading and interpreting drawings,

conducting and interpreting cable test results, applying standards and regulations, and completing the required documentation.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1..

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Laying and connecting cabling for direct access to telecommunication services as described in 7) and including:
    - A Terminating at both network termination device and at least two different outlet types and locations
    - B Placing of cables on support structures and building faces for both internal and external locations
    - C Securing cables correctly for above locations
    - D Avoiding cable damage such as crushing, burning, kinking, sheath twist, cutting and nicking, bending radius
    - E Reading and interpreting drawings related to outlet and service entry location
    - F Conducting and interpreting cable test results
    - G Correctly interpreting and applying standards and

regulations

H Completing the required documentation

I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in laying and connecting cabling for direct access to telecommunication services.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.2; 1.4; 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.6	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.13; 3.2 to 3.6	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.16; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11; 3.12

## **UEENEEF002A Lay and connect cables for multiple access to telecommunication services**

### **Unit Descriptor**

**1)**

This unit covers the laying and termination of telecommunications cabling in buildings and premises. It encompasses working safely and to Australian Communications and Media Authority's 'Open' Cabling Provider Rule, installing multiple telephone line, multi-pair cables, backbone cabling, terminating in socket outlets, termination modules and distributors, testing and compliance checks and completing cabling documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE004A Solve problems in multiple path d.c. circuits

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to customer cabling terminated on distributors and to the installation, maintenance and modification of indoor, external, underground cabling. Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications, including for example: telecommunications (phones and facsimile), data including video and multimedia, security and alarms, and fire protection.

**Licence to practise 3.1)**

This unit meets the minimum ACMA ‘prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved’. Therefore, skills and knowledge described in this unit may only be practised under the requirements set out in ACMA ‘Open’ Cabling Provider Rule.

Practice of this competency standard unit is also subject to regulations directly related to occupational health and safe and contracts of training where they apply.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

- |   |                                  |     |   |
|---|----------------------------------|-----|---|
| 1 | Prepare to lay or alter cabling. | 1.1 | OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.   |
|   |                                  | 1.2 | Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.                             |
|   |                                  | 1.3 | Remote power feeding is identified and established risk control measures prepared.  |
|   |                                  | 1.4 | The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken. |
|   |                                  | 1.5 | Cable routes are planned within the constraints of the building structure, significant and regulations.   |

- 1.6 Earthing requirements are determined with consideration of existing earthing arrangements, where applicable and of cable system earth upper and lower resistance limitations.
  - 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
  - 1.8 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
  - 1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Lay or alter cabling.
- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 Installed support structure is checked to ensure cable will not be exposed to damage during installation and general operation.
  - 2.3 Catenary supports are secured to building structure and tensioned where necessary to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained including adherence to AS/ACIF S009.
  - 2.4 Protective earthing of metal work is installed in accordance with requirements and to industry standards.
  - 2.5 Cables/wires are handled in accordance with manufacturer's application specifications including tension and bending stress requirements.
  - 2.6 Sufficient excess is allowed at cable ends to facilitate termination.
  - 2.7 Telecommunication outlet ends of cable are uniquely labelled to match identifier at originating location.
  - 2.8 Cable is placed and secured to maintain safety and interference segregation in accordance with legislative and industry standards.
  - 2.9 Cable ties not tightened to the point of causing cable sheath damage or transmission impairment are trimmed flush to prevent risk of personal damage.

- 2.10 Cables installed as catenaries or supported by catenaries in external environment shall meet minimum above ground clearances and clearances from hazardous electrical services as per AS/ACIF S009.
- 2.11 Cables installed underground shall meet minimum depth of cover and segregation from hazardous electrical and other services as per AS/ACIF S009.
- 2.12 Over-voltage protection devices are fitted to all cable pairs, where required, to suppress voltage surges with the devices protectively earthed in accordance with AS/ACIF S009.
- 2.13 TRC/CES/Earth wire insulation is protected against damage and TRC/CES and protective earths segregated in accordance with relevant industry and legislative standards AS/ACIF S009.
- 2.14 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.15 Cabling is installed efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
- 2.16 Routine quality checks are carried out to ensure cabling complies with requirements.
- 3. Terminate and test cables and earth wires.
  - 3.1 Established OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Cable sheath removed to allow for correct termination length and without damage to underlying conductors and their insulation.
  - 3.3 Terminating modules are installed in accordance to manufacturer specifications and cable pairs neatly and sequentially fanned for termination.
  - 3.4 Conductors are terminated in accordance with recommended colour code sequence using appropriate termination tools in the manufacturer's specified manner.
  - 3.5 Cable shield (if applicable) is earthed to manufacturer specifications and relevant industry codes of practice including AS/ACIF S009.

- 3.6 Visual inspection is undertaken to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity.
- 3.7 Cable pairs are tested and clearly labelled to provide an accurate identification in accordance with requirements.
- 3.8 TRC/CES/Earth wires are terminated with connectors recommended by manufacturers in accordance with relevant industry codes of practice including AS/ACIF S009.
- 3.9 TRC/CES /Earth wire continuity is maintained through out and interface requirements with electrical systems are observed.
- 3.10 TRC/CES /Earthing installation is tested for continuity, insulation resistance and conductive resistance as per relevant industry standards including AS/ACIF S009.
- 3.11 Earthing system is labelled in accordance with requirements.
- 3.12 Compatibility of alterations with existing systems is confirmed and new work tested both in isolation and when integrated with existing systems.
- 3.13 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 3.14 Cabling is terminated efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
- 3.15 Routine quality checks are carried out and a defect rectified to ensure cabling complies with requirements.
- 4 Complete cabling work, records and reporting.
  - 4.1 OHS work completion risk control measures and procedures are followed.
  - 4.2 Work site is cleaned and made safe in accordance with established procedures.
  - 4.3 Record sheets and plans of cable location, type and infrastructure are accurately created or updated and stored in accordance with customer requirements.

- 4.4 Cable pair record books are created or updated to provide an accurate record of pair locations, inter-connections and usage in accordance with industry codes of practice and AS/ACIF S009.
- 4.5 Cabling completion advice is documented and reported in accordance with requirements.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and laying and connecting cables for multiple access to telecommunication services. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.1 Cable protection and support
- 2.1.2 Cable types and applications
- 2.1.3 Cables in buildings, structures and premises
- 2.1.6.1 Telecommunication cable and conductor terminations
- 2.4.1.2 Telephone system fundamentals
- 2.4.2.1 Telecommunication earthing and protection
- 2.5.7 Technical standards, regulations and codes for telecommunications cabling
- 2.5.11 Environmental and heritage awareness
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to cable laying and connecting applicable to larger commercial and industry installations involving many lines, multi-pair cables, backbone cabling, multi-story buildings and more complicated termination modules and distributors.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Lay and connect cables for multiple access to telecommunication services as described in 7) and including:
    - A Terminating systems at both distributor and outlet locations and at least one 50 pair copper cable, with accurate completion of installation records, drawing alterations and compliance forms
    - B Placing of cables on support structures and building faces for both internal and external locations
    - C Securing cables correctly for above locations
    - D Avoiding cable damage such as crushing, burning, kinking, sheath twist, cutting and nicking, bending radius
    - E Reading and interpreting drawings related to cable layouts, outlet location, cable coding system and identifiers, distributor locations
    - F Conducting and interpreting cable test results
    - G Correctly interpreting and applying standards and regulations

- H Completing the required documentation
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in laying and connecting cables for multiple access to telecommunication services.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE005A Fix and secure equipment
- UEENEEE007A Use drawings, diagrams, schedules and manuals

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.2; 1.4; 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.6	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.13; 3.2 to 3.6	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.16; 4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11; 3.13

## UEENEEF003A **Install and maintain cabling for telecommunication services in lifts**

### **Unit Descriptor**

1)

This unit covers the installation and termination of telecommunications cabling in buildings and premises. It encompasses working safely and to Australian Communications and Media Authority's 'Lift' Cabling Provider Rule, installing multiple telephone line, multi-pair cables, backbone cabling, terminating in socket outlets, termination modules and distributors, testing and compliance checks and completing cabling documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG016A Diagnose and rectify faults in lifts systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to customer cabling terminated on distributors and to the installation, maintenance and modification of indoor, external, underground cabling. Customer cabling, for the purpose of this standard, may be used to connect devices for a range of applications, including for example: telecommunications (phones and facsimile), data including video and multimedia, security and alarms, and fire protection.

### **Licence to practise**

3.1)

This unit meets the minimum ACMA 'prescribed level of knowledge and skill that safeguards matters of health, safety, network integrity and addresses matters of interoperability where customer equipment and standard telephone service are involved'. Therefore, skills and knowledge described in this

unit may only be practised under the requirements set out in ACMA ‘Lifts’ Cabling Provider Rule.

Practice of this competency standard unit is also subject to regulations directly related to occupational health and safe and contracts of training where they apply.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install or alter cabling in lifts

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
- 1.3 Remote power feeding is identified and established risk control measures prepared.
- 1.4 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
- 1.5 Cable routes are planned within the constraints of the building structure,, significant and regulations.
- 1.6 Earthing requirements are determined with consideration of existing earthing arrangements, where applicable and of cable system earth upper and lower resistance limitations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.

- 1.8 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
- 1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Install or alter cabling in lifts.
  - 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 Installed support structure is checked to ensure cable will not be exposed to damage during installation and general operation.
  - 2.3 Catenary supports are secured to building structure and tensioned where necessary to ensure cable weight can be carried in operating conditions with interference and safety segregation maintained including adherence to AS/ACIF S009.
  - 2.4 Protective earthing of metal work is installed in accordance with requirements and to industry standards.
  - 2.5 Cables/wires are handled in accordance with manufacturer application specifications including tension and bending stress requirements.
  - 2.6 Control cubicles, travelling cable supports, junction boxes, line isolator units, back-mount and outlet layout conforms to manufacturer specifications and allows adequate work space for ease of access and avoid overlaying and segregation incoming and outgoing cables.
  - 2.7 Sufficient excess is allowed at cable ends to facilitate termination.
  - 2.8 Telecommunication outlet ends of cable are uniquely labelled to match identifier at originating location.
  - 2.9 Cable is placed and secured to maintain safety and interference segregation in accordance with legislative and industry standards.
  - 2.10 Cable ties not tightened to the point of causing cable sheath damage or transmission impairment are trimmed flush to prevent risk of personal damage.

- 2.11 Cables installed as catenaries or supported by catenaries in external environment shall meet minimum above ground clearances and clearances from hazardous electrical services as per AS/ACIF S009.
  - 2.12 Travelling cables installed and secured to maintain safety and in accordance to relevant legislative, industry and manufacturer’s standards.
  - 2.13 Local Isolation Units are fitted as required by TS001 and AS/ACIF S009.
  - 2.14 Over-voltage protection devices are fitted to all cable pairs, where required, to suppress voltage surges with the devices protectively earthed in accordance with AS/ACIF S009.
  - 2.15 TRC/CES/Earth wire insulation is protected against damage and TRC/CES and protective earths segregated in accordance with relevant industry and legislative standards AS/ACIF S009.
  - 2.16 Procedures for referring non-routine events to immediate supervisor for directions are followed.
  - 2.17 Cabling is installed efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
  - 2.18 Routine quality checks are carried out to ensure cabling complies with requirements.
3. Terminate and test cables and earth wires in lifts.
- 3.1 Established OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Cable sheath removed to allow for correct termination length and without damage to underlying conductors and their insulation.
  - 3.3 Terminating modules are installed in accordance to manufacturer specifications and cable pairs neatly and sequentially fanned for termination.
  - 3.4 Conductors are terminated in accordance with recommended colour code sequence using appropriate termination tools in accordance with manufacturer specifications.
  - 3.5 Cable shield (if applicable) is earthed to manufacturer specifications and relevant industry codes of practice including AS/ACIF S009.

- 3.6 Visual inspection is undertaken to confirm termination colour code sequence has been followed prior to end-to-end testing of wire and pair termination integrity.
- 3.7 Cable pairs are tested and clearly labelled to provide an accurate identification in accordance with requirements.
- 3.8 TRC/CES/Earth wires are terminated with connectors recommended by manufacturers in accordance with relevant industry codes of practice including AS/ACIF S009.
- 3.9 TRC/CES /Earth wire continuity is maintained through out and interface requirements with electrical systems are observed.
- 3.10 TRC/CES /Earthing installation is tested for continuity, insulation resistance and conductive resistance as per relevant industry standards including AS/ACIF S009.
- 3.11 Earthing system is labelled in accordance with requirements.
- 3.12 Compatibility of alterations with existing systems is confirmed and new work tested both in isolation and when integrated with existing systems.
- 3.13 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 3.14 Cabling is terminated efficiently without waste of materials and energy or damage to apparatus, the surrounding environment or services.
- 3.15 Routine quality checks are carried out and a defect rectified to ensure cabling complies with requirements.
- 4 Complete cabling work, records and reporting.
  - 4.1 OHS work completion risk control measures and procedures are followed.
  - 4.2 Work site is cleaned and made safe in accordance with established procedures.
  - 4.3 Record sheets and plans of cable location, type and infrastructure are accurately created or updated and stored in accordance with customer requirements..

- 4.4 Cable pair record books are created or updated to provide an accurate record of pair locations, inter-connections and usage in accordance with industry codes of practice and AS/ACIF S009.
- 4.5 Cabling completion advice is documented and reported in accordance with requirements.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining cabling for telecommunication services in lifts. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.1 Cable protection and support
- 2.4.1.4 Lift telecommunications cabling regulations and installation
- 2.5.11 Environmental and heritage awareness
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and maintaining cabling for telecommunication services in lifts.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control

measures as specified in the Performance Criteria and Range Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and maintain cabling for telecommunication services in lifts as described in 7) and including:
    - A Terminating travelling cables at termination devices and outlet locations with accurate completion of installation records, drawing alterations and compliance forms
    - B Placing of cables on support structures and building faces for both internal and external locations
    - C Securing cables correctly for above locations
    - D Securing trailing cables
    - E Avoiding cable damage such as crushing, burning, kinking, sheath twist, cutting and nicking, bending radius
    - F Reading and interpreting drawings related to cable layouts, outlet location, cable coding system and identifiers, distributor locations
    - G Conducting and interpreting cable test results
    - H Correctly interpreting and applying standards and regulations
    - I Completing the required documentation
    - J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining cabling for telecommunication services in lifts.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of Occupational Health and Safety covered in UEENEEE001A and other discipline specific Occupational Health and Safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.2; 1.4; 1.6	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  1.6	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  1.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.17; 3.2 to 3.6	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	2.16; 4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.16; 3.13

## **UEENEEF004A      Install and modify performance data communication structured cabling**

### **Unit Descriptor**

**1)**

This unit covers the installation and termination of high performance data cabling in buildings and premises and intended for connection a telecommunications network. It encompasses working safely and to standards, installing multiple data lines and backbones using structured twisted pair cabling, terminating at distributors, termination modules and in socket outlets, testing and compliance checks and completing cabling documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEF002A      Lay and connect cabling for multiple access to telecommunication services

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA ‘Open’ Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install and/or modify cabling.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Installation or modification of wiring is prepared in consultation with others affected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 Cable routes are planned within the constraints of the building structure, fire walls, cultural/heritage requirements and regulations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |                           |  |   |
|---|---------------------------|--|---|
|   | 1.10                      | Preparatory work is checked to ensure no damage has occurred and that it complies with requirements. |   |
| 2 | Install cables or modify. | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |                           | 2.2  | Cables are installed or modification to comply with manufacturer specifications, technical standards and job requirements with sufficient excess to affect terminations.                      |
|   |                           | 2.3  | Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.   |
|   |                           | 2.4  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |                           | 2.5  | Ongoing checks of the quality of installed or modified wiring are undertaken in accordance with established procedures.   |
|   |                           | 2.6  | Cable installation/modification is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 | Terminate cables.         | 3.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |                           | 3.2  | Cable termination work area is cleaned and safety measure implemented.  |
|   |                           | 3.3  | Cables are prepared for termination in accordance with manufacturer specifications and technical standards.   |
|   |                           | 3.4  | Over voltage protection devices are fitted to cables with metallic components.  |
|   |                           | 3.5  | Cable shields are earthed in accordance with manufacturer specifications and technical standards.   |
|   |                           | 3.6  | Twist ratio of structured metallic cables is maintained in accordance with manufacturer specifications and technical standards.   |
|   |                           | 3.7  | Twisted pair cables are terminated in accordance with manufacturer specifications and technical standards.  |
|   |                           | 3.8  | Cable performance tests are conducted accurately and results documented.  |

- |   |   |   |
|---|---|---|
|   | 3.9   | Causes of defects indicated by test results are identified and rectified.   |
|   | 3.10  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   | 3.11  | Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.   |
|   | 3.12  | Cable terminations are carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 4 | Document and verify cabling installation and performance. | 4.1 OHS work completion risk control measures and procedures are followed.  |
|   |   | 4.2 Work site is cleaned and made safe in accordance with established procedures.   |
|   |   | 4.3 Final checks are made to that the installed cabling conforms to requirements.   |
|   |   | 4.4 Documentation certifying system performance is issued to an appropriate person(s).  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and modifying performance data communication structured cabling. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.1.7.1 | Performance (copper) data cable installation and terminations |
| 2.11.8  | Data and voice cabling testing devices                        |
| 2.13.8  | Schedule maintenance processes                                |
| 2.18.1  | Occupational Health and Safety principles                     |
| 2.18.2  | Electrical Safe working practices                             |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and modifying performance structured metallic cables each on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and modify performance data communication structured cabling as described in 7) and including:
    - A Reading and interpreting drawings related to cable layouts, cable schedules and apparatus locations.
    - B Routing, placing and securing cables to comply with requirements
    - C Maintaining fire integrity
    - D Preparing and terminating each type of cable to comply with requirements.
    - E Conducting cable performance test accurately
    - F Identifying and rectifying anomalies
    - G Completing the necessary documentation accurately.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:  
 Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:  
 Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and modifying performance data communication structured cabling.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:  
 Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEF009A    Install and connect voice and data communications equipment

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.11	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.10	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.10

## UEENEEF005A **Install and modify performance data communication optical fibre cabling**

### **Unit Descriptor**

1)

This unit covers the installation and termination of high performance data cabling in buildings and premises and intended for connection a telecommunications network. It encompasses working safely and to standards, installing multiple data lines and backbones using optical fibre cabling, terminating at distributors, splices and on socket outlets, testing and compliance checks and completing cabling documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEF002A Lay and connect cabling for multiple access to telecommunication services

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install or modify performance data communication optical fibre cabling

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Installation or modification of wiring is prepared in consultation with others affected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.7 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.9 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.

2 Install optical cables or modify.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 Optical fibres are tested for optical continuity.
- 2.2 Cables are installed or modification to comply with manufacturer specifications, technical standards and job requirements with sufficient excess to affect terminations.
- 2.4 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
- 2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.6 Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.
- 2.7 Cable installation/modification is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
- 3 Terminate cables.
  - 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Cable termination work area is cleaned and safety measure implemented, particularly for terminating optical fibre cables.
  - 3.3 Cables are prepared for termination in accordance with manufacturer specifications and technical standards.
  - 3.4 Optical fibre connectors are fitted in accordance with manufacturer specifications and technical standards.
  - 3.5 Appropriate methods are used to splice optical fibre cables in strict accordance with OHS safety measures, manufacturer specifications and technical standards.
  - 3.6 Cable performance tests are conducted accurately and results documented.
  - 3.7 Causes of defects indicated by test results are identified and rectified.
  - 3.8 Unexpected situations are dealt with safely and with the approval of an authorised person.

	3.9	Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.
	3.10	Cable terminations are carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
4 Document install or modification, and verify data communication optical fibre cabling performance.	4.1	OHS work completion risk control measures and procedures are followed.
	4.2	Work site is cleaned and made safe in accordance with established procedures.
	4.3	Final checks are made to that the installed cabling conforms to requirements.
	4.4	Documentation certifying system performance is issued to an appropriate person(s).

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and modifying performance data communication optical fibre cabling. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.1.7.3	Optical fibre cabling installation and terminations
2.11.8	Data and voice cabling testing devices
2.13.8	Schedule maintenance processes
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing or modifying two types of performance optical fibre cables each on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and modify performance data communication optical fibre cabling as described in 7) and including:
    - A Reading and interpreting drawings related to cable layouts, cable schedules and apparatus locations.
    - B Routing, placing and securing cables to comply with requirements
    - C Maintaining fire integrity
    - D Preparing and terminating each type of cable to comply with requirements.
    - E Conducting cable performance test accurately
    - F Identifying and rectifying anomalies
    - G Completing the necessary documentation accurately.

- H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and modifying performance data communication optical fibre cabling

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEF009A Install and connect voice and data communications equipment

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.8	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.7	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.8

## UEENEEF006A Solve problems in data and voice communications circuits

### Unit Descriptor

1)

This unit covers providing known solutions to predictable problems in single and multiple path circuits operated at extra-low voltage as they apply to various data and voice communications work functions. It encompasses working safely, problem solving procedures, including the use of basic voltage, current and resistance measuring devices, providing known solutions to predictable communication circuit problems.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit shall apply to persons entering work in electrotechnology and may be used in school based vocational programs.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However they are subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### Competency Field

4)

Data and Voice Communications

ELEMENT	PERFORMANCE CRITERIA
<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to work on extra-low voltage data and voice communications circuits</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control work preparation measures and procedures are followed.</p> <p>1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Sources of materials that may be required for the work are established in accordance with established procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
<p>2 Solve problems in extra-low voltage data and voice communications circuits</p>	<p>2.1 OHS risk control work measures and procedures are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Established routines are used to solve circuit problems using measured and calculated values as they apply to single path, single source circuits.</p> <p>2.5 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.</p>

- |   |  |     |   |
|---|--|-----|---|
| 3 | Complete work and document problem solving activities. | 3.1 | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.                                       |
|   |  | 3.3 | Justification for solutions used to solve circuit problems is documented.   |
|   |  | 3.4 | Work completion is documented and appropriate person(s) notified in accordance with established routine procedures. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in extra-low voltage data and voice communications circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.10.31 Electrotechnology communications principles

2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

- Single source single and multiple path communication circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in any of the following disciplines:
  - Data Communications
  - Electronics
  - Fire protection
  - Renewable and sustainable energy systems, and
  - Security technology
- In relation to at least three of the following types of communication circuit problems and on at least two occasions:
  - Determining the operating parameters of an existing circuits
  - Determining the frequency response of an existing circuits
  - Identifying and locating open-circuits

- Identifying and locating short-circuits
- Identifying earth faults
- Identifying loss of supply

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in solving problems in extra-low voltage data and voice communications circuits as described in 7) and including:
    - A Determining the operating parameters of an existing circuit.
    - B Determining the frequency response of existing circuits
    - C Altering an existing circuit to comply with specified operating parameters.
    - D Developing circuits to comply with a specified function and operating parameters.
    - E Identifying earth faults.
    - F Identifying loss of supply.
    - G Dealing with unplanned events by drawing on

essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solve problems in extra-low voltage data and voice communications circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of Occupational Health and Safety covered in UEENEEE001A and other discipline specific Occupational Health and Safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.1	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEF007A Set up the wireless capabilities of communications and data storage devices

### Unit Descriptor

1)

This unit covers entering instructions in wireless devices with simple built-in programming function and verifying that the device operates as intended. It encompasses safe working practices, checking device software installation, following written and oral instruction and procedures and completing necessary documentation.

Note: Examples of wireless devices are personal digital assistants(PDAs), mobile phones, personal computers(PCs) remote controls etc

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies for this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit may require a registration to practise in the workplace subject to requirements set out ACMA ‘Open’ Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to enter operating instructions.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.
- 1.4 Work supervisor or customers are consulted to determine which functions of the device are to be use and the parameter of each.
- 1.5 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 1.6 Device installation is checked for compliance with job specification and regulations where they apply.

2 Enter operating instructions.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 The required status of each function of the device is entered and their parameters set in accordance with manufactures programming instructions.
- 2.4 Entered data are checked as meeting those specified by the work supervisor or customer.

- |   |                                   |  |   |
|---|-----------------------------------|--|---|
|   | 2.5                               | Procedures for referring non-routine events to immediate supervisor for directions are followed. |   |
| 3 | Test device operation and report. | 3.1  | Device operation is tested in strict accordance OHS requirements and procedures.                        |
|   |                                   | 3.2  | Operating anomalies are identified and corrected in accordance with established routines.               |
|   |                                   | 3.3  | OHS work completion risk control measures and procedures are followed.                                  |
|   |                                   | 3.4  | Work site is cleaned and made safe in accordance with established procedures.                           |
|   |                                   | 3.5  | Work completion is reported and appropriate person(s) notified in accordance with established routines. |

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and set up the wireless capabilities of communications and data storage devices. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.10.30 Wireless devices

2.18.1 Occupational Health and Safety principles

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to entering and verifying operating instruction in at least two types of microprocessor equipped devices with built-in icon-based programmable functions such as programmable relays, timers, temperature controllers, detection devices for security and fire.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up the wireless capabilities of communications and data storage devices as described in 7) and including:
    - A Understanding required operating functions and parameters.
    - B Identifying non-compliance conditions of device installation.
    - C Entering functions and parameters correctly.
    - D Correcting programming anomalies.
    - E Testing and verify device operation.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up the wireless capabilities of communications and data storage devices.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 3.2	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.2	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.5; 3.2; 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4; 2.5; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEF008A **Select and arrange equipment for wireless networks**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers selecting and arranging of wireless access devices, routers and switches for local area and wide area networks intended for connection to a telecommunications network. The unit encompasses selecting compliant equipment, developing LAN/WAN arrangements that comply with regulation, based on calculated and deemed-to-comply solutions and completing network documentation.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to select equipment.	1.1 The extent and nature of the communications network is determined from job specifications.
	1.2 Safety and other regulatory requirements to which the wireless network area shall comply are identified, obtained and understood.
2 Arrange locations of equipment and cable routes.	2.1 Location of equipment is arranged to comply with job specifications and regulatory requirements.
	2.2 Cable routes are planned to ensure maximum lengths specified by standards and the manufacturer are not exceeded.
	2.3 Cable routes are planned to comply with job specifications and regulatory requirements.
	2.4 Earthing is arranged to comply with job specifications and regulatory requirements.
3 Select cables and equipment.	3.1 Cables types are selected for suitability for the environments in which they are to be installed, performance required, and regulatory requirements.
	3.2 Cable sizes are selected to meet capacity and performance requirements.
	3.3 Earthing components are selected to meet regulatory and earthing requirements.
	3.4 Evidence is obtained that network equipment selected complies with safety requirements.
	3.5 Electronic equipment types are selected for suitability for the environments in which they are to be installed, performance required, and regulatory requirements.
4 Document communications network.	4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.
	4.2 Wireless networks equipment for arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting and arranging equipment for wireless networks. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.2 Enterprise work activities records
- 2.4.1.2 Telephone system fundamentals
- 2.4.3.2 Networking fundamentals
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to selecting and arranging equipment for wireless networks comprising a representative range of network wireless components.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Select and arrange equipment for wireless networks as described in 7) and including:
  - A Arranging network to comply with safety and other regulatory and functional requirements
  - B Selecting appropriate types and sizes of cables
  - C Arranging network equipment
  - D Selecting appropriate earthing components
  - E Documenting installation arrangement, specification for items selected and reasons for the selections made
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in selecting and arranging equipment for wireless networks.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

**with other units****Key competencies****8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2
	Note: Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEEED001A Use basic computer applications'	

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.2

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A
---	--	---

## UEENEEF009A **Install and connect voice and data communications equipment**

### **Unit Descriptor**

1)

This unit covers the installation, termination and setting up of voice and data equipment for high performance LANs in buildings and premises and intended for connection to a telecommunications network. It encompasses working safely and to standards, installing hubs, routers, switches, decoders, PABXs connected by structured, coaxial and optical fibre cabling, and completing network documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEF004A     Install and modify performance data communication structured cabling

UEENEEF005A     Install and modify performance data communication optical fibre cabling

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical communications equipment and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install communications equipment and associated equipment.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Installation of communications equipment is prepared in consultation with others affected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 A location of communications equipment and associated equipment is planned within the constraints of the building structure, significants and regulations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |  |  |   |
|---|--|--|---|
|   | 1.10   | Preparatory work is checked to ensure no damage has occurred and that it complies with requirements. |   |
| 2 | Install communications equipment and associated equipment. | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |  | 2.2  | Tests are carried out in strict accordance with OHS established safety procedures.  |
|   |  | 2.3  | Communications equipment is installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.                                   |
|   |  | 2.4  | Cabling is terminated at communications equipment in accordance with manufacture's specifications and functional and regulatory requirements.   |
|   |  | 2.5  | Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.   |
|   |  | 2.6  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.7  | Ongoing checks of the quality of installed communications equipment are undertaken in accordance with established procedures.   |
|   |  | 2.8  | Communications equipment installation is carried out efficiently without waste of materials or damage to communications equipment, circuits, the surrounding environment or services and using sustainable energy principles. |
| 3 | Completion and report installation activities.             | 3.1  | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2  | Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3  | Final checks are made to ensure that the installed communications equipment conforms to requirements.   |
|   |  | 3.4  | 'As-installed' communications equipment is documented in accordance with requirements and appropriate person(s) notified in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and connecting voice and data communications equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.3.2 Network fundamentals
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and connecting at least 5 different types of voice and data communications equipment terminating three types of communications cable.

Note:

1. Examples of communications equipment are distribution frames, hubs, routers, switches, decoders, PABXs and the like
2. Example of connecting cables are by structured cable, coaxial cables and optical fibre cabling.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most

effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and connect voice and data communications equipment as described in 7) and including:

- A Reading and interpreting drawings related to and communications equipment locations and connections.
- B Placing and securing communications equipment accurately
- C Maintaining fire integrity
- D Connecting communications equipment to comply with requirements
- E Completing the required documentation accurately
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and connecting voice and data communications equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

**with other units**

UEENEEF004A Install and modify performance data communication structured cabling

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEF010A      Select and arrange equipment for local area networks**

### **Unit Descriptor**

**1)**

This unit covers selecting and arranging voice and data communication cabling routes, socket outlets, termination modules, switches, routers and distributors in LANs intended for connection to a telecommunications network. The unit encompasses selecting compliant equipment, developing LAN arrangements that comply with regulation, based on calculated and deemed-to-comply solutions and completing network documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEF004A      Install and modify performance data communication structured cabling

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended as an additional competency to relevant competencies previously acquired and is therefore not applicable to those entering work.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

**Competency Field****4)**

Data and Voice Communications

**ELEMENT****PERFORMANCE CRITERIA**

<b>5)</b> Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to select equipment.	<p>1.1 The extent and nature of the communications network is determined from job specifications.</p> <p>1.2 Safety and other regulatory requirements to which the communications network area shall comply are identified, obtained and understood.</p>
2 Arrange locations of equipment and cable routes.	<p>2.1 Location of equipment is arranged to comply with job specifications and regulatory requirements.</p> <p>2.2 Cable routes are planned to ensure maximum lengths specified by standards and the manufacturer are not exceeded.</p> <p>2.3 Cable routes are planned to comply with job specifications and regulatory requirements.</p> <p>2.4 Earthing is arranged to comply with job specifications and regulatory requirements.</p>
3 Select cables and equipment.	<p>3.1 Cables types are selected for suitability for the environments in which they are to be installed, required performance and regulatory requirements.</p> <p>3.2 Cable sizes are selected to meet capacity and performance requirements.</p> <p>3.3 Earthing components are selected to meet regulatory and earthing requirements.</p> <p>3.4 Evidence is obtained that network equipment selected complies with safety requirements.</p> <p>3.5 Electronic equipment types are selected for suitability for the environments in which they are to be installed, required performance and regulatory requirements.</p>
4 Document communications network.	4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.

- 4.2 Communications network arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting and arranging equipment for local area networks. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.7.1 Performance (copper) data cable installation and terminations
- 2.1.7.2 Coaxial cable installation and terminations
- 2.1.7.3 Optical fibre cabling installation and terminations
- 2.2.2 Enterprise work activities records
- 2.4.1.2 Telephone system fundamentals
- 2.4.2.1 Telecommunication earthing and protection
- 2.4.3.2 Networking fundamentals
- 2.4.6 PABX fundamentals
- 2.4.8 Switches, hubs and routers
- 2.4.9 Decoders
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to selecting and arranging equipment for local area networks comprising a distribution frame, at least 20 telecommunication and 20 data outlets PABX and server.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. ## **Critical aspects of evidence required to**

### **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Select and arrange equipment for local area networks as described in 7) and including:
    - A Arranging network to comply with safety and other regulatory and functional requirements.
    - B Selecting appropriate types and sizes of cables.
    - C Arranging network equipment.
    - D Selecting appropriate earthing components.
    - E Documenting installation arrangement, specification for items selected and reasons for the selections made.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in selecting and arranging equipment for local area networks.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEF001A Use basic computer applications relevant to a workplace

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEED001A Use basic computer applications'

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 4.1; 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: N/A

## UEENEEF011A Test, report and rectify faults in voice and data installations

### Unit Descriptor

1)

This unit covers testing for certification finding and repairing faults in telecommunication installations and local area networks. The unit encompasses working safely, reading cabling diagrams, performance testing, applying logical fault finding procedures, testing functionality of the network, conducting repairs and completing the necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEF004A Install and modify performance data communication structured cabling

UEENEEF005A Install and modify performance data communication optical fibre cabling

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training

### Licence to practise

3.1)

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical communications equipment and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to test, report and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified, and established risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted, and established risk control measures are implemented.
- 1.4 Testing is prepared in consultation with others affected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.7 Material needed for the testing, reporting and rectifying work is obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to for the work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.9 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.

- |   |   |     |  |
|---|---|-----|--|
| 2 | Test and rectify faults                       | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |   | 2.2 | Tests are carried out in strict accordance with OHS established safety procedures.   |
|   |   | 2.3 | Tests are prepared and conducted in accordance with test equipment operating instructions and requirements.  |
|   |   | 2.4 | Cable performance tests are conducted accurately and results documented in accordance with established procedures.   |
|   |   | 2.5 | Causes of defects or faults indicated by test results are identified and rectified in accordance with established procedures.  |
|   |   | 2.6 | Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.  |
|   |   | 2.7 | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   |   | 2.8 | Ongoing checks of the quality of installed equipment are undertaken in accordance with established procedures.   |
|   |   | 2.9 | Testing and rectifying faults is carried out efficiently without waste of materials or damage to equipment, circuits, the surrounding environment or services and using sustainable energy principles. |
| 3 | Document and verify installation performance. | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.3 | Service reports are completed, when necessary in accordance with established procedures.   |
|   |   | 3.4 | Documentation certifying system performance is issued to an appropriate person(s).   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and testing, reporting and rectifying faults in voice and data installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.4.3.2	Networking fundamentals
2.11.5	Basic electrical testing and measuring devices and techniques
2.11.8	Data and voice cabling testing and testing devices
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to testing, reporting and rectifying faults in voice and data installations comprising two different items of customer premises equipment and a local area network.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Test, report and rectify faults in voice and data installations as described in 7) and including:
    - A Reading and interpreting drawings and schedules of the installation
    - B Preparing and conducting appropriate test accurately
    - C Interpreting test results correctly
    - D Identifying defects/faults from test results
    - E Rectifying faults effectively
    - F Completing the required documentation accurately.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in testing, reporting and rectifying faults in voice and data installations

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEF004A Install and modify performance data communication structured cabling

UEENEEF009A Install and connect voice and data communications equipment

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6; 2.7

## UEENEEF012A Install aerial communication cables

### Unit Descriptor

1)

This unit covers installation of catenary and aerial communication cables on existing post and poles.. The unit encompasses working safely and to standard and specifications, installing catenary cable, fixing communication cables and completing necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEF002A Lay and connect cabling for multiple access to telecommunication services

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA ‘Open’ Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical communications equipment and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to

currency in First Aid, confined space, lifting and risk safety measures.

## Competency Field 4)

### Data and Voice Communications

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to install aerial communication cables	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.</p> <p>1.4 Cabling installation is prepared in consultation with others affected by the work and sequenced appropriately.</p> <p>1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.</p> <p>1.6 Cable routes are planned within the constraints of the precinct, structure, significants and regulations.</p> <p>1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.</p> <p>1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.</p> <p>1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.10 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.</p>
2 Install aerial communication cables.	2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 Poles are checked for soundness in accordance with established procedures.
  - 2.3 Catenary cables are installed ensuring sufficient clearances are maintained in compliance with requirements.
  - 2.4 Cables are attached to the catenary without strain or damage.
  - 2.5 Cable ends are protected from damage in preparation for termination.
  - 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.
  - 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.8 Ongoing checks of the quality of installed aerial communication cables are undertaken in accordance with established procedures.
  - 2.9 Cable installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
- 3 Document and verify cabling installation
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Documenting cable installation.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing aerial communication cables. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.6.2 Telecommunication aerial cabling
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.14 Aerial safety practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing a representative range of aerial communication cables each, on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing

assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install aerial communication cables as described in 7) and including:
    - A Reading and interpreting drawings related to cable schedules and routes
    - B Installing catenary cables correctly
    - C Attaching communications cable to catenary without damage
    - D Protecting cable ends
    - E Completing the necessary documentation accurately
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with

the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing aerial communication cables.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no current assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.4	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.12	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.11	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.11

## UEENEEF013A Install below ground communication cables

### Unit Descriptor

1)

This unit covers installation of below ground conduits and ducts and drawing-in communication cables. The unit encompasses working safely and to standard and specifications, preparing and filling trenches, placing conduits and ducts, drawing cables, and completing necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEF002A Lay and connect cabling for multiple access to telecommunication services

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a registration to practise in the workplace subject to requirements set out ACMA 'Open' Cabling Provider Rule. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical communications equipment and site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install below ground communication cables.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified and established risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Cabling installation is prepared in consultation with others affected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or in discussion with appropriate person(s) to establish the scope of work to be undertaken.
- 1.6 Cable routes are planned within the constraints of the precinct, structure, significants and regulations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.10 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.

