PMC552056 Assemble, fabricate and place reinforcement

Release: 1

PMC552056 Assemble, fabricate and place reinforcement

Modification History

Release 1. Supersedes and is equivalent to PMC552056B Assemble, fabricate and place reinforcement

Application

This unit of competency covers the skills and knowledge required to assemble, fabricate and place reinforcement.

This unit of competency applies to operators who are required to interpret plans (steel drawings), fabricate the reinforcement from pre-cut and bent steel, place and secure reinforcement and identify and rectify routine problems.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members, team leader and supervisor, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- | | | | |
|---|--------------------------------|-----|---|
| 1 | Prepare for fabrication | 1.1 | Check quantities, type, size and shape of reinforcement supplied against drawings, tags and schedules |
| | | 1.2 | Prepare jigs and/or other assembly aids if applicable |

- | | | |
|---|---|--|
| 2 | Assemble/fabricate reinforcement | 2.1 Assemble reinforcement using appropriate fixing method |
| | | 2.2 Check final dimensions are to specification |
| | | 2.3 Insert lifting devices, lugs, fittings, bar chairs and nibs according to standard operating procedures (SOPs) |
| | | 2.4 Ensure minimum lap sizes are observed where applicable |
| | | 2.5 Complete cage to enable lifting (if assembled outside the mould) |
| | | 2.6 Report any non-compliance |
| | | 2.7 Follow all work health and safety (WHS) procedures and work instructions |
| | | |
| 3 | Rectify routine problems | 3.1 Identify the range of faults that can occur during the operation |
| | | 3.2 Determine and rectify fault causes in accordance with procedures/work instructions |
| | | 3.3 Identify and rectify equipment failure causes in accordance with procedures/work instructions |
| | | 3.4 Ensure appropriate records and log books of equipment operations are maintained to meet procedures/work instructions |
| | | 3.5 Identify non-routine problems and report to designated person |
| | | |
| 4 | Control hazards | 4.1 Identify hazards from the job to be done |
| | | 4.2 Identify other hazards in the work area |
| | | 4.3 Assess the risks arising from those hazards |
| | | 4.4 Implement measures to control those risks in line with procedures |

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- health, safety and environmental (HSE) legislation, regulations and codes of practice relevant to the workplace, equipment and production processes and hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- job cards
- drawings
- emergency procedures
- work instructions
- SOPs
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Tools and Tools and equipment include:

- equipment**
- one or more of:
 - automatic reinforcement machines
 - semi-automatic reinforcement machines
 - welding equipment
 - ancillary equipment that is integral to the process.

Problems Routine problems must be resolved by applying known solutions.

Routine problems are predictable and include one or more of:

- dimensions and positions of fittings and lugs
- incorrect cover to steel
- incorrect size and shape of completed reinforcement
- inadequate tying of assembled reinforcement
- part of the steel burnt away by undercutting
- off-cuts of bar in bottom of the mould due to cropping bar inside a mould
- welding spatter from assembling cage inside steel mould.

Known solutions are drawn from one or more of:

- procedures
- training
- remembered experience.

Non-routine problems must be reported according to according to relevant procedures.

Hazards Hazards must be identified and controlled. Identifying hazards requires consideration of:

- high temperatures
- smoke, dust, vapours or other atmospheric hazards
- weight, shape, volume of materials to be handled
- hazardous products and materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- electricity
- gas
- gases and liquids under pressure
- noise
- rotational equipment or vibration

- plant services (steam, condensate, cooling water, etc)
- structural hazards
- equipment failures
- machinery, equipment and product mass
- limited head spaces or overhangs
- working at heights
- working in restricted or confined spaces
- other hazards that might arise.

Records and reports Records include one or more of:

- log books/sheets
- electronic records
- job/work sheets
- other records used for the smooth running of the plant.

Reports include one or more of:

- paper or electronic-based logs and reports
- verbal/radio reports
- reporting items found which require action.