2 Install below ground communication cables.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- |   |  |  |
|---|--|--|
|   | 2.2  | Trenching is checked as complying with requirements and standards.   |
|   | 2.3  | Ducts/conduits are laid in compliance with requirements and standards.   |
|   | 2.4  | Cables are drawn-in without stain of damage.   |
|   | 2.5  | Cable ends are protected from damage in preparation for termination.   |
|   | 2.6  | Established methods for dealing with unexpected situations are discussed with appropriate person(s) and documented.  |
|   | 2.7  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.8  | Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.  |
|   | 2.9  | Cable installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 | Document and verify installation of below ground communication cables. | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2 Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3 Documenting cable installation.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing aerial communication cables. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.1.6.3 | Telecommunication below ground cabling    |
| 2.18.1  | Occupational Health and Safety principles |
| 2.18.2  | Electrical Safe working practices         |
| 2.18.15 | Trenching safety practices                |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing a representative range of below ground communication cables each on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training

Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install below ground communication cables as described in 7) and including:
    - A Reading and interpreting drawings related to cable schedules and routes
    - B Installing ducts/conduits below ground correctly
    - C Drawing in cables without strain or damage
    - D Protecting cable ends
    - E Completing the necessary documentation accurately
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing below ground communication cables.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no current assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  4.4	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.12	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.11	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.11

## UEENEEF014A Set up and configure basic data communications systems

### Unit Descriptor

1)

This unit covers setting up, configuring and maintaining operation of personal computer based data communications systems. It encompasses safe working practices, installing data communications hardware, installing and configuring data communications software and documenting set-up parameters.

Note:

This unit applies to all aspects of Electrotechnology - engineering applications only. For general competencies related Information Technologies refer to the latest endorsed IT Training Package.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENED002A Assemble, set up and test personal computers

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Computer Systems

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to set up and configure basic data communications systems.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 The extent of set-up and configuration work is determined from job specifications and in consultation with appropriate person(s).</p> <p>1.3 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.4 Hardware and software needed for the work are obtained in accordance with established procedures and checked against job requirements.</p> <p>1.5 Preparatory work is checked to ensure no damage has occurred and that it complies with requirements.</p> <p>1.6 OHS processes and procedures for a given work area are identified, obtained and understood.</p>
2 Set up, configure and maintain basic data communications equipment.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Layout of data communications hardware, cabling and outlets is determined from job specifications or in consultation with appropriate person(s).</p> <p>2.3 Hardware is installed in accordance with the data communications system requirements. (Note 1)</p> <p>2.4 Data communications software is installed and configured in accordance with network requirements. (Note 2)</p> <p>2.5 Data communications operations are tested and anomalies identified and corrected.</p> <p>2.6 Reported data communications failures and faults are responded to and appropriate tools and methods are used.</p> <p>2.7 Identified causes of reported problems are rectified and the data communications link is tested in accordance with established procedures.</p>

	2.8	Unexpected situations are dealt with safely and with the approval of an authorised person.	
	2.9	Set-up configuration and maintenance are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.	
3	Complete work and document activities.	3.1	OHS risk control work completion measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Data communications configuration and maintenance records are maintained in accordance with established procedures.
		3.4	Service report is completed and forward to appropriate person(s) in accordance with established procedures.

Notes.

1. Examples of hardware include cables and connectors, dial up modems, and cable modems.
2. Examples of configuration include data communications protocols, user options and permissions, security, driver software.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and in setting up and configuring basic data communications systems.

The extent of the essential knowledge and skills required is given Volume 2 Part 2, Clauses:

- |         |   |
|---------|---|
| 2.4.3.1 | Data Communication Fundamentals           |
| 2.18.1  | Occupational Health and Safety Principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to setting up and configuring basic data communications systems that include:

- Standard serial and parallel ports
- High-speed ports (eg. USB, Firewire)
- 1 dial-up modem
- 1 broadband modem

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up and configure basic data communications systems as described in 7) Range: and including:
    - A Establishing the extent of work schedule.
    - B Obtaining specified hardware and software according to the work.
    - C Laying out network in accordance with requirements.
    - D Installing hardware as specified.
    - E Installing and configuring software to requirements.
    - F Identifying and correcting anomalies.
    - G Finding the cause of faults/malfunctions.
    - H Rectifying the cause of malfunctions.
    - I Documenting network configurations and activity results for future referencing.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in context of assessment’, which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up and configuring basic data communications systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6) Key Competencies:**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.2 to 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5; to 2.7	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2; to 2.7	2

**Skills Enabling Employment**

**8.7) Skills Enabling Employment:**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1,3; 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.2 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.8

## UEENEEF015A Assemble and connect communication frames and cabinets

### Unit Descriptor

1)

This unit covers assembly and connection of communication frames and cabinets. The unit encompasses working safely, following standards, specifications and component/manufacturer requirements, matching equipment with that specified, terminating and connecting communication wiring and completing necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, schedules, and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in a workplace specifically for the purpose of assembling and connecting communication frames and cabinets. In other skills and knowledge described in this unit may only be practised under the requirements set out in ACMA 'Open' Cabling Provider Rule. In addition, practice in this unit is subject to regulations directly related to

occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Data and Voice Communications

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to assemble and connect communication frames and cabinets

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures for work preparation are followed.
- 1.3 Work instructions, including layout and wiring diagrams, are identified, obtained and understood.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Materials required for the work are obtained in accordance with established routines and procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Assemble and connect communication frames and cabinets

- 2.1 Established OHS risk control work measures are followed.
- 2.2 Equipment is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 Frames/cabinets and communication components are fitted in accordance with work instructions, standards and established routines.
- 2.4 Interconnections are made in accordance with work instructions, standards and established routines.
- 2.5 Routine quality checks are carried out in accordance with work instructions.

	2.6	Completed communication frames/cabinets are checked/testing against work instructions and industry standards and in strict accordance with OHS risk control measures.
	2.7	Procedures for referring non-routine events to immediate supervisor for directions are followed.
	2.8	Work is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3	Check quality of assembled communication frames and cabinets	3.1 Established OHS risk control measures for work completion are followed.
		3.2 Quality of assembled frames/cabinets is checked/tested against work instructions and industry standards and in accordance with established routines.
		3.3 Prescribed solutions are used where corrective actions to assembled components are necessary.
		3.4 Work report forms are completed accurately and appropriate person(s) notified in accordance with established routine.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and connecting communication frames and cabinets. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.1.6.4	Voice and data cabinet cabling terminations
2.4.2.2	Voice and data cabinet assembly and terminations
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to assembling and connecting communication frames and cabinets each on at least two occasions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble and connect communication frames and cabinets as described in 7) and including:
    - A Following assembly instructions
    - B Selecting and placing equipment correctly
    - C Making connection without damaging switchgear/control
    - D Adhering to quality procedures
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling and connecting communication frames and cabinets.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following Performance Criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.6; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

The views expressed in the copyright work do not necessarily represent the views of the Commonwealth of Australia.

This work is copyright and licensed under the AEShareNet Free for Education instant licence (AEShareNet-FfE Licence). The onus rests with you to ensure compliance with the AEShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AEShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AEShareNet-FfE Licence conditions should be directed to the AEShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AEShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

UEENEEG022A.....	2
Conduct compliance inspection of single phase electrical installations.....	2
UEENEEG023A.....	2
Conduct compliance inspection of electrical installations with demand exceeding 100 A per phase.....	2
UEENEEG024A.....	2
Conduct compliance inspection of special electrical installations .....	2
UEENEEG025A.....	2
Plan electrical installations with a LV demand up to 400A per phase .....	2

UEENEEG026A .....	2
Install and maintain field power and distribution systems with a LV demand up to 200 A per phase .....	2
UEENEEG027A .....	2
Design electrical installations with a LV demand greater than 400 A per phase .....	2
UEENEEG028A .....	2
Plan switchboard and control panel layouts .....	2
UEENEEG029A .....	2
Overhaul and repair major switchgear/controlgear .....	2
UEENEEG030A .....	2
Design switchboards rated for high fault levels.....	2
UEENEEG031A .....	2
Evaluate performance of electrical apparatus .....	2
UEENEEG032A .....	2
Carry out electrical field testing and report findings .....	2
UEENEEG034A .....	2
Perform high voltage field switching to a given schedule.....	2
UEENEEG035A .....	2
Diagnose and rectify faults in a.c. motor drive systems .....	2
UEENEEG036A .....	2
Diagnose and rectify faults in d.c. motor drive systems .....	2
UEENEEG037A .....	2
Diagnose and rectify faults in energy supply apparatus .....	2
UEENEEG038A .....	2
Diagnose and rectify faults in electrical energy distribution systems.....	2
UEENEEG039A .....	2
Diagnose and rectify faults in distributed generation systems.....	2
UEENEEG040A .....	2
Develop engineering solutions for energy supply power transformer problems .....	2
UEENEEG041A .....	2
Diagnose and rectify faults in servo drive systems.....	2
UEENEEG042A .....	2
Diagnose and rectify faults in electrical energy supply transmission systems .....	2
UEENEEG043A .....	2
Develop engineering solution for synchronous machine problems .....	2
UEENEEG044A .....	2
Develop engineering solutions for d.c. machine problems .....	2
UEENEEG045A .....	2
Develop engineering solutions for induction motor problems .....	2
UEENEEG046A .....	2
Develop engineering solutions for energy supply system protection problems .....	2
UEENEEG047A .....	2
Provide computational solutions to power engineering problems .....	2
UEENEEG048A .....	2
Solve problems in complex multiple path power circuits.....	2
UEENEEG049A .....	2
Solve problems in complex polyphase power circuits.....	2
UEENEEG050A .....	2
Wind coils.....	2
UEENEEG051A .....	2
Place and connect coils.....	2
UEENEEG052A .....	2
Rewind single phase induction machines .....	2
UEENEEG053A .....	2
Rewind three phase induction machines rated for low voltage .....	2

UEENEEG054A.....	2
Rewind direct current machines rated for low voltage.....	2
UEENEEG055A.....	2
Rewind three phase induction machines rated for high voltage to 3.3 kV .....	2
UEENEEG056A.....	2
Rewind three phase induction machines rated for high voltage above 3.3 kV.....	2
UEENEEG057A.....	2
Conduct electrical tests on low voltage electrical machines .....	2
UEENEEG058A.....	2
Conduct electrical tests on high voltage electrical machines .....	2
UEENEEG059A.....	2
Conduct mechanical tests on electrical machines.....	2
UEENEEG060A.....	2
Evaluate performance of electrical machines .....	2
UEENEEG061A.....	2
Design and develop modifications to electrical machines.....	2
UEENEEG062A.....	2
Set up and place electrical apparatus and associated circuits into service.....	2
UEENEEG064A.....	2
Repair mechanical components of electrical machines .....	2
UEENEEG065A.....	2
Maintain and service traction lifts .....	2
UEENEEG066A.....	2
Install and maintain escalators, moving walks and tread ways .....	2
UEENEEG067A.....	2
Align and install lift equipment .....	2
UEENEEG068A.....	2
Diagnose and rectify faults in complex lift systems .....	2
UEENEEG069A.....	2
Manage electrical projects .....	2
UEENEEG070A.....	2
Plan electrical projects.....	2
UEENEEG071A.....	2
Install and set up interval metering .....	2
UEENEEG072A.....	2
Investigate and report on electrical incidents .....	2

## UEENEEG001A Solve problems in electromagnetic circuits

### Unit Descriptor

1)

This unit covers determining correct operation of electromagnetic circuits and providing solutions as they apply to electrical installations and equipment. It encompasses working safely, power circuit problems solving processes, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in multiple path circuit.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEE004A Solve problems in multiple path d.c. circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to work on electromagnetic circuits.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve multiple path electrical circuit problems.

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Established methods are used to solving circuit problems from measure and calculated values as they apply to multiple path electrical circuit.
- 2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.6 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.

- |   |  |     |  |
|---|--|-----|--|
| 3 | Complete work and document problem solving activities. | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3 | Justification for solutions used to solve circuit problems is documented.  |
|   |  | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in electromagnetic circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.8.6  | Electromagnetic principles                |
| 2.11.1 | Hand tools                                |
| 2.18.1 | Occupational health and safety principles |
| 2.18.2 | Electrical safe working practice          |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to:

Single source parallel and series-parallel circuits as they apply to problems related to installation, fault finding, maintenance or development work functions in the following discipline:

- Electrical

In relation to at least two of the following types of circuit problems and on at least two occasions:

- Determining the operating parameters of an existing circuit
- Alternating an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in electromagnetic circuits as described as described in 7) and including:
    - A Determining the operating parameters of an existing circuit.
    - B Alternating an existing circuit to comply with specified operating parameters.
    - C Developing circuits to comply with a specified function and operating parameters.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in electromagnetic circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEG002A Solve problems in single and three phase low voltage circuits

### Unit Descriptor

1)

This unit covers ascertaining correct operation of single and three phase circuits and solving circuit problems as they apply to servicing, fault finding, installation and compliance work functions. It encompasses safe working practices, multiphase circuit arrangements, issues related to protection, power factor and MEN systems and solutions to circuit problems derived from calculated and measured parameters.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG001A Solve problems in electromagnetic circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to solve single and three phase low voltage circuit problems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
- 1.4 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve single and three phase low voltage circuit problems..

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Established methods are used to solve circuit problems from measure and calculated values as they apply to single and three-phase low voltage circuit.
- 2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
- 2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.7 Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Complete work and document problem solving activities.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Justification for solutions used to solve circuit problems is documented.
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in electromagnetic circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.8.2.2 Alternating current principles - power
- 2.18.1 Occupational health and safety principles
- 2.18.2 Electrical safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any four of the following problems for both single and three-phase circuit.

- - Determining the operating parameters of existing circuits
  - Alternating an existing circuit to comply with specified operating parameters
  - Developing circuits to comply with a specified function and operating parameters

Note:

Operating parameters include voltage, current, impedance, power and power factor

- Determining the cause of low power factor in an existing circuit.
- Determining conditions causing an existing circuit to be unsafe.

Note:

Examples of unsafe circuits includes electric shock hazard from indirect contact with conductive parts, insufficiently low impedance of a fault current path and inadequate fault protection

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Solve problems in electromagnetic circuits as described as described in 7) and including:
  - A Determining the operating parameters of existing circuits.
  - B Alternating an existing circuit to comply with specified operating parameters.
  - C Developing circuits to comply with a specified function and operating parameters.
  - D Determining the cause of low power factor in an existing circuit.
  - E Determining conditions causing an existing circuit to be unsafe.
  - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in electromagnetic circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	2.4	1
--	-----	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEG003A Install wiring and accessories for low voltage circuits

### Unit Descriptor

1)

This unit covers the installation in building and premises of wiring enclosures, cable support systems, cables and accessories and intended to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, routing cables to specified locations, terminating cables and connecting wiring at accessories and completing the necessary installation documentation.

Note: This unit includes the skills and knowledge covered by Unit UEENEEE008A Lay cables and terminate accessories.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install wiring.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Installation of wiring is prepared in consultation with other effected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or other appropriate person to establish the scope of work to be undertaken.
- 1.6 Cable routes are planned within the constraints of the building structure, significants and regulations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.

- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
  - 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
  - 1.10 Preparatory work is checked to ensure no damage has occurred and complies with requirements.
- 2 Install wiring and accessories.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Wiring and accessories are installed to comply with technical standards and job specifications and requirements with sufficient excess to affect terminations.
  - 2.5 Accessories are installed straight and square in the required locations and within acceptable tolerances.
  - 2.6 Cables and conductors are terminated at accessories in accordance with manufacture's specifications and regulatory requirements.
  - 2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.9 Ongoing checks of the quality of installed wiring are undertaken in accordance with established procedures.
  - 2.10 Cable installation and termination is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.

- |   |  |     |   |
|---|--|-----|---|
| 3 | Completion and report installation activities. | 3.1 | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 | Final checks are made to that the installed wiring conforms to requirements.  |
|   |  | 3.4 | ‘As-installed’ cables/wiring and accessories is documented and an appropriate person or persons notified in accordance with established procedures. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing wiring and accessories for low voltage circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.1.3   | Cables in buildings, structures and premises                                    |
| 2.1.5.1 | Power cable and conductor terminations  |
| 2.5.2.1 | Technical standards, regulations and codes for general electrical installations |
| 2.5.11  | Environmental and heritage awareness  |
| 2.7.1.2 | Electrical installations, wiring and accessories                                |
| 2.7.1.3 | Electrical wiring systems   |
| 2.7.2   | Electrical installation, equipment requirements                                 |
| 2.18.1  | Occupational Health and Safety principles                                       |
| 2.18.2  | Electrical Safe working practices   |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least three different wiring systems and circuits for four different purposes.

Note:

1. Examples of wiring systems include Thermoplastic insulated (TPI) cable in an enclosure such as conduit or trunking; Thermoplastic sheathed (TPS) circular or flat cable unenclosed; Thermoplastic sheathed (TPS) circular cable unenclosed; Steel wire armoured (SWA) cable unenclosed; Fire performance cables (eg MIMS, Radox, armoured, flexible, and the like); Flexible cables such as trailing cables;
2. Circuits types include circuits for Control devices; Fixed appliances/accessories; Lighting; Single phase motors and their controls; Socket outlets Three phase motors and their controls, synchronous machines and their controls, transformers and their controls, switchboards and/or distribution boards and their controls, protection and/or metering devices, d.c. machines and their controls other like equipment/accessories.
3. Cable support and mechanical protection devices are also included (eg clips, saddles, hangers, ties, non-metallic conduit, metallic conduit, cable ducts, trunking, cable trays/ladder) and other like devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety

and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install wiring and accessories for low voltage circuits as described as described in 7) and including:
    - A Reading and interpreting drawings related to cable layouts, cable schedules and apparatus locations.
    - B Routing, placing and securing cables to comply with requirements.
    - C Placing and securing accessories accurately.
    - D Maintaining fire integrity.
    - E Terminating cable and conductors to comply with

requirements.

- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing wiring and accessories for low voltage circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE008A Install wiring and terminate accessories for extra-low voltage circuits

UEENEEG004A Install low voltage electrical apparatus and associated equipment

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**
**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.10	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.7	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7; 2.8	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.5	1

**Skills Enabling Employment**
**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills

enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.10
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.8

## UEENEEG004A Install low voltage electrical apparatus and associated equipment

### Unit Descriptor

1)

This unit covers the installation of protection devices, switchgear and controlgear, appliances and luminaries and intended to operate at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to installation standards, matching equipment with that specified for a given location, placing and securing equipment accurately, making required circuit connections and completing the necessary installation documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install apparatus and associated equipment.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Installation of apparatus is prepared in consultation with other effected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
- 1.6 Locations of apparatus and associated equipment are planned within the constraints of the building structure, significant and regulations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.

- |   |  |   |   |
|---|--|---|---|
|   | 1.8  | Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.   |   |
|   | 1.9  | Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety. |   |
|   | 1.10   | Preparatory work is checked to ensure no damage has occurred and complies with requirements.  |   |
| 2 | Install apparatus and associated equipment.    | 2.1   | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |  | 2.2   | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.  |
|   |  | 2.3   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
|   |  | 2.4   | Apparatus and associated equipment are installed to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance.      |
|   |  | 2.5   | Wiring is terminated at apparatus and associated equipment in accordance with manufacture's specifications and functional and regulatory requirements.  |
|   |  | 2.6   | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   |  | 2.7   | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.8   | Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures.  |
|   |  | 2.9   | Apparatus installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. |
| 3 | Completion and report installation activities. | 3.1   | OHS work completion risk control measures and procedures are followed.  |

- 3.2 Work site is cleaned and made safe in accordance with established procedures.
- 3.3 Final checks are made to that the installed apparatus conforms to requirements.
- 3.4 ‘As-installed’ apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing low voltage electrical apparatus and associated equipment.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.3 Cables in buildings, structures and premises
- 2.1.5.1 Power cable and conductor terminations
- 2.5.2.1 Technical standards, regulations and codes for electrical installations
- 2.5.11 Environmental and heritage awareness
- 2.6.6.2 Alternating current rotating machines
- 2.6.8.2 Single and three phase transformers
- 2.6.9.2 Luminaries and lighting systems
- 2.7.1.2 Electrical installations, wiring and accessories
- 2.7.1.3 Electrical wiring systems
- 2.7.2 Electrical installations, equipment requirements
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least four different electrical apparatus and associated equipment.

Note:

1. Examples of apparatus are switchboards/distribution boards and their controls; protective devices such as circuit breakers, fuses and residual current devices; control devices; fixed appliances/accessories; lighting and their controls; socket outlets; single phase motors and their controls; three phase motors and their controls; synchronous machines and their controls; transformers and their controls; metering devices; a.c./d.c. machines and their controls; motor starters and associated control devices other like equipment/accessories.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training

Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install low voltage electrical apparatus and associated equipment as described as described in 7) and including:
    - A Reading and interpreting drawings related to and apparatus locations and circuit connections.
    - B Placing and securing apparatus accurately.
    - C Maintaining fire integrity.
    - D Terminating and connecting apparatus and associated equipment to comply with requirements.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific**

**8.3)**

**resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing low voltage electrical apparatus and associated equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE007A Use drawings, diagrams, schedules and manuals

UEENEEG003A Install wiring and accessories for low voltage circuits

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.9

## **UEENEEG005A    Verify compliance and functionality of general electrical installations**

### **Unit Descriptor**

**1)**

This unit covers inspection and testing to verify whether an electrical installation is safe and complies with all requirements. It encompasses working safely, visual inspections and mandatory, optional and functional test procedures, identifying non-compliance defects and mandatory reporting requirements.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEE001A	Apply OHS practices in the workplace
UEENEEE002A	Dismantle, assemble and fabricate electrotechnology components
UEENEEE003A	Solve problems in extra-low voltage single path circuits
UEENEEE004A	Solve problems in multiple path d.c. circuits
UEENEEE005A	Fix and secure equipment
UEENEEE007A	Use drawings, diagrams, schedules and manuals
UEENEEE008A	Lay wiring and terminate accessories for extra-low voltage circuits
UEENEEE033A	Document occupational hazards and risks in electrical work
UEENEEG001A	Solve problems in electromagnetic circuits
UEENEEG002A	Solve problems in single and three phase low voltage circuits
UEENEEG003A	Install wiring and accessories for low voltage circuits
UEENEEG004A	Install low voltage electrical apparatus and associated equipment

- UEENEEG007A Select and arrange equipment for general electrical installations
- UEENEEG008A Find and repair faults in electrical apparatus and circuits
- UEENEEG009A Develop and connect control circuits

Elective units to a Unit Strand Total of at least 6 from Schedule 3.

**Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading 4 Writing 4 Numeracy 4

**Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field**

**4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to inspect and test an electrical installation.	<p>1.1 OHS measures for the site are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.</p> <p>1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.</p> <p>1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.</p> <p>1.7 Preparatory work is checked to ensure no damage has occurred and complies with requirements.</p>
2 Visually inspect and conduct safety testing on the installation.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Wiring is checked for suitability for the environments in which they are installed and suitably protected from damage or overheating.</p> <p>2.5 Cable conductor sizes are acquired as meeting current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations.</p> <p>2.6 Protection methods and devices are validated as meeting co-ordination requirements for overload and short-circuit protection.</p>

- 2.7 Switchgear and control gear is validated as being appropriately rated and meeting functional requirements.
- 2.8 Evidence that electrical equipment complies with safety requirements is cited.
- 2.9 Earthing system components are checked that they are correctly located and conductors correctly sized.
- 2.10 Marking on switchboards are checked for accuracy and clarity and comply with requirements.
- 2.11 Mandatory tests are conducted to verify that:
- 2.12 Testing is conducted to verify that:
- 3 Report inspection and test findings.
  - 3.1 OHS risk control work completion measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Non-compliance defects are identified and reported in accordance with established procedures.
  - 3.4 Recommendations for rectifying defects are made in accordance with established procedures.
  - 3.5 Mandatory documentation is completed in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of general electrical installations.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.7.5.1 Electrical installations, testing and verification methods
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to verifying compliance and functionality of at least two electrical installations comprising of a main switchboard, at least supplying lighting, one circuit supplying socket outlets, one circuit supplying a fixed appliance. One of the installations shall include a distribution board additional to the main switchboard and a circuit supplying a three-phase load.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will

contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Verify compliance and functionality of general electrical installations as described as described in 7) and including:
    - A Selecting correct tools and testing equipment.
    - B Identifying visual non-compliance defects.
    - C Using effective methods for conducting mandatory and optional tests.
    - D Identifying non-compliance from test results.
    - E Identifying causes of non-compliance.

- F Completing mandatory reporting.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in verifying compliance and functionality of general electrical installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.10; 3.4; 3.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5; 2.6; 3.4; 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 4.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 3.4; 3.5	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEG007A **Select and arrange equipment for general electrical installations**

### **Unit Descriptor**

1)

This unit covers selecting equipment for electrical installations operating at voltages up to 1,000V a.c. or 1,500 V d.c. to meet performance standards. These encompass schemes for protection of persons and property, correct function, compatibility with the supply, arrangement of circuits and selection of switchgear, controlgear, protection devices and wiring based on calculated and deemed-to-comply solutions.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG002A      Solve problems in single and three phase low voltage circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired and is therefore not applicable to those entering work.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

- |   |   |     |  |
|---|---|-----|--|
| 1 | Prepare to select equipment.              | 1.1 | The extent and nature of the electrical installation is determined from job specifications.  |
|   |   | 1.2 | Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood. |
| 2 | Arrange installation into circuits.       | 2.1 | Circuits are arranged to ensure safe and functional operation of the installation.   |
|   |   | 2.2 | Circuits are arranged to comply with technical standards and job specifications and requirements.  |
|   |   | 2.3 | Earthing is arranged to comply with the MEN system requirements.   |
| 3 | Select cables, protection and switchgear. | 3.1 | Wiring is selected for suitability for the environments in which they are installed.   |
|   |   | 3.2 | Cable conductor sizes are selected to meet current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations. |
|   |   | 3.3 | Protection methods and devices are selected to meet co-ordination requirements for overload and short-circuit protection.                |
|   |   | 3.4 | Switchgear and control gear is selected to meet current, voltage and IP ratings and functional requirements.                             |
|   |   | 3.5 | Earthing system components are selected to meet requirements of the MEN system.  |
|   |   | 3.6 | Evidence is obtained that electrical equipment selected complies with safety requirements.   |
| 4 | Document electrical installation.         | 4.1 | Reasons for selections made, including calculations, are documented in accordance with established procedures.                           |

- 4.2 Electrical installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting and arranging equipment for general electrical installations.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.1 Cable protection and support
- 2.1.2 Cable types and applications
- 2.1.3 Cables in buildings, structures and premises
- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.3.1 Electrical control devices
- 2.5.1.2 Drawings and diagrams
- 2.5.2.1 Technical standards, regulations and codes for electrical installations
- 2.5.2.2 Technical standards, regulations and codes for special electrical installations
- 2.5.10 Technical manuals and catalogues
- 2.5.11 Environmental and heritage awareness
- 2.6.1 Protection devices and applications
- 2.6.2.1 Switchboards/distribution boards
- 2.7.1.2 Electrical installations, wiring and accessories
- 2.7.1.3 Electrical wiring systems
- 2.7.2 Electrical installations, equipment requirements
- 2.7.3 Electrical installations, safety principles and requirements
- 2.7.4.1 Electrical installations, protection methods and devices

- 2.7.4.2 Electrical installations, circuit arrangements and equipment selection
- 2.11.3.1 Fixing and support devices and techniques
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to selecting and arrange equipment for general electrical installations comprising a main switchboard, at least supplying lighting, one circuit supplying socket outlets, one circuit supplying a fixed appliance. One of the installations shall include a distribution board additional to the main switchboard and a circuit supplying a three-phase load.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Select and arrange equipment for general electrical installations as described as described in 7) and including:
    - A Arranging electrical installations to comply with safety and other regulatory and functional requirements.

- B Selecting appropriate type and size of cables.
- C Selecting protection methods and devices that meet co-ordination requirements for overload and short-circuit protection.
- D Selecting switchgear and control gear that meet current, voltage and IP ratings and functional requirements.
- E Selecting appropriate earthing components.
- F Documenting installation arrangement, specification for items selected and reasons for the selections made.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in selecting and arranging equipment for general electrical installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEED001A Use basic computer applications relevant to a workplace

The critical aspects of occupational health and safety covered in UEENEEEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: (See Note)	2

Note:  
Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEEED001A Use basic computer applications'

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

# UEENEEG008A Find and repair faults in electrical apparatus and circuits

## Unit Descriptor

1)

This unit covers finding and repairing faults in electrical apparatus and interconnecting circuits and equipment operating at voltages up to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely, reading circuit diagrams, sketching diagrams from traced wiring, logically applying fault finding procedures, conducting repairs and completing the necessary service documentation.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG002A Solve problems in single and three phase low voltage circuits

UEENEEG003A Install wiring and accessories for low voltage circuits

UEENEEG004A Install low voltage electrical apparatus and associated equipment

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

## Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to

occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to find and rectify faults.

- 1.1 The extent and nature of the electrical installation is determined from job specifications.
- 1.2 Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood.
- 1.3 OHS procedures for a given work area are identified, obtained and understood.
- 1.4 OHS risk control measures and procedures in preparation for the work are followed.
- 1.5 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
- 1.6 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.

- |  |  |  |   |     |   |     |   |     |  |     |  |
|--|--|--|---|-----|---|-----|---|-----|--|-----|--|
| 2.5  | Fault finding is approached methodically drawing on knowledge of a.c. circuits and apparatus using measured and calculated values of circuit/apparatus parameters.   |  |   |     |   |     |   |     |  |     |  |
| 2.6  | Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.   |  |   |     |   |     |   |     |  |     |  |
| 2.7  | Faulty circuits/components are rechecked and their fault status and acquired.  |  |   |     |   |     |   |     |  |     |  |
| 2.8  | Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.   |  |   |     |   |     |   |     |  |     |  |
| 2.9  | Effectiveness of the repair is tested in accordance with established procedures.   |  |   |     |   |     |   |     |  |     |  |
| 2.10   | Apparatus is reassembled, finally tested and prepared for return to service.   |  |   |     |   |     |   |     |  |     |  |
| 2.11   | Unexpected situations are dealt with safely and with the approval of an authorised person.   |  |   |     |   |     |   |     |  |     |  |
| 2.12   | Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.   |  |   |     |   |     |   |     |  |     |  |
| 3  | <table border="0"> <tr> <td style="vertical-align: top; padding-right: 20px;">Completion and report fault finding and repair activities.</td> <td style="vertical-align: top;"> <table border="0"> <tr> <td style="vertical-align: top; padding-right: 20px;">3.1</td> <td style="vertical-align: top;">OHS work completion risk control measures and procedures are followed.</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">3.2</td> <td style="vertical-align: top;">Work area is cleaned and made safe in accordance with established procedures.</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">3.3</td> <td style="vertical-align: top;">Written justification is made for repairs to apparatus.</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">3.4</td> <td style="vertical-align: top;">Work completion is documented and an appropriate person or persons notified in accordance with established procedures.</td> </tr> </table> </td> </tr> </table> | Completion and report fault finding and repair activities. | <table border="0"> <tr> <td style="vertical-align: top; padding-right: 20px;">3.1</td> <td style="vertical-align: top;">OHS work completion risk control measures and procedures are followed.</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">3.2</td> <td style="vertical-align: top;">Work area is cleaned and made safe in accordance with established procedures.</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">3.3</td> <td style="vertical-align: top;">Written justification is made for repairs to apparatus.</td> </tr> <tr> <td style="vertical-align: top; padding-right: 20px;">3.4</td> <td style="vertical-align: top;">Work completion is documented and an appropriate person or persons notified in accordance with established procedures.</td> </tr> </table> | 3.1 | OHS work completion risk control measures and procedures are followed.        | 3.2 | Work area is cleaned and made safe in accordance with established procedures. | 3.3 | Written justification is made for repairs to apparatus.  | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in electrical apparatus and circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |       |                                  |
|-------|----------------------------------|
| 2.2.1 | Enterprise communication methods |
|-------|----------------------------------|

- 2.2.2 Enterprise work activities records
- 2.2.3 Fault finding techniques
- 2.3.1 Electrical control devices
- 2.3.2 Control circuit fundamentals
- 2.5.2.1 Technical standards regulations and codes for general electrical installations
- 2.5.10 Technical manuals and catalogues
- 2.6.6.2 Alternating current rotating machines
- 2.6.8.2 Single and three phase transformers
- 2.6.9.1 Lighting fundamentals
- 2.6.9.2 Luminaries and lighting systems
- 2.6.10 Electrical heating
- 2.7.1.2 Electrical installation wiring and accessories
- 2.7.4.1 Electrical installation protection methods and devices
- 2.7.4.2 Electrical installations, arrangement and equipment selection
- 2.8.6 Electromagnetic principles
- 2.9.77 Electronic components and systems, industrial applications
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing faults and their cause in electrical apparatus and circuits. Finding and repairing fault types in electrical apparatus and interconnecting circuits and equipment operating at voltages up to 1000 V a.c. or 1500 V d.c include the following:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure
- Other electrical apparatus and circuit faults
- Any five of the above shall apply.

Note:

1. Examples of apparatus are Control devices; Fixed appliances/accessories; Lighting; Single phase motors and their controls; Socket outlets Three phase motors and their controls, synchronous machines and their controls, transformers and their controls, switchboards and/or distribution boards and their controls, protection and/or metering devices, a..c./d.c. machines and their controls other like equipment/accessories.
2. Examples of circuits include those supplying fixed appliances; lighting; single-phase motors; socket outlets; three phase motors and controls circuits; machines and transformers; electronic or computer based equipment other like equipment/accessories.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be

required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in electrical apparatus and circuits as described as described in 7) and including:
    - A Envisaging the likely extent of the fault and the work from fault/breakdown reports and/or discussion to

elicit information on the fault/breakdown with appropriate person(s).

- B Using appropriate tools and resources, and methodical fault finding techniques.
- C Locating and finding faults efficiently.
- D Conducting tests or measurements in strict accordance with OHS and electrical safe working requirements.
- E Rectifying faults effectively.
- F Reporting and completing documentation correctly.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in electrical apparatus and circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG004A Install low voltage electrical apparatus and associated equipment

UEENEEG009A Develop and connect control circuits

The critical aspects of occupational health and safety covered in UEENEEG001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.4 to 2.8

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEG009A Develop and connect control circuits

### Unit Descriptor

1)

This unit covers developing, connecting and functionally testing electrical power and control circuits that perform specific control functions. It encompasses working safely; developing schematic/ladder diagrams and converting them to wiring diagrams; selecting and connecting contactors and control devices to perform a specific function.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG002A	Solve problems in single and three phase low voltage circuits
UEENEEG003A	Install wiring and accessories for low voltage circuits
UEENEEG004A	Install low voltage electrical apparatus and associated equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Develop and prepare to connect control circuits.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
- 1.4 Control scenarios are determined from discussions with appropriate person(s) and documented in accordance with established procedures.
- 1.5 Agreement for the control scenarios is sought from appropriate person(s) and documented in accordance with established procedures.
- 1.6 Schematic arrangement of control circuits that complies with agreed scenarios is documented in accordance with established procedures.
- 1.7 Materials needed to connect control circuits are obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to connect control circuits are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.9 Preparatory work is checked to ensure no damage has occurred and complies with requirements.

- |   |   |     |   |
|---|---|-----|---|
| 2 | Connect and test control circuits.                      | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |   | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.  |
|   |   | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
|   |   | 2.4 | Control circuit components are connected to comply with the agreed control scenario.  |
|   |   | 2.5 | Control circuit operation is tested for agreed functionality and in strict accordance with OHS requirements and established safety procedures.  |
|   |   | 2.6 | Non-compliant control functions are rectified to comply with the agreed control scenario.   |
|   |   | 2.7 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |   | 2.8 | Control circuits are connected and tested efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practice. |
| 3 | Completion and document circuit development activities. | 3.1 | OHS work completion risk control measures and procedures are followed.  |
|   |   | 3.2 | Work site is cleaned and made safe in accordance with established procedures.   |
|   |   | 3.3 | ‘As-connected’ control circuits are documented using standard drawing conventions and an appropriate person or persons notified in accordance with established procedures.                                    |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and developing and connecting control circuits.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.1 Enterprise communication methods
- 2.2.2 Enterprise work activities records
- 2.2.3 Fault finding techniques
- 2.3.1 Electrical control devices
- 2.3.2 Control circuit fundamentals
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing and connecting at least four of the following control circuits:

- Multiple light switching circuit
- Master control circuit
- Single stop-start circuit
- Multiple stop-start circuit
- Time controlled circuit
- Machine interlocked circuit
- Motor jogging circuit
- Machine safety circuit

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop and connect control circuits as described as described in 7) and including:
    - A Determining control scenarios.
    - B Developing schematic arrangement of control circuits.
    - C Connecting control circuit function correctly.
    - D Identifying and correct non-compliant control functions.
    - E Documenting 'as-connected' control circuit.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in electrical apparatus and circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEG004A Install low voltage electrical apparatus and associated equipment
- UEENEEG008A Find and repair faults in electrical apparatus and circuits

The critical aspects of occupational health and safety covered in UEENEEG001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3 to 1.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 2.5; 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEG010A Find and repair faults in d.c. electrical apparatus and circuits

### Unit Descriptor

1)

This unit covers finding and repairing faults in electrical apparatus and interconnecting circuits and equipment operating at voltages up to 1,500 V d.c. It encompasses working safely, reading circuit diagrams, sketching diagrams from traced wiring, applying logical fault finding procedures, conducting repairs and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG008A Find and repair faults in electrical apparatus and circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electric

**ELEMENT**

**PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>	
<p><b>1</b> Prepare to find and rectify faults.</p>	<p>1.1</p>	<p>OHS procedures for a given work area are identified, obtained and understood.</p>
	<p>1.2</p>	<p>OHS risk control measures and procedures in preparation for the work are followed.</p>
	<p>1.3</p>	<p>The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).</p>
	<p>1.4</p>	<p>Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p>
	<p>1.5</p>	<p>Sources of materials that may be required for the work are established in accordance with established procedures.</p>
	<p>1.6</p>	<p>Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.</p>
<p><b>2</b> Find and repair faults.</p>	<p>2.1</p>	<p>OHS risk control measures and procedures for carrying out the work are followed.</p>
	<p>2.2</p>	<p>The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p>
	<p>2.3</p>	<p>Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p>
	<p>2.4</p>	<p>Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p>

- 2.5 Fault finding is approached methodically drawing on knowledge of d.c. circuit and apparatus using measured and calculated values of circuit/apparatus parameters.
  - 2.6 Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.7 Faulty circuits/components are rechecked and their fault status and acquired.
  - 2.8 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
  - 2.9 Effectiveness of the repair is tested in accordance with established procedures.
  - 2.10 Apparatus is reassembled, finally tested and prepared for return to service.
  - 2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
  - 3.3 Maintenance work activities are documented in accordance with established procedures.
- Note.  
Examples of documentation are component faults reports, test results, authorisations, permits, parts/component dispatch and stores records.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in d.c. electrical apparatus and circuits. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.12 Direct current machines

- 2.6.16 Direct current motor controls
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing faults and their cause in d.c. electrical apparatus and circuits. Finding and repairing fault types in electrical apparatus and interconnecting circuits and equipment operating at voltages up to d.c include the following:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure
- Other electrical apparatus and circuit faults
- Any five of the above shall apply.

Note:

1. Examples of apparatus are d.c switchboards/distribution boards, protective devices such as circuit breakers and fuses, and d.c machines and associated control devices.
2. Examples of circuits include those related to d.c. apparatus; d.c machines and controls circuits.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment

intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile

- graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
  - Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Find and repair faults in d.c. electrical apparatus and circuits as detailed as described in 7) and including:
      - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
      - B Using methodical fault finding techniques.
      - C Finding faults efficiently.
      - D Rectifying faults effectively.
      - E Completing documentation correctly.
      - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in d.c. electrical apparatus and circuits.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and

incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG004A Install low voltage electrical apparatus and associated equipment

UEENEEG009A Develop and connect control circuits

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEG011A Carry out basic repairs to electrical apparatus

### Unit Descriptor

1)

This unit deals with the repair or replacement of mechanical and electrical components of electrical apparatus. It encompasses safe working practices, following written and oral instruction and procedures, basic testing and techniques for dismantling and assembling apparatus and disconnecting and reconnecting components

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit may apply to persons entering work in electrotechnology and may be used in school based vocational programs.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments

such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to repair electrical apparatus.

- 1.1 OHS procedures for a given work area are obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
- 1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Repair electrical apparatus.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Apparatus is dismantled in accordance with manufacturer’s guide and supervisor’s instructions.
- 2.5 Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.

- 2.6 Repairs are affected efficiently without damage to other components, apparatus or circuits.
  - 2.7 Apparatus is assembled in an appropriate sequence with all components parts placed, secured and connected in accordance with manufacturer’s guide or industry practice.
  - 2.8 Procedures for referring non-routine events to immediate supervisor for directions are followed.
  - 2.9 Repairs are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report repair work activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Repaired apparatus is prepared and forwarded to appropriate person(s) for testing.
  - 3.3 Work area is cleaned and made safe in accordance with established procedures.
  - 3.4 Work supervisor is notified of the completion of the repair work in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out basic repairs to electrical apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.4 Basic cable and conductor terminations
- 2.11.2.2 Electrical workshop machines
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out basic repairs electrical apparatus limited to replacement or repair of components in which the fault has been previously established. This shall include at least two different electrical apparatus in which three different types of components are faulty one of which requires disconnecting and reconnecting internal wiring to affect repairs.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will

contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out basic repairs to electrical apparatus as described as described in 7) and including:
    - A Following manufactures service instructions for access to components.
    - B Removing at least three different types of components specified in the work instructions.
    - C Replacing components to manufacturer’s requirements.
    - D Terminating internal wiring correctly.

- E Reassembling the apparatus correctly.
- F Testing apparatus operation.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out basic repairs to electrical apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.2	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.8

# UEENEEG012A Solve fundamental problems in electrical systems

## Unit Descriptor

1)

This unit covers ascertaining correct operation of electrical systems in building and premises and solving fundamental system problems as applies to engineering support work functions. It encompasses working safely, problem solving techniques, interpreting electrical measurements, providing solutions derived from measurements to predictable problems in electrical systems and providing justification for such solutions.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE025A      Solve problems in complex multiple path circuits

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 6.

## Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and

typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to solve single and three phase low voltage circuit problems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
- 1.4 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others
- 1.6 Sources of materials that may be required for the work are established in accordance with established procedures
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety

2	Solve single and three phase low voltage circuit problems.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Established methods are used to solve electrical system problems from measure and calculated values.
		2.4	Appropriately competent and authorised person(s) are directed to take particular electrical measurements where necessary.
		2.5	Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
		2.6	Unexpected situations are dealt with safely and with the approval of an authorised person.
3	Complete work and document problem solving activities.	3.1	OHS risk control work completion measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Justification for solutions used to solve electrical system problems is documented.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving fundamental problems in electrical systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.6	Electromagnetic principles
2.8.8	Electrotechnology science and materials
2.8.2.2	Alternating current principles - power
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to any three of the following problems.

- Determining the operating parameters of an existing electrical system
- Alternating an existing electrical system to comply with specified operating parameters and regulatory requirements

Note:

Operating parameters include voltage, current, impedance, power and power factor

- Determining the cause of low power factor in an existing circuit.
- Determining conditions causing an existing circuit to be unsafe.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve fundamental problems in electrical systems as described as described in 7) and including:
    - A Determining the operating parameters of existing electrical systems.
    - B Using established problem solving methods.

- C Directing personnel to take relevant measurements.
- D Interpreting measured values appropriately.
- E Providing effective solutions to electrical system problems.
- F Giving written justification of solutions provided.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving fundamental problems in electrical systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE0025A Solve problems in complex multiple path circuits

The critical aspects of occupational health and safety covered in Unit UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6

## UEENEEG013A Install and maintain emergency systems

### Unit Descriptor

1)

This unit covers the installation and maintenance of fire and smoke control, emergency lighting and early warning systems in buildings and premises. It encompasses working safely and to installation and maintenance standards, complying with maintenance schedules and completing the necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG003A      Install wiring and accessories for low voltage circuits

UEENEEG004A      Install low voltage electrical apparatus and associated equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting

equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

**5)** Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install and maintain emergency systems

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Installation/maintenance is prepared in consultation with other effected by the work and sequenced appropriately.
- 1.5 The nature and location of the work is determined from documentation or appropriate person to establish the scope of work to be undertaken.
- 1.6 Location of apparatus and associated equipment is planned within the constraints of the building structure, significants and regulations.
- 1.7 Advice is sought from appropriate persons to ensure the work is coordinated effectively with others.
- 1.8 Material needed for the installation work is obtained in accordance with established procedures and checked against job requirements.
- 1.9 Tools, equipment and testing devices needed to for the installation work are obtained in accordance with established procedures and checked for correct operation and safety.
- 1.10 Preparatory work is checked to ensure no damage has occurred and complies with requirements.

- |   |  |     |   |
|---|--|-----|---|
| 2 | Install and maintain emergency systems                         | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |  | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.  |
|   |  | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
|   |  | 2.4 | Apparatus and associated equipment are installed and maintained to comply with technical standards and job specifications and requirements with sufficient access to affect terminations, adjustment and maintenance. |
|   |  | 2.5 | Wiring is terminated at apparatus and associated equipment in accordance with manufacture’s specifications and functional and regulatory requirements.  |
|   |  | 2.6 | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.   |
|   |  | 2.7 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.8 | Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures.  |
|   |  | 2.9 | Apparatus installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.           |
| 3 | Completion and report installation and maintenance activities. | 3.1 | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 | Final checks are made to that the installed and maintained apparatus conforms to requirements.  |
|   |  | 3.4 | ‘As-installed’ emergency systems apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining emergency systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.17	Cells and batteries
2.7.6	Electrical installations, emergency systems
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to fire and smoke control and evacuation lighting and warning systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Install and maintain emergency systems as detailed as described in 7) and including:
  - A Determining the operating parameters of existing electrical systems.
  - B Using established problem solving methods.
  - C Directing personnel to take relevant measurements.
  - D Interpreting measured values appropriately.
  - E Providing effective solutions to electrical system problems.
  - F Giving written justification of solutions provided.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining emergency systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE0025A Solve problems in complex multiple path circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.2 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 2.6
---	--	--

## UEENEEG014A Develop plans and compliance policies to conduct a contracting business

### Unit Descriptor

1)

This unit covers the development of plans and policies to ensure regulatory requirements are met in conducting a contracting business, technical, occupational and workplace relation requirements associated with functions and responsibilities of a contracting business. It encompasses applying knowledge of technical regulations and standards, legislated obligations in relation to safety, the environment, heritage sites and employment and human resources.

Note:

This Unit should be undertaken in conjunction with UEENEEE018A Establish, maintain and evaluate OHS systems

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG005A      Verify compliance and functionality of general electrical installations

UEENEEE018A      Establish, maintain and evaluate OHS systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading      5      Writing      5      Numeracy      5

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to

occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to develop plans and compliance policies.

- 1.1 Factors influencing the performance of a contracting business are investigated and evaluated.
- 1.2 Information and advice is sought on the effects of legislated requirements on the operation of a contracting business.
- 1.3 Formal processes to meet technical, managerial, occupational and workplace relations' obligation in a contracting business are clearly identified.
- 1.4 Focus of the business is established from investigation of market opportunities and financial climate in which it is to operate

2 Develop plans and compliance policies.

- 2.1 Policies are established to ensure occupational aspects of work undertaken by the business met all legislated requirements and standards.
- 2.2 Policies are established to ensure technical aspects of work undertaken by the business met all legislated requirements and standards.
- 2.3 Policies are established to ensure managerial and workplace relations aspects of work undertaken by the business met all legislated requirements and standards.
- 2.4 Procedures and processes are developed to give effect to the established business policies including maintenance of currency in changes, developments and requirements.
- 2.5 Methods are incorporated in the business procedures to maintain currency with occupational, technical, managerial and workplace relations developments.
- 2.6 Policies, plans and procedures are reviewed in consultation with appropriately competent person(s) and changes made where agreed as necessary.

- 2.7 Plans, policies and procedures are documented in accordance sound management practice.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing plans and compliance policies to conduct a contracting business. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.23 Enterprise regulatory requirements and non regulatory standards
- 2.5.2.1 Technical standards, regulations and codes for general electrical installations
- 2.5.2.2 Technical standards, regulations and codes for special electrical installations
- 2.5.12 Electricity distributors, supply requirements
- 2.5.13 Electricity regulatory safety requirements
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing plans and compliance policies to conduct a small electrical contracting business

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best

utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in

accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop plans and compliance policies to conduct a contracting business as described as described in 7) and including:
    - A Evaluating factors influencing the performance of a contracting business accurately.
    - B Identifying the formal processes for meeting legislated obligations.
    - C Establishing an appropriate focus for the business.
    - D Establishing policies to ensure all legislated requirements and standards are met.
    - E Developing procedures and processes to give effect to established policies.
    - F Giving written justification of solutions provided.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing plans and compliance policies to conduct a contracting business.

**Method of**

**8.4)**

**assessment**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE018A      Establish, maintain and evaluate OHS systems

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  2.6; 2.7	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  2.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.2	2
How are problem solving skills	Refer to the following Performance Criteria for examples of application:	

applied?	1.1; 1.2; 2.1 to 2.5	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  All	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  N/A
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  All
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.4
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEG015A Find and rectify faults in energy supply network equipment

### Unit Descriptor

1)

This unit covers finding and rectifying faults in energy supply network electrical equipment. It encompasses working safely, reading circuit and reticulation diagrams, applying logical fault finding procedures, following fault rectification procedures and completing the necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG008A Find and repair faults in electrical apparatus and circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired and is therefore not applicable to those entering work.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

#### Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to

currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to find and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.

- 2.5 Fault finding is approached methodically drawing on knowledge of energy network equipment using measured and calculated values of circuit/apparatus parameters.
  - 2.6 Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
  - 2.7 Faulty circuits/components are rechecked and their fault status and acquired.
  - 2.8 Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.
  - 2.9 Effectiveness of the repair is tested in accordance with established procedures.
  - 2.10 Apparatus is reassembled, finally tested and prepared for return to service.
  - 2.11 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.12 Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
  - 3.3 Maintenance work activities are documented in accordance with established procedures.
- Note.  
Examples of documentation are component faults reports, test results, authorisations, permits, and parts/component dispatch and stores records.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and rectifying faults in energy supply network equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.3 Fault finding techniques

- 2.6.21 Electricity supply and reticulation
- 2.6.22.1 Electrical power system protection
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by finding and rectifying any four of the following faults in at least four types of energy supply network equipment:

- Open-circuit
- Short-circuit
- Incorrect connections
- Insulation failure
- Unsafe condition
- Apparatus/component failure
- Related mechanical failure

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and rectify faults in energy supply network equipment as described as described in 7) and including:
    - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
    - B Using methodical fault finding techniques.
    - C Finding faults efficiently.
    - D Rectifying faults effectively.
    - E Completing documentation correctly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and rectifying faults in energy supply network equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and

demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG008A Find and repair faults in electrical apparatus and circuits

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  N/A
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEG016A **Diagnose and rectify faults in lift systems**

### **Unit Descriptor**

1)

This unit covers diagnosing and rectifying faults in traction lift systems and equipment. It encompasses working safely, replacing and/or adjustment of lift circuit and associated components, diagnosing and repairing of faults in lift circuits and associated components (including governors, brakes, safety gear, safety devices, lift machines, door components and controllers) and releasing passengers from lifts which have become immobilised.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEG008A Find and repair faults in electrical apparatus and circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any formal recognition for this standard at the aligned AQF 3/4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### **Competency Field**

4)

Electric

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to diagnose and rectify faults.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 The likely extend of work to be undertaken is envisaged from maintain procedures or fault/breakdown reports and/or discussions with appropriate person(s).</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
2 Diagnose and rectify faults.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measured and devised and implemented in consultation with appropriate personnel.</p> <p>2.5 Logical diagnostic methods are applied to diagnose lift system apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.</p> <p>2.6 Suspected fault scenarios are tested as being the cause(s) of system fault.</p>

- |   |  |  |  |
|---|--|--|--|
|   | 2.7  | Cause of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the lift systems.  |  |
|   | 2.8  | Faults in the lift components of the system are rectified to raise apparatus and system to its operational standard.   |  |
|   | 2.9  | System is tested to verify that the system operates as intended and to specified requirements  |  |
|   | 2.10   | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |  |
|   | 2.11   | Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |  |
| 3 | Completion and report fault diagnosis and rectification activities | 3.1  | OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2  | Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.  |
|   |  | 3.3  | Rectification of faults is documented in accordance with established procedures.   |
|   |  |  | Note.<br>Examples of documentation are components fault reports, test results, authorisations, permits, parts/component dispatch and store records |
|   |  | 3.4  | Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.                     |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in lifts systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.3	Technical standards, regulations and codes for lifts and escalators
2.6.46	Lift systems – basic operations
2.6.47	Lift components – electro-mechanical
2.6.48	Electric lifts – mechanics
2.6.49	Electro-hydraulic lifts
2.6.50	Electro-hydraulic lifts – mechanical operation
2.6.51	Emergency release procedures – trapped passengers
2.18.1	Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to diagnosing and rectifying faults in lift circuits and associated components for at least three (3) types of lift circuits/components as listed:

- Governors
- Brakes
- Safety gear
- Safety devices
- Lift machines
- Door components
- Controllers
- Release passengers from a lift, which has become immobilised

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in lift systems as described as described in 7) and including:
    - A Governors.
    - B Brakes.
    - C Safety gear.
    - D Safety devices.
    - E Lift machines.
    - F Door components.
  - Replace and/or adjustment of lift equipment in at least three types of lift equipment as described below
    - A Electro-hydraulic lift.
    - B Electric traction lift.
    - C Passenger lift.
    - D Goods lift.
    - E Dealing with unplanned events by drawing on

essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in lifts systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG008A Find and repair faults in electrical apparatus and circuits

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3 to 1.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 2.5; 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	2.4 to 2.6	2
--	------------	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEG017A **Install electrical power and control equipment for rail network signalling**

### Unit Descriptor

1)

This unit covers the installation of electrical protection devices, switchgear and controlgear and signalling control equipment used in rail networks and intended to operate at voltages up to 50 to 1,000 V a.c. or 1,500 V d.c. It encompasses safe working practices, regulatory requirements and following work procedures, matching equipment with that specified for a given location, terminating cables and connecting wiring and completing the necessary installation documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG003A Install wiring and accessories for low voltage circuits

Note:

This unit may be assessed with competency UEENEEG004A, Install low voltage electrical apparatus and associated equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1	Prepare to install signal and power control equipment.	1.1	OHS procedures including Rail Safeworking for a given work area are identified, obtained and understood.
		1.2	Established OHS risk control measures and procedures, including Rail Safeworking, in preparation for the work are followed.
		1.3	Safety hazards which have not previously been identified are noted and established risk control measures are implemented.
		1.4	On Track safety controls and Isolation of equipment is appropriately sequenced in accordance with job schedule.
		1.5	Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
		1.6	Location in which installation of equipment will occur is determined from job specifications and diagrams.
		1.7	Materials needed for the installation of equipment are obtained in accordance with established procedures and checked against job requirements.
		1.8	Tools, equipment and testing devices needed to Install and test power and control equipment are obtained in accordance with established procedures and checked for correct operation and safety.
		1.9	Preparatory work is checked to ensure no damage has occurred and complies with requirements.
2	Install power and control equipment and wiring.	2.1	OHS risk control measures and procedures, including the On track safety requirements, for carrying out the work are followed.

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Power and control equipment are installed wiring terminated to comply with technical standards and job specifications and requirements.
  - 2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 2.6 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.7 Ongoing checks of the quality of installation, including wiring, are undertaken in accordance with established procedures.
  - 2.8 Installation work is carried out efficiently without unnecessary waste of materials and energy or damage to apparatus, circuits, the surrounding environment or services.
- 3 Completion and report installation activities.
- 3.1 OHS risk control work completion measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Testing is carried out to verify that circuits, apparatus and equipment conform to requirements.
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe installation of electrical protection devices, switchgear and controlgear and signalling control equipment used in rail networks and intended to operate at voltages up to 50 to 1000 V a.c. or 1,500 V d.c.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.7.2 Electrical installations, equipment requirements
- 2.14.1 Basic rail operations
- 2.14.15 Rail signalling, regulations and codes
- 2.18.1 Occupational Health and Safety principles

## 2.18.2 Electrical Safe working practices

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installation of power and control equipment including:

- - At least six of the following signalling equipment components:
    - Termination Points
    - Signal Heads
    - Signal Relays
    - Points Machines
    - Level Crossing Equipment
    - Signal Panels
    - Track Circuit Equipment
    - Automatic Warning Systems
    - Automatic Train Protection Systems
    - Non-vital Electronic Equipment
    - Electronic Interlocking Systems
  - At least four of the following tests:
    - Earth leakage tests
    - Circuit Tests
    - Operational tests
    - Cable integrity tests
    - Continuity tests
    - Wire count

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install electrical power and control equipment for rail network signalling as described as described in 7) and including:
    - A Reading and interpreting drawings related to and apparatus locations and circuit connections.
    - B Placing and securing apparatus accurately.
    - C Maintaining fire integrity.
    - D Connecting apparatus and associated equipment to comply with requirements.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions
- OHS policy and work procedures and instructions.
- On-track safety documentation as applied to Rail Safeworking
- Access to a Supervisor for obtaining work instructions and advice
- Work procedures relevant to work function and organisation
- As built documentation required for the Installation
- Personal Protective Equipment
- Installation tools and equipment
- Typical work environments
- Suitable work environment, facilities, equipment and materials

to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing electrical protection devices, switchgear and controlgear and signalling control equipment used in rail networks intended to operate at voltages up to 50 to 1000 V a.c. or 1,500 V d.c..

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE008A Install wiring and accessories for extra low voltage circuits.
- UEENEEG003A Install wiring and accessories for low voltage circuits
- UEENEEG004A Install low voltage electrical apparatus and associated equipment

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.1; 1.2	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5	1

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.8

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.9

## **UEENEEG018A Maintain operation of electrical mining equipment**

### **Unit Descriptor**

**1)**

This unit covers servicing of electrical systems and equipment in underground and open-cut mines. It encompasses working safely, applying knowledge of mining electrical systems and equipment, reading circuit and reticulation diagrams, applying logical fault diagnosis procedures, following fault rectification procedures and maintaining the necessary documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

- UEENEEG002A Solve problems in single and three phase low voltage circuits
- UEENEEG008A Find and repair faults in electrical apparatus and circuits
- UEENEEM002A Attend to breakdowns in hazardous areas'
- UEENEEM006A Maintain equipment in hazardous areas

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work and working in mines. Competencies in working in hazardous areas and with

explosion-protected equipment are required where the workplace includes hazardous areas such as underground coalmines.

Note:

UEENEEM002A Attend to breakdowns in hazardous areas' and UEENEEM006A Maintain equipment in hazardous areas' provide the required skill and knowledge to work in hazardous areas and with explosion-protected equipment relevant to this unit.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

**5)** Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to maintain operation of electrical mining equipment.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The likely extent of work to be undertaken is envisaged from fault/breakdown reports and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |  |      |   |
|---|--|------|---|
| 2 | Maintain operation of electrical mining equipment.                           | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |  | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.                    |
|   |  | 2.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
|   |  | 2.4  | Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.               |
|   |  | 2.5  | Fault finding is approached methodically drawing on knowledge of mining electrical equipment and circuits using measured and calculated values of circuit/apparatus parameters. |
|   |  | 2.6  | Circuit/apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.  |
|   |  | 2.7  | Faulty circuits/components are rechecked and their fault status and acquired.   |
|   |  | 2.8  | Materials/replacement parts required to rectify faults are sourced and obtained in accordance with established procedures.  |
|   |  | 2.9  | Effectiveness of the repair is tested in accordance with established procedures.  |
|   |  | 2.10 | Apparatus is reassembled, finally tested and prepared for return to service.  |
|   |  | 2.11 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.12 | Fault finding and repair activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.      |
| 3 | Complete and report on maintaining operation of electrical mining equipment. | 3.1  | OHS work completion risk control measures and procedures are followed.  |

- 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
- 3.3 Maintenance work activities are documented in accordance with established procedures.

Note.

Examples of documentation are component faults reports, test results, authorisations, permits, and parts/component dispatch and stores records.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining operation of electrical mining equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.19 Technical standards, regulations and codes for mining
- 2.6.20 Electrical mining systems overview
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices
- 2.18.6 Hazardous area safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to maintaining operation of electrical mining equipment by rectifying any four of the following faults in mining equipment and circuits.

- - Open-circuit
  - Short-circuit
  - Incorrect connections
  - Insulation failure
  - Unsafe condition
  - Apparatus/component failure
  - Related mechanical failure

Note:

1. Examples of apparatus are switchboards/distribution boards, protective devices such as circuit breakers, and earth leakage devices, control equipment, socket outlets, electric vehicles and motor starters and associated control devices.

2. Examples of circuits include those supplying fix equipment; lighting; motors; socket outlets; trailing cable and within electric vehicles.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain operation of electrical mining equipment as detailed as described in 7) and including:
    - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
    - B Using methodical fault finding techniques.
    - C Finding faults efficiently.
    - D Rectifying faults effectively.
    - E Completing documentation correctly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and  
specific  
resources for  
assessment**
**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining operation of electrical mining equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE009A Comply with scheduled and preventative maintenance program processes
- UEENEEM002A Attend to breakdowns in hazardous areas
- UEENEEM006A Maintain equipment in hazardous areas

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6;
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEG019A **Maintain operation of electrical marine equipment**

### **Unit Descriptor**

1)

This unit covers the servicing of electrical systems and equipment on vessels and ships. It encompasses working safely, applying knowledge of marine electrical systems and equipment, reading circuit and reticulation diagrams, applying logical fault diagnosis procedures, following fault rectification procedures and maintaining the necessary operational documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG002A Solve problems in single and three phase low voltage circuits

UEENEEG008A Find and repair faults in electrical apparatus and circuits

UEENEEM002A Attend to breakdowns in hazardous areas'

UEENEEM006A Maintain equipment in hazardous areas

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work and maritime regulations.

Competencies in working in hazardous areas and with explosion-protected equipment are required where the workplace includes hazardous areas such as in gain handling and fuel pumping facilities.

Note:

UEENEEM002A Attend to breakdowns in hazardous areas' and UEENEEM006A Maintain equipment in hazardous areas' provide the required skill and knowledge to work in hazardous areas and with explosion-protected equipment relevant to this unit.

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining operation of electrical marine equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.17 Cells and batteries
- 2.6.23 Marine Electrical Systems overview
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to maintaining operation of electrical marine equipment by rectifying any four of the following faults in marine equipment and circuits.

- - Open-circuit
  - Short-circuit
  - Incorrect connections
  - Insulation failure
  - Unsafe condition
  - Apparatus/component failure
  - Related mechanical failure

Note:

1. Examples of apparatus are switchboards/distribution boards, protective devices such as circuit breakers, and earth leakage devices, control equipment, socket outlets, electric vehicles and motor starters and associated control devices.
2. Examples of circuits include those supplying fix equipment; lighting; motors; socket outlets; trailing cable and within electric vehicles.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain operation of electrical marine equipment as described as described in 7) and including:
    - A Envisaging the likely extent of work from fault/breakdown reports and discussion with appropriate person(s).
    - B Using methodical fault finding techniques.
    - C Finding faults efficiently.
    - D Rectifying faults effectively.
    - E Completing documentation correctly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in context of assessment, which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining operation of electrical marine equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE009A Comply with scheduled and preventative maintenance program processes

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.5 to 2.8	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.9; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.4 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.11

## UEENEEG020A **Select and arrange equipment for special electrical installations**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers selecting and arranging electrical equipment into distribution circuits for installations in caravan parks, construction and demolition sites, marinas, medical treatment areas and moveable premises operating at voltages up to 1,000V a.c. or 1,500 V d.c. The unit encompasses schemes for protection of persons and property, correct functioning, compatibility with the supply, arrangement of circuits and selection of switchgear, controlgear, protection devices and wiring based on calculated and deemed-to-comply solutions.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.</p> <p>UEENEEG007A    Select and arrange equipment for general electrical installations</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 25%;">Reading</td> <td style="width: 5%;">4</td> <td style="width: 25%;">Writing</td> <td style="width: 5%;">4</td> <td style="width: 25%;">Numeracy</td> <td style="width: 5%;">4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4
Reading	4	Writing	4	Numeracy	4		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended as an additional competency to relevant competencies previously acquired and is therefore not applicable to those entering work.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p>						

## Electrical

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to select equipment.	1.1 The extent and nature of the electrical installation is determined from job specifications.  1.2 Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood.
2 Arrange installation into circuits.	2.1 Circuits are arranged to ensure safe and functional operation of the installation.  2.2 Circuits are arranged to comply with technical standards and job specifications and requirements.  2.3 Earthing is arranged to comply with the MEN system requirements.
3 Select cables, protection and switchgear.	3.1 Wiring is selected for suitability for the environments in which they are installed.  3.2 Cable conductor sizes are selected to meet current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations.  3.3 Protection methods and devices are selected to meet co-ordination requirements for overload and short-circuit protection.  3.4 Switchgear and control gear is selected to meet current, voltage and IP ratings and functional requirements.  3.5 Earthing system components are selected to meet requirements of the MEN system.  3.6 Evidence is obtained that electrical equipment selected complies with safety requirements.
4 Document electrical installation.	4.1 Reasons for selections made, including calculations, are documented in accordance with established procedures.

- 4.2 Electrical installation arrangement and specifications for all selected items are documented in accordance with established procedures and forwarded to appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and selecting and arranging equipment for special electrical installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.5.2.2 Technical standards, regulations and codes for special electrical installations
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by, selecting and arranging equipment for at least two of the following types of installations.

- - Caravan parks,
  - Construction and demolition sites.
  - Marinas,
  - Medical treatment areas,
  - Moveable premises

The electrical installations shall comprise consumer's mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards, final sub circuits and requirement particular to the installation type.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Select and arrange equipment for special electrical installations as described as described in 7) and including:
    - A Arranging electrical installations to comply with safety and other regulatory and functional requirements.
    - B Selecting appropriate type and size of cables.
    - C Selecting protection methods and devices that meet co-ordination requirements for overload and short-circuit protection.
    - D Selecting switchgear and control gear that meet current, voltage and IP ratings and functional requirements.
    - E Selecting appropriate earthing components.
    - F Documenting installation arrangement, specification

for items selected and reasons for the selections made.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in selecting and arranging equipment for special electrical installations

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENED001A Use basic computer applications relevant to a workplace
- UEENEEG007A Select and arrange equipment for general electrical installations

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2; to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: (See Note)	2

Note:  
Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>
------------------------------	-------------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEG021A **Verify compliance and functionality of special electrical installations**

### Unit Descriptor

1)

This unit covers testing and visual inspection for verifying that an electrical installation in caravan parks, construction and demolition sites, marinas, medical treatment areas, moveable premises and HV installation in consumer’s premises are safe and comply with requirements. The unit encompasses procedures for safely conducting mandatory and optional tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements.

Note:

Competency in verifying compliance of installations for hazardous areas is covered by other units:

UEENEEM009A	Test installations in hazardous areas
UEENEEM010A	Conduct close inspection of existing hazardous areas installations
UEENEEM011A	Conduct detailed inspection of hazardous areas installations

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG005A	Verify compliance and functionality of general electrical installations
UEENEEG020A	Select and arrange equipment for special electrical installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs

under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to inspect and test an electrical installation.

- 1.1 OHS measures for the site are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
- 1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |                                    |  |  |
|---|------------------------------------|--|--|
|   | 1.7                                | Preparatory work is checked to ensure no damage has occurred and complies with requirements. |  |
| 2 | Visually inspect the installation. | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |                                    | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
|   |                                    | 2.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.                                  |
|   |                                    | 2.4  | Wiring is checked for suitability for the environments in which they are installed and suitably protected from damage or overheating.                        |
|   |                                    | 2.5  | Cable conductor sizes are acquired as meeting current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations.                  |
|   |                                    | 2.6  | Protection methods and devices are validated as meeting co-ordination requirements for overload and short-circuit protection.                                |
|   |                                    | 2.7  | Switchgear and control gear is validated as being appropriately rated and meeting functional requirements.   |
|   |                                    | 2.8  | Evidence that electrical equipment complies with safety requirements is cited.   |
|   |                                    | 2.9  | Earthing system components are checked that they are correctly located and conductors correctly sized.   |
|   |                                    | 2.10   | Marking on switchboards are checked for accuracy and clarity and comply with requirements.   |
| 3 | Conduct safety testing.            | 3.1  | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |                                    | 3.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
|   |                                    | 3.3  | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.                                  |

- |   |                                      |  |   |
|---|--------------------------------------|--|---|
|   | 3.4                                  | Mandatory tests are conducted to verify that: <ul style="list-style-type: none"> <li>• Earthing conductor resistance is sufficiently low</li> <li>• Insulation resistance is sufficiently high</li> <li>• Polarities are correct</li> <li>• Circuit connections are correct</li> <li>• Other tests required by a Standard</li> </ul> |   |
|   | 3.5                                  | Testing is conducted to verify that: <ul style="list-style-type: none"> <li>• Fault-loop impedance is sufficiently low</li> <li>• Residual current devices operate as intended.</li> </ul>   |   |
| 4 | Report inspection and test findings. | 4.1  | OHS risk control work completion measures and procedures are followed.                        |
|   |                                      | 4.2  | Work site is cleaned and made safe in accordance with established procedures.                 |
|   |                                      | 4.3  | Non-compliance defects are identified and reported in accordance with established procedures. |
|   |                                      | 4.4  | Recommendations for rectifying defects are made in accordance with established procedures.    |
|   |                                      | 4.5  | Mandatory documentation is completed in accordance with established procedures.               |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of special electrical installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.5.2.2 | Technical standards, regulations and codes for special electrical installations |
| 2.7.5.2 | Electrical installations, testing and verification of special installations     |
| 2.18.1  | Occupational Health and Safety principles                                       |
| 2.18.2  | Electrical Safe working practices   |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by verifying compliance and functionality of at least two of the following types of installations

- - Caravan parks
  - Construction and demolition sites
  - HV installation in consumer's premises
  - Marinas
  - Medical treatment areas
  - Moveable premises

The electrical installations shall comprise consumer's mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards, final sub circuits and requirement particular to the installation type.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be

‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Verify compliance and functionality of special electrical installations as describe as described in 7) and including:
    - A Selecting correct tools and testing equipment.
    - B Identifying visual non-compliance defects.
    - C Using effective methods for conducting mandatory and optional tests.

- D Identifying non-compliance from test results.
- E Identifying causes of non-compliance.
- F Completing mandatory reporting.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in verifying compliance and functionality of special electrical installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.10; 3.4; 3.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5; 2.6; 3.4; 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 4.4	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  3.4; 3.5	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 1.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEG022A Conduct compliance inspection of single phase electrical installations

### Unit Descriptor

1)

This unit covers inspection of single phase domestic installations for demand not exceeding 100A for varying compliance with electrical safety regulations. It encompasses working safely, conducting tests and inspections, documenting non-compliance defects, taking/recommending actions resulting from non-compliance defects, applying regulatory requirements and completing inspection reports.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG005A Verify compliance and functionality of general electrical installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power

operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to conduct compliance inspection.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s).
- 1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.
- 1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.

2 Conduct compliance inspect.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Detailed inspection of the consumer’s mains and main switchboard is conducted methodically to ascertain compliance of protection, metering, earthing, circuit arrangements and markings.
- 2.5 Detailed inspection of circuits is conducted methodically to ascertain the compliance of the installed wiring, accessories, switchgear / control gear and current-using devices.
- 2.6 Where deemed necessary, evidence that electrical equipment complies with safety requirements is sought from appropriate person(s) and sighted.
- 2.7 Detailed inspection is conducted to verify compliance of earthing, insulation, polarity, circuit connections and operation of Residual current devices.
- 2.8 Fault-loop impedance is ascertained as being sufficiently low by testing, calculation or deemed to comply arrangement of the installation.
- 2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 3 Act and report on inspection findings.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Non-compliance defects are identified with appropriate clauses in regulatory standards and documented in accordance with established procedures.
  - 3.3 Actions are taken as a result of non-compliance within the scope of inspection responsibilities and authority and documented.
  - 3.4 Inspection report is made and issued to appropriate person(s) in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting compliance inspection of single phase electrical installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.2.2 Enterprise work activities records

2.2.5 Enterprise customer relations protocols

- 2.5.12 Electricity distributors, supply requirements
- 2.5.13 Electricity regulatory safety requirements
- 2.7.9.1 Electrical installations, single phase inspections
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by conducting compliance inspection of at least two domestic electrical installations comprising a single phase, two wire supply with a maximum demand not exceeding 100 amperes containing, consumers mains, main earthing system and those parts of a main switchboard related to the control of the installation and protection against spread of fire.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access

to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct compliance inspection of single phase electrical installations as described as described in 7) and including:

- A Obtaining appropriate documentation and equipment in preparation for the inspection.
- B Conducting Detailed inspections and testing methodically.
- C Identifying non-compliance defects.
- D Relating non-compliance defects with appropriate clause in regulatory standards.
- E Acting within the inspection authority when dealing with non-compliance defects.
- F Documenting and reporting inspection findings.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting compliance inspection of single phase electrical installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.4 to 2.8	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5; 2.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.7; 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.7; 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6; 3.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.9

## **UEENEEG023A      Conduct compliance inspection of electrical installations with demand exceeding 100 A per phase**

### **Unit Descriptor**

1)

This unit covers inspection of general electrical installations for verifying compliance with electrical safety regulations. It encompasses working safely, conducting tests and inspections, documenting non-compliance defects, taking/recommending actions resulting from non-compliance defects, applying regulatory requirements and completing inspection reports.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG022A      Conduct compliance inspection of single phase electrical installations

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such

as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to conduct compliance inspection.</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s).</p> <p>1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.</p> <p>1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.</p>
<p>2 Conduct compliance inspect.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p>

- 2.4 Detailed inspection of the consumer's mains and main switchboard is conducted methodically to ascertain compliance of protection, metering, earthing, circuit arrangements and markings.
- 2.5 Detailed inspection of circuits is conducted methodically to ascertain the compliance of the installed wiring, accessories, switchgear / control gear and current-using devices.
- 2.6 Where deemed necessary, evidence that electrical equipment complies with safety requirements is sought from appropriate person(s) and sighted.
- 2.7 Detailed inspection is conducted to verify compliance of earthing, insulation, polarity, circuit connections and operation of Residual current devices.
- 2.8 Fault-loop impedance is ascertained as being sufficiently low by testing, calculation or deemed to comply arrangement of the installation.
- 2.9 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 3 Act and report on inspection findings.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Non-compliance defects are identified with appropriate clauses in regulatory standards and documented in accordance with established procedures.
  - 3.3 Actions are taken as a result of non-compliance within the scope of inspection responsibilities and authority and documented.
  - 3.4 Inspection report is made and issued to appropriate person(s) in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting compliance inspection of electrical installations with demand exceeding 100 A per phase. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.7.9.2 Electrical installations, inspections and safety compliance audits
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by conducting compliance inspection of at least two electrical installations comprising consumers mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards related to the control of an individual occupier's portion of a multiple installation and final sub circuits.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct compliance inspection of electrical installations with demand exceeding 100 A per phase as described in 7) and including:
    - A Obtaining appropriate documentation and equipment in preparation for the inspection.
    - B Conducting detailed inspections and testing methodically.
    - C Identifying non-compliance defects.
    - D Relating non-compliance defects with appropriate clause in regulatory standards.
    - E Acting within the inspection authority when dealing with non-compliance defects.
    - F Documenting and reporting inspection findings.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting compliance inspection of electrical installations with demand exceeding 100 A per phase.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and

demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.4 to 2.8	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5; 2.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.7; 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.7; 2.8	2

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2 to 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6; 3.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

# UEENEEG024A Conduct compliance inspection of special electrical installations

## Unit Descriptor

1)

This unit covers inspection of electrical installation in marinas, moveable premises and caravan parks, medical treatment centres, construction and demolition sites and HV installation in consumer’s premises for verifying compliance with electrical safety regulations. It encompasses working safely, conducting tests and inspections, documenting non-compliance defects, taking/recommending actions resulting from non-compliance defects, applying regulatory requirements and completing inspection reports.

Note:

Competency in verifying compliance of installations for hazardous areas is covered by units:

- UEENEEM009A Test installations in hazardous areas
- UEENEEM010A Conduct close inspection of existing hazardous areas installations
- UEENEEM011A Conduct detailed inspection of hazardous areas installations

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- UEENEEG021A Verify compliance and functionality of special electrical installations
- UEENEEG023A Conduct compliance inspection of electrical installations with demand exceeding 100 A per phase

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of

training at the aligned AQF 4 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the work place subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to conduct compliance inspection.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s).
- 1.4 Documentation or deemed to comply standard on which installation is based is reviewed and understood.
- 1.5 Appropriate person(s) are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |  |     |  |
|---|--|-----|--|
| 2 | Conduct compliance inspect.            | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |  | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.                             |
|   |  | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   |  | 2.4 | Detailed inspection of the consumer’s mains and main switchboard is conducted methodically to ascertain compliance of protection, metering, earthing, circuit arrangements and markings. |
|   |  | 2.5 | Detailed inspection of circuits is conducted methodically to ascertain the compliance of the installed wiring, accessories, switchgear / control gear and current-using devices.         |
|   |  | 2.6 | Where deemed necessary, evidence that electrical equipment complies with safety requirements is sought from appropriate person(s) and sighted.   |
|   |  | 2.7 | Detailed inspection is conducted to verify compliance of earthing, insulation, polarity, circuit connections and operation of Residual current devices.                                  |
|   |  | 2.8 | Fault-loop impedance is ascertained as being sufficiently low by testing, calculation or deemed to comply arrangement of the installation.   |
|   |  | 2.9 | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
| 3 | Act and report on inspection findings. | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2 | Non-compliance defects are identified with appropriate clauses in regulatory standards and documented in accordance with established procedures.   |
|   |  | 3.3 | Actions are taken as a result of non-compliance within the scope of inspection responsibilities and authority and documented.  |
|   |  | 3.4 | Inspection report is made and issued to appropriate person(s) in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting compliance inspection of special electrical installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.2.2 Technical standards, regulations and codes for special electrical installations

2.18.1 Occupational Health and Safety principles

2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by conducting compliance inspection of at least three of the following types of installations.

- Caravan parks,
- Construction and demolition sites,
- HV installation in consumer's premises
- Marinas,
- Medical treatment areas,
- Moveable premises

The electrical installations shall comprise consumers' mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards, final sub circuits and requirement particular to the installation type.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct compliance inspection of special electrical installations as described in 7) and including:
    - A Obtaining appropriate documentation and equipment in preparation for the inspection.
    - B Conducting Detailed inspections and testing methodically.
    - C Identifying non-compliance defects.
    - D Relating non-compliance defects with appropriate clause in regulatory standards.
    - E Acting within the inspection authority when dealing with non-compliance defects.
    - F Documenting and reporting inspection findings.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting compliance inspection of special electrical installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.4 to 2.8	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 2.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.7; 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.7; 2.8	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6; 3.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

## **UEENEEG025A Plan electrical installations with a LV demand up to 400A per phase**

### **Unit Descriptor**

**1)**

This unit covers the planning of circuit and equipment for electrical installations where standardised arrangements for service and CT metering equipment are used, not exceeding 400 A per phase. This encompasses schemes for protection of persons and property, correct functioning, compatibility with the supply, arrangement of circuits, metering and control, cable route planning, specifying type and rating of switchgear, controlgear, protection devices and wiring based on calculated and deemed-to-comply solutions and planning documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG007A Select and arrange equipment for general electrical installations

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### **Competency Field**

**4)**

## Electrical

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to plan electrical installations.	<p>1.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>1.2 The extent and nature of the electrical installation is determined from job specifications.</p> <p>1.3 Safety and other regulatory requirements to which the electrical installation shall comply are identified, obtained and understood.</p> <p>1.4 Electricity tariffs required are discussed with appropriate person(s) to ascertain control and metering needs of the installation.</p>
2 Arrange installation circuits, control and metering.	<p>2.1 Circuits are arranged to ensure safe and functional operation of the installation.</p> <p>2.2 Circuits are arranged to comply with technical standards and job specifications and requirements.</p> <p>2.3 Control and metering of the installation is arranged in accordance with regulatory and local requirements and consumer needs.</p> <p>2.4 Earthing is arranged to comply with the standards and local energy supplier's requirements.</p>
3 Specify cables, protection and switchgear.	<p>3.1 Fault levels at each relevant point of the installation are determined from calculations and/or information from the local energy supplier's.</p> <p>3.2 Suitability of the wiring systems selected is determined to meet requirements for protection against environmental factors and job specifications.</p> <p>3.3 Cable conductor sizes are determined to meet current-carrying capacity requirements and voltage-drop and fault-loop impedance limitations and short circuit performance.</p> <p>3.4 Protection methods and devices are specified to meet co-ordination requirements for overload and short-circuit protection.</p>

- |   |  |  |  |
|---|--|--|--|
|   | 3.5                                    | Switchgear and control gear are specified to meet fault levels, current, voltage and IP ratings and functional requirements. |  |
|   | 3.6                                    | Earthing system components are specified to meet requirements of the earthing system used.                                   |  |
|   | 3.7                                    | Evidence is obtained that electrical equipment selected complies with safety requirements.                                   |  |
| 4 | Document electrical installation plan. | 4.1  | Equipment specified for the installation is documented together with supporting calculations in accordance with established procedures.  |
|   |  | 4.2  | Electrical installation arrangement, equipment locations, cable routes and schedules and requirements are documented in accordance with established procedures and forwarded to appropriate person(s). |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning electrical installations with a LV demand up to 400A per phase. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |         |  |
|--|---------|--|
|  | 2.6.2.2 | Electrical metering arrangements                                   |
|  | 2.7.3   | Electrical installations, safety principles and requirements       |
|  | 2.7.4.1 | Electrical installations – protection methods and devices          |
|  | 2.7.4.2 | Electrical installations, circuit arrangements and cable selection |
|  | 2.18.1  | Occupational Health and Safety principles                          |
|  | 2.18.2  | Electrical Safe working practices                                  |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to planning electrical installations with a LV demand up to 400A per phase. The installation shall comprise a main switchboard CT metering, multiple tariffs or tenants, distribution boards single and three phase final sub circuits.

The electrical installations shall comprise consumers' mains, main earthing system and main switchboard and sub-mains, earthing system and distribution boards, final sub circuits and requirement particular to the installation type.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be

‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan electrical installations with a LV demand up to 400A per phase as described in 7) and including:
    - A Arranging electrical installations to comply with control, metering, safety and other regulatory and functional requirements.
    - B Specifying appropriate type and size of cables.

- C Specifying protection methods and devices that meet co-ordination requirements for overload and short-circuit protection.
- D Specifying switchgear and control gear that meet fault level, current, voltage and IP ratings and functional requirements.
- E Selecting appropriate earthing system components.
- F Documenting installation plan, specifications of equipment, equipment locations, cable routes and schedules and supporting calculations.
- G Arranging electrical installations to comply with control, metering, safety and other regulatory and functional requirements.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning electrical installations with a LV demand up to 400A per phase.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED001A Use basic computer applications'

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2
-----------------------------------	--	---

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEED001A Use basic computer applications'

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## **UEENEEG026A    Install and maintain field power and distribution systems with a LV demand up to 200 A per phase**

### **Unit Descriptor**

**1)**

This unit covers the installation of electrical power intended to operate at voltages to 1,000 V a.c. or 1,500 V d.c. It encompasses working safely and to standards, positioning site generator sets, routing cables to specified locations, matching equipment with that specified for a given location terminating cables and connecting accessories and completing the necessary installation documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG007A    Select and arrange equipment for general electrical installations

UEENEEG008A    Find and repair faults in a.c. electrical apparatus and circuits

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install and maintain field power and distribution systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Nature of the work and location of power equipment is determined by site inspection and from job instructions, specifications and/or diagrams.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Materials needed for the installation, maintenance/repair work are obtained in accordance with established procedures and checked against job requirements.
- 1.7 Tools, equipment and testing devices needed to install or maintain/repair power supplies are obtained in accordance with established procedures and checked for correct operation and safety.

2 Install field power and distribution systems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 Generator set are located and installed to comply with technical standards and job specifications and requirements.
  - 2.3 Cable sets are selected to comply with load requirements and voltage drop limitations.
  - 2.4 Cable sets are installed terminated to comply with technical standards and job specifications and requirements.
  - 2.5 Tests are conducted to ensure installed power supply complies with specifications and functions as intended.
  - 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 2.7 Installation of power supply is carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Maintain/repair field power and distribution systems.
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Correct functioning of equipment is established from reference to manuals, system specifications and commissioning data.
  - 3.3 Faults are identified by reference to appropriate technical information and applying knowledge of field power and distribution systems to logical fault finding techniques.
  - 3.4 Faulty, worn, damaged or insecure components are replaced, repaired or secured in accordance with manufacturer's specifications and enterprise requirements.
  - 3.5 Tests are conducted to ensure maintained/repared power and distribution system complies with specifications and functions as intended.
  - 3.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.

	3.7	Maintenance and repair of power and distribution system is carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
4 Complete installation and maintenance of field power and distribution systems.	4.1	OHS work completion risk control measures and procedures are followed.
	4.2	Work site is cleaned and made safe in accordance with established procedures.
	4.3	Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintaining field power and distribution systems with a LV demand up to 200 A per phase. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.3	Single phase alternators
2.6.4	Three phase alternators
2.6.32	Field power and distribution systems
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and maintaining at least two field power and distribution systems with a LV demand up to 200 A per phase. The installation shall comprise a generator set, main switchboard, earthing system, at least one distribution board, flexible cable/plug sets, final sub circuits supplying lighting and power. One installation is to include a three phase load.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and maintain field power and distribution systems with a LV demand up to 200 A per phase as described in 7) and including:
    - A Interpreting specifications and circuit diagrams correctly.
    - B Maintaining, repairing and installing power and distribution systems correctly.
    - C Using appropriate diagnostic and fault finding techniques.
    - D Following relevant codes of practice, procedures and requirements.
    - E Completing relevant records and documentation.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and maintaining field power and distribution systems with a LV demand up to 200 A per phase.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

**Key competencies**
**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3 to 1.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5; 3.5	1

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling Employment**
**8.7)**

Evidence that competency in this unit incorporates skills enabling

employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.4; 3.1 to 3.5
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5; 3.6

## **UEENEEG027A Design electrical installations with a LV demand greater than 400 A per phase**

### **Unit Descriptor**

1)

This unit covers the design of supply and distribution arrangements, control, protection and selection of equipment for electrical installations with low voltage demand greater than 400 amperes per phase. This encompasses designing schemes for protection of persons and property and correct functioning, compatibility with the supply, and arrangement of circuits, determination of fault levels, effective switchgear, control gear, and protection against over current and over and under voltage and wiring based on calculations to meet required safety and performance standards and functional requirements.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG025A Plan electrical installations with a LV demand up to 400A per phase

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to plan electrical installations.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 The extent and nature of the electrical installation is determined from design brief.
- 1.3 Safety and other regulatory requirements to which the electrical installation shall comply area are identified, obtained and understood.
- 1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work.

2 Develop installation design.

- 2.1 Knowledge of electrical installation performance standards, compliance methods and electrical equipment and is applied to designing the installation.
- 2.2 Alternative arrangements for the installation design are considered based on the requirements outlined in the design brief.
- 2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
- 2.4 Installation design draft is checked for compliance with the design brief and regulatory requirements.
- 2.5 Installation design is documented for submission to appropriate person(s) for acceptance and approval.

	2.6	Solutions to unplanned situation are provided consistent with organisation’s policy.
3 Obtain approval for installation design.	3.1	Installation design is presented and explained to client representative and/or other relevant person(s).
	3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation’s policy.
	3.3	Final design is documented and approval obtained from appropriate person(s).
	3.4	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing electrical installations with a LV demand greater than 400 A per phase. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.12	Electricity distributors, supply requirement
2.7.4.3	Electrical installations, advanced methods of cable and protection selection
2.7.5.1	Electrical installations, testing and verification
2.7.5.2	Electrical installations, testing and verification of special installations
2.7.10	Electrical installations, determination of demand
2.7.11	Electrical installations, overcurrent protection
2.7.12	Electrical installations, overvoltage and undervoltage protection
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing electrical installations with a LV demand in excess of 400A per phase. The installation shall comprise main switchboard,

multiple tenancies, distribution boards and single and three-phase final sub circuits.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design electrical installations with a LV demand greater than 400 A per phase as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing electrical installations with a LV demand greater than 400 A per phase.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE001A      Use basic computer applications'

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.3, 4.1; 4.2	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling

employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEG028A Plan switchboard and control panel layouts

### Unit Descriptor

1)

This unit covers selecting and arranging equipment in electrical switchboards and control panels operating at voltages up to 1,000V a.c. or 1,500 V d.c. and fault levels not exceeding 20 kA. The unit encompasses arrangements for protection of persons and property, correct functioning, compatibility with the supply, and intended arrangement of circuits and selection of switchgear, controlgear and protection devices based on calculated and deemed-to-comply solutions and planning documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG007A Select and arrange equipment for general electrical installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

### Competency Field

4)

Electrical

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to plan switchboard and control panel layouts.	<p>1.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>1.2 The extent and nature of the switchboard and control panel layouts is determined from job specifications or design brief.</p> <p>1.3 Safety and other regulatory requirements to which the switchboard and control panel layouts shall comply are identified, obtained and understood.</p> <p>1.4 Equipment to be incorporated in the switchboard or control panel is determined from job specifications or design brief.</p>
2 Plan switchboard and control panel layouts.	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Equipment is selected that complies with technical standards and job specifications and requirements.</p> <p>2.3 Switchboard and control panel layouts are planned to accommodate all necessary equipment with sufficient clearance to enable wiring/connecting and servicing with constraints imposed by job specifications.</p> <p>2.4 Switchboard and control panel layouts are planned to comply with safety regulatory and functional requirements.</p> <p>2.5 Switchboard and control panel layout draft is checked for compliance with the design brief and regulatory requirements.</p> <p>2.6 Switchboard and control panel layout is documented for submission to appropriate person(s) for acceptance and approval.</p> <p>2.7 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.</p>

- |   |  |     |  |
|---|--|-----|--|
| 3 | Obtain approval for switchboard and control panel layouts. | 3.1 | Requests for alterations to the layout are negotiated with relevant person(s) within the constraints of organisation's policy. |
|   |  | 3.2 | Final layout design is documented and approval obtained from appropriate person(s).  |
|   |  | 3.3 | Switchboard and control panel layout documentation is forwarded to appropriate production personnel.                           |
|   |  | 3.4 | Quality of work is monitored against established organisational standards  |

### REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning switchboard and control panel layouts. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |

| 2.3.1    | Electrical control devices                |
| 2.6.1    | Protection devices and applications       |
| 2.6.2.1  | Switchboards / distribution boards        |
| 2.6.2.2  | Electrical metering arrangements          |
| 2.6.24.1 | Switchgear/controlgear                    |
| 2.6.24.2 | Control panel wiring                      |
| 2.18.1   | Occupational Health and Safety principles |
| 2.18.2   | Electrical Safe working practices         |

### RANGE STATEMENT

- 7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to planning one switchboard layout and one control panel layout. The switchboard shall be in more than one section and comprise essential and general supply controls, CT metering, sub main controls, local distribution board and load monitoring and fault indication. The control panel shall consist of controls for more than two electrical machines, electro-mechanical and/or electronic control devices such as relays, timers, logic controllers, indicators and switches/push buttons.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan switchboard and control panel layouts as described in 7) and including:
    - A Developing outlines of alternative layouts.
    - B Selecting equipment that complies with safety and functional requirements and budget limitations.
    - C Developing the layout within the safety and functional requirements and budget limitations.
    - D Successfully negotiating layout alteration requests.
    - E Obtaining approval for final layout design..
    - F Documenting layout and equipment specifications clearly.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and  
specific  
resources for****8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning switchboard and control panel layouts.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEED001A      Use basic computer applications’

**Key competencies****8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  (See Note)	2

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling

employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEG029A Overhaul and repair major switchgear/controlgear

### Unit Descriptor

1)

This unit covers the overhauling and repairing switchgear/controlgear rated in excess of 20 kA. It requires the ability to establish and document the level of work required, arranging for the overhaul/repair to be carried out, verify compliance of overhauled/repared switchgear/controlgear and complete the necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG064A Repair mechanical components of electrical machines

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and switchgear/control gear operate at voltage above 50 V a.c. or 120 V d.c. Other conditions related to communications, electrical work, fire protection, gas work, high voltage work, refrigeration/air conditioning and security may apply in some jurisdictions subject to regulations. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare for overhaul/repair of switchgear/control gear.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented.
- 1.4 Instructions on the extent of overhaul and/or repair are received and expected outcomes of the work acquired with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Switchgear/control gear service and repair documentation is read and understood.
- 1.7 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.8 Tools, equipment and testing devices needed to work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Overhaul switchgear/control gear.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |                                |  |
|---|--------------------------------|--|
|   | 2.4                            | Switchgear and control gear is dismantled and parts tagged and stored to prevent loss or damage.   |
|   | 2.5                            | The state of switchgear/control gear components is determined by measurements, tests and inspections and results recorded.                                 |
|   | 2.6                            | Materials/replacement parts required to complete the work are sourced and obtained in accordance with established procedures.                              |
|   | 2.7                            | Effectiveness of the repairs is tested in accordance with established procedures.  |
|   | 2.8                            | Specifications and instructions for the overhaul/repair work are documented in accordance with requirements.   |
| 3 | Document overhaul/repair work. | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |                                | 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.  |
|   |                                | 3.3 Overhaul/repair work is documented in accordance with requirements stating that the switchgear/control gear complies with the overhaul specifications. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and overhauling and repairing major switchgear/controlgear. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.6.24.1 | Switchgear/controlgear                                   |
| 2.7.4.1  | Electrical installations, protection methods and devices |
| 2.18.1   | Occupational Health and Safety principles                |
| 2.18.2   | Electrical Safe working practices                        |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to overhauling at least one type of low voltage switchgear/control gear rated above 200 A and any high voltage switchgear/control gear.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to

consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Overhaul and repair major switchgear/controlgear as described in 7) and including:
    - A Interpreting service and repair documentation correctly.
    - B Determining the state of switchgear/control gear correctly.
    - C Repairing switchgear/control gear effectively.
    - D Completing documentation correctly.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in overhauling and repairing major switchgear/controlgear.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- |             |  |
|-------------|--|
| UEENEEC001A | Maintain documentation   |
| UEENEEC002A | Source and purchase material for installation and service jobs |

**Key competencies****8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 4.1; 4.2	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.2	2

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling

employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEG030A Design switchboards rated for high fault levels

### Unit Descriptor

1)

This unit covers the design of supply and distribution arrangements, control, protection and selection of equipment for switchboards with low voltage demand greater than 400 amperes per phase. This encompasses designing schemes for protection of persons and property and correct functioning, compatibility with the supply, and arrangement of circuits, determination of fault levels, effective switchgear, control gear, and protection against over current, over and under voltage and wiring based on calculations to meet required safety and performance standards and functional requirements.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG028A Plan switchboard and control panel layouts

UEENEEG049A Solve problems in complex polyphase power circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the work place. However practice in this unit is subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to plan switchboards.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 The extent and nature of the switchboard is determined from design brief.
- 1.3 Safety and other regulatory requirements to which the switchboard shall comply area are identified, obtained and understood.
- 1.4 Design development work is planned to meet scheduled timelines in consultation with others persons involved in the installation or associated work.

2 Develop installation design.

- 2.1 Knowledge of switchboard performance standards, compliance methods and electrical equipment and is applied to designing the installation.
- 2.2 Alternative arrangements for the switchboard design are considered based on the requirements outlined in the design brief.
- 2.3 Safety, functional and budgetary considerations are incorporated in the installation design.
- 2.4 Switchboard design draft is checked for compliance with the design brief and regulatory requirements.
- 2.5 Switchboard design is documented for submission to appropriate person(s) for acceptance and approval.

	2.6	Solutions to unplanned situation are provided consistent with organisation's policy.
3 Obtain approval for installation design.	3.1	Switchboard design is presented and explained to client representative and/or other relevant person(s).
	3.2	Requests for alterations to the design are negotiated with relevant person(s) within the constraints of organisation's policy.
	3.3	Final design is documented and approval obtained from appropriate person(s).
	3.4	Quality of work is monitored against personal performance agreement and/or established organisational or professional standards.

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing switchboards rated for high fault levels. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.8	Electrotechnology science and materials
2.8.2.2	Alternating current principles - power
2.8.15.3	Fault current calculations
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing switchboards rated for fault levels in excess of 20 kA. The switchboard shall comprise control for essential and general supply, metering, sub-main controls, local final sub-circuit distribution board and fault monitoring.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects  
of evidence  
required to  
demonstrate  
competency in  
this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design switchboards rated for high fault levels as described in 7) and including:
    - A Developing outlines of alternative designs.
    - B Developing the design within the safety and functional requirements and budget limitations.
    - C Documenting and presenting design effectively.
    - D Successfully negotiating design alteration requests.
    - E Obtaining approval for final design.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and 8.3)**

**specific resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing switchboards rated for high fault levels.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEE004A      Use engineering applications software

**Key competencies****8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 4.1; 4.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.2 to 3.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 3.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: N/A	

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling

employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  4.1; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 3.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1; 1.2
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEG031A Evaluate performance of electrical apparatus

### Unit Descriptor

1)

This unit covers testing of electrical apparatus for compliance with a standard and regulation for the purpose of certification, approval and/or product quality maintenance. The unit encompasses safe working practices, determining performance requirements, inspecting, setting up performance tests, evaluating inspection and test results and documenting test outcomes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

This unit shall be assessed with other relevant units in a qualification.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

#### Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices and

- site rehabilitation.
- 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to evaluate electrical apparatus

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Examination and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
- 1.4 Relevant documentation is obtained and read to determine the certification/approval specifications for which the equipment is to be assessed.

Note:  
Examples of documentation are those specifying safety requirements, technical standard, as marketed technical performance and product quality endorsement standards.

2 Evaluate electrical apparatus

- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.
- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Circuits/apparatus/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 In depth knowledge of the performance requirements of electrical apparatus and testing methods are applied to the assessment process.

	2.5	Apparatus examination and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.
	2.6	Apparatus examination and tests are carried out methodically and results and comments systematically noted.
	2.7	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8	Assessment is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.
3	Complete work and document evaluate results	3.1 OHS work completion risk control measures and procedures are followed.
		3.2 Work site is cleaned and made safe in accordance with established procedures.
		3.3 Examination and test results are evaluated and non-compliance issues identified.
		3.4 Examination, test results and comments on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating performance of electrical apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.23	Performance standards and regulatory requirement for electrical equipment
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least two different current-using apparatus and two different control apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Evaluate performance of electrical apparatus as described in 7) and including:
    - A Interpreting compliance documents.
    - B Setting up and conducting appropriate examinations and tests.
    - C Identifying non-compliance issues.
    - D Reporting examination and test results and non-compliance issues clearly and accurately.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

**assessment**

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in evaluating performance of electrical apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	3
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

Note:

Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEED001A Use basic computer applications'

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEG032A Carry out electrical field testing and report findings

### Unit Descriptor

1)

This unit covers field testing of electrical systems, circuits and apparatus to determine the cause of faults, malfunctions or compliance. It encompasses working safely and to standards, applying knowledge of electrical measurement and testing, following appropriate test procedures, documenting, evaluating and reporting test results.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG005A Verify compliance and functionality of general electrical installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting

equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to Carry out electrical field testing.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The likely extent of work to be undertaken is envisaged from situation reports and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, equipment and testing devices needed to locate faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Carry out electrical field testing.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measures devised and implemented in consultation with appropriate personnel.

- |   |  |   |   |
|---|--|---|---|
|   | 2.5  | Field testing and measuring is approached methodically drawing on knowledge of electrical systems, circuits, apparatus and testing/measuring techniques appropriate to each test and situation. |   |
|   | 2.6  | Circuit apparatus/components are dismantled where necessary to facilitate testing and parts stored to protect them against loss or damage.  |   |
|   | 2.7  | Tests required are determined from situation report and appropriate testing/measuring instruments selected and set up in accordance with manufacturer's instructions and industry standards.    |   |
|   | 2.8  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |   |
|   | 2.9  | Testing activities are carried out without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.                                       |   |
| 3 | Complete electrical field testing and report findings. | 3.1   | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2   | Apparatus is reassembled after testing where necessary, and work area is cleaned and made safe in accordance with established procedures.     |
|   |  | 3.3   | Test findings are reported including recommendation for any action to be taken to rectify/modify conditions or parameters shown by the tests. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out electrical field testing and report findings. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |   |
|--|----------|---|
|  | 2.2.1    | Enterprise communication methods                    |
|  | 2.2.2    | Enterprise work activities records                  |
|  | 2.11.6.1 | Advance electrical testing and measuring devices    |
|  | 2.11.6.2 | Electrical field testing and measurement techniques |
|  | 2.11.6.3 | Power cable fault detection techniques              |

2.18.1 Occupational Health and Safety principles

2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out and reporting findings of electrical field tests for the purpose of:

- Locating faults
- Examining operating parameters
- Accessing compliance with regulations
- Evaluating quality compliance

Note.

Examples of tests are earth system testing including HV installations; Varley loop testing; earth resistance measurements in electro-medical areas; temperature rise and thermography; circuit breaker residual current testing; illumination measurements and interpretation; industrial power factor measurements; radiation leakage in microwave ovens; antennae field strength measurement

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Carry out electrical field testing and report findings as described in 7) and including:
  - A Envisaging the extent of work from situation reports and discussion with appropriate person(s).
  - B Using methodical testing techniques appropriate to each type of test and situation.
  - C Selecting and setting up appropriate testing/measuring instruments in accordance with manufacturer’s instructions and industry standards.
  - D Writing test findings and recommendations of actions to be taken.
  - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out electrical field testing and report findings.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.5; 2.7	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.7	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.8; 3.3	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.8	3

Note:  
Where dedicated application software is used in demonstrating competency this unit may be assessed concurrently with 'UEENEE001A Use basic computer applications'

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## UEENEEG034A Perform high voltage field switching to a given schedule

### Unit Descriptor

1)

This unit covers the carrying out of high voltage switching operations involving the operation of circuit breaking and isolation devices from a given switching schedule and according to enterprise procedures. It also encompasses the process of; communicating with the Switching Control Officer or Electrical Control Officer, isolating the electrical equipment and the line or work site, as well as proving that the area is de-energised and earthed, issuing/accepting electrical permits and the returning of the affected circuits to service.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been acquired.

UEENEEG015A Find and rectify faults in energy supply network equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to occupational health and safety, electricity/telecommunications/gas/water industry safety and compliance, industrial relations, environmental protection, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of operating certain equipment.

**Competency Field      4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to undertake HV switching procedures to a given schedule

- 1.1 Switching and work schedule(s), including drawings, plans, requirements, established procedures, and material lists, are received, analysed and acquired, if necessary, by site inspection
- 1.2 Relevant requirements and established procedures for the work are communicated to all personnel and identified for all work sites
- 1.3 OHS policies and procedures related to requirements and established procedures for HV switching are obtained and acquired for the purposes of the work to be performed and communicated
- 1.4 Work is prioritised and sequenced following consultation with others for completion within acceptable timeframes and in accordance with established procedures
- 1.5 Hazards are identified, OHS risks assessed and control measures are prioritised, implemented and monitored including emergency exits kept clear according to established procedures.
- 1.6 Relevant authority is obtained to perform work according to requirements and/or established procedures
- 1.7 Resources including personnel, equipment, tools and personal protective equipment required for the job are obtained and acquired in working order.
- 1.8 Relevant personnel at worksite are acquired current in First Aid and other related work procedures according to requirements
- 1.9 Liaison and communication issues with other/authorised personnel, authorities, clients and land-owners are resolved to carry out work where necessary.

- |   |   |   |  |
|---|---|---|--|
|   | 1.10  | Site is prepared according to the work schedule and to minimise risk and damage to property, commerce, and individuals in accordance with established procedures                                      |  |
|   | 1.11  | Personnel participating in the work, including plant operators and contractors, are fully briefed and respective responsibilities acquired where applicable in accordance with established procedures |  |
|   | 1.12  | Road signs, barriers and warning devices are positioned in accordance with requirements   |  |
| 2 | Carry out HV switching procedures to a given schedule | 2.1   | OHS and Sustainable Energy principles and practices to reduce the incidents of accidents and minimise waste are monitored and followed in accordance with requirements and/or established procedures   |
|   |   | 2.2   | Lifting, climbing, working in confined spaces and aloft, and use of power tools/equipment, techniques and practices are safely followed and, currency according to requirements acquired   |
|   |   | 2.3   | Apply essential knowledge and associated skills for the safe undertaking of HV switching procedures to a given schedule to ensure completion in an agreed timeframe and, to quality standards with a minimum of waste according to requirements            |
|   |   | 2.4   | Communications with Switching Control Officer are established and maintained throughout the isolation operation according to established procedures  |
|   |   | 2.5   | Electrical equipment and associated circuits line/network or work site to be switched including parallelling is isolated and proved de-energised using appropriate devices and earthed where required according to requirements and established procedures |
|   |   | 2.6   | Hazard warnings and safety signs are recognised and hazards and assessed OHS risks are reported to the immediate authorised persons for directions according to established procedures.  |
|   |   | 2.7   | Unplanned events occurring during HV switching procedures to a given schedule are responded to and undertaken within the scope of established procedures   |
|   |   | 2.8   | Relevant permits are prepared and issued in accordance with established procedures   |

	2.9	Known solutions to a variety of problems are applied using acquired essential knowledge and associated skills
	2.10	On going checks of quality of the work are undertaken in accordance with instructions and established procedures
3	Complete HV switching procedures to a given schedule	3.1 Work undertaken is checked against works schedule for conformance with requirements and anomalies reported in accordance with established procedures
	3.2	Accidents and/or injuries are reported in accordance with requirements/established procedures, where applicable.
	3.3	Work site is rehabilitated, cleaned up and made safe in accordance with established procedures.
	3.4	Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
	3.5	Relevant permit(s) are signed off, safety devices are removed, and the system is re-energised and returned to service in accordance with requirements/established procedures
	3.6	Works completion records, reports, as installed /modified drawing and / or documentation and information are finalised and processed and appropriate personnel and authority notified

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and perform high voltage field switching to a given schedule. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

T2.4.3	High voltage switching principles
T2.4.4	High voltage fault switching principles
T2.4.5	High voltage distribution transformer principles
T2.4.6	High voltage SWER system
T2.4.7	Feeder automation system
2.18.1	Occupational Health and Safety principles

## 1.18.2 Electrical Safe working practices

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall/may be demonstrated in relation to the carrying out of high voltage switching operations involving the operation of circuit breaking and isolation devices from a given switching schedule.

Switching operations are confined to those performed in field situations, not in system control rooms or substations and may include electrical load transfer.

Switchgear includes reclosers, ring main units, circuit breakers, isolators, earth switches, sectionalisers, HV links, air break switches, live line clamps, and fuses.

Specialist tools may include HV phasing sticks, HV link sticks, HV live-line clamp operating sticks, HV ground transformer isolating handles and associated earths, HV overhead operating earths and HV detectors.

Switching program/schedule including necessary detail, eg. structure, switch or equipment number; locations; HV feeder; outage times; works plan/order.

The following constants and variables included in the element/Performance Criteria in this unit are fully described in the Definitions Section 1 of this volume and form an integral part of the Range Statement of this unit:

- Appropriate and relevant persons (see Personnel)
- Appropriate authorities
- Appropriate work platform
- Assessing risk
- Assessment
- Authorisation
- Confined space
- Diagnostic, testing and restoration
- Documenting detail work events, record keeping and or storage of information
- Drawings and specifications
- Emergency
- Environmental and Sustainable Energy Procedures
- Environmental legislation
- Environmental management documentation
- Established procedures
- Fall prevention

- Hazards
- Identifying hazards
- Inspect
- Legislation
- MSDS
- Notification
- OHS practices
- OHS issues
- Permits and / or permits to work
- Personnel
- Quality assurance systems
- Requirements
- Testing procedures
- Work clearance systems

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be

required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Perform high voltage field switching to a given schedule as described in 7) and including:

A	All of the following:	Approvals/clearances Access permits
B	All of the following:	HV operating sticks HV operating earths HV detectors
C	At least one of the following:	HV phasing sticks HV ground mounted equipment isolating handles and earths.
D	At least two of the following:	HV links Air break switches Fuses
E	At least three of the following:	Reclosers Ring main units Circuit breakers Isolators Earth switches Sectionalisers
F	At least one occasion	Dealing with an unplanned event by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in perform high voltage field switching to a given schedule.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.2, 1.8, 1.9, 1.11, 2.7, 3.1, 3.2	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1, 1.3, 3.1, 3.5, 3.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.4, 1.5, 1.6, 1.7, 1.10, 1.12, 2.1, 2.5, 2.6, 2.10, 3.1, 3.2, 3.3	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  2.3, 2.5, 2.6, 2.10, 3.4	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.1, 1.7, 2.2, 2.4, 2.6, 2.9	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.1, 2.4, 2.8, 2.9, 3.1	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.7, 2.2, 2.5, 2.6, 3.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: 1.1, 1.3, 1.5, 1.6, 1.7, 1.8, 1.11, 2.2, 3.1, 3.3
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.2, 1.4, 1.7, 1.10, 2.3, 2.5, 2.6, 2.7, 2.8, 2.9, 3.4
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.1, 2.5, 2.9, 2.10, 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.2, 1.3, 1.4, 1.7, 1.8, 1.10, 2.1, 2.2, 2.4, 2.7, 2.8, 2.9, 3.1, 3.6
5	Planning and organising the	Refer to the following Performance Criteria for examples of application:

	meaningful work task	1.1, 1.2, 1.3, 1.4, 1.10, 2.3, 2.4, 2.5, 2.6, 2.7, 3.1
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.7, 2.4, 2.5, 2.6, 2.7, 2.8,3.1, 3.2

## UEENEEG035A Diagnose and rectify faults in a.c. motor drive systems

### Unit Descriptor

1)

This unit covers diagnosing and rectifying faults in systems controlling starting, speed, torque, power output, efficient running and braking of a.c. motors. The unit encompasses safe working practices, interpreting technical data, applying knowledge of a.c. motors operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH026A Provide solutions to polyphase electronic power control problems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1 Prepare to diagnose and rectify faults.	1.1	OHS procedures for a given work area are identified, obtained and understood.
	1.2	Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3	Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4	The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
	1.5	Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
	1.6	Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Diagnose and rectify faults.	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
	2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Logical diagnostic methods are applied to diagnose a.c. motor control system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
  - 2.5 Suspected fault scenarios are tested as being the source of system problems.
  - 2.6 Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the control system.
  - 2.7 Faults in the control components of the system are rectified to raise a.c. motor control system to its operation standard.
  - 2.8 System is tested to verify that the system operates as intended and to specified requirements.
  - 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
  - 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in a.c. motor drive systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.33 Variable speed drives for a.c. motors
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults and control a.c. motor drive system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in a.c. motor drive systems as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the cause of system faults.

- C Identifying faults and competency needed to rectify them.
- D Rectifying faults in system controls.
- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in a.c. motor drive systems

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEG036A **Diagnose and rectify faults in d.c. motor drive systems**

### **Unit Descriptor**

1)

This unit covers diagnosing and rectifying faults in systems controlling starting, speed, torque, power output, efficient running and braking of d.c. motors. The unit encompasses safe working practices, interpreting technical data, applying knowledge of d.c motors operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH026A Provide solutions to polyphase electronic power control problems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |   |  |  |
|---|---|--|--|
|   | 2.4   | Logical diagnostic methods are applied to diagnose a.c. motor control system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.             |  |
|   | 2.5   | Suspected fault scenarios are tested as being the source of system problems.   |  |
|   | 2.6   | Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the control system.   |  |
|   | 2.7   | Faults in the control components of the system are rectified to raise a.c. motor control system to its operation standard.   |  |
|   | 2.8   | System is tested to verify that the system operates as intended and to specified requirements.   |  |
|   | 2.9   | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.   |  |
|   | 2.10  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |  |
|   | 2.11  | Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |  |
| 3 | Complete and report fault diagnosis and rectification activities. | 3.1  | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2  | Work site is made safe in accordance with established safety procedures.   |
|   |   | 3.3  | Rectification of faults is documented in accordance with established procedures.   |
|   |   | 3.4  | Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified. |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in d.c. motor drive systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.34 Variable speed drives for d.c. motors
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults in a d.c. motor control system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnosing and rectifying faults in d.c. motor drive systems as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the cause of system faults.

- C Identifying faults and competency needed to rectify them.
- D Rectifying faults in system controls.
- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in d.c. motor drive systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEG037A Diagnose and rectify faults in energy supply apparatus

### Unit Descriptor

1)

This unit covers diagnosing and rectifying faults in apparatus in energy supply and distribution systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of energy supply apparatus to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG015A Find and rectify faults in energy supply network equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.	
1 Prepare to diagnose and rectify faults	1.1	OHS procedures for a given work area are identified, obtained and understood.
	1.2	Established OHS risk control measures and procedures in preparation for the work are followed.
	1.3	Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
	1.4	The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel
	1.5	Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
	1.6	Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.
2 Diagnose and rectify faults	2.1	OHS risk control measures and procedures for carrying out the work are followed.
	2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
	2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

- 2.4 Logical diagnostic methods are applied to diagnose energy supply apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Cause of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the control system.
- 2.7 Faults in the apparatus components are rectified to raise energy supply apparatus to its operation standard.
- 2.8 Apparatus is tested to verify that it operates as intended and to specified requirements
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in energy supply apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.22.2 Electrical power systems operations

2.18.1 Occupational Health and Safety principles

2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults a control energy supply apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Diagnosing and rectifying faults in energy supply apparatus as described in 7) and including:
  - A Applying logical diagnostic methods.
  - B Using fault scenarios to test the cause of system faults.
  - C Identifying faults and competency needed to rectify them.
  - D Rectifying faults in system controls.
  - E Verifying that the system operates correctly.
  - F Documenting fault rectification.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in energy supply apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEG038A **Diagnose and rectify faults in electrical energy distribution systems**

### **Unit Descriptor**

1)

This unit covers diagnosing and rectifying faults in networks supplying electrical energy to consumers. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of energy supply and reticulation systems to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG015A Find and rectify faults in energy supply network equipment

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to diagnose and rectify faults

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures

- |   |  |  |
|---|--|--|
|   | 2.4  | Logical diagnostic methods are applied to diagnose energy supply apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.               |
|   | 2.5  | Suspected fault scenarios are tested as being the source of system problems.   |
|   | 2.6  | Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is outside the scope of the control system.  |
|   | 2.7  | Faults in the apparatus components are rectified to raise energy supply apparatus to its operation standard.   |
|   | 2.8  | System is tested to verify that it operates as intended and to specified requirements  |
|   | 2.9  | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.   |
|   | 2.10   | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |
|   | 2.11   | Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete and report fault diagnosis and rectification activities | 3.1 OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2 Work site is made safe in accordance with established safety procedures.   |
|   |  | 3.3 Rectification of faults is documented in accordance with established procedures.   |
|   |  | 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in electrical energy distribution systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.22.6	Electrical power distribution systems
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices
2.18.8.2	Occupational Health and Safety, enterprise and responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults in electrical energy reticulation system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnosing and rectifying faults in electrical energy distribution systems as described in 7) and including:
    - A Applying logical diagnostic methods.
    - B Using fault scenarios to test the cause of system faults.
    - C Identifying faults and competency needed to rectify them.
    - D Rectifying faults in system controls.
    - E Verifying that the system operates correctly.
    - F Documenting fault rectification.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in electrical energy distribution systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

**UEENEEG015A** Find and rectify faults in energy supply network equipment

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10
---	--	---

## UEENEEG039A Diagnose and rectify faults in distributed generation systems

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers diagnosing and rectifying faults in distributed generation systems. **ELEMENT PERFORMANCE CRITERIA**

<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to diagnose and rectify faults</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p> <p>1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel</p> <p>1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site</p> <p>1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.</p>
<p>2 Diagnose and rectify faults</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures</p>

- 2.4 Logical diagnostic methods are applied to diagnose distributed generation system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
- 2.5 Suspected fault scenarios are tested as being the source of system problems.
- 2.6 Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the control system.
- 2.7 Faults in the system components are rectified to raise distributed generation system to its operation standard.
- 2.8 System is tested to verify that it operates as intended and to specified requirements
- 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
- 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
- 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in distributed generation systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.22.4 Distributive generation systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.8.2 Occupational Health and Safety, enterprise and responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults in distributed generation systems.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Diagnose and rectify faults in distributed generation systems as described in 7) and including:
  - A Applying logical diagnostic methods.
  - B Using fault scenarios to test the cause of system faults.
  - C Identifying faults and competency needed to rectify them.
  - D Rectifying faults in system controls.
  - E Verifying that the system operates correctly.
  - F Documenting fault rectification.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in distributed generation systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEG040A    **Develop engineering solutions for energy supply power transformer problems**

### **Unit Descriptor**

1)

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely, apply extensive knowledge of energy supply power transformer operation and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical transformer problems are those encountered in meeting performance requirements and compliance standards, revising a transformer operating parameters and dealing with transformer malfunctions

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been acquired:

UEENEEG038A    Diagnose and rectify faults in electrical energy supply distribution system

OR

UEENEEG039A    Diagnose and rectify faults in distributed generation systems

OR

UEENEEG042A    Diagnose and rectify faults in electrical energy supply transmission system

AND

UEENEEG049A    Solve problems in complex polyphase power circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading        5        Writing        5        Numeracy        5

**Application of the Unit 3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to develop engineering solution for energy supply power transformer problems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of the transformer problem is determined from performance specifications and situation reports and in consultations with relevant persons.

- |   |   |     |  |
|---|---|-----|--|
|   |   | 1.4 | Activities are planned to meet scheduled timelines in consultation with others involved in the work.   |
|   |   | 1.5 | Effective strategies are formed to ensure solution development and implementation is carried out efficiently.  |
| 2 | Develop engineering solutions for energy supply power transformer problems.                     | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.   |
|   |   | 2.2 | Knowledge of supply power transformer arrangements, operation, device characteristics and applications are applied to developing solutions to supply power transformer problems.                                 |
|   |   | 2.3 | Parameters, specifications and performance requirements in relation to each transformer problem are obtained in accordance with established procedures.  |
|   |   | 2.4 | Approaches to resolving supply power transformer problems are analysed to provide most effective solutions.  |
|   |   | 2.5 | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.  |
|   |   | 2.6 | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.   |
| 3 | Test, document and implement engineering solution for energy supply power transformer problems. | 3.1 | Solutions to transformer problems are tested to determine their effectiveness and modified where necessary.  |
|   |   | 3.2 | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.   |
|   |   | 3.3 | Appropriately competent and qualified person(s) required to implement solutions to supply power transformer problems are coordinated in accordance with regulatory requirements and enterprise policy.<br>(Note) |
|   |   | 3.4 | Justification for solutions used to solve supply power transformer problems is documented for inclusion in work/project development records in accordance with professional standards.                           |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solutions for energy supply power transformer problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.8.3 Power transformer diagnostic

2.18.1 Occupational Health and Safety principles

2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four supply power transformer problems.

Note.

Typical transformer problems are those encountered in meeting performance requirements and compliance standards, revising a transformer operating parameters and dealing with transformer malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop engineering solutions for energy supply power transformer problems as described in 7) and including:
    - A Understanding the extent of the transformer problems.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining transformer parameters, specifications and performance requirements appropriate to each problem.
    - D Testing and solutions to transformer problems.
    - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
    - F Documenting justification of solutions implemented in accordance with professional standards.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing engineering solutions for energy supply power transformer problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG038A Diagnose and rectify faults in electrical energy supply distribution system

OR

UEENEEG039A Diagnose and rectify faults in distributed generation systems

OR

UEENEEG042A Diagnose and rectify faults in electrical energy supply transmission system

AND

UEENEEG049A Solve problems in complex polyphase power circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEG041A **Diagnose and rectify faults in servo drive systems**

### **Unit Descriptor**

1)

This unit covers diagnosing and rectifying faults in systems controlling servo and drives. The unit encompasses safe working practices, interpreting technical data, applying knowledge of servo/stepper drives operating parameters to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been acquired:

UEENEEH026A Provide solutions to polyphase electronic power control problems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to diagnose and rectify faults.</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.</p> <p>1.4 The extent of faults is determined from reports and other documentation and fro discussion with appropriate personnel.</p> <p>1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.</p> <p>1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.</p>
<p>2 Diagnose and rectify faults.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p>

- 2.4 Logical diagnostic methods are applied to diagnose servo/stepper drive control system faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
  - 2.5 Suspected fault scenarios are tested as being the source of system problems.
  - 2.6 Causes of the faults are identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the control system.
  - 2.7 Faults in the control components of the system are rectified to raise servo drive control system to its operation standard.
  - 2.8 System is tested to verify that the system operates as intended and to specified requirements.
  - 2.9 Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.
  - 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report fault diagnosis and rectification activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is made safe in accordance with established safety procedures.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in servo drive systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.35 Servomechanism systems
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults in a servo/stepper drive control system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in servo drive systems as described in 7) and including:
    - A Applying logical diagnostic methods.

- B Using fault scenarios to test the source of system faults.
- C Identifying faults and competency needed to rectify them.
- D Rectifying faults in system controls.
- E Verifying that the system operates correctly.
- F Documenting fault rectification.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in servo drive systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3; 1.4	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEG042A Diagnose and rectify faults in electrical energy supply transmission systems

### Unit Descriptor

1)

This unit covers diagnosing and rectifying faults in electrical energy transmission systems. The unit encompasses safe working practices, interpreting diagrams and technical data, applying knowledge of energy supply and transmission systems to logical fault finding processes, implementing fault rectification, safety and functional testing and reporting work activities and outcomes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG015A Find and rectify faults in energy supply system

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element.  
Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate personnel.
- 1.4 The extent of faults is determined from reports and other documentation and from discussion with appropriate personnel.
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed to diagnose faults are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- |   |   |  |  |
|---|---|--|--|
|   | 2.3   | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |  |
|   | 2.4   | Logical diagnostic methods are applied to diagnose electrical energy transmission system faults employing measurements and estimations of system operating parameters referenced to system operational requirements. |  |
|   | 2.5   | Suspected fault scenarios are tested as being the source of system problems.   |  |
|   | 2.6   | Source of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the control system.   |  |
|   | 2.7   | Faults in the system components are rectified to raise electrical energy transmission system to its operation standard.  |  |
|   | 2.8   | System is tested to verify that it operates as intended and to specified requirements.   |  |
|   | 2.9   | Decisions for dealing with unexpected situations are made from discussions with appropriate persons and job specifications and requirements.   |  |
|   | 2.10  | Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.  |  |
|   | 2.11  | Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to system and the surrounding environment or services and using sustainable energy practices.    |  |
| 3 | Complete and report fault diagnosis and rectification activities. | 3.1  | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2  | Work site is made safe in accordance with established safety procedures.   |
|   |   | 3.3  | Rectification of faults is documented in accordance with established procedures.   |
|   |   | 3.4  | Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and diagnosing and rectifying faults in electrical energy supply transmission systems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.22.3 Electrical power system transmission faults

2.18.1 Occupational Health and Safety principles

2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to diagnosing and rectifying at least four faults in a servo/stepper drive control system.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Diagnose and rectify faults in electrical energy supply transmission systems as described in 7) and including:
  - A Applying logical diagnostic methods.
  - B Using fault scenarios to test the source of system faults.
  - C Identifying faults and competency needed to rectify them.
  - D Rectifying faults in system.
  - E Verifying that the system operates correctly.
  - F Documenting fault rectification.
  - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in electrical energy supply transmission systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.9
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.2; 3.3

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9; 2.10

## UEENEEG043A **Develop engineering solution for synchronous machine problems**

### **Unit Descriptor**

**1)**

This unit covers developing engineering solutions to resolve problems with synchronous machines. It encompasses working safely, apply extensive knowledge of synchronous machine operation, construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG049A    Solve problems in complex polyphase power circuits

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 5 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations

directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to develop engineering solution for synchronous machine problems.</p>	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 The extent of the machine problem is determined from performance specifications and situation reports and in consultations with relevant persons.</p> <p>1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.</p> <p>1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.</p>
<p>2 Develop engineering solution for synchronous machine problems.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of synchronous machine construction, operation, characteristics and applications are applied to developing solutions to synchronous machine problems.</p> <p>2.3 Parameters, specifications and performance requirements in relation to each machine problem are obtained in accordance with established procedures.</p>

- |   |  |   |
|---|--|---|
|   | 2.4  | Approaches to resolving synchronous machine problems are analysed to provide most effective solutions.  |
|   | 2.5  | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.   |
|   | 2.6  | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.  |
| 3 | Test, document and implement engineering solution for synchronous machine problem. |   |
|   | 3.1  | Solutions to machine problems are tested to determine their effectiveness and modified where necessary.   |
|   | 3.2  | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.  |
|   | 3.3  | Appropriately competent and qualified person(s) required to implement solutions to synchronous machine problems are coordinated in accordance with regulatory requirements and enterprise policy.<br>(Note) |
|   | 3.4  | Justification for solutions used to solve synchronous machine problems is documented for inclusion in work/project development records in accordance with professional standards.                           |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solution for synchronous machine problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.6.36 | Synchronous machine diagnostics           |
| 2.18.1 | Occupational Health and Safety principles |
| 2.18.2 | Electrical Safe working practices         |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four synchronous machine problems.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to

consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop engineering solution for synchronous machine problems as described in 7) and including:
    - A Understanding the extent of the machine problem.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining machine parameters, specifications and performance requirements appropriate to each problem.
    - D Testing and solutions to machine problems.

- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- F Documenting justification of solutions implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing engineering solution for synchronous machine problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG049A Solve problems in complex polyphase power circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 3.3	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3; 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5

## UEENEEG044A **Develop engineering solutions for d.c. machine problems**

### **Unit Descriptor**

1)

This unit covers developing engineering solutions to resolve problems with d.c. machines. It encompasses working safely, apply extensive knowledge of d.c machine operation and construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising machine operating parameters and dealing with machine malfunctions.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG048A Solve problems in complex multiple path power circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to develop engineering solution for d.c. machine problems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of the machine problem is determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

2 Develop engineering solution for d.c. machine problems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of d.c machine construction, operation, characteristics and applications are applied to developing solutions to d.c machine problems.
- 2.3 Parameters, specifications and performance requirements in relation to each machine problem are obtained in accordance with established procedures.
- 2.4 Approaches to resolving d.c. machine problems are analysed to provide most effective solutions.

	2.5	Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.	
	2.6	Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.	
3	Test, document and implement engineering solution for d.c. machine problems.	3.1	Solutions to machine problems are tested to determine their effectiveness and modified where necessary.
		3.2	Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.
		3.3	Appropriately competent and qualified person(s) required to implement solutions to d.c machine problems are coordinated in accordance with regulatory requirements and enterprise policy. (Note)
		3.4	Justification for solutions used to solve d.c. machine problems is documented for inclusion in work/project development records in accordance with professional standards.

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solutions for d.c. machine problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.38	Direct current machine diagnostics
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four d.c. machine problems.

Note.

Typical machine problems are those encountered in meeting performance requirements and compliance standards, revising a machine operating parameters and dealing with machine malfunctions

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop engineering solutions for d.c. machine problems as described in 7) and including:
    - A Understanding the extent of the machine problem.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining machine parameters, specifications and performance requirements appropriate to each problem.
    - D Testing and solutions to machine problems.
    - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
    - F Documenting justification of solutions implemented in accordance with professional standards.

- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing engineering solutions for d.c. machine problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG048A Solve problems in complex multiple path power circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the

following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3 to 2.4; 3.1	3

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEG045A    **Develop engineering solutions for induction motor problems**

### **Unit Descriptor**

**1)**

This unit covers developing engineering solutions to resolve problems with induction motors. It encompasses working safely, apply extensive knowledge of induction motor operation and construction and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical motor problems are those encountered in meeting performance requirements and compliance standards, revising a motor operating parameters and dealing with motor malfunctions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG049A    Solve problems in complex polyphase power circuits

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where

applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to develop engineering solution for induction motor problems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of the motor problem is determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Effective strategies are formed to ensure solution development and implementation is carried out efficiently.

2 Develop engineering solution for induction motor problems.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 Knowledge of induction motor construction, operation, characteristics and applications are applied to developing solutions to induction motor problems.
- 2.3 Parameters, specifications and performance requirements in relation to each motor problem are obtained in accordance with established procedures.
- 2.4 Approaches to resolving induction motor problems are analysed to provide most effective solutions.

- |   |   |   |
|---|---|---|
|   | 2.5   | Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.   |
|   | 2.6   | Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.  |
| 3 | Test, document and implement engineering solution for induction motor problems. |   |
|   | 3.1   | Solutions to motor problems are tested to determine their effectiveness and modified where necessary.   |
|   | 3.2   | Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.  |
|   | 3.3   | Appropriately competent and qualified person(s) required to implement solutions to induction motor problems are coordinated in accordance with regulatory requirements and enterprise policy.<br>(Note) |
|   | 3.4   | Justification for solutions used to solve induction motor problems is documented for inclusion in work/project development records in accordance with professional standards.                           |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solutions for energy supply system protection problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.6.37 | Induction motors diagnostics              |
| 2.18.1 | Occupational Health and Safety principles |
| 2.18.2 | Electrical Safe working practices         |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four supply system protection problems.

Note.

Typical motor problems are those encountered in meeting performance requirements and compliance standards, revising a motor operating parameters and dealing with motor malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will

contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop engineering solutions for energy supply system protection problems as described in 7) and including:
    - A Understanding the extent of the motor problem.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining motor parameters, specifications and performance requirements appropriate to each problem.
    - D Testing and solutions to motor problems

- E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
- F Documenting justification of solutions implemented in accordance with professional standards.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing engineering solutions for energy supply system protection problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG049A Solve problems in complex polyphase power circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 1.5; 3.3	3

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3 to 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3 to 1.5; 3.1 to 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEG046A **Develop engineering solutions for energy supply system protection problems**

### Unit Descriptor

1)

This unit covers developing engineering solutions to resolve problems with energy supply system protection. It encompasses working safely, apply extensive knowledge of energy supply system protection operation, protection devices and their application, gathering and analysing data, applying problem solving techniques, developing and documenting solutions and alternatives.

Note.

Typical protection problems are those encountered in meeting performance requirements and compliance standards, revising a protection operating parameters and dealing with protection malfunctions..

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG038A Diagnose and rectify faults in electrical energy supply distribution system

OR

UEENEEG039A Diagnose and rectify faults in distributed generation systems

OR

UEENEEG042A Diagnose and rectify faults in electrical energy supply transmission system

AND

UEENEEG049A Solve problems in complex polyphase power circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

**Application of the Unit 3)**

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to develop engineering solution for energy supply system protection problems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The extent of the protection problem is determined from performance specifications and situation reports and in consultations with relevant persons.

- |   |   |   |
|---|---|---|
|   | 1.4   | Activities are planned to meet scheduled timelines in consultation with others involved in the work.  |
|   | 1.5   | Effective strategies are formed to ensure solution development and implementation is carried out efficiently.   |
| 2 | Develop engineering solution for energy supply system protection.                               | <p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 Knowledge of supply system protection arrangements, operation, device characteristics and applications are applied to developing solutions to supply system protection problems.</p> <p>2.3 Parameters, specifications and performance requirements in relation to each protection problem are obtained in accordance with established procedures.</p> <p>2.4 Approaches to resolving supply system protection problems are analysed to provide most effective solutions.</p> <p>2.5 Unplanned events are dealt with safely and effectively consistent with regulatory requirements and enterprise policy.</p> <p>2.6 Quality of work is monitored against personal performance agreement and/or established organizational or professional standards.</p> |
| 3 | Test, document and implement engineering solution for energy supply system protection problems. | <p>3.1 Solutions to protection problems are tested to determine their effectiveness and modified where necessary.</p> <p>3.2 Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed.</p> <p>3.3 Appropriately competent and qualified person(s) required to implement solutions to supply system protection problems are coordinated in accordance with regulatory requirements and enterprise policy. (Note)</p> <p>3.4 Justification for solutions used to solve supply system protection problems is documented for inclusion in work/project development records in accordance with professional standards.</p>  |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and developing engineering solutions for energy supply system protection problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.22.5 Electrical power system protection diagnostic

2.18.1 Occupational Health and Safety principles

2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to developing engineering solution for at least four supply system protection problems.

Note.

Typical protection problems are those encountered in meeting performance requirements and compliance standards, revising a protection operating parameters and dealing with protection malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Develop engineering solutions for energy supply system protection problems as described in 7) and including:
    - A Understanding the extent of the protection problem.
    - B Forming effective strategies for solution development and implementation.
    - C Obtaining protection parameters, specifications and performance requirements appropriate to each problem.
    - D Testing and solutions to protection problems.
    - E Documenting instruction for implementation of solutions that incorporate risk control measure to be followed.
    - F Documenting justification of solutions implemented in accordance with professional standards.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in developing engineering solutions for energy supply system protection problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3

‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent  
assessment and  
relationship  
with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG038A Diagnose and rectify faults in electrical energy supply distribution system

OR

UEENEEG039A Diagnose and rectify faults in distributed generation systems

OR

UEENEEG042A Diagnose and rectify faults in electrical energy supply transmission system

OR

UEENEEG049A Solve problems in complex polyphase power circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2 to 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5; 3.3	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3 to 2.4; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.1	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEG047A Provide computational solutions to power engineering problems

### Unit Descriptor

1)

This unit covers the application of computational processes to solving problems encountered in power engineering. It encompasses working safely, applying problem solving techniques, using a range of mathematical processes, providing solutions to power engineering problems and justifying such solutions.

Note.

Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising a systems operating parameters and dealing with system malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG002A Solve problems in single and three phase low voltage circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

<p><b>5)</b> Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>	
<p>1 Provide computational solutions to engineering problems</p>	<p>1.1</p>	<p>OHS procedures for a given work area are obtained and understood</p>
	<p>1.2</p>	<p>The nature of the problems are obtained from documentation or from work supervisor to establish the scope of work to be undertaken</p>
	<p>1.3</p>	<p>Power engineering problems are clearly stated in writing and/or diagrammatic form to ensure they are understood and appropriate methods used to resolve them.</p>
	<p>1.4</p>	<p>Known constants and variable related to the problem are obtained from measured values or problem documentation.</p>
	<p>1.5</p>	<p>Alternative methods for resolving the problem are considered and where necessary discussed with appropriate person(s).</p>
	<p>1.6</p>	<p>Problems are solved using appropriate mathematical processes and within the realistic accuracy.</p>
<p>2 Complete work and document problem solving activities</p>	<p>2.1</p>	<p>Justification for solutions used to solve engineering problems is documented for inclusion in work/project development records in accordance with professional standards.</p>
	<p>2.2</p>	<p>Work completion is documented and an appropriate person or persons notified.</p>

**REQUIRED SKILLS AND KNOWLEDGE**

**6)** This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing computational solutions to power engineering problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.11 Power engineering computations

## 2.18.1 Occupational Health and Safety principles

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to problems that apply to power engineering diagnosis and development work functions in any of the following disciplines:

- Electrical
- Electronics
- Renewable energy
- Control

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be

‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide computational solutions to power engineering problems as described in 7) and including:
    - A Clearly stating problems in written and diagrammatic form.
    - B Obtaining known constants and variable from an appropriate source.

- C Solving problems using appropriate mathematical processes.
- D Documenting justification of solutions provided in accordance with professional standards.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing computational solutions to power engineering problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG002A Solve problems in single and three phase low voltage circuits

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.1; 2.2	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.3 to 1.6	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.1; 2.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.2; 1.3
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  N/A

## UEENEEG048A Solve problems in complex multiple path power circuits

### Unit Descriptor

1)

This unit covers the determining correct operation of complex series-parallel power circuits and providing solutions as they apply to electrical power engineering work functions. It encompasses working safely, problem solving procedures, including electrical measuring devices, applying appropriate circuit theorems and providing solutions derive from measurements and calculations and providing justification for such solutions.

Note.

Typical engineering problems are those encountered in meeting requirements in a design brief, meeting performance requirements and compliance standards, revising a systems operating parameters and dealing with system malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG047A Provide computational solutions to power engineering problems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Provide computational solutions to engineering problems

1.1 OHS procedures for a given work area are obtained and understood

1.2 The nature of the problems are obtained from documentation or from work supervisor to establish the scope of work to be undertaken

1.3 Power engineering problems are clearly stated in writing and/or diagrammatic form to ensure they are understood and appropriate methods used to resolve them.

1.4 Known constants and variable related to the problem are obtained from measured values or problem documentation.

1.5 Alternative methods for resolving the problem are considered and where necessary discussed with appropriate person(s).

1.6 Problems are solved using appropriate mathematical processes and within the realistic accuracy.

2 Complete work and document problem solving activities

2.1 Justification for solutions used to solve engineering problems is documented for inclusion in work/project development records in accordance with professional standards.

2.2 Work completion is documented and an appropriate person or persons notified.

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in complex multiple path power circuits. The extent of the essential knowledge and skills required is given Volume 2 Part 2, Section 2 Clauses:

2.8.9.2 Electrical power circuit analysis

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to problems that apply to power engineering diagnosis and development work functions in any of the following disciplines:.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. ## UEENEEG049A Solve problems in complex polyphase power circuits

### Unit Descriptor

1)

This unit covers determining correct operation of complex polyphase power circuits and providing solutions as they apply to electrical power engineering work functions. It encompasses working safely, problem solving procedures, including using electrical measuring devices, applying appropriate circuit theorems and providing solutions derived from measurements and calculations and justification for such solutions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG048A Solve problems in complex multiple path power circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to solve problems in complex polyphase power circuits.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the circuit(s) problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve problems in complex polyphase power circuits.

- 2.1 OHS risk control work measures and procedures are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Established methods are used to solving circuit problems from measure and calculated values as they apply to complex multiple path circuit.
- 2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.

	2.6	Problems are solved without damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
3 Complete work and document problem solving activities.	3.1	OHS work completion risk control measures and procedures are followed.
	3.2	Work site is cleaned and made safe in accordance with established procedures.
	3.3	Justification for solutions used to solve circuit problems is documented.
	3.4	Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in complex polyphase power circuits. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.8.9.3	Polyphase power circuit analysis
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to complex polyphase power circuits as they apply to problems related to electrical power engineering diagnosis and development work functions in any of the following types of circuit problems:

- Determining the operating parameters of an existing circuit
- Alternating an existing circuit to comply with specified operating parameters
- Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in complex polyphase power circuits as described in 7) and including:
    - A Determining the operating parameters of existing circuit.
    - B Using established problem solving methods.
    - C Taking relevant measurements accurately.
    - D Interpreting measured values appropriately.
    - E Providing effective solutions to circuit problems from measurements and calculations.
    - F Giving written justification of solutions provided.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and  
specific  
resources for  
assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in complex polyphase power circuits..

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEG050A Wind coils

### Unit Descriptor

1)

This unit covers setting up coil former and winding machines and winding coils for static and rotating machines. It encompasses working safely, using hand and powered tools, measuring, applying basic knowledge of electrical circuits, following technical instructions and set procedures and recording work activities.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE007A Use drawings, diagrams, schedules and service manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrical

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to wind coils.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> <p>1.3 Work instructions are identified, obtained and understood.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Materials required for the work are obtained in accordance with established routines and procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Wind coils.	<p>2.1 Established OHS risk control work measures are followed.</p> <p>2.2 Winding machines are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 Winding wire and insulation is selected in accordance with work instructions and established routines.</p> <p>2.4 Winding formers and machine is set-up in accordance with routine instructions.</p> <p>2.5 Prescribed solutions are used to resolve work completion issues.</p> <p>2.6 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.</p> <p>2.7 Work is completed in acceptable timeframe given environment and workplace conditions.</p>
3 Complete work report.	3.1 OHS measures work completion risk control are followed.

- 3.2 Work report forms/data sheets are completed accurately.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and winding coils.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.29 Coil winding basics  
2.6.30 Coil Testing  
2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to winding at least four different types of coils in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Winding coils as described as described in 7) and including:
    - A Following winding specifications.
    - B Selecting correct winding wire and insulation.
    - C Setting up and operating winding machine.
    - D Adhering to quality procedures.
    - E Completing work report/forms accurately.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in winding coils.

**Method of assessment****8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units****8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies****8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  1.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 1.3; 3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 3.1
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.5

## UEENEEG051A Place and connect coils

### Unit Descriptor

1)

This unit covers insulating, placing and connecting coils, in a small armatures/stators, transformers and solenoid equipped devices. The unit encompasses working safely, using hand and powered tools, measuring, applying basic knowledge of electrical circuits, connecting conductors following technical instructions and set procedures and recording work activities.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE004A Solve problems in multiple path d.c. circuits

UEENEEG050A Wind coils

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

<b>Competency Field</b>	<b>4)</b>
	Electrical
<b>5) Elements describe the essential outcomes of a unit of competency</b>	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to place and connect coils.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> <p>1.3 Work instructions are identified, obtained and understood.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Materials required for the work are obtained in accordance with established routines and procedures.</p> <p>1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Place and connect coils.	<p>2.1 Established OHS risk control work measures are followed.</p> <p>2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 Coils and insulation are selected in accordance with work instructions and established routines.</p> <p>2.4 Insulation is cut and applied in accordance with work instructions and established routines.</p> <p>2.5 Coils are place in accordance with work instructions and established routines.</p> <p>2.6 Coils ends are prepared and connections made in accordance with work instructions and established routines.</p> <p>2.7 Prescribed solutions are used to resolve work completion issues.</p>

- |   |                       |  |   |
|---|-----------------------|--|---|
|   | 2.8                   | Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape. |   |
|   | 2.9                   | Work is completed in acceptable timeframe given environment and workplace conditions.                                  |   |
| 3 | Complete work report. | 3.1  | OHS measures work completion risk control are followed. |
|   |                       | 3.2  | Work report forms/data sheets are completed accurately. |

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and placing and connecting coils.

The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |   |
|--|----------|---|
|  | 2.1.9    | Winding wire types and connections        |
|  | 2.6.31.1 | Electrical machine winding basic          |
|  | 2.18.1   | Occupational Health and Safety principles |

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to placing and connecting coils for a small armatures/stators and single phase transformers or solenoid equipped devices in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## Overview of Assessment

### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## Critical aspects of evidence required to demonstrate competency in this unit

### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range

Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Place and connect coils as described as described in 7) and including:
    - A Following winding specifications.
    - B Selecting correct coils and insulation.
    - C Cutting insulation and place insulation and coils without damage.
    - D Connecting coils correctly.
    - E Adhering to quality procedures.
    - F Completing work report/forms accurately.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace

and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in placing and connecting coils.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4, 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7
---	--	---

## UEENEEG052A Rewind single phase induction machines

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers dismantling and winding stators for single-phase induction machines. It encompasses working safely, using hand and powered tools, measuring, applying basic knowledge of electrical circuits and winding data, following technical instructions, and set procedures and recording work activities.</p>

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to rewind single phase induction machines.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> <p>1.3 Work instructions are identified, obtained and understood.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.</p> <p>1.6 Winding data is obtained from record or from work supervisor in accordance with established routines.</p> <p>1.7 Winding is stripped from stator in accordance with established routines.</p> <p>1.8 Materials required for the work are obtained in accordance with established routines and procedures.</p> <p>1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Rewind single phase induction machines.	<p>2.1 Established OHS risk control work measures are followed.</p> <p>2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.</p> <p>2.4 Winding is stripped from stator in accordance with established routines.</p> <p>2.5 Stator is wound and insulated in accordance with winding data and established routines.</p>

- 2.6 Machine is assembled and prepares for testing.
- 2.7 Prescribed solutions are used to resolve work completion issues.
- 2.8 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
- 2.9 Work is completed in acceptable timeframe given environment and workplace conditions.
- 3 Complete work report.
  - 3.1 OHS measures work completion risk control is followed.
  - 3.2 Work report forms/data sheets are completed accurately in accordance with established routines.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and rewinding single phase induction machines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.3.2 Control circuit fundamentals
- 2.6.6.2 Alternating current rotating machines
- 2.6.31.1 Electrical machine winding basic
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to dismantling and winding stators for single-phase induction machines in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

**8)** This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

## **Overview of Assessment**

### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

## **Critical aspects of evidence required to**

### **8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Rewind single phase induction machines as described as described in 7) and including:
    - A Dismantling machine and storing parts securely.
    - B Preparing stator for winding.
    - C Following winding specifications.
    - D Selecting correct coils and insulation.
    - E Winding and connecting stator correctly.
    - F Assembling machine and preparing for testing.
    - G Adhering to quality procedures.
    - H Completing work report/forms accurately.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in rewinding single phase induction machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information	Refer to the following Performance Criteria for examples of application:	

communicated within this competency?	3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:

		All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.4, 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.7

## **UEENEEG053A      Rewind three phase induction machines rated for low voltage**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers preparing, placing and connecting coils and insulating three phase stators and rotors. It encompasses working safely, using hand and powered tools, measuring, applying knowledge of electrical circuits and stator windings, using testing devices, applying technical and quality standards and keeping winding records.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.</p> <p>UEENEEG052A      Rewind single phase induction machines</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="text-align: left;">Reading</td> <td style="text-align: center;">4</td> <td style="text-align: left;">Writing</td> <td style="text-align: center;">4</td> <td style="text-align: left;">Numeracy</td> <td style="text-align: center;">4</td> </tr> </table>	Reading	4	Writing	4	Numeracy	4
Reading	4	Writing	4	Numeracy	4		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Electrical</p>						

### **ELEMENT**

### **PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to rewind three phase induction machines.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> <p>1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.</p> <p>1.6 Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures.</p> <p>1.7 Winding is stripped from stator in accordance with established procedures.</p> <p>1.8 Materials required for the work are obtained in accordance with established procedures and procedures.</p> <p>1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Rewind three phase induction machines.	<p>2.1 Established OHS risk control work measures are followed.</p> <p>2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.3 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.</p> <p>2.4 Winding is stripped from stator in accordance with established procedures.</p> <p>2.5 Stator is wound and insulated in accordance with winding data and established procedures.</p> <p>2.6 Machine is assembled and prepares for final testing in accordance with established procedures.</p>

- 2.7 Prescribed solutions are used to resolve work completion issues.
- 2.8 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
- 2.9 Work is completed in acceptable timeframe given environment and workplace conditions.
- 3 Complete work report.
  - 3.1 OHS measures work completion risk control is followed.
  - 3.2 Work report forms/data sheets are completed accurately in accordance with established procedures.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and rewinding three phase induction machines rated for low voltage. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.8.2 Single & three-phase transformers
- 2.6.28 Motor windings
- 2.6.31.2 Low voltage three phase motor winding techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to dismantling and winding stators for at least three different three-phase induction machines in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Rewind three phase induction machines rated for low voltage as described as described in 7) and including:
    - A Dismantling machine and storing parts securely.
    - B Preparing stator for winding.
    - C Following winding specifications.
    - D Selecting correct coils and insulation.
    - E Winding and connecting stator correctly.
    - F Assembling machine and preparing for testing.
    - G Adhering to quality procedures.
    - H Completing work report/forms accurately.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in rewinding three phase induction machines rated for low voltage.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG057A Conduct electrical tests on low voltage electrical machines

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3; 1.4, 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7
---	--	---

| 2.18.2   | Electrical Safe working practices         |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to dismantling and winding armatures and field coils for at least three different direct current machines in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Rewind direct current machines rated for low voltage as described as described in 7) and including:
    - A Dismantling machine and storing parts securely.
    - B Preparing stator for winding.
    - C Following winding specifications.
    - D Selecting correct coils and insulation.
    - E Winding and connecting armature and fields correctly.
    - F Assembling machine and preparing for testing.
    - G Adhering to quality procedures.
    - H Completing work report/forms accurately.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in rewinding direct current machines rated for low voltage.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG057A Conduct electrical tests on low voltage electrical machines

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4; 2.5	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4, 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEG055A      Rewind three phase induction machines rated for high voltage to 3.3 kV**

**Unit Descriptor**                    1)

This unit covers preparing, placing and connecting coils and insulating three phase stators and rotors rated for high voltage to 3.3 kV. It encompasses working safely, using hand and powered tools, measuring, applying knowledge of electrical circuits and HV stator windings, applying technical and quality standards and keeping winding records.

**Prerequisite Unit(s)**            2)

**Competencies**                    2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG053A      Rewind three phase induction machines rated for low voltage

**Literacy and numeracy skills**            2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

**Application of the Unit**                                    3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

**Licence to practise**                    3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships

**Competency Field**                    4)

Electrical

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to rewind three phase induction machines.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> <p>1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.</p> <p>1.6 Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures.</p> <p>1.7 Winding is stripped from stator in accordance with established procedures.</p> <p>1.8 Materials required for the work are obtained in accordance with established procedures and procedures.</p> <p>1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Rewind three phase induction machines.	<p>2.1 Established OHS risk control work measures are followed.</p> <p>2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures. (see Note 1).</p> <p>2.3 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.</p> <p>2.4 Winding is stripped from stator in accordance with established procedures.</p> <p>2.5 Stator is wound and insulated to 3.3 kV standards in accordance with winding data and established procedures.</p>

- 2.6 Machine is assembled and prepares for final testing in accordance with established procedures.
- 2.7 Prescribed solutions are used to resolve work completion issues.
- 2.8 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.
- 2.9 Work is completed in acceptable timeframe given environment and workplace conditions.
- 3 Complete work report.
  - 3.1 OHS measures work completion risk controls are followed.
  - 3.2 Work report forms/data sheets are completed accurately in accordance with established procedures.

Note 1:

Particular attention shall be given to following risk control measure related to high voltage hazards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and rewinding three phase induction machines rated for high voltage to 3.3 kV. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.10 High voltage motor winding, conductors, connections methods and insulation
- 2.6.31.4 High voltage three phase motor winding techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to dismantling and winding stators for at least two different three phase induction machines at for HV to 3.3 kV in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Rewind three phase induction machines rated for high voltage to 3.3 kV as described as described in 7) and including:
    - A Dismantling machine and storing parts securely.
    - B Preparing stator for winding.
    - C Following winding specifications.
    - D Selecting correct coils and insulation.
    - E Winding and connecting stator correctly.
    - F Assembling machine and preparing for testing.
    - G Adhering to quality procedures.
    - H Completing work report/forms accurately.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in rewinding three phase induction machines rated for high voltage to 3.3 kV

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG057A Conduct electrical tests on low voltage electrical machines

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4, 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEG056A      Rewind three phase induction machines rated for high voltage above 3.3 kV**

**Unit Descriptor**                      **1)**

This unit covers preparing, placing and connecting coils and insulating three phase stators and rotors rated for high voltage above 3.3 kV. It encompasses working safely, using hand and powered tools, measuring, applying knowledge of electrical circuits and HV stator windings, applying technical and quality standards and keeping winding records.

**Prerequisite Unit(s)**                **2)**

**Competencies**                        **2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG055A      Rewind three phase induction machines rated for high voltage to 3.3 kV

**Literacy and numeracy skills**                **2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

**Application of the Unit**                                      **3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

**Licence to practise**                      **3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field**                        **4)**

Electrical

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to rewind three phase induction machines.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> <p>1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Induction machine is dismantled and parts tagged and stored to prevent loss or damage.</p> <p>1.6 Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures.</p> <p>1.7 Winding is stripped from stator in accordance with established procedures.</p> <p>1.8 Materials required for the work are obtained in accordance with established procedures and procedures.</p> <p>1.9 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Rewind three phase induction machines.	<p>2.1 Established OHS risk control work measures are followed.</p> <p>2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures. ## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to dismantling and winding stators for at least two different three phase induction machines at for HV to 3.3 kV in an environment designed specifically for the purpose.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Rewind three phase induction machines rated for high voltage above 3.3 kV as described as described in 7) and including:
    - A Dismantling machine and storing parts securely.
    - B Preparing stator for winding.
    - C Following winding specifications.
    - D Selecting correct coils and insulation.
    - E Winding and connecting stator correctly.
    - F Assembling machine and preparing for testing.
    - G Adhering to quality procedures.
    - H Completing work report/forms accurately.
    - I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in 'Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in rewinding three phase induction machines rated for high voltage above 3.3 kV.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG055A    Rewind three phase induction machines rated for high voltage to 3.3 kV

UEENEEG058A    Conduct electrical tests on high voltage electrical machines

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.6; 3.2	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4

## **UEENEEG057A      Conduct electrical tests on low voltage electrical machines**

### **Unit Descriptor**

**1)**

This unit covers electrical safety and functional testing of electrical machines designed to operate at low voltage. The unit encompasses working safely, setting up and conducting continuity, insulation and short circuit and inspection and testing of iron circuit, interpreting and documenting test results and any resulting corrective actions.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG008A    Find and repair faults in electrical apparatus and circuits

OR

UEENEEG053A    Rewind three phase induction machines rated for low voltage

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to conduct electrical tests on three phase induction machines.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures for work preparation are followed.
- 1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements.
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures.
- 1.6 Winding is stripped from stator in accordance with established procedures.
- 1.7 Materials required for the work are obtained in accordance with established procedures.
- 1.8 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Conduct electrical tests on three phase induction machines.

- 2.1 Established OHS risk control work measures are followed.
- 2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.3 All necessary electrical tests are conducted to established cause of faults or operational condition of the machine.
- 2.4 Status of the machine is determined from test results and recorded.

- |   |                       |   |
|---|-----------------------|---|
|   | 2.5                   | Prescribed solutions are used to resolve work completion issues.  |
|   | 2.6                   | Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.    |
|   | 2.7                   | Work is completed in acceptable timeframe given environment and workplace conditions.                                     |
| 3 | Complete work report. | 3.1 OHS measures work completion risk controls are followed.  |
|   |                       | 3.2 The status of the machine is documented in accordance with established procedures and appropriate person(s) notified. |

### REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting electrical tests on low voltage electrical machines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |           |  |
|--|-----------|--|
|  | 2.7.4.1   | Electrical installations, protection methods and devices |
|  | 2.11.20.1 | Low voltage motor testing devices and techniques         |
|  | 2.18.1    | Occupational Health and Safety principles                |
|  | 2.18.2    | Electrical Safe working practices                        |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to conducting electrical tests on at least two different low voltage electrical machines with one of the machines having at least two winding faults. The purpose of the tests is to establishing:

- - The causes of faults in machines, and
  - Whether a machine as been correctly repaired and complies with all requirements

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct electrical tests on low voltage electrical machines as described as described in 7) and including:
    - A Dismantling machine and storing parts securely.
    - B Setting up tests correctly.
    - C Taking test reading accurately.
    - D Determining the status of the machine correctly from test result.
    - E Documenting the status of the machine clearly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:  
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and  
specific  
resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice

**assessment** using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting electrical tests on low voltage electrical machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG008A Find and repair faults in electrical apparatus and circuits

OR

UEENEEG053A Rewind three phase induction machines rated for low voltage

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
------------------	------------------------	-------------------

How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEG058A Conduct electrical tests on high voltage electrical machines

### Unit Descriptor

1)

This unit covers electrical safety and functional testing of electrical machines designed to operate at high voltage. The unit encompasses working safely, setting up and conducting continuity, insulation and short circuit and inspection and testing of iron circuit, interpreting and documenting test results and any resulting corrective actions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG057A Conduct electrical tests on low voltage electrical machines

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

### Competency Field

4)

Electrical

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to conduct electrical tests on three phase induction machines.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established OHS risk control measures for work preparation are followed.</p> <p>1.3 The extent of the work is determined from job sheets, specifications and regulatory requirements.</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Winding data is obtained from winding data records or directly from measurements of stator and recorded in accordance with established procedures.</p> <p>1.6 Winding is stripped from stator in accordance with established procedures.</p> <p>1.7 Materials required for the work are obtained in accordance with established procedures.</p> <p>1.8 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Conduct electrical tests on three phase induction machines.	<p>2.1 Established OHS risk control work measures are followed.</p> <p>2.2 Machines/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures. (See Note 1)</p> <p>2.3 All necessary HV electrical tests are conducted to established cause of faults or operational condition of the machine.</p> <p>2.4 Status of the machine is determined from test results and recorded.</p> <p>2.5 Prescribed solutions are used to resolve work completion issues.</p> <p>2.6 Routine quality checks are conducted to ensure coils are correctly wound with correct wire, number of turns and shape.</p>

- |   |                       |   |
|---|-----------------------|---|
|   | 2.7                   | Work is completed in acceptable timeframe given environment and workplace conditions.                                 |
| 3 | Complete work report. | 3.1 OHS measures work completion risk controls are followed.  |
|   | 3.2                   | The status of the machine is documented in accordance with established procedures and appropriate person(s) notified. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and conducting electrical tests on high voltage electrical machines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.11.20.2 High voltage motor testing devices and techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to conducting electrical tests on at least two different high voltage electrical machines with one of the machines having at least two winding faults. The purpose of the tests is to establishing:

- - The causes of faults in machines, and
  - Whether a machine as been correctly repaired and complies with all requirements

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct electrical tests on high voltage electrical machines as described as described in 7) and including:
    - A Dismantling machine and storing parts securely.
    - B Setting up tests correctly.
    - C Taking test reading accurately.
    - D Determining the status of the machine correctly from test result.
    - E Documenting the status of the machine clearly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting electrical tests on high voltage electrical machines

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG057A Conduct electrical tests on low voltage electrical machines

The critical aspects of occupational health and safety covered in Unit UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## **UEENEEG059A      Conduct mechanical tests on electrical machines**

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers mechanical safety and functional testing of electrical machines and their mechanical components. The unit encompasses working safely, setting up and conducting tests, taking measurements, interpreting and documenting test results and any resulting corrective actions.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.  UEENEEG057A    Conduct electrical tests on low voltage electrical machines
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading        4        Writing        4        Numeracy        4
<b>Application of the Unit</b>	<b>3)</b>  This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Electrical

| 2.18.1    | Occupational Health and Safety principles                              |
| 2.18.2    | Electrical Safe working practices                                      |

### RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to conducting mechanical tests on at least two different electrical mechanical with one of the machines having at least two mechanical faults. The purpose of the tests is to establishing:

- - The causes of faults in machines, and
  - Whether a machine as been correctly repaired and complies with all requirements

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Conduct mechanical tests on electrical machines as detailed as described in 7) and including:
    - A Dismantling machine and storing parts securely.
    - B Setting up tests correctly.
    - C Taking test/measurements reading accurately.
    - D Determining the status of the machine correctly from test result.
    - E Documenting the status of the machine clearly.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in conducting mechanical tests on electrical machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG057A Conduct electrical tests on low voltage electrical machines

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEG060A Evaluate performance of electrical machines

### Unit Descriptor

1)

This unit covers electrical and mechanical safety and performance evaluation of electrical machines across their load range. The unit encompasses working safely, setting up and conducting evaluation measurements, evaluating performance from measured parameters and documenting results and recommending any resulting corrective actions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG057A Conduct electrical tests on low voltage electrical machines

AND

UEENEEG043A Develop engineering solution for synchronous machine problems

OR

UEENEEG044A Develop engineering solution for d.c. machine problems

OR

UEENEEG045A Develop engineering solution for induction motor problems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for

this standard at the aligned AQF 5 level or higher.

**Licence to practise 3.1)**

The skills and knowledge described in this unit may require a licence to practise in the workplace subject to regulations for undertaking of electrical work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical devices and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to evaluate electrical machines.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Examination and testing area is checked for safety hazards and risk control measures implemented in strict accordance with safety policy and procedures.
- 1.4 Relevant documentation is obtained and read to determine the certification/approval specifications for which the equipment is to be assessed.
- 1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.6 Tools, testing devices, and materials needed to carry out the work are obtained and checked for correct operation and safety.

- |   |  |     |   |
|---|--|-----|---|
| 2 | Evaluate electrical machines.                | 2.1 | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |  | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.    |
|   |  | 2.3 | Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.                                     |
|   |  | 2.4 | In depth knowledge of the performance requirements of the particular electrical machine under scrutiny is applied to the assessment process.                    |
|   |  | 2.5 | Machine examination and tests are set up in accordance with established test methods and procedures for each particular parameter under scrutiny.               |
|   |  | 2.6 | Machine examination and tests are carried out methodically and results and comments systematically noted.   |
|   |  | 2.7 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.8 | Assessment is carried out without damage to systems, circuits, the surrounding environment or services and using sustainable energy practices.                  |
| 3 | Complete work and document evaluate results. | 3.1 | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3 | Examination and test results are evaluated and non-compliance issues identified.  |
|   |  | 3.4 | Examination, test results and comments on non-compliance issues are documented and reported to appropriate person(s) in accordance with established procedures. |

Note 1:

Examples of documentation are those specifying safety requirements, technical standard, as marketed technical performance and product quality endorsement standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and evaluating performance of electrical machines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.22	Performance standards and regulatory requirements for the electrical rotating machine
2.6.31.6	Electrical machines, performance monitoring
2.18.1	Occupational Health and Safety principles
2.18.2	Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least two different types of electrical machine:

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Evaluate performance of electrical machines as described as described in 7) and including:
    - A Interpreting compliance documents.
    - B Setting up and conducting appropriate examinations and tests.
    - C Identifying non-compliance defects.
    - D Reporting examination and test results and non-compliance issues clearly and accurately.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in evaluating performance of electrical machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG059A Conduct mechanical tests of electrical machines

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

# UEENEEG061A Design and develop modifications to electrical machines

## Unit Descriptor

1)

This unit covers the performance and efficiency aspects of electrical machine design as applied to the modification of existing machines. It encompasses designing to given parameters including those related to safety and efficiency, adhering to compliance standards and compliance assessments and documentation.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG060A Evaluate performance of electrical machines

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 5 level or higher.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to design and develop modifications to electrical machines.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 The extents of modifications required are determined from performance test results and customer’s requirements.
- 1.3 Original specification documents for the machine are sought and received in order to check currency of compliance requirements. (see note 1)
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in or relying on outcomes of the work.

2 Design modifications to electrical machines.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 In depth knowledge of electrical machine and sustainable energy policies in improving machine efficiency is applied to modification design.
- 2.3 Modifications are designed to comply with the requirements of Standards and regulations.
- 2.4 Acceptance/approval for modification design is sought from appropriate person(s) in accordance with established procedures.
- 2.5 Specifications and instructions for the modification work are documented and processed in accordance with requirements.
- 2.6 Solutions to unplanned or unforeseen events are provided consistent with safety and work outcomes.

3 Arrange modification work.

- 3.1 OHS risk control measures and procedures for carrying out the work are followed.

- |   |                          |  |
|---|--------------------------|--|
|   | 3.2                      | Arrangements are made for the modification work to be done in accordance with established procedures.  |
|   | 3.3                      | A copy of modification specifications and instructions is provided to personnel responsible for carrying out the work.                             |
|   | 3.4                      | Strategies are implemented that verify that modification conforms to specifications.   |
|   | 3.5                      | Solutions to unplanned or unforeseen events are provided consistent with safety and work outcomes.   |
| 4 | Complete work and report |  |
|   | 4.1                      | OHS work completion risk control measures and procedures are followed.   |
|   | 4.2                      | Arrangements are made for formal certification of modifications where required by regulation or customer.  |
|   | 4.3                      | Machine marking is revised to comply with performance parameters resulting from modifications.   |
|   | 4.4                      | Modification and machine performance standard are documented and report issued to appropriate person(s) in accordance with established procedures. |

Note 1:

Examples of documentation are those specifying safety requirements, technical standard, as marketed technical performance and product quality endorsement standards.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and designing and developing modifications to electrical machines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.6.28   | Motor windings                            |
| 2.8.10.2 | Engineering Maths                         |
| 2.18.1   | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to designing and developing modifications to at least two different types of electrical machines.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Design and develop modifications to electrical machines as described as described in 7) and including:
    - A Determining the extent of work correctly.
    - B Designing modification to meet requirements.
    - C Documenting modification specifications clearly.
    - D Arranging for formal certification of modifications.
    - E Completing final report.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in designing and developing modifications to electrical machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3; 1.4; 2.5 to 2.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEG062A Set up and place electrical apparatus and associated circuits into service

<b>Unit Descriptor</b>	<p>1)</p> <p>This unit covers adjusting and setting up electrical apparatus before placing and checking that they operate as intended. It encompasses working safely and to standards, following specified set up procedures, ensuring safety devices are correctly set, evaluating apparatus and circuit operation against specified parameters and completing necessary documentation.</p>						
<b>Prerequisite Unit(s)</b>	<p>2)</p>						
<b>Competencies</b>	<p>2.1)</p> <p>Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.</p> <p>UEENEEG005A    Verify compliance and functionality of general electrical installations</p>

equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measure and the like

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to set up electrical apparatus and associated controls

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards which have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s).
- 1.4 Setting up work is appropriately sequenced in accordance with job schedule
- 1.5 Appropriate personnel are consulted to ensure the work is coordinated effectively with others involved on the work site
- 1.6 The location of electrical apparatus and controls is determined from site inspection and/or job specifications and diagrams
- 1.7 Control setting and operating parameters are determined from job specifications and requirements.
- 1.8 Tools, equipment and testing devices needed to commission the system are obtained in accordance with established procedures and checked for correct operation and safety
- 1.9 Pre set up checks are undertaken to ensure all components are in place and secure.

	1.10	The need to test or measure a live and operating system is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures	
2	Set up electrical apparatus and associated controls	2.1	OHS risk control measures and procedures for carrying out the work are followed.
		2.2	The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
		2.3	Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		2.4	Electrical apparatus and associated controls are adjusted to their required settings.
		2.5	Testing/measuring devices are used to observe the operation of electrical apparatus and fine adjustments of controls are made as necessary.
		2.6	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
		2.7	Setting up is conducted efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
3	Document operational settings of electrical apparatus and associated circuits.	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Results of setting up are documented including final operating parameters and an appropriate person or persons notified in accordance with established procedures

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and placing electrical apparatus and associated circuits into service. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.2 Enterprise work activities records
- 2.2.4 Problem solving techniques
- 2.2.5 Enterprise customer relations protocols
- 2.2.43 Commissioning processes and procedures
- 2.18.1 Occupational Health and Safety principles
- 2.18.2 Electrical Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to commissioning electrical apparatus and associated controls. Types of electrical apparatus and controls are motor switching and control, relevant parts of general electrical installations, process plants or production plant.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be

required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up and place electrical apparatus and associated circuits into service as described as described in 7) and including:
    - A Selecting appropriate testing/measuring devices.

- B Making initial adjustments of apparatus and controls correctly.
- C Finely adjusting apparatus and controls based of measured observations.
- D Documenting final operating parameters accurately.
- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up and placing electrical apparatus and associated circuits into service.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4

for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.4 to 2.8	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 2.6	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.7; 2.8	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.7; 2.8	2
-----------------------------------	--	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6; 3.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

## UEENEEG064A Repair mechanical components of electrical machines

### Unit Descriptor

1)

This unit covers the repair of mechanical components of electrical machines including basic machining. The unit encompasses working safely and to standards, following written instructions and drawing, selecting and setting up machine tools, basic machining, measuring and documenting work activities.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electrotechnology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to repair component.

1.1 OHS procedures for a given work area are obtained and understood through established routines and procedures.

1.2 Established OHS risk control measures and procedures in preparation for the work are followed.

1.3 Safety hazards which have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.

1.4 The nature of repair work is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.5 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.

1.6 Sources of materials that may be required for the work are established in accordance with established routines and procedures.

1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

1.8 Appropriate machine is selected, checked for safety and prepared for any necessary machining operation.

1.9 Cutting tools are selected, sharpened and set up for correctly for each particular machining operation.

2 Repair components.

2.1 Established OHS risk control measures and procedures for carrying out the work are followed.

2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

2.3 Component being machined is positioned and clamped appropriately.

- |   |                           |   |  |
|---|---------------------------|---|--|
|   | 2.4                       | Machining is carried out safely and to suit the component and material being machined.  |  |
|   | 2.5                       | Appropriate measurements are taken to ensure repairs comply with technical standards and job specifications and requirements.                                     |  |
|   | 2.6                       | Components are repaired to comply with technical standards and job specifications and requirements.   |  |
|   | 2.7                       | Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.                                       |  |
|   | 2.8                       | Unexpected situations are dealt with safely and with the approval of an authorised person.  |  |
|   | 2.9                       | Ongoing checks of the quality of repair work are undertaken in accordance with established procedures.  |  |
|   | 2.10                      | Repairs are carried out efficiently without unnecessary waste of materials and energy and damage to apparatus, circuits, the surrounding environment or services. |  |
| 3 | Complete work and report. | 3.1   | OHS work completion risk control measures and procedures are followed.   |
|   |                           | 3.2   | Work area is cleaned and made safe in accordance with established procedures.  |
|   |                           | 3.3   | Fits are made to verify that repaired component conforms to requirements.  |
|   |                           | 3.4   | Work completion is documented and an appropriate person or persons notified in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and repairing mechanical components of electrical machines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.6.31.5 | Electrical machines, mechanical components |
| 2.11.2.2 | Electrical workshop machines               |
| 2.18.1   | Occupational Health and Safety principles  |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to repairs at least two of the following electrical machine components:

- Shaft
- Bearing housing
- End shield
- Fan
- Coupling
- Machine housing

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Repair mechanical components of electrical machines as described as described in 7) and including:
    - A Establishing the nature of the repair work.
    - B Selecting appropriate method of repair.
    - C Sharpening cutting tools/twist drills correctly.

- D Securing work piece correctly.
- E Repairing component to required standard.
- F Documenting repairs in accordance with established procedures.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in repairing mechanical components of electrical machines.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.5	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4	2

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4; 3.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.2 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.3; 3.2; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.4

## UEENEEG065A Maintain and service traction lifts

### Unit Descriptor

1)

This unit covers maintenance and servicing of traction lift systems and equipment. It encompasses working safely, conducting site cleaning, lubricating and painting lift equipment, inspecting of suspension, governors, compensators, floor selector and tappet switch ropes, and carrying out periodic testing on lift safety gear.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG016A Diagnose and rectify faults in lift systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any formal recognition for this standard at the aligned AQF 3/4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

<p>5) Elements describe the essential outcomes of a unit of competency</p>	<p>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</p>
<p>1 Prepare to maintain and service lift equipment.</p>	<p>1.1 OHS procedures for a given work area are identified, obtained and understood.</p> <p>1.2 OHS risk control measures and procedures in preparation for the work are followed.</p> <p>1.3 The likely extent of work to be undertaken is envisaged from maintain procedures or fault/breakdown reports and/or discussions with appropriate person(s).</p> <p>1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.</p> <p>1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.</p>
<p>2 Maintain and service lift equipment.</p>	<p>2.1 OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measured and devised and implemented in consultation with appropriate personnel.</p>
<p>3 Completion and report of maintain and servicing activities</p>	<p>3.1 OHS work completion risk control measures and procedures are followed.</p>

- 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
- 3.3 Maintenance work activities are documented in accordance with established procedures.

Note.

Examples of documentation are components fault reports, test results, authorisations, permits, parts/component dispatch and store records

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and maintaining and servicing traction lifts. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.6.39 • Lubrication of lift component
- 2.6.40 Lift systems, roping
- 2.6.41 Lift systems, rope inspection
- 2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to maintaining and servicing at least two of the lift equipment as following:

- Geared traction drive
- Gearless traction drive
- Drum drive
- Suspended electro-hydraulic drive
- At least two of the roping systems as following:
  - Single or double wrap
  - Single or multiple fall
  - Side slung or underslung
  - Overhead or basement drive
  - Drum drive.
  - And at least two of the components as following:
    - Suspension ropes
    - Governor ropes

- Tappet ropes
- Compensator ropes
- Floor selector tapes/ropes
- All safety gear periodic tests as following:
  - Governor type A
  - Governor type B
  - Governor type C

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or

less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Maintain and service traction lifts as described as described in 7) and including:
    - A Conduct site cleaning, lubricating and painting of lift equipment.
    - B Inspect lift ropes.
    - C Maintain electro-hydraulic lift equipment.
    - D Carry out lift safety gear periodic testing.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with

the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in maintaining and servicing traction lifts.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.5	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: N/A	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 3.3	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4; 2.3; 3.2; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.4

## **UEENEEG066A    Install and maintain escalators, moving walks and tread ways**

### **Unit Descriptor**

**1)**

This unit covers installation and maintenance of escalators, moving walks and tread ways. It encompasses working safely, installing and maintaining escalators, moving walks and tread ways such as repair or replacement of escalator handrails, cleaning, lubricating, replacement and adjustment of escalator/moving walk/tread way mechanical components and/or the installation and commissioning of escalators/moving walks/tread ways.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG016A    Diagnose and rectify faults in lift systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	4	Writing	4	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit applies to any formal recognition for this standard at the aligned AQF 3/4 level or higher.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install and maintain of escalators, moving walks and tread ways.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The likely extend of work to be undertaken is envisaged from maintain procedures or plans/specifications and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Install and maintain escalators, moving walks and/or tread ways

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measured and devised and implemented in consultation with appropriate personnel.
- 2.5 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.

- |   |  |   |
|---|--|---|
|   | 2.6  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   | 2.7  | Ongoing checks of the quality of installed/maintain apparatus are undertaken in accordance with established procedures.   |
|   | 2.8  | Apparatus installation/maintenance is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles.                     |
| 3 | Completion and report of install and maintain activities |   |
|   | 3.1  | OHS work completion risk control measures and procedures are followed.  |
|   | 3.2  | Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.   |
|   | 3.3  | Maintenance work activities are documented in accordance with established procedures.<br>Note.<br>Examples of documentation are components fault reports, test results, authorisations, permits, parts/component dispatch and store records |
|   | 3.4  | Final checks are made to that the installed/maintained apparatus conforms to requirements.  |
|   | 3.5  | ‘As-installed’ apparatus and associated equipment is documented and an appropriate person or persons notified in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and maintenance of escalators, moving walks and tread ways.. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.6.39 | • Lubrication of lift component                 |
| 2.6.42 | Escalators, moving walk and tread way mechanics |
| 2.18.1 | Occupational Health and Safety principles       |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to installing and maintaining at least one of the following:

- Escalators (single or multiple units)
- Moving walks (single or multiple units)
- Tread ways (belt or pallet type)
- At least five of the following:
  - Handrails
  - Steps
  - Pallets
  - Step-chains and associated driving equipment
  - Chains
  - Combs
  - Guards
  - Balustrades
  - Step rollers
  - Newel rollers
  - Motors
  - Controllers
  - Safety devices

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and maintenance of escalators, moving walks and tread ways as described in 7) and including:
    - A Escalators.
    - B Moving walks.
    - C Tread ways.
    - D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installation and maintenance of escalators, moving walks and tread ways.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 2.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: N/A	
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.2	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.3	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEG067A **Align and install lift equipment**

### Unit Descriptor

1)

This unit covers alignment and installation of lift mechanical and electrical equipment. It encompasses working safely, alignment of lift structures such as measuring, marking out and aligning of lift installations including machine room equipment, lift well equipment, the lift car and associated equipment and landing door frames and doors, setting out of multiple lift wells in varying configuration and the installations of well and pit equipment, lift car equipment, superstructure and counterweights, machine room equipment, landing, door frames and door, landing buttons and indicator boxes.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG016A Diagnose and rectify faults in lift systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit applies to any formal recognition for this standard at the aligned AQF 3/4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to align and install lift equipment.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The likely extend of work to be undertaken is envisaged from site plans, drawings and specifications and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, equipment and alignment devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Align and Install lift equipment.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Equipment are installed straight and square in the required locations and within acceptable tolerances.
- 2.5 Equipment align and install in accordance with manufacture’s specifications and regulatory requirements.
- 2.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.

	2.7	Unexpected situations are dealt with safely and with the approval of an authorised person.
	2.8	Ongoing checks of the quality of installed equipment are undertaken in accordance with established procedures.
	2.9	Equipment installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
3	Completion and report of alignment and installation activities	3.1 OHS work completion risk control measures and procedures are followed.
		3.2 Work site is cleaned and made safe in accordance with established procedures.
		3.3 Final checks are made to that the installed equipment conforms to requirements.
		3.4 ‘As-installed’ equipment is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and aligning and installing lift equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |        |   |
|--------|---|
| 2.6.43 | • Lift systems, plumbing and setting out  |
| 2.6.44 | Lift equipment alignment techniques       |
| 2.18.1 | Occupational Health and Safety principles |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to align and install at least two of the following:

- Lift well equipment
- Lift cars
- Machine room equipment

- Lift well alignment
- Lift car alignment
- Machine room alignment

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Align and install lift equipment as described in 7) and including:
    - Install at least two types of the following lift equipment as described below
      - A Lift well equipment.
      - B Lift cars.
      - C Machine room equipment.
    - Carry out at least two types of set out and alignment functions as listed below:
      - A Lift well alignment.
      - B Lift car alignment.
      - C Machine room alignment.

- D Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in aligning and installing lift equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1, 1.3 to 1.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.4; 1.4; 2.5; 2.6	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.6	
-----------------------------------	--	--

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEG068A **Diagnose and rectify faults in complex lift systems**

### **Unit Descriptor**

1)

This unit covers diagnosing and rectifying faults in complex traction lift systems and equipment. It encompasses working safely; replacing and/or adjustment of solid state/electrical circuitry and components, diagnosing and repairing of complex faults in lift circuits and associated components (including governors, brakes, safety gear, safety devices, lift machines, door components and controllers).

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

UEENEEG016A Diagnose and rectify faults in lift systems

UEENEEH043A Diagnose and rectify faults in digital sub-systems of electronic controls

UEENEEH044A Diagnose and rectify faults in analogue circuits in electronic controls systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit applies to any formal recognition for this standard at the aligned AQF 4/5 level or higher.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations

directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to diagnose and rectify faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 The likely extend of work to be undertaken is envisaged from maintain procedures or fault/breakdown reports and/or discussions with appropriate person(s).
- 1.4 Advice is sought from the work supervisor to ensure the work is coordinated effectively with others.
- 1.5 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Diagnose and rectify faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Safety hazards resulting from the fault or breakdown are documented and risk control measured and devised and implemented in consultation with appropriate personnel.

- 2.5 Logical diagnostic methods are applied to diagnose lift system apparatus faults employing measurements and estimations of system operating parameters referenced to system operational requirements.
  - 2.6 Suspected fault scenarios are tested as being the cause(s) of system fault.
  - 2.7 Cause of the fault is identified and appropriately competent persons are engaged to rectify the fault where it is out side the scope of the lift systems.
  - 2.8 Faults in the lift components of the system are rectified to raise apparatus and system to its operational standard.
  - 2.9 System is tested to verify that the system operates as intended and to specified requirements
  - 2.10 Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
  - 2.11 Diagnosis and rectification activities are carried out efficiently without unnecessary waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault diagnosis and rectification activities
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Reusable, faulty or worn components are tagged and dispatched for repair to maintain adequate spares.
  - 3.3 Rectification of faults is documented in accordance with established procedures.
    - Note.  
Examples of documentation are components fault reports, test results, authorisations, permits, parts/component dispatch and store records
  - 3.4 Appropriate person or persons notified, in accordance with established procedures, that the system faults have been rectified.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing electrical projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.6.45 Lift components, electrical/electronic

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Competency shall be demonstrated in relation to diagnosing and rectifying faults in complex lift circuits and associated components for at least three (3) types of lift equipment as listed:

- Emergency light units
- D.C. power supplies
- Variable voltage controllers
- Variable speed hoist motor control
- Variable speed door motor control
- Electronic lift controls
- Lift remote monitoring equipment

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Diagnose and rectify faults in complex lift systems as described in 7) and including:
    - Release passengers from a lift, which has become immobilised as specified in the Performance Criteria and Range Statement
    - Diagnose and repair faults in lift circuits and associated components for at least three types of lift circuits/components as follows:
      - A Governors.
      - B Brakes.
      - C Safety gear.
      - D Safety devices.
      - E Lift machines.
      - F Door components.
      - G Controllers.
    - Replace and/or adjustment of lift equipment in at least three types of lift equipment as described below:
      - A Electro-hydraulic lift.
      - B Electric traction lift.
      - C Passenger lift.
      - D Goods lift.

And

- A Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace.

**assessment**

This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in diagnosing and rectifying faults in complex lift systems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEG016A Diagnose and rectify faults in lift systems

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 3.3	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1, 1.3 to 1.6	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.9	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 1.5	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.4; 1.4; 2.5; 2.6	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.9
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7

## UEENEEG069A Manage electrical projects

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers the management of electrical projects involving design, modifications, installation, and/or maintenance of systems and equipment. The unit encompasses management of safety, budget variation, personnel, resources, critical path timelines and completion documentation.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’</p> <table border="0" style="width: 100%;"> <tr> <td style="width: 25%;">Reading</td> <td style="width: 5%;">5</td> <td style="width: 25%;">Writing</td> <td style="width: 5%;">5</td> <td style="width: 25%;">Numeracy</td> <td style="width: 5%;">5</td> </tr> </table>	Reading	5	Writing	5	Numeracy	5
Reading	5	Writing	5	Numeracy	5		
<b>Application of the Unit</b>	<p><b>3)</b></p> <p>This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.</p>						
<b>Licence to practise</b>	<p><b>3.1)</b></p> <p>The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.</p>						
<b>Competency Field</b>	<p><b>4)</b></p> <p>Electrical</p>						

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Establish the scope of the project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.3 Project deliverables and budget are established from project planning and other relevant documentation and from discussions with appropriate person(s).</p> <p>1.3 Measurable outcomes are identified to evaluate the project on completion from project planning and other relevant documentation.</p> <p>1.4 Plant, materials and skills needed to meet project outcome are established from project planning and other relevant documentation.</p> <p>1.5 Processes and procedures are developed for managing contract variations from discussions with appropriate person(s) and in accordance with contractual agreement.</p>
2 Manage project.	<p>2.1 OHS policies, procedures and programs are implemented and monitored.</p> <p>2.2 Achievement of project outcomes is delegated to appropriately competent persons involved in the project.</p> <p>2.3 Risk events are identified and project plan strategies implemented to ensure that outcomes are achieved to the required standard of quality specified in the contract and safety required by organization's policy.</p> <p>2.4 Procurement processes and procedures are monitored to ensure on time supply of plant and materials and in accordance with organisation's policy.</p> <p>2.5 Project progress is monitored against schedule, quality requirements and budget.</p> <p>2.6 Conflict issues at the work site and between stakeholders, clients and regulators are identified and managed in accordance with organisation's policy.</p>

- 2.7 Variations are managed in accordance with agreed processes and in accordance with the contract.
- 2.8 Project records are maintained and progress reports written and forwarded to all appropriate person(s).
- 3 Complete project.
  - 3.1 Project outcomes are reviewed against original plan, implemented risk strategies, contract variations, safety record and budget.
  - 3.2 Project completion acceptance is sought from appropriate person(s) and hand-over documented in accordance with organisation's policy.

### **REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and managing electrical projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.17 Project management
- 2.2.19 Customer/Client relations
- 2.2.28 Electrical industry sector customs and practices
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing an industry accepted medium sized electrical project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Manage electrical projects as described in 7) and including:
    - A Establishing the scope of the project accurately.
    - B Ascertaining the input a project.
    - C Developing effective management processes.
    - D Managing resources and variations effectively.
    - E Resolving conflicts.
    - F Adopting risk management strategies.
    - G Maintaining records and submitting progress reports.
    - H Meeting project outcomes.

- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in managing electrical projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies****8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.2 to 1.4; 2.6 to 2.8	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.4	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: All	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.3; 2.5; 2.7; 3.1	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.3; 2.6	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: All	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.3; 2.7; 3.1
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.8; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## UEENEEG070A Plan electrical projects

<b>Unit Descriptor</b>	<b>1)</b>  This unit covers development and documentation of electrical project proposals, milestones and completions. The unit encompasses, establishing budgets, critical path analysis, development of workflow strategies, documenting, presenting and negotiating budgets and timelines.
<b>Prerequisite Unit(s)</b>	<b>2)</b>
<b>Competencies</b>	<b>2.1)</b>  Competency in this unit shall be assessed only after the technical units in a qualification have been achieved.
<b>Literacy and numeracy skills</b>	<b>2.2)</b>  Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’  Reading      5      Writing      5      Numeracy      5
<b>Application of the Unit</b>	<b>3)</b>  This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It applies to any formal recognition for this standard at the aligned AQF 6 level or higher.
<b>Licence to practise</b>	<b>3.1)</b>  The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.
<b>Competency Field</b>	<b>4)</b>  Electrical

ELEMENT	PERFORMANCE CRITERIA
5) Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1 Prepare to plan project.	<p>1.1 OHS processes and procedures for a given work area are identified, obtained and understood.</p> <p>1.2 Established techniques for project planning are reviewed and adopted in accordance with organisation's policies.</p> <p>1.3 The extent of the project is established from design brief, specification and/or other relevant documentation and from discussions with appropriate person(s).</p>
2 Develop project plan proposal.	<p>2.1 Estimated plant, material, labour and other costs are sought and obtained from appropriate person(s) in accordance with organisation's policies and procedures.</p> <p>2.2 Project budget is established from estimated plant, material, labour and other costs in accordance with organisation's policies and procedures.</p> <p>2.3 Knowledge of critical path analysis is applied to developing workflow strategies.</p> <p>2.4 Sources and availability of materials and human resources needed for the project are established in accordance with organisation's policies and procedures.</p> <p>2.5 Risk management strategies are sought and obtained for incorporating in the project plan.</p> <p>2.6 Project plan is reviewed against all inputs and adjusted to rectify any anomalies.</p> <p>2.7 Project plan proposal is documented in accordance with organisation's policies and procedures.</p>
3 Obtain approval for project plan.	<p>3.1 Project plan is presented and discussed with person(s) of higher authority.</p> <p>3.2 Alterations to the project plan resulting from the presentation/discussion are negotiated with person(s) of higher authority within the constraints of organisation's policy.</p>

- 3.3 Final project plan is documented and approval obtained from appropriate person(s).

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and planning electrical projects. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.16.1 Project planning
- 2.2.18 Critical path and project analysis
- 2.2.28 Electrical industry sector customs and practices
- 2.18.8.2 Occupational Health and Safety, enterprise responsibilities

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to managing an industry accepted medium sized electrical project.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Plan electrical projects as described in 7) and including:
    - A Determining the project requirements accurately.
    - B Establishing a project budget.
    - C Developing effective work flow strategies.
    - D Documenting project plan proposal.
    - E Negotiating alterations to the proposed project plan successfully.
    - F Obtaining approval of the final plan.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with Performance Criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in planning electrical projects.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and

demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6; 2.3; 2.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4 to 1.6	2

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.5; 1.6; 2.1; 3.1	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.6; 3.1; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 1.6 to 3.2	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.4; 1.6; 3.1
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.4; 3.1

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.1 to 2.4; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 1.7 to 3.2

## UEENEEG071A Install and set up interval metering

### Unit Descriptor

1)

This unit covers the installation and set up of interval metering for measurement of energy use by consumers under choice of supplier arrangement. It encompasses working safely and to installation and set up standards, evaluating the integrity of metering wiring and earthing systems, fixing metering, making power and communication connections, setting meter parameters and completing the necessary documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEF002A Lay and connect cables for multiple access to telecommunication services

UEENEEG005A Verify compliance and functionality of general electrical installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require:

- licence to practise in the workplace subject to regulations for undertaking of electrical work, and
- registration to practise in the workplace subject to requirements set out ACA 'Open' Cabling Provider Rule

Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to install and set up interval metering.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Health and safety risks are identified and established risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are noted and established risk control measures are implemented. (Note 1.)
- 1.4 Switchboard on which the meter is to be installed is inspected and evaluated for compliance with safety and functionality standards. (Note 2)
- 1.5 Approval to rectify safety and/or functionality defects of the switchboard is sought from person of higher authority in accordance with established procedures.
- 1.6 Installation of the meter and rectification work is prepared in consultation with other effected by the work and sequenced appropriately. (Note 3)
- 1.7 Material needed for the work is obtained in accordance with established procedures and checked against job requirements.

- |   |   |  |
|---|---|--|
|   | 1.8   | Tools, equipment and testing devices needed to for the work are obtained in accordance with established procedures and checked for correct operation and safety.   |
| 2 | Install and set up interval metering.                   | 2.1 OHS risk control measures and procedures for carrying out the work are followed.   |
|   | 2.2   | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.   |
|   | 2.3   | Existing metering is checked as being isolated in strict accordance OHS requirements and procedures.   |
|   | 2.4   | Approved rectification work is carried out to comply with standards and in accordance with established procedures.   |
|   | 2.5   | Metering is installed to comply with technical standards and job specifications and requirements.  |
|   | 2.6   | Metering power and communication connections are made in accordance with manufacture’s specifications and functional and regulatory requirements.  |
|   | 2.7   | Meter operating parameters are set in accordance with manufacture’s specifications and functional and regulatory requirements.   |
|   | 2.8   | Unexpected situations are dealt with safely and with the approval of an authorised person  |
|   | 2.9   | Ongoing checks of the quality of installed apparatus are undertaken in accordance with established procedures.   |
|   | 2.10  | Metering installation is carried out efficiently without unnecessary waste of materials or damage to apparatus, circuits, the surrounding environment or services and using sustainable energy principles. |
| 3 | Completion and report metering installation activities. | 3.1 OHS work completion risk control measures and procedures are followed and supply is reinstated to the installation.  |
|   | 3.2   | Work site is cleaned and made safe in accordance with established procedures.  |
|   | 3.3   | Final checks are made to that the installed metering conforms to requirements.   |

- 3.4 'As-installed' metering and rectification work is documented and appropriate persons notified in accordance with established procedures.

Note.

1. Examples of hazards likely to be encountered are asbestos reinforced switchboard panels, deteriorating switchgear and cabling and location of the switchboard.
2. Safety and functionality standards include the clear identification of switchboard components and their function, sound electrical insulation of wiring and components, sound MEN and main earth connections, fire integrity and access.
3. Preparation includes arranging for the safe isolation of the installation, access to a telecommunications connection where two-way metering is to be installed and access to a transducer connection where gas metering is to be included.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing and setting up interval metering. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.5.2.1 | Technical standards, regulations and codes for general electrical installations |
| 2.5.12  | Electricity distributors, supply requirements                                   |
| 2.6.2.2 | Electrical metering arrangements  |
| 2.6.2.3 | Interval metering concepts and applications                                     |
| 2.18.1  | Occupational Health and Safety principles                                       |
| 2.18.2  | Electrical Safe working practices   |

## RANGE STATEMENT

- 7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to the installation of at least:

- a single phase interval meter
- a two-way interval meter
- an interval meter where compliance rectification work is required

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment**

**8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install and set up interval metering as described in 7) and including:
    - A Inspecting and evaluating safety and functionality compliance of the switchboard accurately.
    - B Following established procedures to obtain approval to rectify non-compliance aspects of the switchboard.
    - C Carrying out preparation work effectively.
    - D Rectifying compliance defects.
    - E Placing and securing metering correctly.
    - F Making power and communications connections in accordance with manufacture's specifications and functional and regulatory requirements.
    - G Setting meter parameters in accordance with manufacture's specifications and functional and regulatory requirements.
    - H Reinstating supply to the installation safely.

- I Documenting metering and rectification work and notifying appropriate persons in accordance with established procedures.
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Resources required to assess this unit are listed above in Context of assessment', which should also be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing and setting up interval metering.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4

for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 3.4	2
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.8	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.6	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 1.4; 2.4; 2.5	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 1.4; 2.6; 2.8	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.7	2

### **Skills Enabling Employment**

#### **8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.4; 2.8
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  1.4; 2.4; 2.8

## UEENEEG072A Investigate and report on electrical incidents

### Unit Descriptor

1)

This unit covers investigating and reporting the possible electrical cause of incidents resulting electric shock, injury, fatality or property damage. It encompasses working safely, gathering information from an incident site and from witnesses, conducting site tests, gathering and arranging for analysis of forensic evidence, documenting findings and presenting evidence in court.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEG021A Verify compliance and functionality of special electrical installations

UEENEEG023A Conduct compliance inspection of electrical installations with demand exceeding 100 A per phase.

UEENEEG024A Conduct compliance inspection of special electrical installations

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	5	Writing	5	Numeracy	5
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended as an additional competency to relevant competencies previously acquired. It is suitable for employment-based programs under an approved contract of training at the aligned AQF 4 level or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the work place subject to regulations for undertaking of electrical work. Practice in workplace and

during training is also subject to regulations directly related to occupational health and safe and contracts of training such as new apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electrical

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

1 Prepare to investigate incident

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures in preparation for the work are followed.
- 1.3 Safety hazards that have not previously been identified are documented and risk control measures devised and implemented in consultation with appropriate person(s).
- 1.4 Notification of the incident is reviewed in consultation with appropriate person(s) to establish the nature and extent of the investigation.
- 1.5 Appropriate person(s) are consulted to ensure the investigation is coordinated effectively with others involved on the work site.
- 1.6 Tools, equipment and testing devices needed for the investigation are obtained in accordance with established procedures and checked for correct operation and safety.

2 Investigate incident

- 2.1 OHS risk control measures and procedures for carrying out the investigation are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- |   |                               |   |   |
|---|-------------------------------|---|---|
|   | 2.3                           | Co-operation of others involved in the investigation is sought and obtained.  |   |
|   | 2.4                           | Recreation of incident situation is only undertaken in strict accordance with OHS requirements and when necessary conducted within established safety procedures.   |   |
|   | 2.5                           | Witnesses to the incident are interviewed in accordance with established procedures and protocols to determine the circumstances of the incident and those leading up to it.  |   |
|   | 2.6                           | Physical evidence of the possible causes of the incident is obtained through inspection and testing are and documented in accordance with established procedures.   |   |
|   | 2.7                           | Forensic evidence gather at the site is handled to avoid contamination or damage and where necessary forwarded to appropriate persons for analysis.   |   |
|   | 2.8                           | Witness statements and evidence gathered at the site is documented in accordance with established procedures and include: <ul style="list-style-type: none"> <li>• Procedures and results of tests undertaken on site;</li> <li>• Forensic evidence removed from site and for analysis;</li> <li>• Aspects of the electrical installation that do not comply with safety standards and requirements.</li> </ul> |   |
|   | 2.9                           | Actions are taken to prevent any unsafe electrical hazards found on the site from posing a risk of any further injury or damage.  |   |
| 3 | Report investigation findings | 3.1   | Reports of forensic evidence analysis are obtained and reviewed for inclusion the final investigation report.               |
|   |                               | 3.2   | Cause or causes of the incident are extrapolated from the evidence using acceptable deductive methods.                      |
|   |                               | 3.3   | Investigation procedures, finding, conclusions and recommendation are documented in accordance with established procedures. |
|   |                               | 3.3   | Investigation report is forwarded to appropriate person(s) in accordance with established procedures.                       |

- 3.5 Where required, evidence as documented in the Investigation Report is given in court honestly and without bias following court procedures and protocols.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and investigating and reporting on electrical incidents. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.2.49 Procedure and protocols for giving evidence in a court of law.
- 2.7.14 Procedures and processes for responding to reported electrical incidents.
- 2.7.15 Causes and consequence of unsafe and misuse of electrical installations and equipment.
- 2.11.6.1 Advance electrical testing and measuring devices.
- 2.11.6.2 Electrical field testing and measurement techniques.
- 2.18.1 Occupational Health and Safety principles.
- 2.18.2 Electrical Safe working practices.

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by investigating and reporting of at least three of the following incidents involving:

- Reported electric shock.
- Injury from a reported electrical source.
- Fatality from a reported electrical source.
- Property damage from a reported electrical source.

The incidents may occur in a domestic premises, a non-domestic premises or a construction site.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit. It must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Investigate and report on electrical incidents as described in 7) and including:
    - A Establish the nature and extent of the investigation by reviewing initial notification of the incident
    - B Recreating incident situation as accurately as evidence indicates
    - C Interviewing and taking witness statements appropriately
    - D Gathering relevant physical evidence and treating it appropriately
    - E Documenting evidence gathered at the site including:
      - Procedures and results of tests undertaken;
      - Forensic evidence removed for analysis;
      - Aspects of the electrical installation that do not comply with safety standards and requirements
    - F Taking appropriate actions to prevent any unsafe electrical hazards found on the site from posing a risk of any further injury or damage
    - G Using deductive methods to determine the cause or

causes of the incident

- H Documenting investigation procedures, finding, conclusions appropriately
- I Preparing and giving evidence in a court of law honestly and without bias
- J Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires assessment in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE024A Compile and produce an Electrotechnology report

The critical aspects of occupational health and safety covered in UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit

**Key competencies**

**8.6)**

Evidence that particular key competencies have been achieved within this competency standard unit is in the context of the

following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.1; 3.3 to 3.5	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4; 2.3 to 2.9	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6;	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5; 2.3;	2
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.6; 2.7	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.7; 2.8	3

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>	<b>Example of Application</b>

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.1 to 3.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4; 2.1 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:

This work is copyright and licensed under the AShareNet Free for Education instant licence (AShareNet-FfE Licence). The onus rests with you to ensure compliance with the AShareNet-FfE licence and the following is merely a summary of the scope of the Licence.

When you obtain a copy of material that bears the AShareNet-FfE licence mark by legitimate means you obtain an automatic licence to use and copy the work in whole or in part, solely for educational purposes.

Individual learners may:

1. use the material personally for their education such as including it, with proper attribution, in work that is performed in the course of that education
2. make unlimited copies, in whole or in part, of the material.

Organisations may:

1. use the material within the organisation or for the services provided by the organisation
2. make or give copies to learners
3. charge for the education provided
4. charge learners for the material on a cost-recovery basis.

Conditions for the licence can be found at <http://www.aesharenet.com.au/FfE2/>. Queries regarding the standard AShareNet-FfE Licence conditions should be directed to the AShareNet website at <http://www.aesharenet.com.au/help/support/>.

In addition to the standard AShareNet-FfE Licence conditions, the following special conditions apply:

1. The copyright work must only be used in Australia and New Zealand.
2. You are not permitted to develop either an Edited Version or Enhancements of the Licensed Material.

Use of this work for purposes other than those indicated above, requires the prior written permission from the Commonwealth. Requests should be addressed to:

## **UEENEEH001A Carry out basic repairs to computer equipment by replacement of modules/sub-assemblies**

### **Unit Descriptor**

1)

This unit deals with the repair of computer equipment by replacement of slot/plug connected modules/sub-assemblies. It encompasses safe working practices, following written and oral instruction and procedures, basic testing techniques, dismantling and assembling apparatus and disconnecting and reconnecting components.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electro technology components

UEENEEE007A Use drawings, diagrams, schedules and manuals

AND

UEENEEE004A Solve problems in multiple path circuits

OR

UEENEEE023A Solve basic problems in electronic and digital equipment

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

**Application of the Unit 3)**

This unit may apply to persons entering work in electro technology and may be used in school-based vocational programs.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to repair computer equipment.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work
- 1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

- |   |   |   |  |
|---|---|---|--|
|   | 1.5   | Sources of materials that may be required for the work are established in accordance with established routines and procedures.  |  |
|   | 1.6   | Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety.  |  |
| 2 | Repair computer equipment                   | 2.1   | Established OHS risk control measures and procedures for carrying out the work are followed. |
|   | 2.2   | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.                                      |  |
|   | 2.3   | Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |  |
|   | 2.4   | Apparatus is dismantled in accordance with manufacturer's guide and supervisor's instructions.  |  |
|   | 2.5   | Modules/sub-assemblies are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.                                       |  |
|   | 2.6   | Repairs are affected efficiently without damage to other components, apparatus or circuits.   |  |
|   | 2.7   | Apparatus is assembled in an appropriate sequence with all modules/sub-assemblies and parts correctly placed, secured and connected in accordance with manufacturer's guide or industry practice. |  |
|   | 2.8   | Procedures for referring non-routine events to immediate supervisor for directions are followed.  |  |
|   | 2.9   | Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.                         |  |
| 3 | Complete and report repair work activities. | 3.1   | OHS work completion risk control measures and procedures are followed.                       |
|   | 3.2   | Repaired computer equipment is prepared and forwarded to appropriate person(s) for testing.   |  |
|   | 3.3   | Work area is cleaned and made safe in accordance with established procedures.   |  |

- 3.4 Work supervisor is notified of the completion of the repair work in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out basic repairs to electronic apparatus by replacement of components. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.1.8 Electronic cable and conductor terminations
- 2.4.11 Personal computers, hardware structure
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs to personal computers and servers.

The repairs shall be limited to:

- Replacement of at least three slot/plug connected modules/sub-assemblies having different functions and in which the fault has been previously established, and
- Repair to broken wires/ribbon cable to industry standards, that may include, minor soldering

Note:

1. Examples of Modules include self contained hardware components such as motherboards, memory cards, storage devices.
2. Examples of Sub-assemblies include collections of integrated components that may form part of a module that are designed to be replaceable for servicing, such as the component part of a hard drive module or motherboard.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out basic repairs to computer equipment by replacement of modules/sub-assemblies as described in 7) and including:
    - A Following manufacturer service instructions for access to components.
    - B Removing at least three different functional types of modules/sub-assemblies in the work instructions.
    - C Replacing modules/sub-assemblies to manufacturer requirements.
    - D Repairing damaged wires/ribbon cable to an industry standard and without damage to other equipments; includes minor soldering.
    - E Reassembling the computer equipment correctly.

- F Testing computer equipment operation.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Relevant Australian and International industry standards for the repair of electronic assemblies and sub-assemblies
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out basic repairs to electronic apparatus by replacement of components.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE002A Dismantle, assemble and fabricate electro technology components
- UEENEEE007A Use drawings, diagrams, schedules and manuals

AND

- UEENEEE003A Solve problems in single path extra low voltage circuits
- UEENEEE004A Solve problems in multiple path circuits

OR

- UEENEEE023A Solve basic problems in electronics and digital equipment

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1

How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: NA	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## **UEENEEH002A Carry out basic repairs to electronic apparatus by replacement of components**

### **Unit Descriptor**

1)

This unit deals the repair or replacement of non-electrical components and replacement of discrete and integrated components and sub systems of electronic apparatus. It encompasses safe working practices, following written and oral instruction and procedures, basic testing and techniques, dismantling and assembling apparatus and disconnecting and reconnecting components.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electro technology components

UEENEEE004A Solve problems in multiple path circuits

UEENEEE007A Use drawings, diagrams, schedules and manuals

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit may apply to persons entering work in electro technology and may be used in school based vocational programs.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to

regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to repair electronic apparatus.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the repair is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
- 1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Repair electronic apparatus.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- |   |   |   |
|---|---|---|
|   | 2.3   | Circuits/apparatus are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   | 2.4   | Apparatus is dismantled in accordance with manufacturer's guide and supervisor's instructions.  |
|   | 2.5   | Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.                      |
|   | 2.6   | Repairs are affected efficiently without damage to other components, apparatus or circuits.   |
|   | 2.7   | Apparatus is assembled in an appropriate sequence with all components parts placed, secured and connected in accordance with manufacturer's guide or industry practice.   |
|   | 2.8   | Procedures for referring non-routine events to immediate supervisor for directions are followed.  |
|   | 2.9   | Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete and report repair work activities. | 3.1 OHS work completion risk control measures and procedures are followed.  |
|   |   | 3.2 Repaired apparatus is prepared and forwarded to appropriate person(s) for testing.  |
|   |   | 3.3 Work area is cleaned and made safe in accordance with established procedures.   |
|   |   | 3.4 Work supervisor is notified of the completion of the repair work in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out basic repairs to electronic apparatus by replacement of components. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.1.4   | Basic cable and conductor terminations      |
| 2.1.8   | Electronic cable and conductor terminations |
| 2.9.1.1 | Electronic component basics                 |

2.11.11.1 Electronic soldering equipment and techniques

2.18.1 Occupational Health and Safety principles

2.18.9 Electronic safe working practices

## **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out basic repairs electronic apparatus limited to replacement or repair of components, including sub systems in which the fault has been previously established. This shall include at least two different electronic apparatus in which three different types of components and sub systems are faulty one of which requires de-soldering and soldering to affect repairs.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### **Overview of Assessment**

#### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries

risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out basic repairs to electronic apparatus by replacement of components as described in 7) and including:
    - A Following manufacturer service instructions for access to components.
    - B Removing at least three different types of components specified in the work instructions.

- C Replacing components to manufacturer requirements.
- D De-soldering and soldering to a high reliability standard and without damage to components.
- E Reassembling the apparatus correctly.
- F Testing apparatus operation.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note: Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out basic repairs to electronic apparatus by replacement of components.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE002A Dismantle, assemble and fabricate electro technology components
- UEENEEE003A Solve problems in single path extra low voltage circuits
- UEENEEE004A Solve problems in multiple path circuits
- UEENEEE007A Use drawings, diagrams, schedules and manuals

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4; 3.2	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: NA	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.4 to 2.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.8

## UEENEEH003A Carry out routine repairs to business equipment

### Unit Descriptor

1)

This unit covers the confirmation of predictable faults and repair of such faults by repair or replacement of mechanical components and replacement of discrete and integrated components of business electronic equipment. It encompasses safe working practices, following written and oral instruction and routine testing and repair procedures, verifying equipment operation and reporting.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electro technology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, diagrams, schedules and manuals

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However, practice in this unit is subject to regulations directly related to occupational health and safety

and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to repair business equipment.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the repair is obtained from documentation or from work supervisor or customer to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established routines and procedures.
- 1.6 Tools, apparatus and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Repair business equipment.

- 2.1 Established OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- 2.3 Circuits/equipment are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
- 2.4 Predictable faults are confirmed by following routine testing procedures.
- 2.5 Apparatus is dismantled in accordance with manufacturer's service guide and supervisor's instructions.
- 2.6 Component parts are tagged during the dismantling to help ensure correct and efficient reassembly and stored to protect them against loss or damage.
- 2.7 Repairs are made in accordance with manufacturer's service guide and supervisor's instructions.
- 2.8 Apparatus is assembled in an appropriate sequence with all components parts placed, secured and connected in accordance with manufacturer's guide or industry practice.
- 2.9 Repaired equipment is test in accordance with routine procedures to verify that it functions correctly.
- 2.10 Procedures for referring non-routine events to immediate supervisor for directions are followed.
- 2.11 Repairs are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Complete and report repair work activities.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Equipment is place into service and customer and work supervisor notified of the completion of the repair work in accordance with routine procedures.
  - 3.4 Service report is complete in accordance with routine procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out routine repairs to business equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.1.8	Electronic cable and conductor terminations
2.2.1	Enterprise communication methods
2.4.18	Business equipment software basics
2.9.73	Operational concepts of business machines
2.9.74.1	Electro-mechanics of business machines
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by confirming at least four predictable faults in low volume (up to 40 ppm) photocopiers and following routine procedures to repair such faults.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must

include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling

employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out routine repairs to business equipment as described in 7) and including:
    - A Following service instructions to confirm reported fault.
    - B Following service instructions to access components.
    - C Removing and replace mechanical components.
    - D Removing and replace electrical/electronic components.
    - E Reassembling the business equipment correctly.
    - F Testing equipment operation.
    - G Completing service report accurately.
    - H Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out routine repairs to business equipment.

**Method of**

**8.4)**

**assessment**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEE001A Use basic computer applications relevant to a workplace
- UEENEE002A Dismantle, assemble and fabricate electro technology components
- UEENEE007A Use drawings, diagrams, schedules and manuals
- UEENEE002A Carry out basic repairs to electronic equipment

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: NA	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.7	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.9	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.4 to 2.9
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.10
---	--	--

## UEENEEH004A Set up and test residential audio/video equipment

### Unit Descriptor

1)

This unit covers setting-up of non-fixed audio and video equipment as directed in user manuals in a residential or business environment. It encompasses safe working practices, connection and secure and optimum placement of system components, following written and oral instruction and procedures and customer relations.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

There are no prerequisite competencies to this unit.

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

#### Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

**Competency Field 4)**

Electronics

<b>ELEMENT</b>	<b>PERFORMANCE CRITERIA</b>
<b>5) Elements describe the essential outcomes of a unit of competency</b>	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.
1 Prepare to set up audio/video equipment.	<p>1.1 OHS procedures for a given work area are identified, obtained and understood through established routines and procedures.</p> <p>1.2 Established OHS risk control measures and procedures are followed in preparation for the work.</p> <p>1.3 Safety hazards that have not previously been identified are reported and advise on risk control measures are sought from the work supervisor.</p> <p>1.4 Details of the system are obtained from purchase documentation or from work supervisor to establish the scope of work to be undertaken.</p> <p>1.5 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.</p> <p>1.6 Materials that may be required for the work are obtained and checked in accordance with routines and procedures.</p> <p>1.7 Tools and testing devices needed to carry out the work are obtained and checked for correct operation and safety.</p>
2 Set up audio/video equipment.	<p>2.1 Established OHS risk control measures and procedures for carrying out the work are followed.</p> <p>2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.</p> <p>2.3 Circuits/components are checked as being isolated where necessary in strict accordance OHS requirements and procedures.</p> <p>2.4 System components are unpacked to ensure they are complete and undamaged.</p>

- |   |                                    |  |   |
|---|------------------------------------|--|---|
|   | 2.5                                | System components are placed for optimum performance within constraints imposed by the area and customer.  |   |
|   | 2.6                                | Systems components are connected in accordance with manufacturer's instructions.   |   |
|   | 2.7                                | System functions are set to customer's requirements and tested for correct operation.  |   |
|   | 2.8                                | Procedures for referring non-routine events to immediate supervisor for directions are followed.   |   |
|   | 2.9                                | System set up is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |   |
| 3 | Complete system set up and report. | 3.1  | OHS risk control work completion measures and procedures are followed.                            |
|   |                                    | 3.2  | Work area is cleaned and made safe in accordance with established routines.                       |
|   |                                    | 3.3  | All system/component documentation is handed over to the customer.                                |
|   |                                    | 3.4  | Work supervisor is notified of the completion of the work in accordance with established routine. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out routine repairs to business equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |        |   |
|--|--------|---|
|  | 2.1.8  | Electronic cable and conductor terminations   |
|  | 2.9.15 | Audio and video component functional controls |
|  | 2.9.42 | Audio and video system set up                 |
|  | 2.18.1 | Occupational Health and Safety principles     |
|  | 2.18.9 | Electronic Safe working practices             |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by assembling, setting up and functional testing:

- An audio system consisting of a pair of speakers, a preamplifier/power amplifier or an integrated amplifier, tuner and compact disk player, and
- An audio/video system consisting of television receiver, 5-channel amplifier, five speakers and a digital versatile disk player.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently

practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out routine repairs to business equipment as described in 7) and including:
    - A Unpacking and checking system components against purchase documents and manufacturer's content list.
    - B Placing components for optimum performance within constraints imposed by the area and customer.
    - C Connecting components to manufacturer's instructions.
    - D Setting functional controls to customer's requirements.

- E Testing functional operation.
- F Completing necessary documentation, including handing over all system/component documents to the customer.
- G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out routine repairs to business equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: NA	
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.5 to 2.7	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.6; 2.7	
-----------------------------------	--	--

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.4 to 2.7; 3.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.8

## UEENEEH005A **Verify compliance and functionality of custom electronic installations**

### Unit Descriptor

1)

This unit covers testing and visual inspection for verifying that a custom electronic system and components are safe and comply with requirements and functions as intended. It encompasses working safely, conducting compliance tests, conducting visual inspections, identifying non-compliance defects and mandatory reporting requirements.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH006A Assemble and set up fixed audio/video components and systems in buildings and premises

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to augment previously acquired competencies. It is suitable for employment-based programs under an approved contract of training.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace where plant and equipment operate at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Where the components of the custom electronic system are connected to the public telephone system facility practice in the workplace is also subject to ACA regulations to undertake cabling work.

Note:

Units ‘UEE NEEF001A and UEE NEEF002A provide the required skill and knowledge for registration in accordance with ACA regulations for undertaking cabling work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to verify custom electronic installations.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are noted and established risk control measures are implemented.
- 1.4 Appropriate personnel are consulted to ensure the work is co-ordinated effectively with others involved on the work site.
- 1.5 Location of system components is determined from specifications and diagrams.
- 1.6 Inspection and tests are appropriately sequenced in accordance with job schedule.
- 1.7 Materials needed for the tests and verification are obtained in accordance with established procedures and checked against job requirements.
- 1.8 Tools, equipment and testing devices needed to verify compliance are obtained in accordance with established procedures and checked for correct operation and safety.

Visually inspect the installation.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.3 Cabling is checked for appropriate type and size.
  - 2.4 Cabling, accessories and components are validated as being suitably located, securely fixed and suitably protected from damage or corrosion.
  - 2.5 Accessories and components are validated as being appropriately rated and meeting functional requirements.
  - 2.6 Evidence that equipment complies with safety and functional requirements is cited.
  - 2.7 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 2.8 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.9 Inspection is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 2 Conduct tests.
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Testing or measuring on a live and operating system in strict accordance with OHS requirements and within established safety procedures.
  - 3.3 Circuits/machines/plant are checked as being isolated in strict accordance OHS requirements and procedures.
  - 3.4 Tests are conducted to verify that the cabling is safe and meets specified standards and any applicable regulatory requirements.
  - 3.5 Custom electronic apparatus and devices are tested to ensure the installation is safe and functions as intended.
  - 3.6 Established methods for dealing with unexpected situations are discussed with appropriate person or persons and documented.
  - 3.7 Unexpected situations are dealt with safely and with the approval of an authorised person.

	3.8	Testing is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
4	Report inspection and verification findings.	4.1 OHS work completion risk control measures and procedures are followed.
	4.2	Work site and equipment is cleaned and made safe in accordance with established procedures.
	4.3	Non-compliance defects are identified and reported in accordance with established procedures.
	4.4	Recommendations for rectifying defects are made in accordance with established procedures.
	4.5	Work completion is documented and an appropriate person(s) notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and verifying compliance and functionality of custom electronic installations. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.72	Custom electronic installations, testing and verification methods
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to at least two different new or existing custom electronic installations. One installation shall include a basic integrated system. Verification shall include the following

- Visual inspection of cabling, accessories and apparatus and controls
- Conducting all safety and compliance tests

Note:

1. Testing includes isolation testing; insulation resistance; cable tests to specified standard (e.g. Category 5 standard); polarity tests; continuity of earthing; correct connections performance tests.
2. Electrical testing may be limited by the scope permitted under restricted electrical work

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

### Critical aspects of evidence required to

#### 8.2)

Before the critical aspects of evidence are considered all prerequisites shall be met.

---

**demonstrate  
competency in  
this unit**

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Verify compliance and functionality of custom electronic installations as described in 7) and including:
    - A Identifying visual defects.
    - B Conducting all tests safely and correctly.
    - C Identifying non-compliant defects from test results.
    - D Recommending appropriate corrective actions.
    - E Acting within regulatory limits.
    - F Reporting legibly and accurately.
    - G Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and 8.3)**

**specific resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in verifying compliance and functionality of custom electronic installations.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3 to 4.5	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.5; 1.6; 2.3 to 2.6; 3.4; 3.5	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8	2
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.3; 3.4; 3.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  4.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  3.4; 3.5	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and	Refer to the following Performance Criteria for examples of application:

	process of work task	4.3 to 4.5
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.8; 2.1; 3.1; 3.2
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.8
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.7; 2.8; 3.7; 3.8

## **UEENEEH006A Assemble and set up fixed audio/video components and systems in buildings and premises**

### **Unit Descriptor**

1)

This unit covers installing of fixed audio/video components and systems in a residential or business environment. It encompasses safe working practices; secure placement and connection of system components, following written and oral instruction and procedures and customer relations.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEE008A Lay wiring and terminate accessories for extra-low voltage circuits

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical

apparatus and site rehabilitation.  
 2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to install audio/video components and systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines.
- 1.2 Established OHS risk control measures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor and/or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Install audio/video components and systems.

- 2.1 Established OHS risk control measures for carrying out the work are followed.
- 2.2 Circuits/machines/plant are checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.3 Audio/video components are installed to comply standards and job specifications with sufficient excess to affect terminations.
- 2.4 Accessories are installed straight and square in the required locations and within acceptable tolerances.

- |   |  |  |   |
|---|--|--|---|
|   | 2.5                                    | Cables and conductors are terminated at accessories in accordance with manufacture’s specifications and regulatory requirements  |   |
|   | 2.6                                    | Procedures for referring non-routine events to immediate supervisor for directions are followed.   |   |
|   | 2.7                                    | The installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |   |
| 3 | Complete installation work and report. | 3.1  | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2  | Work site is cleaned and made safe in accordance with established procedures.                                   |
|   |  | 3.3  | Work supervisor is notified of the completion of the installation work in accordance with established routines. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and setting up fixed audio/video components and systems in buildings and premises. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |  |          |   |
|--|----------|---|
|  | 2.5.5    | Technical standards, regulations and codes for extra low voltage work |
|  | 2.9.16.1 | Sound reproduction fundamentals                                       |
|  | 2.9.17.1 | Audio reproduction, electronic components                             |
|  | 2.9.18   | Audio reproduction, speaker fundamentals                              |
|  | 2.9.19   | Audio/video recording and replay components repair basics             |
|  | 2.9.43   | Video systems installation  |
|  | 2.9.81   | Audio/video control equipment   |
|  | 2.18.1   | Occupational Health and Safety principles                             |
|  | 2.18.9   | Electronic Safe working practices                                     |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by assembling and setting up fixed audio/video systems in building and premises on at least two occasions. Systems are to consist of surround sound and multi-room speakers, central audio and home theatre components.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for

Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble and set up fixed audio/video components and systems in buildings and premises as described in 7) and including:
    - A Reading and interpreting drawings of circuit arrangements and component locations.
    - B Placing and securing components and accessories accurately.
    - C Maintaining fire integrity.
    - D Terminating cable and conductors correctly.
    - E Connecting components to manufacturer's instructions.
    - F Setting functional controls to customer's

requirements.

- G Testing functional operation.
- H Completing necessary documentation including handing over all system/component documents to the customer.
- I Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling and setting up fixed audio/video components and systems in buildings and premises.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE002A Dismantle, assemble and fabricate electro technology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, schedules and service manuals

UEENEEE008A Lay wiring and terminate accessories for extra-low voltage circuits

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1

How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7

3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.6

## **UEENEEH007A Carry out repairs of predictable faults in general electronic apparatus**

### **Unit Descriptor**

**1)**

This unit covers identifying predictable faults and repairing by replacement of subassemblies in electronic apparatus. The unit encompasses safe working practices, interpreting circuit diagrams and service manuals, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

UEENEEH038A Find and repair faults in complex power supplies

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

**3)**

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

**3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical

work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to repair electronic apparatus.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment, testing devices and service manual needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures
- 2.4 Fault finding is approached methodically drawing on knowledge of electronic apparatus and circuit using measured and calculated values of apparatus parameters and/or with reference to manufacturer's service manual.
- 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
- 2.6 Faulty components are rechecked and their fault status confirmed.
- 2.7 Repairs are made in accordance with manufacturer's service guide and supervisor's instructions.
- 2.8 Apparatus is reassembled and tested for safety and functionality in preparation for return to the customer.
- 2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
- 2.10 Repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report repair activities.
  - 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Written justification is made for repairs to apparatus.
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out repairs of predictable faults in general electronic apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.10	Technical manuals and catalogues
2.9.83	General electronic apparatus repair basics
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs of predictable faults in two different general electronic apparatus.

Note.

Examples of general electronic apparatus are data capture devices, security panels, fire protection panels, industrial control apparatus, instrumentation electronics and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the

workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out repairs of predictable faults in general electronic apparatus in buildings and premises as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Replacing components without damage.
    - D Providing written justification for the repairs.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out repairs of predictable faults in general electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEH002A Carry out basic repairs to electronic apparatus by replacement of components
- UEENEEH011A Solve problems in d.c. power supplies with single phase input
- UEENEEH012A Solve problems in digital components of electronic apparatus
- UEENEEH015A Solve problems in microprocessor based hardware and firmware
- UEENEEH039A Solve problems in basic amplifier circuits

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

### Skills Enabling Employment 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.6; 3.3
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

	the context of the work task	2.1 to 2.10
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

## **UEENEEH008A Assemble and erect reception antennae and signal distribution equipment**

### **Unit Descriptor**

1)

This unit covers the installation, positioning and securing of terrestrial and satellite arrays and dishes and associated amplifiers and the reticulation of cables and connection of multiple access outlets and associated equipment. It encompasses safe working practices, selection of antennae and distribution components, installation techniques, use of testing devices and following written and oral instruction and procedures.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electro technology components

UEENEEE005A Fix and secure equipment

UEENEEE007A Use drawings, schedules and service manuals

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to install and set-up reception antennae and signal distribution systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines.
- 1.2 Established OHS risk control measures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor and/or other appropriate person to ensure the work is coordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

- |   |   |     |  |
|---|---|-----|--|
| 2 | Install reception antennae and signal distribution systems.           | 2.1 | Established OHS risk control measures for carrying out the work are followed.  |
|   |   | 2.2 | Circuits/components are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   |   | 2.3 | The optimum location for an antenna to be installed is determine from signal tests and limitation imposed by the customer and regulation.                                      |
|   |   | 2.4 | Accessories are installed straight and square in the required locations and within acceptable tolerances.  |
|   |   | 2.5 | Cables and conductors are terminated at accessories in accordance with manufacture’s specifications and regulatory requirements.   |
|   |   | 2.6 | Procedures for referring non-routine events to immediate supervisor for directions are followed.   |
|   |   | 2.7 | The installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices. |
| 3 | Set-up reception antennae and signal distribution systems and report. | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|   |   | 3.2 | Adjustments are made to the antenna and the system to optimise reception at each outlet.   |
|   |   | 3.3 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |   | 3.4 | Work supervisor is notified of the completion of the installation work in accordance with established routines.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and assembling and erecting reception antennae and signal distribution equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |         |   |
|---------|---|
| 2.1.7.2 | Coaxial cable installation and terminations |
| 2.10.14 | TV antenna systems                          |
| 2.10.15 | Antenna installation and servicing          |

2.18.1 Occupational Health and Safety principles

2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by installing, connecting and setting up reception antennae and signal distribution systems on at least two occasions. Systems are to consist of multiple outlets for multiple users.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions

about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner’s performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Assemble and erect reception antennae and signal distribution equipment as described in 7) and including:
    - A Reading and interpreting drawings of circuit arrangements and component locations.
    - B Placing and securing antenna and accessories accurately.
    - C Maintaining fire integrity.
    - D Terminating cable and conductors correctly.

- E Adjusting for optimum reception at each outlet.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in assembling and erecting reception antennae and signal distribution equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE002A Dismantle, assemble and fabricate electro technology components
- UEENEEE005A Fix and secure equipment
- UEENEEE007A Use drawings, schedules and service manuals
- UEENEEE008A Install wiring and accessories for extra-low voltage circuits

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 1.1; 1.2	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4

4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEH009A Set up and test gaming/games equipment**

<b>Unit Descriptor</b>	<p><b>1)</b></p> <p>This unit covers setting-up of electronic gaming and games equipment to manufactures’ instructions in compliance with regulations. It encompasses safe working practices, connection and secure placement of gaming/games equipment, following written and oral instruction and procedures and customer relations.</p>						
<b>Prerequisite Unit(s)</b>	<p><b>2)</b></p>						
<b>Competencies</b>	<p><b>2.1)</b></p> <p>There are no prerequisite competencies to this unit.</p>						
<b>Literacy and numeracy skills</b>	<p><b>2.2)</b></p> <p>Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. |---|------------------------------------|---|
|   | 2.5                                | Equipment operating functions are set to regulatory and customer requirements and tested for correct operation.   |
|   | 2.6                                | Procedures for referring non-routine events to immediate supervisor for directions are followed.  |
|   | 2.7                                | Equipment set up is carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete system set up and report. | 3.1 OHS risk control work completion measures and procedures are followed.  |
|   |                                    | 3.2 Work area is cleaned and made safe in accordance with established routines.   |
|   |                                    | 3.3 Documentation detailing equipment maintenance and operating instructions is handed over to the customer.  |
|   |                                    | 3.4 Work supervisor is notified of the completion of the work in accordance with established routine.   |

Note 1:

Connection of equipment may include both plug connected power supply and network

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and setting up and testing gaming/games equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be in relation to setting up and testing a gaming machine connected to a network and a commercial games machine to customer and regulatory requirement.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Set up and test gaming/games equipment as described in 7) and including:
    - A Placing equipment in accordance with regulatory and customer requirements.
    - B Connecting equipment to manufacturer's instructions and regulatory and customer requirements.
    - C Setting functional controls to regulatory and customer's requirements.
    - D Testing functional operation.
    - E Completing necessary documentation including handing over equipment maintenance and operating instructions documents to the customer.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in setting up and testing gaming/games equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.5	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: NA	

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.5	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.5	

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 2.4; 2.5; 3.3

5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

# UEENEEH010A Install commercial audio/video system components

## Unit Descriptor

1)

This unit covers installation of components for audio/video facilities in buildings and premises. The unit encompasses working safely and to specifications and standards, matching equipment with that specified for a given location, terminating and interconnecting cables/conductors and completing the necessary installation documentation.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEE002A Dismantle, assemble and fabricate electro technology components.

UEENEEE005A Fix and secure equipment.

UEENEEE007A Use drawings, schedules and service manuals.

UEENEEE008A Lay cables and terminate accessories for extra-low voltage circuits.

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit is intended for competency development in entry-level employment based programs incorporated in approved contracts of training.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to occupational health and safety and where applicable contracts

of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to install audio/video components and systems.

- 1.1 OHS procedures for a given work area are identified, obtained and understood through established routines.
- 1.2 Established OHS risk control measures are followed in preparation for the work.
- 1.3 Safety hazards, which have not previously been identified, are reported and advise on risk control measures, are sought from the work supervisor.
- 1.4 The nature and location of the work is obtained from work supervisor or other appropriate person to establish the scope of work to be undertaken.
- 1.5 Advice is sought from the work supervisor and/or other appropriate person to ensure the work is co-ordinated effectively with others.
- 1.6 Sources of materials that may be required for the work are established in accordance with established routines.
- 1.7 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2	Install audio/video components and systems.	2.1	Established OHS risk control measures for carrying out the work are followed.
		2.2	Circuits/components are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
		2.3	Audio/video components are installed to comply standards and job specifications with sufficient excess to affect terminations.
		2.4	Accessories are installed straight and square in the required locations and within acceptable tolerances.
		2.5	Cables and conductors are terminated at accessories in accordance with manufacture’s specifications and regulatory requirements.
		2.6	Procedures for referring non-routine events to immediate supervisor for directions are followed.
		2.7	The installation is carried out efficiently without waste of materials or damage to apparatus, circuits or the surrounding environment and using sustainable energy practices.
3	Complete installation work and report.	3.1	OHS work completion risk control measures and procedures are followed.
		3.2	Work site is cleaned and made safe in accordance with established procedures.
		3.3	Work supervisor is notified of the completion of the installation work in accordance with established routines.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and installing commercial audio/video system components. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.1.7.4	Specialist audio/video cabling installation and termination
2.5.5	Technical standards, regulations and codes for extra-low voltage work
2.9.17.1	Audio reproduction, electronic components

- 2.9.16.1 Sound reproduction fundamentals
- 2.9.18 Audio reproduction, speaker fundamentals
- 2.9.19 Audio/video recording and replay components repair basics
- 2.9.46 Professional audio electronics.
- 2.9.47 Loud speakers and microphones
- 2.9.80 Video and display set up
- 2.9.81 Audio/video control equipment
- 2.18.1 Occupational Health and Safety principles.
- 2.18.9 Electronic Safe working practice

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to installing and connecting commercial audio/video system components in buildings and premises on at least two occasions.

Note:

Examples of systems are dedicated audio and video facilities in meeting rooms, video conferencing facilities, centrally controlled audio/video facilities across a number of locations.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit – the learner's performance outcome is reported in accordance with the preferred approach; where required by the regulated environment, this will be a percentile graded result
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Install commercial audio/video system components as described in 7) and including:
    - A Reading and interpreting drawings of system arrangements and component locations.
    - B Placing and securing components and accessories accurately.
    - C Maintaining fire integrity.
    - D Connecting apparatus and associated components to comply with requirements.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in installing commercial audio/video system components.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the

industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEE002A Dismantle, assemble and fabricate electro technology components
- UEENEEE005A Fix and secure equipment
- UEENEEE007A Use drawings, schedules and service manuals
- UEENEEE008A Install wiring and accessories for extra-low voltage circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  1.1; 1.2	1

How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.7	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.5	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.6	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.1 to 2.5	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  1.1; 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.4 to 1.7
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.7
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEH011A      Solve problems in d.c. power supplies with single phase input**

### **Unit Descriptor**

**1)**

This unit covers determining correct operation of independent power supplies and power supply sections of electronic apparatus. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in d.c. power supplies with single phases input.

### **Prerequisite Unit(s)**

**2)**

### **Competencies**

**2.1)**

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH001A      Carry out basic repairs to computer equipment by replacement of modules/sub-assemblies

OR

UEENEEH002A      Carry out basic repairs to electronic apparatus by replacement of components

AND

UEENEEH014A      Solve problems in frequency dependent circuits

OR

UEENEEG002A      Solve problems in single and three phase low voltage circuits

OR

UEENEEG012A      Solve fundamental problems in electrical systems

### **Literacy and numeracy skills**

**2.2)**

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3

**Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

**Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field**

4)

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on d.c. power supplies.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the power supply problem is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
  - 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
  - 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.
- 2 Solve d.c. power supply problems.
- 2.1 OHS risk control work measures and procedures are followed.
  - 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Established methods are used to solve problems from measure and calculated values as they apply to d.c. power supplies with single phase input.
  - 2.5 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.6 Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.
- 3 Complete work and document problem solving activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work site is cleaned and made safe in accordance with established procedures.
  - 3.3 Justification for solutions used to solve circuit problems is documented.
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in d.c. power supplies with single phase input. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.12	Electronic fault finding
2.9.63	Direct current power supplies
2.11.7.2	Advanced electronic testing and measuring devices and techniques
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving problems in d.c. power supplies with single phase input on the rectification section and filtering section of a half wave bridge rectifier and a full wave bridge rectifier.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in

a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in d.c. power supplies with single phase input as described in 7) and including:
    - A Using methodical problem solving methods.
    - B Taking measurements correctly and accurately.
    - C Calculating parameters correctly and accurately.
    - D Providing solution to power supply problems, and
    - E Providing written justification for the solutions to problems.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in d.c. power supplies with single phase input

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which

is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1
-----------------------------------	---	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH012A Solve problems in digital components of electronic apparatus

### Unit Descriptor

1)

This unit covers determining correct operation of digital components of electronic apparatus. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in digital components circuits.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH001A Carry out basic repairs to computer equipment by replacement of modules/sub-assemblies

OR

UEENEEH002A Carry out basic repairs to electronic apparatus by replacement of components

OR

UEENEEH070A Terminate and connect components, conductors, wiring and cables for electronic circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

**Licence to practise 3.1)**

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on digital component.

- 1.1 OHS procedures for a given work area are obtained and understood.
- 1.2 OHS risk control work preparation measures and procedures are followed.
- 1.3 The nature of the digital component/circuit problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

- |   |  |     |  |
|---|--|-----|--|
| 2 | Solve digital components problems.                     | 2.1 | OHS risk control work measures and procedures are followed.  |
|   |  | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures. |
|   |  | 2.3 | Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.   |
|   |  | 2.4 | Established methods are used to solve problems from measure and calculated values as they apply to digital components in an electronic apparatus.            |
|   |  | 2.5 | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   |  | 2.6 | Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.       |
| 3 | Complete work and document problem solving activities. | 3.1 | OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3 | Justification for solutions used to solve circuit problems is documented.  |
|   |  | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures.                                       |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in d.c. power supplies with single phase input. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.4.1 Digital electronic fundamentals
- 2.9.12 Electronic fault finding
- 2.11.7.1 Electronic testing and measuring devices and techniques
- 2.18.1 Occupational Health and Safety principles

## 2.18.9 Electronic Safe working practices

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving at least two of the following types basic digital component/ circuit problems.

- Determining the operating parameters of a digital component of an existing circuit
- Alternating an existing digital component to comply with specified operating parameters
- Developing a basic digital component to comply with a specified function and operating parameters
- Finding and repairing a fault in a digital component of an existing circuit

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment****8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access

to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in d.c. power supplies with single phase input as described in 7) and including:

- A Using methodical problem solving methods.
- B Taking measurements correctly and accurately.
- C Calculating parameters correctly and accurately.
- D Providing solution to digital component/circuit problems.
- E Providing written justification for the solutions to problems.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in d.c. power supplies with single phase input

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEH002A Carry out basic repairs to electronic equipment
- UEENEEH012A Find and repair faults in the digital components in electronic apparatus
- UEENEEH015A Solve problems in microprocessor based hardware and firmware
- UEENEEH016A Find and repair faults in the microwave amplifier sections in electronic apparatus
- UEENEEH039A Solve problems in basic amplifier circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed	Refer to the following Performance Criteria for examples of application:	

and organised?	1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All

2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH013A Solve problems in amplifier sections of electronic apparatus

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on amplifier sections.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 OHS risk control work preparation measures and procedures are followed.

1.3 The nature of amplifier problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve amplifier section problems.

2.1 OHS risk control work measures and procedures are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures

2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |  |  |
|---|--|--|
|   | 2.4  | Established methods are used to solve problems from measure and calculated values as they apply to amplifier sections in an electronic apparatus.      |
|   | 2.5  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
|   | 2.6  | Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |
| 3 | Complete work and document problem solving activities. |  |
|   | 3.1  | OHS work completion risk control measures and procedures are followed.   |
|   | 3.2  | Work site is cleaned and made safe in accordance with established procedures.  |
|   | 3.3  | Justification for solutions used to solve circuit problems is documented.  |
|   | 3.4  | Work completion is documented and an appropriate person or persons notified in accordance with established procedures.                                 |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in amplifier sections of electronic apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.9.9.1  | Advanced amplifiers  |
| 2.9.9.2  | Amplifier applications   |
| 2.11.7.2 | Advanced electronic testing and measuring devices and techniques |
| 2.18.1   | Occupational Health and Safety principles                        |
| 2.18.9   | Electronic Safe working practices                                |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving at least two of the following types amplifier problems.

- Determining the operating parameters of an amplifier section of an electronic apparatus.

- Alternating an existing amplifier section to comply with specified operating parameters
- Developing an amplifier section to comply with a specified function and operating parameters
- Finding and repairing a fault in an amplifier section of an electronic apparatus

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when

choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in amplifier sections of electronic apparatus as described in 7) and including:
    - A Using methodical problem solving methods.
    - B Taking measurements correctly and accurately.
    - C Calculating parameters correctly and accurately.
    - D Providing solution to digital component/circuit problems.
    - E Providing written justification for the solutions to problems.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate

solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in amplifier sections of electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH002A	Carry out basic repairs to electronic equipment
UEENEEH012A	Find and repair faults in the digital components in electronic apparatus
UEENEEH014A	Solve problems in resonance circuits
UEENEEH015A	Solve problems in microprocessor based hardware and firmware

UEENEEH016A Find and repair faults in the microwave amplifier sections in electronic apparatus

UEENEEH039A Solve problems in basic amplifier circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:	

	2.4	1
--	-----	---

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH014A Solve problems in frequency dependent circuits

### Unit Descriptor

1)

This unit covers determining correct operation of resonance circuits used in electronic apparatus. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in resonance circuits.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Competency in this unit may be assessed with or only after the following competency has been confirmed.

UEENEEE004A Solve problems in multiple path d.c. circuits

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on resonance circuits.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 OHS risk control work preparation measures and procedures are followed.

1.3 The nature of the amplifier circuit problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve in resonance circuits.

2.1 OHS risk control work measures and procedures are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

2.3 Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |   |  |  |  |
|---|--|--|--|
|   | 2.4  | Established methods are used to solve problems from measure and calculated values as they apply to resonance circuits.                                 |  |
|   | 2.5  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |  |
|   | 2.6  | Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices. |  |
| 3 | Complete work and document problem solving activities. | 3.1  | OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2  | Work site is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3  | Justification for solutions used to solve circuit problems is documented.  |
|   |  | 3.4  | Work completion is documented and an appropriate person or persons notified in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in amplifier sections of electronic apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |   |
|----------|---|
| 2.9.1.4  | Frequency dependent circuit principles                  |
| 2.11.7.1 | Electronic testing and measuring devices and techniques |
| 2.18.1   | Occupational Health and Safety principles               |
| 2.18.9   | Electronic Safe working practices                       |

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving at least two of the following types resonance circuit problems.

- Determining the operating parameters of an existing circuit
- Alternating an existing circuit to comply with specified operating parameters

- Developing circuits to comply with a specified function and operating parameters

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in amplifier sections of electronic apparatus as described in 7) and including:
    - A Using methodical problem solving methods.
    - B Taking measurements correctly and accurately.
    - C Calculating parameters correctly and accurately.
    - D Providing solution to resonance circuit problems.
    - E Providing written justification for the solutions to problems.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in amplifier sections of electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEE004A      Solve problems in multiple path d.d. circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  3.3; 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH015A Solve problems in microprocessor based hardware and firmware

### Unit Descriptor

1)

This unit covers determining correct operation of microprocessor hardware and firmware. It encompasses working safely, problem solving procedures, including the use of voltage, current and resistance measuring devices, providing solutions derived from measurements and calculations to predictable problems in microprocessor hardware and firmware.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH002A Carry out basic repairs to electronic apparatus by replacement of components

OR

UEENEEH001A Carry out basic repairs to computer equipment by replacement of modules/sub-assemblies

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some

States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to work on microprocessor hardware and firmware.

1.1 OHS procedures for a given work area are obtained and understood.

1.2 OHS risk control work preparation measures and procedures are followed.

1.3 The nature of microprocessor hardware and firmware problems is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to carry out the work are obtained and checked for correct operation and safety.

2 Solve microprocessor hardware and firmware

2.1 OHS risk control work measures and procedures are followed.

- |  |     |   |
|--|-----|---|
| \ problems.  | 2.2 | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.        |
|  | 2.3 | Circuits are checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|  | 2.4 | Established methods are used to solve problems from measure and calculated values as they apply to microprocessor hardware and firmware in an electronic apparatus. |
|  | 2.5 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|  | 2.6 | Problems are solved without unnecessary damage to apparatus, circuits, the surrounding environment or services and using sustainable energy practices.              |
| 3 Complete work and document problem solving activities. | 3.1 | OHS work completion risk control measures and procedures are followed.  |
|  | 3.2 | Work site is cleaned and made safe in accordance with established procedures.   |
|  | 3.3 | Justification for solutions used to solve circuit problems is documented.   |
|  | 3.4 | Work completion is documented and an appropriate person or persons notified in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and solving problems in microprocessor based hardware and firmware. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.9.5.1  | Microprocessor fundamentals                                      |
| 2.9.12   | Electronic fault finding   |
| 2.11.7.1 | Electronic testing and measuring devices and techniques          |
| 2.11.7.2 | Advanced electronic testing and measuring devices and techniques |
| 2.18.1   | Occupational Health and Safety principles                        |

## 2.18.9 Electronic Safe working practices

**RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to solving at least two of the following types microprocessor hardware and firmware problems:

- Determining the operating parameters of microprocessor hardware and firmware of an electronic apparatus
- Alternating an existing microprocessor hardware and firmware to comply with specified operating parameters
- Developing microprocessor based hardware and firmware to comply with a specified function and operating parameters
- Finding and repairing a basic fault in microprocessor hardware and firmware of an electronic apparatus

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

**EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

**Overview of Assessment****8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access

to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Solve problems in microprocessor based hardware and firmware as described in 7) and including:

- A Using methodical problem solving methods.
- B Taking measurements correctly and accurately.
- C Calculating parameters correctly and accurately.
- D Providing solution to digital component/circuit problems.
- E Providing written justification for the solutions to problems.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in solving problems in microprocessor based hardware and firmware.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEH012A Find and repair faults in the digital components in electronic apparatus
- UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus
- UEENEEH014A Solve problems in resonance circuits
- UEENEEH016A Find and repair faults in the microwave amplifier sections in electronic apparatus
- UEENEEH039A Solve problems in basic amplifier circuits

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

AND

- UEENEEH002A Carry out basic repairs to electronic equipment

OR

- UEENEEH001A Carry out basic repairs to computer equipment by replacement of modules/sub-assemblies

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3; 1.4; 2.4	2
How are activities planned and	Refer to the following Performance Criteria for examples of application:	

organised?	1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	1
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4	1

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 3.3; 3.4
4	Interacting and understanding of	Refer to the following Performance Criteria for examples of application:

	the context of the work task	1.2 to 1.6
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## **UEENEEH016A Find and repair faults in the microwave amplifier sections in electronic apparatus**

### **Unit Descriptor**

1)

This unit covers fault finding and repair of microwave amplifier sections in electronic apparatus. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH046A Solve fundamental problems in electronic communication systems

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

1.1 OHS procedures for a given work area are identified, obtained and understood.

1.2 OHS risk control measures and procedures are followed in preparation for the work.

1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find faults.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Fault finding is approached methodically drawing on knowledge of microwave amplifier sections and circuit using measured and calculated values of apparatus parameters.
  - 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.8 Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Repair fault.
- 3.1 OHS risk control measures and procedures for carrying out the work are followed.
  - 3.2 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 3.3 Materials required for the repair work are sourced and obtained in accordance with established procedures.
  - 3.4 Repairs are affected efficiently without damage to other components, apparatus or circuits.
  - 3.5 Effectiveness of the repair is tested in accordance with established procedures.
  - 3.6 Apparatus is reassembled, finally tested and prepared for return to customer.
- 4 Completion and report repair activities.
- 4.1 OHS work completion risk control measures and procedures are followed.
  - 4.2 Work area is cleaned and made safe in accordance with established procedures.
  - 4.3 Written justification is made for repairs to apparatus.

- 4.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in the microwave amplifier sections in electronic apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.9.3 Microwave amplifiers
- 2.9.12 Electronic fault finding
- 2.11.7.1 Electronic testing and measuring devices and techniques
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing faults in the microwave amplifier sections in at least two types of electronic apparatus.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work

environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in the microwave amplifier sections in electronic apparatus as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Replacing components without damage.
    - D Providing written justification for the repairs.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in the microwave amplifier sections in electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential

knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEH002A Carry out basic repairs to electronic equipment
- UEENEEH012A Find and repair faults in the digital components in electronic apparatus
- UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus
- UEENEEH014A Solve problems in resonance circuits
- UEENEEH015A Find and repair faults in the microprocessor components of electronic apparatus

The critical aspects of occupational health and safety covered in Unit UEENEEH001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 4.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this	Refer to the following Performance Criteria for examples of application:	

competency?	1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 3.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.6; 3.5; 4.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the	Refer to the following Performance Criteria for examples of application:

	meaningful work task	1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.6

## **UEENEEH017A Carry out repairs of predictable faults in audio and video replay/recording apparatus**

### **Unit Descriptor**

1)

This unit covers identifying predictable faults and repairing by replacement of subassemblies in CD, DVD and tape replay/recording apparatus. The unit encompasses safe working practices, interpreting circuit diagrams and service manuals, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

UEENEEH038A Find and repair faults in complex power supplies

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also be used to augment formally acquired competencies.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c.

or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to repair replay/recording apparatus.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment, testing devices and service manual needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Fault finding is approached methodically drawing on knowledge of replay/recording apparatus and circuit using measured and calculated values of apparatus parameters and/or with reference to manufacturer's service manual.
  - 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Repairs are made in accordance with manufacturer's service guide and supervisors instructions.
  - 2.8 Apparatus is reassembled and tested for safety and functionality in preparation for return to the customer.
  - 2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.10 Repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report repair activities.
    - 3.1 OHS work completion risk control measures and procedures are followed.
    - 3.2 Work area is cleaned and made safe in accordance with established procedures.
    - 3.3 Written justification is made for repairs to apparatus.
    - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in the microwave amplifier sections in electronic apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.10	Technical manuals and catalogues
2.9.19	Audio/video recording and replay components repair basics
2.9.27	Digital versatile disc (DVD) and compact disc (CD)
2.9.48	Digital audio
2.9.52	Digital versatile disk processors
2.9.53	Compact disk players
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs of at least four predictable faults in two different video replay/recording apparatus

Note.

Examples of audio/video recording and replay components are audiocassette player/recorders, compact disk players, videocassette player/recorder, digital versatile disk and super audio compact players.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships.

However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment

- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in the microwave amplifier sections in electronic apparatus as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Replacing components without damage.
    - D Providing written justification for the repairs.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in the microwave amplifier sections in electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential

knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**  
There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**  
Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2

How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.6	2
-----------------------------------	--	---

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.10
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

# UEENEEH018A Find and repair faults in electronic apparatus

## Unit Descriptor

1)

This unit covers fault finding and repairing of general electronic apparatus. The unit encompasses safe working practices, consulting apparatus service manuals, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

## Prerequisite Unit(s)

2)

## Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH007A Carry out repairs to predictable faults in general electronic apparatus

## Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

## Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

## Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- |      |  |
|------|--|
| 2.4  | Fault finding is approached methodically drawing on knowledge of data circuits using measured and calculated values of apparatus parameters.   |
| 2.5  | Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage  |
| 2.6  | Faulty components are rechecked and their fault status confirmed.  |
| 2.7  | Effectiveness of the repair is tested in accordance with established procedures.   |
| 2.8  | Apparatus is reassembled, finally tested and prepared for return to customer.  |
| 2.9  | Unexpected situations are dealt with safely and with the approval of an authorised person.   |
| 2.10 | Fault finding activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3    | Completion and report repair activities.   |
| 3.1  | OHS work completion risk control measures and procedures are followed.   |
| 3.2  | Work area is cleaned and made safe in accordance with established procedures.  |
| 3.3  | Written justification is made for repairs to apparatus.  |
| 3.4  | Work completion is documented and an appropriate person or persons notified in accordance with established procedures.   |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in electronic apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- |          |  |
|----------|--|
| 2.9.70   | Automatic data capture                                     |
| 2.9.71.1 | Biometric devices  |
| 2.9.77   | Electronic components and systems, industrial applications |

2.18.1 Occupational Health and Safety principles

2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing four different faults in two different types of electronic apparatus.

Note.

Examples of electronic apparatus are communication-networking devices, data capture devices, fire protection panels, industrial control apparatus, instrumentation electronics, security panels, and the like.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in electronic apparatus as described in 7) and including:
    - A Using methodical fault finding techniques
    - B Finding faults efficiently
    - C Replacing components without damage
    - D Providing written justification for the repairs

- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in electronic apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this

Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
-----------------------	------------------------

1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.10
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

## UEENEEH019A Carry out repairs of predictable faults in television receivers

### Unit Descriptor

1)

This unit covers identifying predictable faults and their repair by replacement of subassemblies in televisions. The unit encompasses safe working practices, interpreting circuit diagrams and service manuals, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

UEENEEH038A Find and repair faults in complex power supplies

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical

work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to repair televisions.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment, testing devices and service manual needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Fault finding is approached methodically drawing on knowledge of televisions and circuit using measured and calculated values of apparatus parameters and/or with reference to manufacturer's service manual.
  - 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Repairs are made in accordance with manufacturer's service guide and supervisor's instructions.
  - 2.8 Apparatus is reassembled and tested for safety and functionality in preparation for return to the customer.
  - 2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.10 Repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report repair activities.
    - 3.1 OHS work completion risk control measures and procedures are followed.
    - 3.2 Work area is cleaned and made safe in accordance with established procedures.
    - 3.3 Written justification is made for repairs to apparatus.
    - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out repairs of predictable faults in television receivers. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.10	Technical manuals and catalogues
2.9.29	Television scanning and deflection
2.9.30	Television chrominance and luminance
2.9.57.1	Introduction to television
2.9.57.2	Television receiver repair basics
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic Safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs to of at least four predictable faults in a CRT television receiver.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and

regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Carry out repairs of predictable faults in television receivers as detailed as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Replacing components without damage.
    - D Providing written justification for the repairs.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out repairs of predictable faults in television receivers.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.6	2

**Skills Enabling  
Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.6; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.1 to 2.10
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.9

## **UEENEEH020A Find and repair faults in gaming and games equipment**

### **Unit Descriptor**

1)

This unit covers fault finding and repair of gaming equipment. The unit encompasses safe working practices, interpreting circuit diagrams, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### **Prerequisite Unit(s)**

2)

### **Competencies**

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH009A Set up and test gaming equipment

UEENEEH011A Solve problems in d.c. power supplies with single phase input

UEENEEH012A Find and repair faults in the digital components in electronic apparatus

UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus

UEENEEH038A Find and repair faults in complex power supplies

### **Literacy and numeracy skills**

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### **Application of the Unit**

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment formally acquired competencies.

### **Licence to practise**

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

- |   |  |      |   |
|---|--|------|---|
| 2 | Find and repair faults.                                    | 2.1  | OHS risk control measures and procedures for carrying out the work are followed.  |
|   |  | 2.2  | The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.  |
|   |  | 2.3  | Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |
|   |  | 2.4  | Fault finding is approached methodically drawing on knowledge of gaming equipment and circuit using measured and calculated values of apparatus parameters.   |
|   |  | 2.5  | Equipment components are dismantled where necessary and parts stored to protect them against loss or damage.  |
|   |  | 2.6  | Faulty components are rechecked and their fault status confirmed.   |
|   |  | 2.7  | Faulty components are readjusted or replace in accordance with established procedures.  |
|   |  | 2.8  | Effectiveness of the repaired component is tested in accordance with established procedures.  |
|   |  | 2.9  | Apparatus is reassembled, finally tested and prepared for return to customer.   |
|   |  | 2.10 | Unexpected situations are dealt with safely and with the approval of an authorised person.  |
|   |  | 2.11 | Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices. |
| 3 | Completion and report fault finding and repair activities. | 3.1  | OHS work completion risk control measures and procedures are followed.  |
|   |  | 3.2  | Work area is cleaned and made safe in accordance with established procedures.   |
|   |  | 3.3  | Written justification is made for repairs to apparatus including components and materials used.   |
|   |  | 3.4  | Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.  |

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in gaming and games equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.19 Gaming equipment communications
- 2.9.23.2 Gaming machine fault finding
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing at least four faults in two different types of gaming equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by

various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Find and repair faults in gaming and games equipment as detailed as described in 7) and including:
  - A Using methodical fault finding techniques.
  - B Finding faults efficiently.
  - C Replacing components without damage.
  - D Providing written justification for the repairs.
  - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in gaming and games equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH011A Find and repair faults in the power supplies of electronic apparatus

UEENEEH012A Find and repair faults in the digital components in electronic apparatus

UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus

UEENEEH015A Find and repair faults in the microprocessor components of electronic apparatus

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas	Refer to the following Performance Criteria for examples of application:	

and techniques used?	2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-	Refer to the following Performance Criteria for examples of application:

	routine or contingent situations	2.10
--	----------------------------------	------

## UEENEEH021A Find and repair faults in high volume office equipment

### Unit Descriptor

1)

This unit covers fault finding and repair in high volume photo copiers (40 to 80 ppm), fax machines and the like. The unit encompasses safe working practices, interpreting electrical and mechanical diagrams, applying knowledge of office equipment to logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH003A Carry out routine repairs to business equipment

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as

apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

1.1 OHS procedures for a given work area are identified, obtained and understood.

1.2 OHS risk control measures and procedures are followed in preparation for the work.

1.3 The nature of the fault is obtained from documentation, work supervisor and customer to establish the scope of work to be undertaken.

1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.

1.5 Sources of materials that may be required for the work are established in accordance with established procedures.

1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

2.1 OHS risk control measures and procedures for carrying out the work are followed.

2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.

- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Fault finding is approached methodically drawing on knowledge of office equipment and using measurements of operating parameters and built-in fault indicators referenced to manufacturer's specifications.
  - 2.5 Equipment components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Faulty components are readjusted or replace in accordance with established procedures.
  - 2.8 Effectiveness of the repaired component is tested in accordance with established procedures.
  - 2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
  - 2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Written justification is made for repairs to apparatus including components and materials used.
  - 3.4 Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in high volume office equipment. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.4.45 Copier/printer software functions and configuration
- 2.9.74.2 Business machine transducers
- 2.9.75.1 High volume business machine functions and faults
- 2.9.75.2 Colour photocopiers operating principles
- 2.9.75.3 Facsimile machine operating principles
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated by finding and repairing at least four faults in a high volume (40 to 80 ppm) copier and work group Fax machine (12 ppm).

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in

some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination

legislation, regulations, policies and workplace procedures

- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in high volume office equipment as detailed as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Remove/adjusting/replacing components without damage.
    - D Testing equipment operation.
    - E Providing written justification for the repairs and obtain acceptance of repairs.
    - F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in high volume office equipment.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the

industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH012A Find and repair faults in the digital components in electronic apparatus

UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus

UEENEEH015A Find and repair faults in the microprocessor components of electronic apparatus

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1

How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment		Example of Application
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6

6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.10
---	--	--

## UEENEEH022A Find and repair faults in remote control apparatus

### Unit Descriptor

1)

This unit covers fault finding and repair in remote control apparatus and devices. The unit encompasses safe working practices, interpreting circuit diagrams, applying knowledge of remote control to logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

UEENEEH038A Find and repair faults in complex power supplies

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical

work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation, work supervisor and customer to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- |   |  |   |  |
|---|--|---|--|
|   | 2.2  | Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.  |  |
|   | 2.3  | Fault finding is approached methodically drawing on knowledge of remote control apparatus using measured and calculated values of operating parameters and referenced to manufacturer's specifications. |  |
|   | 2.4  | Equipment components are dismantled where necessary and parts stored to protect them against loss or damage.  |  |
|   | 2.5  | Faulty components are rechecked and their fault status confirmed.   |  |
|   | 2.6  | Faulty components are readjusted or replace in accordance with established procedures.  |  |
|   | 2.7  | Effectiveness of the repaired component is tested in accordance with established procedures.  |  |
|   | 2.8  | Apparatus is reassembled, finally tested and prepared for return to customer.   |  |
|   | 2.9  | Unexpected situations are dealt with safely and with the approval of an authorised person.  |  |
|   | 2.10   | Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.   |  |
| 3 | Completion and report fault finding and repair activities. | 3.1   | OHS work completion risk control measures and procedures are followed.   |
|   |  | 3.2   | Work area is cleaned and made safe in accordance with established procedures.  |
|   |  | 3.3   | Written justification is made for repairs to apparatus including components and materials used.  |
|   |  | 3.4   | Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures. |

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in remote control apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- 2.9.28 Hand held remote control units
- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing at least four faults in two different types of remote control devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in remote control apparatus as detailed as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.

- C Remove/adjusting/replacing components without damage.
- D Testing equipment operation.
- E Providing written justification for the repairs and obtain acceptance of repairs.
- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing fault in remote control apparatus

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

- UEENEEH012A Find and repair faults in the digital components in electronic apparatus
- UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus
- UEENEEH015A Find and repair faults in the microprocessor components of electronic apparatus
- UEENEEH038A Find and repair faults in complex power supplies

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1

How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment**

**8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application: All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application: 2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application: 2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application: 1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application: 2.10

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to find and repair faults.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation, work supervisor and customer to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment and testing devices needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.
- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
- 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.

- 2.4 Fault finding is approached methodically drawing on knowledge of microwave heating apparatus using measured and calculated values of operating parameters and referenced to manufacturer's specifications.
  - 2.5 Equipment components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Faulty components are readjusted or replaced in accordance with established procedures.
  - 2.8 Effectiveness of the repaired component is tested in accordance with established procedures.
  - 2.9 Apparatus is reassembled, finally tested and prepared for return to customer.
  - 2.10 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.11 Fault finding and repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report fault finding and repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Written justification is made for repairs to apparatus including components and materials used.
  - 3.4 Acceptance that the reported fault(s) have been repaired is sought from an appropriate person in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and finding and repairing faults in microwave heating apparatus. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.76 Microwave heating

- 2.18.1 Occupational Health and Safety principles
- 2.18.9 Electronic Safe working practices

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to finding and repairing at least four faults in two different microwave heating devices.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its

‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines – UEE06’. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Find and repair faults in microwave heating apparatus as detailed as described in 7) and including:
    - A Using methodical fault finding techniques.
    - B Finding faults efficiently.
    - C Remove/adjusting/replacing components without damage.
    - D Testing equipment operation.
    - E Providing written justification for the repairs and

obtain acceptance of repairs.

- F Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in finding and repairing faults in microwave heating apparatus.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH012A Find and repair faults in the digital components in electronic apparatus

UEENEEH013A Find and repair faults in the amplifier sections of electronic apparatus

UEENEEH015A Find and repair faults in the microprocessor components of electronic apparatus

The critical aspects of occupational health and safety covered in Unit UEENEEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.2; 3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.1; 1.3	2
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.3; 1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.4	1
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.4; 2.10	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.4 to 2.8	2

**Skills Enabling Employment****8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  2.7
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  2.8; 3.2; 3.3
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  1.3
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.10

## UEENEEH024A Carry out repairs of predictable faults in audio components

### Unit Descriptor

1)

This unit covers identifying predictable faults and repairing by replacement of subassemblies in audio components. The unit encompasses safe working practices, interpreting circuit diagrams and service manuals, applying logical fault finding procedures, conducting repairs, safety and functional testing and completing the necessary service documentation.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH012A Solve problems in digital components of electronic apparatus

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

UEENEEH038A Find and repair faults in complex power supplies

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	3	Writing	3	Numeracy	3
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended for competency development entry-level employment based programs incorporated in approved contracts of training. It may also be used to augment previously acquired competencies.

### Licence to practise

3.1)

The skills and knowledge described in this unit do not require a licence to practise in the workplace provided equipment is not connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some States/Territories subject to regulations related to electrical

work.

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to repair audio components.

- 1.1 OHS procedures for a given work area are identified, obtained and understood.
- 1.2 OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The nature of the fault is obtained from documentation or from work supervisor to establish the scope of work to be undertaken.
- 1.4 Advice is sought from the work supervisor to ensure the work is co-ordinated effectively with others.
- 1.5 Sources of materials that may be required for the work are established in accordance with established procedures.
- 1.6 Tools, equipment, testing devices and service manual needed to carry out the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Find and repair faults.

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

- 2.2 The need to test or measure live is determined in strict accordance with OHS requirements and when necessary conducted within established safety procedures.
  - 2.3 Apparatus is checked as being isolated where necessary in strict accordance OHS requirements and procedures.
  - 2.4 Fault finding is approached methodically drawing on knowledge of audio components and circuit using measured and calculated values of apparatus parameters and/or with reference to manufacturer's service manual.
  - 2.5 Apparatus components are dismantled where necessary and parts stored to protect them against loss or damage.
  - 2.6 Faulty components are rechecked and their fault status confirmed.
  - 2.7 Repairs are made in accordance with manufacturer's service guide and supervisors instructions.
  - 2.8 Apparatus is reassembled and tested for safety and functionality in preparation for return to the customer.
  - 2.9 Unexpected situations are dealt with safely and with the approval of an authorised person.
  - 2.10 Repair activities are carried out efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
- 3 Completion and report repair activities.
- 3.1 OHS work completion risk control measures and procedures are followed.
  - 3.2 Work area is cleaned and made safe in accordance with established procedures.
  - 3.3 Written justification is made for repairs to apparatus.
  - 3.4 Work completion is documented and an appropriate person or persons notified in accordance with established procedures.

## REQUIRED SKILLS AND KNOWLEDGE

- 6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and carrying out repairs of predictable faults in audio components. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.5.10	Technical manuals and catalogues
2.9.15	Audio and video component functional controls
2.9.17.1	Audio reproduction, electronic components
2.9.17.2	Audio component repair basics
2.18.1	Occupational Health and Safety principles
2.18.9	Electronic Safe working practices

### **RANGE STATEMENT**

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to carrying out repairs to two different audio components each with any three predictable faults.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

### **EVIDENCE GUIDE**

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

#### **Overview of Assessment**

##### **8.1)**

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, policies and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:

- Carry out repairs of predictable faults in audio components as detailed as described in 7) and including:
  - A Using methodical fault finding techniques.
  - B Finding faults efficiently.
  - C Replacing components without damage.
  - D Providing written justification for the repairs.
  - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in carrying out repairs of predictable faults in audio components.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent**

**8.5)**

**assessment and relationship with other units**

There are no concurrent assessment recommendations for this unit.

The critical aspects of occupational health and safety covered in Unit UEENEE001A and other discipline specific occupational health and safety unit(s) shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application:  3.3	1
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application:  1.1; 1.3	1
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application:  1.1 to 1.6	1
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application:  1.4	1
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application:  2.4	2
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application:  2.4	2
How is use of technology applied?	Refer to the following Performance Criteria for examples of application:  2.4 to 2.6	2

## UEENEEH025A Provide solutions to single phase electronic power control problems

### Unit Descriptor

1)

This unit covers solving problems with electronic aspects of single phase power control devices and circuits. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of electronic power control devices and their application, using effective problem solving techniques, safety and functional testing and reporting work activities and outcomes.

Note.

Typical single phase electronic power control problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

OR

UEENEEH044A Diagnose and rectify faults in analogue circuits and components in electronic control systems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

**Competency Field 4)**

Electronics

**ELEMENT**

**PERFORMANCE CRITERIA**

5) Elements describe the essential outcomes of a unit of competency

Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the evidence guide.

1 Prepare to provide solutions to single phase electronic power control problems.

- 1.1 OHS processes and procedures for a given work area are identified, obtained and understood.
- 1.2 Established OHS risk control measures and procedures are followed in preparation for the work.
- 1.3 The extent of single phase electronic power control problem is determined from performance specifications and situation reports and in consultations with relevant persons.
- 1.4 Activities are planned to meet scheduled timelines in consultation with others involved in the work.
- 1.5 Tools, equipment and testing devices needed for the work are obtained in accordance with established procedures and checked for correct operation and safety.

2 Provide solutions to single phase electronic

- 2.1 OHS risk control measures and procedures for carrying out the work are followed.

power control problems.	2.2	Knowledge of single phase electronic power control device and circuit operation, characteristics and applications are applied to developing solutions to control problems.
	2.3	Parameters, specifications and performance requirements in relation to each single phase electronic power control problem are obtained in accordance with established procedures.
	2.4	Approaches to resolving single phase electronic power control problems are evaluated to provide most effective solutions.
	2.5	Methods for dealing with unexpected situations are selected on the basis of safety and specified work outcomes.
	2.6	Problems are solved efficiently without waste of materials or damage to apparatus and the surrounding environment or services and using sustainable energy practices.
	3 Test and document solutions to single phase electronic power control.	3.1
3.2		Solutions to single phase electronic power control problems are tested to determine their effectiveness and modified where necessary.
3.3		Adopted solutions are documented including instruction for their implementation that incorporates risk control measure to be followed. (See Note)
3.4		Justification for solutions used to solve single phase electronic power control problems are documented in accordance with established procedures.

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to single phase electronic power control problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.7 1 Single phase power control

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to providing solutions to at least four single phase electronic power control problems.

Note.

Typical single phase electronic power control problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational

requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide solutions to single phase electronic power control problems as detailed as described in 7) and including:
    - A Understanding the extent of the single phase electronic power control problem.
    - B Obtaining electronic device and circuit parameters, specifications and performance requirements appropriate to each problem.
    - C Testing and solutions to single phase electronic power control problems.
    - D Documenting justification of solutions implemented in

accordance with established procedures.

- E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing solutions to single phase electronic power control problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH013A Solve problems in amplifier sections of electronic apparatus

OR

UEENEEH044A Diagnose and rectify faults in analogue circuits and components in electronic control systems

The critical aspects of occupational health and safety covered in unit E001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<b>Key competencies</b>	<b>Example of Application</b>	<b>Performance Level</b>
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3 to 2.4; 3.2	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.2	3

**Skills Enabling Employment 8.7)**

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<b>Skills for Employment</b>		<b>Example of Application</b>
1	Developing and using skills within a real workplace	Refer to the following Performance Criteria for examples of application:  All
2	Learning to learn in the workplace	Refer to the following Performance Criteria for examples of application:  All
3	Reflecting on the outcome and process of work task	Refer to the following Performance Criteria for examples of application:  1.3 to 1.5; 3.2 to 3.4
4	Interacting and understanding of the context of the work task	Refer to the following Performance Criteria for examples of application:  2.2 to 3.4
5	Planning and organising the meaningful work task	Refer to the following Performance Criteria for examples of application:  1.1 to 1.5
6	Performing the work task in non-routine or contingent situations	Refer to the following Performance Criteria for examples of application:  2.5

## UEENEEH026A Provide solutions to polyphase electronic power control problems

### Unit Descriptor

1)

This unit covers solving problems with electronic aspects of polyphase power control devices and circuits. The unit encompasses safe working practices, interpreting diagrams, applying knowledge of electronic power control devices and their application, using effective problem solving techniques, safety and functional testing and reporting work activities and outcomes.

Note.

Typical polyphase electronic power control problems are those encountered in meeting performance requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

### Prerequisite Unit(s)

2)

### Competencies

2.1)

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

UEENEEH025A Provide solutions to single phase electronic power control problems

### Literacy and numeracy skills

2.2)

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading	4	Writing	4	Numeracy	4
---------	---	---------	---	----------	---

### Application of the Unit

3)

This unit is intended to apply to any recognised development program that leads to the acquisition of a formal award at AQF level 4 or higher.

### Licence to practise

3.1)

The skills and knowledge described in this unit require a licence to practise in the workplace for work involving direct access to plant and equipment connected to installation wiring at voltage above 50 V a.c. or 120 V d.c. However other conditions may apply in some jurisdictions subject to regulations related to electrical work. Practice in the workplace and during training is also subject to regulations

directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment and the like. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

|   | 3.4  | Justification for solutions used to solve polyphase electronic power control problems are documented in accordance with established procedures.                       |

Note:

A licence to practise in the workplace is required for work involving direct access to plant and equipment connected to installation wiring at voltages above 50 V a.c. or 120 V d.c.

## REQUIRED SKILLS AND KNOWLEDGE

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and providing solutions to polyphase electronic power control problems. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

2.9.7 2 Polyphase power control

2.18.1 Occupational Health and Safety principles

## RANGE STATEMENT

7) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to providing solutions to at least four polyphase electronic power control problems.

Note.

Typical polyphase electronic power control problems are those encountered in meeting performance

requirements and compliance standards, revising control operating parameters and dealing with control malfunctions.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

## EVIDENCE GUIDE

**8)** This provides essential advice for assessment of the unit and must be read in conjunction with the performance criteria and the range statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

### Overview of Assessment

#### 8.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it must include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

**8.2)**

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines – UEE06'. Evidence shall also comprise:

- A representative body of performance criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to the extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Provide solutions to polyphase electronic power control problems as described as described in 7) and including:
    - A Understanding the extent of the polyphase electronic power control problem.
    - B Obtaining electronic device and circuit parameters, specifications and performance requirements appropriate to each problem.
    - C Testing and solutions to polyphase electronic power control problems.
    - D Documenting justification of solutions implemented in accordance with established procedures.
    - E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in a holistic assessment with the above listed items.

Note:

Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

**Context of and specific resources for assessment**

**8.3)**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

In addition to the resources listed above, evidence should show demonstrated competency in providing solutions to polyphase electronic power control problems.

**Method of assessment**

**8.4)**

This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

**8.5)**

For optimisation of training and assessment effort, competency development in this unit may be arranged concurrently with unit:

UEENEEH025A Provide solutions to single phase electronic power control problems

The critical aspects of occupational health and safety covered in unit E001A and other discipline specific occupational health and safety units shall be reassessed in relation to this unit.

**Key competencies**

**8.6)**

Evidence of achievement of particular key competencies is assessed in the context of the following performance criteria. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

Key competencies	Example of Application	Performance Level
How are ideas and information communicated within this competency?	Refer to the following Performance Criteria for examples of application: 3.3; 3.4	3
How can information be collected, analysed and organised?	Refer to the following Performance Criteria for examples of application: 1.3; 2.3	3
How are activities planned and organised?	Refer to the following Performance Criteria for examples of application: 1.1 to 1.5	3
How is team work used within this competency?	Refer to the following Performance Criteria for examples of application: 1.4	3
How are mathematical ideas and techniques used?	Refer to the following Performance Criteria for examples of application: 2.3 to 2.4; 3.2	3
How are problem solving skills applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.2	3
How is use of technology applied?	Refer to the following Performance Criteria for examples of application: 2.2 to 2.4; 3.2	3

### Skills Enabling Employment

#### 8.7)

Evidence that competency in this unit incorporates skills enabling employment is assessed in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

Skills for Employment	Example of Application
1 Developing and using skills within	Refer to the following Performance Criteria for examples of application:

	a real workplace	All
